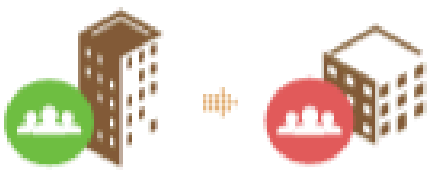
(a) Projects that are aligned with the company's most profitable customers and products; and

(b) Highly profitable innovation programs that can propel their personal career forward.

Disruptive innovations do not fulfil these considerations.

Solution: Create an independent organization that is responsible to serve the new customer needs using disruptive technologies.



The same organization cannot concurrently support mainstream customers and pursue disruptive innovations, due to the different cost structures and models required. From the case studies, it is seen that mainstream companies that successfully established a strong position in disruptive technologies did so by setting up new and independent businesses around the technologies.

This places the technology in a different value network, allows managers to use different success metrics, think like new entrants to the markets, and be free from current constraints.

The book provides detailed case studies on the success/failure of:

KEY QUOTES

The 5 Laws
"I'm particularly anxious that managers read these chapters for understanding, rather than for simple answers."

"It is the customers, rather than the managers, who really determine what a firm will do. It is forces outside the organization, rather than the managers within it, that dictate the company's course."

"Projects targeted at the explicit needs of current customers or at the needs of existing users...will always win over proposals to develop products for markets that do not exist. The best resource allocation systems are designed precisely to weed out ideas that are unlikely to find large, profitable, receptive markets."

"Creating an independent organization, with a cost structure honed to achieve profitability at the low margins characteristic of the most disruptive technologies, is the only viable way for established firms to harness this principle."

- Digital Equipment Corporation (DEC), IBM and the personal computer
- Kresge, Woolworth and discount retailing
- Hewlett-Packard's Laser-jet vs Ink-jet printers

Principle 2:

Small markets don't solve the growth needs of large companies

Large and successful companies typically don't invest in disruptive technologies because:

- Although disruptive technologies usually create new markets, these new markets are initially not attractive enough to large companies. For example, a 20% growth for a $40 million company is just $8m, while a 20% growth for a $4 billion company is $800 million – no new market is singularly large enough for large companies.
- Disruptive technologies are typically simpler and cheaper, with lower profit margins. They also tend to be most suitable for launch with new and less profitable customers in the market.

Although it is viable to adopt a follower strategy in either sustaining or disruptive technologies, a leadership position in disruptive technologies can bring rapid growth and enormous value in the long run.

Solution: Match the size of the organization to the size of the market.

When setting up an independent organization, match its size to that of the market. This ensures that:

- The smaller organization can respond most nimbly to the new market(s), to develop first-mover advantages without distracting the leaders from the main business of the company; and
- The market is large enough to excite the management of the new organization(s).

Johnson & Johnson, for example, has 160 autonomous companies, each of which can introduce small disruptive products (e.g. disposable contact lenses).

KEY QUOTES

"Small organizations can most easily respond to the opportunities for growth in a small market."

Principle 3:
Markets that don't exist can't be analyzed

Sustaining technologies work well with the process of sound market research, good planning, followed by execution. However, for disruptive technologies, the markets are new and there's no existing market data. None of the past market data, revenues or costs projections are relevant.

Solution: Match the size of the organization to the size of the market.

When doing "discovery-based planning", managers should work on the assumption that their forecasts and strategies are wrong. Investments and management focus should be on learning what needs to be known.

The initial learning is largely through trial-and-error, and failures are inevitable. Take a flexible and exploratory approach in your strategy, and set aside adequate resources to revise your approach based on real-time learning.

Marketing strategy:

- Openly acknowledge that the disruptive technology is not currently applicable to mainstream markets. Instead, focus on creating a market that could appreciate its attributes, such that its weaknesses become its strengths.
- Avoid using existing research data for decision-making. Instead, use "agnostic marketing", i.e. watch how customers use the products, rather than listen to what they say. Assume that no one – even the customers - know if, how, or in what quantities they will use the product until they try it.
- Set up a business plan for learning (not executing a fixed strategy). Identify the most critical information needed, and in what sequence the information is required.

Product Development Strategy:

Develop a product that:

- Is simple, reliable, and convenient;

KEY QUOTES

"Not only are the market applications for disruptive technologies unknown at the time of their development, they are unknowable."

"Because markets for disruptive technologies are unpredictable, companies' initial strategies for entering these markets will generally be wrong."

"Guessing the right strategy at the outset isn't nearly as important to success as conserving enough resources...so that new business initiatives get a second or third stab at getting it right."

"(Successful new entrants) sold their products without a clear marketing strategy– essentially selling to whoever would buy. Out of what was largely a trial-anderror approach to the market, the ultimately dominant applications for their products emerged."

- Has features, functions and styles that can be made quickly and at low cost; and
- Must hit a low price point

Technology Strategy:

Disruptive technologies usually offer great value by putting together proven technologies in a novel way. Technological breakthroughs are hence not required.

Distribution Strategy:

Acknowledge the need to find new distribution channels aligned with the new market requirements. The book provides detailed case studies on:

- Hewlett-Packard and the failed Kittyhawk project; and
- Honda's successful invasion of the North American motorcycle industry

Principle 4:
An organization's capabilities define its disabilities.

Good managers tend to assign capable people to the job, based on their skills, experiences and values. Just because an individual has the requisite skills for the job doesn't mean the organization has the requisite capabilities.

Solution: Appraise your organization's capabilities and disabilities.

To identify where the core competencies of a firm reside, Christensen recommends the Resources-Processes-Values (RPV) framework.

Resources:

These are assets or things "that can be hired and fired, bought and sold, depreciated or enhanced", e.g. people, equipment, technology, product designs, brands, information, energy, cash, relationships. They usually can be transferred.

Processes:

These are the methods by which the organization transforms inputs of resources into outputs of higher value. They are visible, and can be formal, informal or cultural in nature. These processes help employees to perform recurrent tasks consistently but can

KEY QUOTES

"Organizations have capabilities that exist independently of people who work within them."

"To succeed consistently, good managers need to be skilled not just in choosing, training and motivating the right people for the right job, but in choosing, building and preparing the right organization for the job as well."

backfire when applied to disruptive technologies.

Values:

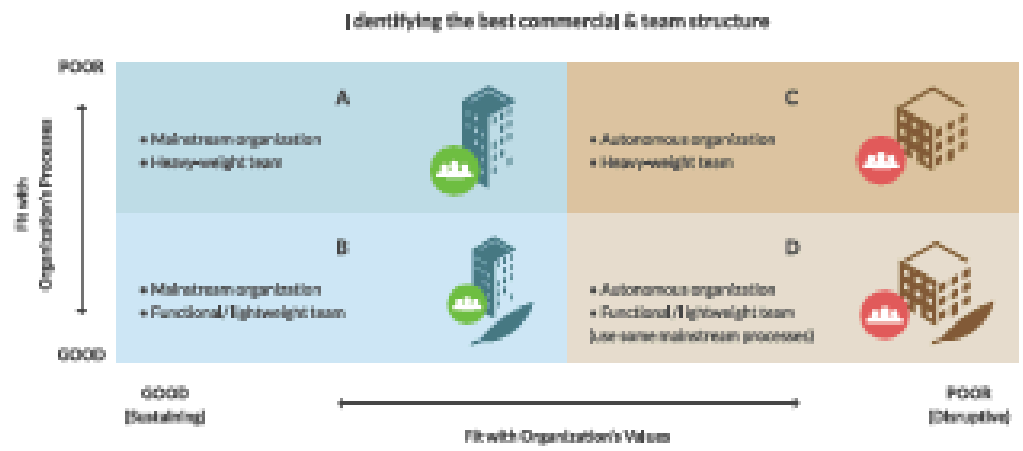
These are the criteria that determine how prioritization decisions are made. Successful organizations train employees at every level to make independent decisions that are aligned with the company's strategic direction and business model. These same values, however, also define what an organization can't do, especially with regard to the acceptable levels of profits and size of businesses.

Leading firms succeed in adopting sustaining technology because they have the resources, rigorous processes and investments that fit the companies' values. However, disruptive innovations happen so rarely that no firm has a routine process to manage them, and the margins typically do not fit with the company values.

To prepare the organization to succeed in the disruptive technology, managers must go beyond resource allocation, to also scrutinize the organization's processes and values. There are **3 ways to create new capabilities:**

- **Acquisition** of a different organization with processes and values suited for the new task
- **Internal creation** by changing current processes and values
- Creation of **independent organizations** to develop new processes and values

Using the framework below, managers can select the best commercial structure and development team for the challenge. Generally, functional/lightweight teams are good for exploiting established capabilities, and heavyweight teams are good for creating new ones.



KEY QUOTES

"Clear, consistent, and broadly understood values, however, also define what an organization cannot do."

"When the organization's capabilities reside primarily in its people, changing to address new problems is relatively simple. But when the capabilities have come to reside in processes and values and especially when they have become embedded in culture, change can become extraordinarily difficult."

Principle 5:

Technologies can progress faster than market demand

Because technology investment and development tends to outstrip the growth in market demand, large companies tend to move up-market too quickly, over-satisfying the needs of their original customers ("performance oversupply"). In the process, they secure higher-margin/higher-performing markets, but create a vacuum at the lower price points that allow competitors with competitive technologies to come in. These technologies become disruptive when they (eventually) become fully performance-competitive against established products.

Solution: Manage the evolution of product competition, and learn to spot disruptive threats & opportunities

According to Windermere Associates, customers make their choice between competing products in the market using this "buying hierarchy": Functionality => Reliability => Convenience => Price. Companies can choose between 3 strategic options when managing the evolution of product competition:

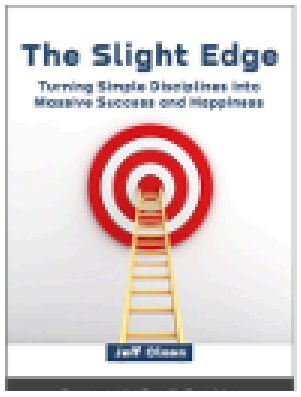
To identify if a new technology is potentially disruptive, define current mainstream market needs by watching what they do, not simply by listening to what they say. Compare the current market needs with the new technology capabilities, to check if:

The new technology works on fundamentally different value assumptions (hence they can't be used in the mainstream markets today and are likely to be doubted by existing market leaders); but

Could one day improve to be competitive in parts of the mainsteam market.

KEY QUOTES

"Differentiation loses its meaning when the features and functionality have exceeded what the market demands."



THE SLIGHT EDGE

Turning Simple Disciplines into Massive Success

JEFF OLSEN

The Big "So What"

The Slight Edge is a philosophy, a new way of thinking, to help us to make simple daily choices and take small actions, that create the compound effect to deliver the lives we desire. If you are prepared to start with just one simple, daily discipline and consistently apply the 7 Slight Edge principles, you can turn around any aspect of your life in just a few years.

Introduction

We already have all the information about success that we need. The book is about applying that information in our daily lives. The book starts with a few relatable stories to illustrate the principles of the Slight Edge at work all around us. The Slight Edge is about knowing that the small things we do – even when people are not watching – add up to create massive positive or negative outcomes in our lives. It is about consistently making the right choices every day.

THE SLIGHT EDGE

The Secret Ingredient

Our philosophies shape our attitudes, actions and results, which in turn shape our lives. The Slight Edge is a philosophy; it represents a way of thinking: what we know, how we hold that knowledge, and what we do. The secret ingredient is straightforward: to do the small things over and over again until success kicks in. Most of these small things are extremely easy to do–such as choosing between a salad or a packet of French

KEY QUOTES

"There is no magic bullet, quick fix, or quantum leap method to reach success... (the Slight Edge) is a philosophy that will become a filter for every decision you make. It will give you a way to apply great information into your life in a way that will produce lasting results."

"The things you do every day, the things that don't look like they matter, do matter. They not only make a difference – they make all the difference."

"The single most important thing I can tell you about the Slight Edge is this: it's already working, right now, either for you or against you. So don't wait."

fries, saving a penny or spending a penny. Yet, compounded over time, they can produce massive results.

Putting Time on Your Side

"Consistently repeated daily actions + time = unconquerable results"

A penny, doubled every day, will grow to over $10 million in just one month. If you improved in an area by just 1% a day, you would have improved by 365% in 1 year. With each passing minute and each new choice that we make, the Slight Edge is at work – either for us or against us. Once you embrace this philosophy, you will know that if you do something long enough, you will get the results you want. But if you make the small errors of judgment long enough, you will also suffer the consequences.

If it's so simple, why doesn't everyone do it?

Things that are easy to do are just as easy not to do. Precisely because they are small decisions and actions, it won't kill us immediately if we don't do them today. A simple, positive action (e.g. exercising 30 minutes a day), repeated over time, adds up. A simple, negative action (e.g. eating a packet of potato chips), repeated over time, also adds up. But they are easy not to do.

Plant-Cultivate-Harvest: Everything goes through the plant-cultivate-harvest cycle – this requires the seeds to be planted, and time for them to grow. For the slight edge to work, you can't start with nothing. You have to at least start with a penny, a seed, i.e. you have to do something. Then, you have to keep doing it until you succeed. However, many people either expect something from nothing, or they want to go directly from plant to harvest.

KEY QUOTES

"How long will it take? Chances are it will take longer than you want it to….and when the time arrives, you'll be astonished at how quick it seemed."

"Here's the problem: every action that is easy to do, is also easy not to do."

"You plant, then you cultivate, and finally you harvest. Plan, cultivate, harvest. In today's world, everyone wants to go directly from plant to harvest."

The results are not immediately visible. The small activities are undramatic and seemingly insignificant. You don't get immediate results or feedback, and no one notices you making the small choices daily. By the time they notice your results, the work has already been done.

As a society, we tend to worship breakthroughs and quantum leaps. This can be dangerous because there is actually no magic bullet that will propel us to success - focusing on quantum leaps can prevent us from doing the small actions required to deliver results.

The 7 Slight Edge Principles

Show up, even when others drop out.

Be consistent: Showing up consistently provides structure, in small doses that are easier to handle.

Have a good attitude: Bring energy and vitality, not criticism and negativity. Surround yourself with positive people, and stay away from the naysayers. Having said that, we will still have our "funky" moments when we don't feel good – embrace this as part and parcel of life that everyone goes through.

Be committed for a long period of time. Commit to principles 1-3 above, and give yourself time to build your attitudes and beliefs, knowing that the results will eventually come.

Have faith and a burning desire

Be willing to pay the price

Practice Integrity, i.e. do the little things even when no one is watching, and do the things you said you were going to do, long after the mood to do them has left you.

KEY QUOTES

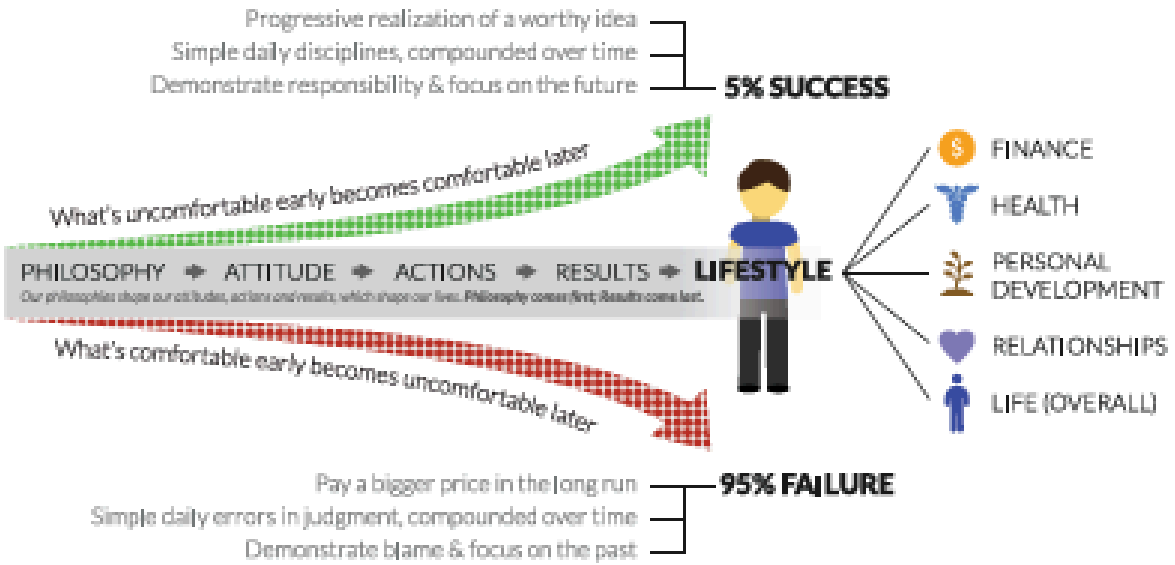
"It isn't that the actions are wrong. It's that people don't keep doing them."

"No success is immediate. Nor is any failure instantaneous. They are both products of the Slight Edge."

"The important point is to start on the path and to remember that no matter what has gone on before, you can begin fresh and new and at any time you can choose to start with a clean slate."

Two Life Paths

It has been scientifically established that space is curved. There are no such things as straight lines – everything, including your life, is curved. Your daily choices determine which curve you are on. If you are making the right choices every day, your life curve is on the upper half (which only 5% of people are on). If you are making simple errors in judgment daily, you are on the lower curve (where the majority of people are).



- **The Upper Curve:** Those on the upper curve demonstrate responsibility – they accept that they alone are the cause of where they are; they do not find excuses, not do they attach any judgment of right or wrong to the situation. They focus on the future, and use the past merely as tools to pull themselves forward.
- **The Lower Curve:** Those on the lower curve demonstrate blame – they blame themselves, others and the external environment for their circumstances. They tend to focus on the past with regret, remorse or retributions.

If we take an honest look at what we are doing daily in different aspects of our lives – our health, personal development, relationships, finances, and life itself (our impact and legacy) – we will know if we are on the upward or downward curve.

The good news is, the past doesn't equate the future. The Slight Edge is constantly at work; once you make a firm decision to step onto the upper curve and consistently apply the 7 Slight Edge principles, you can turn any area of your life around in a few years. In fact, genuine success in any one area of your life tends to spread to other areas.

KEY QUOTES

"As you walk your path, it is always, every moment of every day, curving either upward or downward."

"Responsibility starts with…the point of view…that you are the source of what you are, what you do and what you have." - Werner Erhard

"Failure, unchecked by a choice to change, is a life-long condition."

"Success in any one of these areas begin to affect all the others, too. Improve your health and you improve your relationships; work on your personal development and you have an impact on your career. Everything affects everything else."

Mastering Your Life

Mastery is a state of mind, not an end-goal or destination. Babies learning to walk never think of quitting, nor do they tell themselves "I'm not cut out for it" after a few failed attempts. We were all babies once – we just need to remember that childlike willingness to keep trying, and get back on the path of mastery.

Closing the Gap

When we want something, we both desire it and lack it. A natural tension is created between Point A (where we are) and Point B (where we could be). That gap will somehow be resolved. The question is whether we resolve it by moving Point B closer to Point A (i.e. we compromise or give up on our dreams) or we move Point A closer to Point B (i.e. we overcome our problems). The bigger a person's life, the bigger the problems that he/she faces.

When we have a strong vision or desire, we feel uncomfortable. We also make others around us uncomfortable, because we remind them of their own gaps. That is why we should be cautious who we share our goals with, as those without the right philosophies and attitudes will pull us down, out of self-defence.

Olsen shares that at a typical funeral, only ten people cry. Why live our entire lives worrying about what others thought, when only a handful of people will even care or remember us when we are gone? People who are remembered by the masses are those who dared to do what they believed in, regardless of what others thought.

Harnessing The Power of The Slight Edge

- The power of momentum: Activity is important because once you are in motion, you are harnessing the power of momentum to keep going; Once you stop, it is harder to get started again. Allow yourself to move at your optimal rate, from slow to fast.

KEY QUOTES

"Mastery is the act of setting your foot on the path."

"You gave up on the universal truth that simple little disciplines, done again and again over time, would move the biggest mountains."

"Noticing that you're not where you want to be can be uncomfortable. Wanting hurts."

"You can measure the impact a person's life has by the size of the problems he or she solves."

"Gigantic funerals are held and great crowds, sometimes entire nations, mourn for those people who spent their lives not worrying about what others thought."

The power of completion: Each time we complete something (e.g. fulfill a promise to take the kids somewhere, say "I'm sorry"), we lighten our load of the past and improve our forward mobility. If we ignore our list of incompletions, the fear or inertia that kept us from completing the tasks in the first place will compound with time.

The power of habit: When we repeat something long enough, it becomes automatic and we do it without thinking. The Slight Edge is about taking the right simple actions, over and over again, so they form positive habits that serve you.

The power of reflection: Being busy doesn't necessarily mean being productive. Reflect daily on what you are doing, so improvement becomes second nature.

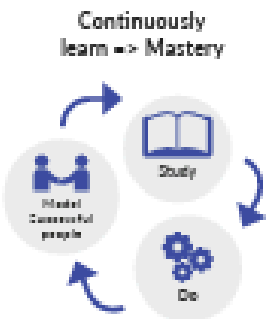
The power of celebration: Catch yourself doing something right, and celebrate each successful right choice.

Results Come Last

Our results are a function of what we have done in the past. Focusing on results means focusing on the past. To focus on the future, we need to look at controlling our thoughts (which determine our attitudes and actions), which are in turn determined by our philosophy. In short, we must start with the right philosophy to life.

Continuous Learning

Invest in your personal development, as learning is a key element of the Slight Edge philosophy. There are 3 key ways to learn:



- Learn by study
- Learn by doing
- Learn through modelling: Find people who have achieved what you want to achieve, surround yourselves with them, and emulate their success.

KEY QUOTES

"Your optimal rate of growth is always served best by a step-by-step approach of constant, never-ending improvement, which lays solid foundations and builds upon them over and over."

Every incomplete promise, commitment and agreement saps your strength... Incomplete things keep calling you back to the past to take care of them."

"The only reliable, consistent way to control your attitudes is to control your thoughts. And the source of your thoughts is your philosophy."

"Your philosophy comes first; your results come last."

"Life is not a spectator sport – it is a contact sport; there is no practice session."

The learning process involves developing an awareness of yourself and what is contributing versus hindering your progress. It requires a balance between being book-smart and street-smart, and it inherently involves a constant process of course-correction and plan-do-review.

Turning Your Dreams Into Reality

There are 4 foundational steps to goal setting:

- **Write it down:** Envision it, make it specific with all your senses, and give it a deadline.
- **Start with a plan:** Know that the plan is only our jump-off point. There is no such thing as a perfect plan; the plan that we start with will not be the same plan that brings us success. However, we need to start with our first plan in order to take our first steps, start the learning journey and refine our course.
- **Understand and pay the price:** There will be a price to pay for success, e.g. giving up the right to be right, giving up a few hours of television. In the long run, the price of doing what you should will always be smaller than the price of not doing it.
- **Look at it everyday.**

Living The Slight Edge

Olsen takes us through 5 key areas of our lives, including health, personal development, relationships, finances, and life in general. For each of these areas, list down the following:

My dreams for this area (be specific, vivid, with a deadline)

Price to pay

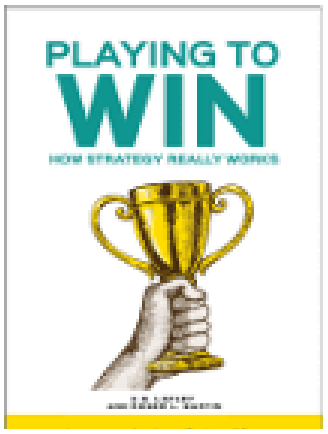
Plan to Start

One simple daily discipline

KEY QUOTES

"Whatever price you pay, there's a bigger price to pay for not doing it than the price for doing it. The price of neglect is much worse than the price of discipline."

"All the information you need is already out there – and, right here. You're already doing the actions. All you need to do is choose to have them serve and empower you – and keep on choosing."



PLAYING TO WIN

How Strategy Really Works

A.G. LAFLEY AND ROGER L. MARTIN

The Big "So What"

Any organization without a sound strategy is bound to fail. Yet, most leaders don't truly understand strategy nor how to apply it. This book demystifies strategy and equips you with concepts, frameworks, tools and processes to help your organization to win.

Introduction: What is Strategy?

The strategy framework in this book was jointly developed by the authors, who were previously the CEO of Procter & Gamble (P&G) and the dean of the Rotman School of Management respectively. When Lafley became P&G's CEO in 2000, he used this framework to revitalize the company and it has now become a standard process at P&G. This approach to strategy can be applied to any business, function, or organization.

There are several common misconceptions about strategy:

- It's untrue that strategy has become *irrelevant* with today's fast changing environment. Although there's no perfect strategy, a sound strategy can offer competitive advantage while a lack of strategy can kill any organization.
- Strategy is *not* the same as vision, mission, plans, tactics or optimizing processes—these are merely *elements of strategy*.
- Strategy is also *not* about *adopting best practices*. Benchmarking against competitors only makes you a copycat.

KEY QUOTES

"Our intent is to provide you with a do-it-yourself guide to strategy...a strategy that serves your customers better and enables you to compete more successfully and to win."

"Not only is strategy possible in times of tumultuous change, but it can be a competitive advantage and a source of significant value creation."

Fundamentally, strategy is about making specific, integrated choices to win in the marketplace.

- A good strategy starts with a *deliberate intention to win*, rather than just to survive or participate in the marketplace.
- Specifically, it involves 5 sets of inter-connected choices, which can be combined with other tools to form a single framework, process or *strategy playbook*.

In this summary, we'll elaborate on each of the 5 strategic choices, before integrating these ideas with application concepts into a strategy playbook.

Strategy: An Integrated Cascade of Choices

Basically, your strategy is your set of answers to these 5 questions:

- *What is your winning aspiration?* This is the reason you exist and the guiding purpose behind *all* your decisions.
- *Where will you play?* This is the playing field where you can achieve your aspiration, such as your geography, product category, consumer segments, channels etc.
- *How will you win?* This involves the strengths, model and value proposition that will jointly give you the competitive advantage needed to win in your chosen playing field.
- *What capabilities must be in place?* These are the set of core capabilities and reinforcing activities you'd need for your choices.
- *What management systems are required?* These are the systems, structures and measures needed to enable your core capabilities and support your choices.

These choices affect what you do and don't do. They're closely interrelated: the choices at the top cascade downward, and the choices at the bottom refine and reinforce the choices

KEY QUOTES

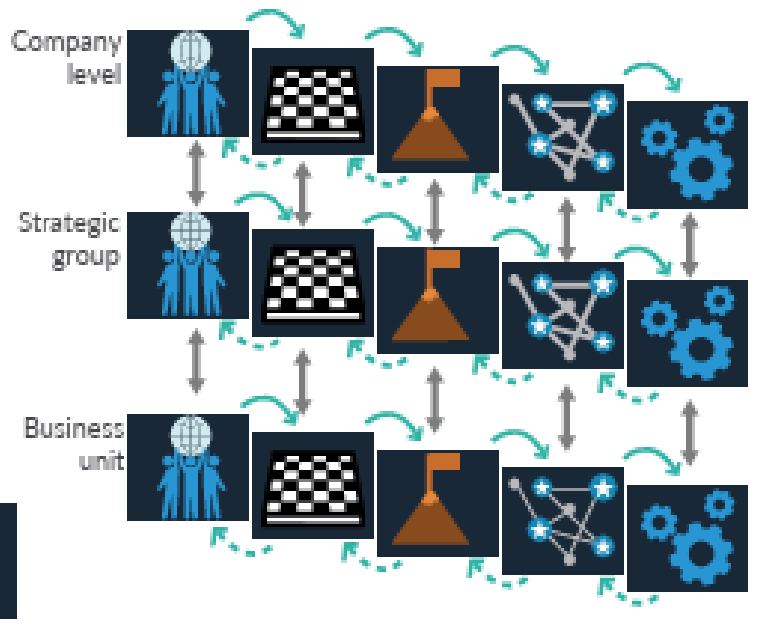
"What matters is winning. Great organizations…choose to win rather than simply play."

"A strategy is a coordinated and integrated set of where-to-play, how-to-win, core capability, and management system choices that uniquely meet a consumer's needs, thereby creating competitive advantage and superior value for a business. Strategy is a way to win—and nothing less."

above. In small companies, there may be only 1 choice-cascade, while in large organizations there may be sub-levels of choices.

Strategic Choice Cascade

Multi-level Choice Cascades



Winning Aspiration

Your aspiration states why you exist, what you seek to be, and what winning looks like for your organization. It's the starting point to align the rest of your strategic choices.

Your aspiration must focus on winning, not just competing.

- This forces you to *make hard decisions* that create real advantages. Nike's mission is "to bring inspiration and innovation to every athlete in the world" (where an athlete is anyone with a body) and McDonalds seeks to "be our customers' favorite place and way to eat." P&G aims to deliver the most valuable, value-creating brands that improve consumers' lives in every category it competes in.
- You can *break it down further* into what winning means for specific brands, business lines or internal functions.
- When you merely "*play to play*", you're setting yourself up to fail. In 1990, General Motors launched Saturn in hope of getting a share of the younger car-buyer market and making money in that segment. Unlike their key competitors Toyota, Honda, and Nissan, Saturn didn't aim to win, and eventually closed down after $20bil losses.

KEY QUOTES

"A definition of winning provides a context for the rest of the strategic choices; in all cases, choices should fit within and support the firm's aspirations."

"A lofty mission isn't a strategy. It is merely a starting point."

"Strategy is disciplined thinking that requires tough choices and is all about winning."

"A too-modest aspiration is far more dangerous than a too lofty one. Too many companies eventually die a death of modest aspirations."

- *Playing to win*. In 2000, P&G had to decide what to do with its inhouse global business services (GBS) unit that handled its IT facilities and services. The easiest option would be to keep running GBS internally, while the most common option would be to outsource to a large BPO firm like IBM. P&G asked themselves which option would help them to *win*. They realized they needed cost-effectiveness, service standards *and* flexibility, i.e. partners who would innovate with P&G to create real value. So, they came up with a new approach, to (a) select the best BPO partners for each IT area (e.g. facilities management vs IT infrastructure), and (b) choose partners with interdependency (vs going with the biggest ones). This allowed them to work with a range of specialized partners (thus increase quality, reduce cost, mitigate risk *and* instill competition), while freeing up existing GBS resources for P&G's core capabilities.

When defining your aspirations, focus on consumers and your best competitors.

- *Consumers, not products/services*. A product-focused business may see itself as a maker of smartphones and focus on R&D and engineering. A consumer-focused business may see itself as a connector of people around the world, and focus on relationship-building, user experience etc.

- *Best competitors, not just obvious ones*. Identify your best competitors, how they're doing better than you, what can you learn from them and do differently. Consider what it means to win against the largest global brands, as well as the local and private-label companies.

Where to Play

Choosing the right playing field is really about defining the business you're in, where you'll compete to win, and where you'll *not* compete.

Regardless of the size or nature of your industry, you must address all of these where-to-play choices:

- *Geography*: The countries or regions you'll compete in;
- *Product segment*: The types of products/services you'll offer;

KEY QUOTES

"The desire to win spurs a helpfully competitive mind-set, a desire to do better whenever possible."

"Companies in the grips of marketing myopia are blinded by the products they make and are unable to see the larger purpose or true market dynamics."

"Looking at the best competitor, no matter which company it might be, provides helpful insights into the multiple ways to win."

"If everything is a priority, nothing is."

- *Consumer segment*: The groups of consumers you'll target (with the associated price tiers and needs);

- *Distribution channel*: The channels you'll use to reach your consumers; and

- *Stage of production*: The parts of the vertical production or value chain you'll enter.

Choose where to play and where *not* to play. You can go for a narrow or broad choice depending on what's ideal for your organization, but you *must* choose. If you try to play in every field concurrently, you'll stretch your resources too thin and end up under-performing in all sectors.

To find a brand new playing field or change an existing playing field, you must first believe it's possible. Then, dig deep to examine your choices from all possible angles.

- P&G always starts by *understanding the customer*, using in-depth research (from observations to home visits) to identify who the customers really are, what they want and need. The goal is to uncover issues you can solve, which leads to big ideas that define your where-to-play choices.

- Such *changes to existing playing fields* may be subtle (like how Olay was reinvented with a new target consumer group within the same industry), or massive (like how Thomson Corporation changed its entire business model to web-based services over a period of 20 years).

- Wherever possible, avoid going directly against strong competitors or fighting multiple battles. Try to stagger your choices so you can conquer the market *one challenge at a time*. If you're entering a competitive industry, consider whether to eliminate the weaker players first, target the lead competitor or expand the playing field so you buy time to coexist with existing players while you gain momentum.

- Look for ways to *attack from unexpected angles* with the least resistance. P&G initially struggled tried to find a viable playing field in the fine-fragrances category. After digging deep, they chose to go into men's fragrances (e.g.

KEY QUOTES

"Focus is a crucial winning attribute. Attempting to be all things to all customers tends to result in underserving everyone."

"Sometimes the key to finding a new place to play is to simply believe that one is possible."

Hugo Boss, Lacoste), which was an unexpected space with minimal resistance from existing competitors who typically focused on fashion and the high-end women's market.

Don't try to buy your way out of a bad game, i.e. try to acquire a company to solve your problems. Acquisitions are usually expensive, and the acquired companies tend to have different strategies and capabilities that complicate your already-fragmented strategy. It's better to sort out your own game by enforcing internal discipline in your strategic thinking.

How to Win

Once you've chosen where to play, you can define how to win there.

Broadly, there are 2 key ways to win, but the exact details will vary for each organization.

- *Low-cost strategies* means having a lower cost structure than competitors, so you can set lower prices and/or reinvest the margin in other areas to create competitive advantages. For example, Mars enjoys lower production costs than Hershey's. But, instead of reducing its price, it invests the extra margin to buy the best shelf-spaces in convenience stores. In any industry, there can only be one true low-cost leader. To win with this strategy, you must be the player with the lowest cost.

- *Differentiation* means your offerings have similar cost structures as competitors, but deliver a much higher perceived value to customers. Each brand or offering will have its own consumer value equation and price-point, e.g. some consumers may prefer the quality service of global hotel chains while others prefer the unique experience of boutique hotels. To win with this strategy, you must do everything possible to keep customers happy.

- It's possible to *combine both strategies*, i.e. command a huge price premium yet produce at much lower costs than rivals. However, it's very rare as the 2 strategies require vastly different approaches. A cost leader is obsessed with cost reduction via cost drivers (e.g. sourcing, production) and may sacrifice nonconforming customers for standardization.

KEY QUOTES

"While all companies make efforts to control costs, there is only one low-cost player in any industry—the competitor with the very lowest costs."

A differentiator is obsessed with serving customers better, retaining loyalty and commanding a price premium (via brand, quality, service etc.).

Find your winning formula. There are many ways to win, and your strategy must evolve over time. Building your organization's strategic thinking capabilities allows you to keep finding new ways to win.

- Your where-to-play and how-to-win choices are closely-related and must *reinforce one another*. If, after digging deep, you still can't create credible how-to-win choices, then find a new playing field where you can win.

- In the 1960s, P&G launched *Pampers*, pioneering the disposable diapers category and viably addressing cloth diaper-users' frustrations. By the 1970s, Pampers had 75% market share in the US and was growing globally. However, in 1976, P&G made a strategic mistake when it introduced Luvs—a new, pricier brand of diapers with superior fit, absorbency and comfort. In 1978, Kimberly-Clark launched Huggies with similar features to Luv (plus enhancements). It gained a 30% market share while Luvs and Pampers fell behind individually since their market share was split amongst themselves. In 1984, P&G finally launched Ultra Pampers with premium features, and repositioned Luv to a basic offering. They learned the painful lesson that they should've applied Luv's improvements to Pampers from the onset rather than lose customers for product-based reasons.

- Separately, P&G launched *Citrus Hill* (a juice that was enhanced using superior calcium technology) in direct competition with incumbents Minute Maid and Tropicana. Citrus Hill lost the battle, and, P&G sold the calcium technology to its 2 rivals. Technology alone just wasn't enough to win against strong established players.

- P&G also developed a technology that made trash bags stronger/stretchable using less material, and improved the effectiveness of self-sealing plastic wraps for food storage. This time, instead of competing directly with strong incumbents in an unfamiliar industry, P&G explored other choices. They decided on a joint venture (JV) with *The Clorox Company*, a a leader in the food-storage business. P&G

KEY QUOTES

"There simply is no one perfect strategy that will last for all time. There are multiple ways to win in any almost any industry. That's why building up strategic thinking capability within your organization is so vital."

"Technology and product alone wouldn't lead to victory—not in the face of tough competitive dynamics and high capital costs."

"The challenge was to find a way to win, rather than just compete…Finding the answer meant taking a new and creative approach to what winning could mean and how P&G could win in a different way."

assigned 20 P&G staff (mainly scientists/technologists) to Clorox, gave them technology access and full control of the business, in return for 10% of their Glad business and an option to acquire another 10%. In short, they partnered closely with Clorox in 1 category while competing in other categories. This model gave P&G a new way to win and led to other similar joint ventures in the future.

Capabilities: Play to your Strengths

Your *core capabilities* are the entire set of activities that jointly allow you to realize your where-to-play and how-to-win choices. An *activity system* (coined by Michael Porter) is a 1-page visual representation of these capabilities—it helps you to visualize your core capabilities and supporting activities, so you can decide where to increase and reduce investments.

In 2000, P&G had defined its where-to-play and how-to-win choices, and had to translate the choices into core capabilities.

- At an off-site meeting, business and functional leaders started by identifying their business units' *industry-specific capabilities*.

- Then, everyone was asked to vote for top capabilities that met these criteria: they must be (a) existing competitive advantages that could be expanded, (b) were relevant and vital to most of P&G's businesses, and (c) could make the decisive difference between winning and losing. They eventually narrowed down to 5 core *corporate-level capabilities*: (a) consumer understanding, (b) brand building, (c) innovation, (d) go-to-market ability and (e) global scale.

- From this list, the teams developed specific action plans to invest in each of the 5 capabilities at the corporate, category, and brand levels. These were then mapped into *activity systems* that would guide P&G's strategic choices for the next decade.

To win, your activity system must meet the 3 sequential criteria below. Refine your system over several rounds, changing your where-to-play and how-to-win choices if necessary.

KEY QUOTES

"An organization's core capabilities are those activities that, when performed at the highest level, enable the organization to bring its where-to-play and how-to-win choices to life."

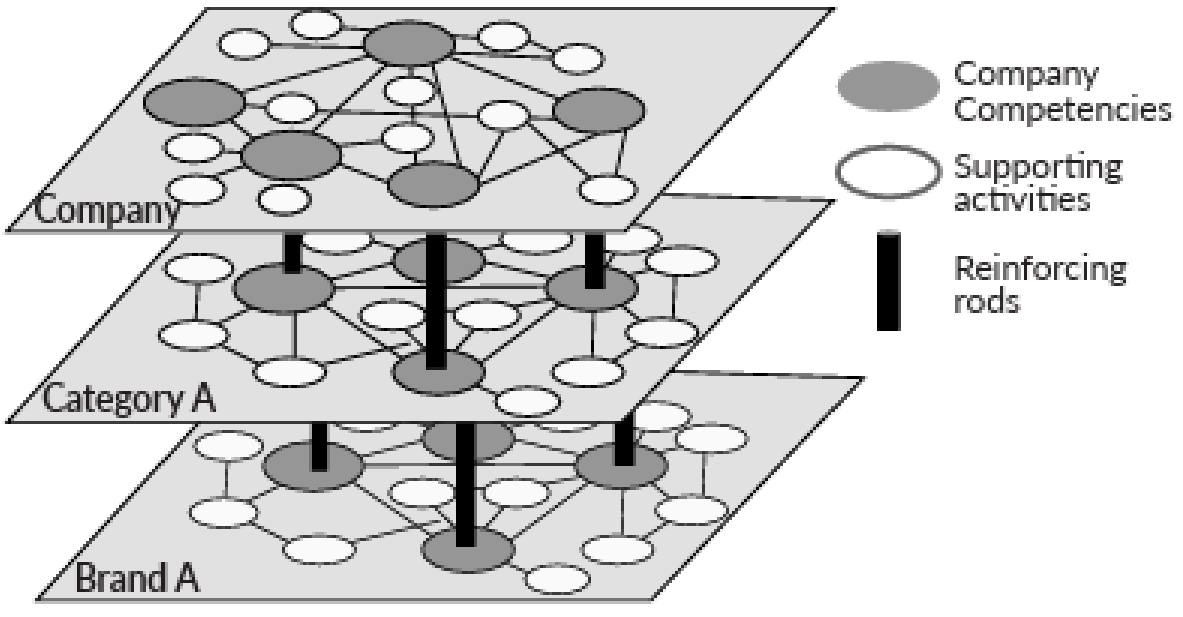
"Companies can be good at a lot of things. But there are a smaller number of activities that together create distinctiveness, underpinning specific where-to-play and how-to-win choices."

- *Feasibility*: The activity system must be feasible to build. If most of the components don't exist yet and you lack resources to create them, rethink where to play and how to win.

- *Distinctiveness*: Your combination of capabilities must be unique enough that no other competitor will likely end up with a similar map.

- *Defensibility*: Your activity system must not be easily replicated by a competitor.

A small business may have 1 activity system for the whole company, while a large corporation like P&G will have different activity systems for each business unit, e.g. different choices and capabilities for baby care vs laundry care. Reinforcing rods are the shared capabilities that cut across multiple divisions or units, and link parts of the organization together. When you strengthen these rods, it creates multiplier effects across the entire organization.



To improve your organizational integration:

- *Start at the "indivisible level"*, where the activity system looks similar 1 level down but looks different 1 level up. For example, at the product level various Head & Shoulders shampoos have similar maps, but at the category level varying hair-care products (e.g. Nice 'n Easy hair colors vs Herbal Essences hair gels) have different maps. Start at the ground level and work upwards.

KEY QUOTES

"The links between the systems are crucial to create brand, category, sector, function, and overall company competitive advantage—to make the system stronger than the sum of its parts."

- *Add value to the level below*. Managers at each level should focus on the reinforcing rods that help the level below to compete more effectively, either through a shared activity and/or skills and knowledge transfer. Unless a level creates more value than its financial and administrative costs, it should be removed.

- *Expand or trim your portfolio*. Look at the reinforcing rods throughout your organization—invest in businesses that benefit from same rods, and divest those that don't.

Most corporate mergers destroy rather than create value. Yet, P&G's acquisition of Gillette in 2005 was a massive success, because it satisfied P&G's 3 criteria for mergers: growth, structural attractiveness and strategic fit (in all 5 levels of the choice cascade). Specifically, Gillette's aspiration was aligned with P&G's, it could benefit significantly from all of P&G's core capabilities, and could also reinforce P&G's strengths.

- Straight after the acquisition, the 2 teams jointly defined Gillette's *strategic choices*: (a) win in male shaving systems, (b) extend the Gillette brand to men's personal-care items, (c) win in women's hair removal and (d) expand into emerging markets, especially India.

- To achieve these, Gillette needed certain *capabilities*. For example, it had to learn to meet the needs of consumers in the developing world. Instead of its usual quantitative research; the Gillette team followed the P&G approach and sent its scientists to live in India for 2 weeks. They were surprised to learn that most Indian men shaved with only a small cup of cold water instead of running hot water. This led to the creation of the Gillette Guard razor—with a single-blade, safety comb, and a price-point of one-tenth of US prices.

Management Systems

Having a sound strategy isn't enough. To win, your organization needs supporting management systems and structures to cultivate its capabilities, as well as measures that tell you how well you're delivering on your strategic choices.

KEY QUOTES

"Most corporate mergers fail to create value. The bigger the deal, the less likely it seems to produce success."

"By engaging directly with the…consumer, by treating that consumer as the boss, the Gillette team was able to understand what he values and what he experiences."

Create regular strategy creation and review sessions where leaders come together to discuss vital issues e.g. whether you're winning in a category, what are the biggest opportunities or threats facing each business and what core capabilities must be built. This creates a systematic focus on strategy and helps leaders at all levels to hone their strategic-thinking abilities and decision-making abilities.

For real dialogues to happen, people must be open-minded, willing to listen and engage in constructive debate. You can use this 3 part approach to nurture assertive inquiry, i.e. advocating your views while asking with an open mind for others' views:

- *Present your view* and invite a response, e.g. "This is how I see the situation and why. But I may be missing something—do you see it differently?"
- *Paraphrase* what you understand of the other person's view, e.g. "It sounds like your view is this...is that an accurate summary?"
- *Explain and clarify gaps* if any, e.g. "It sounds like you think we shouldn't take up this project. I'm not sure I understand why; could you tell me more?"

Communicate your strategy clearly to all levels in the organization, by focusing on the most critical choices and presenting them in a clear, simple way that everyone can understand. P&G distilled its strategy into 3 core themes that cut across all its businesses: (a) make the consumer the boss, (b) increase the gap between value delivery and the cost of delivering that value, and (c) win the 2 crucial moments when the client first encounters the product in the store, and when he/she first uses it.

To facilitate discussions, P&G also summarizes its choice cascades into a 1-page "OGSM" documents which capture the objectives, goals, strategies and measures of a brand/category company at a glance.

Objectives	Strategy	Measures
	Where to play :	
Goals		
	How to Win:	

Invest in systems to support your core capabilities. For example, P&G invested heavily in new consumer research methodologies to deepen their capability for consumer

KEY QUOTES

"(Help your) leaders to become better strategists because better, more choiceful strategies would enable yet better operations."

"Inquiry leads the other person to genuinely reflect and hear your advocacy rather than ignoring it and making their own advocacy in response."

"Strategy is formulated at all levels of the organization, and to be successful, it needs to be clearly communicated at all levels as well."

"The goal was to create... a simple, clear expression of a strategy, a living document that everyone in the business knew and understood."

understanding, and invested in strong retail partnerships to improve their go-to-market capabilities.

Measure desired outcomes. This not only offers *feedback* to address performance gaps, but also motivates people to *focus* on results. To be effective, your measures must specifically explain the expected outcomes, cut across various parameters (e.g. finance and consumers), and be written down. You can also create weighted indexes to measure your performance across multiple factors.

Getting Started: Your Strategy Playbook

In this section, we'll combine the choice cascade with strategy logic flow and reverse engineering to form a single framework or process— your strategy playbook. Start with a rough definition of your winning aspiration, but don't worry about perfecting it at this point. Spend more effort on your where-to-play and how-to-win choices: these form the heart of your strategy and define what you'll do and where/how you will win.

There are various strategy tools (e.g. SWOT or the BCG growth matrix) which you can use to do your analyses. The authors recommend using the strategy logic flow and reverse engineering to generate and select your where-to-play and how-to-win choices. The process takes time, effort and teamwork, but the results are worth it.

Think through your strategy with a logical flow, using 7 questions in 4 key areas to analyze your organization's current realities and generate possible where-to-play and how-to-win choices.

INDUSTRY ANALYSIS

- **Segmentation**: What are the strategic segments in the industry?
- **Structure**: How potentially profitable are these segments for your company? [Consider suppliers' & consumers' bargaining power, degree of rivalry, threat of new entrants & substitutes]

CONSUMER VALUE ANALYSIS

- **Channel**: What do channel customers (e.g. retailers) value?
- **End-consumer**: What do end-consumers value?

RELATIVE POSITION

- **Capabilities**: How are your capabilities compared to competitors?
- **Costs**: How are your cost compared to competitors?

COMPETITIVE ANALYSIS

- **Prediction**: How are competitors likely to react to your choices & actions?

KEY QUOTES

"If aspirations are to be achieved, capabilities developed, and management systems created, progress needs to be measured."

"The strategic choice cascade, the strategic logic flow, and the reverse-engineering process represent a strategic playbook for your organization...(that) can guide your strategic thinking and help create true and lasting competitive advantage."

"A strategy that only works if competitors continue to do exactly what they are already doing is a dangerous strategy indeed."

Once you have a list of possible choices, use the reverse engineering process to improve your odds of arriving at a winning set of choices.

Frame the choice	• Ask "what are the different ways of resolving this problem?" • Generate pairs of opposite options and narrow down to ≥2 mutually exclusive options.
Expand scenarios	• Brainstorm diverse possibilities, including unexpected ones. • Express them not as options, but as narratives or scenarios of happy outcomes.
Specify conditions	• For each case, specify what must be true for the possibility to be a winning choice. • These are the conditions the team must commit to deliver if they choose a certain path.
Identify barriers	• Identify the conditions that're *least* likely to happen—these are your barriers to success. • Address all concerns, including the skeptics'
Design valid tests	• For each key barrier, design a valid test, e.g. surveying consumers or suppliers.
Conduct tests	• Run the tests to validate specific hypotheses. • Start with the conditions you're least confident about, then move on to the next-most-dubious condition and so on.
Choose	• Compare the test results and make an informed decision with real market data.

An Ongoing Process

The pursuit of winning is a never-ending process. Develop your answers for the *5 levels of the choice cascade*, use the *strategy logic flow* to understand your present realities and identify where-to-play and how-to-win possibilities, and *reverse-engineer* these possibilities to identify what would've to be true for each possibility to be your best chance to win.

Other Details in the Book to Look out For

The book is packed with detailed case studies and tips, including:

- Examples involving brands like Gillette, Pampers, Olay, Tide, Impress, Swiffer, Febreze and Bounty; and
- Details of various strategy tools and models you can use for your strategic analysis, and additional appendices about P&G's performance and the microeconomics of strategy.

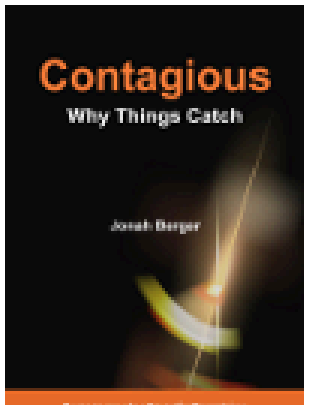
We've distilled the key ideas and tips in this summary. For more details and examples, please visit playingtowin.net.

KEY QUOTES

"In strategy, there are no absolute answers or sure things, and nothing lasts forever...In the end, building a strategy isn't about achieving perfection; it's about shortening your odds."

"Crystallizing the issue by clearly framing the choices for resolving it makes the issue immediately real and meaningful."

"Leaders lead, and a good place to start leading is in strategy development for your business...Play to win."



CONTAGIOUS

Why Things Catch On

JONAH BERGER

The Big "So What"

Why do some products and ideas spread like wildfire while others fail to catch on? In this book, Wharton marketing professor Jonah Berger shares the 6 STEPPS or ingredients for creating viral content that are more likely to spread via word-of-mouth (WOM). These insights are relevant for anyone who wants to build awareness, spread ideas or grow a customer base more effectively.

Introduction

Most people believe that products and ideas become successful due to 3 factors: quality, price, and advertising. Although these factors are relevant, they don't tell the full story, e.g. a free, low-quality YouTube video can still go viral with no advertising. Social influences and word-of-mouth (WOM) drive 20-50% of all purchasing decisions. These include product reviews, recommendations by friends/ colleagues, and so on. WOM is more effective than traditional advertising because:

- It's more *persuasive* since we tend to share both the pros and cons of a product or service candidly, making our recommendations more objective and believable.
- It's also more *targeted* since we only share information and stories with people whom we think would be interested in them.

The question is, how can you create content that's more likely to get passed on via WOM?

KEY QUOTES

"While traditional advertising is still useful, word of mouth from everyday Joes and Janes is at least ten times more effective."

Berger holds a Ph.D. in marketing and spent 10 years studying various types of content—ranging from products to articles, political messages and baby names—to uncover what spread and what didn't. He collected and analyzed data from many sources (e.g. marketing agencies and news websites), and ran experiments to test different content. In this book, he shares how he proved/disproved various factors/hypotheses to arrive at the 6 ingredients (STEPPS) behind social contagion. By applying these 6 principles, you can make any content more contagious, i.e. to spread from person to person via WOM.

- In *The Tipping Point*, Malcolm Gladwell suggests that to create virality, you need the right people to spread the message. However, Berger's research shows that contagious content is so viral in itself that it can spread *regardless of who is talking about it*. It's like how a good joke will still be funny even if it's told by an average person.

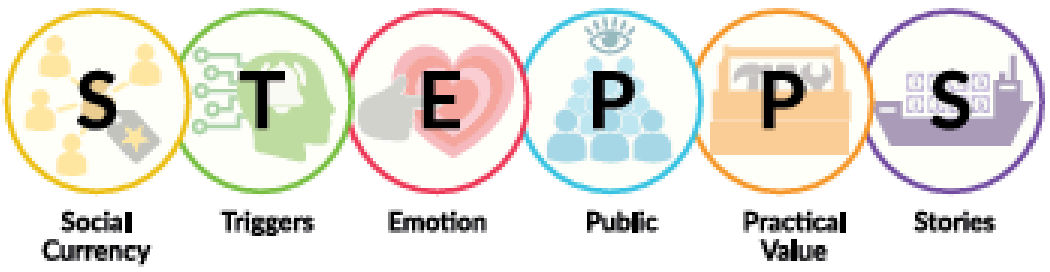
- People also tend to over-estimate the level of online virality. A study by the Keller Fay Group found that only 7% of WOM happens online; most social influence actually happens *offline* over daily activities like a dinner conversation. Reaching masses of people online isn't as important as ensuring the content is viral in the first place.

KEY QUOTES

"Follow these six key STEPPS, or even just a few of them, and you can harness social influence and word of mouth to get any product or idea to catch on."

"Contagious content is…so inherently viral that it spreads regardless of who is doing the talking."

The 6 STEPPS to Creating Contagious Content



Principle #1: Social Currency

Our social image is affected by many factors, including the job/title we hold, the clothes we wear, the house/cars we own and the things we say. Social Currency refers to things that help people to look good and improve their social influence.

"Just as people use money to buy products or services, they use social currency to achieve desired positive impressions among their families, friends, and colleagues."

- People want to appear smart, hip, rich, and cool (instead of seeming stupid, boring, poor or geeky). We share things that make us look good. There are *3 ways to generate Social Currency*: (i) make your product/idea remarkable, (ii) leverage game mechanics, and (iii) make it scarce/ exclusive.

Make your product/idea remarkable. People love to talk about things that are unusual, surprising, extraordinary, or worthy of mention. That's because talking about remarkable things makes *us* appear remarkable too.

- Identify your *inner remarkability* or what makes your product/idea truly stand out. Remarkability could come from breaking an expected pattern, doing something seemingly-impossible, or generating mystery/controversy.

- For example, *Blendtec* went viral with a series of "Will it Blend?" videos on Youtube—the videos showed its blenders reducing tough items (e.g. golf balls, iPhones) to dust. The *Blair Witch Project* (which was filmed on a handheld camera for $35,000) grossed more than $248 million worldwide because it got people debating if the movie was based on a true story.

Leverage game mechanics to make people feel good about their achievements. When people "win" a game, trophy, or award, they want to brag about their accomplishments. In the process, they also share about your brand or message.

- *Create Social Currency* in 2 ways: (i) *use metrics or status symbols* (e.g. point systems, leaderboards, badges, trophies) to make accomplishments visible, and (ii) help people to *publish* their achievements. For example, airlines have successfully gamified air travel with their frequent flier programs. Passengers fly with certain airlines to collect air miles and move up the rewards hierarchy, then brag about their achievements (e.g. when they achieve Diamond status).

- You can also run *contests* based on popular votes. As participants rally others to vote for them, they also create awareness for your brand or campaign. Burberry's sales increased by 50% when it ran a campaign featuring pictures of people wearing their trenchcoats—people whose photos were featured ended up sharing about it and driving others to Burberry's website.

KEY QUOTES

"To get people talking we need to craft messages that help them achieve these desired impressions."

"Game mechanics help generate social currency because doing well makes us look good."

Use scarcity and exclusivity to make people feel like insiders. People assume that if something is hard to obtain, it must be special or desirable. Access to scarce or exclusive items/ news makes people feel like insiders, and they'd want to brag about their special status.

- *Scarcity* is about limiting something's availability. You can do that by (i) limiting the number of units produced/ released, (ii) restricting the time/place to buy, or (iii) creating the impression that it will sell out quickly. For example, McDonald's McRib didn't sell well initially, but became a coveted item after they removed it from the menu and brought it back only for limited periods and at selected locations.

- *Exclusivity* is about restricting access to people who meet certain criteria (e.g. wealth, prestige, knowledge, connections). Rue La La (a website for discounted designer items) became popular when it started to run flash sales for just 1-2 days each, generating perceived scarcity for its discounted products. In addition, you can only access the website through an invitation from an existing user, which creates an additional sense of exclusivity.

A note of caution: Social Currency is built on intrinsic motivation. When you pay someone to refer others, it may actually *reduce* the level of sharing to what's proportionate to the amount of financial incentive.

Principle #2: Triggers

A trigger is something that reminds you of something else. For example, the smell of food reminds you that it's time for lunch, or the word "dog" reminds you of the word "cat".

- People don't always share what's the most interesting, novel or surprising. Instead, people tend to talk about *whatever's at the top of their minds*, especially during casual chats. If your product/idea is linked to a trigger that people encounter frequently, then they're more likely to talk about it. Researchers found that playing French music at a restaurant triggered more purchases of French wine, whereas playing German music triggered more purchases German wine. In 1997, Mars chocolate

KEY QUOTES

"The mere fact that something isn't readily available can make people value it more and tell others to capitalize on the social currency of knowing about it or having it."

"Top of mind leads to tip of tongue."

"People often talk about whatever comes to mind, so the more often people think about a product or idea, the more it will be talked about."

bars saw a jump in sales due to extensive media coverage about NASA's mission to planet Mars.

- There's also a difference between *immediate vs ongoing WOM*. Things that are novel or interesting (e.g. a colleague coming to work in a jewel-studded suit) may trigger immediate WOM, but the novelty soon fizzles out. To keep people talking weeks and months later, you need to design products/messages that are linked to cues in the environment.

- Generally, an interesting/clever slogan is less effective in *changing behavior* than one with a strong trigger. In a study, students were asked to provide feedback on 2 public-health slogans: "Live the healthy way, eat five fruits and veggies a day" and "Each and every dining-hall tray needs five fruits and veggies a day." The students preferred the 1st slogan to the 2nd one. Yet, the latter was more effective in shaping behaviors—students who saw the 2nd slogan and used trays in the cafeterias ended up eating 25% more fruits and vegetables.

An effective trigger should fulfil 3 criteria:

- *Frequency*: Choose a stimulus that people will encounter regularly in their daily lives. For example, Budweiser ran a campaign that showed people greeting each other with "Wassup?" while drinking Budweiser. This was silly but nonetheless effective since "Wassup" was frequently used by young men at that time, making it an effective trigger or reminder to drink Budweiser.

- *Relevance*: There should be a strong and relatively unique link between the product/idea and the stimulus. For example, the color red is a weak trigger as it's associated with many things from Coke to love and danger. Kit Kat's jingle in the 1980s ("Have a break, Have a Kit Kat") was wildly successful. Then in 2007, it successfully revived the brand by repeatedly pairing itself with coffee. Coffee is great trigger for Kit Kat because (i) "Kit Kat and coffee" sounds good, (ii) it builds on the notion of having Kit Kat during a break (or coffee break), and (iii) coffee is a frequent stimulus.

- *Context*: Choose triggers that can be found near the desired behavior, so they can trigger action before they're

KEY QUOTES

"Social currency gets people talking, but triggers keep them talking."

"Accessible thoughts and ideas lead to action."

"The more things a given cue is associated with, the weaker any given association."

"By acting as reminders, triggers not only get people talking, they keep them talking."

forgotten. For example, if you want people to use reusable grocery bags, consider using a shopping list as a trigger (so they'll remember to bring the bags *before they* leave home). Likewise, there's no point using camels as a trigger if you're targeting people in New York City—since they rarely encounter a camel, they won't think about your product/message.

You can even use your competitors as a trigger by using the "poison parasite" approach. Design your marketing campaign to establish a link with your competitor's product or message, e.g. create a spoof of their ad. That way, each time someone sees your competitor's ad, they'll think of you.

Principle #3: Emotion

Emotions can make us laugh, shout, talk, share, and buy things. The question is, what type of messages/ideas will trigger emotions that lead to action?

- Berger found that both positive and negative emotions can spur action. What's more important is the *level of arousal* triggered by the emotions. When we're aroused, our hearts beat faster, our blood pressure increases, and we're ready for action. High-arousal emotions prepare us for action and *increase* the likelihood of us talking about or sharing something. Low-arousal emotions lull us into a state of inaction to *decrease* the likelihood of sharing.

- *High-arousal emotions* include positive emotions (e.g. awe, excitement, amusement) and negative ones (e.g. anger and anxiety).

Emotion	You're more likely to share when...
Awe (+)	You're inspired by a story of a nerdy guy who won a talent show with his amazing voice
Excitement (+)	You've just returned from an amazing holiday with lots of pictures
Amusement (+)	You can't stop laughing at a funny video of a baby
Anger (-)	You're furious about news of a tax increase
Anxiety (-)	You're anxious about news of a new life-threatening virus

- *Low-arousal emotions* can also be positive or negative:

KEY QUOTES

"When we care, we share."

"We need to pick the right emotions to evoke. We need to kindle the fire."

Emotion	You're less likely to share when...
Contentment (+)	You're feel relaxed after a good massage
Sadness (-)	You're saddened by news of someone's death

To get people to share, focus on kindling high-arousal emotions.

- Don't just focus on facts and information in your marketing messages. Figure out how you can make them care. You can find *emotional hooks* in *any* product, service or message. For example, Google's 2008 "Parisian Love" campaign told a love story using a series of Google searches—studying abroad, cafes in Paris, how to impress a French girl, churches in Paris, how to assemble a baby crib, etc. In *Made to Stick*, Chip and Dan Heath suggest using the "Three Whys" to find an idea's emotional core—ask yourself why something is important, and keep drilling down by asking "Why" at least 3x.

- You can also create emotional arousal using *situational factors*, or targeting people who're already fired up. For example, people are more likely to share something (or respond to an ad) when they're in a state of arousal, e.g. just after exercise, at the height of a crime drama, or just after watching an exciting game show.

KEY QUOTES

"Rather than harping on features or facts, we need to focus on feelings; the underlying emotions that motivate people to action."

"Any sort of arousal, whether from emotional or physical sources, and even arousal due to the situation itself...can boost transmission."

Principle #4: Public

When something is public and observable, we're more likely to discuss and imitate it, making it more likely to spread. Conversely, it's hard to mimic or talk about things we don't see.

- We tend to follow others on the assumption that if lots of people are doing something, it must be right or good. Psychologists call this *Social Proof or herd mentality*. Social Proof influences everything we do, from what we buy/eat, to what career we choose and whether we pay our taxes. We'd choose a crowded restaurant over an empty one, and add money to an already-full tip jar instead of an empty one. In fact, 1 in 10 kidney patients refuse a kidney donation even though it would've been a match—they wrongly assume that if others have rejected the kidney before them, it must be a lousy kidney!

"Making something more observable makes it easier to imitate."

"We assume that if other people are doing something, it must be a good idea."

"Behavior is public and thoughts are private."

- Public choices and behaviors are more likely to be imitated than private ones. Items like shirts and cars are more likely to spread as a fashion statement or status symbol because they're *highly visible*. On the other hand, we don't notice the socks or toothpaste used by others, making them less likely to spread via WOM. Even if everyone in a room is feeling uncomfortable about a task, they'll still carry on if others *appear* to be ok with it—we can only imitate public behavior, not private thoughts.

To make your product/idea spread, you need to make the private public. Create Social Proof by making hidden choices and behaviors visible in 2 ways:

- *Self-advertising*: Design products, campaigns or behaviors that are so visible that they advertise themselves, e.g. Apple's prominent logo on its computers, Pringles' unique tubes for its potato chips, or other distinctive shapes, sounds and features. Members of the Movember Foundation managed to raise awareness of prostate cancer (a serious but seldom-discussed problem in men's health) by growing their moustaches every November—in so doing, they became walking advertisements for their cause.

- *Behavioral residue*: Create physical traces that will remain even *after* an action or behavior is completed, e.g. giving people "I voted" stickers when they vote. Lululemon makes high-quality shopping bags that people keep for daily use, thus generating both Social Currency and Social Proof.

On the other hand, if you're trying to discourage undesirable behaviors (e.g. drink-driving, theft or drugs), you should *avoid* focusing on the problem.

- For sample, the "Just Say No" anti-drug campaign ended up *increasing* drug use because (i) it increased the visibility of drug-use, and (ii) it created the impression that many young, cool people were using drugs.

- A more effective approach would be to (i) hide the undesired behavior (i.e. make it private or unseen), and (ii) promote the desired behavior instead. Instead of highlighting the problem of stealing wood from a national park, promote how you can preserve the forest by not removing the wood.

KEY QUOTES

"The more public a product or service is, the more it triggers people to take action."

"If something is built to show, it's built to grow."

"If you want to get people not to do something, don't tell them that lots of their peers are doing it."

Principle #5: Practical Value

People like to help others. We'll naturally pass on content that has practical value, e.g. things that can help others to save time or money, improve their health, etc. While Social Currency is about making ourselves look good, Practical Value is driven by altruism and our desire to help the recipients.

- To increase the likelihood of your content being shared, you need to make it *stand out* by (i) highlighting the incredible value being offered (monetary or otherwise) and (ii) packaging it in a way that can be easily passed on.

Highlighting incredible value:

- People assess value using *reference points* rather than the absolute value of a product/service. A $1 coffee may seem cheap in New York but exorbitant in rural India. A $50 dress will sell better just by having a "Sale" sign with an original price of $100 (making $100 the reference point).

- Generally, saving 50% sounds more exciting than saving 10%. However, *diminishing sensitivity* says that a change will have a smaller impact as it moves farther from the reference point. For example, buying a $$20 item at $10 sounds like a great deal, but buying a $1,000 item at $990 doesn't. That's because $10 is much further from $1,000 than it is to $20.

- To frame your offers optimally, use the *rule of 100*:

  (i) If an item costs less than $100, frame the price reduction in *percentage terms* to make it appear more significant (e.g. 20% off a $50 item sounds better than saving $10).

  (ii) If an item costs more than $100, frame the price reduction in *absolute or dollar terms* to make it sound more attractive (e.g. saving $200 sounds better than 20% off a $1000 item).

- An offer is also more likely to be shared if it's (i) *surprising* or surpasses expectations, and (ii) limited in availability

KEY QUOTES

"Practical advice is shareable advice."

"If Social Currency is about information senders and how sharing makes them look, Practical Value is mostly about the information receiver."

(e.g. restricted to X items per customer or for a limited time).

- You can *also make the value more obvious or visible* to create Social Proof, e.g. having a digital sign at the checkout counter to show how much other customers have saved, or ringing a bell each time someone enjoys a deal.

Packaging your content. Information can also have high practical value. To make your content more shareable:

- *Keep it short*, e.g. having a 1 page email with 3-4 main points about 1 main topic, with links for people to click on if they wish to find out more.

- *Keep it targeted*. Broad content or stories may be relevant to a wider audience, but narrower/targeted content can be more compelling. When something reminds you specifically of someone, you're more likely to pass it along.

KEY QUOTES

"The fact that a deal won't be around forever makes people feel that it must be a really good one."

"While broadly relevant content could be shared more, content that is obviously relevant to a narrow audience may actually be more viral."

Principle #6: Stories

Stories are powerful information vessels. They capture our attention, spark our imagination, tug at our heartstrings, and convey underlying messages in a way that can change our attitudes and behaviors.

"People don't just share information, they tell stories."

- Stories provide a fast and easy way for people to pass on *lots of information* in a vivid, engaging way. Consider how fables, fairy tales and famous works (e.g. Shakespeare) have been used over the generations to impart morals and complex lessons/themes.

"Stories carry things. A lesson or moral. Information or a take-home message."

- Stories can also be *more persuasive* than factual articles or advertisements as people become emotionally engaged and are less likely to challenge the facts.

To spread an idea, you need to wrap it in a broader narrative, i.e. to embed your product/idea in a captivating story that people want to pass on.

"While people focus on the story itself, information comes along for the ride.

- For example, if you receive exceptional customer service, you may feel compelled to share the experience with

your friends. In the process, you'll also share about the company, the product/service, how they solved your problems and exceeded your expectations.

- Stories also tend to *spread via WOM* because they create Social Currency by making people look cool or informed, trigger high-arousal Emotions, and provide Practical Value in the form of useful information or advice. For instance, people were intrigued by the story of how Jared Fogle supposedly lost 245 pounds eating Subway sandwiches. They wanted to know how he could lose so much weight eating fast food. In the process, they learned about Subway's healthy and tasty food options.

However, it's not enough to simply weave your brand into a story. You must ensure that the virality is valuable, i.e. your brand or core product benefit must be so essential to the story that people can't retell the story without mentioning it. This is crucial since people tend to drop the irrelevant details as they pass on the stories. The only way to connect the word-of-mouth back to you is to ensure the information you want people to notice/remember is integral to the story itself.

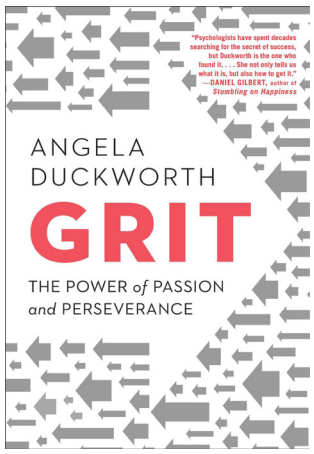
- In 2004, Ron Bensimhon crashed the Olympics in a publicity stunt, diving into an Olympics pool in Polka dot tights and tutus. Although the stunt was widely shared and discussed, no one spoke of the online casino GoldenPalace.com which was written in bold across Ron's chest. There was simply no relevant link between the stunt and the casino.

- On the other hand, Dove's 2006 "Evolution" video revealed the amount of makeup and photo-editing used to create the stunning-looking women that we see in advertisements. The video was viewed 1.7 mil times within a month of its upload on Youtube, and 12 mil times within the first year. It brought millions of dollars worth of exposure for Dove, stimulated discussion on the definition of beauty, reminded people that what we see in ads are unreal, and tied in neatly with Dove's campaign for "real beauty" to celebrate diverse and natural beauty in women.

KEY QUOTES

"That is the magic of stories. Information travels under the guise of what seems like idle chatter."

"We need to make our message so integral to the narrative that people can't tell the story without it."



GRIT

The Power of Passion and Perseverance

ANGELA DUCKWORTH

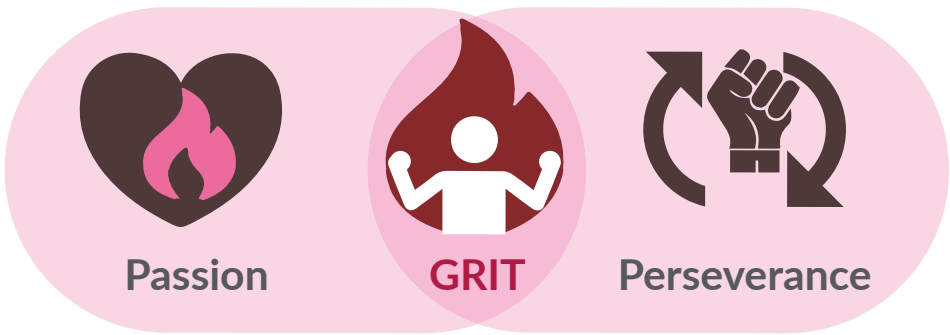
The Big "So What"

Grit has been found to be a stronger predictor of high-achievement than intelligence, talent and other personality traits. In this book, Duckworth explains why this is so and how we can cultivate grit in both ourselves and others to accomplish more in life.

Introduction

Grit is the combination of passion (a deep, enduring knowledge of what you want) and perseverance (hard work and resilience). It has been found to reliably predict whether military recruits graduate from rigorous elite training programs, whether salespeople stay in their jobs, whether high-school students graduate on schedule and whether adults earn their graduate degrees.

Grit = Passion + Perseverance



Over the years, Duckworth has studied grit through experiments, empirical research and interviews with "grit paragons" (people who exemplify grit). In this book, she explains why grit matters, how it relates to other success factors and how we can develop grit.

Why Grit is Important

- Various research studies have proven that **talent and intelligence alone don't predict success**. In fact, they can be dangerous when over-emphasized.

KEY QUOTES

"What we eventually accomplish may depend more on our passion and perseverance than on our innate talent."

"It was this combination of passion and perseverance that made high achievers special. In a word, they had grit."

"Apparently, aptitude did not guarantee achievement."

- *Talent can hinder performance* when people feel they needn't work as hard or try to hide their weaknesses instead of addressing them. People who believe they lack talent may also give up without discovering what they're truly capable of achieving.

- *Aptitude tests are poor measures of true potential*. Duckworth's student was assessed (based on aptitude tests) to be inadequate for advanced math classes, yet he excelled and went on to become a rocket scientist. West Point's "Whole Candidate Score" was designed to shortlist cadets with the propensity to master the required skills, yet only 20% of the shortlisted recruits graduated. Grit turned out to be a much stronger predictor of whether cadets would graduate.

In the end, talent is only important if you put in effort. In fact, **effort is doubly important** to move from talent to achievement:

Talent x *Effort* = **SKILL** → Skill x *Effort* = **ACHIEVEMENT**

- You must put in effort to hone your natural talents into tangible skills through practice and improvement. You must also put in effort to apply those skills to solve real-world problems to attain achievement. Grit is vital for achievement as it helps to *sustain effort*. [Note: this theory is about the inner psychology of achievement and doesn't address external factors like luck or opportunities.]

- For example, celebrity potter *Warren MacKenzie* dabbled with many artistic interests from painting to textile design before focusing on pottery. His first 10,000 pots were the most difficult. However, once he developed the required skills, he was able to produce good pots more easily, and could focus his efforts on creating masterpieces for more people.

- In his study of competitive swimmers, sociologist Dan Chambliss found that great genes or inborn physical features only play a small role in excellence. If you did a time-lapse video of a swimmer's life, you'd find that the real results come from a series of *mundane activities* like daily training and conditioning.

Most of us value hard work. Yet, we tend to have a **talent-bias**, i.e. we're positively biased toward natural talent.

KEY QUOTES

"What we accomplish in the marathon of life depends tremendously on our grit—our passion and perseverance for long-term goals. An obsession with talent distracts us from that simple truth."

"Skill is only developed by hours and hours and hours of beating on your craft."

"With effort, talent becomes skill and, at the very same time, effort makes skill productive."

"In doing something over and over again, something that was never natural becomes almost second nature…it doesn't come overnight."
-John Irving

"Greatness is many, many individual feats, and each of them is doable."
- Dan Chambliss

- *Naturals vs strivers*. People tend to believe "naturals" with musical talent are more likely to succeed than "strivers" who work hard to make their mark. Investors are also more likely to back a "natural entrepreneur" than a "striver entrepreneur".

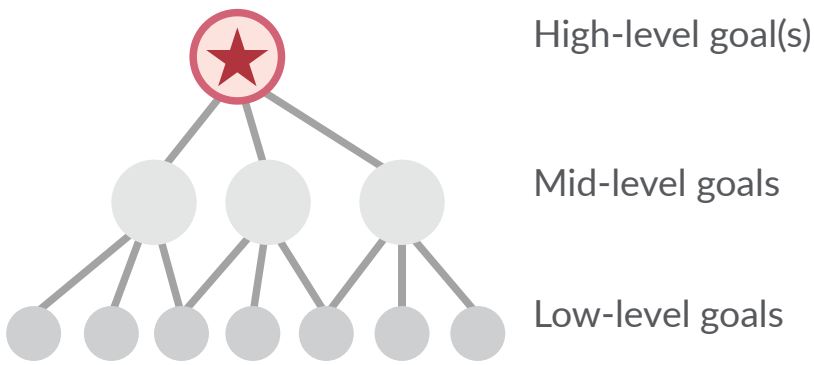
- When we see people performing effortlessly, we instinctively attribute it to their *special talents*. After all, (i) the mystery of natural-born talent is much more exciting than the mundanity of hard work, and (ii) we won't feel as bad about our own lack of achievements if we can blame it on our lack of magical talent.

Understanding Grit

Grit is *not* about the intensity of your passion or enthusiasm. It's about moving in a direction with **consistency and endurance**. It's like having a clear inner compass that guides all your decisions and actions. Gritty people ponder their purpose daily, feel excited about every small step in the right direction, and keep refining their path until they're where they want to be.

- In the book, Duckworth shares the **Grit Scale**—it comes with 10 self-assessment questions that measure how easily you get distracted by new projects/goals/interests, whether you work hard, finish what you begin and overcome challenges/setbacks. Your grit score is a snapshot of how you see yourself now; it will change over time.

Aligning your goals. All of us have a hierarchy of goals. Low-level goals are concrete, specific, and the means to an end, like items on our weekly to-do list. As you move up the hierarchy, your goals become more abstract and important.



- Your top-level goal is your *end-goal or life-purpose*. Hall of Fame pitcher Tom Seaver seeks to be "the best I possibly can day after day, year after year." Duckworth seeks to "use psychological science to help kids thrive".

KEY QUOTES

"Mythologizing natural talent lets us all off the hook. It lets us relax into the status quo."

"Enthusiasm is common. Endurance is rare."

- Gritty people (i) stick to their high-level goals consistently and (ii) align their goals at all levels. In short, grit is not about sticking to every goal to the bitter end. It is about *being clear and loyal to your top-level goal* and adjusting your low-level goals to support that end goal. In fact, you should change your low-level goals regularly to make them more viable, effective and/or congruent with your high-level goals.

- You can use these *4 steps to prioritize and align your goals*:

(i) List down 25 goals.

(ii) Reflect on them and choose just 5 top-priority goals. Consider which of these inter-related goals are means-goals vs end-goals, and which ones are the most important to you.

(iii) Intentionally avoid the other 20 goals that you didn't select. These will be your biggest distractions.

(iv) Define your single inner compass. Ask yourself: to what extent do your key goals serve a common purpose? Use your top-level goal as a compass to guide/align the lower-level goals.

KEY QUOTES

"The more unified, aligned, and coordinated our goal hierarchies, the better."

"Time and energy are limited. Any successful person has to decide what to do in part by deciding what not to do."

Grit Can Be Developed

Nature vs nurture. Every aspect of our human traits comes from both genes and life experiences. Grit is no different.

- Even traits like height (which may seem to be 100% genetic) can be changed in 1 generation due to nutrition, modern medicine, clean air and water. Talents, personality traits and grit are also an outcome of *both nature and nurture*.

- All human traits are *polygenic*, i.e. they're influenced by multiple genes. Hence, there's no such thing as a "grit gene".

We change with age. The grittiest adults were found to be around 70 or older, while the least gritty were in their 20s.

- There are *2 plausible explanations*: the older people lived in a different cultural era with different values and/or they developed grit as they matured. There's inadequate scientific data to draw a firm conclusion at this point.

"Necessity is the mother of adaptation."

- Duckworth believes that both factors play a part, with *life experiences* playing the bigger role. Over time, we learn things that we didn't previously know, e.g. realizing we have the ability to overcome setbacks. At other times, we're simply forced by circumstances to learn to act differently, e.g. when we get a new job, become a parent, or undergo a life-changing event.

Becoming grittier. Research suggests 4 "psychological assets" behind grit. Each of these components can be developed by yourself (from inside-out) or with external help (from outside-in).

- *Interest*: loving what you do;
- *Practice*: focusing on improvement no matter what;
- *Purpose*: believing strongly that your work matters to yourself and to others. This usually happens only after years of cultivating your interest and honing your abilities from practice; and
- *Hope*: believing that you can work things out and overcome your challenges. Hope works hand-in-hand with all 3 components above to determine how you respond to failures—if you get up and keep going, or stay down and be defeated.

In the next 2 sections, we'll break down how you can develop grit from inside-out and outside-in.

Developing Grit From Inside Out

Many successful people have advised us to **follow our passion** in choosing our career. Indeed, people who are interested in their jobs are much more satisfied with their work, perform better, stay longer in their jobs and are happier with their lives in general.

However, passion is *not* inborn; **passion is cultivated** over time.

- *Grit paragons* didn't start by finding the perfect job and falling crazily in love with it. Nor did they discover their passion in a magical, fireworks-filled moment. Instead, they spent years exploring different interests before focusing on one area. As they practiced and honed their skills, they also developed a deeper understanding and appreciation of their craft until it became a burning passion and a calling.

KEY QUOTES

"Passion begins with intrinsically enjoying what you do."

"What ripens passion is the conviction that your work matters."

"At various points, in big ways and small, we get knocked down. If we stay down, grit loses. If we get up, grit prevails."

"The directive to follow your passion is not bad advice. But what may be even more useful is to understand how passions are fostered in the first place."

"Passion for your work is a little bit of discovery, followed by a lot of development, and then a lifetime of deepening."

- To cultivate deep interest , there are several core ingredients:

(i) *Age*. Most people only start to cultivate specific vocational interests around middle school.

(ii) *Real-life triggers*. You can't predict exactly what will interest you. Any random event may spark your interest, though you'd probably be too absorbed in the moment to realize it.

(iii) *A period of interest development*. For an interest to take root, it must catch your attention repeatedly.

(iv) *Supportive people*. Positive feedback and stimulation (from parents, coaches, peers etc.) help your interest to thrive.

Discovering your Interests

In the initial stages, most people learn and practice something for fun, not to develop a life-long career.

- At this phase, interest is best nurtured through *fun, exploration and autonomy*. If you push a beginner too hard, you may end up killing the fledging interest.

- *For example*, New York Times puzzle editor Will Shortz was introduced to puzzles from young by his mum, a writer and puzzle lover. When he started to create his own puzzles, his mum taught him how to submit his puzzles for sale, and he sold his first puzzle at the age of 14. Amazon's founder Jeff Bezos loved to tinker with solutions since young. Instead of scolding or discouraging him, his mum listened to his ideas and even helped to buy parts so he could assemble his prototypes.

Although gritty people typically discover their interest through trial and error, they **don't make many career changes** once they've identified their passions/interests.

- It's ok to have multiple hobbies and to switch them regularly. However, if you keep *switching occupations*, you'll never progress beyond a passionate newbie to master anything of real value.

KEY QUOTES

"Rush a beginner and you'll bludgeon their budding interest. It's very, very hard to get that back once you do."

"The reality is that our early interests are fragile, vaguely defined, and in need of energetic, years-long cultivation and refinement."

"Doing one thing better and better might be more satisfying than staying an amateur at many different things."

"For the beginner, novelty is anything that hasn't been encountered before. For the expert, novelty is nuance."

- Grit paragons don't get bored with their craft because they keep discovering fascinating *nuances and distinctions*. An art expert can appreciate the fine details between the different art pieces while a novice can't, and such deep mastery can be extremely fulfilling.

If you don't have a passion yet, **start by discovering your interests**:

- *Reflect* on questions like: What do I tend to think about the most? What do I really care about? What makes me feel alive? What do I find unbearable?

- Once you have a rough idea, *start experimenting* with different things in that general direction. Give yourself some time to do trial and error in each area, bearing in mind you'll need repeated exposures to develop an interest. Keep exploring, discovering and seeking out mentors until certain options stand out.

Deepening Through Practice

The term "**deliberate practice**" was coined by cognitive psychologist Anders Ericsson. He found that experts became outstanding not just from lots of practice, but *how* they practiced. Specifically:

- They set a *stretch goal*, zooming in on a specific weakness or area for improvement.

- They *practice with full attention* (often by themselves) with 100% focus on reaching the stretch goal.

- They seek *immediate feedback*, focusing on what they do wrong and taking steps to fix them.

- They *repeat the process* over and over until they've reach their stretch target and the actions have become second-nature. Then, they set a new stretch goal and start over again.

Deliberate practice and grit. In a joint study of Spelling Bee contestants, Duckworth and Ericsson found that both grit and deliberate practice predicted spellers' performance. Deliberate practice was also much more effective than quizzes and reading for fun, in spellers' ability to advance to the next level.

KEY QUOTES

"Experts do it all over again, and again, and again. Until they have finally mastered what they set out to do. Until what was a struggle before is now fluent and flawless. Until conscious incompetence becomes unconscious competence."

Deliberate practice and flow. Mihaly Csikszentmihalyi found that people in a state of flow immerse themselves fully in their tasks to deliver high performance effortlessly and pleasurably. Duckworth believes that deliberate practice hones your skill levels so you can perform even better when you're in flow:

- Deliberate practice is a set of behaviors (what experts *do*), while flow is an experience (how experts *feel*). Deliberate practice is about pushing yourself to improve *beyond* your existing skill levels (which makes it effortful and often unpleasant), while flow is about thriving at your *existing* skill level (which makes it enjoyable and effortless).

- Most of us see experts performing effortlessly in flow, but we don't see the years of deliberate practice that make their achievements possible in the first place.

Most people don't do deliberate practice *at all*. By **understanding and applying** the science of deliberate practice, you can increase your rate of learning significantly:

- *Establish a routine* for deliberate practice, doing it at the same time and place daily until it becomes a habit that you repeat without conscious thought.

- Seek to enjoy the challenge. *Don't judge yourself* during practice, as it only brings feelings of anxiety or self-blame.

Developing a Sense of Purpose

Purpose is "the intention to contribute to the well-being of others." Both gritty and non-gritty people seek short-term pleasures, but gritty people are drastically more likely to also **seek to contribute to others**. They usually spend years developing their skills and interest, *before* they discover their purpose later in life.

Similar to interests/passion, **passion must be cultivated**.

- Yale management professor Amy Wrzesniewski said that people can see their work as a job (a necessity to survive), a career (a stepping stone to better jobs), or a calling (a vital part of your life). Her research suggests that any type of work—regardless of its job description—could be a *job, career or calling*. It all depends on how you choose to see what you do.

KEY QUOTES

"Deliberate practice is for preparation, and flow is for performance."

"The idea of years of challenge-exceeding-skill practice leading to moments of challenge-meeting-skill flow explains why elite performance can look so effortless."

"If you keep practicing in the same time and place, what once took conscious thought to initiate becomes automatic."

"At its core, the idea of purpose is the idea that what we do matters to people other than ourselves."

"How you see your work is more important than your job title."

"The road to a purposeful, interesting passion was unpredictable."

- A sense of purpose emerges only with *2 key revelations*: (i) you must discover a problem that needs solving (which may come as a revelation during a life event) and (ii) you must believe *you* can personally make a difference.

Here are **3 ways to start cultivating a sense of purpose**:

- Connect your work with a *bigger picture or vision*. Constantly look at how you can make a positive impact with what you do.
- Find ways to *tweak your work* in small, meaningful ways to better express your personal values.
- *Find a role model*: study the life of people who inspire you, or imagine what'd matter most to you 15 years from now.

Nurturing Hope

Hope is "the expectation that our own efforts can improve our future". It **helps us to persevere**; it gives us the strength to get up each time we fall and to keep going.

- *Optimism*. Everyone encounters setbacks. However, optimists are more likely to learn and find solutions because they attribute those setbacks to *temporary* and *specific causes* (e.g. "I made a mistake *this* time"). Pessimists are more likely to give up as they attribute the setbacks to *permanent* and *pervasive* causes (e.g. "I'm a loser") which seem impossible to overcome.
- Our *interpretation of events* (and not the events themselves) determines our feelings and behaviors. By helping patients to think more objectively and healthily, cognitive behavioral therapists can address depression and related issues.
- According to psychologist Carol Dweck, people with *growth mindsets* believe that people can change (be it their skills, talents, or personality), while those with fixed mindsets think they can't. Duckworth's research shows that growth mindset and grit go hand in hand.

We *can* **train ourselves** to become more optimistic and gritty, by conditioning the prefrontal cortex of our brains to rationalize or moderate our fears.

KEY QUOTES

"Whatever your age, it's never too early or late to begin cultivating a sense of purpose."

"It isn't suffering that leads to hopelessness. It's suffering you think you can't control."

"When you keep searching for ways to change your situation for the better, you stand a chance of finding them. When you stop searching, assuming they can't be found, you guarantee they won't."

"The reality is that most people have an inner fixed-mindset pessimist in them right alongside their inner growth-mindset optimist."

- However, to do that, you must *personally undergo challenges* that you can control, to wire your neural circuits. Children and adolescents who experience adversity that they can control/ influence are likely to become more resilient later in life. The more intense the experiences, the stronger the impact.

- Unfortunately, this also means that you *can't talk someone into becoming grittier*.

You can cultivate hope in several ways:

- *Equip yourself with new facts* and develop a growth mindset. Know that your brain is extremely flexible and gets stronger with use, just like your body's muscles. With practice, you can change anything from your intelligence to your skillsets. Each time you catch yourself responding with helplessness or frustration, step back and say "OK, I just slipped into a fixed mindset. Let's start over. What can we learn from this?"

- *Practice optimistic self-talk* and use growth-mindset language, e.g. "This is a tough problem that I can't solve *yet*" or "Great job! What did you learn to help you do even better?". Avoid fixed-mindset language, e.g. "This problem is too hard for me" or "Great job! You're a genius!".

- *Ask for help*. Having help and support gives you hope of improvement. Find role models who inspire you.

Developing Grit From Outside In

Parenting For Grit

Duckworth refers to parenting broadly as the act of nurturing the next generation. Every grit paragon she interviewed had at least 1 person who, at the right time and in the right way, motivated him/her to push through to the next level.

If you want your children to become grittier, you must first **role model** passion and perseverance in the pursuit of your own goals.

You can also use **wise parenting**—being concurrently supportive and demanding—to nurture grit.

KEY QUOTES

"Like a muscle that gets stronger with use, the brain changes itself when you struggle to master a new challenge."

"All of us are 'parents' to young people other than our own children in the sense that, collectively, we are responsible for "bringing forth" the next generation."

- Unlike controlling parents, wise parents understand their children's psychological needs, and set rules/boundaries out of *selflessness* rather than a need for control. They don't always punish their kids for doing something wrong, nor do they let them get away with things. They respect their children's privacy and freedom, yet hold them accountable for their decisions.

- Wise parents set high expectations for their children backed by support. They enforce strict family rules which they themselves abide by. Kids with wise parents are more likely to *emulate their parents' behaviors* when they grow older.

- *Teachers* who're both supportive and demanding also tend to more positively impact their students. When teachers provide specific feedback and express their confidence in the students' ability to achieve high standards, the students are twice as likely to seek improvement.

Providing the Training Ground for Grit

Kids who participate in extra-curricular activities outside of the classroom tend to fare better from grades to self-esteem. **Follow-through** in such activities was found to be even more important—it was the best predictor of whether young people attained high achievement. Those who excelled later in life had (i) participated in ≥2 different high school extracurricular activities for several years each and (ii) made major advancements in both activities e.g. winning competitions or holding leadership roles.

Duckworth found **grit and follow-through** to be directly correlated. When someone commits to an activity and makes progress in it over several years, it's a signal of their existing grit and at the same time shapes their character. In scientific studies, animals and people who've done hard things in 1 area were found to be more tenacious in other hard tasks as well.

To **nurture grit in young children**:

- Sign them up for *extra-curricular activities* once they're old enough, so they spend at least some time each week doing hard things that interest them.

- Consider implementing the "*Hard Thing Rule*" in your family:

KEY QUOTES

"(Wise parents) appreciate that children need love, limits, and latitude to reach their full potential. Their authority is based on knowledge and wisdom, rather than power."

"Following through on our commitments while we grow up both requires grit and, at the same time, builds it."

(i) Everyone (mum and dad included) must do a hard thing;

(ii) Everyone gets to choose his/her hard thing; and

(iii) You can only quit when you reach a natural stop point (e.g. at the end of a season or term) and not at your whim or fancy.

Developing a Culture of Grit

Culture refers to a group's **shared norms and values**. Our cultures shape our self-identity, worldview and how we think and act.

You can fast-track your grit development by **joining a gritty culture**.

- When you're surrounded by gritty people, you're likely to conform by becoming grittier. The cultural spillover effects can also create a "*social multiplier effect*" to multiply the overall grittiness of the group.
- Once you're shaped by a culture, the traits can become part of your *self-identity* and influence all your life decisions. For example, you may not push yourself to finish a triathlon due to a logical cost-benefit analysis, but you may do so out of the conviction that "I'm not a quitter".

To **build a gritty culture**, you'll need to communicate grit relentlessly in terms of what you say, how you say it, how often you say it, and how you demonstrate it. Communicate it to the point where everyone in the organization has internalized it.

Conclusion and Details in the Book to Look out For

Grit is a vital part of the psychology of success and how we manage ourselves. However, it's not the only virtue that's important. Our character is multi-dimensional, and there're other virtues (like social intelligence and curiosity) which affect how we interact with others, learn and engage with ideas.

In the book, Duckworth includes many other details, including:

- Empirical research, highlights of interviews with grit paragons, and examples of how people developed passion, purpose and perseverance in various fields

KEY QUOTES

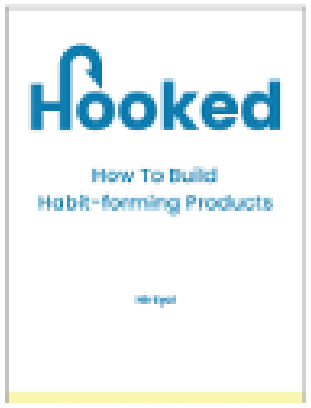
"Whether we realize it or not, the culture in which we live, and with which we identify, powerfully shapes just about every aspect of our being."

"If you want to be grittier, find a gritty culture and join it."

"Either small environmental differences, or genetic ones, can trigger a virtuous cycle. Either way, the effects are multiplied socially, through culture, because each of us enriches the environment of all of us."

"The plurality of character operates against any one virtue being uniquely important."

"Grit isn't everything. There are many other things a person needs in order to grow and flourish. Character is plural."



HOOKED

How to Build Habit-Forming Products

NIR EYAL

The Big "So What"

Why are certain products or services so addictive while others fail? In this book, Eyal explains the role of habits in successful products/services, and how you can use the 4-step Hook Model to shape customer behaviors and habits.

Introduction

To have a massively successful business like Google or Facebook, it's not enough to have the marketing muscle to reach lots of people. You must learn to leverage human habits and emotions and get people to use your product so regularly that it becomes a habit.

Habit-forming companies offer first-to-mind solutions, i.e. they become so strongly associated with a problem/need that people automatically reach for these solutions when the triggers appear. For example, you'll automatically think of Google when you need to search for information, or start scrolling through your Facebook or Instagram feeds when you're bored or lonely. The question is, how do you develop such an association?

The key is to create a series of hooks and experiences that lock people into using your products habitually. After years of research, consulting and real-life experience, Eyal developed the 4-part Hook Model which can be used to embed habit-forming cycles into a product/service. In this summary, we present the key ideas in 3 parts:

- Habits and habit-forming products

KEY QUOTES

"In order to win the loyalty of their users and create a product that's regularly used, companies must learn not only what compels users to click, but also what makes them tick."

"Hooks connect the user's problem with a company's solution frequently enough to form a habit."

- The 4 Steps of the Hook Model; and
- Applying the Hook Model

We'll use the term "products" to refer generically to all types of products, services, technologies and solutions.

Habits and Habit-Forming Products

Whenever we do something, it creates a neural pathway in the brain. The more we repeat the action/routine, the more it reinforces the pathway, until the action is triggered automatically by situational cues. For instance, we automatically go to the bathroom and brush our teeth once we wake up.

Benefits of habit-forming products/services

User habits can significantly increase a business' return on investment due to a combination of 4 key benefits.

Higher Customer Lifetime Value (CLTV). CLTV is the amount of money a customer spends with you before they stop using your products or die. When a customer uses your product frequently and habitually, CLTV increases.

Greater price flexibility. The more people use your product, the more they're willing to pay and the less price-sensitive they become. The success of free-to-play video games hinges on their ability to get users hooked to the game so they'll end up buying extra lives, tools or powers to move up the game levels. Likewise, many free apps/tools like Evernote rely on users' willingness to pay for upgraded features like collaboration tools or offline access.

Accelerated growth. The more people use and value a product, the more likely they'll share it with their friends. Viral Cycle Time (VCT) is the amount of time a user takes to invite another user. When people use your products several times daily, they initiate more loops (e.g. tagging

KEY QUOTES

"The aim is to influence customers to use your product on their own, again and again, without relying on overt calls-to-action such as ads or promotions."

"Hooked users become brand evangelists — megaphones for your company, bringing in new users at little or no cost."

Facebook friends several times daily) which generate more responses from other users to improve the VCT.

Competitive advantage. Once customers form habits around your products, it creates a real competitive advantage.

- Habits are so hard to change that a new solution must be ≥9x better to break the *inertia to change*. The QWERTY keyboard was actually invented in the 1870s for typewriters. Commonly-used characters were spaced out to prevent the typewriter keys from jamming when pressed together. Today, we're still using QWERTY although typewriters are long obsolete. Better keyboards have been designed for modern computers, but the benefits simply weren't enough to motivate change.

- Even when you stop a habit and start a new one, it's easy to *revert back into old habits* since the neural pathways still exist and are easily reactivated. That's why two-thirds of alcoholics return to drinking within 1 year of finishing their rehabilitation programs. The only way to lock in a new habit is to keep doing it repeatedly for a long period of time.

- We also resist change if we've *stored valuable data* in the products, e.g. we don't want to lose our photos/memories on Instagram nor our emails in Gmail. These technologies also use customer data and algorithms to create even more hooks.

A solution can be a painkiller and/or a vitamin.

- Generally, people are ready to pay for *painkillers* which offer immediate relief from an existing pain (e.g. how Tylenol eases aches and pains). On the other hand, *vitamins* don't solve an obvious pain-point—they appeal more to emotions (e.g. the desire to be attractive or healthy) and require habit formation.

- Habit-forming products are *both painkillers and vitamins*. They start out as nice-to-have options. But once you become reliant on them, they become painkillers since you'll feel an "itch" or discomfort if you don't use them.

KEY QUOTES

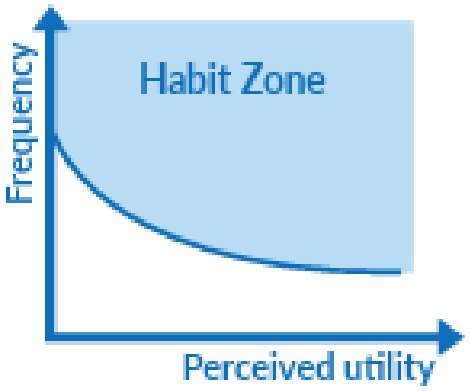
"Old habits die hard and new products or services need to offer dramatic improvements to shake users out of old routines."

"A habit is when not doing an action causes a bit of pain."

"Once we come to depend on a tool, nothing else will do."

A product's habit-formation potential hinges on 2 factors:

- *Frequency of use*: how often the behavior occurs; and
- *Perceived utility*: how useful or rewarding it is compared to other alternatives.



A behavior falls into the "Habit Zone" only when it happens frequently enough and has a high-enough perceived utility. By embedding the 4-step process of the Hook Model into your products, you can move your product into this zone.

ACTION STEPS

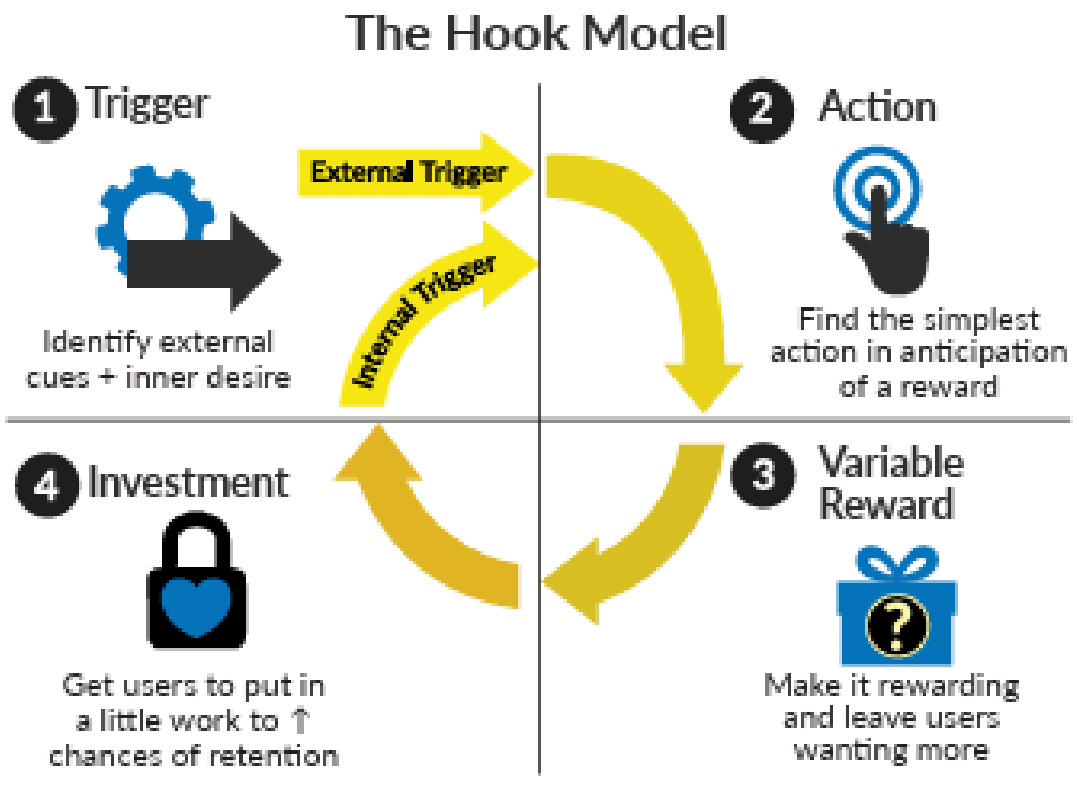
Identify the habits required for your business model. Ask yourself:

- What problem does your product solve for your users?
- How else do users currently solve that problem? Why do they need your product?
- How frequently are users likely to use your product?
- What user behavior should you make into a habit?

KEY QUOTES

The 4 Steps of the Hook Model

The Hook Model involves 4 steps that run in a loop or cycle: Trigger → Action → Variable reward → Investment.



Step 1: Trigger

Habits happen when a trigger automatically brings about a behavior. Such habits are formed in layers over time; they aren't developed overnight.

There are 2 types of triggers:

- *External triggers* provide an obvious call-to-action, i.e. they tell people what to do. These can come in the form of pictures, text, and/or explicit instructions e.g. "Click here" or "Call this number". A well-designed trigger has so much information embedded that it doesn't require long instructions on what to do. There're 4 key types of external triggers:

  (i) Paid triggers (e.g. search engine marketing, advertisement) which can be costly in the long-run.

  (ii) Earned triggers (e.g. media coverage, viral videos, features in app stores) which can bring temporary spikes in numbers.

  (iii) Relationship triggers (e.g. word-of-mouth, electronic invitations, social media "likes").

  (iv) Owned triggers come from having a space in the user's environment (e.g. an app icon on their phone, news-letters in their inbox).

  Generally, (i)-(iii) are good for acquiring new users, while (iv) helps to trigger repeated behavior until a habit is formed.

- *Internal triggers*. An internal trigger is formed when a product becomes tied with a thought, routine, or emotion. When a product relieves a pain-point, you associate certain feelings with it. As the experience is repeated, the association is strengthened, until you automatically reach for those products for quick relief whenever you experience the internal triggers. That's why smokers feel the urge for a cigarette when they're stressed. People turn to Google when they want certainty (to find/verify certain information).

KEY QUOTES

"Habits are not created, they are built upon."

"In the case of internal triggers, the information about what to do next is encoded as a learned association in the user's memory."

External → Internal triggers. Habit-forming technologies start with external triggers to prompt repeated actions, until these become closely linked to internal triggers.

- Imagine you're new to Instagram. You receive an external trigger (a friend's recommendation), which prompts you to create an account. This is followed by a series of external triggers (e.g. push notifications, friends' pictures, comments and "likes" in response to your posts), all of which prompt you to keep using Instagram. After a while, you're so used to snapping photos on Instagram that you're afraid to miss a special moment if you don't snap it.

- Social media are powerful because they have multiple internal triggers, e.g. they can be triggered by boredom, the desire to connect, fear of missing out etc.

To build the right triggers, you must first understand your users' internal triggers.

- *Start with emotions* (e.g. frustrations and pain-points) rather than product features. In reality, all humans are driven by a set of common needs and desires. By studying successful habit-forming products, you can understand those needs and create your own triggers.

- *Examine what people actually do*, rather than what they wish/say they'd do. For example, we may wish to exercise every night but end up eating junk food in front of the TV.

- To understand a behavior, *keep asking "why"* until you uncover the root cause or internal trigger. For example, we keep checking our emails because we're afraid to be out of the loop; we keep posting on Instagram because we're afraid to miss out on a special moment.

ACTION STEPS

Consider these questions to develop the right triggers:

- Who is the user of your product? Which internal trigger does the user experience most frequently? Express it as a statement: "Each time the user [internal trigger], he/she [first action of intended habit]."
- What's the user doing just before the intended habit? What are the best times/places to send an external trigger? How can you link an external trigger to the time the internal trigger is activated?

KEY QUOTES

- What are 3 internal triggers that can cue your user to action? Brainstorm 3 conventional triggers using existing technology (e.g. emails, notifications) and 3 triggers that may not be viable yet (e.g. biometric sensors).

Step 2: Action

A trigger is useless unless it creates real action. And, people will only take action if the desire outweighs the effort (mental/physical).

According to Dr. BJ Fogg, Behavior = Motivation + Ability + Trigger (B = MAT). To successfully trigger action, you must make it easy to perform the action, increase the motivation to do it, *and* have an effective trigger.

- *Motivation* to take the action. Fogg says that there're 3 key motivators, each with a set of positive and negative feelings:

  (i) Seek pleasure + Avoid pain

  (ii) Seek hope + Avoid fear

  (iii) Seek social acceptance + Avoid rejection

- *Ability* to complete the desired action. The fewer and simpler the steps, the more likely that people can/will do it. As a rule of thumb, always improve ability first, then motivation. Fogg presents 6 elements that affect how easy it is to complete a task:

  (i) Time

  (ii) Money

  (iii) Physical effort

  (iv) Brain cycles (i.e. the amount of mental focus and effort)

  (v) Social deviance (how far the behavior is accepted by others)

KEY QUOTES

"To initiate action, doing must be easier than thinking."

"A given behavior will occur when motivation, ability, and a trigger are present at the same time and in sufficient degrees."

"The greatest return on investment will generally come from increasing a product's ease-of-use."

"To successfully simplify a product, we must remove obstacles that stand in the user's way."

(vi) Routine (how far it fits or disrupts existing routines).

- A *trigger* to activate the behavior (covered in Step 1 above).

Our decisions and behaviors are also influenced by mental biases or heuristics. For example:

- *Scarcity*: When something is perceived to be scarce (or to suddenly become scarce), people value it more. That's why e-commerce stores often add words like "only 7 left in stock".

- *Framing*: Our contexts or surroundings shape our perceptions. People pay a lot to listen to famous violinist Joshua Bell in the concert halls; yet few people even stopped to listen when Bell played in a subway station. Brain-scans also showed that people's enjoyment of wine increased when they believed it cost more (even though it was exactly the same wine).

- *Anchoring*: We tend to anchor our decisions to 1 piece of info, e.g. if we enter a store with a "50% off" sign, we tend to zoom in on the 50% discount rack even though there may be better items on other racks.

- *Endowed progress*: Customers who were given loyalty punch cards with 2 boxes punched out of 12 boxes were 82% more likely to complete the punch cards, compared with those with 0 out of 10 boxes punched. Social media sites like LinkedIn and Facebook use this heuristic to collect more data, e.g. showing progress bars to encourage people to improve their profile strength.

KEY QUOTES

ACTION STEPS

- Define your users' path, from the time they experience an internal trigger till they get the desired outcome from your product. Consider how you can **remove steps** to simplify the process as much as possible.
- Which of the 6 elements above may limit the users' ability to complete the intended tasks? Brainstorm 3 testable ways to **make the tasks easier**.
- Use **heuristics** to encourage habit-formation.

Step 3: Variable Reward

Dopamine is a pleasure-inducing chemical that's released when we experience or expect a reward. Once we learn that something predictably delivers a reward, the anticipation of the reward is already enough to activate dopamine release.

- When users' problems are solved, they're rewarded and become more motivated to repeat the action. To form habits, your product must solve a real problem *consistently and reliably*.

- Yet, if something becomes so predictable that we know *exactly* what will happen, we lose attention. When the cause-effect pattern is broken, we suddenly pay attention again. *Variable rewards* increase the likelihood that we'll keep doing something because we're anticipating a reward and also curious to see what we'll get. This increases the effects of dopamine.

Habit-forming products use 3 key types of variable rewards:

- *Rewards of the Tribe*. Social rewards (e.g. Facebook "likes", upvotes on forum pages, and profile badges) are driven by the human need to feel liked, accepted, connected and included. Such rewards are also variable since we can't predict others' responses (e.g. how many likes or upvotes we'd get).

- *Rewards of the Hunt* come from money, things or information. For example, slot machines keep you playing round after round in anticipation of hitting the jackpot. You scroll through your endless social media feeds to see what else may come up.

- *Rewards of the Self* tap on our desire for mastery, competence, consistency and completion, e.g. we try to level up in video games, learn a new software or win awards/accolades. Variation only makes the process more interesting.

Use these tips for designing your variable rewards:

- *Use 1 or more of the 3 variable rewards* above.

KEY QUOTES

"To hold our attention, products must have an ongoing degree of novelty."

- Variable rewards are only effective if the rewards *match the users' internal triggers and motivations* for using the product, e.g. Quora's upvoting system works because it's aligned with users' desire to find great answers.

- Give users a *sense of autonomy*. A habit-forming product must be enjoyable in itself and make users feel like they're in control. Give people the option to accept or refuse certain features. Tap on behaviors that users *want* to do and are familiar with. For example, if a health app only works when users record *every* meal and exercise, users will soon drop off. However, if the app offers virtual encouragement, comments and questions from other users in response to each new entry, people will naturally feel motivated to keep going.

- Content-driven products can be infinitely variable. However, if your product has limited or *finite variability*, it'll eventually become predictable unless you deliberately add new experiences to keep it novel.

KEY QUOTES

"People must want to use the service, not feel they have to."

ACTION STEPS

- **Interview 5 customers** to find out (i) what they enjoy the most about using your product, (ii) if they experience any moments of delight or surprise, and (iii) if there's anything especially satisfying about your product.
- Define the reward, i.e. how your product relieves the user's pain. Then brainstorm ways to augment it using the **3 types of variable rewards**.

Step 4: Investment

In order for a behavior to become automatic, users must complete this final step—they must invest in the product by putting in their time, effort, money, social capital etc. The more users invest in your product, the more they'll return to use it because of how we rationalize our behaviors:

- *Perceived value*: We place an irrationally high value on our own efforts. People who made their own origami bid 5x higher prices for them compared to others who didn't. The more effort we invest in something, the more we'll value it.

"The more users invest time and effort into a product or service, the more they value it."

- *Consistency*: We tend to act consistently with past decisions. When residents were asked to place a large sign in their yard about safe driving, only 17% agreed. However, when residents were first asked to put a small sign in their window (most of whom agreed), 76% later agreed to the large sign in the yard.

- *Cognitive dissonance*: When there's a conflict in our thoughts, beliefs or attitudes, we'll adjust them to remove the dissonance. Even when we don't like something initially, we'll gradually shift our perception if we see others enjoying them.

Here are some **tips for implementing this step effectively**:

- Investment creates friction/resistance, and must happen only *after* users have already *received the variable rewards*.

- This investment must be associated with a *potential improvement* in the service or experience, e.g. recording personal preferences, inviting friends, adding content (e.g. playlist, notes, photos), building a base of followers, or learning to use an app/software.

- The best habit-forming technologies tap on users' behaviors to *initiate new triggers*, e.g. having users generate to-do lists that trigger new reminders, generating a list of recommendations that users can shortlist, notifying users of responses to their posts etc.

ACTION STEPS

- Review the process for using your product. Brainstorm 3 ways to **add a small user investment**, e.g. add data, content, followers, reputation, skill.
- Brainstorm how to **load the next trigger**, and how to reduce the cycle-time through the Hook.

KEY QUOTES

The 4 Steps of the Hook Model

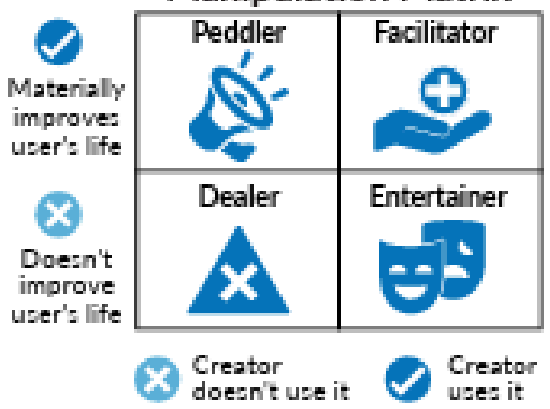
The Manipulation Matrix

Habit-forming products are powerful since they can fundamentally change people's behaviors. And, our ability to create such products will only increase as we improve our capacity to collect and process customer data. Eyal urges innovators and businesses to use habit-forming technologies ethically and responsibly. Help people to form positive/useful habits, not negative/destructive ones.

Use the Manipulation Matrix to consider the implications of your innovation, including if you *can* and *should* hook your users.

- Ask yourself *2 questions*: "Would I use this product myself?" and "Will it help users to improve their lives?"

- There are *4 key quadrants*:



(i) *Facilitators* help users to create a healthy habit. It's morally better and increases your chances of success (by delivering something of real value). However, you can't be an effective facilitator unless you've personally experienced the problem.

(ii) *Peddlers* try to incentivize people to do things that they don't otherwise value. There's nothing morally wrong with this, but your chances of success will be low.

(iii) *Entertainers* may not materially improve their users' lives, but they can bring temporary joy, laughter and connection. However, such rewards are short-lived, so you must constantly find new ways to inject novelty.

(iv) *Dealers* offer a product that's exploitative, i.e. it exists mainly to extract money from the user, e.g. gambling, drugs.

KEY QUOTES

"Ubiquitous access to the web, transferring greater amounts of personal data at faster speeds than ever before, has created a more potentially addictive world."

"Peddlers tend to lack the empathy and insights needed to create something users actually want."

"Entertainment is a hits-driven business because the brain reacts to stimulus by wanting more and more of it, ever hungry for continuous novelty."

YouVersion's Bible app is a great case-study of a habit-forming product. As of Jul 2013, it has been downloaded on >100mil devices.

- The app was designed to help people with their Bible study. It started as a desktop website, but didn't really take off until they created a mobile version that could be used anytime, anywhere.

- The app was optimized for reading, with >400 reading plans to cater to a range of audience, goals, preferences and languages. It presented small, digestible chunks of daily reading (which was much less intimidating than reading the whole Bible).

- The app utilized effective triggers (e.g. greetings during Christmas, members' virtual encouragement and community emails), all of which prompted people to open the app or share the messages. User data and behavioral patterns were used to further tailor the app, to make it as easy/simple to absorb God's Word as possible. When users went through a rough patch, they often found themselves uplifted by inspiring notifications, as if they were hearing from God himself. The app also offers an element of variability and surprise, since you don't know what verse or notifications you'll get each day.

- Users progressively invest in the app when they create bookmarks, highlight verses and make notes. Over time, the app becomes an invaluable personal Bible, packed with their own insights and notes.

KEY QUOTES

"It's a case study in how technology can change behavior by marrying the principles of consumer psychology with the latest in big data analytics."

Habit Testing

You can use the Hook Model to identify potential weaknesses and ideas for improvement. However, you won't know which ideas will work until you test them. Eyal presents a simple Habit Testing process based on the build-measure-learn Lean method. This is a continual process that should be applied to every new product feature and iteration:

- *Identify* what a devoted user means. Consider who are your product's habitual users and how often they'd realistically

use the product. Define the numbers and type of users who meet these criteria: if <5% of your users are devoted users, it probably means your product isn't valuable or useful enough.

- *Codify the Habit Path*. Different customers will use your product differently. Your goal is to collect enough data to identify a pattern or a "Habit Path" shared by your most loyal users. Then, seek to replicate those action steps. For example, Twitter found (in its early days) that once new users followed 30 other members, they were drastically more likely to keep using the app.

- *Modify* or gently prod new users down the Habit Path.

Uncover Habit-forming Opportunities

You can discover great opportunities through careful observation:

- *Daily behaviors*. Consider why you do or don't do certain things, and how those tasks could be made easier and/or more rewarding. Ask yourself: "what problem do I wish someone else could solve for me?"

- *Nascent behaviors*. Technologies that are massively successful in a niche often end up spreading if they can address a wider need. Such innovations (e.g. disposable cameras, telephones) are often dismissed initially as nice-to-have vitamins but eventually become a painkiller for a major pain/itch.

- *Enabling technologies*. Every 10 years or so, new enabling technologies (e.g. the internet) emerge to provide the foundation for mass market penetration/adoption. Alternatively, a shift in user interface (i.e. how people interact with technology) can also bring massive changes, like how Apple changed the mobile phone interface and Google changed the search interface.

KEY QUOTES

"Careful introspection can uncover opportunities for building habit-forming products."

"Wherever new technologies suddenly make a behavior easier, new possibilities are born."

ACTION STEPS

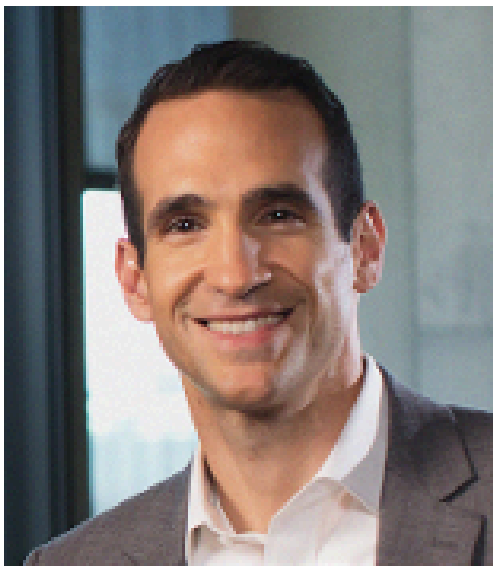
- Consider where your product falls on the **Manipulation Matrix** and if you're proud of the way you're influencing people.
- Use **habit testing** to identify the Habit Path for long-term engagement.
- Look for new **habit-forming opportunities** by observing your own behaviors, looking for nascent behaviors, enabling tech or new interfaces.

Other Details in the Book to Look out For

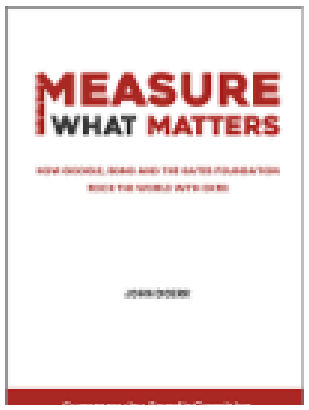
This is an easy-to-read book that includes many real-life examples, case studies and useful empirical research/background. Each chapter comes with a brief summary and recommended questions/ exercises to help you get started. We've captured the key ideas and tips with selected examples in this summary. For more details, please visit www.nirandfar.com/hooked/.

About the Author

Nir Eyal is an Israeli-born American author, lecturer and investor. He earned a B.A. at Emory University, worked for Boston Consulting Group and a solar panel installation firm before graduating with a Master of Business Administration from Stanford. He then founded a digital marketing company with his friends before becoming a consultant in product design. Eyal also teaches university courses and gives speeches about how psychology intersects with technology and business.



KEY QUOTES



MEASURE WHAT MATTERS

How Google, Bono and the Gates Foundation Rock the World with OKRs

JOHN DOERR

The Big "So What"

Great ideas are useless if you can't execute them. Objectives and key results (OKRs) help to create clarity, focus, accountability, alignment and momentum to deliver real results. This book explains the value of OKRs and why you should apply them in your work and life.

Introduction

What are OKRs?

OKRs stand for objectives and key results. They provide a structured way for teams and individuals to set and achieve their goals.

- An *objective* is what you're trying to achieve. A sound objective should be meaningful and inspiring. It typically involves a timeframe of at least 1 year.

- *Key results (KRs)* are how you'll achieve the objective. They provide a yardstick to measure and track your progress. Good KRs are specific, measurable, challenging and time-bound.

- *KRs ➡ Objective*. A KR should be so concrete that it's crystal-clear if you have achieved it; there's no grey area. Let's imagine your long-term objective is to dominate the mid-range personal computer market. Without KRs, it's hard to tell if you're on-track. However, you can clearly measure if you've achieved a quarterly KR of winning 15 new designs or growing market share by 10%. Assuming you've identified the right KRs, you'd know in the next month or quarter whether you're moving toward your objective. When you've achieved all your KRs, you'd have achieved your objective.

KEY QUOTES

"Ideas are easy. Execution is everything."

"If you don't know where you're going, you might not get there."
—Yogi Berra

"Objectives and key results drive clarity, accountability, and the uninhibited pursuit of greatness."

"OKRs surface your primary goals. They channel efforts and coordination. They link diverse operations, lending purpose and unity to the entire organization."

OKRs can be applied in any organization from startups to non-profit organizations and established corporations. OKRs have been adopted by many companies such as BMW, Disney, Exxon, LinkedIn, Oracle and Samsung. You can also apply OKRs in your personal life.

- However, there are *no fixed steps or rules* for OKRs. Instead of presenting specific how-to tips, Doerr uses various examples and interviews with leaders to explain the value and potential of OKRs.

- In this summary, we've distilled the key insights in *2 parts* to explain how OKRs deliver results and the ingredients needed for successful OKR application.

OKR: lessons from Intel

Doerr learned about OKRs from Dr. Andy Grove when the latter was Intel's executive vice president. Grove later went on to become Intel's CEO. Intel's innovation management is built on the philosophy that knowledge alone isn't enough; it's how you apply the knowledge that matters. OKR is a manifestation of that philosophy.

The power of OKRs can be seen in "Operation Crush".

- In the late 1970s, Intel had developed the 8086 micro-processor—the first high-performance, 16-bit micro-processor—meant to capture the growing personal computer market. However, it was facing a real threat from Motorola's 68000.

- Intel responded swiftly with Operation Crush to infuse urgency and secure Intel's position as the market leader. In just 1 year, it mobilized the entire company to meet the challenge, and won a definitive victory over Motorola.

- Intel's leaders took the lead by quickly diagnosing their situation and strategic options—they decided they had no time to rebuild the 8086 and would have to focus on using marketing efforts instead. Once the broad direction was set, Operation Crush brought together the top management, salespeople and 4 marketing departments across 3 different locations.

KEY QUOTES

"OKRs are Swiss Army knives, suited to any environment."

"It almost doesn't matter what you know. It's what you can do with whatever you know or can acquire and actually accomplish [that] tends to be valued here."
- Andy Grove

"Crush was a thoroughly cascaded set of OKRs, heavily driven from the top, but with input from below."

- Teams developed solutions from bottom-up to support the high-level strategy. Each quarter, the broad objectives were translated into specific KRs for each key function—from engineering to marketing—and further expanded into concrete, actionable steps. Here's an example of 1 set of quarterly KRs:

CORPORATE OBJECTIVE
Establish the 8086 as the highest performance 16-bit microprocessor family.
KEY RESULTS (Q2 1980)
1. Develop and publish 5 benchmarks showing superior 8086 family performance (Applications)
2. Repackage the entire 8086 family of products (Marketing)
3. Get the 8MHz part into production (Engineering, Manufacturing)
4. Sample the arithmetic coprocessor no later than June 15 (Engineering)

- Since the OKRs were shared openly, people could coordinate their efforts dynamically and take swift, unified action. Intel's existing culture provided the necessary foundation for such an open, collaborative approach.

From Ideas to Sound Execution

OKRs help to translate ideas into results through 4 key success factors.

1. Focus and Commitment to Core Priorities

If you want to fill a jar with rocks, pebbles and sand, the best way is to start with the rocks, followed by the pebbles and sand, so the latter can fill in the empty spaces between the rocks. If you start with the sand and pebbles, you'll have no space left for the rocks. Likewise, to maximize results, you must focus on your top priorities first.

OKRs force leaders to decide on and commit to what matters most.

- *Ask this question*: What are the most important outcomes we must achieve in the next 3 months? Decide on the few core initiatives to focus on, and set the rest aside.

- *Commit these priorities on paper* so they can be clearly communicated throughout the organization to direct everyone's efforts results.

KEY QUOTES

"OKRs may be called a tool, or a protocol, or a process."

"An effective goal-setting system starts with disciplined thinking at the top, with leaders who invest the time and energy to choose what counts."

Senior leaders are 100% responsible for the organizational-level OKRs. This includes (i) setting the OKRs, (ii) articulating them clearly and (iii) role-modeling the desired actions and behaviors.

- *Choosing what to focus on* is an art, and it falls on senior leaders to make these tough decisions. Set aside the time and energy to research, analyze and think deeply about what truly matters. When in doubt, refer back to your mission, e.g. Google is guided by its mission to "organize the world's information and make it universally accessible and useful."

- In *communicating the OKRs*, make sure you address both the why and the what, to clearly show how the milestones are linked to the wider mission.

Tips/insights

- There's no fixed or ideal way to do your planning. However, Doerr recommends having 2 parallel planning cycles for *quarterly OKRs and annual OKRs*. A quarter is short enough to drive immediate action and respond to changes, yet is long enough to deliver meaningful results.

- Go for fewer KRs, but make sure that each one is significant. A well-defined objective can usually be achieved with just *3-5 strong KRs*. Check that your KRs:

  (i) Are concise, specific, and measurable (e.g. "reduce average processing time by 5 seconds");

  (ii) Include both inputs and outputs (e.g. reduction in errors by 10% and winning 5 awards); and

  (iii) Will jointly result in the objective being achieved.

It takes commitment to push aside distractions and stick to your core priorities. It will also take dedicated effort to tailor an OKR system for your organization. Commit to the process and keep persisting.

- Nuna is a healthcare data platform and analytics company. In 2015, Nuna tried to implement OKRs using a top-down approach. However, it failed as there was no buy-in from the leadership team nor any integration with their existing goal-setting process.

KEY QUOTES

"The art of management lies in the capacity to select from the many activities of seemingly comparable significance the one or two or three that provide leverage well beyond the others and concentrate on them."
- Andy Grove

"Key results are the levers you pull, the marks you hit to achieve the goal."

"To inspire true commitment, leaders must practice what they teach."

- They tried again the following year. This time, the founder personally reached out repeatedly to each person, and set the example by sharing and inviting feedback on her OKRs. Gradually, OKRs became a vital part of the organization.

2. Alignment and Connection for Teamwork

Alignment means that everyone's efforts are directed toward the same vision and objectives. By making everyone's goals transparent—from the CEO to the front-line staff—OKRs help people to understand their inter-dependencies and see how their work serves a wider purpose.

In short, OKRs can promote teamwork, work satisfaction and alignment.

- With transparency, everyone can see what everyone else is doing. They understand where they fit in the big picture and feel a greater sense of connection.

- It's also easier for teams and individuals to set their OKRs and develop solutions that're aligned with the organizational-OKRs. People can take the initiative to coordinate efforts across various functions, reach out to colleagues to explore potential areas for collaboration and reduce duplication. It also facilitates rewards and recognition based on meritocracy.

Connecting your OKRs. Imagine you're the General Manager of a football club. Your objective is to earn profits for the owners with 2 KRs: (i) win the Super Bowl and (ii) fill ≥85% of your home stands. To achieve these KRs, you need your coaches build a winning team and your marketing team to fill the stands.

- With the high-level OKRs, your coaching and marketing teams can figure out how exactly to *align the team/individual OKRs* with the wider goals.

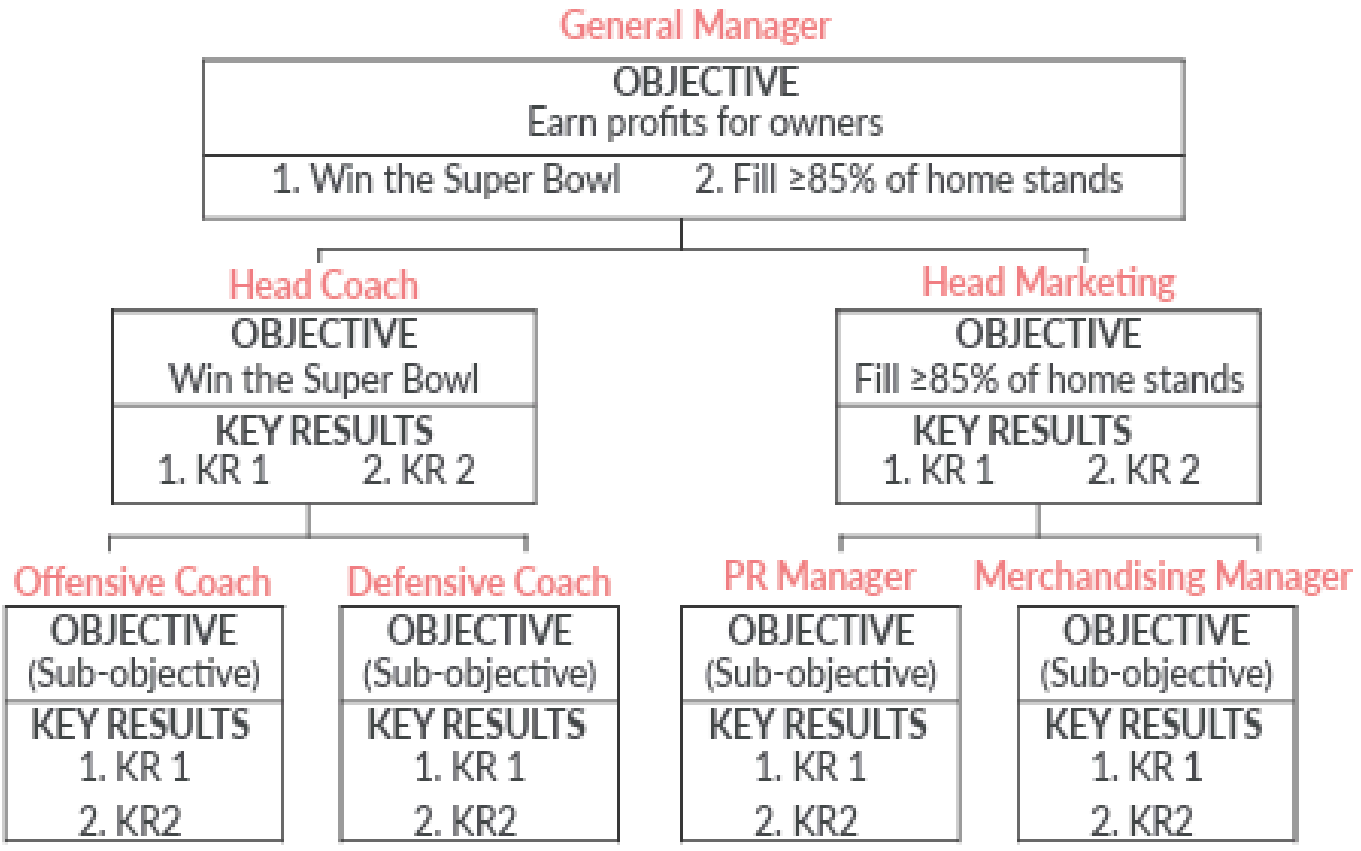
- These OKRs are shared openly so anyone can see the big picture and contribute ideas. There's a healthy *mix of top-down and bottom-up goal setting*. People can easily identify potential areas of synergy and collaboration, and coordinate any cross-functional changes.

KEY QUOTES

"Alignment is about helping people understand what you want them to do."

"People can't connect with what they cannot see; networks cannot blossom in silos."

"High-functioning teams thrive on a creative tension between top-down and bottom-up goal setting, a mix of aligned and unaligned OKRs."



Tips/insights. Doerr shared the case studies of how MyFitnessPal and Intuit used OKRs to facilitate cross-team connection and integration. Here are some insights gleaned from their experience:

- It's not enough to simply set good OKRs. Real coordination between teams can only happen when there are supporting *systems and behavioral norms* to encourage regular sharing and communication.

- To ensure *accountability*, there should only be 1 owner for each KR. It's ok for teams to have similar objectives, but every team must have clear, distinct KRs with no overlaps.

- Consider *implementing your OKR system in phases*. Intuit's Chief Information Officer, Atticus Tysen, rolled out OKRs amongst the IT group progressively like a pilot project. He started OKRs on a small scale with his direct reports for 1 quarter, then expanded to the director level the next quarter, followed by 600 IT staff the following quarter. Eventually, OKRs help the IT group to align some 2,500 active objectives each quarter, both vertically and horizontally.

3. Tracking for Accountability

OKRs are dynamic tools, not static numbers. By tracking and reviewing OKRs regularly, people know exactly where they stand,

KEY QUOTES

"Connected companies are quicker companies."

"Micromanagement is mismanagement. A healthy OKR environment strikes a balance between alignment and autonomy, common purpose and creative latitude."

"OKRs are living, breathing organisms."

stand, what areas must be addressed, and are held accountable for results. Broadly, there are 3 key phases for OKR-tracking.

Setup your OKRs system such that it can be scaled up in future.

- Consider using *OKR management software* which allows users to create, edit, track and share their OKRs easily, as well as integrate OKRs with other sales or team-collaboration apps.

- For OKRs to work, everyone must be onboard without exception. Consider having *OKR champions* to overcome resistance and encourage adoption.

Midlife Tracking. When people have a clear goal and can see how they are progressing toward it, they feel more motivated.

- Have a *dashboard* with real-time progress presented in a quantifiable, visual way (e.g. using charts) so everyone can see (i) where they stand and (ii) where attention/action is required.

- Have *regular reviews*, including 1-1 and group sessions, to evaluate progress and address obstacles. Ideally, hold weekly check-ins between the managers and contributors.

- Any KR that's not ontrack must be adjusted or replaced. There are *4 options* you can consider at any point in time:

  (i) *Continue* with the items that're on-track.

  (ii) *Adjust* items that're falling behind, e.g. change the timeline or reallocate resources to bring them back on-track.

  (iii) *Stop* something if it's no longer a priority. Make sure everyone is notified of the change and do a proper review to learn from the process.

  (iv) *Start* a new OKR as and when required.

Wrap-up in 3 parts:

- *Score* your OKRs to evaluate your outcomes, decide if a goal is still worth pursuing and/or identify ways to improve it. In advanced OKR systems, scores can be automatically calculated based on predetermined criteria (e.g. grouping KRs into "green", "yellow" or "red" status for easier management).

KEY QUOTES

"Our goals are servants to our purpose, not the other way around."

"In the end, the numbers are probably less important than contextual feedback and a broader discussion within the team."

- Use the data to do a *self-assessment*. This is *not* a performance appraisal to assess compensation and rewards. The focus should be on learning and improving future actions.

- Step back to *reflect* on what you've learned so you can consolidate your learning and to celebrate your successes. Consider (i) how far you achieved your objectives and why, (ii) what you've learned from the obstacles you faced, (iii) how you could've written your objectives better and (iv) how you could better approach future OKR-cycles.

When tackling ambitious, long-term goals, break things down into smaller, meaningful parts that can measured and tracked. For example, the Bill & Melinda Gates Foundation has the ambitious goal of eradicating malaria. However, they must first consider if it'd be more practical to expand the reach of vaccination or eradicate the disease. Only then could they define the next level of strategy and break things down into daily activities that can be tracked and evaluated.

4. Stretching for Breakthroughs

Innovation is essential for organizational success. This in turn requires that people stretch beyond existing limits and solutions. OKRs deliver all the factors above—focus and commitment, transparency and alignment, tracking and adjustment—so people can stretch to deliver breakthrough innovations.

Stretch goals need not always be big; they could also be about doing small things extraordinarily well.

- Having an *innovative culture* is simply about striving constantly to deliver much more value with much less resources. When people believe that they're stretching to their full potential, they also feel more fulfilled.

- To win big, you must first think big. Don't assume something is impossible just because it doesn't yet exist. Aim to deliver something that's *at least 10x better* than what's available, then work backwards to make it a reality.

KEY QUOTES

"There are no judgments, only learnings."

"OKRs push us far beyond our comfort zones. They lead us to achievements on the border between abilities and dreams."

"Conservative goal setting stymies innovation. And innovation is like oxygen: You cannot win without it."

"As a leader, you must try to challenge the team without making them feel the goal is unachievable."

- There's no fixed formula for *setting stretch goals*. The key is to define (i) what an amazing yet believable outcome would look for your team, and (ii) how you can deliver extraordinary value. Real stretch goals won't be attained 100% of the time. In Google, achieving 70% of OKRs on average is already considered a success. The challenge is to make your goals challenging without being impossible.

Stretch goals can broaden people's perspectives and fuel imagination to create solutions that won't otherwise be considered.

- *Google Chrome*'s success came on the back of a series of stretch goals. The team chose to rethink and reconstruct the best possible browser from scratch rather than merely improve existing browser designs. When Chrome was launched in 2008, Larry and Sergey set an inspiring vision to "make the web as fast as flipping through a magazine". This pushed Googlers to explore totally new solutions and approaches. Each time they failed, they asked themselves what they could do differently. For the first 2 years, the team missed their ambitious weekly-user targets of 20mil and 50mil respectively. However, they kept learning and persevering, finally exceeding their goal of 100mil in 2010.

- In 2012, *YouTube* made the bold decision to shift its focus from views and clicks to watch-time. This was based on the insight that people would only spend more of their valuable time watching a video if they were happy with it, so a higher watch-time meant higher user engagement and satisfaction. The team set the stretch goal of reaching 1 billion hours (a 10x increase) by 2016. People started to think big and look at ways to fundamentally redesign their architecture and storage. They broke the huge goal down into rolling year-on-year increases, and identified the 3-4 outcomes that'd make the biggest difference. They went on to change the algorithm, make the platform more user-friendly (especially for content like music, how-to videos, and entertainment) and measure *everything* they did in terms of the impact on watch time.

OKRs are powerful, but they're not a magic bullet. To deliver results, OKRs must work hand-in-hand with great leadership and a strong culture.

KEY QUOTES

"If you set a crazy, ambitious goal and miss it, you'll still achieve something remarkable."
- Larry Page

"Stretch goals are invigorating. By committing to radical, qualitative improvement, an established organization can renew its sense of urgency and reap tremendous dividends."

"Stretch OKRs are an intense exercise in problem solving."

"By testing our limits and affording the freedom to fail, they release our most creative, ambitious selves."

Ongoing Improvement and Performance Management

To set and achieve meaningful goals, you must have ongoing dialogues and continuously manage performance. Annual performance reviews are inadequate and ineffective for such purposes.

Use 3 key components of continuous performance management with OKRs—conversations, feedback and recognition (CFRs)—to achieve transparency, teamwork, accountability learning and ongoing improvement.

Conversations. Hold separate dialogues for compensation and performance management.

- Compensation focuses on past performance while OKRs focus on future goals/performance. Direct your *OKR conversations* toward (i) where your team members are spending their time/resources, (ii) how they're progressing toward their OKRs, (iii) what obstacles they face, (iv) what support they need, and (v) what types of growth/development they need to achieve their career goals. Leaders should play the roles of facilitators and coaches, not disciplinarians or micro-managers.

- OKRs are still relevant for performance review, but shouldn't be the sole determinant of *compensation* (e.g. bonuses and pay). After all, someone who achieves 75% of a stretch goal could have delivered much more value than someone who achieves 100% of a conservative goal. At Google, OKRs make up about one-third of compensation considerations.

Feedback. Without feedback, people won't know where they stand nor how to improve. Moreover, in the modern workplace, people *want* to be heard, to be involved in goal-setting and to connect/collaborate with their colleagues.

- By making OKRs transparent and encouraging *360 degree feedback*, you're essentially removing silos and allowing ideas to flow freely across the organization.

- Encourage *constructive, specific feedback*. Make it a norm for people to ask if they're focusing on the right things and how they can do things differently or better.

KEY QUOTES

"OKRs are not a silver bullet. They cannot substitute for sound judgment, strong leadership, or a creative workplace culture. But if those fundamentals are in place, OKRs can guide you to the mountaintop."

"As workplace conversations become integral, managers are evolving from taskmasters to teachers, coaches, and mentors."

"Feedback is an opinion, grounded in observations and experiences, which allows us to know what impression we make on others"
- Sheryl Sandberg

"Public, transparent OKRs will trigger good questions from all directions."

Recognition can be more motivating than monetary rewards and incentives. OKRs make it much easier for ideas and contributions to be noticed and recognized. It could be as simple as (i) having peer recognition or "shout-outs" whenever someone is seen doing something noteworthy, (ii) celebrating specific goal-achievement, behaviors or milestones e.g. having an "Achievement of the Month" award and/or (iii) sharing stories to acknowledge meaningful achievements, however big or small.

Culture

OKRs and organizational culture are inter-dependent.

Without the right cultural support and buy-in from key leaders, it's hard to successfully install OKRs. For example, Lumeris initially struggled to roll out OKRs as many of its senior leaders adopted an autocratic approach that was inconsistent with both OKRs and with Lumeris' core values. Lumeris made the tough decision to remove senior leaders who didn't fit with the company culture. Without conflicting signals from leaders, they could now educate people about transparency, accountability, and how to use OKRs to improve individual and organizational results.

Once they are in place, CFRs and OKRs work together to influence what people focus on and how they think and act. They create opportunities for everyone in the organization to be heard (including the less vocal people), encourage critical thinking and disciplined action, all of which jointly shape the organization's culture and reinforce transparency, innovation and accountability in a positive loop.

Other Details in the Book to Look out For

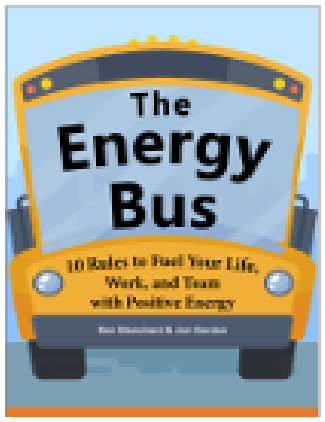
There's no one-size-fits-all approach for OKRs. It's up to the leaders of an organization to figure out the right goals and approach for their teams. Besides the highlights in this summary, the book includes various other examples and interviews with leaders to give you a range of perspectives on the potential challenges and results from OKRs. For more details, please visit whatmatters.com.

KEY QUOTES

"Modern recognition is performance-based and horizontal. It crowdsources meritocracy."

"Goals cannot be attained in a vacuum. Like sound waves, they require a medium. For OKRs and CFRs, the medium is an organization's culture, the living expression of its most cherished values and beliefs."

"Healthy culture and structured goal setting are interdependent. They're natural partners in the quest for operating excellence."



THE ENERGY BUS

10 Rules to Fuel Your Life, Work, and Team with Positive Energy

Ken Blanchard & Jon Gordon

The Big "So What"

Through a fictional story about how a man overcame serious career and marital problems, the authors present 10 rules about using positive thinking and positive energy to create desired outcomes in life. The ideas are useful for anyone who wants to overcome challenges, build strong teams, and live a happy, fulfilling life.

Introduction

To succeed in your personal and professional life, you must learn to manage people's energy, including your own. This book explains how to manage negativity and create positive energy to bring desired outcomes for yourself, your team/organization and your family.

- Research shows that positive thinking and communication create better results in various aspects of life—from personal health to family relationships, teamwork, and success. *Positive energy* in this book refers to the joy, passion, enthusiasm, optimism, and sense of purpose that allow us to live and perform at a higher level. It affects how you lead and build your teams at work, how you manage challenges and adversities in life, and how you interact with others around you. It determines if you allow negative forces to drag you down, or if can counter those forces to bring out the best in others and in yourself.

- Through a fictional story about a George—a middle manager struggling with a series of challenges at work and at home—the authors present *10 rules to help you harness positive energy* to overcome problems and setbacks in life. In this summary, we'll outline the story before elaborating on the 10 rules.

KEY QUOTES

"I hope you use this book not only to fuel your life, work, and team with positive energy but also to enjoy the ride of your life."
—Jon Gordon

"Positive people, positive communication, positive interactions, and positive work and team cultures produce positive results."

Story Outline

The story is about George, a manager at NRG (a lightbulb manufacturing company). George had a great start to his career and a loving family. Yet recently, nothing seemed to be going right, and he felt besieged by problems on all fronts.

- *At work*, his team had been performing badly and was struggling with an upcoming product launch. George's job was at risk unless he could turn things around quickly.

- *At home*, his negativity and perpetual sense of doom-and-gloom was making everyone miserable. His wife threatened to leave him if he didn't change.

- George's life seemed to be unraveling in front of him, and he felt *helpless and frustrated*. When his car broke down and he had to take the bus to work for 2 weeks, George felt like it was the last straw. Could he get any unluckier than this?

Yet, those 2 weeks turned out to be a blessing in disguise. The bus driver, Joy, was a woman full of energy and enthusiasm. After encountering so many passengers who were overworked, overwhelmed, and overstressed, she made it her personal mission to energize each and every passenger on her bus. She called it the "Energy Bus", and it was always full of cheerful passengers.

Initially Joy's exuberance annoyed George, but he soon warmed up to her. Together with the other passengers on the Energy Bus, Joy progressively imparted the "10 rules for the ride of your life" that transformed George's perspectives and attitudes. As he let go of his negativity, things started to change for the better at work and at home.

By the end of 2 weeks, George managed to rally his work team, successfully launch the new product, and renew his relationship with his wife and children. He was amazed at his profound shift, and decided to keep taking the Energy Bus even when his car was repaired.

KEY QUOTES

"Every morning you have a choice. Are you going to be a positive thinker or a negative thinker?"
—Ken Blanchard

The 10 Rules For a Positive, Fulfilling Life

Now, let's look at the 10 rules that led to George's transformation, and the accompanying steps you can take to start applying them.

Rule #1: You're the Driver

Life is like a bus ride. You can only control the journey and destination when you're in the driver's seat.

- Make a real decision to *take control of your life*. It's *your* bus, and you get to choose where you go and what kind of ride it will be.
- To create the life you want, you must first *know what you want*. As the driver, you can ask for advice and directions, but you're ultimately responsible for deciding where to go.

Take some time to crystallize your vision of what you want your life to look like. Write down:

- Your vision for your life (including your health);
- Your vision for your work, career, and team; and
- Your vision for your family and relationships.

Rule #2: Channel your Energy in the Right Place

Everything is made of energy, including physical objects, people, and thoughts. Albert Einstein distilled this concept into the formula $E = MC^2$.

- You can experience this truth in your daily life. The food you eat, the people you hang out with, the words you say, and even the thoughts you think, all *energize or de-energize you*.

To bring your vision to life, you must first focus on it. This begins with your thoughts.

KEY QUOTES

"If you don't take responsibility for your life and control of your bus then you can't take it where you want to go."

"No one can choose your attitude but you."

"If you want to change your situation you must first change your thoughts."

- Have you ever received a call from someone the moment you think about him/her? This phenomenon is known as "telephone telepathy". The *law of attraction* says that thoughts are magnetic. We attract what we think about the most. The more you focus on something, the more it shows up in your life.

- *Our thoughts carry energy*. When you think about a happy memory or an inspiring vision, it can fill you with joy, motivation and positive energy. Thought energy can be so tangible that you may even read someone's mind as if the words are being transmitted to you.

- Write down your vision, then spend at least 10 minutes each day *visualizing your ideal future*.

- At the same time, *stop complaining*. It distracts you from what you want, sends negative thought energy to attract more negatives, and ruins other passengers' ride.

Events + Perception = Outcome. You can't control the events in your life, but you can control how you perceive and respond to them.

- Sometimes, you must experience something you don't want, in order to realize what you do want. See every *challenge or setback* as an opportunity for you to grow wiser and stronger.

- *Surround yourself with positive people*. Use positive energy to overcome challenges to create your desired outcomes.

Rule #3: Fill the Tank with Positive Energy

It's not enough to have vision and focus. You also need fuel to get to your desired destination. Positive energy propels your bus forward, while negative energy clogs up your engine.

- When you whine about problems and blame others, you create/spread *negative energy* that drains and demotivates people. This leads to bad outcomes.

- When you exhibit and spread *positive energy*, it motivates and energizes people. This leads to success.

KEY QUOTES

"Sometimes we have to see what we don't want, to know what we do want."

"Positive energy and positive people create positive results."

"Positive energy is high octane fuel for the ride of your life while negative energy causes sludge to accumulate in your energy pipeline."

- Imagine you have 2 dogs inside you—a positive dog and a negative dog—battling for dominance. The dog that wins will be the one that you feed more. So, *feed the positive dog*.

Let go of your negative thoughts and energy, and focus on the positives that you're grateful for. Fill yourself with positive energy first, so you can share it with others.

- There's always a positive to every negative, or a silver lining to every dark cloud. Consciously *fill your mind with positive thoughts*, so there's no space for negative thoughts to creep in. For example, if you're upset about a flat tire, be thankful that you own a car in the first place. When the restaurant is slow in serving your meal, think of people who're going hungry elsewhere.

- In the story, George learned to crystallize his vision and focus. Thereafter, he was given a book with many 10-minute exercises to give himself *positive energy boosts* throughout the day. He started to take "thank you walks" to think about what he was grateful for, and ended each day by talking to his children about something good that they experienced that day. Before long, George started to feel better about himself and his life, and others began to see the positive changes in him.

Rule #4: Invite Others on the Journey

With a clear vision/focus for your journey and fuel in your tank, you're now ready to invite people onto your bus, and to share your vision with them. The more positive people you have on the bus, the more you can generate and spread the positive energy.

It was just 1 week to the product launch, and George's team was still in a mess. If they were to have any chance of success, they had to pull things together quickly. Joy advised him to get buy-in by sharing his vision and inviting people to get on the bus with him.

- George followed Joy's recommended steps closely:

  (i) He sent an email with an electronic bus ticket to his boss and team members to spark their curiosity.

KEY QUOTES

(ii) Then, he met each person individually to share his vision for the product launch, explain where his bus was going, and invite them to come onboard.

(iii) He concluded each meeting by giving the person a printed ticket. If they were ready to board the bus, they should return the ticket (with their name on it) the following Monday at 9am.

(iv) Separately, he also gave a ticket to his wife, with a vision for himself, their marriage, and their family.

- On Monday, George returned to the office in anticipation, only to find that not everyone was willing to get on his bus.

(i) Three of his team members believed the product launch would fail, and they didn't want to be a part of it. They preferred to remain on the sidelines as the rest worked on their final preparations.

(ii) Surprisingly, 2 of the most troublesome team members submitted their tickets. However, instead of contributing, they only disrupted the meetings with endless criticisms and negativity.

Rule #5: Don't Waste Energy on Those Who Refuse to Board

Between the 3 deserters and 2 trouble-makers, George felt like his bus had stalled before it even started. He was devasted. The next morning, he confided with his fellow passengers on the Energy Bus, and learned the next rule: Don't waste time/ energy on people who refuse to come onboard.

- If people don't share your vision and don't want to be on your bus, there's *no point having them onboard*. It will only ruin the ride for everyone else, and distract you from driving the bus or serving the other passengers.

- Accept that some people will get on your bus and some won't. *Don't take it personally*. However, speak with each person who refused the ticket, and give them a final chance to come onboard. If their answer is still "no", then exclude them from all meetings and discussions until you can formally remove them from the bus.

KEY QUOTES

"You haven't failed until you stop trying."

Rule #6: Remove the Energy Vampires From Your Bus

There will always be negative people who kill productivity and sabotage your efforts by instilling doubts and fear. They are like energy vampires that suck the life out of you and your passengers.

- Put up a "*No Energy Vampires Allowed*" sign and remove such people from your bus. Let the energy vampires know that you won't tolerate negativity. They can either change their attitude and contribute constructively to the shared vision, or get off the bus.

You can only counter others' criticism if your beliefs, conviction and vision are strong enough to withstand their doubts. You can only counter others' negativity if you have enough positive energy. This is especially important if the nay-sayers are people you cannot remove from your bus, such as your boss.

- Develop the habit of infusing yourself with positive thinking and positive energy throughout the day.

Equipped with Rules 5 and 6, George got his team in order by confronting the 2 energy vampires and the 3 members who didn't submit their tickets.

- After a series of 1-1 meetings, 3 of the team members agreed to get on the bus fully to give George and his vision a chance. However, one of the members quit, and another was fired. In the process, George realized how much his own negativity had hurt the team's morale and productivity in the past. He resolved to be a better leader moving forward.

- With the right people on the bus and a renewed sense of hope, George's team had their most productive day in months.

Rule #7: Use Enthusiasm to Attract and Retain Passengers

This rule is about leading from the heart, to infect others with your positive energy and emotions.

- Emotions are basically *energy in motion*. Your emotional state reflects how energy is flowing through you. When you try

KEY QUOTES

"Your positive energy and vision must be greater than anyone's and everyone's negativity. Your certainty must be greater than everyone's doubt."

"The heart is your power center. It's where contagious positive leadership comes from."

to please others or gain their approval, you give away your power. When you bring happiness, gratitude, and excitement to others, you empower everyone. People were found to be stronger and more resilient when they were thinking positive thoughts than when they were thinking negative ones.

- Studies show that *emotions are contagious*. The heart serves as an emotional conductor—your feelings are broadcasted through your heart's electromagnetic field to every cell in your body and beyond, for up to 5-10 feet. It's easier to feel good when others around you feel good too.

Be a Chief Energy Officer (CEO) to spread courage, optimism, and enthusiasm.

- Your *excitement* decides if people want to get on your bus and stay there. When you're truly passionate and excited about your life and work, others will feel the energy and want to get on your bus. The more positive people you have onboard, the more your reputation and energy spreads, and the more passengers you'll attract.

- Let your enthusiasm attract passengers and energize them during the ride. *Nurture other CEOs* who can continue to spread the positive energy throughout your organization and beyond.

Rule #8: Love your Passengers

Besides their strong enthusiasm, great leaders show genuine care and concern for the people around them. When you truly love and care for your team, they will love and care for you back.

Specifically, you can love your passengers in 5 ways:

- *Make time for them*. Spend quality 1-1 time to engage them and get to know them as individuals. During your interactions, truly *be* with people and give them 100% of your attention—they will be able to feel the difference.

- *Listen to them* with heart and empathy, so you can truly hear their needs, feelings, ideas, etc.

KEY QUOTES

"Just as every cell in the body beats to the frequency of the heart, everyone around you will beat to your frequency and your energy."

"People are always buying you and your energy."

"A life touches a life that touches a life. It spreads, one person at a time."

- *Recognize them* by honoring who they are and what they do. Write them a handwritten note, remember their birthdays and things that matter to them (e.g. their kids' names or their anniversaries). Catch people doing the right things and share positive feedback.

- *Serve them* by helping them to grow, achieve their goals, and enjoy themselves on your bus.

- *See and bring out the best in them*. Constantly look for value in yourself and in others. See the potential in each person, and help them to shine, succeed, and be happy.

With just days to the product launch, George's team had a lot to do. George set aside his own fears and concerns, and reminded himself to trust fully in himself and his team. Once he let go of his uptight/grumpy self and showed his love and care, things started to fall in place, both at work and at home.

Rule #9: Drive with Purpose

Along the journey, you will inevitably encounter setbacks. Without a purpose, you won't have the energy or motivation to persist. On the other hand, when you're working on something truly meaningful, you'll rarely feel bored or tired.

George gathered his team members to discuss their wider purpose as a team, beyond the upcoming product presentation.

- After a *passionate debate*, they agreed that their real goal wasn't just to sell lightbulbs, but to:

  (i) Strive for greatness through great ideas, great marketing campaigns, and great results;

  (ii) Develop Chief Energy Officers within and outside their team to spread positive energy; and

  (iii) Create new possibilities with their lightbulbs, e.g. allow a student to study late for an exam, an elderly person to find his medicine at night, or a working parent to prepare for work before dawn.

KEY QUOTES

"The more you recognize them for doing things right the more they will do things right. Feed the positive dog inside them and watch it grow."

"When you bring out the best in others you can't help bringing out the best in yourself."

"Purpose is the ultimate fuel for our journey through life."

- By the end of the discussion, the energy and excitement in the room was palpable. People were no longer competing for the limelight or pushing for their personal agendas. Instead, they were *collaborating* to find ways to advance their shared purpose.

Fueled by a new sense of purpose and direction, the team worked tirelessly to finish and polish the launch and presentations. The event was a roaring success. Meanwhile, George's relationship with his wife and children also improved dramatically.

Rule #10: Have Fun and Enjoy the Ride

After just 2 weeks on the Energy Bus, George found himself a changed man. When his car was finally repaired, but he decided to keep taking the Energy Bus to surround himself with positive people, and to contribute to others in need. Joy had 1 final rule left to impart: to have fun and enjoy the ride.

- Most people get so overwhelmed and stressed with work and daily responsibilities that they don't stop to notice or cherish the things and people in their lives. They realize too late at their deathbeds that they've failed to *pay attention to what truly matters*.

- *Have fun* on your ride. Appreciate the scenery and enjoy the time with your passengers. Don't rush from 1 destination to the next, or fret over how fast your bus is traveling compared to others.

11 Steps to Start your Energy Bus

Create your vision. Together with your team, develop a shared vision (or multiple visions) for where your bus should be headed. Ask yourselves: What are our goals? What do we see when we look to the future? What do we wish to accomplish?

Find a wider purpose to propel your vision forward. Ask yourselves: How will our vision benefit each team member? How will it benefit others? What do we stand for? What does greatness mean to us? How will we make a difference?

KEY QUOTES

"Shared purpose keeps a team energized and together."

"The goal of every journey should be to arrive at your destination with a smile on your face."

Consolidate your vision and purpose into a vision statement. Write it down.

Focus on your vision. Make sure each member has a copy of the vision statement. Encourage them to review the vision daily, and spend at least 10 minutes per day visualizing the desired future.

Zoom in on the goals and action steps your team must achieve to make the vision a reality. Write these down and share it with the entire team.

Identify the people required to achieve the goals and vision. Invite them on the bus with a digital or printed ticket.

Engage and energize your team on a daily basis to spread positive energy and keep negativity at bay. Cultivate practices and processes to develop a positive culture.

Identify negative team members who are slowing down the bus. Have an open discussion to understand what's going on, why, and agree on a course of action. Try to help them succeed if possible. However, if they're unwilling or unable to change, then get them off the bus.

Expect detours, obstacles, flat tires, and potholes on the journey. In face of adversity and setbacks, ask yourselves: What can we learn from this incident? How can we grow and bounce back stronger? What opportunity does this challenge present?

Show your passengers that you care for them. Find ways to recognize them, spend quality time with them, listen to them, serve them and their growth, and bring out the best in them.

Have fun on the journey, and enjoy the ride! Ask yourselves: how can we succeed and have fun in the process? How can we infuse more joy into our work?

Other Details in the Book to Look out For

This story was inspired by a true experience by author Jon Gordon, when he met a bus driver who impacted him with his positive energy and wisdom. The story is written in a lively and engaging

KEY QUOTES

"Every person and every team will be tested on their journey. It was part of the curriculum of life."

"You have only one ride through life so give it all you got and enjoy the ride."

style, with bits of facts, anecdotes and research incorporated throughout the story. For more details, please visit www.theenergybus.com. You can also get more tips and resources from www.jongordon.com.

About the Authors

Ken Blanchard, PhD is one of the most influential leadership experts in the world. He has co-authored 60 books. In 2005 he was inducted into Amazon's Hall of Fame as one of the top 25 bestselling authors of all time. He's also the recipient of numerous leadership awards and honors. Together with his wife, Margie, Ken founded The Ken Blanchard Companies, a leading international training and consulting firm.

Jon Gordon, is an author, speaker, trainer and consultant focusing on leadership, culture, sales, and teamwork. He holds a Bachelor of Science in human ecology from Cornell University and a Master of Arts in teaching from Emory University.

JON ACUFF

The Big "So What"

Most people find it easier to start something than to finish it. In this book, Acuff explains why it's so hard to complete what we've started, and presents a set of principles and tips to help us reach the finish line.

Introduction

In his book "Start" published in 2013, Acuff focused on helping people to get past their fears and start on their goals and projects. He later realized that people may struggle to start something, but they struggle even *more* to finish what they've started. For example, only 8% of people finish their New Year's resolutions—the large majority (92%) drop out along the way.

Acuff created an online video course—the 30 Days of Hustle challenge—to help people achieve their goals.

- In 2016, a researcher from the University of Memphis decided to do a study of 850 course participants. The study found that people who finished the course had on average 27% *higher success rates* than when they pursued goals without the course.

- Based on the results from this study and Acuff's own observations, he discovered that the key to finishing is not about working harder. It's about *overcoming perfectionism*, which causes us to set overly-ambitious goals, amplify our mistakes, diminish our achievements, complicate things and quit prematurely.

In this summary, we'll zoom in on how perfectionist tendencies can get in the way of your goals, and how you can overcome perfectionism to finish your plans and achieve real results.

KEY QUOTES

"Starting is fun, but the future belongs to finishers."

"Accomplishing a goal is a lot less like taking a train across country and a lot more like driving a bumper car."

"If you want to finish, you've got to do all that you can to get rid of your perfectionism right out of the gate. You've got to have fun, cut your goal in half, choose what things you'll bomb, and a few other actions you won't see coming at first."

Reaching the Finish Line

Embrace Imperfection

Perfectionism is *not* the same as excellence—it can be an obstacle to success because it pushes you to reject mistakes and quit just because something isn't perfect.

Many self-help books focus on starting strong. It's a good idea to have a plan, but a bad idea to try to have a *perfect* plan.

- Imagine you aim to exercise 30 minutes a day, but miss a day of exercise after 1 week. Perfectionists are likely to quit simply because of this blemish on their impeccable record. Or, you may be doing well with your sales target, then fall short for 2 months and decide that you've fallen too far behind to catch up.

- Many people won't even *start* on a goal if they think it isn't ideal. More than 97% of respondents in an online poll said that at some point in their lives, they've decided not to jot down an idea because it didn't seem good enough. If you wait for the perfect goal, you may never get started. It's much better to start with an imperfect goal and refine it along the way.

Let go of perfectionism and embrace imperfection instead.

- In reality, mistakes are inevitable and most failures *won't kill or hurt you*. On the other hand, if you quit each time you encounter a setback or imperfection, you may soon become a chronic quitter. That's because each time you quit, you're breaking a promise to yourself and losing faith in your own abilities.

- Even *visualization techniques* focus on repeatedly imagining yourself doing something perfectly. When your actual experience turns out to be different, you may feel discouraged and stop trying.

- Beware of the *might-as-well trap*, i.e. thinking "Since I've already slipped up, I might as well stop altogether." The largest proportion of people drop out of The 30 Days Hustle Challenge as early as Day 2—all it takes is something small to mar their perfect plan and they decide they might as well quit.

KEY QUOTES

"We don't want B's and C's when we've got a goal. We want straight A's, especially if it's a goal we've thought about for any amount of time."

"Goals you refuse to chase don't disappear—they become ghosts that haunt you."

"Developing tolerance for imperfection is the key factor in turning chronic starters into consistent finishers."

"The harder you try to be perfect, the less likely you'll accomplish your goals."

"The day after perfect is what separates finishers from starters."

In short, perfectionism plays up our mistakes and plays down our achievements. By embracing imperfection and celebrating incremental progress, you're more likely to survive the bumps on the road to reach the finish line.

Halve Your Goals 50%

Perfectionism prompts us to over-stretch. We believe that that we must "go big or go home" and feel bad about setting small goals.

- Once you've set an overly-ambitious goal, your *perfectionist tendency* kicks in and tells you to quit if you can't do it properly. You tell yourself that it's better to stop now rather than waste all the time/energy and still fail later.

- The *planning fallacy* refers to the human tendency to consistently under-estimate the amount of time needed to complete a future task. Thinking of a big goal can be exciting at the beginning. However, the bigger the goal, the worse the planning fallacy and the more insurmountable it'd seem halfway into the process.

The solution is to cut your goals by 50%. This is not the same as doing half the work. In fact, halving your goals will actually encourage you to do *more*:

- When you reduce your goals, (i) they seem more attainable, and (ii) each time you complete a goal, you feel more motivated to keep going.

- On Day 9 of Acuff's 30-day program, participants were asked to reduce their goals by half. Those who did so improved their average performance by 63% (from their past performance), and 90% felt more motivated to work on their goal.

2X If your goal can't be halved, then double the timeframe allotted to achieving it.

? If you feel uncomfortable about reducing your goal, ask yourself what's the worst thing that can happen if you halve the goal or double the duration. Chances are, the real reason behind your ambitious goal is your perfectionist streak telling you to do everything *now* and to do it perfectly.

KEY QUOTES

"Perfectionism magnifies your mistakes and minimizes your progress."

"Goals are a marathon, not a sprint."

"Perfectionism will tell you it's now or never, forever obsessed with the idea that if you don't finish it now, you never will."

Choose What To Drop

Most of us accept at some level that it's impossible to do *everything*, much less to do everything *well*. Yet, the perfectionist in us says that we should do *more*. We feel ashamed when we don't do what we're "supposed" to do—to have an amazing career, spend loads of time with the kids, keep the house and lawn flawlessly clean and tidy, have a colorful social life, a wide range of hobbies and still have time to exercise and rest.

Instead of trying to juggle everything, then feeling like a failure when you can't, it's better to decide in advance what you'll ace in and what you'll allow yourself to suck at. Deliberately choose the goals to focus on and the goals to give up. For example, are you willing to be clueless about the latest TV programs, have fewer likes on social media, and have one of the sloppiest lawns in the neighborhood? By allowing yourself to drop the balls on things of lower priority, you free yourself from the shame of not living up to expectations in those areas.

In some areas, you may need a system or strategy in order to reduce your time/focus and still stay effective.

- *For example*, Acuff examined his daily emails and discovered that only a small number required a response within 24-48 hours. He sets up his emails such that he can check them only a few times a week while his assistant handles the bulk of the responses. To reduce the temptation to constantly check his emails, he moved the email app icon to a less accessible part of his phone.

- List down your daily activities and label/code them, e.g. use green for items that'd move you toward your goals and red for those that will distract you from your goals. *Progressively drop 3 items* from this list. You can keep changing the list as your priorities shift.

Learn to say No. It can be extremely hard to say no to your friends or when someone asks for a favor. You can't please everyone if you want to achieve your important goals. You may even need to temporarily pause certain relationships, e.g. stop hanging out for your drinking buddies every week until you've finished your project. If your friends will walk away just because of that, they're probably not worth your time to begin with.

KEY QUOTES

"More than likely, you've spent most of your life choosing to do more than is possible and beating yourself up for not being able to keep up."

"Choose what to bomb and succeed at a goal that matters."

"In order for me to go all in on things that matter, I had to choose to suck at a few that don't."

"Just say no. No long explanation. No apology. No justification. No."

If you can't stop something totally, then simplify it. For example, whenever you have a major deadline round the corner, replace your home-cooked meals with simpler meals or food deliveries.

Motivate Yourself and Have Fun!

Perfectionism says that if a goal is worthwhile, then it must be difficult and painful. That's simply not true. It's equally untrue that if something is fun, it's not "real" work.

In fact, the opposite is true. You're more likely to succeed with fun goals because you'll *want* to take action and are more likely to perform better.

- Each time you finish a goal, you should (i) feel a sense of *satisfaction* and (ii) see an *improvement in performance*, both of which will motivate you to keep going. Participants of Acuff's 30-day program who chose a potentially-satisfying goal reported a 31% higher level of satisfaction. Those who chose something they enjoyed saw a 46% increase in performance success.

- This principle is not about choosing something fun and easy; it's about *finding ways to make your goal fun*. You'll still need to put in deliberate work and effort to achieve results. Ask yourself: "How could I make this goal more enjoyable?" For example, if you enjoy football but hate running, then play more football as part of your weight-loss program.

- Remember: the definition of "fun" is totally subjective. Just *do what works for you*, even if it appears strange or crazy to others.

There are 2 key sources of motivation: rewards (i.e. being driven by positive outcomes you desire) and fears (i.e. being driven by negative outcomes you want to avoid).

- To significantly increase your chances of success, make it fun to achieve your goals and painful if you don't: (i) know the fears and desires that drive you, and (ii) build them into your goals and activities wherever possible.

- For example, if you're motivated by rewards and love music, then indulge in a concert or buy yourself a musical gadget

KEY QUOTES

"Perfectionism and fun are like oil and water. They don't mix. Perfectionism thinks fun is a waste of time and holds no value."

"Fun not only counts, but it's necessary if you want to beat perfectionism and get to the finish."

"Fun is supposed to be personal and often that means it's weird."

"Pick which form of motivation you need the most and then add it to as many parts of the project as possible."

when you achieve a goal. If you're motivated by fear of criticism, then force yourself to announce publicly if you miss your goal, or do something you detest as a punishment.

Remove Excuses and Self-Made Obstacles

When you try to focus on a goal, you're likely to find yourself facing these 2 hurdles:

- "*Hiding places*" are the safe and easy things you busy yourself with to avoid doing what you should be doing; and
- "*Noble obstacles*" are legit-sounding reasons for not finishing what you started.

Get out of your hiding places. To achieve your goal, you may need to perform difficult tasks. This triggers your fear of failure or imperfection, so you end up hiding behind other activities like checking your emails or organizing your files. You *appear* to be busy but are actually unproductive.

- *Identify your hiding places* using 3 questions:

(i) Are you doing this activity by chance or design? The things you do on a difficult project will always happen by design, not by accident. If you find yourself doing something by chance or habit, you're probably escaping from the real work you should be doing.

(ii) Can you explain clearly and succinctly how the work creates value and directly contributes to your goal? If not, you're probably just creating excuses for what you're doing.

(iii) Will others agree that you're working on the right things? Get external feedback by asking someone you trust if what you're doing is truly vital for your goals.

Make a list of your hiding places (e.g. watching TV, surfing the internet, checking emails). Deliberately redirect your time, energy and resources away from those activities to the ones that truly matter.

KEY QUOTES

"The more fun you add to your goal, be it in the form of fear or reward, the more likely you'll actually finish."

"Hiding places are tricky... They make you feel like you're doing well when in reality you're not getting anywhere on your most important projects."

"If you ever have to do a complicated, multistep explanation to say why what you're doing is valuable, it probably isn't."

"'What's next' will always look more interesting than 'what's now'."

- *Turn your distractions into motivators*:

  (i) New ideas and opportunities will always seem more exciting than finishing an existing project. When a thrilling new idea comes to mind, don't fight it. Instead, park it aside and explore it once you finish your current project.

  (ii) Each time you feel tempted to return to a hiding place, make it conditional upon completing your existing project, e.g. you can have a movie night or a full day of TV once you complete your goal.

Get rid of the Noble Obstacles. Learn to recognize these 2 types of excuses for not finishing your goal:

- "*I can't do X until Y happens*". Have you ever told yourself that you can't do something until certain conditions are met? Perhaps you can't develop your business plan until you've done detailed research on 10 different businesses, or you can't start on your book until you've picked the perfect title. By making your goal unnecessarily complex, you create an excuse not to finish it. Each time you hear "until" in your sentence, pause and ask if the condition is truly necessary.

- "*If I do this, then I'm a bad person*." Have you ever abandoned a goal because you think it'll make you a bad person? Such "if-then" reasons could range from "If I start a business I'll have no time for my family" to "If I eat only healthy organic food then I'll end up spending a lot of money." Such reasons are flawed because you're only presenting 2 extreme options with no alternatives in between.

Perfectionists tend to complicate things unnecessarily while finishers keep things simple. Keep asking how you can make your goals easier and simpler, e.g. wear your sportswear to bed so you can work out early in the morning, or do up a priority list the night before so you can start work first thing in the morning.

Overcome your Hidden Rules

Most of us have been brought up with certain rules and limiting beliefs that're so deeply embedded in our subconscious that we aren't even aware of them.

KEY QUOTES

"Line your finish line with the dream goals you're currently using as hiding places and then watch how fast you'll run toward it."

"At the heart of it, a noble obstacle is an attempt to make your goal harder than it has to be so you don't have to finish, but can still look respectable."

"If you want it done, aim for simple."

- *Become aware of your hidden rules*. For example, you may be making things hard for yourself because you believe that anything worth achieving won't come easily. Or, you may feel guilty about becoming rich because you've been taught that money is the root of all evil.

- If you find yourself in a *lose-lose situation*, chances are you're bogged down by some limiting beliefs or hidden rules, such that you'll feel like a failure if you don't achieve your goals, yet you'll feel guilty if you do.

Overcome your limiting beliefs with 3 key steps:

- Use these 4 questions to *identify the gaps*:

  (i) *"Do I really like doing this?"* If you don't enjoy what you're doing, the first step is to acknowledge it.

  (ii) *"What's my real goal?"* If your current goal no longer excites you, step back and examine why. A true end-goal can always be achieved in many different ways. For example, you may have been doggedly pursuing the goal of making your first million dollars, when your true desire is to earn enough to have a healthy, happy lifestyle. With this realization, you can free yourself up to explore better ways of building your desired lifestyle and income stream. Keep returning to this question to ensure you're on-track.

  (iii) *"Am I using an approach that's aligned with who I am?"* You'd get the most from your journey when you play to your strengths. If you're feeling weary and demotivated, chances are you have the wrong goal or approach.

  (iv) *"Is it time for me to quit?"* It's a myth that winners don't quit. In reality, you won't know if something is for you until you've tried it. You won't know if you like yoga until you've tried a few sessions, and you won't know what it takes to start your own F&B business until you've developed an initial business plan. There's no shame in quitting a particular path if you realize the end-destination is not where you want to go.

KEY QUOTES

"You know you're dealing with a cuckoo when either outcome makes you unhappy."

"Make sure that what you're chasing is actually what you want to catch."

"If you pursue the right goal in the wrong way, you still end up in the wrong place."

"Finishing a goal you absolutely hate isn't a win."

- *Crush the hidden rules* by asking 2 questions for each rule:

  (i) *"What does this mean?"* If your hidden rule says that "money is bad", then does it mean that "not having money is good"? When you think deeply about each of the hidden rules, you'd quickly realize how ridiculous most of them are.

  (ii) *"Who says so?"* In most cases, you'd realize you don't even know where the rules came from nor the basis upon which they're built.

- *Replace each old rule* with a healthy, constructive, reality-based rule. For example, you may replace the rule "Money is bad" with the rule "Money in itself isn't good or bad; it's what I choose to do with it that matters."

Your hidden rules and beliefs define how you feel about your goals, and such emotions can overrule logic to sabotage your progress. Get rid of these inner obstacles so you can truly move ahead. Remember: there's no need to do everything by yourself. If you lack info or experience in a certain area, it's perfectly fine to seek help from others who have succeeded before you.

KEY QUOTES

"Your goal will be a whole lot easier if you're not listening to secret rules."

"If you don't have any information of your own, someone else does and will give it to you if you ask the right way."

Use Data to Stay On-Track

We tend to remember our mistakes and failures more than our successes and small wins. Mid-way through your goals, the perfectionist in you may start telling you to quit because you're going nowhere, and blow your fears and frustrations out of proportion. Data is crucial in such instances to help you see your progress objectively.

"Perfectionism screams failure and hides progress."

Ideally, we want to achieve consistent or even compounded results. However, in reality, we're likely to experience cycles of ups and downs.

"Without data, progress virtually disappears."

- Having multiple points of data helps you to see when you're in a momentary dip, shows your overall progress and ensures you're on the right path to the finish line. It helps you to make *informed decisions* rather than guesses. For example, you can get a more comprehensive view of your weight-loss progress if you record your clothes sizes, BMI, food intake, and the frequency, type, duration and intensity of your exercises.

"If you don't review the progress, you can't make adjustments. You can't learn from mistakes. You can't get better, and ultimately, you can't finish."

To find time for a crucial project, you can use a time-log to track your time-use and find pockets of unproductive time to free up.

- Data also allows you to review your progress based on actual facts, so you can systematically *learn and refine your approach* to arrive at your end-goal faster.

Even if you agree that data is useful, you may subconsciously prefer to ignore the truth than to face up to it. Most people would rather deny that they're overspending, wasting time on unproductive activities, or cheating on their diet program. Don't stay in denial until you land up in a crisis without a proper plan of action.

Measure forward and backward to learn and celebrate small wins.

- When you're in the midst of a goal, don't just look ahead as the finish line may seem very far away. Make it a point to *also look backward* to remember how far you've come from the starting line.

- Start by *identifying 3 key measures* for your goal, e.g. # hours invested in your goal, income generated, # products sold, # email subscribers, # pounds or inches lost, # steps taken, amount of debt paid off, # words or pages written, # books read.

Review past experiences. Use the lessons to refine your goal and approach so you improve your chances of future success.

- *Consider questions like*:

(i) Have you attempted a similar goal before? If so, what happened?

(ii) What and who was involved in the goal (e.g. people, time, money, resources)?

(iii) Were there specific deadlines, rewards and consequences? How did each of these elements motivate/demotivate you?

(iv) If you didn't finish your goals, why?

(v) What can you do differently this time to improve your outcomes?

KEY QUOTES

"Data kills denial, which prevents disaster. But only if you'll listen to it."

"If you don't learn what makes you work best and repeat it, you'll never get better."

- Such reviews help you to *develop self-awareness*, e.g. identify the conditions under which you're the most effective and productive, so you can apply these success factors in more areas of your life.

If you're unhappy with your progress, consider 3 options:

- *Adjust your goal* e.g. halving it;
- *Adjust your timeline*, e.g. increasing or doubling your timeframe for completion; and/or
- *Adjust your actions*, e.g. increasing your level of activity or redirecting your energy to higher-impact activities.

Finish Strong

Theoretically, it should be easier to drive action when you're closer to the finish line. Yet, perfectionism can get in the way by triggering 3 fears of finishing:

- *Fear of what comes next*, e.g. once you finish writing your book, you'll have to face the readers' response and critique. Stop worrying about the next step—you can deal with it when you get there.
- *Fear of an imperfect outcome*, e.g. what if making your first million isn't as satisfying as you've imagined? Indeed, life tends to turn out differently from our expectations. Learn to welcome unexpected surprises rather than insist on a fixed outcome.
- *Fear of uncertainty*: what should you do after you've achieved your goal? If you've been working single-mindedly on your current goal, you may worry about what's next. It's ok to finish your current goal without knowing your next goal; just treat the finish line as an opportunity for a brand new start.

If you're dragging your feet to the finish-line:

- Ask yourself, "*What am I getting out of not finishing?*" For example, you may be avoiding the risk of failure or trying not to raise others' expectations by finishing ahead of time. Unless your reasons for finishing are greater than your reasons for not finishing, you won't succeed.

KEY QUOTES

"Reviewing your past is one of the best ways to understand who you really are and how you'll work best on a goal."

"We believe the finish line is a magnet pulling us toward it...but usually it's the polar opposite, pushing against you."

"You can't have perfect, but what you get is even better. You get a surprise."

"Don't let the fear of what's next steal the joy of finishing what's now."

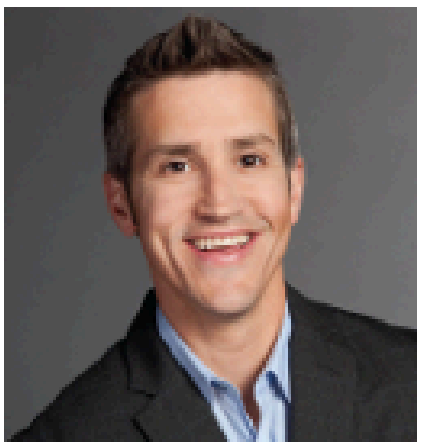
"We need friends during the entire goal, but they are most critical at the finish line."

- *Get support* from trusted friends or family members who believe in you and can encourage you in this final push.

Other Details in the Book to Look out For

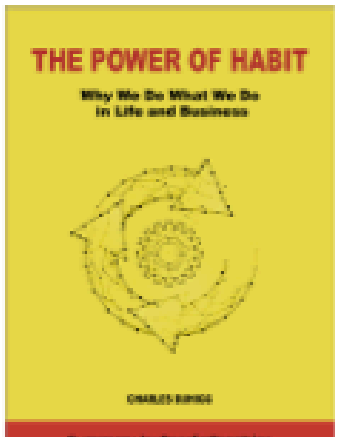
This is a lively, easy-to-read book full of humorous examples and anecdotes. At the end of each chapter, Acuff also summarizes the action steps you can take for each of the success principles above. For more details, please visit https://acuff.me/

About the Author



Jon Acuff is an American author and speaker. He has published several books, written for several major media companies (including Reader's Digest, Fast Company, The Harvard Business Review and Time Magazine), and also runs the blog StuffChristiansLike.net. Acuff is one of INC's Top 100 Leadership Speakers.

KEY QUOTES



The Power of Habit

Why We Do What we Do
in Life and Business

CHARLES DUHIGG

The Big "So What"

Habits can be used to create powerful outcomes for individuals, organizations and societies, including losing weight, raising exceptional children, becoming more productive, transforming corporate culture, influencing customer buying habits, and starting social movements. Written by Pulitzer prize winning reporter, Charles Duhigg, this book presents the science behind how habits are formed, and how we can change and rebuild them.

Introduction

Habits are automatic responses that often operate without our conscious awareness, and can be extremely hard to change. By understanding how habits are formed and how they work, we can decide if, and how, to change them. The book is based on hundreds of studies, interviews and organizational research, and Duhigg zooms in on several case studies in vivid detail. In this summary, we will outline the science of habits at 3 levels - individuals, companies and societies - before sharing the 4-step framework to identify and change habits.

Part 1: The Habits of Individuals

How Habits Work

The Habit Loop summarizes how habits work. There are 3 main components:

KEY QUOTES

"Habits can be changed, if we understand how they work."

"We now know why habits emerge, how they change, and the science behind their mechanics. We know how to break them into parts and rebuild them to our specifications."

"Transforming a habit isn't necessarily easy or quick. It isn't always simple. But it is possible. And now we understand how."

"Simply understanding how habits work – learning the structure of the habit loop – makes them easier to control."

Cue: This is a trigger (e.g. a TV commercial, a bar of chocolates, an emotion, or a sequence of thoughts) that tells your brain to go into automatic mode, using a particular habit.

Routine: The automatic response (e.g. feeling irritated, getting a glass of wine) can be mental, emotional, or physical.

Reward: The routine can produce physical sensations or positive feelings (e.g. pride, relaxation), which determine whether you'll remember this feedback loop in the future.

Once a habit is formed, your default routine will kick in - without conscious thought - each time a cue is triggered. For example, the feeling of stress may cue a smoker to automatically reach for a cigarette, to seek the reward of temporary relaxation.

Our brain converts routines to habits as a way to save effort.

Our brain is like an onion, with layers of cells. Complex thinking (e.g. analysis, inventions) happen in the outer layers, primal behaviours (e.g. breathing, swallowing) are controlled by the inner area near the brain stem, while habits are stored in the basal ganglia near the centre of the brain. In short, our habits are created and operated in a different part of the brain from memories and other bodily functions. Our habits run on "auto-pilot", and we an act without consciously thinking why we do so.

Through the habit loop, our brains learn which cues and routines can bring us desired rewards, and convert them into habits. Lab experiments show that rats placed in a new maze have initially-heightened mental activities. They take in new scents, sounds and sights as they learn to navigate the maze. Over time, these mental activities decrease and the rats navigate the maze automatically. This is the same

KEY QUOTES

"The cue, in addition to triggering a routine, must also trigger a craving for the reward to come."

"(Habits)...shape our lives far more than we realize – they are so strong, in fact, that they cause our brains to cling to them at the exclusion of all else, including common sense."

"When a habit emerges, the brain stops fully participating in decision making. It stops working so hard, or diverts focus to other tasks. So unless you deliberately fight a habit – unless you fine new routines – the pattern will unfold automatically."

"Habits...emerge because the brain is constantly looking for ways to save effort. Left to its own devices, the brain will try to make almost any routine into a habit, because habits allow our mind to ramp down more often."

reason why we can automatically and effortlessly turn off the alarm clock in the morning, put toothpaste on our toothbrush, or tie our shoelaces.

Cravings and How Habits are Formed

Craving is a crucial element of habits formation. As the cue-routine-reward loop becomes more automatic, we start to anticipate and crave the rewards. Our craving powers the habit loop to eventually seal in the habit.

Pepsodent. In early 20th century America, hardly anyone brushed their teeth. Claude Hopkins managed to instil the habit of brushing teeth, making Pepsodent toothpaste a household brand. His ads read, "Just run your tongue across your teeth. You'll feel a film – that's what makes your teeth look 'off color' and invites decay." He used the "film" as a cue for people to brush their teeth with Pepsodent, with the promise of clean teeth and beautiful white smiles. The truth is, the "film" is a natural membrane, and toothpaste doesn't remove it. However, the cue was visible and universal, people wanted the reward (beautiful teeth), and they started craving for the fresh, tingling after-sensation of using Pepsodent. The teeth felt clean, and this sent a signal that the product was working.

Febreze. P&G initially struggled to launch Febreze, a spray that removed odours. Sales went through the roof after they added a fragrance and repositioned it as the finishing touch to one's daily household cleaning routine. Once people tried the product, they began to crave the clean smell from the finishing spray of Febreze – it made their homes smell clean the cleaning routine felt complete.

Transforming habits

Habits can never truly be removed. You can only **replace and rebuild** it, by changing the routine while keeping the cue and reward constant. This golden rule must be supported by one's **belief** that the habit can be changed permanently

Changing a **cue** can avoid triggering the habit loop, but it does not break the habit. The habit lies dormant, and once the same cue surfaces, the habit will kick in again. That's why someone who has "quit" drinking, smoking or

KEY QUOTES

"Cravings are what drive habits. And figuring out how to spark a craving makes creating new habit easier."

"Once you break a habit into its components you can fiddle with the gears."

"We might not remember the experiences that create our habits, but once they are lodged without our brains they influence how we act – often without our realization."

"The problem is that your brain can't tell the difference between bad and good habits, and so if you have a bad one, it's always lurking there, waiting for the right cues and rewards."

"By learning to observe the cues and rewards... we can change the routines."

"You can never truly extinguish bad habits. Rather, to change a habit, you must keep the old cue, and deliver the old reward, but insert a new routine."

"If we keep the same cue and the same reward, a new routine can be inserted."

gambling may resume the habit when faced with stressful circumstances.

Even if **rewards** are removed, or even replaced with negative outcomes, we'll have the same automatic reaction to the cues. That's why gamblers continue to gamble even when they've lost everything.

Hence, the only way to change a habit is to intentionally break it down and rebuild it – Replace it with a new **routine** that will satisfy the same cravings, then find a support group or community to help you build your **belief** and follow through.

Here are some examples of the Golden Rule at work:

(i) People often use alcohol to forget a worry. At Alcoholics Anonymous (AA), each time a member feels worried or stressed, they talk to their sponsor or join a group gathering, to achieve the same relief via non-alcoholic means. The AA community also provides support and belief to kick the habit.

(ii) Chronic nail-biter Mandy started by using an index card to track her nail-biting urges, and realized the cue was a tingling sensation in her fingers. To break the habit, she developed alternative responses (e.g. rubbing her arms or rapping her knuckles) each time the cue surfaced. That way, she could achieve a similar physical stimulation without biting her nails.

To start making changes, focus on **Keystone Habits** - these are the habits that, once formed, will disrupt and/or influence other habits.

- People who exercise tend to smoke less, eat healthier foods, and develop other positive habits. Food journaling (writing down what you they eat) helps people to develop more conscious eating habits. A daily gathering with like-minded friends helps someone to maintain focus on a goal and overcome obstacles.
- **Small wins** are a crucial element of keystone habits. They boost morale, build belief, and help us to decide where to focus our efforts.

KEY QUOTES

"Belief was the ingredient that made a reworked habit loop into a permanent behaviour."

"The precise mechanisms of belief are still little understood... But we do know that for habits to permanently change, people must believe that change is feasible"

"Keystone habits say that success doesn't depend on getting every single thing right, but instead relies on identifying a few key priorities and fashioning them into powerful levers."

"The habits that matter most are the ones that, when they start to shift, dislodge and remake other patterns."

"Small wins have enormous power, an influence disproportionate to the accomplishments of the victories themselves."

- Under the guidance of coach Bowman, multiple Olympic gold medallist ***Michael Phelps*** followed a rigorous routine that ran like clockwork. By trying a range of techniques until they found stuff that worked, Phelps and Bowman focused on small wins, made them into mental triggers, and built routines and habits around everything that Phelps did- from what time he woke up, to what he ate and how he trained.

- Phelps' keystone habit was to "watch the videotape" - his mental visualization of the perfect race - before he slept and when he woke up. By doing this each day, Phelps memorized every detail of the pool, and mentally perfected his strokes from start to finish. During a particular race, he was blinded from water leaking into his goggles; yet, by using the video in his head, he won the race and even broke a World Record.

KEY QUOTES

"Small wins fuel transformative changes by leveraging tiny advantages into patterns that convince people that bigger achievements are within reach."

Part 2: The Habits of Successful Organiztions

Keystone Habits in Organizations

Routines are important in any organization - they capture the unwritten rules of how things work, how roles are carved out, and how to "survive" and succeed in an organization. These are typically what the employee handbook will not address, and form the unconscious, automatic "habits" of organizations. Like individual habits, organizational habits can be created by accident or by design, using the same ingredients of Keystone Habits and Small Wins.

In 1987, Paul O'Neill became the new CEO of Fortune 500 manufacturer Alcoa. Instead of making typical promises with vague business buzzwords, he announced his goal to make Alcoa the safest company in America, with zero workplace injuries. In 11 years, O'Neill transformed Alcoa from having about 1 accident per week per plant, to a worker injury rate that was 1/12 of the national average. In the same period, Alcoa's income grew 5 times and market capitalization increased by $27 billion.

O'Neill had zoomed in on safety as a keystone habit and an indicator of habitual change. He made sure that everything centred around safety, e.g. hiring and firing decisions, promotions, 24 hour incident reports. In order to achieve the stringent safety standards, teams had to re-examine their processes, managers had their ears on the

"There are no organizations without institutional habits. There are only places where they are deliberately designed, and places where they are created without forethought."

"Cultures grow out of the keystone habits in every organization, whether leaders are aware of them or not."

"You can't order people to change…So I decided I was going to start by focusing on one thing. If I could start disrupting the habits around one thing, it would spread throughout the entire company."
- Paul O'Neill, ex-Alcoa CEO

"Some habits…matter more than others in remaking businesses and lives. These are 'keystone habits', and they can influence how people work eat, play, live, spend and communicate."

ground and invited bottom-up suggestions... Eventually, these habits rippled to other aspects of businesses, creating greater efficiency, quality, learning and flexibility, and profitability.

Making Willpower Automatic

All of us have a limited supply of willpower. In a study, a group of hungry students were given 2 bowls – one containing chocolate chip cookies, and another containing radishes. Half were told to eat only the cookies, and the other half were told to eat only the radishes. The students were subsequently given an impossible puzzle to complete – those who ate only radishes gave up much faster than those who ate the cookies, because they'd already depleted much of their willpower to resist the cookies.

Likewise, handling difficult situations like angry customers and long queues can sap employees of their energy and discipline. Duhigg shares how Starbucks converts willpower and self-discipline into an organizational habit. For example, Starbucks trains its staff to use the "LATTE" method of handling angry customers – Listen to customers, Acknowledge their complaint, Take action to solve the problem, Thank them, then Explain the reason for the problem. By defining the desired behaviour(s) ahead of time, then following that routine each time the situation arises, you can convert ideal routines into relatively effortless organizational habits.

Besides having well-defined instructional manuals, you also need to give people a sense of sense of control or autonomy, so they willingly adopt these habits.

Using Crises to Build Habits

Habits are so inter-related and deeply entrenched in an organization that they can be hard to isolate and to break. Great leaders understand how to use crises to make fundamental changes.

In 1987, a major fire at London's King's Cross station killed 31 people. The fire hazard had been known for years, yet no action was taken. Many opportunities to contain the fire on the day of the incident were ignored, due to the organization's culture for people to keep to their own roles. Desmond Fennel, special investigator for the incident, realized that things would not change without due pressure. Hence, he deliberately called for public hearings for 91 days, and released a 250-page report detailing the complacency and inadequacies of the organization. The resulting public outrage prompted an organizational revamp and bought about the necessary legislative changes.

KEY QUOTES

"Willpower is the single most important keystone habit for individual success."

"The best way to strengthen willpower and give students a leg up, studies indicate, is to make it into a habit."

"Giving employees a sense of control improved how much self-discipline they brought to their jobs."

"Sometimes, in the heat of a crisis, the right habit emerge."

"Crises are so valuable, in fact, that sometimes it's worth stirring up a sense of looming catastrophe rather than letting it die down."

"Good leaders seize crises to remake organizational habits."

Shaping Consumer Habits

Generally, consumers' buying habits are better predictors of purchases than their demographics and intentions. However, everyone's buying habits is unique. To shape customer habits, the key is to sandwich a new habit you wish to nurture, between existing habits or familiar routines.

Retail giant, **Target,** managed to deduce which of their customerswere pregnant, by studying their purchasing patterns. However, when they mailed coupon-booklets for baby items to these customers, the gesture was not well-received. The customers did not expect Target to know they were pregnant, and didn't respond well to the coupons. Target decided to change its approach - it intentionally sandwiched coupons for diapers and maternity clothes between unrelated ads for lawn mowers and wine glasses. This time, the customers assumed these coupons were sent to everyone, and willingly used them.

Radio stations also use a similar technique to introduce and popularize new songs. New releases are sandwiched the other familiar, popular songs, until listeners become familiar with them and the songs become new hits.

Part 3: The Habits of Societies

Habits are a big part of how social movements start, spread and become lasting social change. In this segment, we'll explain the 3 essential parts of a social movement – the habits of friendship, the habits of communities, and social habits – using the example of the American civil rights movement.

In pre-civil rights America, seats on buses were "segmented", with thefirst 4 rows reserved for white passengers by law. On 1 Dec 1955, Rosa Parks refused to give up her seat to a white man. She was seated in the row behind the white section, where either race could sit, yet she was the arrested by the police and put in jail.

Although such incidents had happened many times before, Rosa Parks' incident triggered the famous Montgomery boycott, which became the focal point of the civil rights campaign that changedAmerican history. In the book, Duhigg details the sequence of events. Here's an outline:

KEY QUOTES

"Even though everyone relied on habits to guide their purchases, each person's habits were different... The habits were unique to each person."

"Whether selling a new song a new food, or a new crib, the lesson is the same: If you dress a new something in old habits, it's easier for the public to accept it."

"Movements don't emerge because everyone suddenly decides to face the same direction at once. They rely on social patterns that begin as the habits of friendship, grow through the habits of communities, and are sustained by new habits that change participants' sense of self."

The Habit of Friendship is our natural inclination to help people we like or respect. It's crucial for *starting* social movements. Parks was unique because she was well-liked and well-connected in many social networks, across different social and economic strata. She had friends from diverse backgrounds, from farmers to professors. When news of her arrest got out, one of her friends called for a boycott of the city buses. The news spread, and everyone who knew and liked Park wanted to support her.

The Habits of Communities is crucial for *growing* social movements. Parks' personal ties would not have been enough to drive the movement. It spread due to the "power of weak ties", via people who didn't know Parks personally, but shared common acquaintances or social networks. Being a part of such communities created peer pressures and social expectations; people felt obligated to participate and conform, even if they didn't really want to. This allowed the movement to reach people beyond Parks' personal network, generating critical mass for a successful boycott. Dr Martin Luther King Jr. also came into the picture when his church was used as a boycott meeting venue.

Social habits are what *sustain* a movement; long-term sustainable change sets in when the activities become social habits. This happens when leaders give new identity and ownership for people to continue the movement as social habits.

After 2 months, the bus boycott started to lose momentum. At this juncture, there was a bombing at Dr Martin Luther King's house, triggering fresh responses from the black community. King made a speech calling for non-violence and acceptance. This gave a new perspective on the boycotts – it was no longer just about inequality on buses, but about love and forgiveness of the attackers, with faith of eventual victory for the black community. People started to organize themselves, making their statements in nonviolent ways, and the civil rights movement entered another phase.

KEY QUOTES

"There's a natural instinct embedded in friendship, a sympathy that makes us willing to fight for someone we like when they are treated unjustly."

"People have no problem ignoring strangers' injuries, but when a friend is insulted, our sense of outrage is enough to overcome the inertia that usually makes protests hard to organize."

"Weak-tie acquaintances... give us access to social networks where we don't otherwise belong."

"When the strong ties of friendship and the weak ties of peer pressure merge, they create incredible momentum. That's when widespread social change can begin."

"For an idea to grow beyond a community, it must become self-propelling. And the surest way to achieve that is to give people new habits that help them figure out where to go on their own.""

Part 4: Applying the Ideas

Habits are complex and hard to change, but change is certainly possible with the correct understanding and desire. There is no fixed way to change habits, since each person, habit and the underlying motivation are different. Hence, in each chapter of the book, Duhigg covers different examples and scenarios to illustrate possible approaches and permutations. Now, we'll outline his 4-part framework to identify and build habits.

Step 1: Identify the Routine

Start by identifying the old, negative routine what you wish to replace, such as gambling, snacking, or smoking.

Step 2: Experiment with Rewards

It's relatively harder to identify the cravings that drive our behaviours. For example, are you taking a daily "drinks-break" because you crave a can of Coke, the sugar rush, or the temporary distraction that it provides? To identify the cravings that are driving your habits, experiment with different rewards to test the outcome. Assuming you're trying to wean off the habit of drinking a can of Coke a day:

- Try replacing the Coke with an apple, a coffee, or an activity like chatting with a friend; and
- After each activity, write down the first 3 words or things that come to mind, be it an emotion, thought, or reflection. After 15 minutes, check if you still feel the urge for the Coke.

Step 3: Isolate the Cue

It is hard to identify the specific cue behind a habit because we are flooded with different stimuli and information each day. Most habitual cues fall into one of these 5 categories:

- Location: Where were you?
- Time: What time was it?
- Emotional state: What/ how were you feeling?
- Other people: Who else was around?
- Immediately preceding action: What were you doing just before the urge?

KEY QUOTES

"The problem is that there isn't one formula for changing habits. There are thousands."

"Change might not be fast and it isn't always easy. Bu with time and effort, almost any habit can be reshaped."

"Individuals and habits are all different, and so the specifics of diagnosing and changing the patterns in our lives differ from person to person and behaviour to behaviour... What's more, each person's habits are driven by different cravings."

"By experimenting with different rewards, you can isolate what you are actually craving, which is essential in redesigning the habit."

"To modify a habit, you must decide to change it... You must consciously accept the hard work of identifying the cues and rewards that drive the habit's routines, and find alternatives. You must know you have control and be self-conscious enough to use it."

Jot down your answers to these questions each time the routine occurs, to identify a recurring pattern in the cues.

Step 4: Have a Plan

Steps 1-3 allow you to define your habit loop, e.g. you may realize that your Coke-drinking habit occurs every afternoon, and it's actually a craving to take a break from work and socialize. You can then draw up a plan, e.g. Set an alarm at 4pm everyday to remind yourself to walk to a friend's desk and talk for 10 minutes.

Other Details in the Book to Look Out For

In each chapter of the book, Duhigg covers examples and scenarios in vivid detail to help us see the cues, routines, rewards involved in habits formation and change. Besides the examples outlined in this summary, the book covers details of lab experiments and brain research, case studies on sports, hospitals, gambling, sleep-walking etc.

For more details, do get a copy of the book, or visit the website www.thepowerofhabit.com.

About the Author

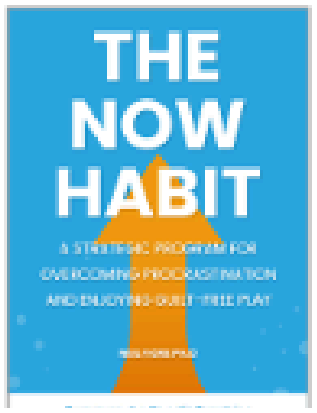
Charles Duhigg (born 1974) is an American journalist and non-fiction author. He is a Pulitzer prize winning reporter for The New York Times, and is best known for his books on habits and productivity. He graduated from Yale University, Harvard Business School, and worked with the New York Times as an investigative business reporter.

He has received many accolades including the George Polk Award, Heywood Broun Award, National Journalism Award, and the Pulitzer Prize for Explanatory Reporting.

KEY QUOTES

"Once you understand that habits can be rebuilt, the power of habit becomes easier to grasp, and the only option left is to get to work."

"A habit is a formula our brain automatically follows... To re-engineer that formula, we need to begin making choices again."



THE NOW HABIT

A Strategic Program for Overcoming
Procrastination and Enjoying Guilt-Free Play

NEIL A. FIORE PH.D

The Big "So What"

All of us have tasks or goals that we tend to delay or escape from. Contrary to common belief, procrastination is *not* a character flaw or a problem in itself. It is a coping mechanism can be unlearned and reprogrammed. This book presents strategies and tools that can help anyone to overcome procrastination, improve your quality of work, *and* free up guilt-free time to play and relax.

Introduction

Most habitual procrastinators are aware of their tendencies, but are unable to break free from them. Common advice to "work harder", "just do it" or "get organized" simply don't work because they fail to address the root of the issue:

- Procrastination is a *coping mechanism* that we use to deal with the stress and anxiety associated with certain tasks and our self-image. The only way to eliminate it is to tackle the underlying fears and self-condemnation.

- The truth is, no one is an absolute procrastinator. There are always activities that we willingly dive into with enthusiasm. The Now Habit is built on positive psychology and the Maslow hierarchy of needs. It's based on the belief that humans have a natural desire to do well. By harnessing that *innate drive* and overcoming our fears or insecurities, we can start to take action *now*.

- With time, you'll not only enjoy greater productivity, but also free yourself from the guilt and shame of procrastination, feel more motivated, improve your self-

KEY QUOTES

"The skills and strategies of the Now Habit program will let you think of yourself as a producer, feel like a producer, and act like a producer."

"Procrastination is a mechanism for coping with the anxiety associated with starting or completing any task or decision."

"The healthy individual has an appetite for fruitful activity and for a high quality of life."
—George Bernard Shaw

esteem, and have more time for guilt-free enjoyment while improving the quality of your work. You will think, feel, and act like a *producer, not a procrastinator*.

This summary is organized into 2 parts: we'll start by explaining the whys and hows of procrastination, before zooming in on various powerful tools that you can use to overcome procrastination and unlock your productivity.

Why and How We Procrastinate

Why we Procrastinate

Procrastination is not a character defect or a sign that we're lazy. Many of us have been taught from young not to let praise get to our heads, and never to rest on our laurels. We feel guilty when we're playing or relaxing when we "should" be working harder and improving ourselves. We procrastinate to cope with underlying issues like perfectionism, low self-esteem, fear of failure/success, and negative feelings about ourselves or our work.

Habits are learned when an activity is instantly followed by a reward. Procrastination is rewarding because it provides temporary relief from our stress and anxiety. We feel even more justified if the task eventually takes care of itself or is handled by someone/something else. In particular, we use procrastination to achieve 3 things:

- Express *resentment or resistance* toward authorities and our sense of powerlessness. We use procrastination to indirectly rebel against or sabotage our "oppressors".
- Avoid the *fear of failure or disappointment*, which often comes from perfectionism and self-criticism.
- Avoid our *fear of success*. We hold back our best effort due to:

  (i) The *conflict* between our desire for advancement and our loved ones' demands for our time/attention.

KEY QUOTES

"Generally we are taught that procrastination is the problem, rather than a symptom of other problems."

"Our real distress comes from the constant anxiety of delaying, from guilt about the inferior quality of projects completed at the last minute, and from deep regrets about life's missed opportunities."

"People don't procrastinate just to be ornery or because they're irrational. They procrastinate because it makes sense, given how vulnerable they feel to criticism, failure, and their own perfectionism."

(ii) The *disincentives* associated with the end of a project, e.g. looking for a new job after graduation.

(iii) Our *fear of eventual failure*. Each time we succeed, we're presented with an even-higher bar. The higher we go, the higher the standards and competition become. So, it seems like a matter of time before we'll fail.

People who procrastinate habitually get stuck in a vicious cycle. They procrastinate because of certain fears or anxiety. The more they procrastinate, the more anxious they feel, and the more they criticize themselves and lose confidence. This leads to an even stronger urge to procrastinate. The cycle continues until they label themselves as a procrastinator, and can't even enjoy their leisure time without guilt.

How we Procrastinate

Each of us procrastinates differently. Over the next week, observe your own tendencies and identify your procrastination patterns so you can break them.

Know how you spend your time. Divide your day into 3-4 segments (e.g. morning, afternoon, evening), and record the time spent for every activity. You can also label your work activities with "A" (most important), "B" (important) or "C" (least important). After a few days, you'll have a good idea of how you typically spend your time, including how much time is spent on email/phone, working, eating, socializing etc. Chances are, the bulk of your time is not used for important or high-priority work.

Create a procrastination log. Allow yourself to procrastinate as usual, then take note of when/how you procrastinate without judging yourself. Whenever you put something off, write down these details:

- *When and what*: Record the date and time, the activity involved and its priority level. You may start to notice that you tend to procrastinate more during certain days/ time, or for certain type of tasks (e.g. detailed tasks like tax filing, or "big" projects like an annual plan).

KEY QUOTES

"[Others] can never make you into a victim or a procrastinator. Only you can do that."

"Identifying how you go about doing anything is essential to improving your performance."

"The first major step out of procrastination is to become aware of how fear leads to your old patterns and how creating safety leads to productivity."

- *Why and how*: Write down your thoughts and feelings, the justifications you give yourself, how you try to avoid the task, and how you feel after that. These help you to identify the attitudes, beliefs, self-talk and responses associated with certain tasks.

Sample Procrastination Log					
Date & Time	Activity & Priority	Thoughts & Feelings	Justification	Attempted solution	Resultant Thoughts & Feelings
15/12 10am	Prepare annual plan, A	There's so much to cover	Must think about it	Surfed the internet	Guilty and stressed
16/12 3.20pm	Fix the shelf, B	I should but I don't want to	Nice weather	Go for a walk	Relaxed from the walk

Reprogram your Habits: From Procrastinator to Producer

The Now Habit strategy comes with several powerful tools you can use to overcome procrastination and reprogram yourself to be a producer.

Create a Psychological Safety Net

If you were asked to walk across a wooden plank on the floor, you'd probably do it without hesitation. But if you had to walk across the same plank 200m above ground, you'll hesitate for fear of falling. Now, if there's a fire raging behind you, you'll somehow find a way to cross the plank to safety. This analogy mirrors what happens when we procrastinate: we imagine a task to be much scarier than it is, then we put it off until the situation becomes so dire that we have no choice but to do it. This creates undue stress and worsens the negative feelings associated with the work and our self-image.

The solution is to create a safety net, so crossing the plank no longer seems so dangerous. A psychological safety net can reduce the perceived threat of failure or imperfection, and help you to bounce back stronger from your mistakes.

KEY QUOTES

"The absurd lengths taken to procrastinate indicate how much pain you've trained yourself to associate with the task."

"Procrastination has been learned, and it can be unlearned. You need to develop alternative tools for coping with your fears."

- Consider *alternative options* instead of being fixated on 1 option. Develop backup plans, so that any failure won't seem like the end of the world.

- Use *positive self-talk* to remind yourself: "Whatever happens, I will survive, bounce back and find a way to carry on." Think of all the successful people who've bounced back from major setbacks in life. Create a space where you've safe from judgement and criticism, especially from yourself.

Use Positive Self-Talk

Our self-talk shapes our attitudes to determine how we think, feel, and act.

- We react negatively to words like *"I have to" or "I should"* because they're associated with pressure and unpleasant tasks.

  (i) "Have to's" bring up feelings of stress—we feel victimized and compelled to do something we don't want to do. It creates an internal conflict, since your logical mind says you must do it, but your subconscious mind rejects it. The more you struggle, the more unpleasant the task seems.

  (ii) "Should's" bring up feelings of envy or depression as we focus on the gap between reality and ideal, or feel guilty/disappointed for not doing/achieving what we "should".

- On the other hand, words like *"I choose," "I decide," or "I will"* remind us that we have a choice in what, when, where or how we do something. They focus our energy positively toward a desired outcome, so we shift from resistance to commitment. That's why people who become pregnant may suddenly improve their diet or quit smoking, even though they had failed to do so in the past.

Reprogram your attitude by replacing negative self-talk with positive ones.

KEY QUOTES

"Through a language of choice and commitment you'll learn to direct your energy toward a goal, feeling empowered rather than victimized."

- *Learn to say "no"* without guilt/shame, e.g. "No, I have other priorities", "No, I need more time to consider", "No, I don't accept these terms".

- *Replace negative messages with positive ones*:

  (i) Replace "I have to" with "I choose to."

  (ii) Replace "I must finish" with "When/where can I start?"

  (iii) Replace "This is too big" with "I can take one small step".

  (iv) Replace "I must be perfect" with "I can be perfectly human".

  (v) Replace "I have no time to play/relax" with "I must take time to play/relax".

- Switch from the mindset of a procrastinator to that of a *producer*: "I choose to start on one small imperfect step knowing I have plenty of time for play."

KEY QUOTES

Use Old Habits to Trigger New Ones

Whenever you decide not to procrastinate, you're changing your neural pathways to weaken your old habits and create/strengthen new ones. In this way, you can unlearn your habits in the same way you learned them.

Push vs pull. The push method assumes that humans are lazy and can only be motivated through threats or punishments. The pull method assumes that humans are naturally curious and will persevere with the right incentive.

- We're more likely to start working on a task if it generates *short-term rewards*. We're less motivated by a vague promise of long-term rewards, and are demotivated by immediate pain/isolation. Focus on the rewards at the end of every small milestone, e.g. you can take the whole weekend off to play if you finish your project by Friday, or can relax for the year once you hit your sales target this quarter.

Use Guilt-Free Play to Inspire Quality Work

Prioritize guilt-free play-time by scheduling it in your calendar. This simple step will inspire higher quality work because:

- It removes your fear that work will deprive you of *time for enjoyment*.
- With less time left for work, you'll feel motivated to *make every minute count*. You'll approach your work with more focus and seek to finish your tasks in less time.
- The extra exercise, relaxation and stimulation give you more *energy and inspiration*, to bring back excitement and creativity into your work, learning and problem-solving.

As a result, you break the vicious cycle of procrastination and start a positive cycle of creativity and productivity.

KEY QUOTES

"Enjoying guilt-free play is part of a cycle that will lead you to higher levels of quality, creative work."

Overcome Blocks to Action with 3 Tools

The next 3 tools help to overcome the 3 key blocks that trigger procrastination: the fear of being overwhelmed, the fear of failure, and the fear of not finishing. These blocks reinforce one another, and demolishing 1 block also weakens the others.

To tackle the fear of being overwhelmed, use Three-dimensional thinking and the Reverse Calendar:

- If you're feeling overwhelmed by the immensity of a project, remember *3 things* to ease your anxiety: (i) you don't have to start at the "right" place, (ii) you can learn as you go (instead of having to know everything now), and (iii) it's ok not to finish immediately.
- Use the *Reverse Calendar* to divide a big project into small, manageable parts with sub-deadlines over the coming days/weeks. Break this down further into bite-sized steps within your control. You now have checkpoints to allay your fear of going in the wrong direction, and know how much time you have to finish each step.

To tackle the fears of failure and imperfection, finish the work of worrying. Don't waste energy fretting about a potential problem—use the energy to develop solutions and plans to address the threat. Consider: (i) What's the worst that could happen and how likely/unlikely it is, (ii) what you can do in that scenario, (iii) how you can lessen your pain and increase your happiness even then, (iv) what alternatives you have or create, and (v) what you can do *now* to reduce the chances of the worst-case event and increase your chances of success.

To tackle the fear of not finishing, use persistent starting. Shift your focus away from the finish-line and keep asking "when can I start on the next step?" If you keep taking 1 step at a time, you *will* finish the task. Remember: preparing to start is not the same as starting, and can actually be a form of procrastination. Don't waste energy berating yourself on your slow progress or how you should've started earlier. If you find yourself making excuses not to finish (e.g. "I need more time to perfect it"), remind yourself that your work is what can be accomplished *within* the deadlines.

KEY QUOTES

"Procrastination is an ineffective way to cope with worrying because it stalls action and simply piles up more worries."

"Keep on starting, and finishing will take care of itself."

Use The Unschedule

Procrastination doesn't remove the need to get the work done. You're better off just doing it. The Unschedule helps you **get started, 30 minutes at time**. It's basically (i) a weekly calendar of your nonwork activities and (ii) a record of actual work done.

- The Unschedule combines several *behavioral and psychological principles* to help you achieve realistic timekeeping, overcome your fears, associate your work with success/rewards, do more quality work and enjoy guilt-free play time. It builds your confidence by (i) motivating you with short periods of work followed by immediate rewards, and (ii) showing a visible record of how much focused, uninterrupted work you've done daily.

Use these guidelines to start implementing your Unschedule:

- Start by filling your planner with *nonwork activities* (e.g. meals, exercise, sleeping, meetings, recreation,

"The choice is not working or not working, but which type of work; even feeling guilty because of procrastinating takes some effort."

socialization). You'll realize that you have only a few hours a day for real work.

- Fill in the work hours only after you've finished *30 min of uninterrupted work*. Don't record the time if you stop before 30 min, or step away for a snack/call.

- After each work period, *reward yourself* with a break or switch to a more enjoyable task. Before going for a recreational or social activity, take 30 minutes to work on a high-priority project.

- *Add up* the number of quality hours worked each day/ week and give yourself a pat on the back. You may soon feel excited to see how many work hours you can clock each day.

- Devote at least 1 day a week just for *rest and recreation* (and perhaps some small chores). After a rest, you'll feel more motivated to return to your high-priority projects.

- Focus on "when is the next time I can start?" and keep taking *1 small step at a time*. Don't try to finish an entire project, or work non-stop for 3 hours. Just aim for just 30 minutes of quality, focused work.

- *Never end on a low note*. If you're stuck, use another 5-10 minutes to at least come up with a partial solution.

Within 2 weeks, you'd have established a rhythm and have a better sense of your schedule. You can now start to make adjustments:

- Consider starting earlier, reprioritizing your tasks, or dropping/delegating some projects to *free up time* for your primary goal. Ideally, use your first 30min-slot for your highest-priority task, followed by the next-highest priority task and so on.

- If you *can't get started* even with 30 min of focused work, then take a full day's rest to do something you really want to do. You'll probably feel more eager to return to work the next day.

- Make a firm commitment to your *scheduled leisure activities* (e.g. sleep, meals, exercise, socialization).

KEY QUOTES

Work in the Flow State

Peak performance comes when we're in a state of flow, i.e. we feel calm, focused, and so absorbed in our work that even the most challenging task feels effortless. Yet, you can't feel creative or inspired if you're constantly judging or criticizing every step you take. To use your brain optimally, you must suspend your criticism/judgement and allow your creativity and inspiration to flow. You can organize the ideas later to meet specific requirements or standards.

Train yourself to get into the flow state:

"Working in the flow state or in the zone removes the emotional need to procrastinate and accelerates your progress toward your goals."

- Don't impose linear structures prematurely during the *initial steps/drafts* as your idea is still unfolding.

- Before each 30-minute work session, use 2 minutes for a *focusing exercise* to shift into a relaxed, creative state of mind. Sit upright and breathe deeply. Hold your breath for a moment, and then imagine your tension flowing out as you exhale slowly. With each exhale, release any remaining tension and allow the deep relaxation to flow down your entire body. Let go of all thoughts/worries about the past, as well as your anticipations for the future. Bring your energy and focus to the present and what you choose to do right *now*.

- In the book, Dr. Fiore also suggests additional self-talk and a 12-15 min relaxation exercise to prepare for your focusing exercise.

Use Controlled Setbacks to Train your Responses

Use planned setbacks to practice how to counter your negative habits and switch to a productive one. The more you practice, the more you build your brain's neural pathways to facilitate peak performance.

- Choose projects/tasks that you're likely to procrastinate on, and deliberately switch to a *producer mindset* using the various techniques above (e.g. switch from "I have to" to "I choose to", apply the focusing exercise or the Unschedule). Observe the shift in your own thoughts and feelings.

- Through the practices, you can build *hardiness and resilience* to bounce back from setbacks and persevere through difficulties.

- Practice how to master your *distractions* during focused work.

  (i) You may suddenly feel anxious about a deadline or concern, think of an outstanding task, fantasize over something, or have an idea/inspiration. Just jot these down in a notebook so you can deal with them later, e.g. put the fantasy in your guilt-free playbook as a potential reward in the future.

KEY QUOTES

"Great works are performed, not by strength, but perseverance."
—Samuel Johnson

(ii) Most distractions can be addressed after your half-hour of focused work, with the exception of strong emotions (especially if you're using work to escape your feelings about a loved one or a major concern). Pause briefly to acknowledge your emotions and develop a plan to address them later. This will give you the peace of mind to return to your work.

You can also use mental rehearsals to prepare for your focused work sessions. Use mental imagery to call up positive feelings and enter a focused, relaxed state of mind. For example, if a project seems like huge, thick wall, then imagine a small door that you can simply walk through. You can also visualize sitting at your desk and immersing yourself in your work with focus and enjoyment.

Set Effective Goals

Learn to set effective goals, so you can achieve them and build your confidence.

- It's better to set *a few key goals* that you're committed to, than to waste energy procrastinating on many trivial goals.

- Set *realistic, observable, concrete goals* with an action verb (e.g. "I will make 10 sales calls by Friday 5pm", not "I'll finish my calls next week"). Include an action-oriented sub-goal that tells you exactly what you must do today.

- If you're repeatedly drawn to a goal that you can't find time for, then treat it as a *wish* rather than a goal. That will free you to focus fully on the present goal.

Managing the Procrastinators in your Life

Managing procrastinators at work. Now that you understand procrastination, you'll see why many management practices actually backfire. Managers who use threats and pressure only increase people's fears, anxiety and tendency to

KEY QUOTES

"Nothing is so fatiguing as the eternal hanging on of an uncompleted task."
—William James

procrastinate. On the other hand, successful managers use words and images that evoke choice and inspiration. They state priorities clearly and give frequent rewards and praises.

- *Commitment, not compliance*. Successful leaders don't demand compliance, e.g. "You have to finish this by today" or "You better make sure there're no mistakes." They invite commitment by giving people a sense of choice and trust, e.g. "Can you get a draft to me by end of today?" or "Can I count on you to manage this important account?"

- *Action steps vs end-point*. Effective managers don't just focus on the finish-line, e.g. "Get this done by Friday." They clearly communicate how to get started, and break down a project into a series of sub-goals, e.g. "When can you start on a first draft?" or "We need to table the proposal next Tuesday, so can you send me a first draft in 2 days' time?"

- *Criticism vs praise/rewards*. Good managers don't attack people's character, e.g. "Why can't you ever get things right?" Instead, they offer praises and constructive, action-oriented feedback, e.g. "That was a really clear and succinct report", or "You did a great job handling that angry customer." They also offer rewards and encouragement whenever a sub-goal is achieved.

- They state their *priorities* clearly, and stick to their decisions. When they're unsure of the correct priorities, they involve their team members in the decision-making process.

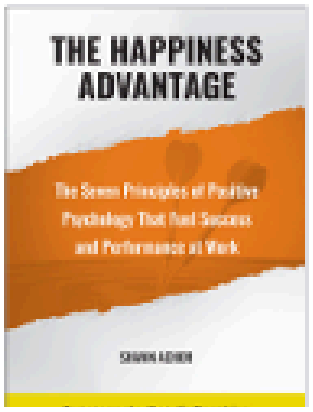
The same principles apply to procrastinators at home.

- Don't treat your family members like kids or blame them for not living up to your expectations. Instead, appeal to them as *responsible, autonomous individuals*, e.g. "I know I'm obsessed about being on time, so I have to leave in exactly 30 minutes. It's great if you can join me, but that's up to you." Then, be prepared to leave in 30 minutes even if the other person isn't ready.

- The best way to influence behavior is by *role modeling* what it means to be a producer who works and plays to the fullest.

KEY QUOTES

"Frequent encouragement helps a worker to feel motivated now while on the path to distant rewards."



THE HAPPINESS ADVANTAGE

The Seven Principles of Positive Psychology that Fuel Success and Performance at Work

SHAWN ACHOR

The Big "So What"

Happiness has been found to be an important predictor of success. In this book, Achor presents a set of 7 proven positive psychology tools that can improve your resilience, happiness, well-being and performance.

Introduction

Many of us have been brought up on the belief that success brings happiness—we think we'll only be happy if we get that promotion, if we lose that next 5 pounds, and so on. Yet, today, there's ample scientific research to show that happiness drives success, not vice versa. When you're happy and positive, you tend to be more motivated, resilient, creative and efficient, which in turn improves your results. This is the "Happiness Advantage".

There's also extensive evidence that the human brain changes throughout our lives. This means that everything from your intellectual capacity to personal potential *can* be changed. From his research, Achor found 7 positive psychology principles which were proven to help people from various walks of life—from Harvard students to professionals and Fortune 500 executives—to overcome challenges, improve productivity and unlock their potential.

The 7 Positive Psychology Principles

Principle #1: Tap on the Happiness Advantage

Train your brain to become more positive, as it gives you a natural advantage over being neutral or negative.

KEY QUOTES

"Happiness and optimism actually fuel performance and achievement—giving us the competitive edge that I call the Happiness Advantage."

"Happiness is not the belief that we don't need to change; it is the realization that we can."

"Small positive interventions (can) create sustainable, longterm change at work."

What's happiness? There's no universal definition for happiness. Generally, it's a state of subjective well-being that involves a positive mood in the moment and a positive viewpoint for the future. In this book, Achor uses "happiness" interchangeably with words like "positivity" and "positive emotions".

There are many studies to show that happiness brings better health, success and achievement (and not the other way round).

- *Learning and creativity*. Positive emotions release dopamine and serotonin in our brains to improve our learning capacity. They also improve our peripheral vision so we literally see more things around us. Students and young children who were feeling happy performed much better at tests and learning tasks than their peers who were feeling neutral or negative. People who were feeling amused or contented thought of more ideas than people feeling angry or anxious.

- *Performance*. Positive emotions increase your chances of success by (i) improving your ability to conceptualize new solutions and (ii) alleviating physical symptoms of stress and anxiety (e.g. increased heart rates or blood pressure). By thinking about something that makes you happy just before a stressful exam or presentation, you can prime yourself for better performance.

- *Health*. Nuns with more joyful journal entries (which indicate a positive disposition) were found to live almost 10 years longer than those with negative or neutral entries. Unhappy employees were also found to take 15 more sick days a year compared to their colleagues.

We all have different "happiness baselines", i.e. some people are naturally happier than others. However, you can use these proven practices to boost short-term emotions *and* permanently increase your happiness baseline.

- *Meditate*. Meditation has been found to grow the left prefrontal cortex—the part of our brain with the greatest impact on happiness levels. By taking 5 minutes daily to meditate and focus on your breathing, you can reduce stress, improve happiness and even immunity over time.

- *Look forward to a future reward* (e.g. a movie or a vacation)—the anticipation alone can boost your endorphin levels so you feel as happy as when you enjoy the actual reward.

KEY QUOTES

"Happiness causes success and achievement, not the opposite."

"Even the smallest shots of positivity can give someone a serious competitive edge."

"Happiness is not just a mood—it's a work ethic."

- *Perform 5 deliberate acts of kindness daily*. Altruistic acts (e.g. giving to friends or strangers) have been found to reduce stress and improve mental health.

- *Inject positivity into your environment*, which has a huge impact on your mindset and well-being. Surround your workspace with pictures of loved ones, go for a walk on a nice day, and watch fewer negative TV programs.

- *Exercise*—be it walking, biking, or playing—triggers the release of endorphins, reduces stress and improves motivation. Exercise is as effective as antidepressant medication in the short term, and even more effective than medication in the long-term.

- *Invest in meaningful experiences*, as they bring more lasting happiness than pleasure from material acquisitions (i.e. buying things for yourself).

- *Use a signature strength*. It feels good to apply a core skill. Identify your top 5 strengths on www.viasurvey.org and use at least 1 key strength each day.

KEY QUOTES

"Physical activity is not just an incredibly powerful mood lifter, but a long-lasting one."

"Each time we use a skill, whatever it is, we experience a burst of positivity."

Lead with the Happiness Advantage. Leaders can create huge ripple effects because they can (i) shape the company policies/ culture, (ii) act as a role model and (iii) influence their team members directly. Unfortunately, in many organizations, leaders dismiss the need for happiness and even frown on people laughing or taking breaks from work.

"By changing the way you work, and the way you lead the people around you, you can enhance the success of your team and your whole organization."

- The Happiness Advantage is a *useful tool* for motivating your team and unlocking staff potential. By using small gestures (e.g. giving encouragement or providing recreational options), you can generate positive feelings to trigger the advantage. Google provides scooters, video games and gourmet food for its staff while Toyota uses strength-based training. Coors Brewing Company saw a return of >6x from its corporate fitness programs alone.

"Even the smallest moments of positivity in the workplace can enhance efficiency, motivation, creativity, and productivity."

- Leaders' *tone of voice and body language* also impact others, e.g. a message delivered with an angry, annoyed or indifferent tone could affect staff morale and performance.

"Just as important as what you say to employees is how you say it."

- *Stay above the Losada Line*. Marcial Losada discovered that for an organization to work well, there must be approximately 3 positive interactions for every negative interaction. Team

performance suffers when you fall below the Losada Line and peaks when you hit the ideal ratio of 6:1 positive-to-negative interactions.

Principle #2: Change outcomes with your fulcrum and lever

Famous scientist and mathematician Archimedes theorized that with a long-enough lever and the right fulcrum, a man could single-handedly move the world. Your mindset is like your fulcrum while your belief is like your lever. By shifting your mindset and extending your belief of what's possible, you can magnify your ability to create what originally seemed impossible.

Your mindset (the fulcrum). Reality isn't cast in stone; it's merely your subjective understanding of the world. By changing your mindset, you can change your perceived reality and how you respond to it.

- Everyone has 24 hours a day; your mindset defines *how much you achieve with your time*. People with positive mindsets tend to work more productively and energetically, e.g. they may find meaning in a mundane activity by challenging themselves to do it better or trying to learn something in the process. They also tend to use their leisure time to recharge and enrich themselves. On the other hand, those with negative mindsets drag themselves through work and treat leisure activities as a waste of time.

- Your mindset is so powerful that it can *change the concrete outcomes from your subjective experiences*. In an experiment, a group of 75 year old men were told to dress, speak, act and live as if they had travelled back in time to when they were 55 years old. After just 1 week, most of the men showed an improvement in physical appearance, flexibility, strength, eyesight, and/or mental capabilities. Placebos have been found to be 55-60% as effective as real medication or treatments—people experienced hair growth and reduced knee swelling even when they were given placebo drugs and fake surgery. On the other hand, people who thought they had come into contact with poison ivy actually developed physical symptoms (e.g. boils, redness and itching).

Your beliefs (the lever). Your belief about your potential defines what you can achieve. Accountants' belief in their ability/

KEY QUOTES

"Give me a lever long enough and a fulcrum on which to place it, and I shall move the world."
- Archimedes

"Our mindset, and in turn our experience of the world, is never set in stone, but constantly in flux."

"Mindset doesn't just change how we feel about an experience—it actually changes the objective results of that experience."

"The mental construction of our daily activities, more than the activity itself, defines our reality."

"The more you believe in your own ability to succeed, the more likely it is that you will."

potential was found to predict their job performance better than their skill level/training. Women who were told they had superior math abilities did much better than those who were told they had inferior abilities.

- *Believe in your abilities*. While prior preparation is important, your mental state directly affects your in-the-moment performance. During a difficult task, you'll perform better if you focus on your strengths or the reasons you'll succeed.

- *Believe you can improve your abilities*. Carol Dweck found that people with a growth mindset consistently out-perform those with a fixed mindset. The former believe that skills, abilities and temperaments can be changed, so they take every opportunity to learn and improve. The latter believe they can't change and thus let opportunities slip by.

Find your calling. Amy Wrzesniewski found that employees can have 3 mindsets about work: they can see it as a *job* (a chore to earn a salary), a *career* (a means to achieve success) or a *calling* (a way to use their strengths to contribute meaningfully).

- People who see their work as a calling are more likely to work longer and harder at it, resulting in *higher chances of success*. On the other hand, telling people their work is meaningless is a sure way to demotivate them.

- How you see your work depends on your *mindset*, not the job nature. A janitor with a job-orientation may find it a chore to clean up others' mess while a janitor with a calling-orientation may feel satisfied to provide a clean environment for others.

- Instead of using a job description, try writing a "*calling description*" to describe the meaning from your work (e.g. how you're impacting others) and how it helps you to achieve your wider goals.

You can **influence others' mindset and beliefs** simply by changing your choice of words to convey faith and encouragement instead of cynicism and doubt.

- Your expectations of someone can affect their actual performance, a phenomenon called the *Pygmalion Effect*. In an experiment, teachers were told that certain students had

KEY QUOTES

"By changing the way we perceive ourselves and our work, we can dramatically improve our results."

"Beliefs are so powerful because they dictate our efforts and actions."

"You can have the best job in the world, but if you can't find the meaning in it, you won't enjoy it."

"Even the smallest tasks can be imbued with greater meaning when they are connected to personal goals and values."

higher academic potential when these were just ordinary students. Due to the teachers' high expectations, the students ended up with superior results. At the workplace, people also tend to act the way we expect them to.

- If you're a leader, *ask yourself 3 questions regularly*: (i) Do I believe my staff can improve their abilities? (ii) Do I believe my staff want to invest the effort and do meaningful work? and (iii) How am I conveying these beliefs via my words and actions?

Principle #3: Create a Positive Tetris Effect

The Tetris Effect occurs when we spend so much time and attention on something that it changes our thoughts, mental images, and behaviors. It was named after the phenomenon of people seeing their world in Tetris blocks (e.g. constantly thinking how buildings or items may fit together) after they've played the game for too long. Train your brain to see positive patterns (like possibilities and opportunities) instead of the negatives (like stress and failure).

Your brain naturally filters out as much as 99% of the environmental inputs you receive. What it takes in or filters out depends on what you train it to focus on.

- "*Inattentional blindness*" refers to our tendency to be oblivious to something we're not focusing on, even if it's right in front of us. In a famous experiment, people were asked to count the number of times the white team passed the ball in a basketball game. They were so focused the ball that 46% failed to notice a person walking across the screen for 5 seconds in a gorilla costume.

- On the other hand, *when we focus on something*, we tend to see it everywhere. If you've decided to buy a certain car model, you'd suddenly notice it everywhere.

Our predominant work habits can shape our brain's thinking patterns so much that it spills over to our personal life. Tax auditors who spend hours at work looking for errors tend to focus on their kids'/spouses' mistakes at home. Athletes can't help competing with others while financial traders can't help assessing the risks in everything. Beware of such negative Tetris Effects.

KEY QUOTES

"Spam filters, whether in our heads or our e-mail, scan only for what they are programmed to find."

"We tend to miss what we're not looking for."

Different people see different things in the same situation, not only because of their interpretation but because of what they actually notice.

- Two groups of people were asked to count the number of photos in newspapers. The group that believed they were lucky finished the task quickly as they saw at least 1 of 2 planted messages telling them they could stop. Those who believed they were unlucky failed to see the opportunities right in front of them and missed both messages.

- In both work and life, those with positive cognitive patterns are more likely to recognize and take up an opportunity when it comes along, while the opposite holds true for those with negative cognitive patterns.

Create the Positive Tetris Effect by training your brain to look for opportunities and ideas that increase your success, instead of the negatives that block success.

- *Do this simple daily exercise*: write down specifically 3 good things in your work or life, e.g. the friendly driver who helped you with your luggage or that wonderful dinner with your spouse. This trains your brain to notice and focus on the positives while pushing the negatives to the background. This exercise has been found to improve happiness levels over 1-6 months, with sustained effects even after people stop doing it.

- You can *vary the exercise* by writing a long daily entry about a positive experience. Make it easier by ritualizing it (e.g. doing it at the same time and place daily) or involving others (e.g. doing it with your team or spouse).

- Creating a positive Tetris Effect doesn't mean you should shut out all negatives and become blind to problems. *Wear rose-tinted glasses, not blindfolds*.

Principle #4: Fall upward

During crisis and failures, we typically have 3 mental paths: (i) we keep dwelling on our current situation, (ii) we think about worst-case scenarios, or (iii) we find the upward path that brings us out of the dumps into a stronger position than before. Learn to find the third mental path so you can emerge stronger and happier from setbacks.

KEY QUOTES

"It's not your age, or what you do for a living; it's the training and consistency that count."

"The ideal mindset isn't heedless of risk, but it does give priority to the good."

"Our ability to find the Third Path is the difference between those who are crippled by failure and those who rise above it."

Finding the path to success. Studies show that people who see failure and disasters as an opportunity to grow and learn are more likely to find creative ways to rebound from their setbacks. On the other hand, people who stop searching for solutions lose the ability to overcome challenges and keep sliding downward.

- Some people who experience trauma end up with Post-Traumatic Stress Disorder (PTSD) while others experience Post-Traumatic Growth (to feel greater compassion, spirituality, strength etc.). The difference lies in how they perceive the trauma.

- During economic downturns, companies that focus on streamlining their operations and creating new solutions tend to pull ahead of those who focus on lost opportunities.

Use these strategies to find the upward path:

- *Change your counterfacts*, or the explanation you create about what happened and why. Imagine you fell down the stairs and broke an arm—you could think you were unlucky to get injured, or you could think you were lucky not to get a more serious injury. You can always choose your counterfacts.

- Adopt a more optimistic explanatory style, so you *see your failures as specific and temporary* ("I made a mistake this time"), rather than global and permanent ("I'm just too stupid"). Studies have found that people who adopt the former approach tend to learn from their mistakes while the latter simply give up.

- Even if you've experienced a real disaster, you can *decatastrophize the event* by looking for alternative counterfacts and considering the long-term impact, which is usually not as bad as you think.

Principle #5: Regain control with the Zorro Circle

We find the best solutions when we can think clearly and creatively. Unfortunately, in times of crisis, all logic goes out of the window.

Legend says that the masked hero, Zorro, mastered the sword by training in a small circle. The Zorro Circle represents our "circle of control". When things are spiralling out of control, refocus on small, manageable goals, then gradually expand your circle as you rebuild your confidence and control.

KEY QUOTES

"The most successful people see adversity not as a stumbling block, but as a stepping stone to greatness."

"When people don't believe there is a way up, they have virtually no choice but to stay as down as they are."

"Our fear of consequences is always worse than the consequences themselves."

"Adversity never hits us quite as hard—or for quite as long— as we think it might."

Why we lose control. Our brain has (i) an emotional center (governed mainly by the amygdala) which triggers our instinctive responses, and (ii) a logical center (governed mainly by the prefrontal cortex) which rationalizes our options before we act.

- In the cavemen age, if you're faced with a lion, there'd be no time to analyze your options; your amygdala would flood your body with hormones to spark a *"fight or flight" response*.

- Today, we seldom face such time-critical dangers. Yet, when we're extremely stressed, our involuntary biological responses take over and we get *emotionally hijacked*. When this happens, we can't think clearly, tend to lash out at others, feel helpless and/or take drastic actions.

Perceived control. When you believe you're in control of your fate and outcomes, you tend to be happier, less stressed, and more motivated. The actual amount of control you have is less important than how much control you *think* you have. When elderly in a nursing home were given control over simple daily tasks (e.g. caring for their house plants), mortality rates actually fell by 50%.

How to regain control, 1 circle at a time:

- *Develop self-awareness*: The simple act of putting your feelings into words can reduce the impact of the negative feelings.

- List down (i) aspects of the situation you can control vs (ii) aspects that you can't control. *Identify 1 small goal you can achieve quickly*. By focusing your energy and effort on 1 task, you increase your chances of success and regain a sense of control.

- *Expand your circle of control gradually*, going for goals of mid-difficulty so you still must push yourself but won't feel so overwhelmed that you give up. Don't set unrealistic goals that'd backfire and demoralize you.

Principle #6: Transform habits with the 20-Second Rule

Almost everyone understands the value of a healthy diet, exercise and rest. Yet, most people don't do it. Even if you want to nurture positivity,

KEY QUOTES

"When our brain hits the panic button, reason goes out the window and our wallets, our careers, and our bottom lines all suffer."

"Feeling that we are in control, that we are masters of our own fate at work and at home, is one of the strongest drivers of both well-being and performance."

"Small successes can add up to major achievements. All it takes is drawing that first circle in the sand."

"Common sense is not common action."

it's hard to break existing habits to create lasting change. Use the path of least resistance to replace bad habits with good ones.

We're creatures of habit. Most of our daily actions—from clothing ourselves to brushing our teeth—are habits that we don't consciously think about. The best way to sustain positive change is to convert a desired behavior into an automatic habit.

- *How habits are formed*. Each time you do something, it sparks electrical currents between the billions of neurons in our brains. When you do something regularly, it reinforces specific neural pathways, allowing the currents to move faster until the behavior seems second-nature to you. It may be hard to coordinate your movements when you first learn to juggle, but with practice the movements become automatic.

- *Overcoming inertia*. It's human nature to follow the path of least resistance and stick with "default" options, e.g. using the default ringtone on the phone or buying items placed at eye level (instead of those at the top or bottom shelves). When you force yourself to do something, it takes willpower; and willpower gets depleted with use. That's why it's so hard to break a habit—you must repeatedly invest physical and mental energy until the habit is changed.

Use this strategy to form new habits: Put your desired habit on the path of least resistance. Add 20 seconds of extra effort to a habit you want to break, and reduce the effort for the new habit you want to form.

- For example, to stop snacking on chocolates, keep them in a container on an upper shelf so it takes 20 extra seconds to reach them. Concurrently place fresh fruits on the kitchen counter within easy reach. To watch less TV, remove the batteries from the remote control and keep them in your bedroom drawer. Concurrently place a book next to the couch so you're more likely to pick it up.

- Set rules in advance so you won't need to make a decision each time and reduce the chances you'd go off-course.

KEY QUOTES

"Habits are like financial capital—forming one today is an investment that will automatically give out returns for years to come."

"Your brain, once it has tipped toward a habit, will naturally keep rolling in that direction, following the path of perceived least resistance."

Principle #7: Invest in social support

In times of difficulty and stress, we need social support more. Yet we tend to bury ourselves in work and reduce our time with friends and family. Invest in social support, which is one of the biggest predictor of success and happiness, and your greatest asset.

Our social interactions (with spouse, family, friends, colleagues etc.) generate positive feelings and deepen relationships, both of which improve our happiness baseline, well-being and performance. Positive social interactions lead to the release of oxytocin, a pleasure-inducing hormone that reduces stress and improves focus. Social connections also improve our cardiovascular, neuroendocrine, and immune systems. On the other hand, the lack of social support/contact can hurt life expectancy as much as smoking, high blood pressure and obesity.

To build your social capital:

- *Create high-quality connections* e.g. greet colleagues with eye contact, remember things about them like their interests or the names of their children.

- *Show support in good times (not just bad times)*. When someone shares a piece of good news, respond with enthusiasm and interest e.g. "That's great news! I'm glad your work is being recognized. When will your promotion take effect?" Passive responses (e.g. "That's cool") or negative responses ("Oh, I thought the promotion would go to Ben") can be harmful, and the worst response is to ignore the good news altogether.

Employees with strong bonds to their manager tend to perform better and stay longer. As a leader, you can strengthen your personal connections directly and build an environment that nurtures social relationships.

- Create opportunities for employees from different departments to interact and connect. Go beyond formal work titles to recognize people's contributions, personal interests etc. Give people your full attention during a conversation (instead of looking at your phone) and move around for face-to-face interactions and acknowledge people's work.

KEY QUOTES

"When we encounter an unexpected challenge or threat, the only way to save ourselves is to hold on tight to the people around us and not let go."

"The more social support you have, the happier you are. And as we know, the happier you are, the more advantages you accrue in nearly every domain of life."

"Like our stocks, social support networks grow stronger the longer they are held."

"The best leaders give their employees the space and time to let moments of social connection develop on their own."

- Google provides cafes where employees can interact, and encourages its staff to visit their kids at the on-site day care. UPS encourages its truck-drivers to meet up for lunch while Southwest Airlines and Domino's Pizza allow their staff to offer donations for colleagues with medical or financial emergencies.

Creating a Positive Ripple Effect

All 7 principles above are closely intertwined and will create a larger synergistic effect when applied together. The best way to create a massive impact is not to preach to others and hope they'll change. Instead, apply the principles to change yourself; in so doing, you'll naturally create a positive ripple effect.

- Our brains contain mirror neurons that sense and imitate others' feelings, actions and sensations. When you give someone a genuine smile, the other person can't help but mirror it back to you, which in turn improves your own positive feelings. This mirror effect is so powerful that 1 positive team member can change the dynamics of an entire group.
- In fact, our attitudes, words and actions are so contagious that they affect people up to 3 degrees of influence. For example, when you leave a positive impact on your child, you'll also indirectly impact her friends and their parents.

Other Details in the Book to Look out For

In the book, Achor shares many other empirical research and examples to help us understand the foundations of positive psychology and how the 7 principles are derived and applied.

For more details, please visit www.shawnachor.com/the-books/the-happiness-advantage.

KEY QUOTES

"The person we have the greatest power to change is ourselves."

"Practicing the seven principles in your own life can actually become your most effective leadership tool, without your even knowing it."

THE TOTAL MONEY MAKEOVER

A Proven Plan For Financial Fitness

DAVE RAMSEY

The Big "So What"

Many Americans are debt-ridden and live from paycheck to paycheck. This book debunks myths about money and debt, and provides a proven step-by-step plan to help you become debt-free and wealthy. If you embrace the ideas in this book and implement the steps consistently, you *will* regain your financial health and transform your life.

Introduction

A shocking number of Americans are in poor financial health. 88% of graduating college students have credit-card debts *before* they have jobs, 60% of Americans don't pay off their monthly credit card bills, 91% of families have no/little savings for their kids' college education, and 49% only have enough savings to last <1 month if they lose their household income.

To change your financial situation, you need 20% know-how and 80% action. Just like how we learn to read, write and drive, we must learn about money and master the skills through practice.

- Adopt financial principles and processes that *work in both good and bad times*. Unfortunately, during good times, people tend to become overconfident, develop bad financial habits, take huge risks and buy things they can't afford. When they're hit by bad times—be it an economic downturn, a job loss or a bad accident—they find themselves drowning financially with no backup options.

- The principles in this book are not new, and are actually very simple. The real challenge is in adopting them and *taking concrete action* to change the way you think and live. In this book, Ramsey (i) explains various financial principles vs myths, (ii) a 7-step plan to transform your life, and (iii) injects hope/

KEY QUOTES

"Personal finance is 80 percent behavior and only 20 percent head knowledge."

"What to do isn't the problem; doing it is. Most of us know what to do, but we just don't do it."

"When the tide goes out, you can tell who was skinny-dipping."
-Warren Buffett

"This is a process book. We are aiming at carefully weaving inspiration and information together into a step-by-step plan."

inspiration through stories of people who've successfully applied the plan. Regardless of your current financial situation, the key is to start taking action now to improve your financial health.

Addressing Obstacles to Financial Health

The Total Money Makeover (TMM) program is built on this underlying principle: if you will make the sacrifices *now* that most people won't, you can live later in a way that most people can't. To successfully embrace the TMM, you must first address several mental-emotional obstacles.

Overcome Self-denial

Change is uncomfortable and we tend to avoid it if possible. Thus, the first obstacle to overcome is yourself.

Face up to reality. If you're financially overweight (i.e. you have challenges with money), the first step is to acknowledge it so you can start getting back in shape.

Take 100% responsibility for your money and life. Stop finding excuses ("I have no time") or deluding yourself ("It's ok, there's no real problem"). Get financially fit before you get a financial heart attack. Don't fall into the trap of these 3 common risk denials:

- *Laziness*: Denying that you must put in effort to make money.
- *Fatalism*: Denying that you can do something in a bad situation.
- *False security*: Denying that there are risks in your current situation, e.g. thinking your job is 100% secure or your investments are 100% safe.

Debunk the Debt/Money Myths

Any lie, if repeated enough times, will start to seem like the truth. Our modern culture is filled with propaganda designed to influence our buying behaviors and lifestyle choices. To transform your financial health you must first change your perspectives about debt and money.

KEY QUOTES

"If you will live like no one else, later you can live like no one else."

"90 percent of solving a problem is realizing there is one."

"If you tell a lie often enough, loudly enough, and long enough, the myth will become accepted as a fact."

Debt is *not* a tool and won't bring you prosperity.

- Debt has become such an integral part of the American lifestyle that people *expect* to have housing mortgages, car payments, student loans and credit cards. You're constantly being brainwashed that to be successful or admired, you must wear a certain watch, drive a certain car, or join a certain club. You're also told that you should get these things *now* using debt. In reality, debt promotes *instant gratification*, encourages you to live beyond your means and exposes you to unnecessary financial risks.

- A loan makes the borrower a slave to the lender. That's why it's a bad idea to lend money to a friend or family member—it fundamentally *shifts the balance of power* and the relationship starts to deteriorate. Moreover, you're only helping your friend/relative to stay financially irresponsible, which hurts them in the long run. If you have extra cash and truly want to help, then give the money without expecting it back.

- Likewise, *loan schemes* like cash advances, payday loans or rent-to-own schemes do not genuinely help lower-income earners. The lenders actually charge high interest rates and make money at the expense of the poor.

- Learn to *calculate the real costs* of debt. If you buy a TV for $1,000 under a "90 days same as cash" scheme, you do *not* get a free TV; you merely get a 90-day interest-free loan. Chances are, you won't get a discount and will be charged 24-38% interest if you don't pay the full $1,000 within 90 days. If you had paid for the TV in cash, you could've negotiated a discount and avoided the interest payments. Better still, if you'd invested the $1,000 instead of buying the TV, you'll be *earning* interests instead of paying it.

Debt is not necessary nor unavoidable:

- *You do not need to build your credit*. Your credit or FICO scores affect your ability to get mortgages/loans. However, you *don't* need to keep borrowing to improve your scores. You're better off building your financial health so you won't even need a loan.

- *You do not need a credit card*. 69% of bankruptcy filers state credit-card debt as the cause of bankruptcy, and 19% of bankruptcy filing are by college students. Use a debit card

KEY QUOTES

"It is human nature to want it and want it now; it is also a sign of immaturity."

"Debt is not a tool; it is a method to make banks wealthy, not you. The borrower truly is slave to the lender."

"I am not against the enjoyment of money. What I am against is spending money when you do not have money to begin with."

"Just as slaves born into slavery can't visualize freedom, we Americans don't know what it would be like to wake up to no debt."

instead of a credit card—it offers the same convenience without the risk of overspending and accruing huge interests from overdue payments.

- *Debt consolidation is not a lasting solution*. It may save you some short-term interest, but your debt levels will grow back quickly if you don't change your spending habits.

The real building-block for your wealth is your income. The key to wealth is to free up your income so you can invest and grow it. In "The Millionaire Next Door", Dr. Stanley shares how a typical millionaire lives in a middle-class home, drives a second-hand car, and buys jeans from Wal-Mart. They become wealthy not by incurring debt, but by spending less than what they earn and using the remaining cash to build wealth. They apply delayed gratification and focus on growing their money instead of living a lavish lifestyle.

Unfortunately, most people prefer to believe in the myth of easy money. They look for miracles and secrets to overnight riches which don't exist.

- If you don't plan and save for your retirement, don't count on the government or God to provide for you. If you don't set aside time for budgeting or financial planning, then you'll only have yourself to blame when you're stuck with no savings and no job during a financial downturn.

- You can't buy a DVD, learn some secrets and become rich with just a few hours a week. Likewise, you won't get rich on lottery or other games of chance. Take a closer look at the people in the lottery queues and you'll realize that they are *not* rich.

- The faster you let go of the illusion of easy money, the faster you can redirect your time, energy and efforts to building the right financial foundation.

Learn to discern the truth about investment-related products.

- *Gold* is a not a secure investment for bad times. The historical rates of return for gold have been relatively low. In the event of total economic collapse, gold will have no more use or value than food, clothing and other essentials.

KEY QUOTES

"Looking good is when your broke friends are impressed by what you drive, and being good is having more money than they have."

"Money denial always involves an illusion, followed by disillusionment."

"Things won't be okay unless you make them that way... You are in charge of your retirement."

"The lottery is a tax on poor people and on people who can't do math."

"The secrets of the rich don't exist, because the principles aren't a secret."

- *Mobile homes or trailers* aren't good investments either as their value depreciates rapidly.

- Most *whole life insurance products* (that bundle insurance and savings) yield poor returns. By all means get insurance for your home, car or permanent disability, but do *not* use insurance as a form of saving or investment.

- Do not *prepay* for something (e.g. your funeral or your kids' college fees) to protect yourself against inflation, since your rate of return will be capped at the rate of inflation. Pre-plan for such expenses but don't pre-pay them.

Conquer Ignorance and Social Pressure

The typical American family has much more debt than savings, and no control over their finances. Couples quarrel over money and struggle with debt payment, taxes, and family expenses. Yet, people continue to live beyond their means; they buy houses, cars and lifestyle items on credit, only to lose everything when they get a pay-cut or lose their jobs. Stop following the ignorant masses; to become rich, you must learn from rich people.

Prioritize your financial goals over others' opinions.

- It's normal to want to feel accepted and respected, but there's no point in trying to impress others with a lifestyle you can't afford. Aim to *be truly wealthy*, not just *appear* to be wealthy.

- Have the guts to *resist peer pressure*: Say "no" to that expensive meal or the luxury trip beyond your budget. Be willing to give up your nice cars and boats or admit that you can't afford them *yet*. The good news is, once you have built your wealth, you'll be able to buy them using cash, not debt.

Total Money Makeover: Your 7-Step Financial Plan

The TMM is built on a series of Baby Steps, each acting as a building block for the next step.

Just like how you'd eat an elephant 1 bite at a time, you become financially ultra-fit 1 Baby Step at a time. Don't skip any step.

KEY QUOTES

"Ignorance is not lack of intelligence; it is lack of know-how."

"We buy things we don't need with money we don't have in order to impress people we don't like."

"To wish for the admiration of others is normal. The problem is that this admiration can become a drug."

"The paradox is that by shortcutting the process, you are much more likely to fail."

Before you begin, do up a written budget. At the start of each month, set up a zero-based budget where income = expenses. Every dollar you earn must be accounted for on paper—for bills, debt repayment, savings etc. This forms a baseline for your next 7 steps.

1. Set up a $1,000 Mini Emergency Fund

Do whatever you must to save $1,000 asap, e.g. cut your expenses, work extra hours, cut your expenses or do a part-time project.

- You *will* have an emergency at some point. Without a *contingency fund*, you're likely to throw all your financial plans out of the window. This starter fund can tide you through a mini-emergency without falling back on debt or credit cards.

- Make sure you keep it for *true emergencies*, i.e. something unpredictable but impactful, like a major illness or retrenchment. Car repairs, textbooks for the kids or Christmas dinners are *not* emergencies; with pre-planning, you could've saved up for them.

Keep the $1,000 out of sight, e.g. in a separate savings account. One of Ramsey's clients placed the money in a photo frame at the back of the closet wall with the words "In case of emergency, break glass". If you use your emergency funds at any point during the TMM plan, return to Step 1 to top up the $1,000 before proceeding further.

2. Start your "Debt Snowball"

Debt payments drain your monthly income and cultivate debt-dependency. Eliminate your debts to regain control of your income and free up cash for wealth-building.

- According to the Federal Reserve, an average person pays $495 a month for a car over 64 months. Once the car is fully paid off, the person would buy a new car and restart the payments. The same $495, if invested monthly (from age 25 to 65) in a mutual fund at 12% returns, will give you almost $5.9 million by 65 years old.

KEY QUOTES

"We will climb the whole mountain, but not until we first have a strong base camp."

"Until you get control and full use of your income to build wealth, you will not build and keep wealth."

- Imagine the impact if you were to invest $2,000 of your monthly income instead of using it for your mortgages, car payments and credit card debts.

The Debt Snowball is basically a strategy for clearing your debt.

- *List down all your debts* in order of debt balance, from the smallest to largest amounts. Include every loan, e.g. parental loans, zero-interest loans and business loans that're personally-guaranteed. Exclude only your home loan. Don't worry about the interest rates unless there're 2 loans with similar balances, in which case you'd list the one with higher interest rates first.

- *Pay off your smallest debts first*. These are easier to clear and you'll feel motivated by the progress. The money freed up from the smaller debts will also snowball toward your next-biggest payments. Only repay a bigger debt first if there're major repercussions e.g. a foreclosure.

- Each time you repay a debt, *redo the list* to see how you're moving toward financial freedom.

Commit 100% to become debt-free and retain a laser-sharp focus.

- *Stop taking new loans*. Cut up your credit cards and stop buying anything using debt.

- *Every dollar counts*. Use *all* penalty-free investments and non-retirement savings to pay off your debt, and find ways to tighten the belt, e.g. sell your expensive car and use a fraction of the original monthly payment to get a cheap second-hand car.

- A casual let's-give-it-a-try approach simply won't work. It's also critical to *get everyone in the family onboard*, e.g. if your husband refuses to sell the luxury car and boat, there's only so much you can achieve by cutting back on groceries.

To gain initial momentum and get your snowball rolling, you need a cash injection. You can:

- *Temporarily increase your income*, e.g. by taking on a part-time job; and/or

KEY QUOTES

"Total, sold-out, focused intensity is required to win. Aiming at the goal and nothing else is the only way to win."

"You can't get out of a hole by digging out the bottom."

- *Sell something*. You can either sell many small items in a garage sale, or a few high-value items. As a rule of thumb, if you can't be debt-free on something (except for your house), sell it. This includes luxury items (e.g. a boat with 20 months' outstanding installments) and your rental properties (i.e. don't keep a property with $50,000 rental equity if you have a $50,000 credit card debt). Pay off your debt first. You can always buy these items again in future when you're debt-free and have excess cash to spend/invest.

3. Complete your Emergency Fund

By now, you have $1,000 cash in your emergency fund, no debt besides your home mortgage and some financial momentum. It's time to finish building your emergency fund, so you have 3-6 months of living expenses if you lost your income. The riskier your financial situation, the more you should set aside.

Keep the money liquid or easily accessible, e.g. in a savings account or Money Market account where there's no penalty for withdrawals. Don't worry about interest rates since you're not relying on this fund to get rich.

- If there's clearly an *upcoming emergency* (e.g. your wife is pregnant with twins or your company is closing down in 3 months), it's ok to pause the Debt Snowball and build your emergency fund first.

- If you don't own a home yet, start *saving for your house* only after you've completed this step.

4. Build your retirement fund with 15% of your income

Invest 15% of your annual pre-tax gross income, excluding any matching contributions by your company. This figure is big enough to build your nest egg, yet small enough to leave enough for your home mortgages and other expenses.

Take the time to learn about investments so you can evaluate your own investment options.

KEY QUOTES

"The mission statement for the emergency fund is to protect you against storms, give you peace of mind, and keep the next problem from becoming debt."

"Investing with the long-term goal of security is not a theory to ponder every few years; it is a necessity you must act on now."

- Ramsey recommends investing in *growth-stock mutual funds*, which are good for long-term investments. The historical performance of the stock market has been slightly less than 12%.

- In *selecting the funds*, Ramsey:

  (i) Only considers those with good track record over at least 5-10 years; and

  (ii) Spreads his investments evenly across 4 types of funds: Blue Chip funds, Equity funds, International funds and Emerging Market funds.

Calculate how much you must save/invest monthly.

- Ideally, you can withdraw and live on 8% of your nest egg yearly, assuming you deduct 4% inflation from 12% annual investment returns. Calculate your *required retirement fund* by dividing your desired annual income by 0.08. For example, if you want a $30,000 retirement income each year, you'll need a total fund of $375,000.

- Calculate the *required monthly savings*, taking into account the # years you have to retirement. The later you start, the harder it'll be. For example, to reach $375,000 by age 65, you'll only have to save $163.50 p.m. if you start at age 30, but you'll have to save $636.75 p.m. if you start at age 45.

- This approach requires that you build your nest egg *patiently and consistently*. It won't work if you keep jumping in and out of the market, or pull out your investments each time you want to buy something.

5. Save up for college

If you don't need to attend college and don't have kids who do, you can skip this step.

Choose a college that you can afford.

- College education is important, but going to the most expensive, prestigious college *does not guarantee future success* or wealth.

KEY QUOTES

"Start where you are, because that is your only option."

"Systematic, consistent investing is the tortoise that beats the hare in the race. When you keep at it, the investing compounds and explodes."

"College degrees do not ensure jobs. College degrees certainly don't ensure success. College degrees do not ensure wealth. College degrees only prove that someone has successfully passed a series of tests."

Don't prioritize college fees over your emergency funds or chalk up a huge loan for it.

- As a general rule: *pay cash, don't take a loan*. If you have excess money or a scholarship, go ahead and enrol in a private school. If not, it's better to attend a state school debt-free than to take on a huge loan for a private school.

Calculate how much to save/invest monthly:

- Multiply the annual cost by the number of years to get the *total college funds* you need, then work backward to calculate the monthly savings required.

- If you're from the USA, you can grow your college funds with an *Educational Savings Account (ESA)*—this is tax-free for higher education and gives you the choice to invest it in any fund(s) and switch them at will. If you go for the *529 (a state plan)*, make sure you only go for the flexible plan that allows you to choose/switch your investments.

- If you're starting late and only have a few years before your kid starts college, then *get creative*. Approach companies that offer scholarships or work-study program, take on summer jobs etc. Do not take up a loan.

6. Pay off your home mortgage

By this phase, you're already fit and are ready to get ultra-fit. Resist the temptation to settle for being "good enough". Finish strong with the last 2 steps to become truly debt-free and truly wealthy.

Once you pay off your home mortgage, you will be totally debt-free. Don't believe the myths about the benefits of home mortgage.

- The tax deductions from the loans do *not* justify the *interest payments*;

- It's a bad idea to borrow money at lower interest rates to invest in something with potentially higher returns, because you're not accounting for the *risks* involved. You won't compare the

KEY QUOTES

"Student loans are a cancer. Once you have them, you can't get rid of them."

"Knowledge is what you are after, not a pedigree."

"Finishing well can be more important than starting well."

potential returns from mutual funds with those from a casino roulette spin because the latter is much riskier. Likewise, debt is risky and you could lose your house if something happens during the 15-30 year debt tenure.

You can consider refinancing your home mortgage if you'll (i) save on interests and (ii) stay longer in your home than the duration it'd take to breakeven. Remember to ask for a par quote so you don't end up pre-paying the interests.

7. Build wealth

By now, you're debt free, in control of your finances and are systematically planning, saving and investing for your future needs. You become truly wealthy when the returns from your investments are higher than your regular income. That means you have money working 24x7 for you, regardless of whether you work. From here, building your wealth will seem like an easy downhill ride instead of a tedious uphill climb.

Money won't solve all your problems or make you happy, but it can certainly give you more options in life. Money is also not inherently good or bad but will merely amplify who you are. To make the most of your resources, use your wealth for all of these 3 things.

- *Have fun*. To get to this step, you may have given up your fancy cars and luxury house which were bought using debt. But if you're now debt-free, have a healthy emergency fund, millions invested and a stable monthly income, it's ok to reward yourself. Use the spare cash to have some fun—bring your family for a luxurious holiday, buy a nice diamond or car.

- *Invest* to keep building your wealth over the long-term. When you have a strong financial foundation, you're less likely to panic in face of temporary market fluctuations and can deliberately buy low and sell high to multiply your wealth. Keep your investments simple until you have >$10 million. Develop a "wealth team" by surrounding yourself with people who're financially stronger than you, and hire qualified financial planners who're humble, nurturing and will act with your best interests in mind.

KEY QUOTES

"When your money makes more than you do, you are officially wealthy."

"To possess riches is to have the right to say how they will or will not be used."

"Someone who never has fun with money misses the point. Someone who never invests money will never have any. Someone who never gives is a monkey with his hand in a bottle. Do some of each."

- *Give*. Don't hog your wealth. Giving to others can be deeply rewarding and will only enrich (not impoverish) you.

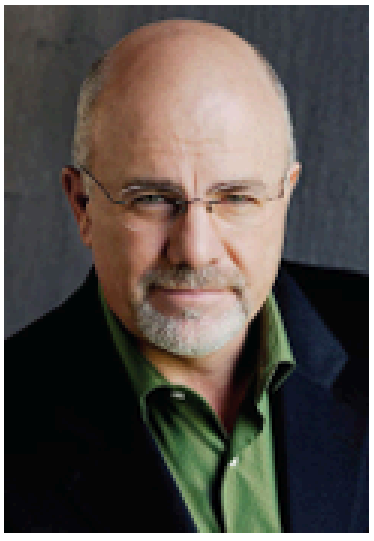
Conclusion & Other Details in the Book

If you follow the 7 steps in the TMM plan above, you *will* become wealthy in the next 20-40 years. The process is like how an overweight person gradually becomes fit, then ultra-fit. It's the hardest at the start, but it gets progressively easier once you've shed some weight and gotten in shape. In the book, Ramsey also shares:

- Short examples and calculations to illustrate the financially-unsound decisions that we make in our daily lives;
- Various US-centric examples and illustrations of retirement-related regulations and tools, additional debt and money myths; and
- Many short stories of people who've transformed their financial situation with the TMM.

You can download Ramsey's Financial Peace software program and get more details at daveramsey.com or MyTotalMoneyMakeover.com.

About the Author

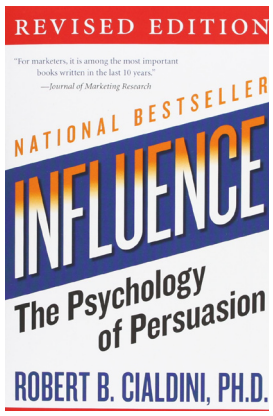


David Ramsey (born 1960) is an American radio show host, author and businessman. Ramsey graduated from the College of Business Administration at University of Tennessee. In 1988, he filed for bankruptcy as he was unable to repay the loans on his rental real estate portfolio. After recovering financially, Ramsey started to counsel couples at his church, and later developed a range of lessons, materials and tools on financial health and transformation.

Ramsey's company, The Lampo Group, Inc., focuses on financial education. His syndicated radio program, The Dave Ramsey Show, is heard on more than 500 radio stations throughout the United States and Canada. He has written numerous books. Ramsey was named the 2009 Marconi Award winner for Network/Syndicated Personality of the Year and was inducted into the National Radio Hall of Fame in 2015.

KEY QUOTES

"Only the strong can help the weak, and that is true of money too."



INFLUENCE

The Psychology of Persuasion

ROBERT B. CIALDINI, PH.D

The Big "So What"

Based on years of research, Cialdini discovered 6 key principles of persuasion which lead people to say "yes" automatically. Understanding these principles and associated techniques can help you to improve your influence and concurrently guard against others' manipulation.

Introduction

Fixed-action patterns. Both animals and humans have certain behaviors that are pre-programmed and activated once specific cues are triggered.

- Such patterns are essential for our survival. There are simply too many environmental stimuli for our brains to process everything. Using specific cues as *shortcuts*, we can react quickly without processing all the information. For example, a flash of sharp teeth or blade will signify "danger", causing us to step back instinctively without second thought.

- The same *predictable patterns* are behind animals' mating rituals and defence mechanisms. A mother turkey will care lovingly for a chick that makes a "cheep-cheep" sound (a good indicator that the chick is healthy), but will ignore or even kill a chick that doesn't chirp. The "cheep-cheep" sound is so powerful that the turkey will even care for a predator-shaped stuffed toy if it makes the sound.

In short, we tend to respond in an mechanical, predictable way to certain triggers or stimuli. With the right cues, we'll **say "yes" automatically** without conscious thought.

KEY QUOTES

"We must very often use our stereotypes, our rules of thumb to classify things according to a few features and then to respond mindlessly when one or another of these trigger features is present."

"Fixed-action patterns…occur in virtually the same fashion and in the same order every time."

- For example, you're more likely to comply to a request if the other party offers a reason using the word "*because*". You'll also estimate how good/heavy/valuable something is, just by comparing it with something you've just seen (the "*contrast principle*").

- We fall back on such shortcuts more when we're tired, stressed, distracted or rushed. With technological advancement, a faster pace of life and information-overload, we've become *increasingly reliant* on this primal way of making quick decisions.

After many years of research, Cialdini discovered 6 key **weapons of influence**, each built on a psychological principle of persuasion.

- Underlying all 6 principles is "*material self-interest*", i.e. everyone wants to pay the least, yet get the most.

- Each principle can be used to *bring positive change or deceive others*, depending on the intention of the user. Being aware of these weapons allow us to guard against "compliance professionals" (e.g. salespeople or marketers) who specialize in getting people to comply with their requests.

The 6 Principles of Persuasion

Reciprocity

When someone does something for us or gives us something, we feel obliged to repay in kind.

The **Reciprocity Principle** is a vital part of human society:

- It makes it less risky for people to offer help or goodwill to others; it facilitates sharing and cooperation which supports mankind's *social advancement*.

- You'll feel *indebted to repay a favor* even if you don't like the person.

KEY QUOTES

"We have created an environment so complex, fast-paced, and information laden that we must increasingly deal with it in the fashion of the animals we long ago transcended."

"A favor is to be met with another favor; it is not to be met with neglect, and certainly not with attack."

Reciprocity has been **widely tested and applied** in various settings:

- In an *experiment*, a man intentionally gave a free bottle of Coca-Cola to some participants but not others. Those who received the free drink later bought twice as many number of raffle tickets from the man as a favor, compared with those who didn't.

- In *sales*, free samples are commonly used to trigger the reciprocity principle and let customers try the product. It's also proven that you're more likely to get a *donation* if you give someone a small gift first.

- Reciprocity even works in *politics and war*. During World War I, a soldier was released after he shared his only piece of bread with the enemy who had captured him.

When you receive a concession, you'll also feel obliged to give a concession. There are **2 related compliance techniques** built on this principle: "reject-then-retreat" and "large-then-small".

- Basically, the other party starts with a larger request (e.g. present an item for $20). If you reject the request, he/she makes a smaller request (e.g. present a less valuable item for $5). In this case, you're *likely to agree the 2nd request* because (a) the requesting party seems to have made a concession, which triggers you to give a concession by switching from "no" to "yes" and (b) by perceptual contrast, the 2nd request seems smaller.

- The larger the initial request (within reasonable limits), the bigger the concession seems. The *requester wins by default*—if we accept the initial request, he/she gets a better deal; if we only accept the 2nd request, they still get a deal.

Interestingly, the receiving party doesn't usually feel cheated and even **responds positively.** Such techniques have been found to (a) increase the chance of *getting* an agreement, (b) increase the chance of the agreement being *fulfilled*, and (c) increase the *satisfaction level* of the receiving party. This is because:

- When we believe someone gave us a concession, we feel *responsible* for the outcome and tend to honor it.

KEY QUOTES

"A person who feels responsible for the terms of a contract will be more likely to live up to the contract."

- We also tend to feel more *satisfied* with the arrangement, and are hence more likely to repeat it in the future.

However, this principle can also be **used against us**.

- *Unsolicited debts*. We may be pressured to accept something that we don't want or dislike, yet feel compelled to repay it. For example, you may grudgingly accept a snack that someone bought for you, then later find yourself cornered to return the favor, resulting in a lose-lose situation. Or, you may receive an uninvited gift in the mail with a request for donation.

- *Unfair exchanges*. A small gift or favor may be used to trigger a much larger favor or purchase in return.

How to say no. It doesn't make sense to reject all favors, gifts and concessions, since many are genuine and benefit us. The key here is to identify the true intention of the requester.

- Start by *accepting the favor or gift* offered to you.

- If the person starts to make demands/requests after that, simply *redefine the situation mentally*. Recognize that it's not a real favor or concession, but a persuasive manoeuvre—this frees you from your sense of obligation and makes it easier to say "no".

Consistency

Once we take a stand or make a choice, we feel compelled to behave consistently with our earlier commitment, and to justify our own decisions so we feel better about them. This need to appear consistent (to ourselves and others) can make us act contrary to our best interest.

Consistency is an **important motivator** because:

- Most *cultures* value personal consistency. Consistency is associated with clarity, reliability or honesty, while inconsistency is associated with indecision, confusion or deceit.

KEY QUOTES

"Another person can trigger a feeling of indebtedness by doing us an uninvited favor."

"The rule says that favors are to be met with favors; it does not require that tricks be met with favors."

"We all fool ourselves from time to time in order to keep our thoughts and beliefs consistent with what we have already done or decided."

- It provides a mental shortcut to *minimize the amount of thinking required*—once we've decided on something, it's easier to use it to guide future decisions.

- It also allows us to *avoid difficult realities* that we'd rather not deal with, e.g. we may prefer to believe that our current solutions will work, rather than find alternatives to a tough challenge.

For the consistency principle to kick in, **a real commitment** must be made, with a fundamental shift in self-image. This involves several components.

- *Active*. When you actively do something in support of a position or decision, you become more committed to it. A written statement can be very powerful as it makes the person's views visible/concrete, and can be shown to others.

- *Public*. The more public your stand, the more reluctant you'll be to change it, for fear of appearing inconsistent. In a study, students were asked to make choices before being given conflicting data. Those who wrote down and signed next to their choices were the most unwilling to change their views, while those who didn't write down their choices were most willing to change them.

- *Effortful*. The more effort you've put into your choice, the more you will value and justify it. This is why tough initiation programs are so popular in tribal and fraternal societies—the more people have endure to secure their membership, the more they're committed to it.

- *Inner choice*. When we choose something without strong external pressures (i.e. huge rewards or huge threats), we feel more ownership of that decision and will stick to it willingly. However, if we believe that we did something just to get a reward or to avoid a threat, our fundamental self-image is unchanged and we'll drop these behaviors once the reward or threat is removed.

Once a firm commitment is made, there'll be **lasting changes** to our choices and behaviors. The commitment "grows legs" as we find new ways to justify it and make new choices in various situations to stay consistent.

KEY QUOTES

"There are certain disturbing things we simply would rather not realize… automatic consistency can supply a safe hiding place from those troubling realizations."

"Our best evidence of what people truly feel and believe comes less from their words than from their deeds."

"It appears that commitments are most effective in changing a person's self-image and future behavior when they are active, public and effortful."

"We accept inner responsibility for a behavior when we think we have chosen to perform it in the absence of strong outside pressures."

Unfortunately, **blind consistency** is often used against us.

- In *retail*, toy manufacturers may advertise certain toys during the Christmas season but understock them. Parents find themselves buying substitutes during Christmas, then getting another set of the originally-intended toys when they're are back in stock after Christmas—just to keep their promises to the kids.

- A common *sales strategy* is to secure a small (even loss-making) purchase, then use it to open the door for bigger sales. A deceitful salesperson may even offer an artificially low price, secure your commitment (with paperwork, trial runs etc.) before revealing at the last minute that there had been a mistake in the calculation or an omission.

- Organizations soliciting *donations* may use surveys to ask if you'd be willing to help collect funds for charitable organizations, or use pleasantries to get you to agree that you're feeling great. To stay consistent with your responses, you're more likely to agree later to contribute to the less fortunate.

- During the *Korean War*, many American soldiers were captured as prisoners-of-war (POWs) by the Chinese communists and successfully "converted" using the consistency principle. The Chinese initially got the POWs to make small, seemingly harmless statements like "The United States is not perfect", then progressively got them to make bigger commitments (e.g. listing down problems in America and even writing essays on them).

How to say no. The best way to avoid being manipulated is to become aware of it *before* we make a commitment.

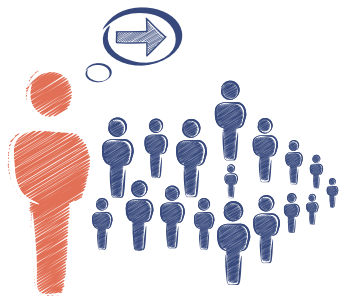
- If you feel unsure about a situation, *pause and ask*, "Knowing what I know now, if I could go back in time, would I still make the same choice?".

- Then, pay attention to the first *gut-impression* that comes to you, before your logic kicks in. If your gut feel is one of discomfort or uncertainty, put aside your inclination to stick to past commitments and take time to review the facts.

KEY QUOTES

"When it occurs unthinkingly, consistency can be disastrous."

Social Proof



When we're uncertain how to behave or react, we look to others for answers.

Generally, this **rule-of-thumb** is useful for quickly figuring out norms or acceptable behaviors. We assume that if lots of people are doing something, it must be correct.

This principle is being **applied widely** in our daily lives.

- For *example*, TV-shows and comedies use canned laughter because it's proven to make the audience laugh more and works even for lousy jokes. Clubs create artificially long queues to give the impression that they are packed. Advertisers use "fastest-growing" or "best-selling" to signal that certain products are popular. Tip jars and donation boxes filled with some money tend to encourage people to tip or donate more.

- This principle is the most powerful when we are emulating the behavior of *people who are similar to us*. That's why many testimonials feature the average-person-on-the-street.

- Social proof can even help to *overcome phobias*—children who were afraid of dogs overcame their fear after repeatedly watching a video of a child happily playing with a dog. The clips were more effective if they showed a variety of children playing with dogs.

"**Pluralistic ignorance**" is a phenomenon where a large group of people go along with something they personally disagree with, but incorrectly assume is acceptable because others also do it. In a tragic incident, a woman was attacked near her house for more than 30min and eventually killed with multiple stab wounds. 38 people watched the attack from their own homes, yet no one called for help until the woman was dead.

- *This happened because*: (a) when there are many people around, everyone assumes someone else will help, so no one takes action, and (b) when people around us seem calm and unflustered, we infer that the situation cannot be an emergency.

KEY QUOTES

"In general, when we are unsure of ourselves, when the situation is unclear or ambiguous, when uncertainty reigns, we are most likely to look to and accept the actions of others as correct."

"We will use the actions of others to decide on proper behavior for ourselves, especially when we view those others as similar to ourselves."

- Pluralistic ignorance is most common in *a large group of strangers*, who try to look poised and dignified in front of others. It's thus likely to occur in urban settings, which are confusing, populous, with people who are less familiar with one another.

- If you're ever caught in an emergency, the *best strategy* to get help is to (a) be clear and specific about the help you need and (b) assign 1 person in the crowd to take action, e.g. "You, sir, in the blue shirt. I'm having a heart attack. I need help. Call the ambulance now."

This copycat behavior or herd instinct is so strong that it can even extend to **aggression and suicide.**

- After news coverage of a black fighter losing a heavyweight championship, there was a marked increase in the *homicide* rate for young black victims (but not white victims) in the next 10 days. Likewise, when a white fighter lost a match, more young white men (but not black men) were killed in the next 10 days.

- More than 2 centuries ago, a German novel (in which the hero committed suicide) was banned after the story triggered a wave of *suicides* in Europe. Today, front-page suicide stories are usually followed by a spike in deadly accidents (which Cialdini believes are suicides masked as accidents so insurance payouts won't be forfeited). In fact, the profiles of drivers in the accidents match those of the news coverage. News articles about a young person's suicide are followed by a surge of accidents involving young drivers, while news about an older person's suicide are followed by a surge of accidents involving older drivers.

How to say no. It's useful to learn from others so long as the feedback is valid and valuable to us. Beware 2 types of social proof:

- *Intentionally-falsified social evidence*, e.g. fictitious testimonials, bogus statistics. Cialdini urges us to expose and take strong action against such tricksters so they can't continue to deceive others.

KEY QUOTES

"Your best strategy when in need of emergency help is to reduce the uncertainties of whose around you concerning your condition and their responsibilities."

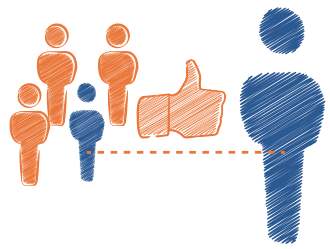
"The mentality of a herd makes it easy to manage. Simply get some members moving in the desired direction and the others…will peacefully and mechanically go along."

"The principle of social proof is so wide-ranging and powerful that its domain extends to the fundamental decision for life or death."

"Whenever possible we ought to sting those responsible for the rigging of social evidence."

- *Erroneous social evidence*, e.g. pluralistic ignorance or when certain actions/trends are replicated in a way that no longer makes sense. Periodically examine the evidence around you, like how a pilot monitors his instrument panel and environment instead of depending fully on the auto-pilot.

Liking



Generally, we're more likely to agree to someone's request if we know and like the person.

Friendships and personal relationships bring a sense of connection, safety and obligation, which influence our choices.

- *Tupperware parties* are a great example of how various weapons of influence are put to use. They evoke the *reciprocity* principle via upfront games and prizes, gain *commitment* by asking participants to share how they've used and benefited from Tupperware, offer *social proof* of people buying Tupperware at the parties and tap on the rule of *liking* by having your friend invite you to the party.

- A relationship can be leveraged even if the person is not physically present—one common tactic is through *referrals*. A salesperson gets a customer to admit that he/she likes a product, then asks for names of friends who'd also benefit from it. When the salesperson contacts the prospects, it's harder for them to say "no" to a friend's recommendation.

This principle works even if there are no established friendships—you simply need to **get someone to like you**. There are several factors that can predictably influence likability:

- *Physical attractiveness.* Good-looking people have an unfair social advantage because we unconsciously associate physical appeal with positive traits like talent, honesty, kindness, and intelligence. Attractive people are more likely to get help or change others' opinions. They even receive lighter sentences in criminal trials and higher-than-average compensations.

- *Similarity*. We tend to like people who are similar to us (in background, interests, opinions, age, religion, personality

KEY QUOTES

"An automatic-pilot device, like social proof, should never be trusted fully…it can sometimes go haywire by itself."

"The attraction, the warmth, the security, and the obligation of friendship are brought to bear on the sales setting."

"A halo effect occurs when one positive characteristic of a person dominates the way that person is viewed by others. And the evidence is now clear that physical attractiveness is often such a characteristic."

etc.). You can get someone to like you better simply by dressing like him/her or claiming to share similar interests.

- *Compliments*. When someone praises us, we tend to view him/her favorably, even if the praise is clearly inaccurate or comes with vested interests.

- *Contact and cooperation*. Generally, we like what's familiar. The more we're exposed to something, the more we're predisposed toward it, so long as (a) the exposure doesn't involve bad experiences (in which case familiarity can bring dislike) and (b) the other party seems to cooperate with us. Studies found that racial differences are more easily overcome when students of different races have to pool resources and cooperate to achieve a common goal. In law enforcement, the Good Cop-Bad Cop approach is commonly used to make the suspect like and cooperate with the "Good Cop".

- *Conditioning and association*. Our feelings toward people are affected by what we associate them with, e.g. we dislike people who bring us bad news even if they've not caused the news. That's why advertisers use celebrities and attractive models to associate their brands with beauty and desirability, and politicians try to associate themselves with positive news about job creation or advancement projects, even if they've not contributed to it.

All of us also unconsciously **associate ourselves with success** to look and feel good.

- People get emotional and defensive over their local or favorite *sports teams* because they associate themselves with the teams and take the wins and losses personally. On the day after a match, more people are likely to wear the winning team's jersey than the losing team's.

- We tend to use "we" when describing a *successful project*, and use "they" when describing a failure.

- Certain people (especially those with low self-esteem) tend to persistently *drop-names* to sound more successful or powerful.

KEY QUOTES

"We are phenomenal suckers for flattery… we tend, as a rule, to believe praise and to like those who provide it, oftentimes when it is clearly false."

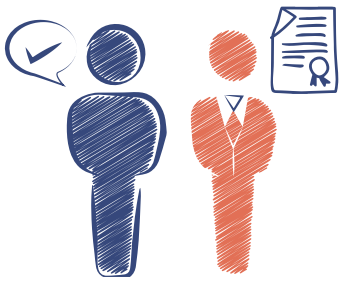
"An innocent association with either bad things or good things will influence how people feel about us."

How to say no. It's hard to stop yourself from liking others. Instead, learn to identify when someone is deliberately using the rule of likability on you.

- Once you *notice the feeling of strong liking* for someone, ask yourself: In the time that you've known this person, is there reason for you to like him/her as much as you do?

- Even if you realize you like the person more than you'd have expected, don't assume you're being manipulated. Instead, make a deliberate mental effort to *separate the person from the request* he/she is making.

Authority



Each one of us, to varying degrees, is wired to **obey figures of authority**.

- Structure and authority are an integral part of *how our society functions*; without it, there'd be confusion and anarchy.

- Authority also offers a *short-cut to decision-making*, i.e. we let others do the thinking for us and simply get rewarded for following orders.

However, **blind obedience** is obviously undesirable.

- In an *experiment*, participants were instructed by an authority figure in a lab coat to administer increasingly larger voltages to another person, to supposedly study the relationship between pain and learning. Most participants followed orders even when the voltages reached fatal levels on the meter and the subjects were screaming and begging them to stop. [In reality, no charges were released in the experiment.]

- Many studies also found that *doctors' orders* in hospitals are followed blindly, even when the instructions obviously didn't make sense.

There are several symbols that reliably trigger our compliance to authority, and can be used to **influence our choices and behaviors.**

KEY QUOTES

"In making a compliance decision, it is always a good idea to keep separate our feelings about the requester and the request."

"We don't have to think; therefore we don't."

- *Titles*. We respect titles that take years of hard work and successes to acquire. Yet, it's relatively easy for con-men to forge credentials, or artificially improve their perceived status through related factors like size, height or other outward signs of power.

- *Clothes*. People wearing guard uniforms and business suits have been found to exert more influence over others. When a man wore a well-tailored business suit, he had 3.5x more pedestrians following him when he jaywalked, compared to when he dressed in normal clothes.

- *Trappings*. Other symbols of position and status (e.g. jewellery, prestige cars) also affect how we perceive and react to others.

How to say no. The best way to neutralise this principle is simply to be mindful that authority symbols can be faked.

- *Scrutinize the source of authority*, bearing in mind that it's a common trick for compliance practitioners to admit to a small flaw or weakness just to appear sincere and honest.

- *Ask 2 key questions:*

  i. Is this authority truly an expert? Filter out hollow symbols and examine if the credentials are valid and relevant.

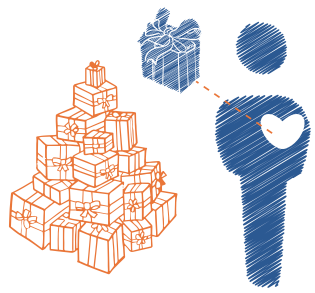
  ii. How truthful can I expect this expert to be? Consider if he/she is truly credible and objective.

KEY QUOTES

"Titles are simultaneously the most difficult and the easiest symbols of authority to acquire."

Scarcity

Generally, we perceive something to be more valuable when it's limited in availability.



Human beings value choices and freedom, and are naturally **loss-averse**, i.e. we are more motivated not to lose something, than to gain something.

We also use an item's availability to **gauge its quality.**

- We value something more *if we see its quantity reduced before our eyes*, compared to if it had been scarce from the

"When our freedom to have something is limited, the item becomes less available, and we experience an increased desire for it."

onset. Downtrodden people who've always lived in deprivation tend to accept their fate, whereas those who experience a period of improvement followed by a sharp decline are more likely to rise in a revolution. Children whose parents give them privileges without consistent rules also tend to become more rebellious.

- We desire something the most if it seems to be less available due to *demand or competition*. That's why advertisers play up "by popular demand" or show queues of people flocking to snap up their goods. Property agents deliberately arrange for multiple prospects to view a house simultaneously. Even romantic pursuits seem more intense if there's a rival involved.

- *Things that are banned* also tend to be more desired. When information is censored, people not only want the information more, but tend to believe it more. Juries who were told not to consider a piece of information in a trial ended up using it even more.

There are several common **sales tactics** used to scare prospects into buying immediately so they won't lose a deal. The salesperson may tell you that there's only a *limited number* of products left, that an opportunity or offer is *expiring soon* ("limited promotion ends today!"), or you have to buy *right now*, because the price will go up or the item will no longer be available.

How to say no. When we encounter scarcity, our emotions take over and we're less likely to evaluate the situation thoughtfully.

- The first step is to *become aware of your emotional arousal.* Learn to scan your inner reactions so you're alert when someone is deliberately rousing you using scarcity tactics.

- Then, *evaluate the situation in 2-steps*: (i) Stop and calm yourself first, then (ii) ask yourself why you want that item. Scarcity may increase the value of possessing something, but doesn't improve its utility, i.e. a cookie won't taste better or satisfy your hunger more just because it is scarce. If you're buying something for consumption, consider its utility value so you won't give it an irrationally high value.

KEY QUOTES

"Not only do we want the same item more when it is scarce, we want it most when we are in competition for it."

"We react to information restriction…by valuing the banned information more than ever."

"In each instance, the intent (is) to convince customers of an item's scarcity and thereby increase its immediate value in their eyes."

"The joy is not in experiencing a scarce commodity but in possessing it. It is important that we not confuse the two."

"We must remember that the item under consideration will function equally well whether scarce or plentiful."

Conclusion & Details in the Book to Look Out For

Each of these principles offer shortcuts to decision-making, but can also be used against us if we're not mindful. You can use the insights from this book to positively influence others and while protecting yourself from deception.

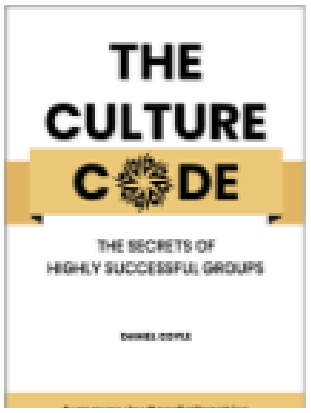
The book is full of detailed case studies and examples to explain each of the 6 principles, illustrate how and why they work, and how they can be used against us. For more details, please visit www.influenceatwork.com.

About the Author

Robert B. Cialdini (born 1945) is the Regents' Professor Emeritus of Psychology and Marketing at Arizona State University. He was previously a visiting professor at Stanford University, as well as at the University of California at Santa Cruz. Cialdini received his Bachelor of Science degree from the University of Wisconsin, earned his Ph.D. in Social Psychology at the University of North Carolina and received Postgraduate training in Social Psychology at Columbia University.

KEY QUOTES

"With the proper understanding of the nature of our opponent, we can come away from the compliance battlefield unhurt and sometimes even better off than before."



THE CULTURE CODE

The Secrets of Highly Successful Groups

DANIEL COYLE

The Big "So What"

Why do some groups perform at a level beyond the sum of their individual parts while others perform below that? The answer lies in their culture. In this book, Coyle demystifies how a great culture is formed and presents the code that you can use to create and sustain a great culture.

Introduction

Groups of business school students and kindergartners were challenged to build the tallest possible structure using uncooked spaghetti, tape, string and marshmallow. The business students discussed ideas and options, decided on a strategy and divided their tasks systematically. The kindergarten kids stood closely in a circle, started on the task without any strategy, and spontaneously exchanged ideas along the way. Surprisingly, the kindergartners built structures that were on average twice the height of the business students'. It turns out that group performance depends more on how people interact with one another than on their individual skills.

Does this apply universally for successful groups and cultures? How are great cultures built and sustained? To answer these questions, Coyle spent 4 years researching exceptionally-successful groups and comparing them with less successful ones.

- Specifically, he studied outstanding groups including San Antonio Spurs, U.S. Navy SEALs' Team Six, Zappos, Google, IDEO and Pixar. These groups were chosen as they had (i) the top 1% performance in their domain, (ii) a variety of employees, and (iii) a widely-admired culture.

- He found that these cultures stood out not because of the intelligence or skills of individual members, but because of their

KEY QUOTES

"Individual skills are not what matters. What matters is interaction".

"While successful culture can look and feel like magic, the truth is that it's not. Culture is a set of living relationships working towards a shared goal. It's not something you are. It's something you do."

relationships. These in turn were built on 3 critical skills: (i) building safety, (ii) sharing vulnerability, and (iii) establishing purpose.

- Using a story-telling style, Colye presents (i) highlights and stories from his research, (ii) related empirical studies and (iii) ideas on how you can nurture the skills in your groups. In this summary, we've distilled and re-organized the key ideas into 3 sections, each focusing on 1 of the 3 vital skills.

Skill 1: Build Safety

In great teams, members constantly send signals of connection that say "you're safe". Safety is like the glue that bonds people together, creating a sense of belonging and the foundation for risk-sharing, open debate/communication and learning.

Why safety matters

Human beings are social animals. Our subconscious brain is always on the lookout for danger—when we feel threatened, we instinctively move into a fight-or-flight mode to protect ourselves. However, when we feel safe and connected, we move into a social mode to forge closer ties with our group.

Cues > content. Such subtle cues are often more important than the actual content being communicated. Alex Pentland found that negotiations outcomes can usually be predicted within the first 5 minutes of the interactions based on dynamics such as the energy levels and vocal patterns. When entrepreneurs are pitching their ideas to business executives, the outcomes depend more on the cues being exchanged than the content being presented—the same business plans, when evaluated on paper without the social cues, produced vastly different outcomes.

People are naturally more positive when they feel connected to others who care about them.

- *Patients* who had attempted suicide were less likely to be readmitted if they received a postcard from the hospital after they were discharged.

KEY QUOTES

"The belonging cues sent in the initial moments of the interaction mattered more than anything they said."

"The content of the pitch didn't matter as much as the set of cues with which the pitch was delivered and received."

- If you approach a *stranger* on a rainy day and ask, "I'm sorry about the rain...can I borrow your cell phone?", you're 422% more likely to get a positive response than if you say, "Can I borrow your cell phone?"

- Adding this sentence can drastically improve the response to *feedback*: "I'm giving you these comments because I have very high expectations and I know that you can reach them." This simple statement conveys that you belong to a group with high standards and someone believes you can achieve them.

Active listening is an important ingredient to develop a deep connection and encourage people to open up. Neurologist Dr Carl Marci found that it's possible for the emotional arousal cues of 2 people to be perfectly synced. This typically happens when one person is listening attentively and responding authentically to the other person's emotions.

Safety in groups

Coyle observed that all great teams share a strong chemistry. Members tend to have close physical proximity (e.g. they're seated close together, share lots of fist bumps or hugs), focused communication (e.g. eye contact, attentive listening), and/or share short dynamic exchanges with lots of questions.

Such behaviors send vital "belonging cues" that make people feel psychological safe. Specifically, (i) *energy* is being invested in the interaction, (ii) people are being treated as unique and valued *individuals*, and (iii) they receive signals that there's a *future* to the relationship. Such cues add up to make people feel safe and connected with a sense of shared future with their group.

Belonging cues are vital when a new member first joins your group.

- WIPRO was one of the most successful call centres in India. However, in the late 2000s, staff started to leave in droves. They tried improving salaries and perks but nothing worked.

KEY QUOTES

"The most important moments in conversation happen when one person is actively, intently listening."

"Belonging cues are behaviors that create safe connection in groups."

- Then, in 2010, they did an experiment by varying the training for new hires. Specifically, new hires were split into 3 groups, with differences in just 1 hour of their training:

Control Group	Group 1	Group 2
Standard training	Standard training + 1 hr on WIPRO identity + sweatshirt with WIPRO logo	Standard training + 1 hr of sharing about each new staff and what he/she brought to WIPRO + sweatshirt with staff name next to WIPRO logo

- After 7 months, retention rates for Group 2 trainees were 250% and 157% better than Group 1 and Control Group trainees. By investing 1 hour to send belonging cues, WIPRO built a foundation to develop a sense of connection and identity amongst new hires.

How are strong relationships built? Gregg Popovich is recognized as one of the best National Basketball Association (NBA) coaches who shaped the San Antonio Spurs into a close-knit team with an unusually high win-lose ratio. We can learn a lot about safety and connection by observing him and the Spurs as a group.

- Popovich is a disciplinarian who'd relentlessly push his players to achieve the highest standards. At the same time, he goes out of his way to build deep bonds with every player. The process starts during recruitment, where he'd spend days with potential recruits and their families to get to know them personally. When he's with the Spurs, he speaks their languages, talks about their lives, touches them on the elbow, shoulders, arms and sometimes moves so close that they're nose-to-nose. Players don't just connect over basketball; they watch documentaries together and discuss issues ranging from voting rights to terrorism.

- When asked to name their biggest team moment, most of the Spurs pointed to a night in 2013 when they suffered one of their worst defeats. Instead of reprimanding the players, Popovich reached out to each person with hugs, smiles and appreciation. People talked, cried, got past the loss and reconnected as a team.

KEY QUOTES

"Group performance depends on behavior that communicates one powerful overarching idea: We are safe and connected."

"There are bigger things than basketball to which we are all connected."

"In a moment that could have been filled with frustration, recrimination, and anger, he filled their cups."

In strong cultures, it's also common for people from all walks to mix regularly in close proximity.

- Zappos' CEO Tony Hsieh firmly believes in designing spaces and systems for "*collisions*", i.e. helping people to meet and connect in a way that generates energy and possibilities. As a leader, he doesn't give direct advice or instructions; he connects you with the right people so you can figure out the answers you need.

- MIT professor Thomas Allen found that desk-arrangements affect the level of visual contact and social connection, to indirectly affect team cohesiveness. When the *distance between people* falls below 8m, communication frequency increases exponentially. However, when people are vertically separated on different floors, they become alienated.

Ideas for building safety and connection

Building safety is more of an art than a science. The only way to recognize subtle cues/patterns and know the right signals to send at the right time is to learn it through real-life interactions. Here are several ideas we can glean from the outstanding cultures:

Create safety and connection in communication:

- Use a range of signals to *show you're listening*, e.g. maintain eye contact, lean your body forward, nod regularly. Don't interrupt.

- *Share your fallibility* (e.g. your fears and concerns) upfront, especially if you're the leader. This creates a connection and makes it less threatening for others to speak up. Use phrases like "that's just my view and I may be wrong" or "what am I missing?"

- *Welcome bad news* so people feel safe to share the truth.

- *Say "thank you"*. These 2 words make people feel appreciated and create a sense of connection.

- *Don't use "sandwich feedback"* to insert a criticism between a positive open and close. Separate recognition/praises from targeted feedback sessions.

KEY QUOTES

"Hsieh has built a machine that transforms strangers into a tribe."

"Proximity functions as a kind of connective drug. Get close and our tendency to connect lights up."

"Interruptions shatter the smooth interactions at the core of belonging."

"Thank-yous aren't only expressions of gratitude; they're crucial belonging cues that generate a contagious sense of safety, connection, and motivation."

- *Ensure everyone is heard* using process, rules and norms, e.g. make it a rule that everyone must share something at a meeting, or anyone can bring up any issue to senior leaders.

- *Have fun*. Laughter is a powerful signal of safety and connection.

Send belonging cues consistently to build safety and identity:

- *Be rigorous in your hiring process*, as it sends a strong signal on what it means to be part of the group.

- Establish a link between *where people are vs where they can be*. Show how others have succeeded e.g. "5 years ago, he was standing in the exact same spot where you are".

- *Define your boundaries*. Every strong culture has behaviors that are unacceptable. Name yours explicitly.

Design spaces and systems for consistent belonging cues:

- *Create spaces for people to collide*. Design your offices in a way that facilitates spontaneous meetings between staff from all levels and departments, e.g. having shared corridors and common cafes. When the Bank of America aligned team members' schedules so they could have joint coffee breaks, productivity improved by 20% and turnover decreased by 28%.

- When people first join your group, they quickly decide if they belong. *Use "threshold moments"* to help people feel like they're part of something bigger. For example, on their first day of work, all new hires at Pixar are given the directors' seats in the screening theatre and told "Whatever you were before, you are a filmmaker now. We need you to help us make our films better."

Skill 2: Share Vulnerability

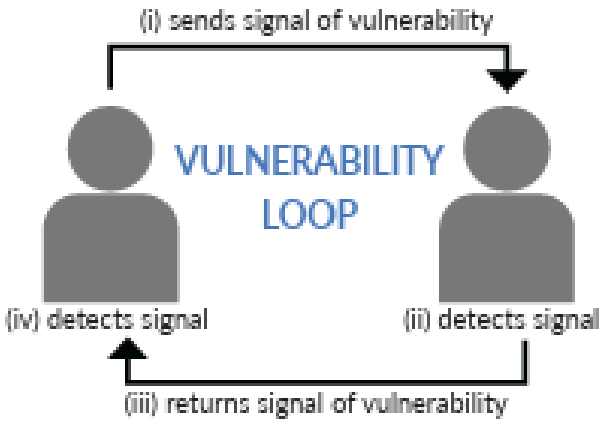
In strong teams, members show their weaknesses, share honest feedback, embrace uncomfortable truths and share risks. This creates a foundation of trust and builds the muscles for cooperation.

KEY QUOTES

The Vulnerability Loop

Vulnerability is about sending a clear signal that you need help.

- It can build trust and cooperation so long as the receiving party detects the signal and returns a vulnerability signal (vs pretending to have no weakness). This creates a *vulnerability loop* and a sense of mutual-need.



- Studies found an inverse relationship between *vulnerability and cooperation*. The greater someone's perceived power, the less willing they are to cooperate.

It's uncomfortable to ask for help or get candid feedback. Yet, this is required in order to deepen trust and solve problems. In all successful cultures, Coyle found leaders, catalysts, systems and/or practices to build risk-sharing and candor in the group.

- The U.S. Navy SEALs are known for their close-knit teams that operate seamlessly with decentralized control. Such deep bonds are forged from the onset in their week-long selection program, *Hellweek*. Every aspect of the training is team-based, with officers going through the training alongside recruits. Recruits go through such extreme levels of pain and fear that they can't survive unless they fully trust and work with their teammates. Through shared perils, SEALs learn to open up, forge close ties and understand one another so well that they can communicate with just a look or a subtle shift in body language.

- After every mission or training, SEALs hold *after-action reviews (AARs)* to unravel what truly happened. People candidly share why they did/didn't take certain actions, the mistakes they made, and how each person can specifically improve in future. Such AARs are led by the enlisted men (not the commanders), with the goal of allowing people to learn from one another's experiences and mistakes. Over time, the teams form a shared mental model for the future and can operate like a single organism.

KEY QUOTES

"Being vulnerable together is the only way a team can become invulnerable."

"These groups are cohesive not because it's natural but because they've built, piece by piece, the shared mental muscles to connect and cooperate."

"Vulnerability doesn't come after trust—it precedes it. Leaping into the unknown, when done alongside others, causes the solid ground of trust to materialize beneath our feet."

"These awkward, painful interactions generate the highly cohesive, trusting behavior necessary for smooth cooperation."

- Since 1995, Pixar made 17 feature films (e.g. Toy Story, Cars), all of which became hits. This comes from a rigorous process of refining each movie. *BrainTrust meetings* are a critical part of this process—veteran directors and producers gather to watch the latest version of a work-in-progress movie and share their feedback. For this to work, the film director must be willing to hear the hard truths (e.g. the characters lack depth, the plot is confusing) while the other veterans must put aside their egos to focus solely on improving the movie.

- IDEO (which has won the most design awards for companies) uses *tools and questions* to help teams to uncover underlying tensions and trigger creativity. To send signals of vulnerability and connection, team members are encouraged to use statements like: "The 1 thing that excites me about this project is....", "I confess, the 1 thing I'm not so excited about this project is....", or "What I'd really like to get better at is..."

Ideas for sharing vulnerability and building trust

It takes time and effort to build candor and shared vulnerability, during which the process can seem painful and inefficient. Be patient and embrace the process.

Don't assume cooperation will happen naturally. Send intentional signals for cooperation:

- Deliberately *communicate expectations* of cooperation.

- *Leaders should send vulnerability signals first and often*, e.g. "I screwed up there" or "I'm scared about our future". Former Googler Lazlo Bock suggests that leaders ask 3 questions: What's 1 thing I currently do that you'd like me to continue? What's 1 thing I don't currently do often enough that you'd like me to do more frequently? What can I do to help you be more effective?

- Leaders should *show you're in it with the rest of the group*, be it doing menial tasks like picking up the thrash, or doing away with executive perks like allocated parking lots.

KEY QUOTES

"All our movies suck at first...The BrainTrust is where we figure out why they suck, and it's also where they start to not suck."
-Ed Catmull

"Building habits of group vulnerability is like building a muscle. It takes time, repetition, and the willingness to feel pain in order to achieve gains."

- Focus on *2 crucial moments* in new group formation. During the first incident of vulnerability, show a willingness to explore weaknesses (not hide them). During the first disagreement, welcome alternative viewpoints (not defend your views).

Master the art of communication.

- When *listening*, be like a trampoline: absorb what's being communicated, offer support and energy to bring the conversation and the other party to a higher level. Use gestures and affirmations to encourage the other person to keep sharing. Refrain from interrupting or jumping in with your suggestions.

- *Address negative issues in person*, not via electronic means.

- Use *language* to send the right signals, e.g. IDEO's call their project managers "design community leaders".

Nurture personal growth and mutual understanding:

- Leaders should *step back often* to let members work out solutions on their own.

- Give *targeted feedback* instead of personal judgements. Handle performance reviews (which involves judgement and compensation) separately from professional development (which involves strengths-use and support for growth).

- Use "*flash mentoring*", i.e. shadow someone for a few hours to learn from them and cultivate understanding.

Develop practices to encourage candor. The goal is to help team members to open up, share vulnerabilities and jointly figure out what works and doesn't work. Here are some models you can use:

- *SEALs' After-Action Reviews (AARs)*. Use these questions to review what happened in a project: What were our planned results? What were our actual results? What caused these results? What should we do similarly or differently next time? Ideally, have your team members run the AARs without leadership involvement. You can also use Before-Action Reviews to prepare yourselves for possible challenges.

KEY QUOTES

"Good listening is about more than nodding attentively; it's about adding insight and creating moments of mutual discovery."

"The goal of an AAR is not to excavate truth for truth's sake, or to assign credit and blame, but rather to build a shared mental model that can be applied for future missions."

- *Pixar's BrainTrust*. Have experienced leaders come together to share feedback for another colleague's project, but refrain from sharing solutions so the project leader still has full ownership.

- *Red-Teaming*. Form an independent "Red Team" to develop counter-strategies to your plan—this brings up alternatives that your team may not otherwise anticipate.

Skill 3: Establish Purpose

Strong cultures use stories, language and behaviors to reinforce their purpose and shared values. People are constantly reminded about the direction they're going, what they stand for and where to focus their efforts.

In most groups, people lack clear direction. In an Inc. magazine survey of 600 companies, 64% of the executives predicted their staff could name the company's top 3 priorities, when in reality only 2% could. In strong cultures, such priorities and goals are explicitly named and reinforced through countless signals, so people are absolute clear on where they are and where they want to be.

Stories and narratives are powerful tools to help people connect their daily work to a shared future.

- Psychologist Adam Grant did an intervention at a call center where workers phoned university alumni for scholarship donations. After he got scholarship recipients to share how the donations impacted them, the call center staff spent 142% more time on the calls and weekly revenues increased by 172%.

- In 1943, the founder of Johnson & Johnson (J&J) wrote a 311-word credo that described its relationship with each and every stakeholder group. 3 decades later, senior leaders intentionally reviewed if the credo was still relevant and decided to recommit to it. Then, in 1982, 6 people died after consuming Extra-Strength Tylenol capsules laced with cyanide, triggering a major PR crisis. J&J leaders used the credo as a guide to make hundreds of tough decisions—they recalled every Tylenol product from the market, introduced

KEY QUOTES

"The real courage is seeing the truth and speaking the truth to each other."

"High-purpose environments are filled with small, vivid signals designed to create a link between the present moment and a future ideal."

"Purpose isn't about tapping into some mystical internal drive but rather about creating simple beacons that focus attention and engagement on the shared goal."

"Stories are not just stories; they are the best invention ever created for delivering mental models that drive behavior."

new tamper-proof packaging and proactively engaged stakeholders. Their response was so sound and consistent that Tylenol eventually recovered its market share and this became a widely-cited case-study for corporate crisis management.

Artifacts are also a vital part of cultural reinforcement. The SEALs HQ is full of items to commemorate fallen SEALs, the Pixar HQ is filled with life-sized Pixar characters, and KIPP schools are full inspiring words like "Where will YOU go to college". These are beacons to remind people of (i) where they are and (ii) where they want to go. When people can see the specific challenges they must overcome to reach their desired future, they're more motivated to take concrete steps to make things happen.

Shared meaning affects group behaviors and how quickly people learn and improve as a team. Researcher Amy Edmondson studied surgical teams that were mastering a new heart surgery technique. She found that the teams' rate of learning wasn't affected by their prior experience or organizational support. Teams that mastered the technique most quickly shared 5 signals: (i) they *framed* the task as a learning experience (not a chore), (ii) members were told why they each played a vital *role*, (iii) they did detailed *rehearsals*, (iv) members were coached to *flag out problems*, and (v) the teams reviewed their results and areas for improvement.

Building Proficiency vs Creativity

To create a high-purpose environment, you must first know if/where you need to build proficiency vs creativity in your group. Proficiency is about performing a task consistently while creativity is about empowering people to create something that doesn't yet exist.

To develop proficiency, you need a blueprint with crystal-clear directions and checkpoints—such as rules of thumb, rewards for skills attainment—to show how to get from Point A to Point B.

KEY QUOTES

"Motivation is not a possession but rather the result of a twopart process of channelling your attention: Here's where you're at and Here's where you want to go."

"High-proficiency environments help a group deliver a well-defined, reliable performance, while high-creativity environments help a group create something new."

- In nature, colonies of ants/bees can organize themselves using a series of simple *decision-making heuristics*. Likewise, human groups can use heuristics to guide collective behaviors. The key is to help people to connect with the ideas, e.g. using catchy phrases, vivid images, and ensuring leaders lead by example.

- 80% of New York restaurants fail within 5 years. Yet, in 30 years, Danny Meyer opened 24 successful restaurants out of 25. His restaurants are known for their warm and homely service. The staff go out of their way to notice customers' preferences and pass the info on to other restaurants to ensure the same personal touch. Meyer achieved such high, consistent service standards by *using language to teach behaviors*. After opening his 2nd restaurant, he invited all his staff to a retreat where they defined their top values and core purpose—"We take care of people". Meyer explicitly named the desired behaviors using maxims and catch-phrases like "make the charitable assumption" (i.e. give people the benefit of the doubt), "collect the dots" (i.e. gather info about guests) and "connect the dots" (i.e. use the info to create happiness).

- New Zealand's All-Blacks rugby team uses phrases like "pressure is a privilege" or "go for the gap". KIPP uses catchphrases like "no shortcuts" or "if there's a problem, we look for the solution". These heuristics help the high-proficiency groups to capture their core priorities and behaviors in *simple, memorable terms*.

To develop creativity, you need to provide support, tools and resources to allow people to explore and arrive at an unknown destination. This includes making it safe to fail, protecting creative autonomy, and rewarding initiative.

- Winning creations don't come from a flash of brilliance, but a *series of deliberate steps* to filter out ideas with potential, and to shape a raw unviable concept into a great one.

- Coyle found that the leaders of creative cultures tend to be quiet, observant, and systems-oriented—they're "*creative engineers*", not artists. Ed Catmull, president and co-founder of Pixar, is such a leader; he focuses on helping others to discover their potential rather than telling them what to do.

KEY QUOTES

"The trick is not just to send the signal but to create engagement around it."

"Building purpose in a creative group is not about generating a brilliant moment of breakthrough but rather about building systems that can churn through lots of ideas in order to help unearth the right choices."

Pixar spent years developing systems to methodologically polish their films. In fact, most of the final movies are totally different from the original drafts. Catmull, too, has his own mottos like "hire people smarter than you" and "fail early, fail often".

Ideas for Establishing Purpose

Explicitly name your priorities, values and purpose.

- Review and *recommit* to them regularly.
- Use *artifacts, stories and narratives* to bring ideas to life.
- Define *1 measure per role* to highlight what truly matters. For example, Zappos' call center measures Personal Emotional Connections instead of the number of calls handled. This simple measure guides staff to focus on creating bonds with customers rather than rushing through the calls.

Shape behaviors with simple heuristics and keep reinforcing them. Such signals may seem cultish or corny to external parties, but are an effective reminder to create internal clarity for your group.

- *Define behaviors* that set the bar and tell stories about them repeatedly.
- *Use catchphrases*, e.g. Zappos' "create fun and a little weirdness" or IDEO's "talk less, do more".

Identify where you need proficiency vs creativity in your group, and build the right environment and infrastructure to support them.

Other Details in the Book to Look out For

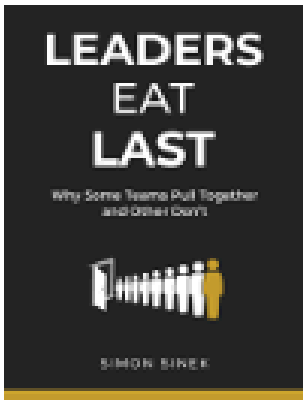
In this summary, we've distilled the key ideas and tips for each of the 3 vital group skills. In the book, Coyle also presents many other vivid examples of groups ranging from armies to airline crew, comedy groups, jewel thieves and soccer hooligans. For more details, please visit http://danielcoyle.com.

KEY QUOTES

"High-purpose environments don't descend on groups from on high; they are dug out of the ground, over and over, as a group navigates its problems together and evolves to meet the challenges of a fast-changing world."

"What seems like repetition is, in fact, navigation."

"The goal here is not precision; it is to create awareness and alignment and to direct behavior toward the group's mission."



LEADERS EAT LAST

Why Some Teams Pull Together and Others Don't

SIMON SINEK

The Big "So What"

Leadership isn't just about managing numbers. It's about helping people to thrive and find meaning in their work. When leaders take care of their people, the numbers will take care of themselves. Unfortunately, many leaders and organizations seem to have lost sight of this fundamental truth. In this book, Sinek explains where we've gone wrong, and puts out an urgent call for real leaders to step forth to make a positive difference.

KEY QUOTES

"The true price of leadership is the willingness to place the needs of others above your own."
—LTG George Flynn (Ret)

Introduction

A company's biggest strength doesn't lie in its products/services. It always lies in its people—in their ability to cooperate closely and rally behind the organization, especially during a crisis.

"The best companies almost always make it through hard times because the people rally to make sure they do."

However, loyalty and commitment must be earned. Today, work has become a contractual, transactional relationship in many organizations. Intense competition and layoffs are the norm. Hardly anyone believes in loyalty to a company anymore, much less lifetime employment. Mercer found that over 6 months, one-third of employees considered leaving their jobs, though only <1.5% actually did so voluntarily. People who're unhappy with their work perform sub-optimally and are more prone to depression and anxiety. Yet, they'd rather stay in their jobs rather than risk the uncertainty of a new environment.

"Our intelligence gives us ideas and instructions. But it is our ability to cooperate that actually helps us get those things done."

What does it take for leaders to inspire true loyalty and outstanding results? In this summary, we'll address this in 3 parts:

- The human need for safety;

- A society out of balance; and
- Becoming a leader.

Part 1: The Human Need for Safety

Humans beings thrived as a species because our brain's neocortex allows us to create, invent, plan, and organize ourselves in complex ways to pass on knowledge and shape our environments. Our survival hinges on our ability to operate in social groups. During prehistoric ages, humans depended on their tribes for food, shelter and protection. Even though our environments and organizations have changed drastically, our biological makeup still remains similar.

The 4 Chemicals (E.D.S.O.)

Each of us is concurrently an individual and a part of social groups. For example, Jane may have her own interests and ambitions, but she's also a member of her family, an American, a Man-U fan etc. We make daily decisions that require us to weigh our self-interests against group interests.

This dilemma also happens in our bodies via 4 key chemicals:

- *Endorphins* are released when you're exercising or laughing. They produce a temporary "high" and numb your pain, so you can relax and/or give yourself a boost.
- *Dopamine* delivers a sense of satisfaction when you find/get what you're looking for, e.g. when you accomplish a goal. This encourages you to find/develop solutions, achieve results and repeat what works, thus driving progress. The bigger the achievement, the greater the satisfaction.
- *Serotonin* brings feelings of pride, strength and confidence when we're liked or respected by others. This is why we crave others' approval and seek awards/recognition. We also feel grateful or obliged to people who've helped us to succeed. When you contribute to others, you gain status and respect.

KEY QUOTES

"We are at our best when we face danger together."

"Human beings exist as individuals and as members of groups at all times. I am one and I am one of many . . . always."

"During tense times, a little lightheartedness may go a long way to help relax those around us and reduce tensions so that we can focus on getting our jobs done."

"Oxytocin and serotonin grease the social machine. And when they are missing, friction results."

- *Oxytocin* comes with the feeling of deep trust, friendship or love. It's the reason we crave human connections and a sense of belonging. Unlike dopamine (which is more about instant gratification), oxytocin has a longer-lasting impact. It's triggered via physical contact (e.g. hugs, hand-shakes, high-fives) or when we help others. When we trust someone, we're more likely to open up to them, share and cooperate, which in turn triggers more oxytocin to deepen the bonds. Oxytocin brings many health benefits including improved immunity and a longer lifespan.

The 4 chemicals are Nature's way to help us survive, by balancing our personal drive and social needs.

- Endorphins and dopamine drive us to *satisfy our personal needs*, e.g. to find food/shelter, develop solutions and persevere through problems. They help us to get things done so we can survive.

- Serotonin and oxytocin encourage us to *work together with others*. They build feelings of trust, camaraderie and loyalty, strengthen our social bonds and increase our inclination to cooperate with others to achieve what we can't on our own.

- On the other hand, *Cortisol* is the stress-related hormone that's triggered when we sense danger. It keeps us in a heightened state of alertness until the danger has passed. It's not meant to stay in our system for a prolonged period, since it reduces our focus, cognitive abilities and immunity, while increasing our aggression and blood pressure. When we're stressed, Cortisol floods our systems to (i) hinder the release of oxytocin (making us less empathetic and more selfish) and (ii) damage our health.

Traditionally, our family provides a Circle of Safety where we feel safe and supported. Inside the circle, we have a healthy balance of E.D.S.O. and low Cortisol levels.

- In organizations, the Circle provides people with a sense of *belonging and security*. People feel valued and cared for, and trust that others will act in their interests. This facilitates communication, cooperation, problem-solving and innovation, allowing people to direct their attention to external threats and opportunities.

KEY QUOTES

"Whereas oxytocin boosts our immune system, cortisol compromises it."

"Stress and anxiety at work have less to do with the work we do and more to do with weak management and leadership."

- By contrast, when people feel threatened by *internal politics and infighting*, they turn their attention inward to focus on self-preservation, making the group more vulnerable as a whole.

Hiring someone should be like adding a new member to your family. You must set stringent standards for the type of people you'll accept. Once they're a part of the family, you don't simply kick them out when the going gets tough. You must give loyalty to earn loyalty.

- Technology company *Next Jump* made the bold move to declare a lifetime employment policy. This forced them to be extremely selective about who they hired and to commit to each employee's growth and success. Next Jump's average revenue grew from 25% to 60%, and turnover for their engineers fell from 40% to 1%. Their top employees stayed with the company even when they were offered jobs by Google or Facebook.

- When the stock market crashed in 2008, *Barry-Wehmiller* didn't simply lay off people. They confronted the challenge as an organization, with everyone taking 4 weeks of unpaid leave. People survived the crisis together and became fiercely loyal to the company and its leaders.

The Role of Leadership

To function effectively, all social groups need hierarchies and leadership. And in any culture, some people will have more authority and privileges than others. In fact, we value symbols of success, power and strength, seek to move up the social ladder and gain others' respect.

KEY QUOTES

"Being a leader is like being a parent, and the company is like a new family to join."

"Cooperation and mutual aid work better than competition and rugged individualism."

- *Leadership is a responsibility*, not an entitlement. True leaders earn their place by making personal sacrifices for the community. Leaders who protect their people are in turn accorded respect and perks. Leaders who further their own interests without looking after their people violate those expectations.

- Weak leaders create fiefdoms and distrust by focusing on their own interests and those of a privileged few in their inner circle. *Strong leaders* include everyone in the Circle of Safety. The larger the organization, the more crucial it is for leaders to (i) establish clear standards for how people can enter the Circle, and (ii) keep expanding the Circle.

Trust must be reciprocal. It's not about shared opinions, but a belief that the other party is willing to put your well-being first. Leaders must make the most sacrifices and be willing to eat last.

- Great leaders train people, equip them with tools, skills and confidence, then step back and trust their people to do what they should. This includes *knowing when to break the rules* for the safety and good of the community.

- On the other hand, when leaders insist on *rigid rules and controls*, people end up following the rules just to stay out of trouble, instead of finding creative ways to achieve the mission.

Part 2: A Society Out of Balance

Each of the 4 E.D.S.O. chemicals play important roles in our survival. When they're in balance, people thrive the way they're designed to, and their groups/organizations thrive too.

Unfortunately, the modern workplace tends to be flooded with Cortisol and dopamine-addiction. We lack Circles of Safety and have become imbalanced due to several related reasons—abstraction, destructive abundance and social changes.

KEY QUOTES

"To earn the trust of people, the leaders of an organization must first treat them like people. To earn trust, he must extend trust."

"Trust is like lubrication. It reduces friction and creates conditions much more conducive to performance."

"We don't just trust people to obey the rules, we also trust that they know when to break them."

Abstraction and Dehumanization

In small traditional communities, it's easier to know one another, and to see/touch the things we use. However, today we're surrounded by global systems and virtual interactions which make things abstract and harder to grasp. Yale psychologist Stanley Milgram ran a series of experiments to understand the impact of abstraction and authority:

- "Teachers" (recruited from newspaper ads) were told to ask "students" (scientists pretending to be volunteers) a series of questions. Each time they got a wrong answer, the teachers administered an electric shock in progressively higher voltages. Whenever a teacher expressed concern, a "scientist" standing behind would urge them to continue the experiment.

- The students pretended to show signs of discomfort and eventually screamed for the teachers to stop. There were 3 variations: (i) where the teacher personally placed the student's hand in the shock plate and could see/hear the student's reactions, (ii) where the teacher could only hear the student's reactions from a separate room, and (iii) where the teacher couldn't see/hear the student's reactions at all.

- In the first 2 variations, most of the teachers refused to continue after a while. But in the last variation, 65% completed the experiment, even though the voltages they administered would've clearly been dangerous or fatal. In addition, none of those teachers asked about the students' welfare—they were only concerned with absolving themselves of blame (e.g. justifying that they were merely following orders).

This experiment shows how dangerous abstraction can be. When we don't see/hear the people we affect, we're capable of monstrous acts.

- As organizations get bigger and more global, *people get reduced to a metric or a label*. We think of people as "customers", "employees" and "shareholders", not individual human beings. When we can't see/hear the impact of our actions on others, we feel detached from the consequences.

KEY QUOTES

"By its very nature, scale creates distance, and at distance, human concepts start losing their meaning."

"The more abstract people become, the more capable we are of doing them harm."

"When we divorce ourselves from humanity through numerical abstraction, we are...capable of inhuman behavior."

We're more likely to act selfishly (e.g. cut corners or tell half-truths to achieve our goals) or even hurt others directly.

- In weak cultures, this is worsened by people *blindly following orders* and hiding behind excuses like "there's nothing I can do" or "this is company policy". Leaders can also get so lost in metrics and systems that they forget to lead people.

Destructive Abundance

We only value something if it's scarce and we must work hard for it. Today, we have electricity, food, clean water, roofs over our heads, and so many tools (from computers to air travel) that we take things for granted. We live with such excesses that 50% of food globally is wasted, both in the developing and developed world.

Throughout history, when a group moves from scarcity to surplus, those with the most resources will try to shape their environment to protect their own interests, e.g. large corporations lobbying for legislation to keep out competitors. This often ends with "destructive abundance", where the players are so preoccupied with winning that they forget why they're in the game to begin with.

Many leaders have become so blinded by commercial interest that they've forgotten who they're supposed to serve. For example:

- In 1933, the *Banking Act* was passed to mitigate speculation and risk-taking in the industry, after half the banks in US collapsed in the 1929 stock market crash. Unfortunately, those laws were repealed in 1999 after heavy lobbying by the banking industry. The 2008 crash occurred because of reckless risk-taking by financial institutions which could've been prevented if the Act was still in place.

- *TV news* used to be about causes and presenting opposing viewpoints. With the removal of the Fairness Doctrine in 1987, news organizations now prioritize stories that drive viewership and ad revenues, instead of truly important or balanced news.

KEY QUOTES

"The end users....become so far removed from the people who mean to serve them that they simply become just another metric to be managed."

"Abundance destroys value."

"In healthy organizations, as in a healthy society, the drive to win should not precede the desire to take care of the very people we claim to serve."

Social Changes

The Boomer Generation. In the 1950s, it was common for people to work for 1 company for life and be rewarded with a pension upon retirement. This was also the start of the post-WWII Baby Boom.

- The Boomers grew up in a time of growth and prosperity, unlike their parents who had suffered economic depression and war. They rebelled against their parents' values of hard work and loyalty, advocated *free choice and individualism*, and distrusted the government.

- By the 1980s, the Boomers had matured and were holding influential positions. Their *cynicism and self-centeredness* shaped business, politics and economies. People had grown used to a lifestyle of excesses and were preoccupied with safeguarding their accumulated wealth and affluence. They also developed the habit of using *disposables*, from cameras to contact lenses. Before long, people become disposable too.

- In 1981, President Ronald Reagan fired >11k air traffic controllers who'd gone on strike. This sent a strong signal that *mass layoff* was an acceptable solution to economic disruption. Since then, layoffs (which used to be a measure of last resort) became increasingly common across all sectors.

- Progressively, *commercial interests* were prioritized over people's loyalty and cooperation. Past contributions and hard work no longer guaranteed long-term employment, and people no longer felt the same commitment to their companies.

The Dopamine-Addicted Generations. The Boomers in turn brought up the Gen-Xers and Gen-Ys. Both generations grew up in times of abundance, believe they can get whatever they want, and suffer from dopamine-addiction.

- *Gen X* is addicted to performance. Many grew up before the internet revolution, seeking bigger salaries, titles, houses, cars and success symbols.

KEY QUOTES

"If Boomers get their dopamine from goals oriented around "more" and "bigger," then Gen Y is getting their dopamine from anything that satisfies "faster" or 'now.'"

- Gen Y is addicted to social media and technology. They're chronically impatient, being so used to instant gratification (e.g. online purchases and live messages) that they also expect instant success and fulfillment. They're used to excessive consumption and are constantly distracted. Gen Ys also feel isolated and lonely. They seek connections and affirmations through virtual relationships which simply don't provide the same fulfillment from deep, trusting and face-to-face connections.

Part 3: Becoming a Leader

Today, we're surrounded by abstraction, destructive abundance, and dopamine-addiction. We're out of balance, and the trend will only get worse as technology progresses and Gen Ys mature to take on leadership roles.

- Our *younger generation* is so used to relying on social media, online support groups and drugs to cope with problems that they don't even know how to build the real human connections needed for their survival and well-being. They often try to solve problems by creating awareness instead of investing time/effort to understand people and get things done.

- People are also feeling increasingly *isolated* without Circles of Safety. Suicide rates in America have risen so sharply in the last decade that more people are now dying of suicides than car accidents.

The good news is: since we're the source of this problem, we can also fix it. Leaders have the power to create Circles of Safety and positive work environments. All it takes is a *decision* to do so.

5 Rules for Overcoming Abstraction

When we read about 1 person's suffering, we tend feel empathetic. When we read about disasters that involve thousands, we feel distanced. That's the difference between looking at people vs numbers.

KEY QUOTES

"The plight of others is not a technology problem; it's a human one. And only humans can solve human problems."

"We are not victims of our situation. We are the architects of it."

"The death of one man is a tragedy. The death of a million is a statistic."
—Joseph Stalin

Bring people together to build real relationships. The internet is good for quick communication and simple relationships. But, no amount of virtual interactions can replace our need for face-to-face connections and deep human bonds. That's why bloggers still attend conferences, and why we go for sports matches and concerts. People also tend to behave differently online, since the anonymity accorded by the internet distances them from the consequences of their actions. Make virtual relationships real by bringing people together physically.

Keep groups manageable with Dunbar's 150 rule. Professor Robin Dunbar found that human beings can only handle about 150 close relationships at any point in time. Even if you have a huge virtual network, you'll only know a small group of people well, and you're more likely to help those whom you know personally. In large organizations, it's impossible to know everyone. Empower managers at every level to personally care for and take responsibility of the people in their charge. Instead of 1 big Circle of Safety, build smaller Circles (≤150 each) in multiple layers.

Meet the people you serve. A university raised 4x more money after scholarship recipients shared with the fund-raisers how they've been impacted by the scholarships. When people can see how their work helps others, they're motivated to work harder and better.

Give people time, not just money. During a rough patch, you'd appreciate a friend who gives you money, but you're more likely to remember a friend who spends time and effort to help you. That's because money is still an abstract concept. However, everyone only has 24 hours a day, so any time spent with/on you is a clear sacrifice. However, for the time to matter, it must come with commitment. e.g. it doesn't work if you're with someone but are messaging on your phone the whole time.

Relationships take time. It can take anything from 7 days to 7 years to get to know and trust someone. Be patient.

KEY QUOTES

Just as money can't buy love, the Internet can't buy deep, trusting relationships."

"There is no such thing as virtual trust."

"The larger the group of people we work with, the less likely we are to develop any kind of trusting relationships with them."

"It makes sense for social animals that our sense of purpose is always human."

Overcoming Destructive Abundance

To build strong organizations, leaders must remember 5 key lessons.

Culture drives Results. When we identify with a group or culture, we adopt their shared beliefs and values, e.g. you start to think of yourself as a Harvard graduate, a Navy SEAL etc.

- In *strong cultures* with a strong identity, people feel a sense of pride and belonging and will do what's right for the group. The Taj Mahal Palace Hotel hired people for respect and empathy, and reinforced those values through training and rewards. They built such a strong culture of putting guests first that when terrorists attacked Mumbai in 2008, the Taj employees risked their lives to protect the guests.

- In *weak cultures*, people focus on their personal interests instead of group interests. In a culture plagued by mistrust, people withhold info and resources, keep others down and try to reap personal rewards. The organization suffers as a result. In the 1970s, Goldman Sachs was reputed for putting their clients' interests over short-term gains. But the culture had changed by the 1990s after they hired many aggressive bankers driven by wealth and status. By 2010, their reputation hit rock bottom due to their involvement in the mortgage-backed crisis.

Leadership drives Culture. A leader's true power doesn't come from his title, power or knowledge. Great leaders lead by example to share resources, empower others, flag out and resolve problems/mistakes openly, and create a safe space for people to focus on the organization's interests. Tyrants, on the other hand, are obsessed with their own power, wealth, and control. They try to protect themselves, only to create isolation, distrust and paranoia.

- Captain David Marquet transformed the Santa Fe from the worst to the best submarine in the fleet by nurturing leaders at all levels. He decentralized decision-making while equipping people with the skills, knowledge, and accountability for results. For example, instead of asking for permission ("Can I..."), he trained every crew member to share their intended plan of action ("I intend to..."). That

KEY QUOTES

"Just as our character defines our value to our friends, so too does the culture of a company define its value to those who know it."

"Responsibility is not doing as we are told, that's obedience. Responsibility is doing what is right."

"The goal of a leader is to give no orders...Leaders are to provide direction and intent and allow others to figure out what to do and how to get there."
—Captain Marquet

way, each crew member owned their actions yet leaders were still ultimately responsible for results.

Integrity matters. We must be able to trust our leaders to do what's right, and there can be no trust without integrity. Integrity is about firmly adhering to certain moral, artistic or other code/values. This includes honesty, owning up to your mistakes and ensuring your words are consistent with your actions.

- When the Titanic set sail in 1912, the laws hadn't been updated for large vessels. On paper, Titanic carried the minimum number of lifeboats required by law. In reality, they should've had 4x more lifeboats for their capacity. More than 1500 people died when Titanic struck an iceberg on its maiden voyage. Sadly, it's common for corporations to *deliberately exploit loopholes* for their commercial interests. It's like saying you can cheat on your spouse so long as you don't violate any marriage rules.

- In the U.S. Marines, you can only become an officer if you prove you have character. A key consideration is whether someone will take responsibility for their actions/mistakes proactively (not only if they get caught). *Genuine mistakes are acceptable, but dishonesty isn't.*

- Apply the *foxhole test*: Would you jump into a foxhole with the people you work with? Can you trust them with your life?

Friendship facilitates cooperation. When you see someone as an adversary, it's hard to work together. To improve an antagonistic relationship, all it takes is the opportunity for people to get to know one another as real people. Once people can see/listen to each other as human beings, it lays the foundation for cooperation.

- In the 1960s-80s, members of the Congress (both Democrats and Republicans) worked well together. Members interacted regularly after work hours and formed personal relationships that facilitated cooperation despite their political differences. However, the Congress become progressively divided since the 1990s. By 2008, the polarization was so acute that leaders were pointing fingers at one another instead of addressing the economic crisis.

KEY QUOTES

"Leadership is about integrity, honesty and accountability. All components of trust."

"When we cannot trust the very people who are supposed to be responsible for us, bad things occur."

"Cooperation doesn't mean agreement, it means working together to advance the greater good, to serve those who rely on our protection, not to rack up wins to serve the party or ourselves."

- Several progressive Congress leaders tried to bridge the gulf by arranging for members to meet over a series of retreats. The friendship between Democrat Steph Sandlin and Republican Bob Goodlatte also facilitated cooperation between 2 groups.

Lead People, not Numbers. In theory, when companies focus on maximizing profits and shareholder value, they'll create more jobs and economic growth. In reality, long-term success comes from serving a wider goal and building the right foundations, not directly focusing on numbers.

- In the 80s and 90s, famous leaders like Jack Welch (General Electric) and Roberto Goizueta (Coca-Cola) started to build companies that maximized shareholder value. This was the start of an era of billionaire CEOs, where *a small group of shareholders and executives often benefitted* at the expense of others.

- At the extreme, executives cut corners/expenses or even manipulated the accounts to *drive short-term numbers*. People became expendable resources, survival instincts kicked in, cultures deteriorated and results tanked in the long run.

- Truly great leaders don't just drive results during their tenure—they build *lasting organizations* that continue to thrive after they step down. Welch grew GE's sales from $26.8bil to $130bil, firing the bottom 10% of GE managers each year and rewarding the top 20%. On the other hand, James Sinegal grew Costco by building a family-like culture where people were rewarded for great solutions instead of outdoing one another. After the 2 leaders stepped down, GE's share price plummeted, while Costco's continued to grow steadily.

- A strong leader who directs and controls a team may deliver short-term results. But in the end, lasting results are delivered by leaders who invest in *empowering and equipping people* at all levels of the organization.

KEY QUOTES

"Numbers of people aren't people, they're numbers."

"Leadership is about taking responsibility for lives and not numbers. Managers look after our numbers and our results and leaders look after us."

"The impact of leadership is best judged over time."

"Legacy is not the memory of better times when the old leader was there. That's not legacy, that's nostalgia."

"Customers will never love a company until the employees love it first."

We need Leaders who Eat Last

Human-to-human connections are extremely powerful: they give us the strength to endure hardships, and motivate us to work with others to achieve even more.

- If you stop to reflect on your best moment at work, it's likely to involve a challenge that you overcame with a team. You'll remember the warm, satisfying feelings of *camaraderie and connectedness*.

- More than ever, we need leaders to create *Circles of Safety* and lead by example to create positive work environments. Alcoholics Anonymous (AA) meetings are so successful because they act as a Circle of Safety for alcoholics. However, such meetings must be done face-to-face, and the alcoholics must complete 1 final step to succeed—they must commit to help another alcoholic to overcome the addiction. That's the power of human connections.

In an age of abundance, leaders must provide a compelling cause for people to rally behind.

- Small companies are often more innovative than big corporations because they have less resources. Leaders must reframe the external challenges and opportunities to ensure they're *proportionate to the size of the organization*.

- Inspire people with a *concrete vision* of something that doesn't yet exist (e.g. Microsoft's vision of having a PC on every desk), and ensure the challenge is bigger than your available resources.

Other Details in the Book to Look out For

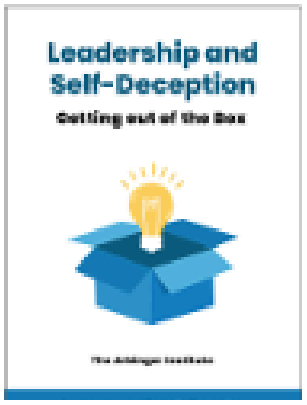
This is not a "how-to" book about leadership techniques, but one that offers a fundamentally different perspective and approach to leadership. Sinek offers many detailed examples and stories of leaders in all walks from the military to politics and businesses. For more details, please visit https://simonsinek.com/.

KEY QUOTES

"Whenever there is a...real, true, honest human...we seem to find the strength to endure—and the strength to help."

"Though it may take small steps to make a big leap, it is the vision of the big leap and not the action of the small steps that inspires us."

"Let us all be the leaders we wish we had."



LEADERSHIP AND SELF-DECEPTION

Getting Out of the Box

THE ARBINGER INSTITUTE

The Big "So What"

Self-deception can blind us to real causes behind problems – not only does it erode our effectiveness in work and life, it can spread like a virus to infect everyone around us. This book explains the profound concept of self-deception, how we get stuck in it, and how to free ourselves to see new possibilities and solutions.

Introduction

This book is written as a parable, set in the Zagrum Company. The key characters are:

- Lou Herbert: The former President and CEO of Zagrum;
- Kate Stenarude: The current President and CEO of Zagrum;
- Bud Jefferson: Executive Vice President (EVP) of Zagrum; and
- Tom Callum, one of Zagrum's new senior managers/ division heads.

The parable starts with Tom being invited for a day-long, one-on-one "self-deception meeting" with his new boss, Bud. Such meetings are a tradition at Zagrum – they're such a crucial part of Zagrum's success that the top management invests personal time to inculcate the ideas in *every* senior management staff who joins Zagrum. Even Kate, the President and CEO, also attends the sessions personally whenever she can.

The fable takes us through Tom's discovery process and "aha" moments, as he realizes that he has been "in the box", and sees how it has affected his relationships and results at work and at home. In this summary, we'll present the key ideas in 3 parts – what is "the box", how we get in, and how to get out.

KEY QUOTES

"Self-deception is so pervasive that it touches every aspect of life... Self-deception actually determines ones experience in every aspect of life."

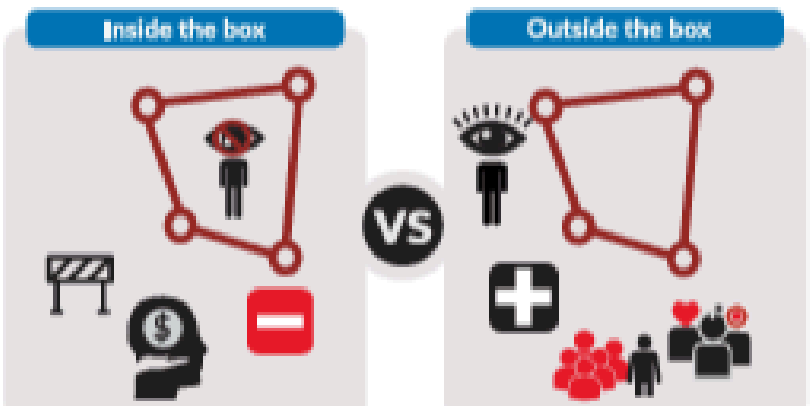
"We hope that this (book) will give people new leverage in their professional and personal lives – leverage to see themselves and others differently, and therefore leverage to solve what has resisted solution and to improve what can yet be improved."

"Of all the problems in organizations, self-deception is the most common, and the most damaging."

What is "The Box"?

Self-deception is a problem encountered by every human being. It's like being stuck in a box - despite our best intentions, we have a biased view of problems, and are blind to their underlying causes and our roles in them. Since we cannot see (or resist the possibility) that we are the problem, everything we do while we're in the box tends to be counter-productive. It hinders our ability to make effective decisions, and erodes our leadership abilities and happiness levels. Once the box is removed, or when we get outside the box, new possibilities and solutions emerge.

Being in versus out of the box



People vs objects. When we are in the box, we view and treat others as objects e.g. a vehicle to help us accomplish our goals, or a problem, threat, or obstacle to what we want. We are the priority, and our needs/ wants are much more important than theirs. When we are out of the box, we view and treat others as people, with equally important wants, hopes and dreams.

Imagine you're rushing for an important meeting. As the lift-doors close, you see someone running frantically toward it. In that split second, you decide to let the doors close, so you won't be delayed further. You're acting from inside the box – the other person is like an object, an obstacle to your meeting, and his needs are less legitimate than yours at that point.

It's more than your behaviour. Being outside the box is much deeper than just changing your outward behaviour.

- People are intuitive and can sense your *true intentions*. The same action, when done from inside vs outside the box, can create markedly different outcomes. For instance, you forget to pick up the groceries which you'd promised to do.

KEY QUOTES

"Self-deception... blinds us to the true causes of problems, and once we're blind, all the 'solutions' we can think of will actually make matters worse."

"Given a little time, we can always tell when we're being coped with, manipulated, or outsmarted. We can always detect the hypocrisy."

Your wife is very upset, so you apologize to pacify her. However, you're silently thinking how unreasonable she's being, given your long day at work and all you've done for her (i.e. you're acting from inside the box). In this case, your apology is unlikely to be well-received.

- The *defining factor* is whether you are doing what the *other person* needs, or what *you* need, whether you're really interested in the other person, or merely that person's opinion of you. When you are focusing on the other person's needs, even if you're harsh on the person, it'll still be better received than if you take a soft approach just to manipulate him to do what *you* want.

As a **rule of thumb**, if you're not even interested in someone's name, it's a clear sign that you're not interested in him/ her as a person. However, simply knowing a person's name doesn't mean you see him/ her as a person.

Finding the Problem beneath the Problem

Bud shares a true event from the 1800s. Ignaz Semmelweis was an obstetrician in Vienna, who was perplexed by the alarmingly high mortality rate of women in his maternity wards - 1 out of 10 women were dying from "childbed fever". While the doctors could identify the symptoms, they couldn't find a remedy that worked, and patients continued to die rapidly at the hospital.

Finally, by chance, they discovered that the cause of the deaths were the doctors themselves. It turned out that most of the doctors, especially Semmelweis, had been working on corpses, and were unknowingly passing germs to the patients via contact. This was before the discovery of the germ-theory, and the doctors' efforts to treat the fever were ironically backfiring as they were the very cause of the disease! Once they instituted the practice of washing their hands in chorine-and-lime solution, the mortality rate fell to 1 in 100.

Self-deception, like childbed fever, is merely a symptom. If left untreated, it can cause severe damage. Yet, treating it requires that we find the germ that causes it in the first place. We'll now take a closer look at the box, how we get in, and how to get out.

KEY QUOTES

"No matter what skill you teach me, I can be either in the box or out of the box when I implement it."

"People primarily respond not to what we do but to how we're being – whether we're in or out of the box toward them."

How We Get In the Box

Self Betrayal

As human beings, we intuitively know what we should do for others. When we're out of the box, we see what we can do, and we often want to do things for others (e.g. holding the door for someone, apologizing for a mistake, sharing a useful piece of information).

Yet, we often don't do what we know we should, i.e. we betray ourselves. Once we betray ourselves, we start to create justifications for our lack of action, which skews how we see the world.

Imagine you failed to complete a project on time. You know you should take responsibility, but instead, came up with a white lie about being very ill that week. You've just betrayed yourself. Soon, you start to notice how Susan had a mistake in her submission, and Tom missed out an important reference. You feel better, thinking how sloppily they've rushed through their work, unlike all of the previous times when you completed your projects perfectly. Before long, you find yourself thinking, "No wonder I couldn't complete my work – all these slackers are just putting up half-baked stuff and I'm the only one taking it seriously!"

This simple example shows how the justifications for our own self-betrayal can lead to self-deception. It happens in all aspects of work and personal life, and is typically characterized by 4 things:

- We exaggerate *others' fault;*
- We exaggerate *our own virtue;*
- We magnify the value of things that *justify our self-betrayal*; and
- We *blame others* for making us feel/ act the way we do.

KEY QUOTES

"An act contrary to what I feel I should do for another is called an act of 'self-betrayal'."

"Self-betrayal is the germ that creates the disease of self-deception."

"The box is a metaphor for how I'm resisting others... I'm actively resisting what the humanity of others calls me to do for them."

Typically, there is a marked difference in how we view others before versus after our self-betrayal. In the example above, you didn't think so poorly of your colleagues and their work until after your own betrayal.

Living in the Box

With time, some boxes may become so innate to us that we carry them with us. We no longer need the sense of betrayal to get in the box, because we're *already* in the box. We constantly see ourselves, others, and circumstances through these self-justifying lenses, and even bring our biases into new situations.

- For example, if you have a self-justifying image that you're a great husband, and your wife complains that you don't give her enough attention, you're likely to feel that she's being ungrateful, without really considering her point. Or, if you have a self-justifying image that you're the expert in your field, you may dismiss others' inputs, and they stop sharing suggestions with you over time.

- Thus, if you find yourself in the box, with no sense of self-betrayal, consider if you're carrying self-justifying views about others. When you can finally see how biased your views have been, you're likely to feel a shift and no longer feel the need to "win".

Collusion

When we're in the box, we want to feel **justified**. We focus on finding ways to reinforce how wrong or bad the other person is, and end up losing sight of our real goals. For example, you're upset with a staff and deliberately set him a tough goal to prove that he's incompetent. When he unexpectedly delivers, you're frustrated to be proven wrong, even though this is should've been a positive work outcome. Instead of appreciating his work, you end up being unreasonably critical.

When we're in the box, we tend to **blame others**. It puts them on the defensive, and incites them to get in their boxes. They start blaming us, we blame them for blaming us, and the vicious cycle continues; we're basically **colluding** to stay in our respective boxes.

KEY QUOTES

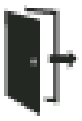
"By being in the box, I provoke others to be in the box."

Being "in the box" limits our ability to deliver results and reach our full potential. Our views are biased, and we're so busy trying to prove things to ourselves that our results are compromised. No amount of skills and techniques will help when our focus is fundamentally wrong.

In short, when we are in the box, all of these don't work:

Attempting to change others. Even if others should change or improve, it does not give us an excuse to be in the box. These are 2 independent factors. Attempting to change someone when we are in the box will only backfire and prompt them to get in their boxes.

Tolerating or bearing with others. Trying to tolerate or cope with others implies that we still carry our self-justified views and are still blaming others.



Leaving. Walking away may be the right move in some situations, but it doesn't solve the underlying problem, as we're simply bringing our boxes with us.

Communicating. No matter how skilled you are, so long as you are in the box, you're blaming others and seeking self-justification. The other party will sense it, and respond accordingly.

Using skills or techniques. Skills or technique are valuable, but ineffective when they're applied from inside the box.

Modifying your behaviour. As discussed earlier, changing your outward behaviour doesn't work, as you're still inwardly focusing on yourself, and the gesture will feel insincere.

So long as we're in the box, all our actions are counter-productive. Still, it's inevitable that we'll slip into the box occasionally. The key is to become aware of it, and to embrace it as an improvement tool for yourself and the whole organization.

Self-Deception and Organizational Results

Most of us start a job with excitement, gratitude, anticipation and the intention to do our best for the organization and our colleagues. However, over time, self-betrayal and deception sets in, and our feelings change.

KEY QUOTES

"People problems seem intractable not because they are insoluble but because the common skill interventions are not themselves solutions."

"From within the box I end up undermining the effectiveness of everything I do."

Self-deception can be one of the biggest hindrances to organizational results, with symptoms like a lack of commitment, trust and accountability, conflict, stress, poor teamwork, and communication issues.

As seen earlier, when someone is in the box, it triggers others to also get in the box, and this **spreads like a disease** throughout the organization.

People in the box are focused on **self-justifications**, which often clash with what's best for the organization. Instead of focusing on improvements and personal accountability, time and energy is wasted on justifications and blaming others.

Being Outside the Box

When we're in the box, we resist others and what they need from us. When we're out of the box, we see people for who they are, including their hopes, fears, dreams, and gifts; we recognize their needs.

On the surface, it'd seem as if living outside the box brings additional burden. However, in reality, the reverse holds true:

- Acting from outside the box doesn't mean we have to give in to everyone's whims and fancies. We can still **prioritize** what's important to us, yet treat others with genuine courtesy, respect and consideration, bringing more positive responses and results.

- When we're out of the box, we see people as they are, without prejudices and judgements. We're **liberated** from trying to justify and prove things to ourselves.

Getting Out of the Box

At any point in time, we are in-the-box toward some people and out-of-the-box toward others. Our out-of-the-box relationships provide a space or opening for us to see our in-the-box relationships in new light. When we start to question our magnified virtues and self-justifying views, our biases toward others will also start to dissolve. As we see others as people again, we'll start to feel like doing our part, or righting past wrongs - we're out of the box.

KEY QUOTES

"In the box we provoke others to get in the box – both with and against us."

"We live insecurely when we're in the box, desperate to show that we're justified."

"The more we can find our way to the 'out-of-the-box' vantage points within us, the more readily we will be able to shine light on the in-the-box justifications we are carrying."

Once we're out of the box, the biggest challenge is to **stay out of the box.** The only way to achieve that is to apply what we've learnt so far, using these tips:

- Focus on improvements, not perfection. If you find yourself in the box, apologize and move on.
- Use the principles yourself, rather than preach to those who're new to the concept.
- Focus on staying out of your box, not focus on others' boxes.
- Focus on what you can do for others, not what they're doing wrong, or what they're not doing for you.

Leadership inside vs outside the Box

In the parable, Tom learns how Zagrum was transformed using the principles he'd just learnt. Lou Herbert, the former President and CEO, had such a strong self-justifying image of his own brilliance and expertise that he unknowingly stifled creativity and trust in the organization. Since he was in his box, he failed to see that people were feeling apathetic or rebellious because of him; instead, he blamed others for their behaviours and became even more controlling and instructive. The same pattern occurred at home with his wife and son. Over time, good people started to leave Zagrum, and his family was falling apart.

Fortunately, Lou learned about self-deception and the box just in time. By stepping out of his box, he was able to convince Kate to return to work for him and transform Zagrum together. He also successfully mended his relationships with his wife and son.

As a leader, when you lead from inside the box, people may still follow you out of obligation. However, when you lead from outside the box, people choose to follow you. When you operate out-of-the-box, you can recognize others' boxes without blaming them for being in it, and you're free from self-betrayal. This encourages similar behaviours in others, develops new leaders and creates a virtuous cycle of trust.

Imagine that you're being considered for a promotion, after many years of hard work, and you discover that one of your new staff has made a crucial mistake that can derail an entire project.

KEY QUOTES

"Merely knowing the material doesn't get you out of the box. Living it does."

"It isn't about perfection... It's simply about getting better."

"The solution to the self-betrayal problem is the solution to all... people problems."

"Your success as a leader... depends on being free of self-betrayal.... Only then do you invite others to be free of self-betrayal."

"We won't know who we work and live with... until we leave the box and join them."

- If you act from *inside* the box, you'd put the blame on the staff to protect yourself. Even if it *seems* justified, the staff will learn to "watch his own back" in future, and you'd both be working for yourselves, from inside your respective boxes.

- If you act from *outside* the box, you'd probably recognize that you could've guided your staff more closely, and hence take full responsibility as his supervisor. Even if you were to speak firmly with your staff after that, he'll respect you and want to do better in future.

Applying the Concepts

The principles in this book can be applied to all aspects of your work and personal life. Based on real-life feedback from readers, Arbinger has identified 5 useful areas of application:

Hiring: You can use the book as required reading materal for potential hires, then evaluate the candidates through post-reading discussions.

Leadership & team-building: Share the book and its ideas with your leaders and team-members, to create awareness of in-the-box and out-of-the-box behaviours, and improve teamwork, interaction and results.

Conflict resolution. The ideas in this book are useful for mediation, handling conflict or volatile situations, especially when combined with the Peacemaking Pyramid from the book "The Anatomy of Peace". Conflict resolution becomes possible just by opening up people's minds to their own roles in the situation. Acting outside the box and treating the other party as people (rather than enemies or vermin), can also significantly improve outcomes.

Staff transformation. Before firing or removing a staff, try using this book as a rehabilitation tool to help them shift their perspectives.

Personal development. This book can also be used in educational institutions and business courses to build strong foundations for students and business leaders.

KEY QUOTES

"Companies fail for the same reason families do... both are organizations of people."

"The reason this book has been so instrumental in helping people to resolve conflict is that it opens readers to how they have helped to create the very problems they have attributed to others."

Other Details in the Book to Look out For

The book was originally published in 2000, and this second edition (published in 2010) expanded on the original book with updated material and ideas for application. This is an easy-to-read parable, with numerous work and personal examples that are highly-relatable and packed with nuances to reflect the common challenges and scenarios in our work and life.

We've modified the some of the examples in this summary to present the gist of the ideas. Reading the book in itself can provide an out-of-the-box environment for us to examine our relationships and effectiveness. For more references and details, do get a copy of the book, or visit www.arbinger.com.

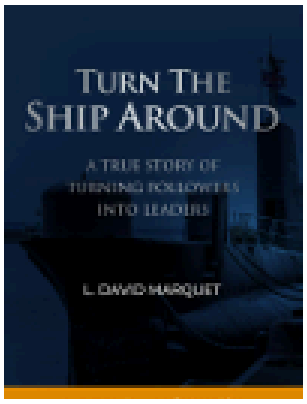
About The Arbinger Institute

Arbinger provides training, consulting, coaching, and implementation tools that move individuals, teams, and organizations from the inward mindset to the results focus of an outward mindset.

ARBINGER

This is built on the knowledge that, without a change in mindset, newly adopted behaviors won't stick and results will suffer. Arbinger is the world leader in transforming mindset, and their programs and methodology are based on 45 years of research in the psychology of human behavior and motivation, and more than 35 years of experience working with organizations worldwide.

KEY QUOTES



TURN THE SHIP AROUND!

A True Story of Turning Followers into Leaders

L. DAVID MARQUET

The Big "So What"

This book tells the story of how Captain Marquet successfully transformed the USS Santa Fe in less than a year, from the worst-performing submarine in its fleet to the best. It presents a different approach to leadership, using a "leader-leader" instead of a "leader-follower" model. This approach can be applied to any organization to unlock the energy and potential of people at all levels.

The Leader-Leader Approach

The book is written in a chronological order, from how Marquet formed his leadership theories to how he implemented a fresh leadership model to turn around the USS Santa Fe. In this summary, we'll give an overview of Marquet's leadership journey, before explaining the leadership model in detail.

A fundamental shift in thinking

Most people unconsciously divide the world into leaders vs followers and make assumptions about what each group can/can't do. Such assumptions influence our thoughts and actions to impact the performance of individual employees and the organization.

Today, many organizations still operate under the leader-follower model, which assumes that leaders have the authority and ability to tell their followers what to do and to command obedience.

- This model *can* be effective in manual, repetitive work e.g. farming or industrial jobs. However, in the modern workplace dominated by unstructured, cognitive work, such an approach *limits organizational potential* because (i) the entire organization's performance hinges on 1 leader's competence,

KEY QUOTES

"Our world's bright future will be built by people who have discovered that leadership is the enabling art."
- Stephen Covey

"One of the things that limits our learning is our belief that we already know something."

(ii) it doesn't tap on individual resourcefulness, and (iii) every leadership change can bring instability.

- It's not uncommon for enthusiastic employees to suggest new ideas, only to be told "that won't work" or "it's not your job". *People feel frustrated* and eventually stop trying or they leave the organization. Bosses also feel frustrated when their staff would rather do the bare minimum rather than to innovate or take responsibility.

On the other hand, the leader-leader model recognizes that *everyone* has the ability and potential to lead. It taps on individual potential at all levels, reduces dependency on a single leader and delivers sustained performance. This model can be applied to any organization and leadership level—it allows senior leaders to unlock the energy and potential of their people, and helps junior/middle leaders to step up in a way that encourages their bosses to let go.

From underdog to high-performance team

A hierarchical leader-follower model is prevalent in military organizations. It's especially convenient in a submarine where people operate under tight deadlines and have easy access to the leader in a physically-enclosed space.

- In the US Navy, a captain's performance was assessed strictly based on the period he was in charge of the ship. Thus, leaders tended to focus only on *short-term results* during their tenure. In fact, if performance dipped after a leader left, people would attribute it to his great leadership rather than his inability to train his people.

- A top-down approach also allowed people to avoid thinking (which is hard work) and *shirk responsibility* for their decisions. When things went wrong, people could simply say that they were following instructions.

- Hence, even if a strong leader could drive short-term results using a top-down approach, it'd cultivate *unhealthy thinking patterns* to damage the organization in the long-run.

KEY QUOTES

"Leadership is not some mystical quality that some possess and others do not."

"Competence could not rest solely with the leader. It had to run throughout the entire organization."

"Empowerment programs appeared to be a reaction to the fact that we had actively disempowered people."

For years, Marquet struggled with the conventional leadership model. He wanted to manage people in a way that he himself would've liked to be managed. He also believed that humans are intrinsically motivated to succeed and shouldn't have to be "empowered" to take action.

- In 1989, as an engineering officer supervising a team of 60 men, he tried to empower his team. He gave people flexibility and authority to make decisions, asked questions instead of issuing instructions, and encouraged people to talk directly to one another instead of going through him. Unfortunately, *his attempt at empowerment failed*—engineering errors increased, the team fell behind schedule and people were frustrated that Marquet wouldn't tell them what to do.

- On hindsight, Marquet realized that he failed because he was trying to empower people within a leader-follower structure and lacked the *3 essential ingredients* for real empowerment.

10 years later, Marquet successful transformed the Santa Fe crew under a different set of circumstances. This time, there were several important pre-requisites in place:

- *Strong call to action*. Unlike previous teams who were content with the status quo, the Santa Fe crew *wanted* change. At that point, Santa Fe was one of the lousiest crew with the worst retention in the submarine force. Every crew member knew there were problems; they just didn't know how to address them.

- *Clear goals and support from top leaders*. Marquet was recommended for the role by his mentor and immediate boss, Commodore Mark Kenny, with the explicit goal of getting the ship and crew ready for deployment in 6 months (by demonstrating combat effectiveness in a torpedo exercise). His bosses had expressed full confidence in Marquet, promising him the support to do whatever necessary to achieve the goal, without dictating how he went about doing it.

- Marquet was *unfamiliar with the technical details* on Santa Fe. With only 172 days to turn things around, he couldn't learn fast enough to issue top-down technical instructions, so he had no choice but to rely on the crew for technical inputs.

KEY QUOTES

"Control...only works with a competent workforce that understands the organization's purpose. Hence, as control is divested, both technical competence and organizational clarity need to be strengthened."

Marquet started by learning first-hand about the ship and crew. Rather than rely on reports and records, he spent time walking around the ship and talking to the crew to learn what worked and didn't work on Santa Fe.

- He observed many *symptoms that revealed bigger issues*. For example, people carried barely-working flashlights, were regularly late for meetings and didn't act without explicit endorsement from the top. Even admin approvals were often stuck in the system. At the awards ceremony, no family members were invited, no one could hear what was going on, and there wasn't even a photographer to capture the moments.

- People were frustrated as they were being micro-managed and had no room to make decisions. Yet, if instructions weren't followed to the letter, they could get blamed if things went wrong. Thus, most *people simply did as they were told* to avoid getting into trouble.

- In short, the Santa Fe crew was stuck in a *downward spiral* of bad practices → mistakes → low morale → doing the bare minimum to avoid trouble → more bad practices. To break this vicious cycle, Marquet had to fundamentally change mindsets.

Specifically, Marquet had to shift the focus away from avoiding mistakes to achieving excellence. So long as people focused on avoiding errors, they'd do just enough to stay out of trouble and never achieve true excellence. On the other hand, if they focused on exceptional performance, they'd naturally have to address mistakes. This mindset shift had to start with the chiefs—including the XO (or the second-in-command) and the 4 department heads.

- Drawing from his past experience and ideas from books like "Built to Last", "Start with Why" and "The 8th Habit", Marquet tried a *new leader-leader approach*. He successfully deployed Santa Fe ahead of schedule, and nurtured one of the best crew whose results lasted even after Marquet stepped down as the captain.

- The process of transformation involved a change in thinking, relinquishing control while retaining responsibility, and equipping people with the competence and clarity to successfully apply their new autonomy. In the next section, we'll zoom in on the *3 essential components* of the leader-leader model, and the specific mechanisms you can use to implement them.

KEY QUOTES

"If you walk about your organization talking to people, I'd suggest that you be as curious as possible... The time to be questioning or even critical is after trust has been established."

"Everything we did reinforced the notion that the guys at the top were the leaders and the rest of the crew were the followers."

"Reducing mistakes would be an important side benefit to attaining our primary goal, achieving excellence."

Implementing the Leader-Leader Model

To implement the leader-leader approach, you need 3 key components:Control,Competence and Clarity. Decentralized control is at the core of this model, but it can only work if it's supported by competence and clarity. Without those 2 pillars, decentralizing control will only bring chaos. When all 3 components are properly installed, they'll reinforce one another in a positive spiral.

Control

Control refers to the freedom and authority to make decisions about why, what and how you're going to work. The goal is to delegate decision-making control as far as possible in the organization.

To decentralize control, Marquet needed to get the chiefs' buy-in and commitment to change. He had to help him to see leadership as a responsibility, not a privilege, and to lead by example by first relinquishing some of *his* control to the XO and department heads. He used the following mechanisms to start disseminating control.

Rewrite your control policies. You can't delegate decision-making control by making grand speeches. You must make concrete changes to existing practices and procedures.

- Together with your key leaders, *review the policy documents* that specify where decision-making authority is currently vested in your organization. Identify the decisions (e.g. leave approvals or purchase decisions) that can be made at a lower level in the organization. You can also break down large decisions into smaller parts that can be decentralized.

- Get leaders to write down their *concerns about delegating* those tasks (e.g. worries that the staff may abuse their authority or lack the clarity/competence to make good decisions). Rank the concerns and discuss specific ways to address them.

KEY QUOTES

"The core of the leader-leader model is giving employees control over what they work on and how they work...The two enabling pillars are competence and clarity."

- Using this approach, Marquet gradually expanded the chiefs' power while getting them to *distribute power* to other crew members. For example, simply by changing the final approving authority for the leave chits, they were able to eliminate 6 steps from the 14-step process.

Use behaviors to change mindsets. You can't force people to change how they think. It's more effective to change how you behave, and let those behaviors influence how people think.

- To improve team morale, Marquet asked the crew to identify the behaviors that'd show someone was proud of the ship. Based on the feedback, they introduced the "*three-name rule*", i.e. every crew member would use 3 names to greet a visitor e.g. "Good morning Commodore Kenny. I am Petty Officer Smith, welcome aboard Santa Fe." This simple behavioral change instilled a sense of pride, initiative and control, to bring a positive mood shift within just a few days.

- To change a part of your culture, start by *brainstorming the desired behaviors* that would reflect the underlying cultural shift. For example, a good sign of an innovative culture could be employees submitting at least 1 new idea a month and openly discussing those ideas. Discuss how to *embed such behaviors* into your organization's practices.

Use short, early check-ins. It's common for people to spend a lot of time/energy perfecting their work before showing it to their boss, only to realize that they were on a totally wrong track.

- For example, Marquet found that the crew members were wasting too much time trying to perfect the nautical charts before reviewing them with the senior officers, for fear of criticism. Nautical charts are crucial for operational planning, but there's no point in perfecting the charts since the final course chosen will depend on the enemy's path. It'd be more effective to have quick, regular conversations to discuss the plans/charts, so the crew could *get early feedback* and start solving important problems instead of wasting time/energy on the wrong things.

- By investing some time to check-in regularly with their team members, leaders can help everyone to become more effective and *reduce time/resource wastage* on a much larger scale.

KEY QUOTES

"The reviews were focused on avoiding errors, as opposed to accomplishing something."

"Even a thirty-second check early on could save your people numerous hours of work."

Share intentions, don't seek permission. When people are used to following orders blindly, 1 leader's mistake can bring down the whole organization. Avoid issuing direct orders. Instead, get your team members to update you on their decisions and plans.

- Use *empowering phrases* like "I intend to...", "I plan to...", or "I will...". Don't use phrases like "Can I...", "Requesting permission to..." or "What should I do...".

- Initially, people may not know what to update or report. *Ask clarifying questions* to find out why they plan to take a certain step, and/or check if they have considered the implications of a certain decision. Over time, people will learn to crystallize their thoughts, think at a higher level, and present their plan so succinctly (with a few sentences) that the leaders can simply respond with an affirmative "go ahead".

Don't jump in with solutions. With the exception of real emergencies—where leaders may have to take clear, decisive actions—there's almost always enough time to let team members work through options and solutions.

- Let people have the opportunity to hone their *problem-solving and decision-making skills*. Resist the urge to step in with the "right" answer as it'll encourage people to keep relying on you for solutions. Help people to embrace differences and understand the value of having differing viewpoints.

- Use these *rules-of-thumb* to get people to think for themselves:

  (i) If you have to make an urgent decision, make sure you explain your rationale and assumptions and get your team to critique the decision after the event.

  (ii) If a decision must be made soon, at least seek inputs quickly before making the decision.

  (iii) Wherever possible, delay the decision so the team can debate the options and arrive at better solutions.

Use bottom-up accountability, not top-down tracking. It's common for team leaders to track and remind their staff of the outstanding items "owed" by them. It's much better for team

KEY QUOTES

"What happens in a top-down culture when the leader is wrong? Everyone goes over the cliff."

"Cherish the dissension. If everyone thinks like you, you don't need them."

"Don't preach and hope for ownership; implement mechanisms that actually give ownership."

members to be accountable for updating their supervisors on their progress and next steps. This frees up the leaders' time and creates a sense of personal responsibility by the subordinates.

Think aloud. Leaders are often afraid to show uncertainty or say the "wrong" things; they end up trying to appear smart rather than maximize their learning and effectiveness. In order for people at all levels to make good decisions in a complex world, it's crucial that they understand why they're doing that they do.

- When leaders "*think out loud*"—by voicing their questions, concerns and assumptions, or sharing why something should be done—it (i) imparts crucial thinking skills and (ii) sends the message that it's ok to show uncertainty.

- Use words like "I think..." or "Let's assume..." to encourage people to *communicate openly* and share ideas and feedback.

Seek external critique. Don't mask problems and paint an overly-rosy picture to the outside world. Instead, invite external criticism so you can learn. The Santa Fe crew learned to "embrace the inspectors" instead of dreading such inspections. Whenever inspectors were onboard, the crew would use the chance get feedback and ask about best-practices on other ships, so they can learn and improve.

Competence

For decentralized control to work, people at every level must be technically competent to make the right decisions. If you give people additional responsibility without equipping them with the required knowledge and resources, things will fall apart.

Take deliberate action. In certain industries or processes, a single mistake could make the difference between life and death. You can't avoid mistakes altogether, but you can take steps to prevent and minimize them.

- When we do something routine or familiar, it's easy to lapse into "auto-mode" which increases the risk of *careless mistakes*. For example, during dangerous navy procedures, red tags are hung on critical parts (e.g. valves or switches) to warn sailors

KEY QUOTES

"Control without competence is chaos."

not to operate those parts. Yet, an accident occurred when a Santa Fe crew member unthinkingly operated a switch despite the red tag.

- In such cases, adding more training or supervision won't solve the problem; the key is to get people to take *deliberate action*, i.e. habitually pause before acting, so a potential mistake can be stopped before the action is completed. For example, an operator can intentionally pause, vocalize his next step and/or position himself in a way that clearly indicates his intent. By making his actions obvious to himself and his team members, there's a higher chance that someone will detect an impending error.

Adopt continuous learning. Learning doesn't have to come in the form of training and lectures. With the right attitude, you can find learning opportunities everywhere.

- Together with the chiefs, Marquet developed a "We Learn" Creed to describe why and how the Santa Fe crew *make learning an integral part of their work*. Next, they defined and designed training programs to equip people with specific technical competencies for decision-making.

- Get together with your leaders to identify your *top learning priorities*. Specifically, discuss (i) the most important types of decisions to be made at certain levels of management, and (ii) the technical knowledge people need to make such decisions. Integrate these topics into your training program to improve your team's decision-making abilities.

Certify, don't brief. It's common for teams to be briefed just before an event (e.g. a product launch or sales campaign). Briefings are often ineffective as they're one-way communications. People on the receiving end may just nod and agree without really thinking about what's being said.

- Operational briefs on Santa Fe were replaced by "*certifications*"—the person-in-charge asked questions and jointly assessed with the rest of the team if they were ready for an operation (and if not, what had to be done).

- This converts every team member into an *active participant*. People are now thinking at a higher level, considering what

KEY QUOTES

"Training is a subset of learning, which in turn is a subset of personal growth."

they must do and taking responsibility for their roles instead of waiting passively for information and instructions.

Repeat key messages regularly and consistently. When a change is first announced, people may not take it seriously, or they may feel skeptical about the change. You must repeat the same message over and over before it will sink in.

Define goals, not methods. Get people to focus on delivering results, not on following predetermined procedures.

- For example, the fire drills on Santa Fe were ineffective as people were strictly *following standard operating procedures (SOPs)*. No one bothered to think of better ways to put out the fire, and people were stuck when they faced scenarios outside the SOPs.

- Results improved drastically when the chiefs stopped dictating who must do what, but gave the crew a *simple clear goal*—to put out the fire asap—and left it to crew members to find the best way to achieve it. This was supported by (i) a clear incentive to reach the goal (i.e. the drill would end once the fire was extinguished), (ii) concrete approaches and techniques that'd help the crew members to achieve the goal (e.g. crew members at the scene should describe the situation in specific detail to offsite experts, and attack the fire with portable extinguishers).

Clarity

For people at all levels to make effective decisions, they must be fully aligned with the organization's purpose, and thoroughly understand the organization's goals and decision-making criteria.

Care for your people. Marquet believes that leaders are responsible for their people's success and well-being, and should help their team members to achieve their work and personal goals.

- The chiefs started to talk to individuals about their *personal and life goals*, the types of courses and personal growth they wished to pursue etc. They also designed programs to bridge specific technical gaps, so crew members could do well in the advancement exams and improve their chances for promotion.

KEY QUOTES

"What I realized…is the need for a relentless, consistent repetition of the message."

"The procedure had become the master and not the servant."

"Provide your people with the objective and let them figure out the method."

"As the level of control is divested, it becomes more and more important that the team be aligned with the goal of the organization."

"Taking care of your people (means) giving them every available tool and advantage to achieve their aims in life, beyond the specifics of the job."

- This built *trust/connection* and gave people more to look forward to. When the crew felt that the chiefs were committed to their success, they also became more receptive to feedback.

Inspire with your legacy. Explore how you can capture your organization's legacy and keep it alive, e.g. tell stories about the drive and purpose of your early days, how you overcame a crisis, and embed the keywords in your guiding principles, reports and awards. To pass on the submariners' legacy and remind people why they were in service, Santa Fe adopted practices like making an announcement each time they passed a sunken submarine site, and sharing stories about their predecessors' accomplishments.

Develop guiding principles for decision-making.

- Develop a set of guiding principles that'd provide *clear criteria* for any team member to make the right choices. Leaders should also test their behaviors regularly against these principles to ensure they're leading by example.

- Santa Fe developed its list of guiding principles and *made them tangible* by linking the principles to everything they did, from language to behaviors, assessments and awards (e.g. "Tom demonstrated Courage and Integrity when he...").

Reinforce desired behaviors with instant recognition. Make it possible for people to celebrate great behaviors immediately, e.g. using peer recognition or small gifts.

- Remove all structural or administrative *barriers* (e.g. a complex approval process). *Measure results* and make the data available to everyone, so it becomes a game that ignites people's natural desire to improve and thrive.

- Don't force your employees to compete with one another. Instead, design your rewards to *encourage collaboration* toward a common goal, with no limit on the number of winners. For example, you can recognize all employees who achieve certain targets or when people outperform external competitors or even themselves.

Start with the end in mind. Share what you're trying to achieve with your team, so they can help to translate the high-level vision into specific, measurable goals for their departments and teams.

KEY QUOTES

"Guiding principles needed to do just that: provide guidance on decisions."

"Guiding principles have to accurately represent the principles of the real organization, not the imagined organization."

"When I say immediate recognition, I mean immediate. Not thirty days. Not thirty minutes. Immediate."

"Have awards that are abundant, with no limit. They pit your team against the world—either external competitors or nature."

Santa Fe was successfully deployed 2 weeks ahead of schedule because of a discussion between Marquet and Lieutenant Adams 3 months prior. The duo had the vision of giving the crew a 2-week break—this idea motivated them to develop a plan that led to the ship's early deployment.

Encourage questions. During an exercise, Marquet ordered a course-change which would've caused Santa Fe to miss its target. Fortunately, one of the officers pointed out Marquet's mistake and averted the error. Encourage everyone in your organization to adopt a questioning attitude instead of blindly following instructions; this is the best way to nurture leaders at all levels.

Conclusion

Just a year after Marquet took over command of Santa Fe, the ship and crew's performance had improved manifold, enlistments and retention had skyrocketed, and the crew members were advancing in their careers. If these 3 sets of mechanisms can work in a top-down hierarchical structure like Santa Fe's, it can work in any organization.

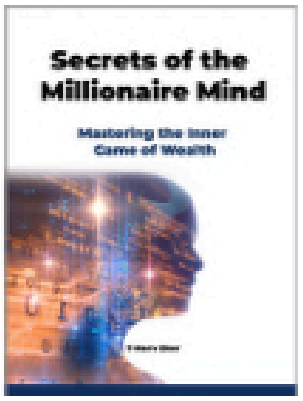
To get started:

- Examine your internal processes to identify key *sources of excellence*, e.g. specific interfaces with customers.
- Figure out the *types of decisions* that'd affect your organization's ability to achieve excellence in those areas.
- Break down *what's required* to help your employees to make those decisions (e.g. technical knowledge, goal-clarity, decision-making authority and accountability) and make it happen.

This summary focuses on the leader-leader model and its 3 core components. The book is packed with many other anecdotes about the navy and Marquet's personal reflections. Each chapter also comes with a list of questions for you to reflect about your leadership approach and where your organization stands. For more details, please visit davidmarquet.com.

KEY QUOTES

"If the leader-leader model can work on board a nuclear submarine, it can work for you."



SECRETS OF THE MILLIONAIRE MIND

Mastering the Inner Game of Wealth

T. Harv Eker

The Big "So What"

In the book, Eker outlines how to identify and revise your money blueprint, to significantly increase your income and accumulate wealth. The idea is to combine your inner mind game (your tool box) with your outer game (the tools) to get rich. Eker used

Introduction

Eker invites you to really study the book (not just read it), try the principles, keep what works and throw away what doesn't. He stresses that there are no right or wrong, true or false beliefs – these are just opinions that were widely circulated and passed on to you through the generations. You can consciously choose to release any belief, way of thinking or being, and replace them with new ones.

For the principles to work, you need to be prepared to let go of old ways of thinking.

Your Money Blueprint

Your level of success is largely dependent on your character, thinking and beliefs. In short, your wealth can only grow to the extent that you do. Like a tree, the seeds and roots beneath the ground are what generate the leaves and fruits above ground. The results you are getting in your outer world (including money, wealth, health, illness, weight etc.) are a reflection of your inner world.

KEY QUOTES

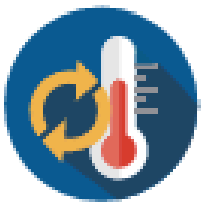
"This book provides the missing link between your desire for success and your achievement of success."

"If you want to move to a higher level of life, you have to be willing to let go of some of your old ways of thinking and being and adopt new ones."

"It's not enough to be in the right place at the right time. You have to be the right person in the right place at the right time."

"If you want to change the fruits, you will first have to change the roots. If you want to change the visible, you must change the invisible."

Your money blueprint is like your internal thermostat, or the default financial setting that you tend to fall back to. Your thermostat may be set for you to earn and possess hundreds, thousands, millions or billions of dollars. That's why poor people who win a lottery often don't keep the money for long, and millionaires who go broke tend to build up their empire again quickly.



The only way to permanently change your level of financial success is to reset your financial thermostat, i.e. change your money blueprint.

How your Money Blueprint was Created

We are born with no preconceptions about money. Everything we think, feel and do about money were taught to us and conditioned since we were young. This programming affects how we think, feel, act and eventually what results we get. In short, the process of manifestation looks like this:

Programming ➲ Thoughts ➲ Feelings ➲ Actions ➲ Results

There are 3 key sources of programming:

- **Verbal Programming**: Much of our sub-conscious beliefs about money, wealth and richness come from what we were told since young e.g. "money is the root of all evil", "money doesn't buy happiness", "that's for the rich people", "earn an honest living".

  Many of these beliefs carry deeply-rooted emotions (e.g. the desire to please our parents, the fear of loss) - these have a stronger influence on our sub-conscious minds than our logical thoughts.

- **Modeling**: We subconsciously model after key role models in our lives like our parents and grandparents. Or, we may silently rebel against their way of doing things (e.g. feeling angry about their lack of money and hence the need to prove ourselves).

KEY QUOTES

"The only way to permanently change the temperature in the room is to reset the thermostat. In the same way, the only way to change your level of financial success 'permanently' is to reset your financial thermostat, otherwise known as your money blueprint."

"Nothing has meaning except for the meaning you give it."

"When the subconscious mind must choose between deeply rooted emotions and logic, emotions will almost always win."

Examine your reason or motivation for money or success – if the motivation comes from unsupportive causes like anger, fear, or the need to prove something, money will not bring you happiness.

- **Specific Incidents**. When we are young, our beliefs about money are affected by specific experiences, e.g. watching our parents fight over money, receiving money/rewards for behaving in a certain way.

Changing your Programming

- Your programming can be changed through 4 elements:
  1. Awareness. You can't change what you're unaware of. Watch yourself and become aware of your thoughts, fears, beliefs, habits, actions and inactions.
  2. Understanding that this way of thinking comes from external sources and is not necessarily who you are.
  3. Disassociation. Know that this way of thinking is not you and you can choose to let it go.
  4. Reconditioning. Retrain your mind to respond supportively to money and success.

- **Using declarations: a powerful secret for change**
  1. A declaration is a positive statement of intention that something will happen. It is different from an affirmation which is stated as if the goal is already happening.
  2. For each principle, Eker provides a verbal "declaration", which he recommends that you say out loud, emphatically. First, you put your hand on your heart and make the verbal declaration. Then, you touch your head with your index finger and make another verbal declaration.
  3. State your declarations aloud each morning and evening. It is even better to do it while looking into a mirror.
  4. Declarations are powerful because they carry their own vibrational frequencies. Stating them aloud creates energy vibrations throughout the cells in your body, sending powerful messages to the universe and your subconscious mind.

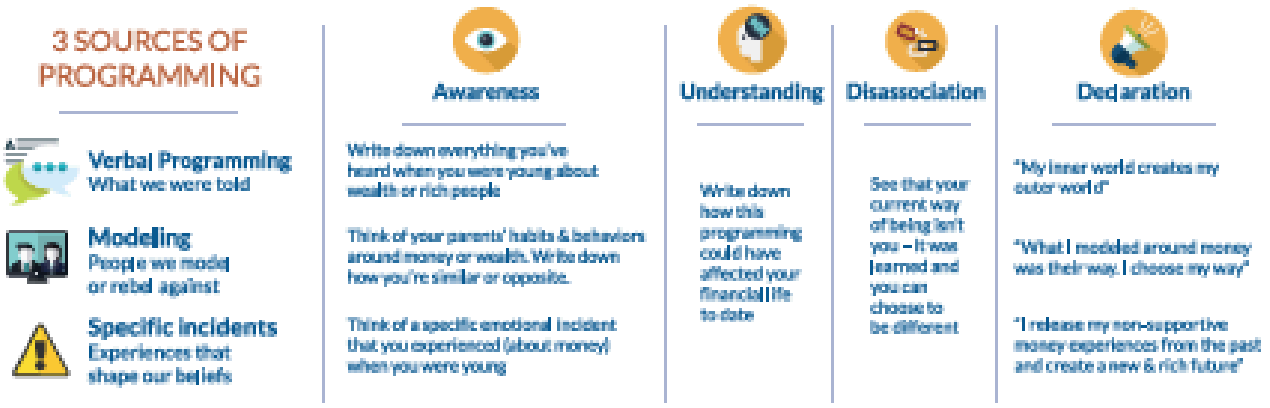
KEY QUOTES

"Put yourself under a microscope. Study yourself."

"Consciousness is observing your thoughts and actions so that you can live from true choice in the present moment rather than being run by programming from the past."

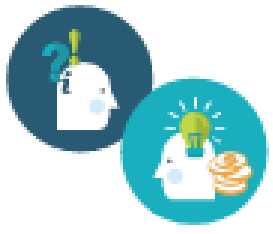
"You can choose to think in ways that support your happiness and success instead of ways that don't."

Use these action steps and declarations to remove and replace your current money blueprint.



The Wealth Files: 17 Ways Rich People Think & Act Differently

Computers run on logic and rules. Likewise, we make decisions based on what we believe is sensible at that point in time, based on the "files", beliefs or logic in our minds.



Rich people think and act differently from the poor or middle-class. To develop a millionaire mind, we can consciously catch ourselves when we are using "poverty files" and switch to alternative "wealth files".

#1: Rich people believe "I create my life".
Poor people believe "Life happens to me".

Rich people believe they control their lives, while poor people believe they have little/no control and have a "victim mindset":

- Blame: The tendency to blame someone else or something for their circumstances (rather than take personal responsibility)
- Justifications: Rationalizing and finding excuses for the lack of success e.g. "money is not that important" (rather than appreciating the importance and role of money in society).
- Complaining: Expressing negativity and attracting more of what they are complaining about (what you focus on grows).

KEY QUOTES

"Realize that you create your wealth, your nonwealth, and every level in between."

"There's no such thing as a really rich victim…You can be a victim or you can be rich, but you can't be both!"

Declaration

Hand on heart: "I create the exact level of my financial success!"
Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Each time you catch yourself blaming, justifying or complaining, slide a finger across your neck (you're slitting your financial throat!).
- At the end of each day, write down 1 thing that went well and 1 thing that didn't. Write your answer to "how did I create each of these situations?"

#2: Rich people play the money game to win.
Poor people play the money game to not lose.

Rich people aim to have massive wealth and abundance, middle class people aim to be comfortable, and poor people aim to pay their bills.

Declaration

Hand on heart: "My goal is to become a millionaire & more!"
Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Write down 2 financial "play to win" goals for your annual income & network. Make these goals ambitious, but achievable in a realistic timeframe.
- Go to an upscale restaurant and order a meal at "market price" without asking how much it costs. Have a feel of what it's like to "win".

#3: Rich people are committed to being rich.
Poor people want to be rich.

There are 3 levels of wanting:

- I want to be rich.
- I choose to be rich.
- I commit to be rich: being unreservedly devoted.

Rich people are unwavering in their desire for wealth, and will do whatever it takes to achieve it (including sacrificing their time/relationships and taking risks). Poor people have negative files in their subconscious mind around riches e.g. "It could cost

KEY QUOTES

"When you are complaining, you become a living, breathing "crap magnet."

"If your goal is to be comfortable, chances are you'll never get rich. But if your goal is to be rich, chances are you'll end up mighty comfortable."

"The number one reason most people don't get what they want is that they don't know what they want."

my health/my family", "I could make it and lose it." These send mixed signals to the Universe about their real commitment and desire for wealth.

Declaration
Hand on heart: "I commit to being rich."
Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Write a paragraph on why creating wealth is important to you. Be specific.
- Do this declaration with a trusted friend or family member: Put your hand on your heart, look at the person in the eye and say "I, (your name), do hereby commit to becoming a millionaire or more by (date)." Tell your partner to say "I believe in you" and you respond with "thank you".

#4: Rich people think big. Poor people think small.

You will be paid in accordance to the value you deliver to the marketplace, which is in turn determined by: supply, demand, quality and quantity. The more people you serve or affect, the greater the value you create. Part of your life mission must be to share your gifts with as many people as possible.

Declaration
Hand on heart: "I think big! I choose to help thousands and thousands of people!"
Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Write down what you believe are your natural talents, and how and where you can use more of these gifts.
- Brainstorm how you can solve problems for 10x of the people you impact now. Develop at least 3 strategies.

#5: Rich people focus on opportunities. Poor people focus on obstacles.

Rich people expect to succeed and take educated risks. They focus on what they want. Poor people are fearful of what could go wrong and tend to stall for time. They focus on what they don't want.

KEY QUOTES

"The excitement and stimulation of a vision go far beyond objective judgment. A vision sets direction for thinking and for action."

"You will be paid in direct proportion to the value you deliver according to the marketplace."

"If you want to be rich in the truest sense of the word, it can't only be about you. It has to include adding value to other people's lives."

"If you want to get rich, focus on making, keeping and investing your money. If you want to be poor, focus on spending your money."

Declaration

Hand on heart: "I focus on opportunities over obstacles."
"I get ready, I fire, I aim!"

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Get in the game. Start on a project/situation or project you have been procrastinating on. Learn "on the job" if necessary.
- Practice optimism. Reframe all problems or obstacles into an opportunity.
- Gratitude. List 10 things you are grateful for in your life and read it aloud, each morning for the next 30 days.

#6: Rich people admire other rich & successful people. Poor people resent rich & successful people.

You can't become something you despise. To overcome the habit of envy, we need to practice admiring, blessing and loving rich people.

Declaration

Hand on heart: "I admire rich people!" "I bless rich people!" "I love rich people!" "And I'm going to be one of those rich people too!"

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Practice the Huna philosophy – whenever you see beautiful homes, cars or successes, bless it and the owners/people involved.
- Send a letter/email to someone who is highly successful (you needn't know them personally) to share your admiration for their achievements.

#7: Rich people associate with positive, successful people. Poor people associate with negative or unsuccessful people.

Rich people associate with and model after successful people. Poor people, on the other hand, judge/criticize/mock others' successes. If the person(s) closest to you are downers and pulling you down:

- Focus on being the best model you can be. Don't try to change them, but they may shift under your positive influence over

KEY QUOTES

The idea is to get in the game with whatever you've got, from wherever you are."

"Bless that which you want."
- Huna philosophy

time.

- Treat their presence as a test for you to stay positive and true to your values in face of "opposition".

Declaration

Hand on heart: "I model rich & successful people." "I associate with rich & successful people." "If they can do it, I can do it."

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Read a biography of someone who is or was extremely rich and successful. Get inspiration from their stories and copy their mindset.
- Get into a high-end environment (e.g. a high-end club, classy hotel) and get comfortable with the atmosphere. Watch the patrons – you'll notice they are no different from you.
- Remove yourself from people or situations that are downers in your life.
- Stop watching thrash TV and stay away from bad news.

KEY QUOTES

#8: Rich people are willing to promote themselves and their value. Poor people think negatively about selling and promotion.

People who resent selling and promotion are usually broke. Rich people can and are willing to promote their value with passion and enthusiasm. That's why leaders earn a lot more than followers – they are good at selling themselves and their vision.

Declaration

Hand on heart: "I promote my value to others with passion and enthusiasm."

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Rate (1-10) the value of the product or service you're offering or intending to offer. If the rating is 7-9, improve it to 10. If it's ≤ 6, drop it and represent something you really believe in.
- Improve yourself (read books, listen to audios, take courses) to the point you can promote your value successfully and with 100% integrity.

#9: Rich people are bigger than their problems.
Poor people are smaller than their problems.

The road to wealth comes with problems and difficulties. Rich and successful people grow themselves to become bigger than the problems , while poor people avoid them. Growing yourself to create wealth is not enough – you also need to grow yourself to keep wealth. The size of the person matters more than the size of the problems.

Declaration
Hand on heart: "I'm bigger than any problems." "I can handle any problems."
Hand to head: "I have a millionaire mind!".

Millionaire Mind Actions
- When you're upset over a "big problem", remember you're being "mini me". Say to yourself "I can handle this. I'm bigger than any problem."
- Write down a problem you are facing – list 10 actions you can take, to move from problem to solution thinking.

KEY QUOTES

"The secret to success is...to grow yourself so that you are bigger than any problem."

#10: Rich people are excellent receivers.
Poor people are poor receivers.

Eker addresses a number of obstacles hindering poor people's ability to receive freely, including:

- Self-worth. Most of us grew up with punishments when we did something "wrong". Poor people still retain this programming: They punish ourselves for their "mistakes" and feel unworthy.
- Poor people have belief systems that tell them they are better people if they are poor. However, money only amplifies who you already are: if you're "good", having more money will only help you to do more good & positively impact more people.

"Money will only make you more of what you already are."

Declaration
Hand on heart: "I am an excellent receiver. I'm open and willing to receive massive amounts of money into my life."

Millionaire Mind Actions

- Receive compliments graciously with a "thank you" (without returning a compliment immediately).
- Enthusiastically celebrate any amount of money that you find or receive should be enthusiastically celebrated.
- Pamper yourself. Do something at least once a month to nurture yourself and feel rich and deserving.

#11: Rich people choose to get paid based on results. Poor people choose to get paid based on time.

Having a steady paycheck gives you security, but this security comes with a price – to earn what you are truly worth. Rich people believe in themselves, and hence prefer to be paid for the results they create.

Declaration

Hand on heart: "I choose to get paid based on my results."

Millionaire Mind Actions

- If you're currently paid an hourly wage, propose a compensation plan in which you're paid at least partially based on individual & company results. If you own a business, create a compensation plan that allows employees and key partners to be paid more on their/the company's results.
- If you feel you are not paid enough on your job, start your own business (possibly beginning part time). Focus on being paid for performance and results rather than only for your time.

#12: Rich people think "both". Poor people think "either/or."

Rich people perceive abundance in their world. They believe they can have the cake and eat it. Poor people perceive scarcity and limitations (e.g. you can have only money or happiness but not both).

Most poor people don't realize that money is not a limited commodity and doesn't get depleted with use. In fact, the same money can be used over and over again to create value for

KEY QUOTES

"If you choose to get paid for your time, you are pretty much killing your chances for wealth."

"Rich people understand that with a little creativity you can almost always figure out a way to have the best of both worlds."

everyone. Living a life without limits requires the intention to have "both" in your life.

Declaration

Hand on heart: "I always think 'both'."

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- When presented with alternatives, ask yourself "how can I have both?"
- Each time you spend money, say to yourself, "This money will go through hundreds of people and create value for all of them."
- Believe you can be a role model by being kind, generous, loving and rich.

#13: Rich people focus on their net worth.
Poor people focus on their working income.

Net worth is the financial value of everything you own, including your cash, investments, business, residences etc. It includes 4 key components, of which working income is only a part of 1 component :

- Income (working income and passive income)
- Savings (which are necessary for investments)
- Investments (to grow your assets)
- Simplification (a lifestyle that needs less expenses, hence freeing up resources for investments)

Declaration

Hand on heart: "I focus on building my net worth!"

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Focus on all 4 net worth factors
- Create a net worth statement and track or revise it every quarter.
- Hire a qualified financial planner

KEY QUOTES

"Being kind, generous, and loving has nothing to do with what is or isn't in your wallet... Being pure and spiritual have nothing to do with what is or isn't in your bank account."

"The true measure of wealth is net worth, not working income."

#14: Rich people manage their money well.
Poor people mismanage their money well.

Rich people have sound money habits – they understand that money management doesn't restrict their freedom, but can create eventual financial freedom. They realize that however little the money, when well managed, can grow to plenty. Even if you are borrowing to survive, you can start managing that borrowed dollar.

Declaration

Hand on heart: "I am an excellent money manager."

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

Manage your money by putting a percentage of every dollar you receive (after taxes) into each of 6 funds:

- 10% into your "Financial Freedom Account". The money should only be used for investments & creating passive-income streams.
- 10% for a "Play" account. Use the money to nurture yourself or do the things you wouldn't normally do. You must spend all the money every month.
- 10% for a "Long-term Savings for Spending account"
- 10% into your Education account
- 50% into your Necessities account
- 10% into your Give account
- Create an additional Financial Freedom jar and deposit something into it daily (however small)

#15: Rich people have their money work hard for them.
Poor people work hard for their money.

Working hard is important, but it is equally important knowing what to do with the dollar that you make with your hard work. You become financially free when your passive income exceeds your expenses. Passive income can come from:

- Money working for you i.e. investments or other assets that appreciate in value and can be liquidated for cash.
- Businesses working for you i.e. ongoing income from businesses where you do not need to be personally involved.

KEY QUOTES

"Until you show you can handle what you've got, you won't get any more!"

"The habit of managing your money is more important than the amount."

"Either you control money, or it will control you. To control money, you must manage it."

"Knowing what to do with that dollar is where you move from hard work to smart work."

"Rich people see every dollar as a 'seed' that can be planted to earn a hundred more dollars, which can then be replanted to earn a thousand more dollars."

The rich understand the concept of delayed gratification – they earn money for their investments, which in turn pays for their future. The poor earn money for survival and immediate gratification. The rich buy assets that will likely go up in value, while the poor buy expenses that will decrease in value.

Declaration

Hand on heart: "My money works hard for me and makes me more money" Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Get educated on investments (through seminars, books, magazines etc.)
- Focus on passive instead of active income. Identify at least 3 strategies to create passive income, and start researching or taking action.
- "Don't wait to buy real estate. Buy real estate and wait"

#16: Rich people act in spite of fear. Poor people let fear stop them.

Affirmations, visualizations and meditations are useful tools, but need to be combined with real action to deliver results. Anyone – be it rich or poor – will feel fear. To be successful, there's no need to remove fear; we just need to practice acting in spite of fear. What's initially uncomfortable will become comfortable with time. Learn to become disciplined with your own thoughts.

Declaration

Hand on heart: "I act in spite of fear." "I act in spite of doubt." "I act in spite of worry." "I act in spite of inconvenience." "I act in spite of discomfort." "I act when I'm not in the mood."

Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- List down and challenge your 3 greatest worries or fears about money or wealth. Realize that you will survive even if each one really happened.
- Intentionally make uncomfortable decisions for you.
- Use "power thinking" to observe your thoughts & entertain only those that support your happiness & success.

KEY QUOTES

"Every dollar you spend today may actually cost you a hundred dollars tomorrow."

"When in France you speak French; when wearing the green hat you use provocation and movement as the grammar of creativity."

"If you are willing to do only what's easy, life will be hard. But if you are willing to do what's hard, life will be easy."

"The only time you are actually growing is when you are uncomfortable."

"Training and managing your own mind is the most important skill you could ever own, in terms of both happiness and success."

#17: Rich people constantly learn and grow.
Poor people think they already know.

You only know something if you are living it. So if you are not completely rich and happy, there are things you can learn. Poor people tend to pretend that they've got it all figured out and under control, and find excuses (e.g. no time/ money) to learn and grow. Rich and successful people understand that their outer world is a reflection of their inner world. They learn from those who have already been where they want to go, and are richer than they are.

Declaration

Hand on heart: "I'm committed to constantly learning & growing."
Hand to head: "I have a millionaire mind!"

Millionaire Mind Actions

- Commit to your growth- read at least a book, listen to an audio, or take a seminar on money or business or personal development monthly.
- Consider hiring a personal coach
- Attend the Millionaire Mind Intensive.

Other Useful Details in the Book to Look Out For

Eker shares many stories of his personal journey and real people he has met, many of whom are graduates of his Millionaire Mind Intensive course (which he promotes heavily in the book).

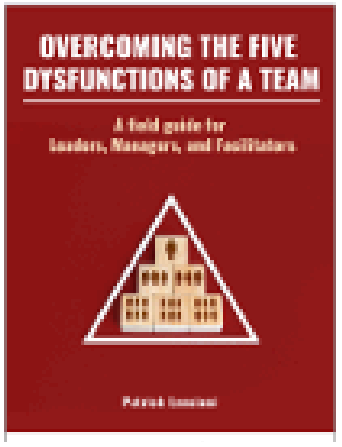
Additional resources or free book bonuses are available at www.millionairemindbook.com, including:

- Millionaire Mind Declarations
- T. Harv Eker's Monthly Lessons
- Action Reminders
- Net Worth Tracking sheet
- A Printout of your Commitment to Wealth

KEY QUOTES

"If you live it, you know it. Otherwise, you heard about it, you read about it, or you talk about it, but you don't know it."

"To get paid the best, you must be the best."



Overcoming the Five Dysfunctions of a Team

A Field Guide for Leaders, Managers and Facilitators

PATRICK LENCIONI

The Big "So What"

The book was written as a follow-up to best-seller *The Five Dysfunctions of a Team*, to provide a guide for leaders and practitioners to apply the concepts in the original book. It offers specific and practical guidelines for executives (be it leaders, practitioners or team players) who wish to understand how to achieve outstanding results through great teams.

Introduction

Teamwork can be hard to measure and achieve. Yet, when you get it right, it can deliver seemingly-impossible results, and become a source of sustainable competitive advantage for your company in today's rapidly changing world. Teamwork can also deliver a sense of fulfilment for its members, with positive spill-over effects beyond the workplace.

Overview - The 5 Dysfunctions of a Team

Using a fable in his earlier book, Lencioni illustrated how the absence of these 5 elements – trust, conflict, commitment, accountability and results - can cripple teams. In this book, he starts by defining each area, and outlines how their lack can handicap teams, and how to overcome them. Each ingredient is important not so much in itself, but in laying the foundation upon which the next ingredient is built, to deliver the ultimate goal of results.

KEY QUOTES

"Teamwork remains the one sustainable competitive advantage that has been largely untapped."

"When people come together and set aside individual needs for the good of the whole, they can accomplish what might have looked impossible on paper."

"A team is a relatively small number of people (anywhere from three to twelve) that shares common goals as well as the rewards and responsibilities for achieving them. Team members readily set aside their individual or personal needs for the greater good of the group."

Team Foundations

Before you move into team-building, there are 2 fundamental questions to ask yourselves:

Are we really a team?
A team should be small (3-12 people) and must share common goals. If your group doesn't fulfil these criteria, you may need to regroup or form a smaller group that does.

Are we ready to do what it takes?
Building a real team requires members to invest time and energy, and to get uncomfortable. Are you and your team members ready for that?

With these prerequisites out of the way, we can now focus on addressing each of the 5 Team Dysfunctions, and converting them into Success Factors.

KEY QUOTES

"Teamwork doesn't require great intellectual insights or masterful tactics. More than anything else, it comes down to courage and persistence."

Have each team member share 3 items:

- Where they grew up;
- Number of kids in their family; and
- The biggest childhood challenge as a kid.

For example, members may have assumed that someone is cold and unfriendly. However when they realize that he merely has trouble expressing himself due to his strict upbringing, they immediately become more understanding and empathic.

Behavioural Profiling

This provides an unbiased and dependable way for people to (a) validate and share their strengths and weaknesses, and (b) have a common and objective lingo to discuss these strengths and weaknesses. There are numerous profiling tools available, though Lencioni personally recommends the Myers-Briggs Type Indicator (MBTI).

Teams can do their assessments prior, then have an off-site meeting to review and share their profiles (after a short briefing). After such meetings, encourage people to have the profile placed visibly at their work-desk, to share them with their direct reports, and get together soon to discuss/ share how they have applied the insights at work.

2. Mastering Conflict

"Good conflict" is about open, constructive and passionate debates about issues that affect organizational success. However, this seldom exists because most teams are trying to maintain artificial harmony by avoiding difficult issues. Others, on the other hand, waste time and energy managing perceived personal attacks, manipulating conversations and trying to win arguments (rather than solve real problems).

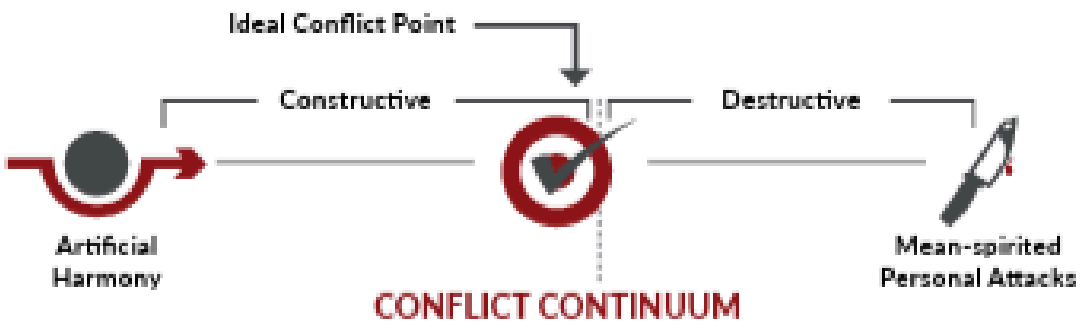
KEY QUOTES

"I will never get tired of watching the reticence and guardedness of untrusting teammates melt away as they acknowledge to one another what makes them tick. Without fail, there is laughter, teasing, relief and insight. And that is exactly when the seeds of trust begin to grow."

"As with any new information, if it is not put to use and discussed, it quickly grows stale."

"When I talk about conflict on a team, I'm talking about productive, ideological conflict: passionate, unfiltered debate around issues of importance to the team."

"When vulnerability-based trust exists, team members say everything that needs to be said, and there is nothing left to talk about behind closed doors."



In theory, the ideal level of conflict would be at the end of the constructive zone, just before it tips into the destructive zone. However occasional destructive conflict gives the team an opportunity to work through difficult issues, building deeper trust and confidence.

Conflict is inherently uncomfortable. Hence, trust is an important (and necessary) foundation that allows members to push one another outside their emotional comfort zones. Here are several tools to facilitate constructive conflict:

Conflict Profiling.

Different people view and handle conflict differently, due to their personality, cultural background, family background etc. Similar to personality profiling, it is useful for team members to understand one another's conflict profiles by doing an assessment (e.g. using the MBIT or Thomas-Kilmann Conflict Mode instrument).

Conflict Norming.

With an understanding of their conflict profiles, members should jointly establish their rules of engagement (e.g. whether to stay emotion-free or express emotions freely, whether interruption is acceptable during debates). Once agreed, everyone is accountable to uphold the norms.

Encouraging Conflict.

Even with mutual understanding and team norms, most people tend to shy away from conflict. Leaders play an important role in encouraging conflict:

KEY QUOTES

"The only thing that really matters is this: are they holding back their opinions? Members of great teams do not."

"When a team recovers from an incident of destructive conflict, it builds confidence that it can survive such an event, which in turn builds trust."

"When people self-identify and publicly declare their outlook on conflict, they become much more open to adjusting it to whatever team norms need to be established."

"The leader is going to have to be ready to not only light the fuse of good conflict but to gently fan the flames for a while too."

The leader must mine for conflict, i.e. identify when real issues are being buried and create opportunities to unearth them.

When team members are in the midst of an atypical debate, leaders should also give "real-time permission" by reassuring them that such conflict is desirable, even if it's uncomfortable.

Rather than waste time running boring meetings with no conflict nor breakthrough, leaders must use meetings productively to surface real issues and critical opinions. They can start meetings with a "hook", creating a sense of urgency around why the issues at hand must be properly addressed, before mining for conflict.

Conflict Resolution.

As more conflict arises, leaders will need to know how to effectively resolve them. Lencioni provides a series of tools to help teams identify and remove individual, relationship, environmental and informational obstacles, as well as to assess and improve their conflict tendencies.

3. Achieve Commitment

Team commitment isn't about consensus, but the willingness to embrace a decision without consensus. There are 2 key ingredients:

Buy-In.

Contrary to common belief, most people are willing to buy in to a decision - even if it is different from their own suggestions - so long as their own ideas have been considered and explained in the context of the final decision.

KEY QUOTES

"The ultimate penalty of boring meetings is bad decisions, not to mention wasted time."

"Commitment is ...the ability to defy a lack of consensus."

"Commitment is not consensus. Waiting for everyone on a team to agree intellectually on a decision is a good recipe for mediocrity delay, and frustration."

This is why conflict (facilitated by good leadership) is so instrumental – when team members are confident that all options, perspectives and opinions have been aired, they are more willing to stand behind the decision despite their initial disagreement.

Clarity.

Often, people walk away from a meeting with different understanding of what has just been agreed. Without clarity and alignment, there can be no real commitment. To remove assumptions and ambiguity:

- Clarify commitment. Before the end of each meeting, the leader must write down the key decisions that have been made. Any discrepancies must be identified and ironed out before the decision is announced.

- Cascade the commitment. Each team member must also communicate (verbally or in person) the decisions to their staff within 24 hours of the meeting. This forces the team members to become equally clear and committed to the decision.

Besides commitment to specific decisions, every team needs to commit to broader issues or principles like purpose, mission, values, strategy and goals. To rally the team around a common cause, you can establish "thematic goals", i.e. a common, unifying goal that all team members can constantly thinking about and work towards in their daily work.

KEY QUOTES

"Most people don't need to have their ideas adopted...in order to buy in to a decision. They just want to have their ideas heard, understood, considered, and explained within the context of the ultimate decision."

"It is amazing to me how a group of intelligent, highly educated adults, all of whom speak the same language, can sit in a room for two hours of discussion, and then leave the room under the false impression that everyone is on the same page."

4. Embrace Accountability

Accountability in the context of this book is about team members' willingness to hold one another to live up to the group's decisions and performance standards. Strong teams don't depend on the leader as the main source of accountability; their true motivation to perform comes from peer pressure and the desire not to let down a fellow team member.

To kickstart the culture of accountability:

- Leaders must first set the tone. Rather than just manage results (which are only visible at the end), they must be prepared to get uncomfortable and uphold behavioural standards (e.g. confronting a staff who is badmouthing a company initiative, or someone who is not handling a task to expectation); and

- Leaders need to reinforce the value of constructive feedback. People are naturally resistant to offering critical feedback, hence members must be educated that when they withhold constructive feedback, they are actually letting down their peers.

Here are 2 tools to help deepen accountability and performance:

Team Effectiveness Exercise. This is suitable for teams that already have some level of trust and experience working together.

- Set aside at least 1 hour. Have every member write down their answers for these 2 questions, for every other team member (except themselves):

    1. "What's the 1 most important behaviour demonstrated by this person which strengthens our team?"
    2. "What's the 1 most important behaviour demonstrated by this person which can sometimes derail the team?"

KEY QUOTES

"Peer pressure and the distaste for letting down a colleague will motivate a team player more than any fear of authoritative punishment or rebuke."

"By holding back we are hurting not only the team, but also our teammates themselves."

- Members share their answers for Question 1, focusing first on the leader, then repeat the process for Question 2, The leader can seek clarification, but can't respond to the feedback. The same process is then repeated for the rest of the team members.

- After the exercise, team members must email their areas of strengths and weaknesses to the leader and review/discuss those areas again in a few months.

Use meetings to build accountability.

- Start each meeting with a "lightning round" by having each team member summarize (in less than 30 seconds) their top 3 priorities that week. Other team members can suggest more important areas that the member should focus on, if any.

- Have a scoreboard or radar screen where key goals can be tracked and made visible during meetings (see next segment)

5. Focus On Results

Even when a team has successfully overcome the previous dysfunctions, they still may not achieve results because of:

- Lack of clear measurements. It is tempting to go with a vague interpretation of success, as it gives us room to manoeuvre and change our goal posts. The key to success is to pick 1 or 2 goals (e.g. market share, customer satisfaction, revenue, year-on-year growth) that the team can rally around, and to commit the goal(s) publicly as early as possible.

- Self-interest/ preservation. Our natural inclination is to put our self-interest first before others' (including our teams). This tendency can be broken down into:

KEY QUOTES

"What's critical is that team members know that the areas that were identified will not go away, and that they will have to answer for their progress in the not-too-distant future."

"Teams have to eliminate ambiguity and interpretation when it comes to success."

- Ego. Much as we want our teams to win, we usually want to win first as individuals. A team can only be strong if each member is not satisfied until the collective results of the group are achieved.

- Our needs in terms of career development and money can distract us from the team's collective goals. Most people are not comfortable sharing such concerns, yet they can fester if not addressed. Only when there's a strong foundation of trust in the team, can members be encouraged to surface such personal concerns for solutions

- Given a choice, most leaders will prioritize their own departments (or the teams they lead) over the cross-departmental teams that they are members of.

To overcome members' natural self-interests, the only way is to make the win-win, common team goals visible and the constant focus of the team's attention. This can be done through a Scoreboard, which clearly lists one visible and largely-quantitative metric (that summarizes the team's progress or success), and a qualitative assessment that summarizes the supportive objectives or thematic goal.

Other Details in the Book to Look out For

This is a concise and easy-to-read book, focusing on practical tools, exercises, assessments and real-world examples for overcoming the 5 dysfunctions of teams, to deliver great results. For each of the tips covered in this summary, Lencioni provides case studies/ examples, including facilitation tips for leaders and practitioners.

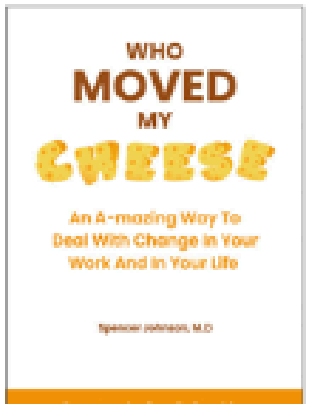
To give a better idea of what is involved in the team-building process, he also provides:

- Answers to a list of commonly asked questions, e.g. How long it takes to build a team, whether to manage the process inhouse or via an external consultant/ facilitator;

KEY QUOTES

"Result oriented teams establish their own measurements for success. They don't allow themselves the wiggle room for subjectivity."

"The key to success for a team is that its members go beyond barter and compromise to embrace a collective pursuit of the best interests of the whole."



WHO MOVED MY CHEESE?

An A-Mazing Way to Deal with Change
in Your Work and in Your Life

SPENCER JOHNSON, M.D.

The Big "So What"

Change is inevitable, yet most people are uncomfortable with it. Through a simple story, this book illustrates how people react to change, and how we can manage change more constructively and effectively. The story provides useful metaphors for us to reflect about our own lives, and the ideas can be used to facilitate discussions and shift attitudes toward change.

Introduction

The story is set in a Maze, and provides an analogy to change in our work and personal lives:

- Cheese represents what we want in life, e.g. a successful career, money, health, freedom, spiritual growth etc.

- The Maze represents our complex world (with blind corners and dark areas), where we try to find our way in search of Cheese.

- The 4 characters represent the 4 types of people we encounter in any change situation. The 2 mice (Sniff and Scurry) keep things simple and cope better with change, while the 2 littlepeople (Hem and Haw) tend to overcomplicate things.

The book is written in 3 sections: "A Gathering" of ex-classmates, "The Story", and "A Discussion" as the classmates reflect on what the story means to them.

In this summary, we'll start by presenting an outline of the story, followed by the key lessons on change.

KEY QUOTES

"Finding Cheese was the littlepeople's way of getting what they thought they needed to be happy. They had their own ideas of what Cheese meant to them, depending on their taste."

The Story

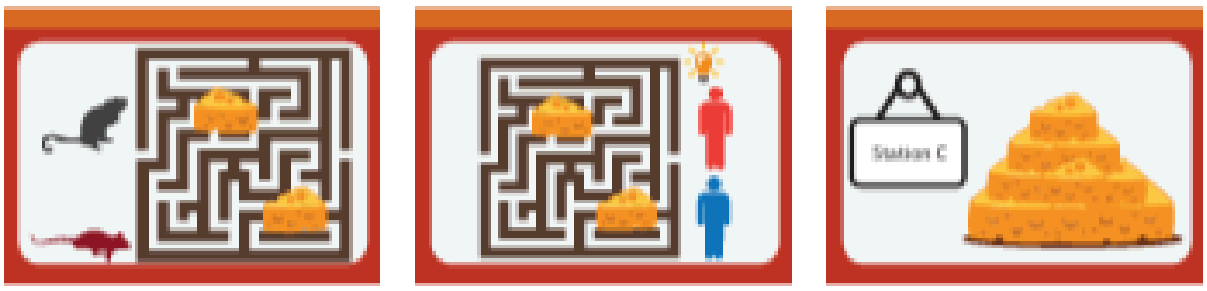
The fable is set in a maze, where the 2 mice (Sniff and Scurry) and 2 littlepeople (Hem and Haw) look for Cheese every day. Cheese has different significance for the 2 mice (who just like to nibble it) compared to the 2 littlepeople (who need Cheese to feel happy and successful).

Each day, the mice and littlepeople leave their respective homes and race into the maze to look for Cheese.

- Sniff and Scurry use trial-and-error, remembering the wrong turns and exploring new areas. Sniff depends more on his nose while Scurry dashes around quickly.

- The littlepeople also learn from their experiences, but they develop more sophisticated ways to find Cheese.

- Eventually, they all find "Cheese Station C", with a large stash of Cheese!



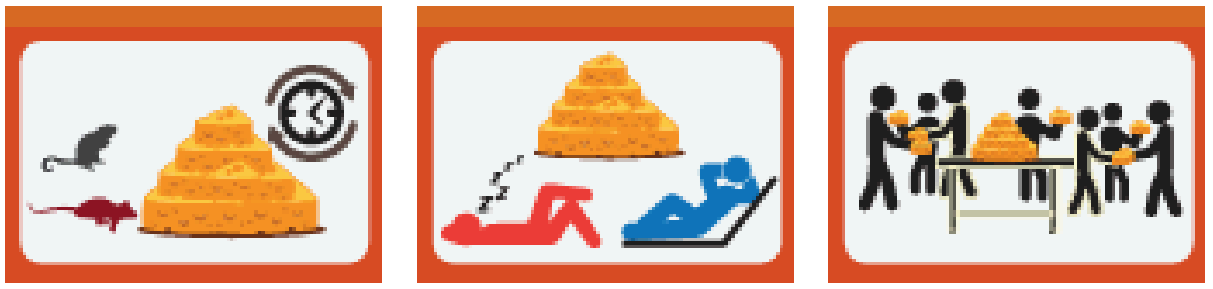
Having found Cheese, both the mice and littlepeople now go straight from their homes to Station C every day to enjoy the Cheese.

- Sniff and Scurry continue to wake up early in the morning, race to the station, inspect the area, then enjoy the Cheese.

- Hem and Haw start out with a similar routine. Over time, they begin to believe that the Cheese will always be there, so they wake up later and stroll over to Station C at their leisure. They don't know how the Cheese got there or who replenishes it, but they think of the Cheese as *theirs*. After all, didn't they work hard to find it? They feel content, secure and successful. They move their homes closer to Station C and even decorate the place. Occasionally, they invite their friends over to show off the Cheese, and to give them a treat.

KEY QUOTES

"Sometimes (the littlepeople) did well, but at other times their powerful human beliefs and emotions took over and clouded the way they looked at things."



As time passes, Sniff and Scurry notice that the supply of Cheese is decreasing. One morning, they arrive to find that there's no more Cheese.

- Since the situation has changed, the mice do the obvious – they change too. They immediately go back into the Maze, in search of new Cheese.

- After scouring the maze for some time, the mice eventually find "Cheese Station N", with an even larger stash and variety of New Cheese.

Hem and Haw, on the other hand, are so comfortable with their seemingly-endless supply of Cheese that they don't notice the decreasing supply. When they arrive later that day, they're stunned.

- Hem keeps yelling and shouting, "Who moved my Cheese?!" and laments how unfair it is. Haw just freezes in shock and disbelief. The Cheese means so much to them, that they dread to think of what would happen without it.

- They keep looking around Station C, returning day after day in hope that the Cheese will somehow show up again. Each day, they fret and worry about their future, feeling upset at the injustice of their Cheese being taken away.

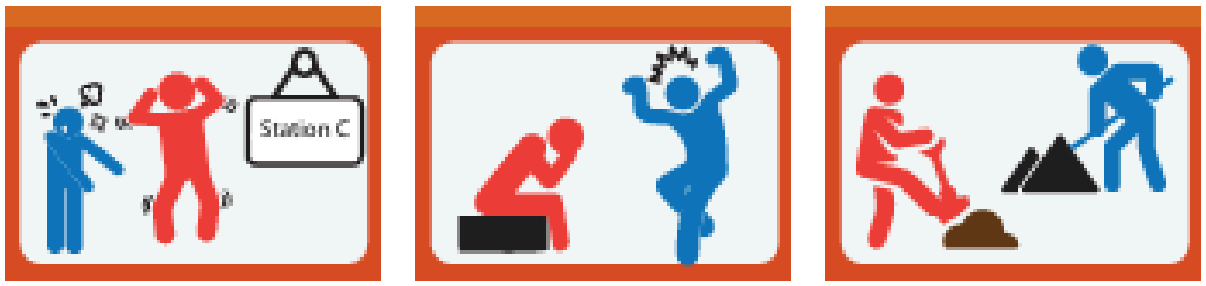
- They rationalize that if they work harder to search around Station C, and use new tools to improve their search, they'll find Cheese.

KEY QUOTES

"The mice did not overanalyze things."

"The littlepeople's behaviour was not very attractive or productive but it was understandable."

"The more important your cheese is to you the more you want to hold on to it."

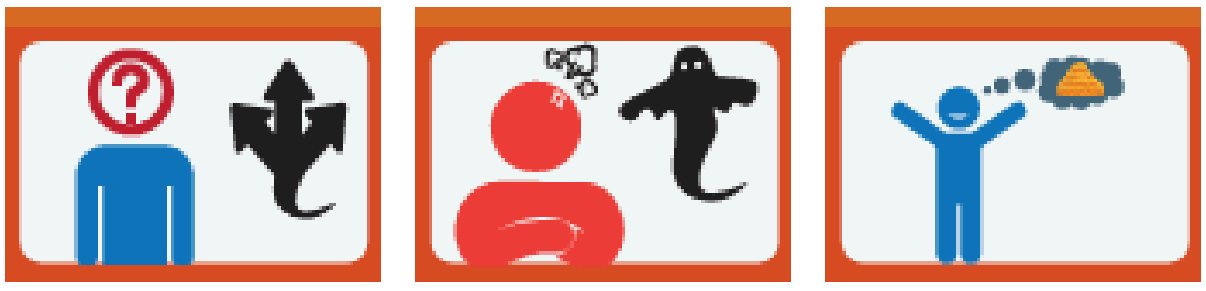


With each passing day, Hem and Haw get progressively weaker, more stressed and afraid to leave Station C.

- Haw finally realizes that being busy isn't going to change anything. He starts to consider leaving Station C to search for more Cheese.

- Hem refuses. He's still angry about how unfair things are. He talks about the dangers in the Maze, how old he is, etc. He doesn't want to fail.

- To make himself feel better about venturing out again into the Maze, Haw imagines himself stepping out with a smile, and visualizes realistic details of what it's like to find New Cheese and to taste it. He laughs at himself, and immediately feels better about letting go and moving on to find New Cheese. He finally gets enough courage to leave Station C.



However, searching for New Cheese isn't easy.

- The Maze has changed, and Haw keeps getting lost.

- He's constantly disappointed to discover a potential Cheese station, only to find it empty, or with leftover bits of Cheese and crumbs.

- He almost gives up, but reminds himself that he's at least taking control of the situation. He asks himself, "what would I do if I wasn't afraid?", focuses on the mental picture of finding New Cheese, and keeps going. As he overcomes his fears and moves ahead with faith, he starts to feel a new sense of freedom.

KEY QUOTES

"Haw was beginning to realize the difference between activity and productivity."

"Sometimes... things change and they are never the same again... Life moves on. And so should we."

"When you move beyond your fear, you feel free."

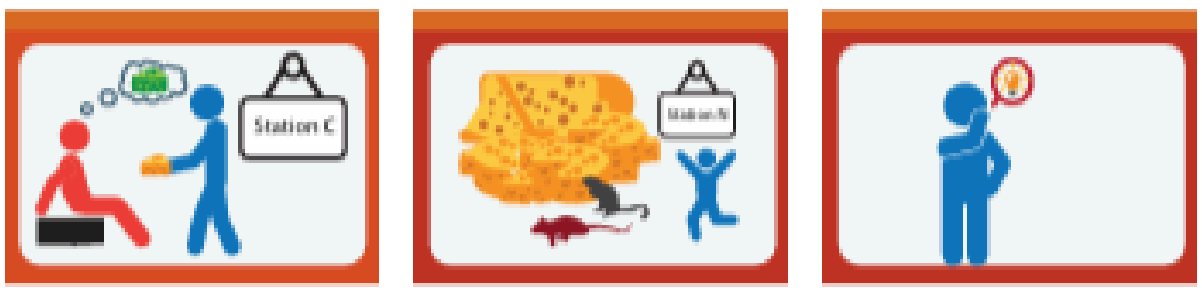
- Along the way, Haw reflects on the situation and writes down his learnings and insights on the walls, both as a reminder to himself, and to leave a trail for Hem to follow if he choses to leave Station C.

As Haw gains courage, he ventures into newer parts of the Maze, and finds new types of Cheese that he has never tried before.

- Haw brings back some New Cheese for Hem, but Hem refuses to try it. Hem is sure he won't like New Cheese; He only wants Old Cheese.

- Haw continues his search, confident that he'd eventually find New Cheese. The bits of Cheese that he finds along the way help to sustain him. With more energy and confidence, he starts to enjoy the process, and tries more new routes.

- Finally, Haw finds Station N. As Haw savours the New Cheese at Station N together with Sniff and Scurry, he continues to apply the lessons that he has learnt. Now, he examines the station for signs of change daily, so he won't be caught by surprise. He also spends part of his time exploring the Maze to stay in touch with the outside world.



- Haw contemplates returning to look for Hem, but realizes that Hem has to help himself by deciding to change first. Haw can only hope that the writings on the wall will help Hem to find his way.

KEY QUOTES

"Haw realized he had been held captive by his own fear. Moving in a new direction had freed him."

"He was letting go and trusting what lay ahead for him, even though he did not know exactly what it was."

"The quicker you let go of old cheese, the sooner you find new cheese."

"A change imposed is a change opposed."

Change: Reflections and Lessons

The 4 characters in the story mirror our common responses to change. Consider: **which character are you like?**

- *Sniff* is able to sniff out the situation and uncover changes early;
- *Scurry* moves quickly into action;
- *Haw* learns to adapt and make changes for better outcomes; and
- *Hem* denies change and prefers to stay in his comfort zone rather than deal with reality.

What are the Cheeses in your life? "Cheese" means different things to different people, e.g. a happy family, successful career, or spiritual growth. Still, every Cheese eventually runs out, and there's always New Cheese out there.

- Often, we may think that our *Old Cheese* is our only Cheese, and we hang on to it, e.g. an old business model, an old group of customers, or an old relationship. Ask yourself: What Old Cheese are you hanging on to?
- Consider the changes you can make in both your work and personal life. For example, how can you let go of bad behaviours and refresh a stale relationship, and what *New Cheese* can you find together with your spouse?
- In fact, rather than wait for the Cheese to run out, you can explore *moving your own Cheese*. For example, you can take proactive steps to transform old store concepts that aren't working, and try out fresh ideas rather than wait to take action only when new competition arrives on the scene.

Change is inevitable, and is happening all the time, whether you like it or not. In short, the Cheese will keep moving. Rather than be caught by surprise, *expect change*, and learn to *move with it*, over and over again.

Stay Vigilant. There are always hints of impending change. Be

KEY QUOTES

"When you change what you believe, you change what you do."

"Sometimes we're not even aware that we're afraid."

"It's a lot better to initiate change while you can than it is to try to react and adjust to it."

"Change could surprise you only if you didn't expect it and weren't looking for it."

on the look out for small changes, so you're better prepared for the bigger changes to come. Haw realizes on hindsight that, before the Cheese at Station C "disappeared", it was already dropping in quantity, and was starting to smell and taste stale. Had he been alert, he would not have been caught by surprise.

Adapt Quickly. There is always New Cheese out in the Maze.

- The faster you let go of your Old Cheese, the sooner you can find and enjoy New Cheese.

- In fact, if you wait too long, you may be too late and become extinct. People who are unaware of changing job requirements, or are unwilling to adapt, may find themselves being fired or laid off. Many established business that refuse to accept changes have also become obsolete.

Overcome Fear. Keep things simple like Sniff and Scurry, so you can change and shift easily. Don't overanalyze things and become paralyzed by fear.

- Often, we're in denial or are unaware of our own fears. Ask yourself, "*What would I do if I wasn't afraid?*"

- Learn to *laugh at yourself* and your mistakes. Have fun and enjoy the adventure.

- *Focus on the New Cheese* you can gain, rather than the Old Cheese you have lost or can lose.

Leading Change. Instead of trying to cope with the rat race and manage your workload, consciously plan for and lead change.

- Paint a *vivid picture* of the New Cheese and share it with your team.

- *Manage all 4 types of characters*: (i) Use *Sniffs* to identify changes, (ii) use *Scurrys* to get things done with guidance, (iii) help *Haws* to overcome their initial scepticism, embrace the vision and open up to new possibilities, and (iv) convert *Hems* to Haws through a clear vision and showing them how others are also making the change. However, there'll always be some Hems who choose to play victims and blame others, and you should be prepared to let them go.

KEY QUOTES

"Noticing small changes early helps you to adapt to the bigger changes that are to come."

"Smell the cheese often so you know when it is getting old."

"What you are afraid of is never as bad as what you imagine."

"The fastest way to change is to laugh at your own folly – then you can let go and quickly move on."

"When you see how it can make things better, you get more interested in making the change happen."

"The biggest inhibitor to change lies within yourself, and... nothing gets better until you change."

- *Share this story* to facilitate discussions about change (e.g. which character(s) people relate to, what are their Old vs New Cheese), and shift attitudes toward change (no one wants to be Hem!).

Other Details in the Book to Look out For

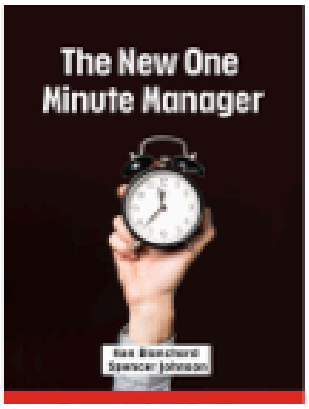
This is a short and easy to read story, that can be easily shared with others. For more details, training and learning product information, please visit www.whomovedmycheese.com.

About the Author

Spencer Johnson, MD is one of the most admired thought leaders andwidely-read authors in the world. Called "The King of Parables" by USA Today, Dr. Johnson is an expert intaking complex subjects and presenting simple solutions that work. Besides his book, he is also the co-author of best-selling book, "The New One-Minute Manager.".

His brief books contain insights and practical tools that millions of people use to enjoy more happiness and success with less stress. For more details, visit, www.spencerjohnson.com.

KEY QUOTES



THE NEW ONE MINUTE MANAGER

KEN BLANCHARD &
SPENCER JOHNSON

The Big "So What

In this updated version of the bestselling book, *The One Minute Manager*, the authors share 3 important secrets that will help you to concurrently get better results, have more time, and empower the people around you to be more effective and fulfilled. Apply these powerful tips to both your work and personal life, to enjoy a happier and more fulfilling life.

Introduction

This book retains the core ideas from the original bestseller, *The One Minute Manager*, with updates to reflect the changes in attitudes and priorities at the workplace over the last 35 years. In particular, the pace of change has increased rapidly. People are also no longer content to just trade time for money in a job, and to find fulfilment during off-work hours. Instead, people seek satisfying jobs where they can make meaningful contributions, feel engaged and appreciated.

Similar to the original book, the authors use a fable to illustrate the key ideas. The story is about a smart young man, who has been looking all over the world for a great manager to work for and learn from. He finds that most companies are either results-driven (focusing on profits and targets at their people's expense), or people-driven (taking care of their people to the point that organizational objectives are not met). He finally finds a great manager - who is known as the "New One Minute Manager", or "New OMM" for short in this summary. The New OMM

- Has found the secret formula to concurrently achieve results for the company, and fulfilment for his team; and
- Is able to adapt his techniques to keep up with rapid changes.

KEY QUOTES

"We trust you'll consider using the Three Secrets you'll discover...you and the people you work and live with will enjoy healthier, happier, and more productive lives."

"In these changing times... the most effective managers manage themselves and the people they work with so that both the people and the organization profit from their presence."

"Just as the world has changed, so has the One Minute Manager. He has a new, more collaborative approach to leading and motivating people."

By interviewing the New OMM and his managers, the young man discovers the 3 Secrets of the New OMM, is eventually offered a job, and becomes a New OMM himself. In this summary, we'll present the key components of the 3 Secrets.

The Three Secrets of the New One-Minute Manager®

Let's zoom in on the 3 secrets of the New OMM.

Secret #1: "One Minute Goals"

One common problem in organizations is the lack of clearly defined roles and responsibilities. In order for people to be effective:

- They must know exactly what their goals are and what success looks like; and
- This definition must be shared between the staff and supervisor.

To use One-Minute Goals effectively:

Develop the goals with your staff. Listen to them, show them what it means to perform well, and discuss the goals together. Do *not* set goals for people.

One-minute goals. Zoom in on the 3-5 most vital goals and have your staff write them out – including what needs to be done and by when – on *1 page*.

- o *Focus on the 20%* that will deliver 80% of the results.
- o The goals and performance standards must be presented succinctly (in, say, 1-2 paragraphs) and *can be read in 1 minute* or less.
- o *Share the goals* so everyone is aligned.
- o Goals for special projects, if any, should be documented with separate one-page goals.

KEY QUOTES

"To succeed sooner, managers must be both results-oriented and people-oriented."

"Many managers assume wrongly that the people on their team know what to aim for."

"(The) Manager makes sure we know what good performance looks like because he shows us. In other words, expectations are clear to both of us."

This paves the way for you to apply the other 2 secrets of the New OMM: to praise people when they do something right, and *re-direct* them when they are off-track.

Secret #2: "One Minute Praisings"

Most people don't know how they are performing, nor how they can improve. Often, managers wait until the annual performance review to provide feedback – by then, there're too many incidents or issues to be addressed in specific, actionable detail.

Once you notice a staff doing something right, offer your one-minute praise:

Share your praises (30 seconds). Share your positive feedback as soon as you can:

- Tell them specifically what they did right
- Share how good you feel about their actions, and how they contribute to the goals, team and/or organization.

Pause for a short while. Allow your staff a moment to take in the praise and feel good about their actions.

Affirm your staff (30 seconds). End off by reminding them of your confidence in them, assuring them of your support, and encouraging them to keep up the great work.

This secret is so powerful because it helps your staff to achieve small wins and successes, which make them feel good about their work, and help the organization to achieve its goals. Specifically:

Your staff are receiving immediate feedback (rather than waiting for a performance review), and it gives them **confidence** to do more of what works;

Your specific feedback shows that you're aware of your staff's efforts and sincerely care about their work. This makes them feel **appreciated;** and

As a manager, you become more **consistent** in offering timely, positive feedback based on good behaviours (rather than your mood). Over time, your staff will learn the desired behaviours, and can even affirm themselves.

KEY QUOTES

"The more we understand why something works, the more apt we are to use it."

"Help people reach their full potential. Catch them doing something right."

However, for this technique to work, the praise must be deserved and sincerely-delivered.

Don't wait for 100%. Recognize that people can't become perfect overnight, and we should be ready to praise and affirm people when they achieve progress and near-successes.

Use smaller-goalposts for newbies. For new staff, it's vital to set smaller targets that can be achieved more easily, and affirm each small win. It's like encouraging a child who's learning to walk or speak - we don't expect them to walk or speak perfectly from the onset; instead, we're genuinely excited with every small progress that they make. Set people up to win.

Secret #3: "One Minute Re-Direct"

What happens when people make mistakes or do something wrong? Similar to the one-minute praising, the key is to provide feedback as soon as possible, using the "One-Minute Re-Direct".

In the previous version of the book, this was known as the "One Minute Reprimand". However, in today's fast-moving environment, what worked well yesterday may have become redundant today, and people expect more appreciation and fulfilment at work. The One-Minute Re-Direct is more effective for framing the feedback as a way to help people see different perspectives or solutions.

Once you're aware of a mistake, quickly check if the goal is clear; if not, start by clarifying it. Then, apply the One-Minute Re-Direct:

Address the mistake (30 seconds). Share your feedback as soon as possible:

- Verify the facts, and review specifically what didn't go well.
- Share how you feel about the mis-step, and how it affects the goals, team and/or organization.

Pause for a short while. Allow the message to sink in and give the staff a moment to feel the implications of their mistake.

Affirm the staff (30 seconds). End off by affirming your belief and trust in your staff. Let them know that you still think highly of them as individuals (i.e. they are better than the slip-up), you're confident they'll not repeat the mistake, and you're glad to have them on your team.

KEY QUOTES

"The key in the beginning... is to catch somebody doing something approximately right until they can eventually learn to do it right."

Re-directs need to be delivered with respect and genuine concern for the other person; otherwise they can backfire.

Remember that your goal is to **build people up and enable change,** so they will do the right things in future. Hence, it's important to end on a positive note. You want people walking away from the interaction thinking how they can do better, rather than feeling angry and indignant.

Separate the action from the person. People who are defensive do not learn from their mistakes; they will simply deny the fault, or blame others. Your goal is *not* to put people down. Be hard on the mistake or behaviour, but be gentle on the individual and preserve their self-worth.

This principle should be applied to the New OMM too – **when you make a mistake, admit to it quickly.** In fact, you can even ask your staff to point out your mistakes, and learn to laugh at yourself and your faults.

Don't hold on to past mistakes. **Once a re-direct is done, move on** and look head. However, if someone continues to make the same mistakes, despite several redirects, the New OMM needs to step back and assess the situation objectively (removing emotions from the evaluation). If it's clear that the person is *able* to do the job but *refuses* to do it, then it may warrant a decision to remove him/her from the team.

Putting it Together

A Collaborative Approach

The New OMM approach is about collaborating with, and helping, your team members to deliver great results on their own, so the organization can perform and adapt in a fast-moving environment at all levels. Here are some important principles behind the approach.

Heavier upfront investment. Initially, when people are new and inexperienced, the New OMM must invest more time to guide them – observe their work, highlight what's right, and show them how to make great decisions. The earlier people can get feedback, the faster they can learn. Once people function effectively, the New OMM can gradually let go.

KEY QUOTES

"Reaffirming them after you've addressed the mistake focuses on their behaviour without attacking them personally."

"We are not just our behaviour. We are the person managing our behaviour."

"Since speed is a currency of success now, leading with collaboration is far more effective than the old command-and-control system."

"The best minute I spend is the one I invest in people."

Facilitation. The New One-Minute Manager meets his team once a week. Here, the team goes through their accomplishments for the previous week, sets out what must be done next, and how. The New One-Minute Manager's role is to *facilitate* staff learning and decision-making (not to instruct or direct). Team members are responsible for making sound decisions and following up on them. Unlike a top-down approach, this allows people to handle problems effectively as they arise, rather than depend on their manager for direction.

Feeling great about work. If people are an organization's most valuable resource, it's important to dedicate time and resources to developing people (not just improving salaries, technology or hardware). The end-goal is to help people to become great at solving problems, delivering results independently, and feeling good about it – this is when people thrive and produce the best results.

Focus on the core and adapt. Obviously, each of the secrets may not be implemented in exactly 1 minute, and the New OMM must constantly adapt to stay relevant. The key is to refocus on key goals using the 80-20 rule, and give timely and specific feedback so you and your team can stay ontrack to deliver results that matter.

Why The 3 Secrets Work

Goal setting and performance management in most organizations are like playing bowling with a blindfold on. If you can't see the pins, you don't really know where to aim. If you can't see where your ball lands or which pins you've hit, it's hard to improve or stay motivated. The New OMM approach is akin to removing the blindfold, so everyone can see the pins immediately, and the managers can coach the players to improve.

Obviously, it will be ideal to hire star players, give them their 1-page goal and have them score 100% all by themselves. Unfortunately, such people are rare and expensive to hire. On the other hand, it's also ineffective to hire average people, leave them alone and hope that they'll miraculously deliver outstanding results.

The best way is to hire people with potential, and methodologically coach them to become star players. The One-Minute Goals give people a *clear target* to aim for, and the One-Minute Praisings and

KEY QUOTES

"People who feel good about themselves produce good results."

"It often takes only a minute to refocus on goals and give people important feedback on how they're doing."

"Rather than punish inexperienced people who are still learning, we need to re-direct them."

One-Minute Re-Directs help them with *progressive* course-correction, until they have the knowledge and skills to achieve stellar performance

By jointly setting clear goals, and giving specific feedback in small doses, you enable people to do more of what is right, and stop mistakes as early as possible (rather than accumulate all the negative behaviours and dumping them at the end of the year). When people succeed, feel confident and affirmed in their work, they will push themselves to do even better. The 3 secrets of the New OMM allow you to concurrently focus on people *and* results, so both the staff and organization win.

Remember: people work for themselves not for you as the manager. Your true goal is to empower people to self-manage *and* feel good about it, so you need not manage them. That way, you'll free up your own time to plan and improve your own results, enjoy less stress and more time for yourself and your loved ones, and positively impact others to enjoy greater success and fulfilment.

KEY QUOTES

"Performance review should be an ongoing process, not something you do only once a year."

"Your job is to show people how to manage themselves and enjoy it. You want them to succeed when you're not around."

Other Details in the Book to Look out For

This is an extremely easy-to-read book, presented in a short story that anyone can identify with. Although the ideas are simple, they have remained relevant after 35 years, and are practical and easy to apply in our hectic workplace.

If you enjoy the ideas in this summary, do get a copy of the book or get more tips and ideas from http://newoneminutemanager.com. Do also share the posts and tips provided on their website.

- Don't seek to beat others; seek to beat yourself. Never be satisfied with your results; continuously push yourself to do even better tomorrow.

Scroll IX: "I will act now."

Big dreams and goals are useless if they're not backed by real action. Your actions may not bring instant results, but without action there'll definitely be no results.

Your actions will determine the value you create. To multiply your value, multiply your actions.

The best way to overcome your fear is to take action in spite of it. Remind yourself repeatedly "I will act now". When you face rejection, take action to knock on the next door immediately. When you feel like procrastinating, take action now instead. When you face a distraction, take action to move away from it right away.

Scroll X: "Pray to God for Guidance"

Regardless of our religious beliefs, all of us instinctively pray for help when we're desperate.

Don't pray for material things or rewards. Instead, pray for guidance on how to achieve your goals.

Scroll X ends with a salesman's prayer. Use it to seek guidance to develop your abilities and tap on opportunities, to stay courageous in face of challenges and your weaknesses, to stay humble despite success, to have the discipline and persistence to keep trying, to develop good habits, be grateful and fulfill your true potential.

Other Details in the Book to Look out For

Mandino has carefully worded the original text in each of the 10 scrolls to help readers to grasp the meaning behind the principles. According to Mandino, the key to success is to read each of the 10 scrolls in sequence, 3 times a day for 30 days each. To download the scrolls and get more details and resources, please visit www.ogmandino.com.

KEY QUOTES

"To surpass the deeds of others is unimportant; to surpass my own deeds is all."

"Only action determines my value in the market place."

"Action is the food and drink which will nourish my success."

THE 5 SECOND RULE

Transform Your Life, Work, and Confidence with Everyday Courage

Mel Robbins

The Big "So What"

This book presents a simple but powerful method to take decisive action, build confidence and courage, and achieve success in any area of life, 5 seconds at a time.

Unleashing Potential with the 5 Second Rule

The 5 Second Rule is a straightforward tool designed to combat doubt, fear, and hesitation. The Rule is simple: Once you have an impulse to act on a goal, you must push yourself to act within 5 seconds, before your brain has the chance to kill the idea.

- This rule operates as a *metacognitive tool*, tricking your brain into executing something you know you should do, but typically avoid.

You can use the Rule for virtually any aspect of your life. The key is to stop over-thinking and start taking action.

- By the time this book was published, more than 100,000 people globally had already benefited from the Rule. Robbins shares many *social media excerpts and testimonials* to show how you, too, can use the rule to:

  (i) Improve health and wellness, e.g. going the gym or resisting junk food;

  (ii) Advance your career aspirations, e.g. seizing opportunities to improve your skills/network, or asking for pay raise;

  (iii) Improve productivity and results, e.g. stop procrastination, finish a degree, or improve your financial situation; and

KEY QUOTES

"If you're searching for that one person who will change your life look in the mirror."

"You change your life one five-second decision at a time."

"I was the problem and in five seconds, I could push myself and become the solution."

"Change comes down to the courage you need every day to make five second decisions."

(iv) Improve emotional regulation, e.g. calm down instead of snapping at others, stop excessive worrying, quit drinking, or manage depression.

- In *this summary*, we will start by explaining the 5 Second Rule, before elaborating on how to apply it to transform your life.

How Did The 5 Second Rule Come About?

Mel Robbins discovered the 5 Second Rule during a low point in her life, when she was struggling with financial troubles, a failing marriage, and career problems. She was filled with self-doubt and anxiety, and struggled to get out of bed each morning.

- One night, she saw a *rocket launch countdown* in a commercial, and felt inspired to adopt a similar approach to propel herself out of bed.

- The next morning, she *counted down "5-4-3-2-1"*, then pushed herself out of bed. She soon found that the method also worked consistently to overcome inertia, fear, or hesitation in other aspects of her life. This became the now-popular "5 Second Rule".

Overthinking makes even the smallest action—be it speaking up at a meeting, asking for help, or saying "no"—seem scary and difficult. In face of a challenge, your response in the first 5 seconds can decide whether you hold back or take positive steps toward your goals.

- By pushing you to take action, the Rule helps you to learn new things about yourself and unleash your inherent potential. The more you take action in spite of your fear and doubt, the more confident you become, and the more it builds your propensity for action, creating a *virtuous cycle*.

- By contrast, the more you succumb to your fears and excuses, the more it reinforces your sense of inadequacy or self-doubt, holding you back in a *vicious cycle*.

KEY QUOTES

"When it comes to change, goals, and dreams, you have to bet on yourself. That bet starts with hearing the instinct to change and honoring that instinct with action."

"The Rule will work every time you use it. But you have to use it."

"Pushing yourself to take simple actions creates a chain reaction in your confidence and your productivity."

Scientific Foundations of the 5 Second Rule

When and how do you use the 5 Second Rule? Use the Rule whenever you feel the impulse to do something you know is good for you, yet feel uncertain or hesitant about. Just count backward "5-4-3-2-1-GO". The moment you hit "GO", act immediately.

Some people dismiss the 5 Second Rule because it seems too simple to be useful. Yet, this Rule is backed by science.

- It's human nature to *avoid risk and change*. Given a chance, the brain will generate excuses to maintain status quo, and such thoughts grow louder with time. So, the key is to push yourself to take action *before* the fear-laden thoughts even begin.

- *The counting is crucial* to keep your mind focused on the task at hand, so it doesn't get the chance to start conjuring objections and hurdles. Having said that, counting forward doesn't work, as the numbers can run in perpetuity. You must count backward, so there's a finite end-point when you hit "1".

- It doesn't matter how you feel at the end of the countdown. Just act regardless, because the first step will *generate a chain reaction*.

  (i) When you take physical action, your physiology changes, and excuses melt away. The more you take action, the more confident and productive you feel. The small steps accumulate to create a *massive compound effect*. You feel more in control of your life, which gives you even more motivation to keep going.

  (ii) Over time, you form *new habits* with a bias for proactive action. Instead of getting paralyzed by analysis, or reacting passively to circumstances, you become more proactive and open to try new things.

- In psychology, the "*Golden Rule of Habits*" says that to change any habit, you must replace one behavioral pattern with another. The best way to counteract hesitation is to use it as a cue for action. Use it to concurrently:

KEY QUOTES

"The Rule doesn't make things easy; it makes them happen. That's why I describe it as a tool."

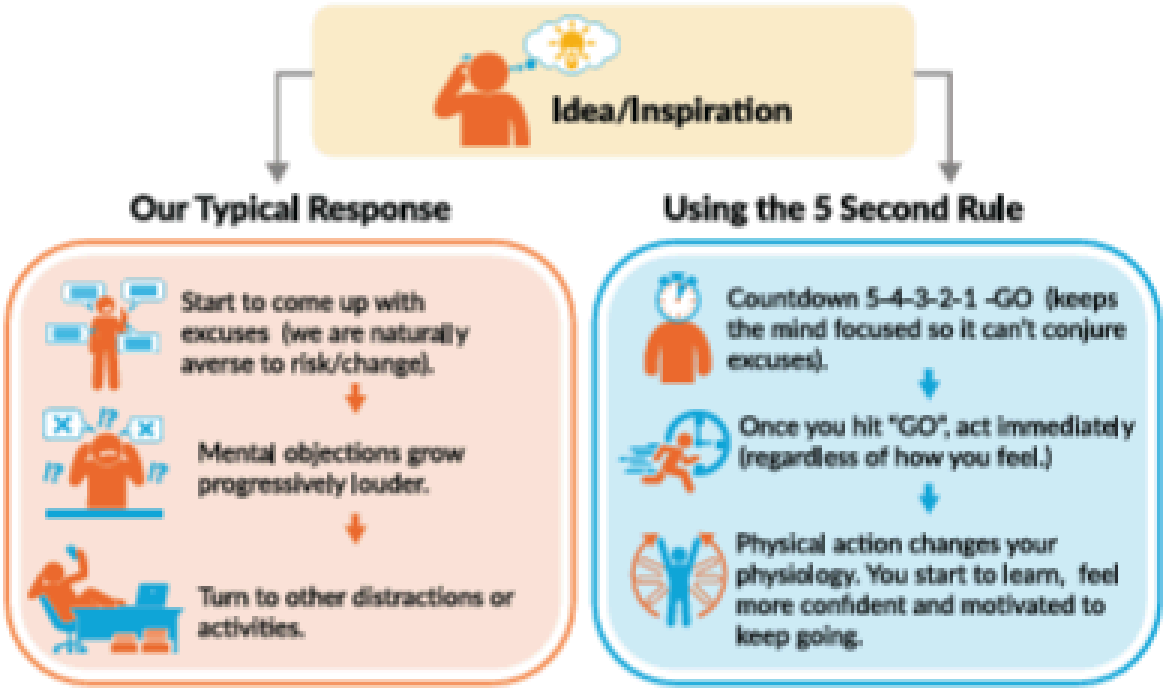
"Start before you're ready. Don't prepare. Begin."

"Starting rituals interrupt your bad default patterns and trigger new, positive patterns."

(i) Break old habits of procrastinating, overthinking, or giving in to self-doubt and fear; and

(ii) Build new habits of taking action in spite of uncertainty.

- As you use the countdown system repeatedly, you are essentially *reprograming your mind*.



Transforming Your Life, 5 Seconds at a Time

At first glance, the 5 Second Rule sounds similar to Nike's "Just Do It" slogan. However, "Just Do It" is a concept or a philosophy, whereas the Rule is a tool to push yourself to do what you need to do. It concurrently serves as a framework, a method, and a source of courage.

"Change your decisions and you'll change your life. And what will change your decisions more than anything? Courage."

The Power of Courage

Courage doesn't have to involve monumental actions or changes. It could involve simple acts like writing a book, asking for a pay raise, quitting drugs, or approaching someone attractive. In fact, small daily actions can lead to big changes.

- For example, Rosa Parks, a seamstress from Alabama, became a central figure in the American civil rights movement. On December 1, 1955, after a long day at work, Parks boarded a city bus and sat in the section designated for colored passengers. As the bus filled up, the driver demanded that

"Every single day we face moments that are difficult, uncertain, and scary. Your life requires courage. And...the Rule will help you discover the courage to become your greatest self."

KEY QUOTES

"If you master the Rule you will reprogram your mind. You will teach yourself new behavior patterns."

she give up her seat to a white passenger. Parks refused and was arrested. Her act of defiance led to the formation of the Montgomery Improvement Association (led by Martin Luther King Jr), and galvanized the civil rights movement.

- Both Parks and King emerged as icons of the movement. They acted on spontaneous impulses to resist injustice, without prior planning. Had they considered the risks, their resolve might have wavered.

All of us have experienced similar moments when we feel a strong urge to act, whether it's reaching out to a friend in need, speaking up in a meeting, or embarking on a meaningful project. Yet, we hold back.

- The 5 Second Rule empowers us to *overcome this hesitation*. It spurs action that can lead us down a totally different path than if we had remained passive.

There's no "perfect time" to act. The right time to act is now.

- Consider these *2 examples*:

  (i) Michelangelo is renowned for painting the Sistine Chapel. Yet, when he was approached by the Pope in 1506, he initially rejected the project and fled to Florence out of self-doubt. He only started the job after 2 years of persistent requests by the Pope.

  (ii) In 1977, Steve Jobs and Steve Wozniak received an investment offer to launch Apple Computers. Wozniak was initially too scared to quit his job, and only made the leap after strong encouragement from Jobs, friends, and family.

- By hesitating, *what opportunities are you missing?* Don't waste your life waiting for the perfect moment. Your biggest regrets are more likely to come from inaction than from failed actions. Ask yourself: What are you waiting for? What if your concerns are wrong? And, even if your fears came true, so what?

Ultimately, success is a numbers game. The more you do something, the more likely you'll succeed.

- Your actions might not guarantee success, but inaction ensures failure. *Keep moving forward* until you arrive at your goals. For example:

KEY QUOTES

"Courage is found in unlikely places."
– J.R.R. Tolkien

"I have learned over the years that when one's mind is made, this diminishes fear; knowing what must be done does away with fear."
– Rosa Parks

"If you have the courage to start, you have the courage to succeed."

"There is no right time. There is only right now. You get one life. This is it. And it's not going to begin again."

"The only thing that will quiet the chatter in your head is a decision to move."

"When you push yourself, you may not change the world… but I can guarantee you'll change something equally as important—you'll change yourself."

"The difference between people who make their dreams come true and those of us who don't is just one thing: the courage to start and the discipline to keep going."

(i) Mobile game developer Rovio launched 51 unsuccessful games before hitting a home run with Angry Birds.

(ii) Actor Mark Ruffalo auditioned for almost 600 roles (without being hired) before he landed the lead role in the Avengers.

(iii) James Dyson created 5,127 prototypes before he arrived at the design for his iconic vacuum cleaner.

(iv) Picasso is famous for 100 art masterpieces, but he actually created >50,000 art pieces in his lifetime, most of which were not considered to be masterpieces.

Taking Action Regardless of How You Feel

Neuroscientist Antonio Damasio found that 95% of our decisions are driven by emotions, not logic.

- When we make a decision, we're actually asking "*Do I feel like doing this?*", not "Should I do this?" Change is so hard because our feelings tend to get in the way, even if we know logically that it's good for us.
- The 5 Second Rule effectively separates *emotions from actions*, pushing you to act despite your feelings.
  (i) If you feel too tired to go to the gym, just 5-4-3-2-1 and do it anyway.
  (ii) If you feel like your idea isn't good enough, just 5-4-3-2-1 and share it anyway.
- It takes more energy to get out a state of inertia than to keep moving. Once you take action, it generates a burst of *activation energy* that makes it easier to keep moving ahead. In the process, you generate even more momentum.

The best way to start applying the Rule is to set your alarm 30 minutes earlier than usual, then use the 5-4-3-2-1 countdown to get out of bed immediately.

- *This is effective because*:
  (i) There's no grey area: you're either up 30 minutes earlier, or not.

KEY QUOTES

"Courage is the commitment to begin without any guarantee of success."
– Johann Wolfgang Von Goeth

"If you only act when you feel like it, you will never get what you want."

"Whether you think you can or you can't, you're right."
– Henry Ford

"You can't control how you feel. But you can always choose how you act. Confidence is a skill that you build through action."

"That's how confidence grows—one small, courageous move at a time."

(ii) Once you change your morning routine, it gives you the confidence to change anything in your life.

(iii) You'll personally experience the power of activation energy, and realize how easy it is to keep going once you're on the move.

- Next, you can *apply the Rule in 3 transformative ways* to:

(i) Change habits and behaviors;

(ii) Master your mind; and

(iii) Act with everyday courage.

Changing Habits and Behaviors

You can use the Rule to break negative habits and form positive habits, such as improving your health, boosting productivity, and overcoming procrastination.

Improving health: Most diet or exercise programs work if you take consistent action. Unfortunately, most of us take action only when we feel like it.

- Set a *personal health goal*, whether it's running a marathon, daily pushups, reducing sugar intake, or going for a health checkup. Then, use the 5 Second Rule to push yourself to take action regardless of how you feel. For example:

(i) 5-4-3-2-1-GO and choose a healthier snack: turn away from the donut and pick up a piece of fruit instead;

(ii) 5-4-3-2-1-GO and start your home workout, such as pushups, sit-ups, or jumping jacks; or

(iii) 5-4-3-2-1-GO and plan your meals for the day, ensuring they're balanced and healthy.

- Usually, the hardest part is to *get started*. After you take your first step, just keep going and you'll see massive results.

The 5 Second Rule also helps to improve your productivity by achieving 2 types of focus:

KEY QUOTES

"When you act with courage, your brain is not involved. Your heart speaks first and you listen. The Rule will teach you how."

"To reach your potential, you'll have to push yourself—there is no other way."

"Stop thinking about how you feel. Your feelings don't matter. The only thing that matters is what you DO."

"Exercise and health comes down to one simple rule—you don't have to feel like it. You just have to do it."

- *Eliminate distractions* to concentrate fully on the task at hand. Once you notice a distraction, start the countdown to remove it.

- *Direct your focus to what's truly important*, not on menial tasks and time-wasters. The best way to do so is to establish a *morning routine*: set your intentions and get crystal-clear on your most important tasks for the day. Robbins' routine goes like this:

  (i) Get up when the alarm rings; don't snooze. Scientists found that hitting the snooze button can make you feel tired for hours, because you're start a new sleep cycle (which usually lasts 90-110 minutes) then interrupting it.

  (ii) Put your alarm in the bathroom so you must get up to turn it off. As you brush your teeth, focus on the big things to do that day to make progress on your personal goals.

  (iii) Wake up 30 minutes earlier to plan out your day. Write down the top 3 "musts" for the day and why they're important for you. Ideally, start working on the items right away, or schedule them for later in the day. Don't start replying to emails or messages until you get to the office.

  (iv) Plan out when you'll stop working and take time to recharge yourself.

The 5 Second Rule is the perfect weapon to fight procrastination.

- *Strategic procrastination* can be helpful for creative processes—where you set aside a project temporarily to allow fresh ideas to surface.

- However, it's often destructive when you avoid something that needs to get done. We procrastinate not because we're lazy or undisciplined, but as a coping mechanism. By avoiding work to shop online or watch a video, we're seeking *temporary stress relief* and getting a boost of feel-good dopamine. Ironically, this only creates more stress as our work builds up.

- Use the 5 Second Rule to *battle destructive procrastination*:

  (i) Stop beating yourself up for procrastinating so you can move forward. Do a countdown and forgive yourself.

KEY QUOTES

"Interruptions of any sort are the kiss of death for your productivity."

"Nothing will work unless you do."
—Maya Angelou

"You'll either find a way or you'll find an excuse."

(ii) Visualize your future self—someone successful and productive—and ask, "What would my future self do?" Then 5-4-3-2-1-Do it.

(iii) Each time you feel yourself hesitating, do the countdown and just launch into the task.

Master Your Mind

The 5 Second Rule can be used to combat persistent anxiety, worries, and fear, to help you focus on things that bring you joy instead.

For 2 decades, Robbins relied on medication to manage her anxiety. After discovering the Rule, she could habitually redirect her thoughts to positive things, improving her confidence and mental control.

Worrying is futile as it often involves events that are unlikely to happen. In any case, worrying won't prevent or solve the issue.

- The moment you start worrying, use the Rule to *switch to positive thoughts*, like the things you're grateful for. The more you think about the great things in your life, the less time/energy you have to worry about imaginary worst-case scenarios, and the more you can enjoy each moment in your life.

You can also use the Rule to curb anxiety, which kicks in when your worries spin out of control.

- Anxiety can escalate into *panic attacks*, marked by adrenaline surges and a state of hyper-alertness, even though there's no real danger. In such a state, it's ineffective to tell yourself to calm down, as your mind is frantically seeking the cause of your anxiety.
- Instead, use the 5 Second Rule to regain control of your mind and *reframe the anxiety as excitement*. For example, if

KEY QUOTES

"Go the extra mile. It's never crowded."

"Rule your mind, or it will rule you."
—Horace

"When your mind takes you somewhere sad, dark, doubtful, or negative, you don't have to go with it."

"You are braver than you believe, stronger than you seem, and smarter than you think."
– A.A. Milne

you feel your nerves kicking in before a public speech, do a countdown the say, "I'm so excited to get out there and share my message!" This works because anxiety and excitement feel similar to your body. By labeling anxiety as excitement, you calm your mind and turn your stress into an advantage.

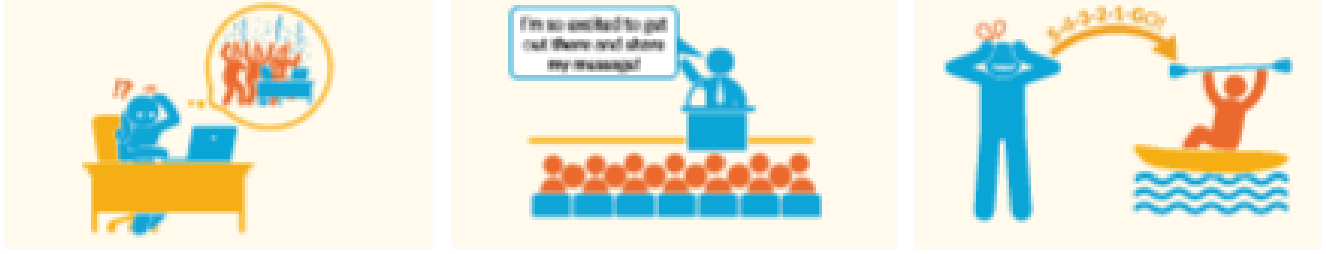
Use a similar approach to overcome fear, such as the fear of flying.

- Before a trip, *anchor an image* of what you're excited to do once you get there.

  (i) Once you feel nervous, use the 5 Second Rule to bring up the anchor image. Your brain will calm down once it interprets the fear as excitement.

  (ii) When you do this repeatedly, the brain will stop thinking of flying as a scary event, and you'd have conquered your fear.

Stop Worrying | **Curb Anxiety** | **Overcome Fear**



Act with Everyday Courage

The 5 Second Rule gives you the courage to face daily challenges, to help (i) increase your self-confidence, (ii) discover your passions, and (iii) enrich your relationships.

Confidence stems from self-belief, not personality traits. You can increase your confidence like any skill.

- According to psychologist Professor Brian Little, some personality traits are fixed, but many are adaptable to our goals and needs. Each time you use the Rule to do something that's "not like you", it gradually *shifts your self-perception*. For example, you might think you're not the type of person to talk to strangers. Yet, if you use the Rule to introduce yourself to 3 strangers daily, it shifts your perception of self.

KEY QUOTES

"It's okay to be scared. Being scared means you're about to do something really, really brave."

"All our dreams can come true if we have the courage to pursue them."
- Walt Disney

"Master your mind and anything is possible."

"The cave you fear to enter holds the treasure you seek."
– Joseph Campbell

"If you have the courage to take action, your confidence will follow."

"Confidence is created by the small things you do every single day that build trust in yourself."

- The more you use the Rule to practice acts of courage, the more you feel in control of your life, and the more confident you feel.

Use the Rule to actively explore your feelings, engage with topics that spark your interest, and progressively discover your passions.

- Notice what consistently draws your *curiosity or envy*, and pause to explore your underlying feelings and desires.
- Take some simple steps to *learn about the topic*, e.g. read up on it, watch some video tutorials, talk to people in that field, or take a class. Over time, you can learn enough to become an expert in a specific area.
- Often, discovering your passions starts with acting on an instinct, then building momentum one step at a time. At some point, you might decide to *make a real commitment* and turn your passion-project into a full-time career. The key is to have the courage to keep following your heart.

The 5 Second Rule also helps to enrich your relationships. Use the Rule to overcome fears of vulnerability or conflict, freeing yourself to express your thoughts/feelings and strengthen your relationships.

- *Don't leave important things unsaid*. Do a countdown, then speak your mind or reach out to connect with someone. The more openly and authentically you communicate, the more your relationships will deepen and grow.

Other Details in the Book to Look out For

The book is filled with testimonials and social media excerpts to show how people worldwide have been positively impacted by the 5 Second Rule. Th effects range from enhancing personal health/

KEY QUOTES

"The answers are inside of you if you have the courage to listen...It starts with listening to what's inside of you and ends with the courage to go where it leads."

"Don't tell people your dreams. Show them."

"An act of courage is always an act of love."
– Paulo Coelho

"Intimacy takes courage."

"Speak from your heart, even if your voice shakes."

wellness, to improving finances, career, emotional regulation, and even overcoming addiction. For more details, please visit melrobbins.com.

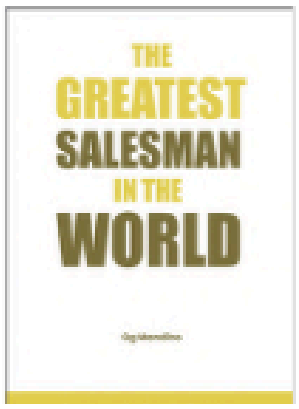
She started her career as a criminal defense attorney before launching her own retail and Internet technology company. Robbins is the author of several best-selling books. She now leads coaching programs for various global companies, and hosts several award-winning shows. Robbins graduated from the Dartmouth College and Boston College Law School.

KEY QUOTES



THE GREATEST SALESMAN IN THE WORLD

OG MANDINO

The Big "So What"

Through a fable about a poor camel boy who rose to success, this book lays out timeless principles for salesmanship and personal success that can be learned and applied by anyone.

Introduction

The story in the book centers around Hafid, a poor camel boy who became the owner of the most powerful trade empire of his time and was known as the greatest salesman in the world. The first half of the book is about how Hafid learned the art of salesmanship from a set of ancient scrolls, while the second half of the book presents the text from each of the 10 scrolls.

The scrolls cover broad success principles that have withstood the test of time. In this summary, we'll outline the story in the book, followed by the key ideas from each of the 10 scrolls.

The Story

Hafid was a camel boy working for Pathros, a successful trader in Jerusalem. He had fallen for Calneh, the daughter of a rich merchant and wanted to rise above his low-born station to win her hand.

- Hafid often heard Pathros saying that the best way to move from poverty to wealth was to become a salesman. So, he asked for Pathros' for permission to sell his goods.

- Pathros agreed to assist Hafid, but advised him that material wealth should never be the end goal—real wealth lies in the heart, in happiness, love and peace. He also cautioned Hafid

KEY QUOTES

"No other trade or profession has more opportunity for one to rise from poverty to great wealth than that of a salesman."

"Do not aspire for wealth and labor not only to be rich. Strive instead for happiness, to be loved and to love, and most important, to acquire peace of mind and serenity."

that becoming a great salesman would not be easy. Hafid would have to endure countless setbacks and the loneliness of traveling far from his loved ones.

Hafid's first task was to find a way to sell a fine, red robe in the poor village of Bethlehem.

- Before he left, Pathros left him with a parting advice: *If your will to succeed is strong enough, you will never fail.*
- After 3 days, Hafid still hadn't sold the robe and was starting to feel discouraged. However, he recalled Pathros' advice and his love for Calneh, and renewed his resolve to keep trying.
- Hafid returned to his cave to find that a couple had sought refuge there with a new-born baby. Seeing how thinly-clothed they were in the cold weather, he gave them the robe to keep them warm.

After he returned to Pathros' caravan, Hafid shared what had happened. He was surprised when Pathros did not reproach him, but took out a cedar chest containing 10 numbered scrolls.

Pathros shared that he, too, started out as a poor boy. He was given the chest of scrolls by a man he saved, and became successful only after he memorized and practised each of the scrolls until the words became a part of him and his daily habits.

He passed the chest and its scrolls to Hafid, with 3 conditions:

- To always follow the instructions in Scroll I;
- To share 50% of all earnings with the less fortunate; and
- Never to share the scrolls or their contents with others unless he received a clear sign that the person was the right successor for the scrolls.

Pathros himself had decided to pass the scrolls to Hafid after he heard what he did with the robe, and when he saw a bright star following Hafid back to the caravan that night.

KEY QUOTES

"True wealth is of the heart, not of the purse."

"Failure will never overtake you if your determination to succeed is strong enough."

"To become a master in the art of sales one must learn and practice the secret of each scroll. When one masters these principles one has the power to accumulate all the wealth he desires."

- Realize that success is a state of mind rather than a fixed destination, and all of us have different goals and definitions of success.

Learn to be patient. Success cannot be rushed. An onion plant may grow quickly but also ages quickly within 9 weeks. On the other hand, the king of trees (the olive tree) grows to maturity only in 100 years. Be patient in your quest for success; be like the olive tree, not the onion plant.

Don't worry if you do not have prior sales experience before today. In fact, many supposedly-experienced people are burdened by the wrong ideas, or fail to realize that an action that worked yesterday may no longer work today. The key is to go for principles that will withstand the test of time.

To succeed, the first step is to form good habits. We are slaves to our habits because they control how we act, and thus determine whether we succeed or fail.

- To change your habits, you must replace bad habits with good ones. Each of these scrolls contains a good habit that you can use to drive out the bad ones.

- The first habit to cultivate is to read the scrolls daily:

  i. Read the words in silence twice daily: when you wake up in the morning and after lunch. Then, read the words again aloud just before you sleep.

  ii. Start with Scroll I, read it daily in accordance with step (i) for 30 days then do the same for the next scroll until you have completed all 10 scrolls. No matter how simple or familiar the words appear to be, don't gloss over them and never skip even 1 day of reading.

- As you repeat the words daily, they will become firmly imprinted in both your conscious and subconscious minds, and you find yourself feeling more confident, enthusiastic and energized. These positive outcomes will make it increasingly easy to continue your daily actions until a firm habit is formed.

KEY QUOTES

"Experience is comparable to fashion; an action that proved successful today will be unworkable and impractical tomorrow."

"When an act becomes easy through constant repetition it becomes a pleasure to perform and if it is a pleasure to perform it is man's nature to perform it often. When I perform it often it becomes a habit and I become its slave and since it is a good habit this is my will."

Scroll II: "I will greet this day with love in my heart."

Approach everything and everyone with love, as it can be a powerful weapon and shield.

Perspective. Look at everything around you with love. What seems to be "bad" is never truly so. For example, you can't see the stars without darkness and you can't grow without obstacles.

Interactions. When you interact with others, hold back your criticisms and gossips, and amplify your praises and encouragement.

- Love can bring down walls of distrust and hatred—when you extol your enemies, they can become your friends.

- Act as if everyone has great qualities, even if you can't see them. Whenever you meet someone, silently say "I Love You". This will change your mood, your expressions, and your demeanour, which will affect how others respond to you.

Most of all, love yourself. It can make you a greater person and protect you from negative events and feelings (e.g. anger and hate).

- Look after your physical body;

- Take care of your mental health by filling your mind with knowledge and wisdom rather than negative thoughts;

- Enrich your soul with meditation and prayer (not pride or complacency); and

- Let go of hatred; enlarge your heart with warmth and love.

KEY QUOTES

"My reasoning they may counter; my speech they may distrust; my apparel they may disapprove; my face they may reject; and even my bargains may cause them suspicion; yet my love will melt all hearts liken to the sun whose rays soften the coldest clay."

"Just as love is my weapon to open the hearts of men, love is also my shield to repulse the arrows of hate and the spears of anger."

Scroll III: "I will persist until I succeed."

No matter what life throws at you, if you keep pushing ahead, you will eventually succeed. If you persist long enough, you will always win. Be like the lion, not the sheep waiting for the slaughterhouse.

Small, repeated actions add up over time to deliver big results. Keep taking 1 additional step at a time until you succeed.

- Realize that the big rewards usually lie at the end of a journey, and you may be just 1 step away from success. Don't stop.
- Remind yourself that by the law of averages, each step that brings failure/rejection also increases the chances of the next step bringing success.

Tomorrow is a brand new day with a fresh start. No matter how bad a day you've had, always end it on a positive note by planting the seeds for success the next day. No matter how successful you've been in the past, never become proud or complacent.

Scroll IV: "I am nature's greatest miracle."

You are unique—there's no other being in this world that looks, thinks and acts exactly like you. Develop your distinct approach as a salesperson, to leverage fully on your unique characteristics, skills and assets.

Human beings only use a fraction of our brain and muscles, and there's always potential to improve. Don't be content with what you've accomplished so far, as you can achieve even more.

Specifically, to multiply your results in sales, you must increase your knowledge of people, yourself and your products/services, as well as refine your communication skills and mannerisms.

Learn to focus your energy fully on the present moment and the task at hand. When you're selling, don't be distracted by your personal problems. When you are at home, don't be distracted by work/sales.

KEY QUOTES

"If I persist, if I continue to try, if I continue to charge forward, I will succeed."

"When others cease their struggle, then mine will begin, and my harvest will be full."

"I am rare, and there is value in all rarity; therefore, I am valuable."

"There is no room in the market place for my family, nor is there room in my home for the market. Each I will divorce from the other and thus will I remain wedded to both."

Be like Nature: constantly rejuvenate yourself. Treat all failures, problems and pain as opportunities in disguise. With each challenge you overcome, the next one will become easier to handle.

Scroll V: "I will live this day as if it is my last."

The past is over and the future has not arrived. You only have the present moment to act—make the most of every day, as if it is your last.

Don't waste time or energy on regrets or dwell in past failures. You cannot turn back the clock nor return to the past to change things. At the same time, don't waste time or energy worrying about what could happen in the future as they may not come to pass. Your life is measured by your time on earth. When you waste time, you're essentially wasting your life.

Be grateful that you're alive today and can still use this time to fulfill your goals or purpose, be it to spend quality time with your loved ones or serve others. Treat each day as if it is your last, use it to the fullest and make each moment count.

Scroll VI: "Today I will be master of my emotions."

Nature moves in cycles, from the tides to the seasons. Likewise, our moods constantly shift between good and bad, high and low.

Don't let your moods and thoughts control you and your actions. Instead, learn to master your emotions.

- There's always something you can do to manage your feelings, e.g. listen to uplifting music when you're sad, recall past successes when you're discouraged, or remember your failures when you're overconfident.

- Ask yourself: how should you feel in order for your day to be happy and productive? Then, master your emotions accordingly. Your clients are more likely to respond positively to you when you bring enthusiasm and laughter, than when you bring lethargy and gloom.

KEY QUOTES

"This day is all I have and these hours are now my eternity."

"I will waste not a moment mourning yesterday's misfortunes, yesterday's defeats, yesterday's aches of the heart, for why should I throw good after bad?"

"I have but one life and life is naught but a measurement of time. When I waste one I destroy the other."

"Like the tides, my moods will rise; my moods will fall."

"Weak is he who permits his thoughts to control his actions; strong is he who forces his actions to control his thoughts."

"I will master my moods through positive action and when I master my moods I will control my destiny."

Learn to empathize with others, i.e. recognize and understand how other people are feeling, and avoid judging others based on first impressions. Realize that others have their mood shifts too. Someone who's angry or unpleasant today can be a friendly, approachable client tomorrow.

Scroll VII: "I will laugh at the world."

Laughter is truly the best medicine. Laugh often to release stress, improve your health, and feel happier.

Laughter helps to cut things down to size. It makes big problems look smaller, and reminds us that our successes are not as inflated or as important as we think.

Learn to laugh at yourself. Whenever you start to take things too seriously, step back and consider if that incident or concern will still seem as significant 10 years or 100 years later. This will help you to realize how trivial most of your worries are.

Our feelings (heartaches, exhilaration), financial wealth and successes, and even physical assets, are all impermanent. Constantly remind yourself that "This too shall pass". When you're suffering, remind yourself that the pain and heartache will pass. When you're happy, enjoy the moment as you can't store that moment and it too, shall pass.

Scroll VIII:"Today I will multiply my value a hundredfold."

Find creative ways to create immense value. Wheat can be fed to the pigs, made into flour and bread, or planted for future harvests. Each option takes different time and effort, but also produces different results. Low-value items like clay and wool can be used ingeniously to create castles and fine garments that are worth hundreds or thousands of times more.

Set high daily, weekly, monthly, yearly and life goals.

- Push yourself to improve by setting high goals that are 100x of your best performance in the past. Setting such high goals means that you'll face lots of failures, but you'll also end up achieving much more than if you set a lower goal.

KEY QUOTES

"To enjoy success I must have happiness, and laughter will be the maiden who serves me."

"So long as I can laugh never will I be poor."

"Is it not better to aim my spear at the moon and strike only an eagle than to aim my spear at the eagle and strike only a rock?"

- Don't seek to beat others; seek to beat yourself. Never be satisfied with your results; continuously push yourself to do even better tomorrow.

Scroll IX: "I will act now."

Big dreams and goals are useless if they're not backed by real action. Your actions may not bring instant results, but without action there'll definitely be no results.

Your actions will determine the value you create. To multiply your value, multiply your actions.

The best way to overcome your fear is to take action in spite of it. Remind yourself repeatedly "I will act now". When you face rejection, take action to knock on the next door immediately. When you feel like procrastinating, take action now instead. When you face a distraction, take action to move away from it right away.

Scroll X: "Pray to God for Guidance"

Regardless of our religious beliefs, all of us instinctively pray for help when we're desperate.

Don't pray for material things or rewards. Instead, pray for guidance on how to achieve your goals.

Scroll X ends with a salesman's prayer. Use it to seek guidance to develop your abilities and tap on opportunities, to stay courageous in face of challenges and your weaknesses, to stay humble despite success, to have the discipline and persistence to keep trying, to develop good habits, be grateful and fulfill your true potential.

Other Details in the Book to Look out For

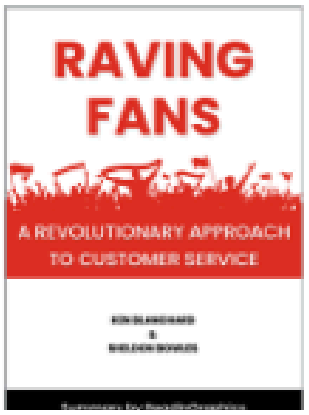
Mandino has carefully worded the original text in each of the 10 scrolls to help readers to grasp the meaning behind the principles. According to Mandino, the key to success is to read each of the 10 scrolls in sequence, 3 times a day for 30 days each. To download the scrolls and get more details and resources, please visit www.ogmandino.com.

KEY QUOTES

"To surpass the deeds of others is unimportant; to surpass my own deeds is all."

"Only action determines my value in the market place."

"Action is the food and drink which will nourish my success."



RAVING FANS

A Revolutionary Approach
to Customer Service

KEN BLANCHARD & SHELDON BOWLES

The Big "So What"

Customer service is important to any business. Yet, it's not enough to merely satisfy your customers. To have a massively successful business, you need Raving Fans. This book presents a simple but powerful 3-part framework to help you to deliver amazing customer service and achieve outstanding bottom-line results.

Introduction

In America, service standards have become so low that customers *expect* poor service. They're satisfied so long as your service is no worse than your competitors'.

You *can* acquire and retain customers by delivering customer satisfaction, i.e. by being just better than your competitors. However, to have a booming business, you need to create Raving Fans, i.e. to make your customers so wildly happy that they can't help talking about you and recommending you to others.

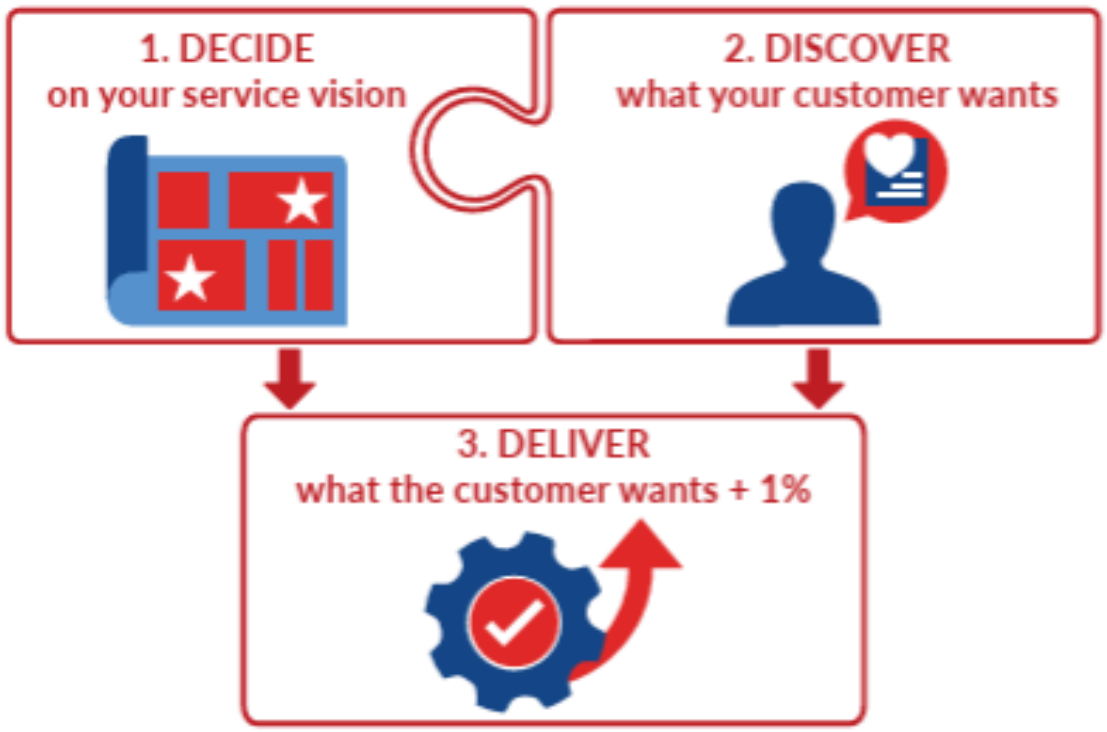
Through a fable, this book presents a simple framework on how to build a raving fan base. The story is about an Area Manager who has been tasked to go beyond product quality to create Raving Fans for his company. With the help of a mysterious fairy godmother, he meets with several successful business leaders and learns the 3 secrets to:

- Define your service vision;
- Learn what your customer truly wants; and
- Deliver outstanding customer service consistently as a competitive advantage.

KEY QUOTES

"Quality is how well our product works in relation to the customer's That's just one aspect of customer service. Customer service covers all the customer's needs and expectations."

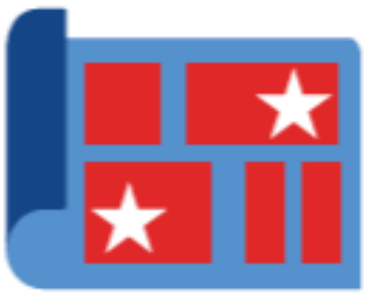
"Your customers are...only satisfied because their expectations are so low and because no one else is doing better."



The 3 Secrets of Creating Raving Fans

Secret #1: Decide on your Service Vision

Define your service vision in detail, with the customer as the focal point.



To create Raving Fans, the first step is to define your vision of perfect service, or the ideal way you'd want to serve your customers. You must see each service detail in your mind before you can create it in reality. These details jointly form the perfect customer experience.

In many companies, service levels are defined by what's possible, practical or affordable. They allow their existing constraints to limit their service potential.

To deliver outstanding customer service, you must start by deciding what you want, i.e. to define your service vision. In the story, the Area Manager sees this secret in action at Varley's Department Store, which is thriving despite being located right next to a mega mall.

- The moment the Area manager enters the store, he's greeted by a well-dressed staff, who pins a flower on him, and offers

KEY QUOTES

- Consider all *direct and indirect customers* who're touched by your product/service. For example, if you manufacture metal cases for computer companies, you may sell directly to a purchasing agent, but actually serve everyone from the computer companies' engineering/production departments to the transport companies' receivers and the end-users of the computers.

- Your service vision provides a window to filter out your *ideal customer niche*, i.e. customers whose vision matches yours. These are the customers whom you can serve exceedingly well to become your Raving Fans.

Learn to listen deeply to distill what customers truly want.

- People often say one thing but mean another, e.g. they may claim that price is the deciding factor, when they're actually influenced by on-time delivery and quality. Listen out for *what's being said as well as what's left unsaid*.

- Don't assume that customers are happy *if they don't complain or if they say that they're "fine"*. These could actually be a sign that they're so dissatisfied/ disillusioned that they don't even wish to share their feedback. Customers will only take the effort to communicate if they're very happy or very unhappy, so take every compliment and complaint seriously. Pay attention to customers who're silent or simply say that things are "ok" or "fine".

Next, integrate the 2 service visions: Using your service vision as a foundation, incorporate specific aspects of your customers' vision. You'll always have to develop your own vision first because:

- Your vision forms a basis or *foundation for meaningful discussions*. For example, if you can't describe or show what a perfect book summary is like, customers won't be able to give specific inputs on what they want or don't want.

- Your service vision will always be more comprehensive than your customers' vision. Most customers will only zoom in on 1-2 key areas that are disproportionately important to them. It's your role to see the big picture and *fill in the gaps* that aren't addressed in the customers' vision.

KEY QUOTES

"You have to listen to the music as well as the lyrics."

"'Fine' or silence is a message in itself."

"A customer's vision has meaning only in the context of your vision."

"Often, the narrower the focus, the more important that vision is to the customer."

- It's impossible to offer outstanding service to *everyone*. Customers whose service vision is totally different from yours won't fit into your business model. Your goal is to offer stunning service to customers *within* your target segment (i.e. they share a similar service vision), and leave others to be served elsewhere. Use your service vision to *filter out* which customer inputs to adopt and which ones to ignore.

Secret #3: Deliver What the Customer Wants ...Plus 1%

Deliver what the customer wants consistently and go beyond that, 1% at a time.

Once you know what the customer wants, you must (i) deliver that all the time (without exception) and (ii) seek to over-deliver and continually improve by 1%.

To create satisfied customers, you should under-promise and overdeliver. To create Raving Fans, you must promise more *and* deliver more. The key is to do get there one step at a time, instead of trying to bite off more than you can chew.

Aim for consistency first, since it's essential for building trust and credibility. It's better to start with a few key areas and deliver them consistently well, than to promise something you can't fully deliver. If you can't accomplish something consistently yet, then don't highlight or market it. Once you raise customers' expectations, they'll hold you to your promise, and leave if you fail to deliver.

- You can *create systems* for any service element or goal. For instance, if you want your employees to be warm and friendly, you must equip them with the right skills and processes, e.g. teach them to smile and greet customers by their names, talk about topics outside the existing business transaction etc.

- Start small, then *progressively expand* your service as you introduce new systems to ensure consistency.

- Systems ≠ rules. Use systems to help your team achieve minimum standards consistently, but give people the

KEY QUOTES

"What you have to do is promise more and deliver more. Just don't promise too much at once."

"Consistency creates credibility."

"All good customer service is a result of nifty systems."

"The purpose of systems is to ensure consistency, not create robots...Systems give you a floor, not a ceiling."

flexibility and discretion to make adjustments and *exceed* those standards. In short, set the baseline but allow people to reach for the skies.

This is why the 1% continual improvement is so crucial:

- If everyone on your team seeks to exceed customer expectations and improve by 1% continually, it (i) creates a *huge cumulative impact* and (ii) *keeps the business moving forward*. Small improvements can be implemented immediately and you can quickly evaluate what works or doesn't work. This can be more effective than major changes which take a long time to plan and execute, yet may not even be effective.

- It also injects flexibility to *ensure your vision is constantly growing and evolving*. No matter how good your service vision is, you'll need to refine it to meet customers' changing needs, and to incorporate their feedback. You win customers' loyalty when they know that their needs and inputs are taken seriously.

Track your service standards by creating a Raving Fan Index that combines key internal benchmarks (e.g. on-time delivery, reworks) for every person and department.

- Talk to customers regularly to establish how you are doing.

- Don't just criticize people when they fall short of expectations. Make sure you recognize and reward people who offer great service, so they're motivated to repeat it. Align your performance evaluation, staff compensation and promotions with your Raving Fan index.

Putting it Together

In the story, the Area Manager sees how the 3 secrets of creating Raving Fans are applied in various businesses, including a departmental store, a grocery store, a manufacturing plant, a gas station and even by a cab driver. In particular, he learns how the owner of Sally's grocery store used the 3 secrets to transform her business.

KEY QUOTES

"Listening to customers is powerful…Responding to what customers say is dynamite."

"Visions do only two things. They grow or they die."

- When Sally first bought the grocery store, it was losing money. She took some time and effort to crystallize her service vision, focusing on her passion to help customers to save money and eat healthily.

- She visualized how customers would be greeted by a friendly valet who'd also recommend the freshest daily produce. Customers would receive a red carpet welcome, with store advisers and a computerized system to map out recommended shopping routes, deals and healthy food alternatives according to their shopping lists. The checkout process would be fast and smooth, using special product tags for automated billing. Customers' purchases would also be stored in their personal accounts so they can receive customized deal-notifications and recommendations in future. By comparing that vision with the existing reality, Sally was able to progressively address the gaps and implement her vision.

- Since Sally's goal is to provide outstanding service for customers who wish to save on groceries and eat healthily, she can deliberately *omit* services that do not match the vision, e.g. offering fresh fish or helping customers to load the groceries into their cars.

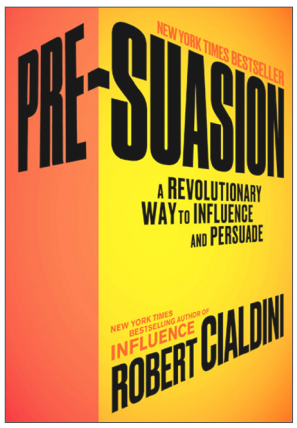
- Similar to Varley's, service quality is a key performance evaluation criterion at Sally's. Employees are recognized for offering excellent service, and can only be promoted if they have delivered a Raving Fan service. For instance, one of the staff suggested the idea of free shoe-cleaning services for husbands who accompany their wives for grocery shopping—the idea was such a hit that the staff was promoted.

Fundamentally, the 3 secrets are really about building a relationship between people, instead of a transactional relationship between companies and customers. Your end goal is to help your employees to serve your customers in a way that's fulfilling for both sides.

KEY QUOTES

"It's nice to do a good job and be recognized for it."

"It's really a human relationship…People arrive with needs and people go out and serve them to fulfil those needs."



PRE-SUASION

A Revolutionary Way to Influence and Persuade

ROBERT CIALDINI

The Big "So What"

Pre-suasion is about laying the groundwork so your recipients are already receptive to your message by the time you present it. Such tactics are based on scientific principles that *can* be learned and systematically applied. By mastering pre-suasion techniques, you can influence and persuade others more effectively, be it to get your kids' cooperation at home or to win over clients in business.

Introduction

After studying professionals in various industries, Cialdini found that the best persuaders spend more time crafting what to say/do *before* making a request. They influence behaviors not by improving the product features or offer, but by presenting them in a way that's the most psychologically appealing. In short, to persuade effectively, you must first learn to pre-suade effectively.

- Pre-suasion is achieved through specific actions, framing and conscious/subconscious cues, strategically placed at the right time.
- This summary is organized into 2 parts:

  (i) Sources of pre-suasion (and why they work); and

  (ii) Putting pre-suasion to work

KEY QUOTES

"To persuade optimally…it's necessary to pre-suade optimally."

"The highest achievers spent more time crafting what they did and said before making a request."

"The basic idea of pre-suasion is that by guiding preliminary attention strategically, it's possible for a communicator to move recipients into agreement with a message before they experience it."

Sources of Pre-Suasion (and Why they Work)

The Importance of Attention

Human beings can only focus on 1 thing at a time—once something grabs our attention, we ignore everything else. In addition, we don't make decisions based on the most helpful or correct inputs. We make decisions based on the inputs we happen to be focusing on *at that moment*.

Privileged Moments are observable points in time when someone becomes especially receptive to a message being communicated.

- It's easier to *confirm or look for something that's present*, than to disconfirm or notice something that's missing. When searching our memory, we naturally look for hits rather than misses. So, you can tell someone on 1 day that he's hard-headed and on another day that he's flexible. Both times, he'll agree because he'll recall different events to confirm the trait being brought to focus.

- *Single-chute questions* are biased, one-sided questions that lead people to confirm a viewpoint. You can use them to create privileged moments where people become vulnerable to related suggestions. In a study, only 33% of people agreed to leave their contact details so they could be sent a new soft drink sample. However, when they were first asked if they were adventurous and liked to try new things (to which 97% said yes), 75.7% later agreed to leave their contacts. By getting people to focus on a belief or perception, you can get them to say "yes" to a related suggestion.

Focusing illusion: Because of our limited attention, we assume that whatever we're focusing on is more important. This means that a communicator can get us to place undue importance on something (e.g. a feature or message) just by drawing our attention narrowly to it. This is commonly done in 3 ways:

KEY QUOTES

"The guiding factor in a decision is often not the one that counsels most wisely; it's one that has recently been brought to mind."

"It is easier to register the presence of something than its absence."

"Nothing in life is as important as you think it is while you are thinking about it."
—Daniel Kahneman

- Subtle *cues in the background* (e.g. noise, images or music) can subconsciously influence our decisions. For example, different backgrounds were tested on the landing page of an online furniture store. Visitors who landed on a page with clouds focused more on comfort in their search for sofas; those who landed on a page with pennies focused more on price.

- Innocent *questions or surveys* can direct us to focus on a specific option or trait to sway our preferences. Leaders in an organization were each asked to do a survey about a different solution—invariably, they ended up recommending the solution that they were surveyed on. Likewise, by getting customers to complete a survey about your product, you can draw their attention to your strong qualities so they'll favorably consider your brand. The key is to focus on just *1 benefit* without drawing attention to other alternatives.

- Our opinion can be shaped by the *issues or facts* we're most exposed to. For example, something that's covered extensively in the news will seem more significant. During the US' military campaign Iraq in 2003, the Bush administration cleverly embedded reporters in the combat units. This skewed the news coverage (and public attention) to the everyday life of the soldiers instead of why the war was happening in the first place.

Assumed causality. The more we focus on something, the more we're likely to believe that it's the cause of a problem or behavior.

- Such causal links can be *totally illogical*. In 1982, Johnson & Johnson recalled all Tylenol pills from the shelves due to drug tampering, and issued numbers to help consumers identify the different Tylenol batches. U.S. residents actually started to run lotteries using those numbers—just because the numbers were highly visible from media publicity, people believed they had a better chance of winning lottery with them.

- *People with greater visibility* are also assumed to be more responsible for both good and bad outcomes.

KEY QUOTES

"A communicator who gets an audience to focus on a key element of a message pre-loads it with importance."

"Anything that draws focused attention to itself can lead observers to overestimate its importance."

"The press may not be successful most of the time in telling people what to think, but it is stunningly successful in telling them what to think about."
—Bernard Cohen

"The brain's operations arise fundamentally and inescapably from raw associations."

(i) The more visible someone is, the more influential they seem. This explains why leaders are often assumed to be responsible for the success or failure of their team, even though there're other factors involved, e.g. staff quality, business systems or market conditions.

(ii) When police interrogations are recorded as evidence for trials, the camera angle makes a huge difference. If the camera is aimed directly at the suspect, he's more likely to be seen as guilty. If the camera is angled sideways (with equal focus on the suspect and questioner), that bias disappears. If the camera is focused on the interrogator, observers tend to believe the suspect is being coerced.

Attracting and Holding Attention

We're attracted to stimuli that are relevant to our survival or goals, and tend to pay more attention to unfinished tasks.

We are drawn to things that're relevant to our survival:

- We involuntarily pay attention to *changes in our environment*. Advertisers target this primal instinct by cutting to specific parts of a message they want the audience to focus on. They also use contrast or novelty to pre-suade people. When presented with 2 brands of sofas, 58% of research participants chose durability over comfort. But when they were presented with 4 sofas—3 that were more durable and 1 that was more comfortable —77% chose comfort because of the contrast.

- *Sex appeal* is a proven stimulus that's widely used in advertising. However, it only works if you're selling a related product e.g. cosmetics or tight-fitting clothes. It does *not* work for unrelated items, e.g. detergents or kitchen appliances.

- *Violence and fear* are also powerful attention-grabbers.

  (i) In fact, people may end up putting themselves at greater risks just to avoid a perceived threat. After the 9/11 terrorist attacks, many Americans chose road travel

KEY QUOTES

"Whenever we first register a change around us, our attention flies to it."

instead of air travel, not realizing that the casualty rate from car accidents was actually much higher.

(ii) To change bad habits, it's more effective to show the negative effects of bad habits than the positive effects of good ones, provided you also include actionable steps to overcome the problem. Anti-smoking messages on cigarette packages are more effective if they display both the harmful effects of smoking and advice on how to stop smoking.

- The stimuli you're exposed to can influence *how you react to subsequent messages*. People who've just been exposed to sexual stimuli will respond positively to an ad to "stand out from the crowd". People who've just been exposed to violence or threats will respond better to an ad with the message: "Everyone else is doing this, don't miss out".

We also focus on **self-relevant topics** (i.e. info about ourselves) or information that match our goals. Marketing messages are more effective when they use "you" instead of "people" or "they". People pay more attention to (and remember) health information that includes relevant data about their age, gender or health history.

The Zeigarnik effect says that we pay much more attention to **unfinished tasks** than completed ones. When a task is incomplete, we remember the details and feel a nagging sense of incompletion if we're pulled away from the task. However, once a task is finished, our cognitive attention is directed elsewhere.

- Use incomplete tasks to *counter procrastination*. If you're a writer, don't end a writing session with a complete paragraph or thought, even if you know exactly what to say. Keep it for the next session so you'll itch to get back to work.

- Use *mysteries* to capture and hold people's attention. If you're a teacher, begin/end each class with an unfinished mystery, so your students will remember the details needed to solve the puzzle.

KEY QUOTES

"When recipients get a message that is self relevant… they are more likely to lend it attention, find it interesting, take it seriously, remember it and save it for future reference."

"Not completing an activity can make everything about it more memorable."

"One's attention is magnetized to the mystery story because of its inherent, unresolved nature."

Counter-arguments can be more effective than direct arguments, especially if they present rivals in bad light. Combine mystery with counter-arguments using these steps: Present the mystery → Deepen it with data/ questions → Present alternative answers then refute them to lead in to your answer → Give a clue on the right answer → Solve the mystery → Explain the implications.

The Power of Association

Every idea in our mind is linked to network of concepts, images and feelings. By using certain words, metaphors, or external/ internal cues, we can get people to unconsciously focus on associated thoughts and feelings, and hence shape their choices and behaviors.

Language & visual associations. Strong communicators use language to conjure mental associations that are favorable to their messages. In a study, fund-raisers at a call-center were given information about how their work impacts the community. One group received printed text while the other had an additional picture of a runner winning a race. The second group raised 60% more money, illustrating the power of visual associations.

Metaphors help listeners to understand something by associating it with another image. They frame how people think, thus influencing their subsequent choices.

- Simply by changing the *metaphor*, politicians can influence people to support different approaches to the same problem. When crime rates were likened to a ravaging beast, people opted for a solution to catch and imprison criminals. When crime rates were depicted as a virus, people preferred a solution to tackle the underlying conditions that led to its spread.

- We're also influenced by *non-verbal metaphors*. A warm cup of tea can make us feel warmer toward the people around us. Reading a resume without a clipboard (or reading a book on lightweight kindle) can also make the content seem lighter or more trivial.

KEY QUOTES

In contests of persuasion, counter arguments are typically more powerful than arguments".

"We should think of language as primarily a mechanism of influence."

"He who wants to persuade should put his trust not in the right argument but in the right word."
—Joseph Conrad

"If you want to change the world, change the metaphor."
—Joseph Campbell

We can also shape behavior by changing people's **external and internal environments**.

- *External cues* from our physical surroundings can prompt us to focus on certain memories, traits or feelings. Audience in a dermatology lecture often start to scratch themselves after hearing about skin irritations. A team of consultants found that pinning up clients' pictures in the meeting rooms helped them to keep their discussions focused on the clients' needs. A writer will unconsciously adopt a more academic writing style if he's in a university, and a more casual writing style if he's in a laid-back neighborhood café.

- We can create positive self-influence by shifting our *internal focus* away from dis-empowering thoughts (e.g. anxiety, inadequacy) to empowering ones (e.g. strengths, past successes).

  (i) Studies found that people felt happier just by adopting 3 practices to shift their focus: (a) list down what they're grateful for at the start of the day, (b) choose to look at possibilities and positives, and (c) limit the time spent dwelling on unhappy events.

  (ii) Just before you start an exam, don't do last-minute cramming or worry about what you don't know. Use that time to recap your strengths and past academic successes.

- You can use pre-suasive cues to achieve your goals. Develop "*if/when-then plans*" by (i) defining situation-specific cues where you can advance your goals and (ii) linking them to the desired actions. For example, to lose weight, you can develop a plan like this: "If/when I'm offered a soft drink during a meal, I'll ask for green tea instead."

We also tend to over-value **things that're connected to or similar to us**. We feel an affinity with people who share our birthday, name, language etc. Even organizations tend to overvalue things that include elements of their name or identity. In 2004, the Rolling Stones Magazine selected top 500 songs of the rock era, of which the top 2 were "Like a Rolling Stone" by Bob Dylan and "Satisfaction" by the Rolling Stones.

KEY QUOTES

"Steering attention from one feature of a person's inner geography to another can affect performance."

"When we grasp something fluently—that is, we can picture or process it quickly and effortlessly—we not only like that thing more but also think it is more valid and worthwhile."

We're also biased toward things that are **easy to grasp, visualize or do**. We prefer rhymes, names that're easy to pronounce, and tasks that're easy to finish. All things being equal, companies on the US stock exchange with pronounceable names or stock ticker codes tend to perform better initially than companies with foreign-sounding or unpronounceable names.

Managing Pre-suasion and its Biases/Influences

When our brain is exposed to an "**opener concept**", it quickly links to other related concepts. It's like opening the doors to related ideas, while *concurrently* closing the doors to irrelevant ideas.

- *Video game players* tend to become more antisocial after playing aggressive games, but more helpful after playing prosocial games. Interestingly, violent video games that require cooperation with others lead to *less* aggressive post-game behaviors, because the very act of cooperation suppresses aggressive associations.

- *The stronger the link* between the opener concept and related concept, the stronger the pre-suasive effects. Subjects who see photos of people standing close together are 3x more likely to demonstrate helpful behaviors than those exposed to pictures of people standing alone. That's because togetherness and helping others are closely-related. You won't get the same effect if you try to link unrelated concepts like togetherness and cleanliness.

- However, you can *construct a link* that previously didn't exist just by repeatedly putting 2 objects together. That's why advertisers often use celebrities to promote their products. A Belgian beer increased viewers' positive feelings toward their brand after superimposing their beer 5x on enjoyable activities like cuddling, sailing and waterskiing.

Pre-suasive influences work best when they're subtle or unconscious. We're more susceptible to persuasive cues

KEY QUOTES

"Successful openers operate for a communicator. They presuasively channel recipients' attention only to those concepts that are associated favorably with the communicator's particular goal."

"An effective linkage between concepts doesn't have to be located in prevailing reality. It can be constructed."

when we lack the time, energy or focus to analyze something in detail. Once we're aware of pre-suasive influences, we respond differently:

- Respondents of a phone survey typically report 20% higher life satisfaction on a sunny day because they're in a better mood. But if the interviewer asks them about the weather before starting the survey, the positive bias disappears. A *simple reminder* of the pre-suasive cue (weather) can negate its effects.

- When viewers notice *obvious product placements* in media programs, they recognize the attempt to sway their choices and become less likely to purchase the products.

Putting Pre-suasion into Action

The 6 Universal Influence Principles

Pre-suasive methods only work if they're aligned with people's unique goals and circumstances. However, in Cialdini's previous book "Influence", he presented 6 influence principles that're built on the universal human need for social acceptance. You can use these 6 principles in your messages and to pre-suade people *before* you even start communicating.

Reciprocation. People tend to say "yes" to those they feel indebted to, e.g. shoppers at a candy store were 42% more likely to buy something if they got a free chocolate at the entrance. To optimize returns:

- Offer the gift/benefit *before* a request is made (pre-suasion); and

- Ensure it is *meaningful, unexpected and customized*.

When diners were offered a chocolate (a meaningful gift) at the end of their meals, tips increased 3.3%. When diners were offered a 2nd chocolate (meaningful + unexpected), tips increased 14.1%. When the waitress started to walk away, then returned to offer the 2nd chocolate (meaningful + unexpected + personalized), tips improved 21.3%.

KEY QUOTES

"If a gift, favor, or service incorporates all three features of meaningfulness, unexpectedness, and customization, it can become a formidable source of change."

Liking. We prefer to do business with people we like. You can be likeable by being friendly, humorous or attractive. However, Cialdini recommends using 2 practices to show people that you sincerely like *them*, which will naturally lead them like/trust *you* in return:

- *Highlight similarities*. We like people who're like us (e.g. similar language styles or interests). Waitresses and salespeople who mimic their clients' verbal styles get more tips or sales. Youth mentoring programs are more successful when there're similarities between the mentors and students.

- *Give compliments*. Everyone likes to be praised, be it for our looks, abilities or personality. Clients who received a compliment from their hairstylist ("You'd look good in any hairstyle") gave 37% more tips.

Social proof. When we see others like us responding in a certain way, we'll think that's the right response—morally and practically:

- *Validity (it's ok to do it)*. Research participants expressed support for the military's use of torture after they learned that the majority of their peers also did so. In F&B, a dish can get sold 13-20% more if you add a "most popular" label.

- *Feasibility (it's realistic to do it)*. When residents received a message about how their fellow residents were conserving energy, they saved 3.5x more energy than those who received other energy-conservation messages. Simply hearing about others' energy conservation efforts made it appear feasible and implementable.

Authority. The persuasiveness of a message depends more on the perceived authority of the messenger than the content of the message. Authority is about expertise and trustworthiness, not hierarchical status:

- *Expertise*. When the communicator is perceived to be a subject expert, we tend to follow the advice without much thought.

KEY QUOTES

"We like those who are like us."

"When a legitimate expert on a topic speaks, people are usually persuaded."

- *Trustworthiness*: We're more likely to trust someone who seems honest and unbiased. You can pre-suasively establish your honesty by referring to a weakness early in the communication. This is especially effective when:

  (i) The audience already knows of the weakness; and

  (ii) You use a transitional word (e.g. "but" or "yet") to counteract the weakness with a strength, e.g. "We are new to this market, but we already have a strong presence in 13 other countries."

Scarcity. When something is scarce, we perceive it to be more valuable, and are more averse to losing the chance to acquire it. During a sale, if you add a purchase limit of "X items per customer", you'll probably sell more, not less!

Consistency. We try to act consistently with our past actions and commitments. Once you get people to explicitly agree to something, they're more likely to follow through, even if it takes more time and effort. An organization increased blood donor participation by 12.4% just by asking donors to verbally confirm their attendance: "We'll mark you on the list as coming then, okay? [Pause for confirmation.] Thank you."

Apply these 6 principles in **3 stages** in any commercial relationship:

- *Stage 1*: Build a positive association using reciprocity and liking;
- *Stage 2*: Reduce uncertainty for decision-making using social proof and authority; and
- *Stage 3*: Motivate action using consistency and scarcity.

The 7th Principle: Unity & Shared Identity

Besides the 6 principles above, Cialdini discovered a 7th principle that strongly affects people's willingness to help one another: the sense of unity and shared identity from human relationships.

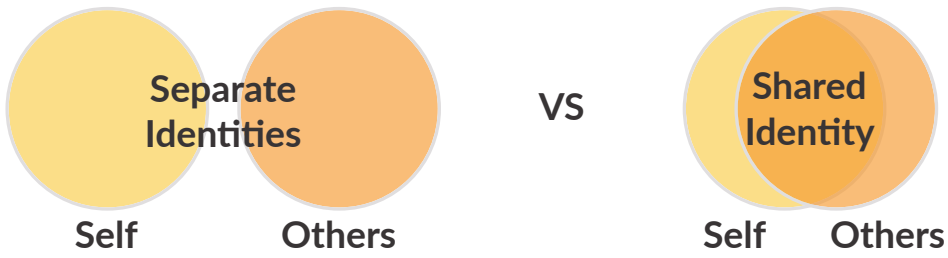
KEY QUOTES

"We want more of what we can have less of."

"Sometimes all that's necessary is to remind others of a commitment they've made that fits with the practitioners' goals."

"Our ability to create change in others is often and importantly grounded in shared personal relationships"

When we share an identity with others, it goes beyond mere liking or reciprocity—they become one of "us". For example, we may feel "as one" with people of the same nationality, family or religious affiliation. This sense of "we-ness" is forged by (i) being together and (ii) acting together.



Being together. We build bonds via kinship and physical proximity.

- *Kinship*. We're biologically programmed to pass on our genes. We're thus inclined to help people in our family who share our bloodline. The use of familial terms (e.g. "brotherhood", "motherland" or "forefathers") can trigger feelings of kinship to make us more willing to sacrifice for the group. Or, we may feel greater trust or loyalty for people who treat us "like family".

- *Physical proximity*. We also develop unity and shared identity with others living in the same place, even if they're not our blood kin. This includes people living in the same house, neighborhood, country or even region (e.g. Asia, Europe). During WWII, Chiune Sugihara sacrificed his career trying to help thousands of Jews escape the Holocaust. This was because as a child, he had watched his parents house and care for people of various nationalities, and had thus developed an expanded definition of "family".

For thousands of years, humans have been unified by synchronized activities such as marches, rituals, prayers, dances, and songs. **Acting together** (doing something in sync, collaborating or co-creating) can develop a sense of unity or oneness among people.

- *Liking*. When we act in unison with someone, we start to think we're *alike*, and hence develop a *liking* for the person. Participants in a study felt physically connected with strangers on a screen who were also getting their

KEY QUOTES

"Relationships not only intensify willingness to help but also cause it."

"From a genetic point of view, being in the same family—the same bloodline—is the ultimate form of self-other unity."

"When people act in unitary ways, they become unitized."

"[The] elevated likeness turns into elevated liking."

face brushed in the same way. They even believed that their movements affected the person on the screen and vice versa.

- Synchronized actions can pre-suade people to collaborate and *support* each other. In a study, participants were split into 2 groups—one group walked together in sync while the other walked normally. Later, both groups played an economic game. Those who walked in step were 50% more cooperative and willing to sacrifice personal gains for their group's success.

- According to Daniel Kahneman, we have 2 *cognitive systems*: "System 1" is for fast, intuitive and emotional decisions, while "System 2" is for slower, reasoned and logical decisions. When we activate one system, the other is suppressed. Effective persuaders match their approach to the recipients' mindset, e.g. using facts/evidence to appeal to a rational decision-maker, and using feelings to appeal to an intuitive decision-maker.

- *Music* has the power to unite people, since everyone can simultaneously experience the same beat, rhythm and musical patterns. It also appeals naturally to System 1 thinking to evoke feelings of unity and harmony. Kids who sang and walked together to music were 3x more helpful and selfless to their partners, than those who sang and moved without music.

- When 2 parties *repeatedly exchange favors* over a period of time, a relationship is formed and it no longer matters who gave the last favor. Pairs of research participants took turns to ask and answer 36 personal questions about each other. By the end of 45 minutes, the participants (who started out as complete strangers) had developed a strong emotional connection.

- *Co-creation*: People tend to value their own creations more. When we jointly create things, we feel an affinity both for our creation *and* our co-creator.

  (i) A manager's level of involvement in a project determines how much he likes the outcome. Paradoxically, managers who feel *more* responsible

KEY QUOTES

"A history of reciprocally exchanged favors leads individuals to give additional favors to their exchange partner, no matter who provided the last one."

for the project's success also attribute *more* success to their co-creators, due to the temporary sense of shared identity from co-creation.

(ii) When you ask someone for advice, they'll feel as if they've co-created the solution with you. So, instead of merely asking for customers' opinions or feedbacks, companies should explicitly ask customers for their *advice*.

Pre-suading Ethically

Pre-suasion can be an extremely powerful source of influence. However, this also raises ethical concerns since they can be used to **trick or mislead consumers**. Most CEOs know that unethical practices can bring irreparable financial and reputational damage to their companies. Yet, 50% would still engage in malpractice just to reap short-term gains, thinking they won't get caught.

Cialdini urges readers to **act responsibly**, as the long-term costs are simply not worth the short-term gains. Unethical actions *will* eventually catch up with you in at least 3 ways:

- *Employee performance*: When employees act against their ethical values, it creates moral stress that causes fatigue, lower morale and a loss of enthusiasm, all of which reduce work performance and profitability.

- *Staff turnover*: Stress and unhappiness at work can lead to 30% higher turnover. On average, each staff turnover can cost the equivalent of 1-year's remuneration for that employee.

- *Employee fraud and misconduct*: The type of employees who'll stay are also those who're likely to cheat and take advantage of the company.

KEY QUOTES

"Just because we can use psychological tactics to gain consent doesn't mean we are entitled to them."

"Those who cheat for you will cheat against you."

Post-Suasion: Ensuring Continuity

How can you ensure that your pre-suasive efforts will continue to deliver results, especially when others also start to use pre-suasive techniques? There are 2 additional strategies to create lasting change:

- Create strong commitments. Pre-suasive openers can trigger immediate behavioral shifts. However, to lock in lasting change, you must secure commitments for future action, and ideally incorporate the behaviors into people's sense of identity. For instance, you can increase the chances of someone showing up for a group coaching session by getting them to fill up the appointment card (instead of you doing it for them). Other related actions (e.g. making a deposit, doing pre-coaching activities or plugging in to a coaching community) can all reinforce their commitment to repeatedly attend the sessions until it's a part of who they are.

- Design your cues and environments. In our fast-paced modern societies, we're constantly bombarded by distractions and stimuli. Use the ideas in this book to design your external living/work spaces so you're constantly surrounded by, and focusing on, cues and stimuli that support your goals. Take systematic control of your surroundings instead of allowing others to influence you with *their* cues.

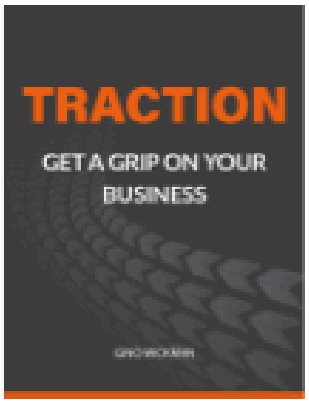
Other Details in the Book to Look out For

This book includes many other detailed research studies and examples to show how pre-suasive techniques can be used to influence decisions and behaviors, and how you can harness pre-suasion to achieve your goals. For more details, please visit www.influenceatwork.com.

KEY QUOTES

"Pre-suasive openers can produce dramatic, immediate shifts in people, but to turn those shifts into durable changes, it's necessary to get commitments to them, usually in the form of related behavior."

"In large measure, who we are with respect to any choice is where we are, attentionally, in the moment before the choice."



TRACTION®

Get a Grip on Your Business

GINO WICKMAN

The Big "So What"

Most entrepreneurs face 5 key challenges in growing their businesses. Entrepreneurial Operating System® (EOS®) is a set of comprehensive processes and tools to help leadership teams overcome these challenges, gain control of the business, operate efficiently, gain traction and move ahead as a healthy, effective and cohesive team.

Overview of the EOS®

The EOS® is ideal for small- to mid-sized companies with $2-$50 million revenues and 10-250 employees. It addresses 5 biggest frustrations that any entrepreneurial leadership team will face:

- *Lack of control*: Your business is running your life rather than the other way round.
- Your *people*—be it customers, vendors, partners, or employees—aren't aligned with your vision and goals.
- You're not making enough *profits*.
- You've hit a *growth ceiling* and don't know how to move forward.
- You lack *sound strategies/tactics*—nothing seems to work.

The EOS® integrates proven principles, frameworks and ideas from various sources into a complete system. It addresses 6 fundamentals that are core to any business: vision, people, data, issues, process and traction.

KEY QUOTES

"You are not your business. Your business is an entity in and of itself...to find success, you have to turn it into a self-sustaining organism."

"The EOS consists of timeless, practical, universal principles that have been tested in almost every kind of organization."

"If you are not happy with the current state of your company, you have three choices. You can live with it, leave it, or change it."

Implementing the EOS® involves change, which can be uncomfortable. To build a scalable, successful business, you (the founder/owner) must be willing to embrace 4 beliefs:

- You can't be the one deciding and doing everything. *Build a real leadership team*—hire people who're better than you, give them control and responsibility of specific areas, and present a united front to the rest of the organization.

- Organizations grow in spurts—*you'll inevitably hit ceilings* at individual, departmental and organizational levels. To punch through and surge ahead, your team must be able to do 5 things:

(i) *Simplify*. Your organization will get more complex as it grows; rules and processes must be constantly streamlined.

(ii) *Delegate*. You and your leaders must continually delegate tasks you've outgrown and elevate yourself to the next level, so both you and your business can grow.

(iii) *Predict*. You must work on your business, not get lost in it. This means concurrently forecasting long-term business needs beyond 90 days as well as immediate issues to be tackled on a daily/weekly basis.

(iv) *Systemize*. Initially, you're likely to deal with issues as they arise. You must eventually systemize the core processes in a way that allows anyone to manage and improve them.

(v) *Structure*. Your structure must evolve to support your next phase of growth. Don't allow personalities, ego, fear and status quo to get in the way.

- Run your business on *1 operating system* so everyone's on the same page. When people use different terms, methods and metrics, things fall apart.

- *Be open-minded*. To grow, you must be willing to be honest and open about your vulnerabilities and to adopt new ideas.

We'll now explain each of the 6 key components and their associated tools. You can download the various tools and worksheets from eosworldwide.com.

KEY QUOTES

"As goes the leadership team, so goes the company."

"Organizations usually expand in spurts, by smashing through a series of ceilings."

"When you experience personal growth, the company will grow under you."

"Just as you need to figure out how to build an extension of yourself, your team can also extend the company by building teams under them, thus ensuring the company's continued growth."

"Too many organizations become stuck because they are set in their old ways and unwilling to change to fit their expansion."

- *Why does our organization exist?* Get each member of your leadership team to write down their answers to this question. Debate it over a few sessions (but don't overthink it). Summarize your purpose in 3-7 words using simple language. Make sure it's bold, has an "aha" effect, comes from the heart and involves everyone. For example, McKinley's purpose is "to enrich the quality of life in our communities".

- *What's our niche?* This is the 1 thing you'll focus on and do better than anyone else, be it "popcorn" or "moving people".

What's our 10-year goal? Set a clear direction by articulating where your organization will be in 10 years. The leadership team must discuss and define a crystal-clear picture that can excite and unite everyone in the organization.

What's our marketing strategy? Define who your ideal customers are and how you'll serve them well, with 4 components:

- The *3 Uniques™* that jointly differentiate you from competitors. Each item may not be exclusive to your organization, but the combination of all 3 items must be. For example, Southwest Airlines had a unique blend of fun, low fares and on-time flights. Get feedback from your sales team on what your customers find unique about you, then debate the list until you've defined your 3 Uniques™.

- *Your guarantee* is your promise on the problem you'll solve, e.g. Domino's promises to deliver your pizza in 30 minutes or it's free. This forces you to identify the solution for an industry-wide problem and ensure you can deliver it. Brainstorm (i) the biggest fears and frustrations of your key customers, (ii) the possible guarantees that'll drive more business and (iii) the penalty if you fail to deliver. Get feedback from your customers.

- *Your proven process*. Capture the process that has helped you to deliver results so far and present it visually in 3-7 steps. Each step is a major touch-point with your customers, summarized with 2-5 bullet points. This makes you stand out with potential customers and helps your staff to see where they fit. Name the process (e.g. "The ReadinGraphics Difference") and present it in a visually appealing way.

KEY QUOTES

"Find your core focus, stick to it, and devote your time and resources to excelling at it."

"Decide what business you are in, and be in that business."

"A 10-year target...is the one larger-than-life goal that everyone is working toward."

"The most common mistake that most organizations make (is) trying to be all things to all people. It's a game you will not win."

"You will not go out of a business without a guarantee, but you will attain your vision faster with one."

- *Your target market*. With your team, define the geographic, demographic and psychographic characteristics of your ideal customers, e.g. HR directors for companies in Canada with at least 200 staff. Develop a list of such customers and their contacts, identify the best way to reach them (e.g. cold call, referrals), and approach them with laser-focus. Communicate why you're unique, offer your guarantee and show your proven process.

What's our 3-year picture? Define clearly what your business will look like 3 years from now—this facilitates your 1-year planning and is near-term enough to be highly motivating. Get each member of your leadership team to write down their 3-year mental picture and read it out (while the others imagine it with their eyes closed). Debate and agree on the picture you're committed to create, including revenue, profit and other measurables (e.g. # clients or volume of output).

What's our 1-year plan? Agree on the 3-7 top priorities to be achieved this year to achieve your 3-year picture. Ensure they're specific, measurable and achievable. Less is more—it's better to focus on just a few key goals. Set a budget to ensure you have the resources to achieve the plan.

What are our quarterly Rocks? From your 1-year plan, work backward on your Rocks—your top priorities for the next quarter.

What are the issues? These are the key barriers that could keep you from your goals. Over 15 mins, get your team to list down *all* the opportunities, threats and obstacles you'll face.

Incorporate all the points from the 8 questions into the V/TO™.

Communicate the vision to everyone

With your vision on paper, you can now communicate it to everyone in the organization.

Use 3 events: (i) a company-wide kick-off meeting with Q&A, (ii) quarterly company-wide update sessions and (iii) quarterly departmental/team reviews.

Tips: Be prepared to repeat the vision many times before it truly sinks in. Welcome employees to share their views and concerns

KEY QUOTES

"With life and business moving as fast as it does.... there is little value in detailed strategic planning beyond a three-year window."

"Goals are set to be achieved...The team has to believe it's possible to hit the goal, or else you can't hold someone accountable to it."

"Now that you clearly know where you're going, you have to identify all of the obstacles that could prevent you from reaching your targets."

"When everyone's energy is going in the same direction, their accumulated drive will kick in and create an exponential force."

"People need to hear the vision seven times before they really hear it for the first time."

since it builds commitment to the goal. Your role is to share the vision and V/TO™ in a clear and compelling way; those who don't buy in will eventually leave.

2) People: Have the right people in the right seats

This component involves (i) identifying the right people for your organization and (ii) placing them in the ideal seats.

Identifying the Right People

The right people are those who share your company's core values and will thrive in your culture. Use the People Analyzer™ to assess the fit for each staff.

Evaluate each staff to see if he/she exhibits the core values most of the time (+), sometimes (+/-) or rarely (-). Aim to have only staff with only "+" scores.

Name	Value 1	Value 2	Value 3	Value 4
Staff 1	+	+	+	+
Staff 2	+/-	+/-	+/-	+/-
Staff 3	-	-	-	-

Manage under-performers with the 3-strike rule.

- Set expectations and give them 30 days to change. If there's no improvement after 30 days, discuss their performance again. If there's no improvement after another 30 days, let them go.

- Once you communicate your values clearly and live by them, people who don't fit in will typically leave before the 3rd strike.

Roll out the People Analyzer™ with your leadership team, using peer analysis and the 3-strike rule. Then, have the leaders do it for the rest of their team members. Thereafter, use the tool in your quarterly performance reviews.

Putting People in the Right Seats

Now that you have the right people, you must place them in the right seats, i.e. the roles and responsibilities must match their Unique Ability® (strengths and passions). Use the Accountability Chart to define the right structure, then the GWC™ to place people.

KEY QUOTES

"It all comes down to getting the right people in the right seats."

"The power of setting the bar is that you give all managers absolute clarity on what is acceptable and what is not."

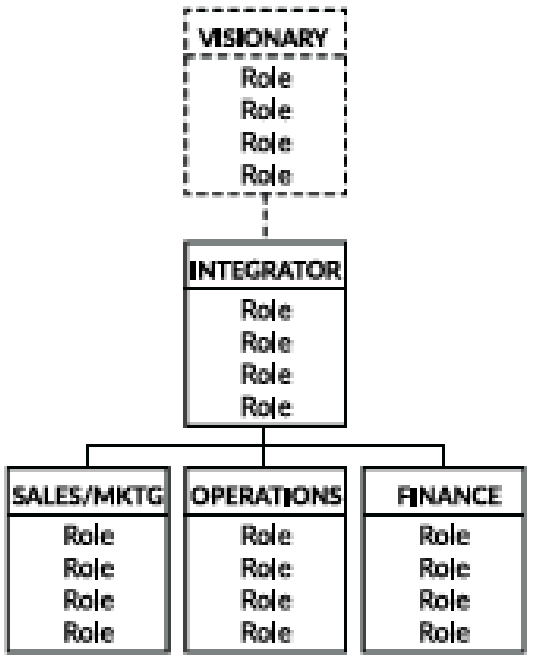
To define your ideal structure, ask this question: What's the right structure to propel us forward in the next 6-12 months?

- Flesh out the structure, with bullet points for the *key roles* and accountability for each seat.

- Generally, there are only *3 critical functions* in any business regardless of your stage of growth: Sales/Marketing, Operations and Finance. All other sub-functions can be grouped under one of these 3 main functions, e.g. production, delivery and customer service may fall under "Operations".

- The 3 functions are unified by an *Integrator* (e.g. CEO, President) who's strong in LMA™—leading, managing and accountability.

- Some organizations may also have a *Visionary* (e.g. the owner) who's more intuitive and creative. In such cases, it's vital to define the roles of the Visionary and Integrator so they're both in the right seats and leveraging their strengths.



Having developed your Accountability Chart and structure, you can now use the GWC™ to fill in the boxes and place the right people in the right seat.

- GWC™ stands for "*Get it, Want it, and Capacity to do it*". When someone has all 3 GWC™ components, he/she understands the ins-and-outs of the job, truly likes the role and has the mental-physical-emotional capacity to excel in it.

- Have *only 1 person accountable* for each function. It's ok to have 1 person in 2 seats, but not 2 persons in 1 seat.

Implementing the new Accountability Chart

Your chart is ready when: (i) the structure will get you to the next level, (ii) the right people are in the right seats and (iii) people have enough time to do their job well.

KEY QUOTES

"Create only the structure first...then put the right people in the right seats."

"The integrator is the glue that holds the company together."

"Life is much easier for everyone when you have people around you who genuinely get it, want it, and have the capacity to do it."

"When more than one person is accountable, nobody is."

This new Accountability Chart should replace your current org chart, though you may need to gradually phase out those who don't fit to avoid having too many gaps in your organization.

- Take time to *explain* the structure, roles and responsibilities so people understand them.

- Depending on your company's rate of growth, you may need to *review the chart* every 90 days so it evolves with your company. As people outgrow their roles (or vice versa), shift them so they can continue to focus on their Unique Ability®.

Making tough decisions. When the wrong person is in the wrong seat, you must let him/her go.

- *Right person, wrong seat*. Certain staff may be right for your organization but the roles are too big/small for them or don't use their Unique Ability®. Simply shift the person to the right seat if it's available. If no such seat is available, let the person go for the good of both the individual and the company.

- *Wrong person, right seat*. A staff can have the skills to perform well in a role, yet be misaligned with your values, e.g. a top salesperson who lacks integrity. Let the person go, as the long-term damage could be worse than the short-term pain.

3) Data: Get the pulse on your business

Without hard data, you'll be running your business on subjective opinion and impulses. Use a Scorecard to get weekly updates on your business, so you can have the pulse of your business, see real-time patterns and make sound decisions.

Develop your Scorecard

With your leadership team, define the 5-15 key numbers (e.g. weekly revenue, cash balance, customer rating) that summarize your business pulse.

Ask yourselves: if you can't contact anyone in your organization, what are the numbers that'll give you a clear sense of how your business is doing? Put these into a company scorecard. For each indicator, define (i) who's accountable, (ii) the weekly goal (tied to your 1-year plan), and (iii) who will update the scorecard.

KEY QUOTES

"You must do a little pruning from time to time for the organization to flourish."

"No matter how difficult the issue is, you have to make a good business decision here for the long haul."

"Only factual information can provide the basis for productive discussion and decision-making."

"What gets measured gets done."

Tips: Go for activity-based numbers that help you to anticipate problems, e.g. instead of tracking revenue, track the activities that drive revenue such as # leads generated or # orders. Use red-flags to highlight numbers that are off-track, e.g. highlighting them in red.

Have Measurables for Everyone

Eventually, aim to translate the company scorecard into 1 meaningful, manageable number for every person in the company. This provides a concrete way for ongoing improvement at all levels.

Everyone has a number e.g. the receptionist picks up the phone within 3 rings while the production executive completes 15 QC-approved units each shift. Use the roles in the Accountabilities Chart as a starting point to define the numbers.

Communicate and display the numbers clearly, so people are crystal-clear on their targets and can identify problems early. It also injects friendly competition and promotes teamwork, since people can see how they each contribute to the wider goal.

4) Issues: Build a solutions-oriented environment

Issues are the obstacles to your goals and vision. Most entrepreneurs are so overwhelmed with firefighting that they don't make time to uncover the root problems. It's also human nature to procrastinate on tough decisions. Create an open, solutions-oriented environment where issues are flagged out, assessed and managed at all levels.

Develop and manage your Issues List

Use 3 types of Issues Lists to bring problems out into the open:

- *V/TO™*: Here, list all issues that can be tackled after 90 days, e.g. new product ideas, office relocation.
- *Weekly leadership team meetings*: Here, senior leaders address all strategic issues for this week/quarter, e.g. company Rocks that're off-track.
- *Departmental meetings*. Here, weekly/quarterly issues that can be handled at departmental level are resolved, e.g. sales orders.

KEY QUOTES

"When an employee is clear on his or her number and agrees that he or she can achieve it, you have commitment."

"With the vision clear, people in place and data being managed through a Scorecard, you're creating a transparent organization where there is nowhere to hide."

"Problems are like mushrooms: When it's dark and rainy, they multiply. Under bright light, they diminish."

"Your ability to succeed is in direct proportion to your ability to solve your problems."

"More is lost by indecision than by wrong decisions."

Resolve issues with IDS™

Don't tackle the issues list in sequential order. Scan the list, pick the top issues then use the 3-step IDS™ process to resolve them quickly.

- *Identify* the real issue. Don't waste time on the wrong issue—the stated problem is usually the symptom, not the cause. Take time to peel away the layers—once the root issue is identified, the solution tends to become clear and other issues will dissolve on their own. Be prepared to get uncomfortable, as the real issue often boils down to people and even the leadership team.

- *Discuss*. Once you identify the issue correctly, this step is simple. Let everyone air their views succinctly about the issue once.

- *Solve* the problem by deciding on a specific action step. This may involve (i) taking a direct action to solve the problem, (ii) agreeing on a new principle or rule, or (iii) assigning someone to research the issue for discussion at a next meeting.

Tips: Don't rely on second-hand info—bring in the people who're involved in the decision. Don't make decisions by consensus, but present a united front once a decision is made. Always end the meeting by summarizing the solution and who will do what.

5) Process: Systematize your Way of doing business

An organization typically has 6-10 core processes that are linked together via a unique system—this is what Michael Gerber calls your "franchise prototype". Define and document your unique Way of doing things, so it can be consistently applied and refined, giving you the option to duplicate, scale, maintain or sell your business.

Document your Core Processes

Together with your leadership team, identify your 6-10 core processes and name them so you use the same terms. Examples include: HR (how you find, hire, integrate, manage and reward people), sales (how you convert a prospect to a customer), accounting (how you manage your money and cashflow).

KEY QUOTES

"The stated problem is rarely the real one."

"Everyone should say what they believe but they should say it only once, because more than once is politicking."

"Consensus management does not work, period."

"Nothing can be fine-tuned until it's first consistent."

Get the person accountable for each core process (under the Accountability Chart) to document the process. Use the 80/20 rule—document the 20% that deliver 80% results. Each process can usually be captured in 2-10 pages of bullet points. Streamline the processes, e.g. remove/combine steps, develop checklists.

Package the materials and make them available for training and reference.

Adopt the System Organization-Wide

Get *everyone* to adopt the system. Present the system and its component parts visually so people can see how their activities impact others, and how the system will benefit both their individual work and company results. Explain and reinforce it at your company meetings and training.

6) Traction®: Bring the Vision to Life

To bring your vision to life, you need to execute your plans and sustain the momentum. Instill discipline and accountability with 2 key components: Rocks and Meeting Pulse™.

Focus on Quarterly Rocks

Humans have a short attention span and tend to lose focus beyond 90 days. To retain focus and momentum, break down your scary long-term goals into bite-sized pieces and short 90-day bursts.

Each quarter, identify the Rocks (your 3-7 biggest priorities) at the company, departmental and individual levels so everyone's aligned on a few key goals. When you get the biggest chunks (the Rocks) out of the way, the smaller pieces will fall in place.

Do a full-day review with your leadership team every 90 days:

- Review the V/TO™, list the priorities for the next 90 days, then narrow down to *3-7 Rocks* for this quarter. Ensure each Rock is specific, measurable and achievable, e.g. "get 3 core accounts at ≥$1 mil each". Assign 1 person who'll be fully accountable for the completion of the Rock that quarter.

KEY QUOTES

"The world is filled with many great visions. Unfortunately, most will go unrealized due to an inability to gain traction."

"To the degree that you focus everyone in one direction, you'll gain the power of (a) laser beam, gaining traction toward your goals."

"Less is always better, and a few priorities are better than many. Do less, accomplish more."

- From the company Rocks, set 3-7 Rocks for each leadership team member. Consolidate them onto a *Rock Sheet* for your weekly meetings. No new priorities can be added that quarter.

- Share the company Rocks with the whole organization. Each department will then set their own *team Rocks*. Unlike the company and leadership team members (who have 3-7 Rocks each), all other staff should have only 1-3 Rocks.

Tips. Don't rush the process as setting the wrong Rocks will mean wasting a full quarter. Give yourself at least 2 quarters to get a hang of the process and commit to the routine—don't let it fizzle out.

Meeting Pulse™

Well-run meetings are essential for accountability, results and efficiency. The Meeting Pulse™ comprises quarterly and weekly meetings where the leadership team meets (without fail) to drive progress and solve issues. 90-day issues go into the V/TO™ and 7-day issues go into the weekly To-Do list.

Quarterly meetings. Leaders meet off-site for about 8 hours with a strategic focus. Everyone comes with a completed V/TO™ and a list of proposed issues and priorities for the coming quarter.

Agenda	Description
Set the tone	Each person shares (i) best business & personal news last quarter, (ii) what's working/not working and (iii) expectations for the mtg.
Review last quarter	• Review the V/TO™: recommit to vision + update issues list. • Review all key numbers and Rocks: done vs not done. • Examine reasons for each incomplete Rock. Decide whether to (i) bring over to the next quarter, (ii) put in weekly To-Do list (if already ≥ 95% complete), or (iii) reassign to someone else.
Set Rocks for next quarter	• List down priorities ➡ Narrow down to 3-7 company Rocks. • Set 3-7 Rocks for leaders + get someone to compile Rock Sheet.
Resolve key issues	• Each leader to share additional issues if any. • Review issues list. Pick top 3 issues and resolve using IDS™. • Solve as many as possible. The rest go into V/TO™ or To-Do list.
Next steps	Summarize who to do what.
Conclude	Each person shares (i) feedback on meeting (ii) if expectations were met and (iii) rating for the meeting.
Note: Aim to complete ≥80% Rocks and get ≥80% rating for each meeting.	

KEY QUOTES

"The Meeting Pulse is your organization's heartbeat."

"You will rarely solve (all the issues). The important thing is to make sure you're solving them in order of priority."

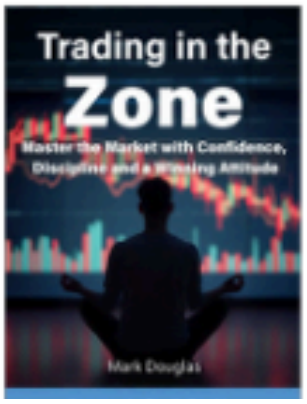
Annual meeting. Leaders meet off-site for 2 days. Everyone comes with a completed V/TO™, suggested goals and a proposed budget for the next year. Use the agenda below for Day 1, and follow the quarterly meeting agenda above for Day 2.

Day 1 Agenda	Description
Set the tone	Each person shares (i) 3 top business achievements that yr, (ii) 1 top personal achievement and (iii) expectations for the mtg.
Review last year	Review key numbers and last quarter's Rocks and what worked or didn't work. Be as specific as possible.
Build Team Health	Each person (i) gets feedback on his/her 1 greatest strength and 1 biggest weakness wrt to the company's success and (ii) commits to doing 1 thing differently the next year.
SWOT/ Issues List	Each person shares what he/she thinks the key SWOTs are. The items go into Issues List.
V/TO™	• Review V/TO™: Challenge assumptions/goals. • Define new 3-Year picture and new 1-year plan.

Weekly meeting. Leaders meet for 90min in the office to solve problems and keep things ontrack. Everyone comes with the Rock Sheet and completed Scorecard. Stick to the same agenda, duration, time and place every week.

Agenda	Description
Set the tone (5min)	• Start on time and turn off all electronic devices. • Share good news as a team.
Scorecard (10min)	• Review key numbers quickly. • All off-track numbers go into the IDS™ .
Rock review (10 min)	• Review company and individual Rocks. • All off-track items go into the IDS™
Client/staff headlines (5min)	• Share key good/bad updates about customers and emloyess • Issues are added to the IDS™ .
To-Do list (10min)	• Review last-week's to-dos. Delete "done" items. • No item to stay on the list for >2 weeks.
IDS™ (45min)	• Scan issues list. Work on top 3 issues, then next 3 etc. • Any identified solutions go into To-Do list.
Conclude (5min)	• Recap To-Do list. • Agree on comms (if any) to the rest of the organization.
Note: Aim to finish 90% of To-Do items and get 100% rating for each meeting.	

KEY QUOTES



TRADING IN THE ZONE

Master the Market with Confidence, Discipline and a Winning Attitude

Mark Douglas

The Big "So What"

Why do so many smart, hardworking traders fail while a few seem to thrive effortlessly? In this book, Mark Douglas explains that consistent trading success has little to do with strategies or analysis—and everything to do with mastering your own mind. He shows how to rewire your beliefs and develop the mental discipline needed to stay calm, objective, and profitable in an unpredictable market.

Introduction

Many traders see trading as a battle against the market. They rely on technical analyses and strategies to outsmart the market—without realizing that the real challenge lies in mastering their mindset and emotions.

Mark Douglas learned this the hard way. After a successful career in commercial insurance, he started trading full-time in 1981—only to lose almost everything within months. That experience led him to study the mental and emotional barriers to trading success. Over more than 2 decades, he coached traders of all levels—from beginners to top floor traders—becoming one of the pioneers in trading psychology.

- In this book, Douglas distilled his lifetime of insights into a practical guide for *developing a "winner's mindset"* and operating from a calm, disciplined, and fearless state known as "the zone."
- Whether you're a beginner or an experienced trader, this mental framework can transform how you think, feel, and act to achieve *consistent trading results* over time.

KEY QUOTES

"The goal of any trader is to turn profits on a regular basis, yet so few people ever really make consistent money as traders."

"Just because you are acting in the capacity of a trader, doesn't mean that you've learned the appropriate ways to think about what you do."

"If your goal is to trade like a professional and be a consistent winner, then you must start from the premise that the solutions are in your mind and not in the market."

"Trading presents us with a fundamental paradox: How do we remain disciplined, focused, and confident in the face of constant uncertainty?"

- In this summary, we've organized the insights into *2 parts*:

  (i) Why most traders fail; and

  (ii) How to build a winning mindset.

Part 1: Why Most Traders Fail

Trading Approaches and their Limitations

Most traders approach the market the wrong way. They try to use analyses to outsmart the market, not knowing that the real battle is inside their own minds.

This is reflected in the evolution of trading approaches:

- In the 1970s, *fundamental analysis* was seen as the only credible approach. It predicts future prices using economic and financial indicators like earnings, supply/demand, and interest rates. It assumes that the market is rational, and prices reflect true value. In reality, market prices are driven by irrational perceptions, emotions, and actions of market participants.

- In the 1980s, *technical analysis* gained popularity. It's more effective than fundamental analysis since it identifies patterns in prices and market behavior. Such patterns are:

  (i) Observable, measurable, and repeatable across different timeframes; and

  (ii) Easier to translate into objective trading systems, helping traders to bridge the gap between market theory and reality.

- Even with sound technical systems, many traders are unable to execute consistently under pressure. They get derailed by fear, impulsiveness, hesitation, or overconfidence. To close the gap between what you know and what you actually do, you need *mental analysis*—to understand and manage your beliefs, emotions, and reactions when faced with uncertainty.

KEY QUOTES

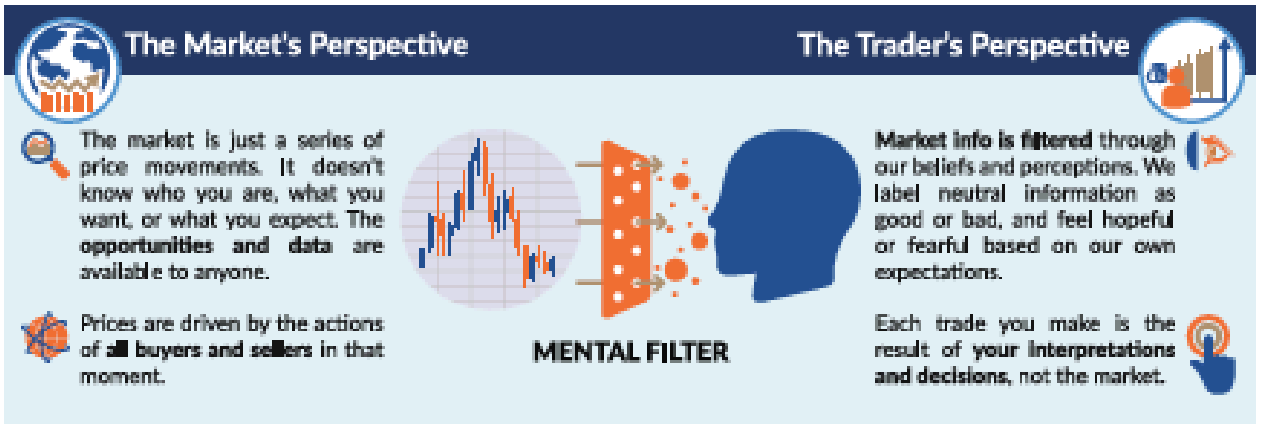
"This book is designed to give you...the insight and understanding you need about yourself and about the nature of trading."

"Attitude produces better overall results than analysis or technique."

"Fundamental analysis creates what I call a 'reality gap' between 'what should be' and 'what is.'"

"In a sense, technical analysis allows you to get into the mind of the market to anticipate what's likely to happen next, based on the kind of patterns the market generated at some previous moment."

"There can...be a huge gap between what you understand about the markets, and your ability to transform that knowledge into consistent profits or a steadily rising equity curve."



How Beliefs Distort Market Information & Responses

Most traders don't perceive the market as it is. We filter market information through our beliefs, perspectives, emotions, and biases.

- *The market is neutral and impersonal*. It doesn't know who you are, and it doesn't care what you want or expect. It simply reflects the collective actions of all participants.
- However, we label market data as "good" or "bad", and feel hopeful or fearful based on our own expectations. After a few losses, a trader may hesitate on the next valid setup out of fear. After a few wins, the same trader may get over-confident and overcommit. In both cases, the market hasn't changed—just the *internal state* of the trader.

Your beliefs influence every aspect of trading. They're like internal filters: they affect what you notice or ignore, how you interpret market information, how you define risk or reward, and how you respond to market changes.

- When your beliefs are *aligned* with reality, you feel calm, clear and confident. When they aren't, you feel stressed, confused, and conflicted—even if your analysis is correct. For example, you might think "I accept risk", yet feel anxious about a trade.
- The most dangerous beliefs are the ones you're unaware of. For example, you might believe "I don't deserve to win" or "It's wrong to profit easily." These hidden beliefs can cause you to make "accidental" mistakes—or feel guilty when you win.

Our minds are wired to resolve uncertainty by associating what we see now with what we've seen before. We might assume

KEY QUOTES

"Trading is probably the hardest thing you'll ever attempt to be successful at…not because it requires intellect…But because the more you think you know, the less successful you'll be."

"It's your own mental framework that determines how you perceive [market] information, how you feel, and, as a result, whether or not you are in the most conducive state of mind to spontaneously enter the flow and take advantage of whatever the market is offering."

"To avoid the pain, we narrow our focus of attention and concentrate on information that keeps us out of pain."

that 2 similar-looking patterns or setups will bring similar outcomes—which is untrue, since every moment in the market is unique.

Many traders unconsciously expect the market to fulfill their hopes and expectations. When it doesn't, they feel betrayed.

- The market owes you nothing. Each trade you make is the result of *your own interpretations and decisions*.
- Traders get stuck when they *take each trade personally* as reflection of their prediction or intelligence. They feel great when they're right and upset when they're wrong. They pick and choose trades based on how they feel, instead of following a process strictly. This leads to random, unreliable results.

When you think you know what happens next, you fall into 3 common traps:

- *Not predefining risk* since you believe this trade is a sure thing.
- *Not cutting losses* since you don't want to admit you're wrong.
- *Not taking profits*, since you're still hoping for more.

The market merely reflects your inner state. Your job isn't to control it, but to manage yourself. Here's the harsh truth:

- 40–50% of traders know how to win, but get trapped in emotional *boom-and-bust cycles*.
- 30–40% *lose consistently* due to illusions and lack of responsibility.
- Only less than 10% *win consistently*. To join this 10%, you must master your mindset.

Part 2: Building a Winning Mindset

The consistently-successful trader you wish to be doesn't exist yet. To reach that level, you must deliberately build a new mental version of yourself—one that can act with clarity, objectivity, and consistency, regardless of wins or losses.

KEY QUOTES

"When we expect something, we are projecting out into the future what we believe to be true."

"The typical trader won't predefine the risk of getting into a trade because he doesn't believe it's necessary."

"If we're going to feel great if the market does what we expect it to do, or feel horrible if it doesn't, then we're not exactly neutral or open-minded."

"The consistency you seek is in your mind, not in the markets."

"You must create a new version of yourself, just as a sculptor creates a likeness of a model."

This transformation requires both fearlessness and restraint:

- Being fearless doesn't mean taking bigger risks. It means removing *fear-based internal conflict*. When you're no longer trying to avoid pain or prove yourself right, you can act decisively and accept losses without emotional turmoil.
- To stay consistent, you also need *restraint*—the ability to remain grounded and disciplined whether you're winning or losing.

The strategies below help you to achieve this transformation.

Create Internal Rules and Structures

Trading offers immense freedom. There are no fixed rules, no bosses, no external accountability. You decide when to trade, how much to risk, and when to enter or exit. But that same freedom can be dangerous.

- Most people are used to operating within structured environments like schools, families, and workplaces, which come with clear *boundaries, rules, and norms* that guide behavior and curb emotional impulses.
- Trading lacks such external structures. So, traders must *impose their own internal rules* for discipline and self-control. Otherwise, emotions—like fear, greed, impatience—can override logic, leading to erratic and self-destructive behaviors. In short, rules aren't restrictive, but essential for sustainable freedom.

Accept Risks and Responsibility Fully

Traders often take credit for wins, but blame external forces (e.g. market, bad luck) for losses. To get consistent results, you must fully own your actions, decisions, and outcomes, without blaming external factors.

Ultimately, you (not the market) are responsible for your trading results.

KEY QUOTES

"Successful traders have virtually eliminated the effects of fear and recklessness from their trading."

"Freedom is great…But that doesn't mean that we have the appropriate psychological resources to operate effectively in an environment that has few…boundaries."

"We have to be rigid in our rules and flexible in our expectations… [but] the typical trader does just the opposite: He is flexible in his rules and rigid in his expectations."

"You are not responsible for what the market does or doesn't do, but you are responsible for everything else that results from your trading activities."

- If you've *truly accepted* the risks and responsibility, you'll see losses as part of the game, not a personal failure or market betrayal. You learn from each trade and move on.

- If you *haven't*, then each loss feels like a violation.

  (i) You treat the market like an enemy and get emotional when trades go wrong.

  (ii) You chase "better analysis" to eliminate losses. This reinforces the false belief that the market is the problem, and prevents you from developing the emotional skills needed to manage risk.

Adopt a Probability Mindset

Stop trying to predict or control markets that are inherently uncertain. The key to consistent, long-term success is to think in probabilities by treating each trade as a unique event with an uncertain outcome. To do that, you must adopt 2 beliefs:

- At a *micro level*, each trade is unique. Even if a setup looks familiar, the participants involved are different, so the outcome is always uncertain. Since you can't predict who will trade or how they will trade, it's impossible to predict the outcomes.

- At the *macro level*, a consistent process applied over time will yield consistent results, despite the randomness of individual trades. Over large numbers of trades, the market has a higher probability of moving in some directions over others.

To be a probability-based trader, embrace 5 fundamental truths:

KEY QUOTES

"You have to understand, with every fiber of your being, the ways in which you are and are not responsible for your success as a trader."

"Taking responsibility means acknowledging and accepting, at the deepest part of your identity, that you—not the market—are completely responsible for your success or failure as a trader."

"When you achieve complete acceptance of the uncertainty of each edge and the uniqueness of each moment, your frustration with trading will end."

"The idea is to create a carefree state of mind that completely accepts the fact that there are always unknown forces operating in the market."

- *Anything can happen*: You can't predict the market, so make sure you stay open and flexible.

- *You don't need to know what will happen next* to make money. Just execute your plan and let the probabilities play out over time.

- There's a *random distribution between wins and losses* for any given set of variables. No matter how good the setup, you can still lose.

- *An edge means one outcome is more likely* than another—but the outcome is never guaranteed.

- *Every moment in the market is unique*. Treat each trade as a new situation, even if it looks familiar.

Remember: consistent trading results mean a steadily-rising equity curve, with minor draw-downs on occasions. Your goal is to produce consistent profitability and keep the profits over time. When you *truly* accept the 5 fundamental truths, you can trade without fear or stress, and be at peace with any outcome.

- However, it's *not enough to understand these truths logically*—you must install them into your belief system, which is easier said than done.

Align Your Beliefs with Market Reality

Beliefs shape how you perceive, interpret, and react to everything, including the market.

- *Beliefs are hard to change* because they're tied to your identity. Challenging a belief can feel like a threat, so your mind distorts or blocks info that doesn't fit existing beliefs. This is why people often cling to old beliefs even when they see evidence that contradicts them.

- In trading, beliefs affect how you interpret market signals. You don't react to what the market is actually doing—*you react to what you believe* it means. For example, if you believe "losing means I'm a bad trader," you'll try to avoid loses or win them back quickly, rather than assess opportunities objectively.

KEY QUOTES

"The best traders stay in the flow because they don't try to get anything from the market; they simply make themselves available so they can take advantage of whatever the market is offering at any given moment. There's a huge difference between the two perspectives."

"Most of the time, understanding a concept is only a first step in the process of integrating that concept at a functional level."

"The fear of admitting we are wrong causes us to place an inordinate amount of significance on information that tells us that we're right."

Consistency is a state of mind, like happiness. It comes from internal alignment, not from trying harder.

- You can't change beliefs through logic alone. The only way is to *rewire them through repeated action*, until the new thinking and behaviors become natural.
  - For example, someone who fears snakes won't stop feeling afraid just because they understand logically that certain snakes are harmless. The fear only fades with repeated, safe experiences around snakes.
  - Trading works the same way. If you fear losing, logic won't dissolve that fear. You must take repeated actions without hesitation until confidence replaces fear as your default response.
- To trade consistently, it's not enough to understand probability. You must align your belief system with how the market really works—by *installing the 5 fundamental truths into your belief system* so they operate automatically without resistance.

Douglas argues that beliefs are energized through repeated action and experience.

- You can't delete or destroy a belief, but you can *shift its energy to deactivate it*. Each time you act in line with a new belief, you energize and reinforce it—while draining energy from the old one. Over time, the new belief becomes dominant, and the old one becomes dormant.
- For example, you might hold two conflicting beliefs at once, like "trading is scary" and "I can trade with confidence." The one you reinforce will have more *emotional energy* to shape your decisions and results.

Internalize The 5 Fundamental Truths In 3 Stages

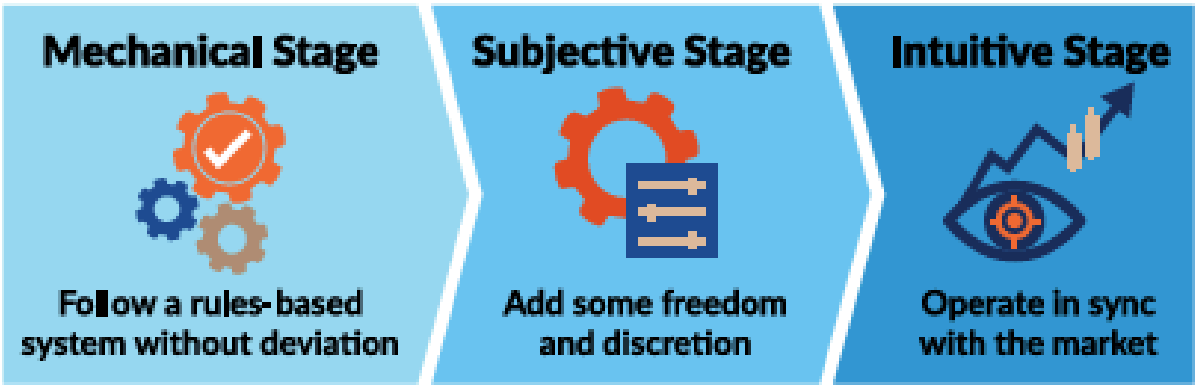
There are 3 developmental stages to progressively master your mindset and move from "knowing" to "being".

KEY QUOTES

"Risk is relative, but to the person who perceives it in the moment, it seems absolute and beyond question."

"If you stop fighting the market, which in effect means you stop fighting yourself, you'll be amazed at how quickly you will recognize exactly what you need to learn, and how quickly you will learn it."

"The easiest and most effective way to work with our beliefs is to gently render them inactive or nonfunctional by drawing the energy out of them. I call this process de-activation."



Mechanical stage: Build discipline, self-trust, and consistency through a rules-based trading approach.

- Choose your *market and trading system*.
  - *Market*: Any actively-traded stock or futures contract that's liquid, with affordable margins for trading >300 shares or 3 futures contracts per trade.
  - *System*: Any rule-based trading system that clearly define your edge (trade entry, stop-loss exit, and time frame).
- *Sample size = 20 trades*: Commit to execute at least 20 trades based on the chosen edge, with zero deviation. Accept that you may lose on all 20 trades. The objective isn't to win, but to train your mind to act consistently, without hesitation.
- Closely observe your own thoughts, feelings, and actions to *notice and address any internal conflict*.
  - If you've adopted a probability mindset and truly believe the 5 Truths, the exercise will feel *effortless* because your actions are align with your beliefs.
  - If you notice any *internal conflict* (e.g. fear, doubt, or the urge to break your rules), pause to examine the underlying beliefs and refocus on your objective.
  - Each time you stick to your process despite emotional urges, you withdraw energy from old beliefs and reinforce new ones that *reinforce probabilistic thinking*.
- To support this, repeat the 5 fundamental truths aloud each day, along with these *7 principles of consistency*. Remind yourself: "I am a consistent winner because...
  - I identify my edges objectively.
  - I predefine the risk of every trade.

KEY QUOTES

"When you really believe that trading is simply a probability game, concepts like right and wrong or win and lose no longer have the same significance. As a result, your expectations will be in harmony with the possibilities."

"'What is the truth?' The answer is, whatever works."

"When you have accepted the risk, you will be at peace with any outcome."

"Beliefs exist in our mental environment from the moment they are born to the moment we die, unless we consciously take steps to de-activate them."

- I completely accept the risk or I'm willing to let go of the trade.
- I act on my edges without reservation or hesitation.
- I pay myself as the market makes money available to me.
- I continually monitor my susceptibility for making errors.
- I understand the absolute necessity of these principles of consistent success and, therefore, I never violate them."

- Keep going until you can finish a full sample size effortlessly, *with no inner resistance*.

Subjective stage: With a stable foundation, you can start adding some freedom and discretion.

- Use everything you've learned to *interpret the market in your own way*, while staying aware of psychological traps like tying your self-worth to your profits.
- Focus on using *internal controls* to reduce emotional errors and avoid lapsing into old habits. The goal is to progressively improve self-management, so you can stay objective without relying entirely on external systems.

Intuitive stage: This is the highest level, where you've transited from "knowing" to "being". You're no longer trying to apply what you know—you're doing them intuitively and effortlessly because you've changed your inner state. It's like earning a black belt in martial arts.

- You're now *operating in "the zone"* where the right decisions and actions come naturally because you're fully in sync with the market. You trade with presence and focus because you're at peace with any outcome, and feel free from all fear, hesitation, or internal conflict. You don't *try* to be consistent. You simply *are*.
- You can't force your way into this state. You can only enter it with the right mental conditions—a *fear-free, objective state of mind*:
  - You *see market data clearly* and respond to what's happening, not what you hope or fear might happen.

KEY QUOTES

"The irony is that if [a trader] completely accepted the fact that certainty doesn't exist, he would create the certainty he craves: He would be absolutely certain that certainty doesn't exist."

"Acting appropriately on anything requires belief and clarity of intent, which keeps our minds and senses focused on the purpose at hand."

"The zone is a mental space where you are doing more than just reading the collective mind, you are also in complete harmony with it."

- You let go of all personal agenda—you're not trying to prove you're right, win back losses, or take revenge on the market. This allows you to be *fully present* to market opportunities.
- You *operate in the now moment*, treating each trade as a unique event, with no emotional baggage from past outcomes.

- In this this state, there's no fear, hesitation, or internal compulsion, because you've built trust in yourself, fully accepted uncertainty and risk, and you're *at peace with any outcome*.

Other Details in the Book to Look out For

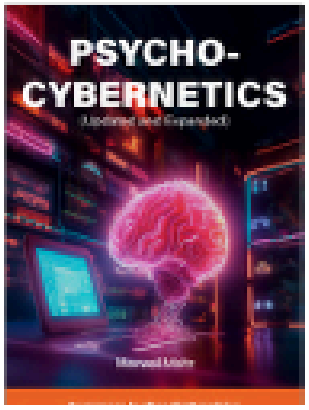
The key to lasting success in trading isn't better strategies, but a better mindset—and you can reshape your mental framework in 3 stages to internalize the 5 fundamental truths of successful trading. In the book, Douglas explains the success ingredients of trading in detail, along with additional tools like an attitude survey and guided exercises to help you deactivate old beliefs and build new ones, so you can trade with confidence, clarity, and consistency.

About the Author

Mark Douglas (1948–2015) was a leading expert in trading psychology and founder of Trading Behavior Dynamics, a firm that coached traders to overcome emotional and mental roadblocks. After starting in commercial insurance, he became a full-time trader, which led to a decades-long career helping traders master the mental side of the markets. His work was instrumental in shifting the industry's focus from analysis to mindset, and his books—The *Disciplined Trader* and *Trading in the Zone*—remain classics in the field.

KEY QUOTES

"By making yourself available, you consciously open yourself up to find out what will happen next; instead of giving way to an automatic mental process that causes you to think you already know."



PSYCHO-CYBERNETICS

(Updated and Expanded)

Maxwell Maltz

The Big "So What"

In this book, Maxwell Maltz applies cybernetics—traditionally used to study feedback systems in machines—to understanding the human mind and personal transformation. He offers a step-by-step guide to reshape your self-image, thereby reprogram your mind, break free from self-imposed limitations and achieve success in any area of your life.

What is Psycho-Cybernetics?

Cybernetics is the study of systems that automatically achieve goals using feedback.

- Just as a missile uses feedback to correct its course and hit its target, the *human brain* also uses feedback to adjust actions and achieve goals. Dr. Maltz applied these principles to the mind, showing how our brain can be programmed to achieve success and personal growth.

The brain is like an advanced computer. Like a computer, the brain processes experiences and adjusts actions based on feedback. However, the brain is far more complex, since it's powered by human creativity, beliefs, and imagination.

- The *conscious mind* is our thinking mind. It consciously analyzes inputs and can choose to accept, reject, or create ideas.
- Our *subconscious mind*, on the other hand, accepts ideas without question. Such ideas are imprinted by the conscious mind through thoughts or vivid imagination. The more often an idea is repeated with strong emotional responses, the deeper the imprint.

KEY QUOTES

"The self-image is the key to human personality and human behavior. Change the self-image and you change the personality and the behavior."

"Man is by nature a goalstriving being...Thus true success and true happiness not only go together but each enhances the other."

"Psycho-Cybernetics does not say that man is a machine. Rather, it says that man has a machine that he uses."

"The more that is learned about the human brain, the more closely it resembles—insofar as function is concerned—a servo-mechanism."

- Once these beliefs or goals are programmed into the subconscious, they shape our *actions and responses*, often without our conscious awareness.

The subconscious mind has a Creative Mechanism which functions like a goal-seeking system. It doesn't question or judge the goals it receives, be it positive or negative. It simply follows those instructions, calibrating our actions/responses until it achieves the goal.

- When we focus on clear, positive goals, our mind works as a *Success Mechanism* to help us achieve those goals. When we focus on negative/limiting beliefs, our brain acts as a *Failure Mechanism*, steering us toward those undesired outcomes.

- The brain uses *two types of feedback systems* to reach goals:

  (i) When it receives a *clear, specific goal*, it acts like guided missile to direct our actions/responses toward that goal.

  (ii) When we lack the direct experiences to achieve a goal, the brain can come up with *creative solutions* through imagination and mental rehearsals (elaborated below).

The Power of Self-Image

As a plastic surgeon, Dr. Maltz noticed that patients often experienced a strong shift in psychology and behaviors after changing their physical appearance. Yet, they seldom experienced lasting happiness. It led him to realize that true transformation comes from within, not from physical or external changes.

Self-image is the mental blueprint of who we believe we are. It is built from our past experiences, successes, failures, and beliefs.

- It is like an invisible guide directing your subconscious mind, *influencing everything you do*. It controls your thoughts, actions, feelings, and even your abilities, ultimately determining your results.

  (i) If you see yourself as a failure, you will unconsciously find ways to fail, no matter how hard you try.

KEY QUOTES

"This Creative Mechanism within you is impersonal. It will work automatically and impersonally to achieve goals of success and happiness, or unhappiness and failure, depending on the goals that you yourself set for it."

"When you do see a thing clearly in your mind, the creative Success Mechanism within you takes over and does the job much better than you could do it by conscious effort, or "willpower.""

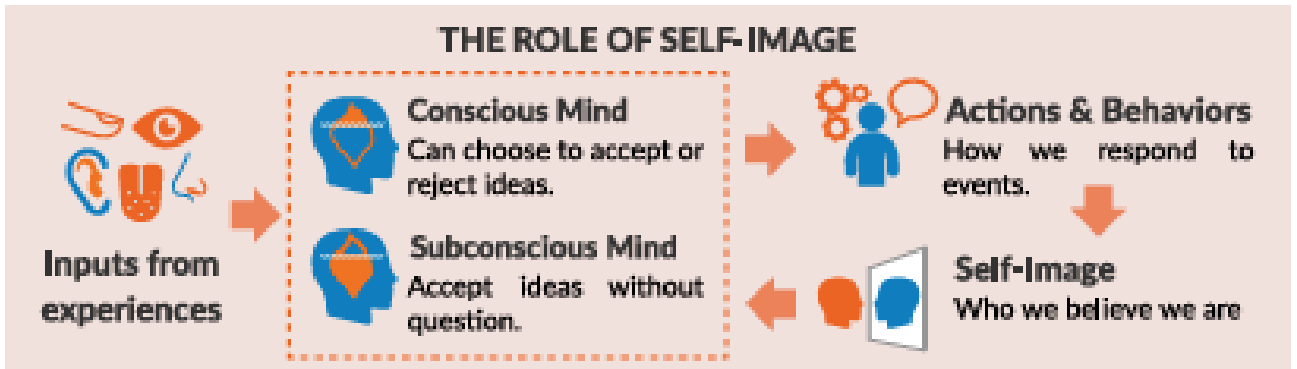
"A plastic surgeon does not simply alter a man's face. He alters the man's inner self."

"The self-image is a premise, a base, or a foundation upon which your entire personality, your behavior, and even your circumstances are built."

"All your actions, feelings, behaviors—even your abilities—are always consistent with this self-image...you will 'act like' the sort of person you conceive yourself to be."

(ii) If you see yourself as capable and successful, your actions and experiences will align with that belief, creating a reinforcing cycle of positive outcomes.

- To achieve lasting behavioral change, you must first *change your self-image*—and it *can* be changed.
  - Positive thinking alone won't work if you hold a negative belief about yourself. But once your self-image changes, new behaviors come naturally and effortlessly.
  - Psychologist Prescott Lecky found that students who improved their self-image saw significant academic improvement, with one student going from failing to achieving A-grades.



A flawed self-image often leads to "imaginary ugliness," where people feel unattractive despite their actual appearance. The solution is to build a healthy self-image, not to alter your physical appearance. In the next section, we will break down how to do so by activating the Success Mechanism and overcoming the Failure Mechanism.

The ideas in this book cannot be understood intellectually; they must be experienced. It takes at least 21 days of consistent mental rehearsal and visualization to reshape a self-image. So, make sure you practice the tips and ideas below without judgment, so as to experience the effects for yourself.

Living a More Successful, Fulfilling Life

To live a successful and fulfilling life, you need a realistic self-image—to recognize both your strengths and weaknesses without exaggeration or denial, so you can express your true self with confidence.

KEY QUOTES

"Positive thinking" cannot be used effectively as a patch or a crutch to the same old self-image."

"The self-image sets the boundaries of individual accomplishment. It defines what you can and cannot do. Expand the self-image and you expand the 'area of the possible.'"

"To find life reasonably satisfying, you must have an adequate and realistic selfimage that you can live with. You must find your self acceptable to 'you.'"

"You can neither prove nor disprove the ideas and concepts described in this book with intellectual argument, or simply by talking about them. You can prove them to yourself by doing them and judging results for yourself."

unrealistic expectations, a negative self-image, or perfectionism. Acknowledge the frustration and adjust your expectations.

- *Aggressiveness*: The desire to control, dominate, or forcefully achieve goals can lead to irritability, health issues, and strained relationships. Find healthy outlets (e.g. exercise, writing) to release the tension.

- *Insecurity*: Self-doubt, comparison, and unrealistic standards can lead us to avoid challenges or overextend ourselves. Rather than seek perfection or prove your superiority, embrace imperfection as part of continuous growth.

- *Loneliness*: Fear of rejection or low self-worth can lead to a cycle of withdrawal from others and further disconnection. Actively engage with others even if it feels uncomfortable initially.

- *Uncertainty*: When we feel lost or unclear about our direction, we might feel paralyzed or start blaming others. Instead of avoiding mistakes, seek to learn from them instead.

- *Resentment*: When we blame others for our failures, we get trapped in a cycle of self-pity, blame and negative thinking. Forgive, let go of past grievances, and move forward.

- *Emptiness*: We feel unfulfilled and apathetic when we pursue goals that are misaligned with our values or emotional needs. To regain purpose and fulfillment, refocus on goals that align with your true desires and values.

Using Imagination & Visualization

Mental imagery is a powerful tool for guiding the brain toward a goal. When we visualize success or achievement, it activates the brain's Creative Mechanism to make that outcome a reality.

- The subconscious mind doesn't distinguish between *real versus vividly-imagined experiences*. You can use visualization and imagination to plant new goals or "memories" to guide your brain, build skills, and reshape your self-image.

- For example, under *hypnosis*, people can act in ways that defy their actual abilities because they believe the hypnotist's

KEY QUOTES

"The answer to aggression is not to eradicate it, but to understand it, and provide proper and appropriate channels for its expression."

"Trying to stand on the top of a pinnacle is insecure. Mentally, get down off your high horse and you will feel more secure."

"The person who is alienated from his real self has cut himself off from the basic and fundamental "contact" with life."

"If we wait until we are absolutely certain and sure before we act, we will never do anything."

"The person in whom the capacity to enjoy is dead can find enjoyment in nothing."

"A human being always acts and feels and performs in accordance with what he imagines to be true about himself and his environment."

"The power of hypnosis is the power of belief."

suggestions. A person with normal hearing may behave as if they were deaf, or a champion weightlifter might struggle to lift something as light as a pencil. In short, our imagination or belief can override our physical abilities.

By vividly visualizing specific goals or scenarios, you can program your brain to achieve them.

- The nervous system responds based on what the brain perceives—regardless of whether it's real. For instance, if you believe that a person in a bear costume is a real bear, your body will experience the same fear response as if it were facing a real threat. Through vivid visualization, you can create "*synthetic experiences*" to get your brain and body to respond as if your imagined goals are already happening.

- By using *mental rehearsals*, you can practice a behavior or skill without physical effort. In a famous experiment, basketball players who visualized free throws improved almost as much as those who practiced physically. Similarly, salespeople who mentally rehearsed their sales scenarios increased their sales performance by 150-400%.

- Many *successful leaders* also used visualization to achieve their goals. Napoleon visualized his military strategies before executing them, and business figures like Conrad Hilton and Henry Kaiser regularly imagined their successes before they materialized.

Daily visualization exercise. Set aside 5-30 minutes each day to vividly picture yourself achieving specific goals that align with your true self and potential.

- Focus on the *steps, emotions, and sensations* involved in reaching those goals. Or, focus on the person you wish to be, seeing how your ideal self thinks, feels, and behaves.

- Such exercises create *new "memories"* in your brain to cumulatively build a new self-image. After some time, you might find yourself spontaneously acting in line with those images.

KEY QUOTES

"We act, or fail to act, not because of 'will,' as is so commonly believed, but because of imagination."

"You act, and feel, not according to what things are really like, but according to the image your mind holds of what they are like."

"Hold a picture of yourself long and steadily enough in your mind's eye and you will be drawn toward it."
—Dr. Harry Emerson Fosdick

"Our aim is to find the real self, and to bring our mental images of ourselves more in line with the objects represented by our goals."

"You must first clearly see a thing in your mind before you can do it."
—Alex Morrison

Using Your Conscious Mind and Rational Thinking

Rational thinking is the process of analyzing situations logically and responding to them with clear, objective reasoning. It's key to manage our feelings so (i) emotional impulses like fear or frustration cannot derail our progress, and (ii) we can intentionally shape the thoughts and beliefs that drive the Creative Mechanism.

Many of us focus too much on past mistakes and the fear of failure.

- This drains our confidence and makes even small challenges seem overwhelming. Moreover, the Creative Mechanism responds to the data we feed it—if we focus on failure, it will lead us toward more failures. *Learn from your mistakes, then let go* and move forward, keeping your attention on past successes and future goals.

Rational thought helps us critically evaluate beliefs, so we can make decisions based on facts, not misconceptions or fears.

- Prescott Lecky emphasized *2 key beliefs for personal growth*: (i) that you are capable and independent, and (ii) that your inner dignity should never be compromised.

- Whenver you feel *inadequate or unworthy*, challenge yourself by asking: Is this belief based on facts, or is it an assumption?

Use emotions like anger, indignation, and desire to motivate yourself to break free from limiting beliefs and achieve success.

Once you've set clear goals and laid the groundwork, trust your automatic mechanism to handle the rest, rather than consciously trying to control every detail.

Using Your Subconscious Mind & Unleashing Creative Insight

The subconscious mind is a powerful tool for creative problem-solving.

- Often, our best insights come when we step away from the problem, and allow the subconscious mind to *"incubate" or connect ideas* without our conscious effort.

KEY QUOTES

"A person has to start in the present to acquire some maturity so that the future may be better than the past."

"The minute that we change our minds and stop giving power to the past, the past with its mistakes loses its power over us."

"Ideas are changed, not by "will," but by other ideas."

"Feelings are the soil that thoughts and ideas grow in."

"We get into trouble when we either neglect to use conscious thinking in the way that it is meant to be used, or when we attempt to use it in a way that it was never meant to be used."

"You must have a clear mental picture of the correct thing before you can do it successfully."

- For *example*, Charles Darwin's key idea for The Origin of Species emerged during a carriage ride, after months of analysis. Philosopher and author Bertrand Russell often worked intensely on a complex problem, then took a break and "passed" the issue to the subconscious mind to continue working on it.

Overthinking blocks this natural creative process. For example, a pianist who overanalyzes each note may struggle to play fluidly, and people who overthink social situations tend to come across as being stiff and unnatural.

Our conscious brain is good for analyzing problems, but creative problem-solving is best left to the subconscious mind. To unleash its full potential, use these 5 rules to incorporate relaxation and detachment into problem-solving.

- *Worry before, not after, making a decision*: Address risks and concerns beforehand, but once a decision is made, stop worrying and start engaging the task/problem fully.

- It's ok to plan for the future, but don't get lost in past or future concerns. Instead, *focus on the present*.

- *Do one thing at a time* to become calmer and more productive. Don't multitask.

- *Sleep on it*: When you're stuck, take a break and let your subconscious process the problem in the background. Thomas Edison often reviewed problems just before going to bed at night or before taking a nap, so his subconscious could work on solutions while he slept.

- *Stay relaxed while working*: Tension and stress block creativity. Consciously relax throughout the day to reduce stress and enhance creativity. Every hour or so, take a minute to release tension from your body and mind, and to consciously relax. Recall the feeling of your arms, legs, back, and face when you're completely at ease, and deepen the sense of calm by saying "I feel more and more relaxed."

KEY QUOTES

"We become nervous because we are trying to do the impossible, and thereby making futility and frustration inevitable."

"By relaxing, and maintaining a relaxed attitude, you remove those excessive states of concern, tension, and anxiety, which interfere with the efficient operation of your Creative Mechanism."

"Make long-range plans for tomorrow. But don't try to live in tomorrow, or in the past."

"The truth is: We can only do one thing at a time...When we work with this attitude, we are relaxed, we are free from the feelings of hurry and anxiety, and we are able to concentrate and think at our best."

Applying the Happiness Formula

Happiness is a mental state that brings many benefits, from better health to improved relationships and success. However, there are several common misconceptions that lead people astray:

- *Happiness is not a destination*: Many people think they'll be happy once they achieve certain goals or milestones. True happiness comes from within and can be accessed *right now*.

- *Happiness is not selfish*: True happiness often involves helping others. However, it's not about self-sacrifice, even though it feels good to be valued and needed by others.

- *Happiness is a habit*: It can be cultivated through daily practice, by consciously choosing positive thoughts and maintaining a positive outlook every day.

Happiness is an internal state shaped by our ideas, thoughts, and attitudes, not external circumstances. To cultivate happiness:

- *Own your happiness*. Don't give away your power by allowing others' opinions to dictate your happiness. When you're calm and at peace within, happiness becomes your natural state.

- *Live in the present* to foster inner peace. Don't dwell on past mistakes or worry about the future.

- Happiness can't be forced. Rather than strive for happiness, do the things that bring joy and fulfillment, and *allow happiness to come naturally* as a byproduct of a balanced, purposeful life.

- *Choose your response to negativity*: You can't avoid unpleasant events in life, but you can choose how to respond to them. Self-pity or resentment only worsens the situation. Instead, focus on a positive goal and actively pursue it.

- *Happiness is a choice*, so focus on positive thoughts regardless of what each day brings.

KEY QUOTES

"We think better, perform better, feel better, and are healthier when we are happy. Even our physical sense organs work better."

"Most people are about as happy as they make up their minds to be."
—Abraham Lincoln

"Happiness is purely internal. It is produced, not by objects, but by ideas, thoughts, and attitudes which can be developed and constructed by the individual's own activities, irrespective of the environment."
—Dr. Matthew N. Chappell

"The measure of mental health is the disposition to find good everywhere."
—Ralph Waldo Emerson

Releasing Inhibitions

True personality comes from within, as a reflection of your unique self. But for many people, it's hidden beneath layers of self-doubt, fear, and limiting beliefs.

- *Over-inhibition* is the suppression of natural impulses, often driven by fear of failure or self-criticism. We hold ourselves back, leading to missed opportunities and under-achievement, such as withholding ideas in meetings out of fear of judgment.

- *Self-criticism* can magnify minor mistakes to make them seem insurmountable. Stutterers, for instance, spoke more naturally when they couldn't hear their own voice (thereby removing self-critical feedback).

To unlock your true personality, become aware of your own thoughts, feelings and actions, without being excessively concerned about others' opinions.

- Ironically, you make the best impression when you *stop trying too hard*. When you express yourself authentically, you resonate more with others. But when you inhibit yourself due to fear or insecurity, you come across as inauthentic, which can be off-putting.

- *Don't overthink* public speaking or performances. Prepare thoroughly, then trust yourself to perform naturally and spontaneously.

Use these exercises to overcome inhibition:

- *Speak louder* in daily interactions, without shouting. This helps you to project confidence and express positive emotions freely.

- *Compliment 3 people* daily or express your appreciation. This reduces fear of judgment and builds positive connections.

- Reflect occasionally, but *don't scrutinize yourself every moment*.

KEY QUOTES

"When we overreact to negative feedback or criticism, we are likely to conclude that not only is our present course slightly off beam, or wrong, but that it is wrong for us to even want to go forward."

"Personality...is not so much something that is acquired from without, as something that is released from within."

"You become too careful to make a good impression, and in so doing choke off, restrain, inhibit your creative self and end up making a rather poor impression."

"The path to the goal is a course between too much inhibition and too little."

"The inhibited personality is as afraid of expressing "good" feelings as bad ones."

Breaking Free From Conditioned Responses

Often, we develop unhelpful habitual responses to certain stimuli. For example, we may reflexively answer a distracting phone call even when we're in the middle of an important task.

Use relaxation to break free from these conditioned responses:

- Studies found that full relaxation makes it impossible to feel negative emotions. It serves as an effective *mental shield* against habitual responses, to either ignore or delay your response to the stimuli.
- Think of it as a "spiritual thermostat" that regulates your reaction and *maintains emotional stability*. This helps you to handle any situation in a calm and composed way, instead of being controlled by your emotions.

One way to relax is by creating a quiet space in your mind that you can retreat to any time.

- Imagine a *serene room* designed with elements that bring you peace—such as simple furnishings, calm colors, or a calming view.
- Whenever you feel a negative emotion, or feel stressed or stuck, visualize yourself entering this space, relaxing, and *taking a mental break*.
- You can also use this space to *clear your mind* before starting on an important challenge or interaction, to prevent negative emotions from being carried from one event to another.

Thriving Under Crisis

Crises can either hold you back or help you to grow—depending on how you respond to it. To perform well in crisis, you need to:

- *Practice without pressure*: It's ineffective to learn under pressure. Repeatedly practice critical skills beforehand, in a calm and pressure-free setting, until they become automatic and will come to you naturally even in high-stress situations.

KEY QUOTES

"Today, more than ever, it's vital to address the bad habit of overresponse—to relax from doing—when we are assaulted by the stimuli of email, texts, and all manner of electronic communications."

"You are basically an 'actor'—not a 'reactor'."

"Men seek retreats for themselves: houses in the country, sea-shores and mountains...But...it is in thy power whenever thou shalt choose to retire into thyself."
—Marcus Aurelius

"The real problem is not to control emotion, but to control the choice of which tendency shall receive emotional reinforcement."
—Prescott Lecky

"The more intense the crisis situation under which you learn, the less you learn."

- A crisis can unleash hidden energy and abilities to propel you forward. During a crisis, *stay focused on your goals* so you can deliberately channel your energy toward creative solutions that support those goals (rather than succumb to fear or stress).

- *See the crisis in perspective*. Ask yourself, what's the worst thing that can happen? When you consider the implications calmly, you'll probably realize that things aren't as bad as they seem.

Conclusion and Other Details in the Book

Self-image is powerful, and it can be changed to positively impact all aspects of your life. Once your mind is tuned for success, you'll naturally experience a "winning feeling" that helps you to act with confidence and spontaneity. To build this winning feeling:

- *Start small and build up gradually*. Begin with manageable tasks, and let every small victory build confidence and momentum.

- *Replay successes*: Mentally revisit past success, even minor ones, to boost your confidence and set the stage for more wins.

- *Practice positive visualization*: Instead of worrying about failure, mentally rehearse successful outcomes to reinforce positive beliefs, build courage and confidence.

- *Manage negative emotions*: You can choose how to respond to negative feelings like fear and doubt—use them to fuel to progress, rather than let them paralyze you.

- *Rewrite your mental script*: Replace memories of past failures with present successes, and change how you interpret past events to build self-esteem and resilience.

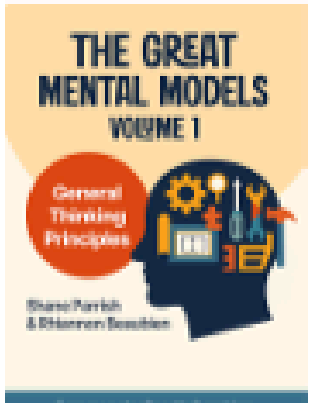
This book includes many other examples and studies of people who have successfully transformed their lives by applying the tools/tips above to change their self-image. For more details, please visit www.psycho-cybernetics.com.

KEY QUOTES

"If we can...react aggressively instead of negatively to threats and crises, the very situation itself can act as a stimulus to release untapped powers."

"Call up, capture, evoke the feeling of success. When you feel successful and self-confident, you will act successfully. When the feeling is strong, you can literally do no wrong."

"You are not 'inferior.' You are not 'superior.' You are simply 'You'....You are not 'supposed' to be like any other person and no other person is 'supposed' to be like you."



THE GREAT MENTAL MODELS, VOLUME 1

General Thinking Principles

Shane Parrish & Rhiannon Beaubien

The Big "So What"

The quality of your thinking shapes the quality of your life. In today's fast-moving world, those who think clearly hold an advantage. This book presents 9 proven thinking tools used by top leaders, scientists, and strategists to solve complex problems and navigate uncertainty. You too can use them to solve real-world problems more effectively.

What are Mental Models—And Why They Matter

Mental models are shortcuts we use to understand, decide, and act on real-world situations. Like lenses, they shape how we interpret reality and respond to it.

- Poor or outdated mental models lead to poor outcomes. Often, we fall into *3 predictable thinking traps*:

  (i) Limited perspective: we get stuck in our own viewpoint and miss the bigger picture.

  (ii) Ego: we cling to being "right," even when facts prove us wrong.

  (iii) Distance from consequences: we don't learn from our mistakes when we don't feel the real impact of our actions.

- To think better, we must overcome these cognitive flaws—by *adopting better models*. The best thinkers don't just use one framework. They draw from a network of ideas across disciplines (like physics, biology, psychology, and economics), choosing the right model for the right situation, and updating their thinking over time.

KEY QUOTES

"In life and business, the person with the fewest blind spots wins."

"The quality of your thinking depends on the models that are in your head."

"Mental models describe the way the world works. They shape how we think, how we understand, and how we form beliefs."

"Thinking better isn't about being a genius. It is about the processes we use to uncover reality and the choices we make once we do."

"When you learn to see the world as it is, and not as you want it to be, everything changes. The solution to any problem becomes more apparent when you can view it through more than one lens."

This book is the first in a **multi-volume series** by Shane Parrish and Rhiannon Beaubien.

- The authors distill timeless insights from various disciplines into *mental models and practical tools* that anyone can use to avoid common thinking traps, learn faster and make smarter choices.
- In this summary, we'll explore *9 essential models for general thinking*, followed by 3 supporting concepts to help you think more clearly across all areas of life.

The 9 Fundamental Thinking Concepts

Mental Model 1: Reality > Model

Models are simplifications, not reality. Use them wisely, without mistaking them for the truth.

Every day, we use maps, models and frameworks to make sense of the world, from city layouts to business frameworks. **Models simplify reality**, allowing us to navigate complexity, make predictions and take action.

However, **all models are imperfect**. Their usefulness lies in their ability to help us understand and respond more effectively to the world around us, but they cannot capture reality perfectly.

KEY QUOTES

"I believe in the discipline of mastering the best of what other people have figured out." – Charlie Munger

"This book is about the pursuit of...wisdom, the pursuit of uncovering how things work, the pursuit of going to bed smarter than when we woke up."

"All models are wrong; the practical question is how wrong do they have to be to not be useful."
—George Box

- Philosopher Alfred Korzybski used the phrase "*the map is not the territory*" to emphasize that a model may resemble the structure of reality but never fully capture it.
    - For example, maps are designed to simplify reality, often omitting variables or distorting scale. A subway map for passengers will be useless to train operators or someone trying to navigate above-ground. A map that included everything would be too complex to use.
- *Newtonian physics* was used for centuries to predict how objects move, but it broke down when applied to things like light or gravity on cosmic scales. That's where Einstein's theory of relativity offered more accurate predictions.
- Garrett Hardin's "*Tragedy of the Commons*" says that shared resources are always overused when individuals act selfishly. This was a widely accepted model in social sciences, until Elinor Ostrom later showed how communities can successfully manage shared resources, i.e. the original model didn't apply universally.

We run into problems when we **confuse models with reality**, cling to outdated models, or treat abstract frameworks as universal truths. This leads us to make critical mistakes, or miss emerging risks and opportunities. If your GPS tells you to drive off a cliff, it's up to you to check reality instead of trusting it blindly.

Use models to guide your decisions, without following them rigidly. Apply these **3 principles to use models more effectively**:

- Always *test models against real-world outcomes*, and update your model as reality changes. For example, Frederick Taylor's "scientific management" model was effective in factories, but it fails in today's knowledge economy, where autonomy, learning, and purpose matter more.
- *Consider who made the model and why*. Every map reflects the values and assumptions of its creator, and omits things for a reason. Colonial maps, for instance, often prioritized political control over cultural accuracy.
- *Watch how models shape behavior*. When we follow maps or models too literally, we can create unintended outcomes —often for the worse. For example, urban planners once

KEY QUOTES

"Territories change, sometimes faster than the maps and models that describe them."

"The description of the thing is not the thing itself. The model is not reality. The abstraction is not the abstracted."

"The map appears to us more real than the land."
— D.H. Lawrence

"When we mistake the map for reality, we start to think we have all the answers."

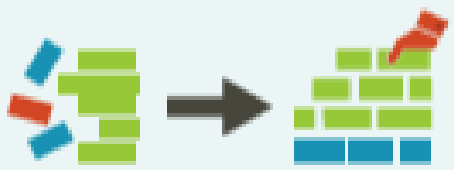
"Maps are useful to the extent they are explanatory and predictive."

"If reality has changed the map must change."

"Maps are not purely objective creations. They reflect the values, standards, and limitations of their creators."

- *Talk to a "Lifer"* or an expert inside the domain. Find out how they think, not just what to do.
    - However, beware of vested interests when seeking advice, especially from people whose income or success depends on the decision you make. Always ask: What does this person stand to gain?
- Use *general thinking models* (like inversion or second-order thinking) to reason through unfamiliar territory and make better choices.
- Take *Queen Elizabeth I*, for example. When she first took the throne, she recognized her inexperience. So, she built a trusted council of advisors, used their inputs to guide her decisions, and laid the foundation for a long and stable reign.

Mental Model 3: Think From the Ground Up



Break things down to basics. Then rebuild ground up from First Principles.

Don't just copy what works or tweak what already exists. Instead, **break things down into First Principles** (i.e. foundational truths in a specific context) then build up from there.

- In physics, that might be thermodynamic laws. In food, it might be asking "What makes something 'meat'—is it the fact that it comes from an animal—or the taste, texture, and nutritional makeup we associate with it?"

Use **2 methods to uncover first principles**:

- Challenge assumptions through *Socratic questioning* or structured inquiry. Start by clarifying your position, e.g. "What do I think and why?" Then, probe deeper:
    - What assumptions am I making?
    - What's the evidence for this belief?
    - Are there alternative explanations?
    - What are the implications if I'm wrong?

KEY QUOTES

"Whenever we are getting advice, it is from a person whose set of incentives is not the same as ours."

"Ignorance more often begets confidence than knowledge."
— Charles Darwin

"First principles thinking is one of the best ways to reverse-engineer complicated situations and unleash creative possibility."

"Everything that is not a law of nature is just a shared belief. Money is a shared belief. So is a border. So are bitcoin. So is love."

"If we never learn to take something apart, test our assumptions about it, and reconstruct it, we end up bound by what other people tell us—trapped in the way things have always been done."

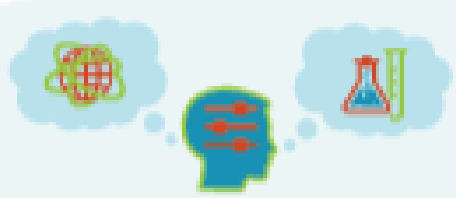
- *The Five Whys*: Start with an issue and ask "Why is this happening?" Repeat the question 5 times or until you land on a root cause (expressed as a "what" or "how").
    - Example: A product fails. Why? → The battery overheated. Why? → A component failed... and so on, until you uncover a design flaw or neglected test.

In other words, don't just copy what works; **understand why it works** so you're no longer limited by how things have always been done.

- For decades, doctors believed the stomach was sterile, until Robin Warren and Barry Marshall challenged the assumption—and discovered that *stomach ulcers* were caused by bacteria. This overturned decades of misdiagnosis and ineffective treatments, transforming how ulcers are now treated.

- Most *slaughterhouses* used straight chutes simply because that's how it had always been done. Temple Grandin challenged this by studying animal behavior and identifying a first principle: reducing stress is key to moving cattle humanely and efficiently. This led to innovations like curved chutes that blocked visual distractions, though any design would work as long as it addressed the underlying principle of stress reduction.

Mental Model 4: Test It In Your Mind



When you can't test something in real life, simulate it mentally.

Some ideas or decisions are too costly, risky, or complex to test in the real world. That's where **thought experiments** come in. By simulating possibilities in our minds, we can tweak the variables and examine possible outcomes to stretch our thinking and make smarter choices.

- A good thought experiment is *structured and intentional*:

    (i) Ask a clear, focused question.

    (ii) Do background research to understand the context.

KEY QUOTES

"Science is much more than a body of knowledge. It is a way of thinking."
— Carl Sagan

"If you know the first principles of something, you can build the rest of your knowledge around them to produce something new."

"As to methods, there may be a million and then some, but principles are few."
— Harrington Emerson

"You can change the tactics if you know the principles."

"A detailed thought experiment...lets us do things in our heads we cannot do in real life, and so explore situations from more angles than we can physically examine and test for."

"Thought experiments are more than daydreaming. They require the same rigor as a traditional experiment in order to be useful."

(iii) Form a hypothesis: What do you expect to happen?

(iv) Run the scenario mentally, tweaking key variables to explore different outcomes.

(v) Analyze the outcomes, and refine your conclusion or assumptions before taking action.

Thought experiments are **especially useful in 3 situations**:

- *Simulating physical scenarios* that can't be recreated in a lab. When developing his theory of relativity, Albert Einstein imagined being in a sealed elevator in space. Would he feel a force pulling him down (gravity) or pushing him up (acceleration)? Since both felt identical from inside the elevator, he concluded the effects were equivalent—an insight that became the foundation of general relativity.

- *Re-imagine history* by exploring "what might have happened" if certain factors were changed. For instance, the assassination of Archduke Franz Ferdinand was considered a key event that triggered World War I. Without it, would the war still have happened? By researching and imagining how other variables might have played out differently, we gain a better understanding of the relative impact of each factor.

  - However, remember that in complex systems like history, small changes can lead to drastically different outcomes.

- *Testing whether our gut-intuition is robust*. Philosopher John Rawls proposed a thought experiment to design a fair society: Imagine you don't know your future position in that society—whether you'd be rich or poor, powerful or powerless. Would you still choose the same rules? This "veil of ignorance" strips away self-interest and reveals what fairness really looks like.

KEY QUOTES

"One of the real powers of the thought experiment is that there is no limit to the number of times you can change a variable to see if it influences the outcome."

"A small change in the past could have a massive, unpredictable effect on the future."

"Thought experiments tell you about the limits of what you know and the limits of what you should attempt."

Mental Model 5: Consider Ripple Effects

Look beyond immediate steps. Consider the ripple effects and what those ripple effects might cause in turn.

People tend to focus on the obvious, immediate outcome of an action (first-order effect). But every action has **additional consequences (second-order and beyond)** that are more impactful in the long run.

- *First-order thinking* is linear and short-term: "If I eat this candy, I'll enjoy it."
- *Second-order thinking* looks long-term: "If I keep eating candy every day, what will my health look like in 10 years?"
  - It goes beyond surface-level thinking to examine (i) short-term wins vs long-term costs, (ii) unintended side effects and (iii) chain reactions that affect other systems, trigger new problems or tradeoffs.
  - This is crucial when dealing with complex systems like markets, ecosystems, organizations, or relationships, where everything is interconnected.

Second-order thinking is **especially useful for 2 things**:

- *Weighing short-term vs long-term consequences*, to avoid creating long-term pains just for short-term gratification. For example, antibiotics have been added to livestock feed for years to prevent disease and to accelerate growth. This makes meat cheaper and production more efficient (first-order benefits). But over time, it also led to the rise of antibiotic-resistant bacteria—a second-order effect that now threatens human health.
- *Make better arguments* by thinking ahead. Rather than arguing only for women's rights on moral grounds, philosopher Mary Wollstonecraft addressed second-order benefits, arguing that educating women would lead to stronger families and a better-functioning society.

KEY QUOTES

"You can never merely do one thing."
—Garrett Hardin

"We must ask ourselves the critical question: And then what?"

"Second-order thinking involves asking ourselves if what we are doing now is going to get us the results we want."

"We operate in a world of multiple, overlapping connections, like a web, with many significant, yet obscure and unpredictable, relationships."

"Maximizing benefits is something that happens over time."

"A little time spent thinking ahead can save us massive amounts of time later."

"We don't make decisions in a vacuum and we can't get something for nothing."

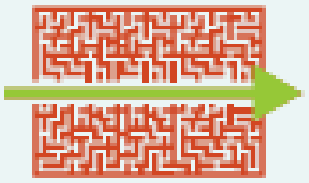
- *Marie Van Brittan Brown* felt unsafe at home. Rather than adding more locks, she asked: What would make me feel safe before opening the door? Her answer led to the invention of the home CCTV system, laying the groundwork for modern home security.

Inversion is especially powerful when you **feel stuck or lost**.

- *Define what you want to avoid*, then eliminate the conditions that would cause it—like how John Bogle created the index fund by seeking to avoid investment losses.

- If success seems impossible, ask "What must be true for it to happen?" or *start with an assumption*. When Sherlock Holmes needed to find a hidden object, he assumed "If she truly values it, she'll try to protect it during an emergency." He then staged a fake fire—and observed where the person instinctively went, revealing the object's location without a direct search.

Mental Model 8: Start with the Simplest Explanation



When in doubt, start with the simplest explanation (with fewest assumptions) that fits the facts.

Occam's Razor reminds us to start with the simplest explanation—one that makes the fewest assumptions. More assumptions means higher risks of being wrong.

- Simple models are *easier to understand, test, adjust*, and they're more robust in fast-moving or uncertain environments. That's because every layer of complexity or moving part introduces potential points of failure.

- *Cut away what doesn't matter* to help you see what does:

  - In *medicine*, doctors use this model to start with the most likely diagnosis. If a patient shows flu-like symptoms, the simplest explanation is the flu—not Ebola.

  - When *IBM* was in crisis during the early 1990s, CEO Louis Gerstner rejected calls for a grand vision. Instead, he focused on simple, tough-minded execution: serving existing customers and building profitable businesses. This saved the company without any complicated overhauls.

KEY QUOTES

"Simply invert, always invert, when you are stuck. If you take the results of your inversion seriously, you might make a great deal of progress on solving your problems."

"The simplest explanation is almost certainly the correct one."

"We should prefer the simplest explanation with the fewest moving parts. They are easier to falsify, easier to understand, and generally more likely to be correct."

"When you hear hoofbeats, think horses, not zebras."
— A medical saying

"The last thing IBM needs right now is a vision."
—Louis Gerstner

Obviously, some truths are more complex. The key is to **start simple, then add complexity when needed** and justified by evidence.

Mental Model 9: Assume Positive Intent

Don't assume ill intent when ignorance or incompetence will do.

Hanlon's Razor reminds us not to jump to conclusion about people's intentions, as it can lead to conflict and misjudgment.

- In an experiment, people were told that "Linda is outspoken and deeply concerned with social justice." Most people incorrectly judged it more likely that she was both a feminist and a bank teller, even though logically, she had to be more likely to be a bank teller alone. This shows how we can *make illogical assumptions* about intention and identity.
- When things go wrong, don't assume it's due to malice. More often, it's due to *carelessness, ignorance, or flawed systems*. If someone spills a drink on you at a party, it's more likely to be an accident than an intentional attempt to ruin your night.

Real malice does exist. But in most situations, **assuming positive intent** helps us to stay calm, prevent paranoia, avoid unnecessary conflict, and make better decisions—especially when misjudging intent can cause more harm than the mistake itself. For example:

- In 1962, Soviet officer Vasili Arkhipov was aboard a submarine during the *Cuban Missile Crisis*. When the Americans dropped depth charges, the crew assumed they were under attack. The captain wanted to retaliate with a nuclear torpedo. But Arkhipov stayed calm and insisted on surfacing and contacting Moscow—a decision that prevented a nuclear war.
- In 408 AD, Roman emperor Honorius misjudged his loyal general Stilicho and had him executed, believing he was conspiring against him. This fatal error left the Western *Roman Empire* without its most capable defender—and it soon collapsed.

KEY QUOTES

"Anybody can make the simple complicated. Creativity is making the complicated simple."
—Charles Mingus

"We should not attribute to malice that which is more easily explained by stupidity."

"If we present the evidence in a certain light, the brain malfunctions. It doesn't weigh out the variables in a rational way."

"There are fewer true villains than you might suppose...all humans make mistakes and fall into traps of laziness, bad thinking, and bad incentives."

"Most people doing wrong are not bad people trying to be malicious....Always assuming malice puts you at the center of everyone else's world. This is an incredibly self-centered approach to life."

"When we assume someone is out to get us...[it] tends to reduce our vision to dealing with the perceived threat instead of examining the bigger picture."

3 Supporting Ideas for Better Reasoning

Falsifiability: To be scientific, a theory must be testable, i.e. it can be disproved by statements like "If X happens, theory Y is false." Otherwise, it's just a belief or an opinion.

- For instance, *Freudian psychology* is hard to prove or disprove, since it can explain any outcome after the fact.
- In contrast, *evolution by natural selection* makes claims that are specific and testable. For example, if traits harmful to survival routinely spread through populations, it would falsify the theory of natural selection. Repeated testing continues to support the theory so far.

Necessary ≠ Enough: Don't confuse necessity with sufficiency. Necessary conditions are what you must have to succeed, but they don't guarantee success. For example, skill and effort might be necessary for success, but they're rarely sufficient. Other factors (like timing, competition, or luck) also play a role.

Causation vs. Correlation: Just because two things occur together doesn't mean one causes the other.

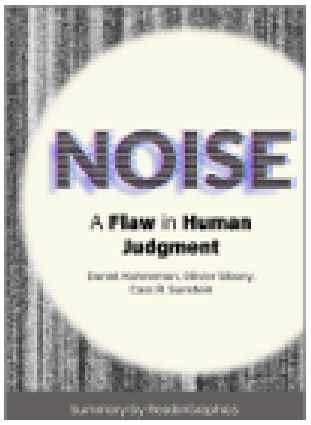
- *Correlation does not imply causation*. For example, a study might show that children of heavy drinkers perform worse in school. But does drinking cause poor grades? Does stress from a child's struggles cause parents to drink more? Or are other factors responsible?
- Understand the *strength and direction of correlation* to avoid overgeneralizing or misapplying data:
  - *Perfect correlation (1)*: This means they measure the same thing in different units (e.g. Celsius and Fahrenheit).
  - *Zero (0) correlation*, e.g. bottled water consumption and suicide rates have no relation.
  - *Weak/moderate correlation (e.g. 0.3)*: Height and weight correlate somewhat, but other factors matter too.

KEY QUOTES

"Extraordinary claims require extraordinary proof."
—Carl Sagan

"The set of conditions necessary to become successful is a part of the set that is sufficient to become successful. But the sufficient set itself is far larger than the necessary set."

"We notice two things happening at the same time (correlation) and mistakenly conclude that one causes the other (causation)."



NOISE

A Flaw in Human Judgment

Daniel Kahneman, Olivier Sibony, Cass R. Sunstein

The Big "So What"

This book explores the concept of noise—an error of judgment that affects human decisions. The authors explain what is noise, how it affects decisions at all levels, and how we can mitigate noise to improve the efficiency, consistency and fairness of our decisions and systems. The ideas are relevant for decision-makers in all walks of life (e.g. executives, professionals, policy-makers), and anyone who's interested in learning about psychology, behavioral economics, and organizational behavior.

What is Noise and Why It Matters

Human judgments (e.g. forecasts, performance evaluations) are inconsistent and inaccurate. Given the same context and information, different people will make different judgments or decisions. Such inconsistencies come from noise and bias.

- *Noise* refers to the *random variability and inconsistencies* in judgment which lead people to evaluate the same information differently. It includes:

  (i) In-person variability which occurs when the same person judges something differently under different circumstances.

  (ii) Between-person variability which occurs when different people judge the same case differently.

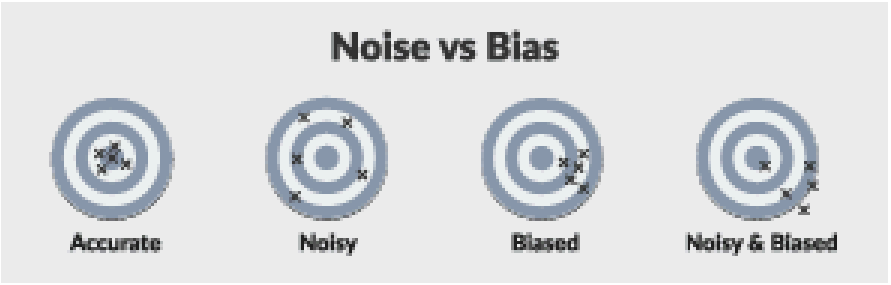
  For example, 5 managers may evaluate the same business proposal differently. The same manager may even evaluate the same proposal differently on different days depending on his/her mood or focus.

KEY QUOTES

"System noise [is] unwanted variability in judgments that should ideally be identical."

"We do not always produce identical judgments when faced with the same facts on two occasions."

- *Biases* refer to the systematic errors in thinking that consistently skew judgments in a certain direction. For example, all 5 managers in a company may evaluate a business proposal too optimistically because of an optimism bias.



Both noise and bias contribute to flawed decision-making, yet relatively little attention has been paid to noise compared to biases.

- In this book, the authors show how noise can lead to inconsistencies, unfairness, and inefficiency. They also recommend solutions for reducing noise and improving the quality of our decisions. In this summary, we'll explain noise and its implications, before moving into solutions for noise.

KEY QUOTES

"Wherever you look at human judgments, you are likely to find noise. To improve the quality of our judgments, we need to overcome noise as well as bias."

Understanding Noise

Noise Exists Everywhere

Noise exists in any situation that involves human judgments—from legal systems to medicine, financial markets, and hiring practices. For example, we expect the criminal justice system to be fair and consistent, when it's actually very noisy. A criminal can get a drastically different sentence depending who's the judge presiding over the case, or even the judge's mood that day. In the USA, the prison term for extortion ranges from 3-20 years, while the term for fraud ranges from 8.5 years to life imprisonment.

"Wherever there is judgment, there is noise—and more of it than you think."

Noise exists even if it can't be detected or measured.

- *Recurrent decisions* are made repeatedly, and you can identify the extent/impact of noise though a "noise audit". For example, underwriters quote insurance premiums based on their clients' health situation. To assess the inconsistencies in quotations, an insurance company assigned 5 realistic

"Our inability to observe variability [does] not make the decision less noisy."

client cases to different groups of underwriters. They found a median difference of 55%, which meant that the same client may be quoted $9,500 or $16,700 depending on which underwriter was assigned to the case. The variations were estimated to cost the company hundreds of millions of dollars. If the quotes were too high, the company could lose a potential client. If the quotes were too low, the company could lose money from large amounts of insurance claims.

- *Singular decisions* are one-off decisions for unique problems. We can't measure noise in such cases, e.g. you cannot compare 2 presidents' decisions to go to war because the circumstances are different. Yet, the same factors that cause noise in recurrent decisions also exist in singular decisions. So, it stands to reason that noise exists in singular decisions even if you can't measure it. The strategies that reduce noise in recurrent decisions should also improve the quality of singular decisions.

System noise—the unwanted variability within a system of judgments—is a problem because the goal of judgments is to be accurate, not to express personal preferences.

- *Variability isn't always bad*. For instance, it's fine for people to have different opinions about movies or wine. It's also helpful to explore diverse viewpoints for complex issues like economic forecasts or developing a new vaccine.

- However, *system noise is always unwanted* because it means inconsistencies in areas like criminal sentences, product service quality, or employee performance. You don't want a different sentence depending on the judge for a court case, nor a different diagnosis depending on the doctor you consult. Yet, noise is tolerated because we often don't even realize that it exists.

Evaluating Judgments and Measuring Noise

Judgments can be predictive or evaluative.

- A *predictive judgment* involves an objective value that you can compare your judgment with. But, not all predictive judgments are verifiable. You can verify a forecast of tomorrow's average temperature in London, but you can't

KEY QUOTES

"We cannot measure noise in a singular decision, but if we think counterfactually, we know for sure that noise is there."

"System noise is inconsistency, and inconsistency damages the credibility of the system."

verify a forecast of Earth's average temperature 1000 years from now. There are 2 measures typically used in predictions:

(i) The *percent concordant (PC)* shows how well a prediction covaries with actual results. A perfect prediction has a PC of 100%.

(ii) The *correlation coefficient (r)* is the percentage of shared determinants between 2 variables, and it ranges from -1 to 1. For example, if a physical trait is purely genetic, then we'll expect a 0.25 correlation in that trait between cousins with 25% common genes.

- An *evaluative judgment* (e.g. criminal judgments or ice-staking competitions) doesn't involve a value that you can validate. Good evaluative judgments should reflect the principles, standards, or values of an entire system, not individual beliefs.

Judgments can be evaluated based on their outcomes or processes.

- You can look at the *outcome* of a prediction to see how accurate it is. However, you can only evaluate a forecaster's accuracy over a large number of forecasts (not just a single forecast). Moreover, not all outcomes are verifiable. For example, if you didn't hire a candidate, you won't know if he/she could have succeeded in the role.

- Another way is to look at the *process*. Often, you can tell if a judgment is done properly just by looking at the process. This works for both verifiable and unverifiable judgments.

Every judgment involves some form of measurement. For example, judges measure the severity of a crime on a mental scale, while underwriters assign a dollar value to the risk of insuring someone. The best way to measure noise is by using standard deviation, which shows how much a judgment has deviated from the mean value. The Mean Squared Error (MSE) is widely used to evaluate the performance of predictive models and forecasts.

$$\text{Overall Error (MSE)} = \text{Bias}^2 + \text{Noise}^2$$

- A higher MSE means greater variability or inconsistency, whereas a lower MSE means greater accuracy or consistency. *Reducing either noise or bias* will reduce the overall error in judgment.

KEY QUOTES

"Reducing noise in predictive judgment is always useful, regardless of what you know about bias."

"Once noise is measured...it is often possible to reduce it."

- In noisy systems, *errors add up*; they don't cancel out one another. For example, an overpriced insurance premium doesn't compensate for an underpriced premium since they are for different clients.

There are 2 main components of system noise:

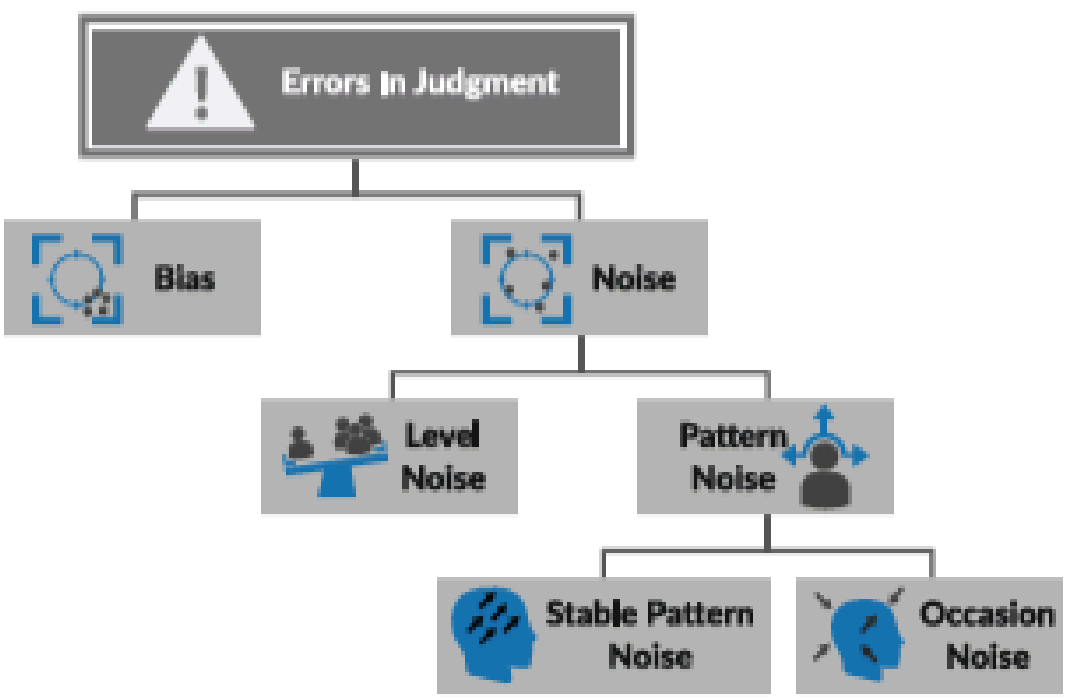
$$\text{System Noise}^2 = \text{Level Noise}^2 + \text{Pattern Noise}^2$$

- *Level noise* occurs when a 1 person's judgments consistently differ from the average person's, e.g. some judges are generally more lenient than others.

- *Pattern noise* occurs when 1 person is consistently affected by specific factors, e.g. a judge is generally more lenient toward older criminals. It includes stable pattern noise and occasion noise.

  (i) *Stable pattern noise* comes from our internal beliefs, biases, values, or knowledge/experiences. We may weigh some factors more heavily than others, or react positively/negatively to specific cues. Such patterns are relatively stable, though they're hard to predict.

  (ii) *Occasion noise* refers to random errors that affect your judgment, such as your mood, weather, state of mind, or how the information is presented. For example, one study found that college admissions officers weighed academic credentials more heavily on cloudy days, and weighed non-academic factors more heavily on sunny days. Occasion noise can only be measured with large-enough samples that statistically show the effects of occasion-related factors.



KEY QUOTES

"No one is exactly like you... your stable pattern errors are unique to you."

"You are not always the same person, and you are less consistent over time than you think."

- In several studies, stable pattern noise was found to be the biggest component of noise, followed by level noise, then occasion noise. Such findings are far from conclusive, but they can help us to think about *how to reduce noise*.

Sources of Noise and Strategies for Noise Reduction

Where Does Noise Come From?

The components of noise (level noise, pattern noise, occasion noise) can be understood from a psychological perspective.

In the book *Thinking, Fast and Slow*, Daniel Kahneman explains how the brain uses mental shortcuts or heuristics to think rapidly and intuitively.

- However, this leads to *psychological biases*, including:

(i) *Substitution bias*: We unknowingly substitute a difficult question (e.g. "Do you think this company will be successful in 5 years?") with a simpler or more accession question (e.g. "Do I like this company's products?"). Or, you may answer the question "How satisfied are you with your life in general?" by considering your mood now and neglecting other factors.

(ii) *Conclusion bias*: We may bypass or distort evidence because we're already inclined toward a certain outcome/ conclusion.

(iii) *Halo effect*: Our judgment is influenced disproportionately by our initial impressions, e.g. you form a different impression if someone is described as "smart, persistent, sly, unprincipled" versus "sly, unprincipled, smart, persistent".

Psychological biases reduce our quality of judgments because they create *statistical bias* when the biases are widely shared, as well as *system noise* when individuals show different types/levels of biases.

- Another mental shortcut is "*matching*". For example, we may predict the chance of rain by looking at how cloudy the sky is,

KEY QUOTES

"Whether they cause statistical bias or noise...psychological biases always create error."

or predict how smart a kid is by looking at how much he/she reads. We also match intensities across different scales, e.g. comparing our love for music with the height of a skyscraper. Matching creates noise and errors because:

(i) We make predictions using available info, even if the variables have *weak or non-existent correlations*. For example, how much a person reads is a poor predictor of how smart he/she is.

(ii) We make *erroneous connections*, e.g. matching the traits "smart, meticulous, and unadventurous" to our stereotypical view of an accountant, when the same traits can also describe a sports athlete.

(iii) We fail to consider *missing or conflicting cues* in complex problems, or we substitute them with simpler/accessible ones.

- Our brains can only discern up to 7 categories or match up to 7 values on an intensity scale (unless those categories are already well-established in advance). So, it's easier for us to make *comparative judgments* than absolute or categorical ones. For example, it's hard to rate 100 songs on a scale of 1-20. It's much easier to group them into 5 comparative categories from best to worst, then rate the songs within each category.

Noise also arises from the scales we use for making judgments. Different people use the scales differently:

- Words on the scale (e.g. "reasonable" or "excellent") may be *interpreted differently* by different people. We may also perceive the numerical values differently (e.g. 1 person may rate "good" as "3" while another rates it as "4").

- Judgments (like how severely a crime should be punished) may be driven by *emotions*, not facts.

- Judgments are the noisiest when people must *assign numbers arbitrarily*, e.g. when jury members must decide on the amount of damages for a crime without any context on what a fair amount may be. Once they conjure a figure, this creates an "anchor" that affects all their subsequent judgments.

Often, we feel overconfident about our judgments even when they're sub-optimal.

KEY QUOTES

"Comparative or relative judgments are more sensitive than categorical or absolute ones."

"Confidence is no guarantee of accuracy...and many confident predictions turn out to be wrong."

- *Objective ignorance* occurs when we're unaware that we lack information which affects the quality of our decisions. We feel confident about our judgments so long as our story seems "comprehensively coherent", i.e. all the details seem to fit (or we can ignore or justify things that don't fit) and there doesn't seem to be other viable explanations.

- When this happens, we get an *internal sense of completion*, and may even believe that others share our conclusions. Even if the judgment is wrong, the sense of false confidence is emotionally-rewarding.

- Most people naturally adopt *causal thinking*: we come up with stories about the cause-and-effect relationships between variables to explain what happened. This creates an *illusion of understanding*, i.e. we think we know what happened, and wrongly assume that we can predict similar events in the future. For example, we may conclude that someone succeeded because of his brilliant leadership, but fail to consider many other factors leading to his success.

- Noise becomes visible only when we adopt *statistical thinking*: to aggregate and analyze large amounts of data from multiple perspectives to work out patterns, correlations, differences, probabilities, etc. For example, to understand why a leader succeeded, you examine the predictors across many cases, then use statistical probability to identify possible root cause(s).

Causal thinking leads us to confuse causation and correlation.

- *Correlation* measures the degree to which changes in 1 variable are associated with changes in another variable. *Causation* refers to the cause-and-effect relationship between 2 variables, i.e. changes in 1 variable will cause changes in the other variable.

- Correlation doesn't imply causation, but *causation always implies correlation*. For example, there's a correlation between large feet and higher mathematical skills because both increase with age. However, you can't predict that someone will have higher mathematical skills because he has large feet, because there's no causal link between the two.

- You can make accurate predictions only if you understand the entire *causal chain* leading up to something. So long as there's

KEY QUOTES

"Objective ignorance sets a ceiling not only on our predictions but also on our understanding."

"The denial of ignorance is all the more tempting when ignorance is vast."

"Life is often more complex than the stories we like to tell about it."

"Causally, noise is nowhere; statistically, it is everywhere."

"Wherever there is causality, there is correlation."

"Causal thinking and the illusion of understanding the past contribute to over-confident predictions of the future."

an imperfect correlation (which is almost always the case), there's objective ignorance at play. Such errors in judgment are amplified for long-term predictions where there're exponentially more unknown factors involved.

Groups can amplify noise. Group decisions are affected by many seemingly-inconsequential factors, such as: seating arrangements, who speaks first, the speaker's body language, etc.

- Group judgments are so noisy due to *several factors*:

  (i) *Information cascades*: people often follow others' opinions without evaluating the information independently. So, the initial opinion of 1 group member can set the tone for the entire group.

  (ii) This is amplified by *social pressure*, when people agree with others to avoid seeming stupid or uncooperative.

  (iii) *Group polarization* refers to the phenomenon where someone's opinion becomes more extreme after discussing it in a group. When juries deliberate their decision, they end up with a more extreme judgment than those held by individual jury members. If the median member was lenient, the entire jury became more lenient. When the median member was severe, the entire jury became more severe.

- Group settings are only beneficial when all the group members share *independent answers*. You can then aggregate and average the answers to reach a more accurate and less noisy judgment.

How to Reduce Noise

Start with a noise audit to understand the extent and impact of noise in your system. Simply assign the same problem to different people, compare their answers to measure the amount of variability in the judgments, and do a cost-benefit analysis to decide if the system noise is worth addressing.

Choose good judges with intelligence, experience/expertise and the right mindset. Above all else, ensure that the judges are *actively open-minded*, i.e. they actively seek out information to learn, test their hypotheses, and challenge their old beliefs.

KEY QUOTES

"Social influences are a problem because they reduce group diversity without diminishing the collective error."

"If group members are listening to one another, they will shift in the direction of the dominant tendency, rendering the group more unified, more confident, and more extreme."

"Aggregation can only reduce noise if judgments are truly independent."

"Good judgments depend on what you know, how well you think, and how you think."

(ii) You can also select a handful of the *best judges* based on the accuracy of their recent judgments, then take an average of their predictions. You can even add monetary incentives for the most accurate forecasts.

(iii) The *Delphi method* is a multi-round process that combines aggregation and social learning. Through a moderator, people anonymously share their estimates and the reasons for them, then adjust their estimates for each round until the numbers converge into an aggregate score.

(iv) The *estimate-talk-estimate method* simplifies the Delphi method into just 2 rounds. The aggregate is calculated by averaging the 2nd round of predictions.

- Improve group judgments by getting members to come up with *independent answers* before aggregating them.

- Formulas—regardless of whether they are randomly-generated, modelled after people, or modelled after reality—will always outperform human experts in predictive judgments. *Mechanical methods and algorithms* have been found to be more accurate, faster and cheaper than human judgments, because they apply the same rules and weightage consistently to reduce noise.

  - Often, we make decisions intuitively after doing a quick mental calculation of the scores for each criteria. This is known as *clinical judgment*, and it's full of noise. For example, we may mentally assign different weightage to the same criteria at different times, and/or consider irrelevant factors unknowingly.

  - *Mechanical judgments* capture decision-making rules using statistical models or artificial intelligence. They may use multiple regression models (which assign optimal weights to specific predictors), equal weights models (which assign equal weights to all predictors), or frugal models (which use simple rules with a small set of strong, correlated predictors). They may also use artificial intelligence and machine learning to handle huge amounts of data, numerous predictors, and complex patterns beyond the capabilities of the human mind.

The mediating assessment protocol integrates many of the decision hygiene strategies above. It can be used/adapted by any organization to reduce noise in decisions. The key steps are:

KEY QUOTES

"Simple rules that are merely sensible typically do better than human judgment."

"Reducing noise mechanically increases the validity of predictive judgment."

"What AI does involves no magic and no understanding; it is mere pattern finding."

- Break down the decision into a set of pre-determined *criteria or mediating assessments*.

  (i) Get people to come up with a list of criteria independently before discussing them. Agree on the criteria and how to measure/assess them. Incorporate outside views where possible (e.g. getting a 2nd opinion by experts).

  (ii) Ideally, develop a scale with a clear frame-of-reference: give clear descriptions and case-study videos for each rating, so raters have a clear baseline for comparative judgments.

- Use the same criteria/assessments to *analyze recurring decisions*.

  (i) For each case, get people to review problems separately, then, use the estimate-talk-estimate method to share and discuss their inputs.

  (ii) By now, the decision-makers all have detailed, relevant info. Calculate and share the average ratings for each criteria, then make a final decision as a team.

KEY QUOTES

Noise Reduction in Real Life

The noise-reduction strategies above can be used to improve all types of judgments. Here are 3 examples of real-life applications.

Forecasts (e.g. sales or project costs/durations) affect all sorts of organizational decisions. To get a more accurate forecast, you can: (i) select good judges who're strong individually and complement one another, (ii) train them to identify/avoid biases, and (iii) get them to make their forecasts independently before aggregating them.

Medicine. There's a huge amount of noise in medical diagnoses and treatments due to factors like stress/fatigue, lack of skills, and a lack of clear guidelines/processes, etc. To reduce noise, you can:

- Use selection and training to increase skill levels;
- Aggregate judgments, e.g. getting a 2nd expert opinion;

- Use algorithms to help with diagnosis and treatment identification; and

- Develop diagnostic guidelines to reduce variations in human judgment. For example, the Apgar score uses 5 criteria (skin color, heart rate, reflexes, muscle tone, and respiratory effort) to help medical professionals assess if a newborn baby is in distress.

The employee hiring process is meant to help organizations select candidates who're likely to perform well in their roles. Yet, most companies use unstructured interviews which are practically useless in identifying good candidates. The solution is to switch to a more structured process:

- Break down the hiring decision into component parts (e.g. leadership, cultural fit, or role-specific knowledge) and focus only on data that measure those components.

- Give each rater the tools to independently assess and rate the candidates in each of the pre-determined components.

- Then, get a hiring committee to evaluate all the ratings along with additional data (e.g. test results, references) to make the final decision.

How Much Noise Should We Tolerate?

It's hard to enforce noise reduction strategies because most people don't even realize that noise exists. Others are concerned that such strategies may be rigid, unfair, or dehumanizing.

- In the 1980s, US congress members sought to address the disparity in criminal judgments by introducing a set of mandatory sentencing guidelines. This successfully reduced variability in criminal sentencing. Yet, people objected that the guidelines were too mechanical and didn't give the judges enough discretion to consider the nuances of each case. In 2005, the guidelines were finally changed from mandatory to advisory. The disparity in judges' sentences doubled thereafter.

There are 7 key objections to reducing or removing noise:

KEY QUOTES

"Unlike rules or algorithms, guidelines do not eliminate the need for judgment: the decision is not a straightforward computation."

"Our intuition will serve us much better once it is informed by the separate assessments we have asked for."

- It can be *costly* (and sometimes unviable) to reduce noise. That's why we need noise audits to learn the extent/impact of noise and run cost-benefit analyses.

- Noise-reduction strategies may create *unwanted side-effects or errors*. For example, if every forecaster makes the same prediction, the forecasts will be less noisy but also incorrect. People may focus too much on noise elimination to lose sight of other goals, principles, or values. Algorithms may also have built-in noise if (i) they use predictors correlated with traits like race or gender, or (ii) the source data itself is biased.

- Some level of noise must be tolerated if we were to let people preserve a sense of *dignity and autonomy*. Concepts like "mercy" and "empathy" are inherently subjective and noisy. It can seem dehumanizing if someone can't get a mortgage due to his credit rating, or can't get a job due to a drug offence 20 years ago.

- Rules that eliminate noise could also block new values that are vital for *social/moral/political change*. For example, our definition of women's role in society has changed over the years. This would not have been possible if our systems are governed by strict and unchanging rules.

- Rule-bound, noiseless systems may be *more easily manipulated*, compared to noisy systems where people can use their discretion to adapt to unexpected situations or system gaps.

- In some cases, noisy systems may be more effective as a *deterrent for wrongdoings*. Risk-averse people may shy away from a crime if they're unsure if it will lead to harsh punishments.

- Squashing noise could *inhibit creativity and self-expression*. These could lead to poor morale and performance, to generate even higher costs.

The authors believe that it's possible to address these concerns and reduce noise. The key is to adopt the right strategies, such as aggregating independent judgments or using shared scales grounded in outside views.

A related question is: should we regulate noise through rules, standards, or both?

KEY QUOTES

"It might be costly to remove noise—but the cost is often worth incurring."

"Algorithms could eliminate unwanted variability in judgment but also embed unacceptable bias."

"If we want people to feel that they have been treated with respect and dignity, we might have to tolerate some noise."

"A rule-bound system might eliminate noise, which is good, but it might also freeze existing norms and values, which is not so good."

"Our general conclusion is that even when the objections are given their due, noise reduction remains a worthy and even an urgent goal."

- *Rules* like "Don't exceed 80 km/hour" or "Take 1 pill every morning and every night" are very specific and rigid. They remove discretion for the judges, allowing people to just follow the rules without much thought.

- *Standards* like "Drive at a safe speed" or "Take a pill whenever you need it" are more flexible. They allow the judges to apply discretion, but also makes it more effortful since the judges must decipher what words like "safe" or "necessary" mean in practice. In some case, guidelines like the Apgar scores may be specific, yet provide some room for discretion.

- To choose between rules and standards, you must consider the *costs of decisions vs errors*. As a rule of thumb, use rules if you need to minimize errors, and use standards if you need to retain some discretion.

  (i) When there are many noisy decisions to be made, or when you can't trust the judges, it's better to have clear rules. For example, the law may say that only those aged ≥18 can buy liquor. This is to protect young people from the risks of alcohol consumption, even though someone who's 16 or 17 may handle alcohol more responsibly than someone who's 46 or 67. It's too messy to set broad standards and leave the discretion to alcohol merchants, so a rule becomes the logical solution, however imperfect it is.

  (ii) However, if a rule may lead to disastrous mistakes (e.g. in matters of life and death), then a standard may be better to give the judges some discretion.

Conclusion and Other Details in the Book

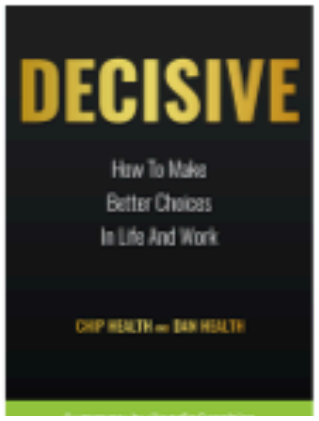
Biases are widely discussed because they're more visible, and laws have even been enacted to correct/prevent unacceptable biases. On the other hand, noise is neglected because it's often invisible, even through it has at least as much impact as biases. To improve the effectiveness and fairness of our systems, it's crucial for organizations to start pay more attention to the costs and impact of noise.

KEY QUOTES

"Rules are meant to eliminate discretion by those who apply them; standards are meant to grant such discretion."

"Although accuracy is the goal, perfection in achieving this goal is never achieved even in scientific measurement, much less in judgment."

"In many areas, the current level of noise is far too high. It is imposing high costs and producing terrible unfairness."



DECISIVE

How To Make Better Choices in Life and Work

CHIP HEATH AND DAN HEATH

The Big "So What"

We make decisions every day. Yet, we often find ourselves regretting or abandoning these decisions—be it choosing the wrong career, making a poor business decision, or buying something we don't need. This book explains why we make poor decisions, and how we can counter our own mental/emotional biases to make better choices.

Introduction

There are many books and studies that explain why we make **poor decisions.**

- For example, in "Thinking, Fast and Slow", Daniel Kahneman explains many of our mental biases, including "what you see is all there is". The Heath brothers call this the "*spotlight effect*", i.e. we make decisions based on the information being spotlighted and our subjective interpretation of that information. In so doing, we miss out on information and options outside of the spotlight.

- In fact, we can't trust our *intuition or detailed analysis*, as both are susceptible to biases.

The question that remains is: **How can we make better decisions**? The Heath brothers explain 4 key steps in a typical decision-making process, the villains that causes bad decisions at each step, and how we can counter them using the WRAP process to adjust our spotlight and make better choices.

KEY QUOTES

"Our decisions will never be perfect, but they can be better. Bolder. Wiser. The right process can steer us toward the right choice."

"What's in the spotlight will rarely be everything we need to make a good decision, but we won't always remember to shift the light."

"Sometimes we are given the advice to trust our guts when we make important decisions. Unfortunately, our guts are full of questionable advice."

Decision-making Process	Key Villains	WRAP Solution
Facing a choice	Narrow Framing	Widen your Options
Analyzing options	Confirmation bias	Reality-Test your Assumptions
Making a choice	Short-term emotions	Attain Distance before Deciding
Post-decision	Overconfidence	Prepare to be Wrong

The 4 Villains of Decision Making

Here are the 4 key factors behind our bad decisions.

Villain #1: Narrow framing.

- When we *face a choice*, we tend to look at our options narrowly, and often in binary terms, e.g. "Should I buy a new house or not?" or "Should I quit or stay in my job?". This limits the options that we consider.

- In reality, there are always more and better options if you use a *broader frame*, e.g. "What's the best way to improve our living conditions?" or "How can I improve both my income and job satisfaction?".

Villain #2: Confirmation bias.

- As we *analyze our options*, we tend to only look for data that confirms our beliefs, assumptions and predispositions, instead of truly seeking the best information.

- Researchers found that we're 2x more likely to favor information that *confirms our view* than information that disconfirms it. In fact, the more time and effort we invest in analyzing an issue, the more our confirmation bias kicks in. A KPMG study found of 83% of 700 mergers and acquisitions (M&As) did not boost shareholder value. This is partially

KEY QUOTES

"A better decision process substantially improves the results of the decision, as well as the financial returns associated with them."

"The confirmation bias leads us to hunt for information that flatters our existing beliefs."

"When we want something to be true, we will spotlight the things that support it, and then, when we draw conclusions from those spotlighted scenes, we'll congratulate ourselves on a reasoned decision."

because, after months of analyzing and negotiating a potential M&A, executives tend to focus only on the company at hand, rather than reconsider other companies or new ways to achieve their goals.

Villain #3: Short-term emotions.

- Despite our detailed data and analysis, when we actually *make our choice*, we tend to be influenced more by our short-term feelings.

- In such cases, it helps to *step away* until the emotions fade, so we can see things from a fresh perspective and consider the bigger picture.

Villain #4: Overconfidence.

- *After making the decision*, we tend to feel certain about how the future will turn out, when in reality we are merely guessing and have no way of accurately predicting the future.

- For example, doctors who were "certain" about their diagnosis turned out to be *wrong* 40% of the time. Students who estimated they had a 1% chance of being wrong were in fact wrong 27% of the time.

Solution: W.R.A.P

To protect yourself from these 4 biases, wrap the 4-step W.R.A.P. process around your usual decision-making process.

The 4 steps generally flow in **sequence**, but you need not follow them strictly, and you may not always need all the steps.

This process works only for **considered decisions** that take at least 5 minutes, i.e. it does not work for intuitive, split-second decisions, which can only be trained in a predictable environment with lots of repetition and instant feedback.

KEY QUOTES

"We have kicked up so much dust that we can't see the way forward. In those moments, what we need most is perspective."

"When we make guesses about the future, we shine our spotlights on information that's close at hand, and then we draw conclusions from that information."

"Our hope is that you'll embrace the process we outline...and practice it until it becomes second nature."

Widen your Options

To overcome your tendency to adopt a narrow frame, use these 3 strategies to (a) expand your options, (b) effectively consider multiple options, and (c) find alternatives even if you're stuck.

Avoid a Narrow Frame

Learn to **become aware** when you're stuck in a narrow frame.

- Watch or listen out for *whether-or-not questions*. Then, consciously widen your options with questions like "Is there a better way?" or "What else can I do?".

- *Replace "OR" with "AND"* in your questions to ask "How can I get this AND that?" rather than "Should I go for this OR that?"

Consider your opportunity costs, i.e. what you give up when you make a choice. For example, if you're deciding whether to buy a car (a binary decision), you can remind yourself of other options simply by *adding the words in bold below.*

a. Buy a car.

b. Not buy a car. **Keep the $5,000 for something else.**

Use the "Vanishing Options Test": Ask yourself what you'd do if you can't choose either of the options you are considering. This forces you to go beyond your narrow frame to explore new alternatives.

Multitrack—Explore Multiple Options

Consider more than 1 option simultaneously. This is more effective than considering your options sequentially.

- For example, graphic designers who concurrently designed (and received feedback on) 3 design options delivered much *better results* than those who designed 3 ads sequentially.

KEY QUOTES

"Learn to distrust 'whether or not' decisions…when you see or hear that phrase, a little alarm bell (should) go off in your head, reminding you to consider whether you're stuck in a narrow frame."

"If you're willing to invest some effort in a broader search, you'll usually find that your options are more plentiful than you initially think."

"Until we are forced to dig up a new option, we're likely to stay fixated on the ones we already have."

- This is because people can *compare and learn simultaneously* from various sets of feedback, to develop better mental models and solutions for subsequent revisions. With multiple alternatives, people also tend to feel less invested in any one solution, thus *minimizing ego and politics*.

- However, this will not work if *bogus options* are presented just to make a preferred option look good. Do a quick poll amongst your team-mates—if there's disagreement on the best option, it means you have genuine options to choose from.

You simply need to add **1-2 additional options** to drastically improve your decision and outcomes.

- There's no need for a full range of options; in fact, too many choices can lead to *decision paralysis*.

- A study found that whether-or-not decisions (with only 1 option) failed 52% of the time in the long term, while decisions with *2 or more alternatives* failed only 32% of the time.

Our **frame of mind** affects how we respond to the options we see.

- When we're in a "*preventive mindset*", we are cautious and focused on minimizing losses or damage. When we're in a "*promotion mindset*", we focus on opportunities.

- You need both perspectives, and the key is to *combine caution with optimism*—focus on AND, not OR, e.g. how can you reduce the budget while using the freed-up resources to invest in your most exciting opportunities?

Find Others Who Have Solved Your Problem

If you feel stuck, one of the best ways to find new ideas is to look for people who have already solved your problem.

You can find "**bright spots**" within your organization, your industry or others in similar circumstances. For example, if you're trying to build a new exercise habit, look at what you did on those days when you successfully went to the gym. If you're

KEY QUOTES

"You don't need a plethora of choices to improve your decisions. You just need one extra choice, or two."

"How you react to (an option)...depends a great deal on your mindset at the time it's offered."

"When life offers us a 'this or that' choice, we should have the gall to ask whether the right answer might be 'both'."

"To break out of a narrow frame, we need options, and one of the most basic ways to generate new options is to find someone else who's solved your problem."

trying to implement a new loyalty program, look at how others have successfully rolled out theirs.

You can even proactively capture your discoveries in a "**playlist**", e.g. people to consult, ideas to consider, or questions to ask.

- *Checklist vs playlist*. A checklist is prescriptive—it tells you exactly what you need to do and works for repetitive tasks. However, a playlist is generative—it acts as a stimulus to help people consider more options and discover new ideas.

- For example, a playlist for *budget cuts* could include: exploring new sources of income to alleviate the need for cost-cutting, delaying planned expenditures (not just cutting existing ones), and identifying new opportunities that are now possible to pursue with the freed-up resources. Such a playlist helps your team to approach budget cuts more creatively and constructively.

Use **analogies** to get new ideas, starting from analogies that are most identical to your situation, then expanding it progressively to get more creative. For example, if you want to reduce the queuing time in your office canteen, you can start with bright spots within your organization (e.g. how queue lines were shortened at the checkout counters). Then, gradually broaden your reference points to look at other industries, e.g. queue-management at F&B outlets or retail stores, or even crowd management practices at stadiums or theme parks.

Reality-Test your Assumptions

To overcome confirmation bias and our overconfidence in our predictions, we must reality-test our assumptions. The authors recommend 3 strategies to (a) improve the way we collect information, (b) improve the types of information we collect, and (c) test our options before we commit to them.

Consider the Opposite

Look for disconfirming data that challenge your beliefs or assumptions. Deliberately seek disagreements or find people who can play devil's advocate, to get a more balanced perspective.

KEY QUOTES

"Granular problems benefit from local analogies, and conceptual problems lend themselves to regional analogies."

"If you haven't encountered any opposition to a decision you're considering, chances are you haven't looked hard enough."

Probe further to draw out disconfirming information.

- Use *probing questions* like: "*What would have to be true* for this option to be the right answer?", or "Could this solution bring any problems?". Where probing questions are inappropriate, you can use open-ended questions to gather data.

- *Probe for specifics*, which may uncover conflicting data. For example, instead of asking, "are your employees happy with your company?", try asking "how many employees were hired 5 years ago?" and "how many of these employees are still with the company?".

Force yourself to **consider what's opposite to your instincts**.

- If you are feeling upset with someone, force yourself to "*assume positive intent*", e.g. assume that the other person is trying to be helpful, rather than being a busy-body.

- At the extreme, you can test your assumption by *making a deliberate mistake*, i.e. do what you believe won't work. If you fail, it proves your assumptions are correct; if you succeed, you'd have just disproved a wrong assumption.

READINGRAPHICS
Ideas Come Alive

KEY QUOTES

"Reality-Testing Our Assumptions is difficult... That's the whole point of the confirmation bias—deep down, we never really want to hear the negative information."

Zoom Out and Zoom In

An "outside view" is the summary of real-world experiences, while an "inside view" is your own impression or opinion. Zoom out and zoom in to get a more complete and realistic assessment of your choices.

Zoom out to get a more global view of what to expect.

- Test your assumptions by *consulting an expert*—someone who has more experience than you in an area—such as a lawyer for legal matters. Generally, experts are great at offering advice on variables and base-rates, but not for predicting outcomes for specific situations.

- Seek to answer this question: *What can I reasonably expect* to happen if I make this choice?

"Take the outside view. You should distrust the inside view...and instead get out of your head and consult the base rates."

Then, **zoom in** on the details to assess the likely outcomes for your unique situation, and focus on specific ways to improve your chances of success.

- For example, you may shortlist *potential holiday resorts*

Conquer Short-Term Emotions

We often make decisions based on emotional impulses, then regret them when the feelings fade.

By default, we tend to be **emotionally attached** to status quo and what's familiar:

- *Loss-aversion*. We find the pain from potential losses to be greater than the rewards from potential gains, thus prefer to keep things the way they are.
- *Familiarity*. We are naturally predisposed toward what we're familiar with, and tend to feel more positive about something just because we're exposed to it more frequently.
- Use the techniques below to *distance yourself* from these short-term impulses so you can make better decisions.

The "10/10/10 principle". To decide whether to proceed with an option, consider how you'll feel about it (a) 10 minutes from now, (b) 10 months from now, and (c) 10 years from now.

- Our feelings seem very real and intense in the present, but fade with time. By forcing yourself to *look into the future*, you'll dull the impact of your emotional impulses.
- Our short-term feelings are still useful in decision-making. The key is *put them in perspective* so they are not the main or sole influencer of our decisions.

Adopt a third-party perspective to distance yourself from your emotions and gain greater clarity. Ask yourself, "What advice would I give my best friend in such a situation?" or "What would my successor do in my shoes?".

Honor your Core Priorities

Although it helps to minimize the impact of short-term impulses, all major decisions are fundamentally about emotions—what you believe in, what you want and who you are. The key is to make decisions that are right for you.

If you find yourself agonizing over 2 options that are both attractive in the long-term, it's likely that you're dealing with a **conflict of core priorities.**

KEY QUOTES

"Conducting a 10/10/10 analysis doesn't presuppose that the long-term perspective is the right one. It simply ensures that shortterm emotion isn't the only voice at the table."

"There's no 'rational machine' underneath that is generating your perspective. It's who you are and what you want. The buck stops with emotion."

- Imagine you're trying to decide whether to stay in your current job (which pays well, provides work-life balance and allows you to play to your strengths) or take on a high-profile job (which comes with a huge pay rise, new challenges but requires you to move overseas and work long hours). The right decision in this case depends on *your values and what matters most to you*.

- Tough organizational decisions like, "Do we go with Option A to maximize shareholder value, or go with Option B to maximize benefits to our customers?" are also about *mission and core values*.

In order to make sound decisions, you must **define and follow your core priorities**. However, most people don't define their priorities simply because they don't have to. Attain distance so you can step back and review where your priorities truly lie.

Even if you know your priorities, it's hard to stick to them, e.g. you may value quality time with your kids but constantly give priority to urgent work projects. To make time for your key priorities, you must **remove your lesser priorities**.

- Create a "*stop-doing list*" each year, to free up time/resources for your main priorities.

- Fix a slot in your weekly schedule to *review how you spend your time*, and to identify what you can give up to make time for your priorities.

- *Set a regular alarm*—each time it goes off, pause and ask, "Am I doing what I most need to be doing right now?"

Prepare to be Wrong

We cannot accurately predict the future, but we can plan for surprises using 2 strategies: (a) bookend the future so you explore a wider range of possibilities and (b) set a tripwire to review your decisions.

Bookend the Future

Estimate 2 extreme scenarios—a desperate outcome (the lower bookend) and a dream outcome (the upper bookend). This forces you to consider a broader range of possibilities.

KEY QUOTES

"When we identify and enshrine our priorities, our decisions are more consistent and less agonizing."

"People rarely establish their priorities until they're forced to."

"With some distance, we can surface the priorities conflicts that underlie tough choices. With some distance, we can spot and stamp out lesser priorities that interfere with greater ones."

"We can't control the future, but with some forethought, we can shape it."

"To bookend the future means that we must sweep our spotlights from side to side, charting out the full territory of possibilities."

Build safeguards against the **lower bookend**, much like how you'd buy insurance.

- Use "*premortems*" (a concept by Gary Klein) to identify your biggest threats: Imagine your project turns out to be a total flop—what could have caused that failure? Build contingencies for these threats.

- Use "*failure-mode and effect analysis*" or FMEA (by Gunther Murphy) to identify potential failures at each step of your plans. Ask "how likely is it?" and "how severe would the consequences be?", then multiply the scores for the 2 questions to identify the biggest threats to be addressed.

Be prepared for the **upper bookend** or the unexpectedly good outcomes. Use a "*preparade*": Imagine your project is such a success that you're holding a parade to celebrate it. What will you need to handle this success?

Assume you're still overconfident, and build in a **margin of error** that's appropriate for your type of project.

You can also apply this concept to make better hiring decisions. During interviews or new-hire orientations, give a "**realistic job preview**", i.e. give a glimpse of what to expect, including unpleasant realities like long hours or difficult customers. By preparing people for what's to come, you can actually reduce turnover and improve job satisfaction.

Set a Trip-Wire

It's easy to get comfortable with status quo or lapse into auto-pilot mode (like how we brush our teeth or drive without conscious thought). We may also miss small daily changes or adopt a wait-and-see approach until it's too late. Tripwires are signals that will force us to reconsider a decision or to make a new one, at the right time, like your car's low-fuel warning indicator.

Your tripwire can be in the form of a **date or measurement**, e.g. "We will take action when 20% of the market has adopted this technology" or "We will take action if the market has not recovered in the next 3 months."

You can also create a **partition** that necessitates a conscious choice.

- In a study, participants who were given 24 unwrapped cookies finished them in 6 days, while those given

KEY QUOTES

"By bookending—anticipating and preparing for both adversity and success—we stack the deck in favor of our decisions."

"The FMEA and its sister technique, the premortem, stop people from focusing on a single, usually optimistic guess about how the world will unfold and instead compel them to pay attention to the uncertainty surrounding the guess."

"Tripwires at least ensure that we are aware it's time to make a decision, that we don't miss our chance to choose because we've been lulled into autopilot."

individually-wrapped cookies finished them in 24 days. The physical act of removing the wrappers forced people to consider if they wanted to continue eating.

- Likewise, you can create tripwires by separating your salary (or even gambling funds) into separate envelopes to remind yourself to control your expenditure.

Label your tripwires to make them easier to recognize—the recognition alone acts as a reminder that you can make a deliberate choice.

Conclusion + Other Details in the Book to Look Out For

The WRAP process provides a clear and consistent way to make better decisions; it can also improve the perception of fairness to improve buy-in for group decisions. Apply the tips to your decisions, and trust that you have the safeguards in place to make bolder decisions and take risks more confidently.

The Heath brothers bring these ideas to life using a range of real-life stories, vivid examples and case-studies. The book also includes:

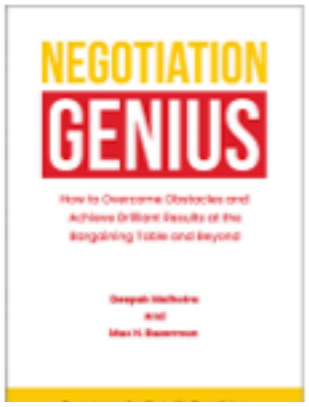
- "Clinics" to help you apply the tips using various real-world challenges; and

- Advice on overcoming 11 common roadblocks to use the WRAP process effectively.

Visit heathbrothers.com for additional resources such as a free workbook, various decision scenarios, podcasts and a book club guide.

KEY QUOTES

"With the right tripwire, we can ensure that we don't throw good money (or time) after bad."



NEGOTIATION GENIUS

How to Overcome Obstacles
and Achieve Brilliant Results at
the Bargaining Table and Beyond

DEEPAK MALHOTRA & MAX H. BAZERMAN

The Big "So What"

Negotiation skills are essential for success in all areas of life, from business to politics and personal life. This book equips you with proven principles, strategies and tactics to become an effective negotiator.

Introduction

A negotiation genius is someone who can (i) consistently negotiate successful deals while (ii) preserving his integrity/ reputation and (iii) strengthening the relationship. Successful negotiations don't come from inborn talent or intuition. They come from careful preparation, sound strategies and tactics. In this book, the authors present the negotiation framework and tools that they've researched, tested and refined in executive programs and real-world corporations.

In this summary, we'll present the insights in 2 parts: (i) The Negotiation Toolkit, and (ii) Negotiating in the Real-World.

Part 1: The Negotiation Toolkit

Claiming and Creating Value in Negotiation

The goal of negotiation isn't to achieve win-win outcomes. It's to create value such that both sides are better off with an agreement than without.

KEY QUOTES

"What appears to be genius actually reflects careful preparation, an understanding of... negotiation...and the ability to structure and execute negotiations strategically and systematically."

"A good negotiator plays the game well; a negotiation genius changes the nature of the game itself."

- During the 1912 U.S. presidential elections, a campaign manager printed 3 million copies of Theodore Roosevelt's photo before he realized that he didn't have permission to use it. The copyrights alone could've cost $3mil (equivalent to $60mil today). Instead of paying a hefty fee, the campaign manager asked the photographer how much he'd pay for this once-in-a-lifetime opportunity to feature his photo, and received $250 from the photographer!

Claiming vs creating value. Value is subjective and can mean different things to different people.

- In some cases, a negotiation involves only 1 divisive issue (e.g. the price for buying/selling a house). In such cases, 1 party's gain is at the other party's expense, and your goal is to *claim the most value* without hurting the relationship or your reputation.

- However, in most cases, it's possible to *create value* to improve the deal for both sides. After all, 50% of a $200 pie is better than 80% of a $100 pie.

(i) One of the best ways to create value is to *add issues* to a negotiation. This creates more currencies for exchange, making it possible for each side to get something it values more, by giving away something it values less. For example, in a business deal, you can go beyond price to discuss financing, warranties, post-sales support etc.

(ii) *Logrolling* = trading across issues. As a rule of thumb, if the other party values something more than you do, give it to them in exchange for something of greater priority to you. Let's imagine you're negotiating the licensing fees for a sitcom. A higher licensing fee will benefit the sitcom at the expense of the TV station. However, if you concede to more runs per episode in exchange for a higher licensing fee, it'll benefit both sides since the revenue from the extra runs can more than cover the additional licensing fee.

KEY QUOTES

"Value is whatever people find useful or desirable... Negotiation helps to create value through agreements that make both parties better off than they were without an agreement."

"Getting a good deal in negotiation is not simply about claiming as much value as you can. Often, a much more important (and difficult) task is to create value and increase the size of the pie."

"A good negotiator will do whatever it takes to close the deal, while a negotiation genius will do whatever it takes to maximize value in the deal."

Pre-Negotiation: Preparation is Key

Great negotiation requires prior preparation: you need to gather information about the situation and the other party, decide what you want, craft your negotiation strategy, etc. To claim the most value from your negotiations:

- Determine *your BATNA* (Best Alternative to Negotiated Agreement), or what you'll do without an agreement. Identify all possible options if negotiations were to fail, estimate the value of each option and select your best fallback option (i.e. your BATNA). This isn't what you think is "fair" nor what you hope for. It's what you're prepared to face if you don't have an agreement.

- Calculate *your Reservation Value (RV)*, or the point you'll walk away from the negotiations. If you're selling your car, then this is the absolute lowest price you're willing to sell your car for.

- Assess *the other party's BATNA*, i.e. what they could do if there's no agreement.

- Estimate *the other party's RV*.

- Calculate the *ZOPA* (or the zone of possible agreement). This is the range between the 2 RVs, or the set of possible deals that may be acceptable to both sides.

To prepare for value-creation, go beyond the BATNA, RV and ZOPA:

- Identify your *range of interests* which can be fulfilled by the other party.

- Create a *scoring system* to reflect each item's relative priority.

- Calculate your *Package Reservation Value (PRV)*.

- Identify *the other party's range of interests*.

KEY QUOTES

"Your BATNA is the reality you will face if you reach no deal in the current negotiation."

During Negotiation: Get the Best Possible Deal

If you have enough info to be confident of the other party's RV, make the first offer to create an "anchor" or reference point for the negotiation.

- Assuming you have enough info to *make the first offer*:

  (i) Make an offer *outside the ZOPA*. This forces the other side to negotiate their way into the ZOPA and keeps the entire ZOPA in play. For example, if you're selling a plot of land with a ZOPA of $41-55 mil, make an initial offer above $55 mil.

  (ii) Go for the most aggressive offer that you can justify. Explain the *reasons* for the offer so your counterpart won't feel offended or think it's impossible to reach an agreement.

  (iii) Remember: you want to get the best possible deal while improving your reputation and relationship. So, set *high but realistic goals* given the context and relationship.

- *If the other party makes the first offer*, you must consciously counter the effects of anchoring:

  (i) *Ignore the anchor* by switching to a different topic, e.g. "From your offer, it seems we have different views on this deal. Perhaps we can bridge the gap by exploring [new topic]."

  (ii) Make an *aggressive counter-offer* to capture the full range of ZOPA, then suggest that you bridge the gap together.

  (iii) If their offer is way outside the ZOPA, explain your position and invite them to *reopen the negotiations* from a new starting point.

- Our satisfaction with a deal depends less on the actual outcome than our *perception* of the outcome. Your counterpart will be satisfied so long as they think they got a good deal and were treated fairly and respectfully. So, if they make an *unbelievably good offer*, don't accept it immediately or they'll feel stupid. Instead, it's better to:

KEY QUOTES

"Asking for too little diminishes the amount of value you can capture; asking for too much diminishes your chances of consummating the deal."

"Aspirations influence first offers, which in turn influence final prices."

"Satisfaction has everything to do with how well you think you did, and often little or nothing to do with how well you actually did."

(i) Wait, make a counteroffer or ask for more concessions. This actually makes them happier than if you agree right away.

(ii) Give something back generously.

(iii) Ask yourself what they may know that you don't, i.e. is there a catch that you may have missed?

Use these haggling strategies to bargain more effectively:

- To capture more value, *focus on their BATNA/RV* instead of yours.
- *Make use of silences*. Resist the urge to speak after you've made your offer. Or, stay silent after they make an extreme offer so they may volunteer a concession.
- Don't make unilateral concessions—always *go for reciprocity*. Label your concessions to make them explicit, and specify what you expect in return for your concession. Or, make your concessions contingent on certain conditions.
- Be aware of the *diminishing rate of concessions*. As the other side approaches their RV, the concession tends to get smaller. This can also be used to create the illusion that you're close to your RV.

Use these strategies to create and maximize value for both sides:

- *Negotiate multiple issues at the same time* to allow for logrolling.
- Reach agreement only after discussing all the issues, so you can consider trade-offs using *package offers*.
- Apply *Pareto improvement*, i.e. change parts of a deal that'd make at least 1 party better off without making anyone else worse off. Keep doing so until you reach Pareto efficiency, when it's impossible for 1 party to gain more without hurting the others.
- When both sides have drastically different expectations and can't agree on who's right or wrong, *contingency contracts* can be used to break the impasse. For example,

KEY QUOTES

"You are negotiating not just the deal, but also the relationship."

"Effective negotiators understand not only the power of silence, but also the need to be comfortable with it...remind yourself that if you speak when it is their turn, you will be paying by the word."

"The relative importance of each issue to each party only becomes apparent when the issues are discussed simultaneously."

if you can't agree on the expected ratings for a sitcom (which affect the licensing fees), try using a clause like this: If the ratings are above the benchmark number, they'll get $X rebate; if it's below the benchmark, they'll pay a surcharge.

You can't maximize value if both sides refuse to share information. Use these strategies to gather useful information:

- Gather *all potential sources of info* before the negotiations, e.g. public info, historical data, information from personal/business contacts.

- *Know what you don't know*. Intentionally ask questions to verify your assumptions and revise your estimates. For example, if you're unsure if the buyer intends to use the land for commercial or residential development, you can say, "This plot of land will be very valuable if it's used for commercial development. What are your plans for this real estate?"

- Great negotiation isn't about selling your proposal or persuading them of your strengths. It's about the ability to *listen and understand* where they're coming from, so you can structure a deal that maximizes value for both sides.

- Don't dismiss their *demands or constraints*. See them as opportunities to create/capture value.

- Don't just focus on what they want; *ask why* they want it or why they're saying "no". A large corporation wanted exclusivity from a small supplier, but the latter had to refuse because the owner had an existing supply agreement with his cousin. Once the "why" was known, both sides could agree on an exclusivity clause while still allowing the owner to supply to his cousin.

- You can't expect your counterpart to tell you their RV, but you can *ask indirect questions* to improve your estimates. For example, you can ask how this deal fits with their overall strategy, ask about their customer profiles/ needs or future projects.

KEY QUOTES

"Negotiation is an information game. Those who know how to obtain information perform better than those who stick with what they know."

"Negotiation geniuses know how to act on information they have, acquire information they do not."

"Every offer is a combination of information and influence. The other party's offer tells you something about what she believes and what she wants (information), but it also has the power to derail your strategy (influence)."

- Learn to *separate information from influence*. Pause to consider if the info is really something new, or if you're influenced by the way it's being presented. We'll elaborate on this in Part 2.

- If the other party is reticent, you need to first *build trust*: (i) use their lingo, (ii) invest the effort to build personal/ informal ties outside the negotiations, (iii) nurture the relationship in advance (not only when you want something), and (iv) give away some info first (e.g. share your relative priorities without revealing the absolute value of each priority).

- If the other party still isn't forthcoming, try making *2 different offers simultaneously*. These offers may be of equal value to you, but contain variations to help you gauge their relative priorities. If neither offer is acceptable, you can then ask "which offer is closer to something you can accept?"

- Use *contingency contracts* to protect yourself from areas of uncertainty. For example, if you're unsure whether the buyer will honor their promise to use the land for non-commercial use, you can add a clause to say that they must pay an extra $X if the land is used for commercial development within 10 yrs.

Post-Negotiation: Maximize Satisfaction and Value

We may feel unhappy about a negotiation if we think that we could've secured an even better deal. To maximize your satisfaction: focus on your ambitious targets during the negotiation, but switch to focusing on your RV once the negotiation is over.

After signing the initial agreement, you can continue to create value with a post-settlement settlement (PSS). Acknowledge the progress made with the initial agreement. Then, tell your counterpart that you've already given all possible concessions, but are still willing to think out of the box to help them.

- The goal isn't to reverse the agreement or squeeze new concessions. It's to give both sides the opportunity to

KEY QUOTES

"Negotiation geniuses do not simply leverage trust when it is present; they build trust when it is absent."

mutually improve the agreement, or at least achieve *Pareto improvement*.

- If neither party can think of better ideas, your initial agreement will now become your BATNA.

Part 2: Negotiating in the Real World

Psychology in Negotiations

All human beings—including experienced negotiators—are subject to mental and emotional biases/errors. These create conflict and distrust, hinder our ability to learn from experiences, and lead to sub-optimal outcomes. Negotiation geniuses learn to minimize their own mistakes while leveraging others' mistakes.

- Our brains take shortcuts so we can make decisions quickly. However, such *cognitive biases* can result in irrational decisions.

(i) The *fixed-pie bias* is the assumption that you're in a zero-sum game, and one party's gain is the other party's loss. It's hard to collaborate when each side sees the other as an enemy, focuses on grabbing a larger chunk of the pie, and dismisses the proposals/concessions made by the other side.

(ii) The *vividness bias* is our tendency to focus too much on vivid features/data, to neglect dull but important info.

(iii) Once we're in a competitive/combative mode, we may end up in an *irrational escalation of commitment*. We try to win at all costs even if it sabotages our own goal.

(iv) We're also *susceptible to framing*, i.e. we'll respond differently to the same info when it's presented differently. For instance, we tend to be risk-averse when thinking about potential gains (i.e. we want guaranteed wins), but risk-seeking when thinking about potential losses (i.e. we switch to an "all or

KEY QUOTES

"In the context of decision-making and negotiation, many of the mistakes people make are systematic and predictable."

"It is better to assume that you can enlarge the pie and later find out that you were wrong than to assume the pie is fixed and never find out you were wrong."

"Once you are a "loser," you won't mind digging yourself into a bigger hole (i.e., losing even more) as long as there is some possibility of digging yourself out entirely."

nothing" mentality if we have something to lose). You may hesitate to bet your first $100 at the casino. Yet, after losing $800, you'll be more willing to bet another $100 to try and win back your losses.

- We also act irrationally due to *motivational or emotional biases*.

  (i) Often, we're torn between what know we *should* do vs what we *want* to do. In a real story, a dispute over window grills (worth $909) ended up costing the parties $100,000 in legal fees over 6 years. They spent an illogical amount of time/money just to satisfy their desire for justice.

  (ii) We also tend to view ourselves with a *positive bias*. We play up things that make us look good, and play down things that make us look bad. We're also prone to overconfidence, irrational optimism, and the illusion of superiority. We think that we're better (smarter, fairer, more flexible, etc.) than others, and believe our views to be more valid.

  (iii) We adopt *self-serving attributions*—we attribute our successes to internal reasons (e.g. skills, personality, creativity) and our failures to external reasons (e.g. bad luck). We do the opposite for others—we attribute their successes to external reasons and their failures to internal reasons.

  (iv) We tend to hold out more/longer that we should due to *regret aversion*, or the desire to avoid any cause for regret.

Negotiation geniuses seek to manage such biases:

- Our brains have 2 default systems. System 1 is fast, automatic, and emotional. System 2 is slower, deliberate and logical. *Facilitate System 2 thinking* with the following:

  (i) Set aside time for *pre-planning*. Create a scoring system to remember your real interests, and develop an exit strategy (e.g. set a cut-off point where you'll stop bidding).

  (ii) Don't negotiate under *time pressure*.

KEY QUOTES

"We view the world the way we wish it were rather than how it truly is."

"Egocentrism is not only common, but also robust and resilient."

"To overcome bias and negotiate effectively, you need a framework for thinking about, preparing for, and executing negotiations systematically and strategically."

(iii) Spread out the negotiation across *multiple sessions* to give yourself time to think in between.

- *Use analogies* to facilitate logical thinking. Review several negotiations simultaneously to identify similarities and differences, key learning principles and lessons.

- *Adopt the "outsider lens"* to detach yourself from the situation:

  (i) Bring in an *outsider* during preparation, or assign someone to act as your devil's advocate.

  (ii) Assess the system as a *third party*, e.g. imagine you're giving advice to a friend.

- Stop to consider how an offer compares with *objective reference points*, such as the status quo, your original target or BATNA.

At the same time, you need to address others' biases:

- Factor their biases into your *plan/strategy*.

- If you're confident that your offer is better than what they can get elsewhere, then give them time to analyze and compare their options. You can also *facilitate rational discussions* by proposing a timeline to discuss specific issues or ask them to consider their relative priorities.

- *Calibrate information*, e.g. get opinions from several real-estate agents to ensure your agent's list price isn't biased.

- *Use contingency contracts* to cater to different viewpoints.

Using and Countering Strategies of Influence

Use these strategies to influence others effectively:

- Leverage loss aversion by *highlighting their potential losses, not their potential gains*. For example, you can frame your proposal in terms of how much they'll lose without your solution (not how much they'll save/gain). Or, point out what's missing from your rivals' offer (instead of what your offer includes).

KEY QUOTES

"By giving up your ability to pursue what you want, you can ensure that you will do what you should."

"Thinking about the decision biases of others allows you to calibrate, quantitatively and qualitatively, the information, data, and arguments that you hear from them."

- *Disaggregate their gains and aggregate their losses*.

  (i) We feel more satisfied with *many small wins* (instead of 1 big win). Make small concessions throughout the negotiation, share good news in small doses, and distribute your benefits/rewards in installments.

  (ii) We feel less pain if we encounter *1 big loss* (instead of many small ones). So, combine your demands, bad news or costs, and share them all at once.

- Use the *Door-in-the-face (DITF) technique*. Make an extreme request so they'll say "no", then quickly follow up with a moderate request. They're 3x more likely to say "yes" because the 2nd request seems like a concession, and appears more reasonable compared to the first.

- Use the *Foot-in-the-door (FITD) technique*. Start with a small request that they'll probably agree to, then wait a while before you make a bigger, related request. This plays on our desire to act consistently with past decisions and actions.

- People tend to say "yes" to requests with seemingly-legitimate *justifications*. You can increase the chances of an agreement just by adding the word "because".

- Something that's popular always seems more attractive. Use *social proof* by presenting a list of happy clients, high demand for a product, etc.

- Surveys sent with a $1 note received a much higher response rate than those sent with a promised incentive of $50. That's because people feel obliged to reciprocate when you give a *unilateral concession*. This works even for small/token concessions, e.g. meeting at their preferred time/place or buying coffee/snacks.

- Use *reference points* to make an offer/request look reasonable, e.g. a $100 warranty looks small compared to a $2,000 computer.

Use these strategies to counter others' attempt to influence you:

KEY QUOTES

"People seem to prefer finding money in installments but losing money in one lump sum."

- *Prepare in advance*. Know your interests, BATNA, ZOPA, etc. so you're less likely to accept an unfavorable offer.
- Use a *scoring system* to help you evaluate offers more objectively.
- Deliberately *separate information from influence*.
- *Rephrase their offer* in other terms, e.g. change a loss-frame to a gain-frame to see if it still sounds as attractive.
- *Appoint a devil's advocate*.
- Don't negotiate under *time pressure*.

Overcoming Blind Spots in Negotiation

Be mindful of these common blind spots in negotiations:

- Often, *parties who're absent* from the negotiation table (e.g. regulators or rivals) can affect the outcome.
- Your counterpart may be using *different decision rules* that you're unaware of.
- There may be *information asymmetries* that put the less-informed party at a disadvantage. For example, you may think you got a great deal for a used car because you're unaware of its major problems.
- Don't focus so much on your proposal that you overlook *your competitors' strengths*, nor focus narrowly on the immediate outcomes to neglect the *big picture* and longer-term implications.

Expand your focus/awareness to consider all factors in play. Learn from past negotiations, and get a team to help you with research/preparation for important negotiations.

Addressing Lies/Deception and Ethical Dilemmas

It's possible to be ethical without being taken advantage of.

KEY QUOTES

"For most negotiators, the decision rules of other parties lie outside the bounds of awareness."

"The best defense against lies and deception is to eliminate your counterpart's temptation to lie."

Most people admit to lying at some point in negotiations. People are less likely to lie if they don't feel the need to, or if they believe they can't get away with it. To minimize lies and deception:

- Use *defensive strategies* to discourage deception:

  (i) Look prepared and show that you're able to obtain information to verify their data/claims.

  (ii) Ask questions that're less direct or threatening so they won't feel the need to lie.

  (iii) Build trust. Demonstrate openness and honesty, volunteer information and don't lie.

- Improve your ability to *detect lies*:

  (i) Reduce information asymmetry with multiple sources of info.

  (ii) Set a trap: ask a question (for which you already know the answer and they have reasons to lie) to see how they respond.

  (iii) Ask more questions so it's hard for them to lie consistently.

  (iv) Watch out for evasive responses.

  (v) Use contingency contracts to protect yourself for contentious issues.

- *Remove your own need/desire to lie*:

  (i) Consider the cost of your reputation and relationship.

  (ii) Prepare for tough questions so you won't be caught offguard. Refuse to answer sensitive questions, or offer to answer a different question, e.g. "I can't share our cost figures, but I can explain our production process and pricing model to assure you that you're getting value for money."

  (iii) Remove the constraints or incentives that tempt you to lie, e.g. don't respond under time pressure.

KEY QUOTES

"Someone must take the first step, and it may as well be the one who is aspiring to become a negotiation genius."

"Information asymmetry makes you vulnerable to deception."

"Most people do not like to lie, but they are usually very comfortable with you being deceived."

"Lies are not only potentially unethical; they are also, very often, poor strategy."

If you catch the other party lying:

- *Don't call them a liar*. Explain that you feel misled, and give them a chance to clarify.
- You can subtly *warn them* that their data seems "outdated" and your sources indicate a different number. Or, directly *confront them* by stating your disappointment with the misinformation.
- Decide if you wish to continue negotiating or *walk away*.

Most of us unknowingly make incorrect or self-serving statements. Be mindful of the situations where *anyone*—yourself included—may **behave unethically**.

- *Conflicts of interest* are common in negotiation. For example, a deal that maximizes a real-estate agent's earnings may not be one that serves the client's best interest. Always verify the info/advice or ask them to justify the recommendations.
- We may be unconsciously influenced by *implicit assumptions and stereotypes*. For example, we may we assume that people of a certain race, gender, industry or negotiating style will think/act in a certain way, so we respond in a biased way.
- A deal can create value for both parties at the *expense of third parties* absent from the negotiating table, e.g. 2 companies agreeing to increase prices and pass the costs to consumers.
- We tend to *overclaim credit* or our "fair" share of rewards, without stopping to consider others' contribution.

Negotiating From a Position of Weakness

At some point, you'll have to negotiate with few/no good alternatives. When negotiating from a position of weakness:

- Don't reveal that your BATNA is weak. Instead, *play up their weakness and your own unique traits*. In the earlier example, Roosevelt's campaign manager was in a weak position since the photos were already printed. However,

KEY QUOTES

"It is often tempting—but not always judicious—to retaliate quickly when you feel you have been deceived."

"The one who fares better is the one who makes the other side's weakness more salient throughout the negotiation."

he focused on the photographer's weak BATNA (i.e. he'd lose a one-in-a-lifetime opportunity without a deal).

- Give multiple proposals to explore *other variables* that may be of value/interest to your counterpart. If you have other deals where you're in a stronger position, you can also *negotiate across your whole portfolio*.

- Use the time between deals to *nurture the relationship* and understand the client's needs/interests. Bypass the agents by sending a copy of the proposal to the client, or propose a PSS to add more value after you're selected.

- If your position is truly weak, it may be better to *relinquish your power* and ask for their help instead.

If all else fails and you're being bullied by the other party, try disrupting the power balance:

- *Build coalitions with other weak parties* to increase your strength.

- Point out that if they push too hard, they could destroy you and *lose a value-creating partner*.

- *Attack their source of power*. Before confronting a powerful salesperson who holds 70% of your accounts, weaken his position by building relationships with those clients and locking them into long-term contracts.

When Negotiations Turn Ugly

Negotiations can break down due to 5 problems:

- *Irrationality*: Don't assume that the other party is being unreasonable. Try to uncover the hidden causes behind their behavior, e.g. they may be misinformed or have other hidden constraints/interests.

- If *distrust* is an obstacle, diagnose the problem first (e.g. whether they distrust your character or competence, and why). Then, identify ways to rebuild trust.

- When the other party is *angry*:

KEY QUOTES

"If you can't outmuscle the other side in a negotiation, you may want to stop flexing your muscles and, instead, simply ask them to help you."

"If you create value for others, you gain at least some power to claim value for yourself."

"In most cases, behavior that appears to be irrational has a rational—albeit hidden—cause."

(i) Acknowledge their anger and seek to *understand why*, e.g. "You seem to be angry. Can you share what's on your mind?"

(ii) *Sidestep the attack* and stay calm. Consider how you'd feel if you were in their shoes.

(iii) Refocus on their *real interests*. Ask: "What would you like to see happen?" or "What could help us to move forward?"

- When the other side resorts to *threats and ultimatums*:

  (i) Ignore the threat by shifting to another topic;

  (ii) Pre-empt additional threats by voicing their concerns and your willingness to help them resolve it.

  (iii) Politely point out if their threat isn't credible or viable.

- Help them to back down without *losing face*. For example, if they clearly need to reduce the price further after issuing an ultimatum, you can say something like, "I realize you're doing us a favor by reducing the price beyond what's normally permissible. I really appreciate that."

You shouldn't negotiate at all when:

- The costs of negotiation (including the value of your time, or the harm to a relationship) exceed the potential gains;
- Everyone knows that your BATNA sucks;
- Negotiation is inappropriate for the culture or context (e.g. negotiating a pay raise in the midst of a crisis); or
- There's no ZOPA, i.e. your BATNA exceeds their best possible offer.

Other Details in the Book to Look Out for

This book provides the negotiation strategies and tools that can be applied to virtually any scenario. However, becoming a

KEY QUOTES

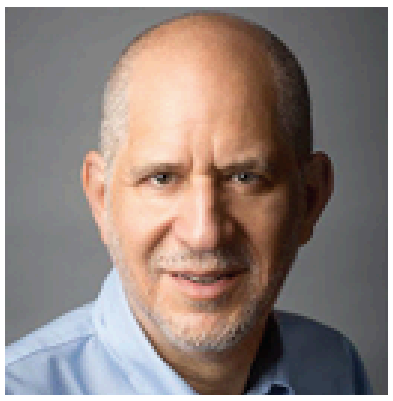
"If you can sidestep the attack, you will avoid the hit, retain your balance, and remain in control of the situation."

"Unless the other side is able to save face…they may be very reluctant to change their perspective or their behavior."

negotiation genius takes time and continuous practice. The key is to keep taking small steps and making incremental improvements. Besides the insights in this summary, the book includes various case-studies and examples to help you understand how the principles and techniques can be applied in real-life. For more details, please visit http://www.negotiationgenius.com/.

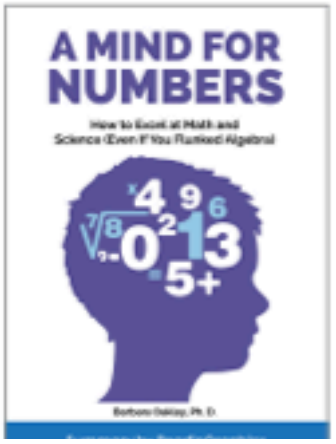
About the Authors

Deepak Malhotra is an American economist, focusing on negotiation strategy, international and ethnic dispute resolution, and competitive escalation. He is currently the Eli Goldston Professor of Business Administration at Harvard Business School.



Max Hal Bazerman is an author and researcher focusing on negotiation, behavioral economics, and ethics. Bazerman is the Jesse Isidor Straus Professor of Business Administration at Harvard Business School.

KEY QUOTES



A MIND FOR NUMBERS

How to Excel at Math and Science
(Even If You Flunked Algebra)

BARBARA OAKLEY, PH.D

The Big "So What"

This book explains powerful learning concepts and techniques to help you improve in math, science, and virtually any topic/area in life. The insights are relevant for students and learners of all ages who wish to learn better, faster and deeper.

Introduction

As a child, Oakley disliked math and science because she couldn't grasp the technical details. After she started work, she realized that those inadequacies were limiting her career opportunities. So, she decided to rewire her brain and teach herself to get good at math and science. The more progress she made, the more she started to enjoy the subjects and the better/faster she learned.

Oakley is now a professor of engineering, and actively researches different areas ranging from engineering to humanities and social sciences. In this book, she shares learning insights from scientists, educators, students, famous inventors (such as Thomas Edison and Richard Feynman), as well as her personal experiences. In this summary, we've organized the key ideas into 2 parts:

- How the brain works; and
- Strategies, concepts and ingredients for learning.

KEY QUOTES

"If you've ever wanted to become better at anything, this book will help serve as your guide."

"My success reinforced my desire to practice, and that built more success."

"What you discover will help you be more effective and creative, not only in math and science, but in almost everything you do."

Understanding How Your Brain Works

Your brain is capable of handling complex mental calculations and problems. Each day, you're already making countless unconscious decisions involving distances, speed, and quantities. To get better at math and science, you must learn how your brain works so you can use it to learn faster and deeper.

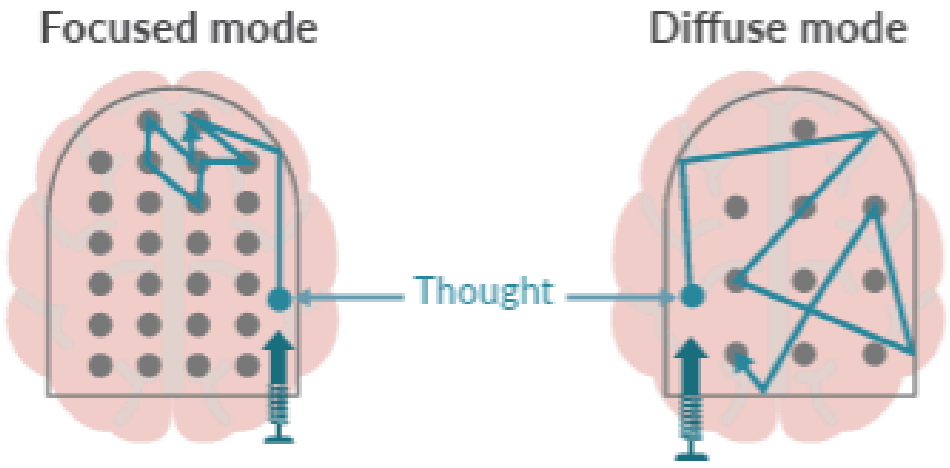
Focused vs Diffused Thinking

Neuroscientists found that our brain switches frequently between 2 sets of thought processes: focused thinking and diffused thinking.

- The *focused mode* concentrates your prefrontal cortex (which handles logical, analytical thinking) to consciously target a specific issue. It's like shining a strong beam of flashlight in the dark, and is great for deep work or execution.

- The *diffuse mode* occurs in a more relaxed state. Your mind starts to wander, picking up scattered thoughts and ideas from different parts of the brain, and combining them creatively to arrive at fresh insights. This often happens in the background without your conscious awareness.

- When your brain releases a thought, it's like a ball being released into a *pinball game*.



(i) The *focused mode* is great for things that you're familiar with. The concepts are already tightly-connected in your mind—like a pinball game with bumpers close together—so the ball bounces rapidly between the bumpers.

KEY QUOTES

"We all have a natural feel and flair for math and science. Basically, we just need to master the lingo and culture."

"Most difficult problems are solved through intuition, because they make a leap away from what you are familiar with."

(ii) The *diffuse mode* is better for big-picture thinking when you're exploring new or unfamiliar concepts. The bumpers are further apart so the ball travels a longer distance, allowing you to explore new ideas or approaches.

In short, the diffuse mode allows you to quickly scan for new inputs, while the focused mode allows you to get things done. We need both modes of thinking to learn and survive.

- However, you can't apply both modes concurrently. You can only *toggle repeatedly between the 2 modes*: scan for data → process/integrate it → scan for more data/ideas.

- To *learn math and science*, you need the focused mode to analyze a problem rationally and sequentially, and the diffuse mode to grasp abstract concepts like integrals or electric currents.

The 2 Key Memory Systems

Learning involves 2 key memory systems: your short-term and long-term memory. These are like your computer's random access memory (RAM) and hard-drive.

- Your *short-term memory* or working memory holds whatever information you're processing consciously. It has a limited capacity, and can hold about 4 main clusters of information at any point in time, like a juggler who can keep only 4 balls in the air.

- Your *long-term memory* is like a warehouse that can store huge amounts of material. However, it can be hard to find a parcel of information in a room filled with parcels. To keep the memories accessible, you need to revisit them occasionally.

To learn effectively, improve your memory and how you transfer information from the short-term to long-term memory.

Learning Strategies, Concepts and Ingredients

In this section, we'll explain various interconnected concepts about learning, and how they can be applied to math and science.

KEY QUOTES

"To learn about and be creative in math and science, we need to strengthen and use both the focused and diffuse modes."

Distributed Practice

Math and science are best learned in small daily doses so your brain has the time to absorb and internalize what you've learned. When you're learning something new, it's crucial to alternate between focused and diffused thinking. This is also known as "distributed practice", i.e. taking breaks between learning sessions instead of doing mass-learning.

- *Start with the focused mode*. Study intensely about the subject, then relax or do something totally different, e.g. take a nap, listen to music, exercise, play video games, or check your emails.

  (i) In the diffuse mode, you seem relaxed but your brain is still working in the background to synthesize ideas and generate fresh insights. That's why creative ideas often pop up after a break.

  (ii) However, you can't create something out of nothing. Start with focused learning to provide "raw materials" for your brain to work with.

- *Pause just long enough* for your brain to stop thinking about the problem consciously, but not so long that you forget what you've learned. If you're learning something new, always return to the materials within a day.

- Famous inventor *Thomas Edison* was known for taking regular naps. When he was stuck with a tough problem, he'd take a nap with a ball bearing in his hands. As he fell asleep (which meant that his brain had relaxed to a diffuse mode), the ball bearing would clatter to the floor and wake him up. Edison would then gather any new thoughts/ideas and continue his work.

Moreover, you need mental energy to focus. Without periodic breaks, you'll deplete your mental resources quickly.

- It's *similar to physical training*. If you lift weights non-stop, you'll exhaust or even injure your muscles. The best way to build muscles is to exercise intensely, then give your muscles time to recover and grow.

KEY QUOTES

"It's best to work at math and science in small doses—a little every day...That's how solid neural structures are built."

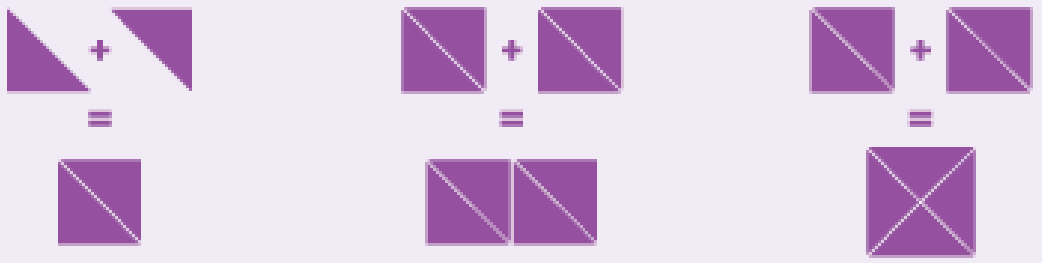
"Sometimes...your desire to figure things out right now is what prevents you from being able to figure things out."

4

- *Feelings of frustration* are a signal to shift to diffuse mode.

The Einstellung effect refers to our tendency to get stuck because we get fixated on a wrong approach or a flawed concept, thus blocking out better approaches or solutions.

Imagine you must use triangles to form squares:



If your mind is locked onto this pattern...

...you may replicate the same pattern...

...instead of seeing a different approach

- When dealing with new or complex problems, don't latch on to a solution too quickly. Study the problem in detail, then *step back* to see the big picture. You can blink or close your eyes to momentarily disconnect from the problem in front of you.
- *Check your work and assumptions*. Rushing ahead with a wrong calculation or assumption will only slow you down.
- *Brainstorm with others* to uncover blind spots, erroneous thinking or assumptions. Be prepared to unlearn old concepts in order to learn new ones.

Chunking and Practice

To get good at math and science, you must grasp the concepts, equations/formulas, then recall and apply them to different types of problems. This requires both memory and understanding.

Chunks are bits of information that are connected by meaning. For example, the word "sum" comes from the letters "s", "u" and "m". To do a "golf swing" you must string together a series of steps from positioning yourself to moving your arms, torso, and hips.

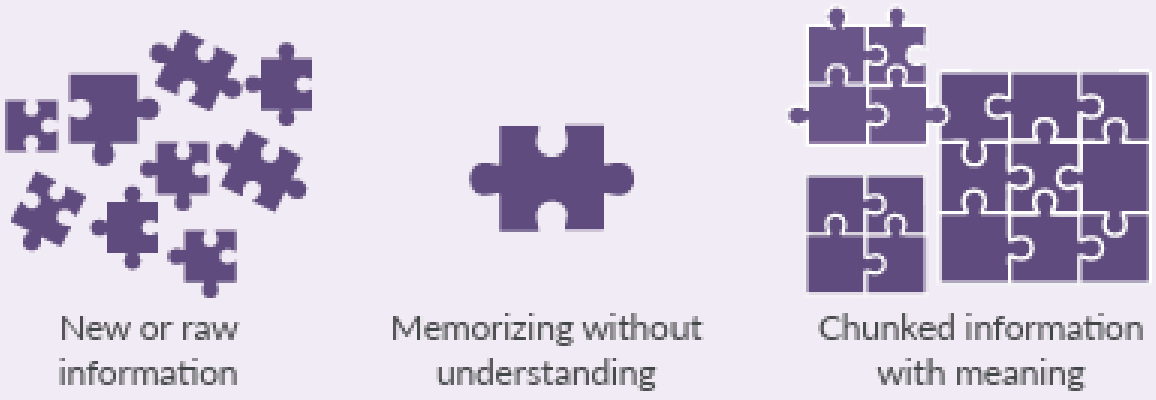
KEY QUOTES

"Focused attention...can often help solve problems, but it can also create problems by blocking our ability to see new solutions."

"You have to unlearn your erroneous older ideas even while you're learning new ones."

- When you're learning something new, you must *dissect each component*, which makes it effortful. For instance, to play the piano, you must learn the notes of the keyboard, the correct fingering, and how to read the music score.

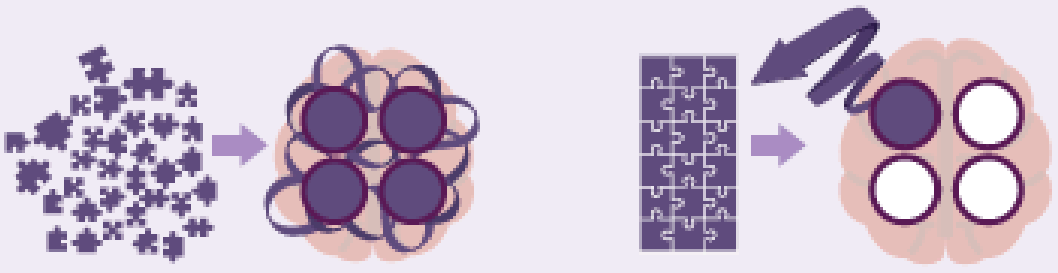
- With enough practice, your brain forms *neural patterns or conceptual chunks* so you no longer need to remember every detail. When you think of "playing the piano", your brain pulls out a chunk of information instead of separate components.



Chunking frees up your available working memory.

- Initially, each *loose piece of information* takes up a part of your working memory. This maxes out your short-term memory, which can only hold about 4 clusters of information.

- When you *condense the information into 1 chunk*, it (i) frees up the other 3 clusters of working memory, and (ii) creates a string of ideas so it's easier to link to other ideas.



The more you practice chunking, more easily and intuitively you can solve problems because (i) you have a larger library of mental chunks, (ii) each chunk contains more data (or a longer "string of data"), and (iii) it's easier to connect between chunks. Each new math/science concept builds your mental scaffold until you can intuitively solve problems at a glance.

Generally, chunks are built in 3 steps:

KEY QUOTES

"Chunking...is the mental leap that helps you unite bits of information together through meaning."

"Practice helps build strong neural patterns—that is, conceptual chunks of understanding."

- Remove all distractions to *focus fully* on the material.

- *Understand the basics*, e.g. the concept of atoms or how to solve a specific type of math problem.

- Keep practicing to reinforce the neural pathways. Apply the insights across different situations until you *gain context and see the big picture*. At this point, you will know:

  (i) How to use a method in different scenarios (*bottom-up chunking*); and

  (ii) Where a chunk fits in the big picture, i.e. when a method will or won't work (*top-down chunking*).

Initially, you must practice at least daily to reinforce a new pattern/chunk before it fades away. Once you've grasped the concept, you can refresh the idea every few weeks, then every few months or years.

- The *bigger your library* of chunked concepts and solutions, the more easily you can solve new problems.

- Repeatedly using an incorrect method can build *wrong chunks*, so make sure you check your work to get it right from the start.

- If you're *stuck*, ask someone for their inputs or do some generic research (e.g. who invented that method and why). The new inputs and perspectives can help you to see things differently and develop your chunks.

The more effort you put into learning the material, the more deeply it gets embedded in your memory. To accelerate chunking, use retrieval practice (i.e. recall or mental retrieval).

- *Don't just passively reread* your material. Instead:

  (i) After each page or chapter, look away and *recall* the key points; or

  (ii) Used *spaced repetition*, i.e. wait for some time before you reread the material. As you walk into your classroom, try to recall the key ideas from the last lesson.

KEY QUOTES

"In some sense, recall helps build neural hooks that you can hang your thinking on."

"Context is where bottom-up and top-down learning meet."

"A key to building mental flexibility and expertise is to build your library of chunked solution patterns. This is your rapid-access data bank—always handy in a pinch."

"The more you do it, the easier it becomes, and the more useful it is."

- Be selective in what you highlight or mark in your texts. Highlight/mark no more than 1 sentence per paragraph, and ideally *summarize the ideas in your own words* in the margin.

- *Rewrite your lecture notes* each evening to reinforce the new chunks being formed, or to uncover gaps to be filled. Writing by hand facilitates learning more than typing.

- Try to *solve the problems on your own* before checking the answers. The more deeply you think about the problem, the more you strengthen the associated neural networks.

When you are building a chunked library, it helps to tackle the toughest aspects using deliberate practice.

- First, *work on 1 problem repeatedly*:

  (i) Work on the problem on paper without referring to notes or answers.

  (ii) Rework the problem, paying attention to your processes.

  (iii) Take a break or do something totally different.

  (iv) Rework the problem just before bed. Listen to your intuition.

  (v) The next day, rework the problem again. By now, it should seem relatively effortless. Just focus on the parts that you find challenging.

- *Choose another problem* and repeat the steps above. The more problems you work on, the more chunks you build in your mental library.

- Practice *active repetition*: review the problems mentally while you're doing something active (e.g. walking or exercising). This improves your ability to recall the solutions anytime, anywhere.

Once you've grasped the basics, you can improve by overlearning or interleaving.

- *Overlearning* means to keep learning/practicing something until it becomes automatic. This is useful for perfecting a piano piece or a tennis swing.

KEY QUOTES

"A little bit of work on something that feels painful can ultimately be very beneficial."

"Once you start working on a math or science problem, you'll notice that each step you complete signals the next step to you."

"A library of these chunks gives you an understanding of fundamental concepts in a way nothing else can."

- For math and science, it's more useful to use *interleaving*, i.e. do a mix of problems that involve different strategies or approaches.

  (i) Focus on 1 topic for some time, then shift to a totally different topic. Alternatively, open to a random page of the book and start working on a problem there.

  (ii) Prepare index cards with questions on one side and solutions on the other. Shuffle the cards and test yourself with random questions involving different approaches. Initially, do this at a table and write down your solution by hand before you review the answer. Once you're confident, you can review the cards anywhere (e.g. when you're out for a walk) to strengthen the chunking effect.

To understand and internalize complex or abstract math/science ideas, seek to **simplify and personalize** them.

- Formulas and equations are merely ways to abstract and simplify concepts. Like poetry, the numbers and symbols hold layers of deeper meaning. Try to understand the math/science equations so thoroughly that you can *see them in your mind's eye*. For instance, a physicist doesn't merely see the symbol for "mass"; he sees and senses the inertia of, say, a huge boulder.

- To grasp a complex concept, look for *simple explanations or analogies*. When you can break down a complex idea into its core elements, you'll have a much deeper understanding of it.

  (i) Einstein used to imagine himself as a photon moving at the speed of light and how other photons might perceive him. Charles Darwin imagined himself explaining an idea in the simplest terms to a stranger.

  (ii) Imagine yourself explaining the concept to a 10-year old—how could you express it in the simplest possible way?

Learning doesn't happen in a straight line. Sometimes, you must **step back to step forward**. After a period of learning, you may suddenly feel confused because your mind is synthesizing the material and restructuring your knowledge. You'll usually emerge from the confusion with a leap in understanding.

KEY QUOTES

"Testing is itself an extraordinarily powerful learning experience."

"There are hidden meanings in equations, just as there are in poetry."

"Simple explanations are possible for almost any concept, no matter how complex."

"The learning process is all about working your way out of confusion. Articulating your question is 80 percent of the battle. By the time you've figured out what's confusing, you're likely to have answered the question yourself!"
—Kenneth R. Leopold

Improving your Memory

When you first learn or notice something, it's stored in your working memory. To move it to your long-term memory, you must repeat the idea and make it memorable.

- Instead of rote memorization, use all 5 senses to *create neural hooks* to "hang" your ideas. For example, you'll remember a pig more clearly if you see, feel, hear and smell one (instead of merely seeing the word "pig"). Use the memory tricks and techniques below to tap into your brain's huge visual and spatial memory.

The "memory palace technique" is about anchoring key concepts visually to a familiar scene, such as your home or the journey to work.

- The key is to link an idea with a *memorable image*. For example, you can use a memory mnemonic to remember the sequence of minerals from the softest to the hardest: In front of the house, there's a Toad (talc) carrying a Giant (gypsum) which is holding a Can of Coke (calcite). You step through the Front door (fluorite) to see an Alligator (apatite) in the living room, playing the Organ (orthoclase). In the dining hall a Queen (quartz) is spinning a Top (topaz), eating Cheese (corundum) and sitting on a Deer (diamond).

- Once the images are vividly lodged in your mind, you can recall the sequence easily. Vivid, unusual and funny images leave the biggest impressions.

You can also use music, tunes and rhymes to remember formulas and equations. Search online for "quadratic formula" and "song" for existing samples, or make up your own!

Metaphors and analogies help to connect a new idea to an idea that we're already familiar with, making it easier to understand or recall. For example, you can explain electrical currents by comparing it to flowing water.

Use spaced repetition with all 5 senses to better encode ideas in your long-term memory. For instance, you can hand-write the symbol for density (ρ) on 1 side of an index card and write the key information (e.g. "measured in standard units of kilograms

KEY QUOTES

"Memory tricks allow people to expand their working memory with easy access to long term memory."

"One of the best things you can do to not only remember but understand concepts in math and science is to create a metaphor or analogy for it—often, the more visual, the better."

per cubic meter") at the back. As you do so, say it out loud and imagine a heavy 1m-by-1m luggage. Look at the symbol and recall what you know about ρ. Once you can do it without peeking at the back, put the card away. Revisit the card a few days later, then extend the period between each review.

Create meaningful groups to connect unrelated items:

- *Acronyms*: To remember the 4 plants to ward off vampires (GRHM—Garlic, Rose, Hawthorn, Mustard) think of a GRAHAM cracker.
- Associate numbers with *memorable events*, e.g. your birthday.
- String separate concepts into a *memorable story or sentence*. For example, the sentence "King Henry died while drinking chocolate milk" can help you to remember the decimal system (Kilo=1,000; Hecto=100; deca=10; while=1; deci=0.1; centi=0.01; milli=0.001).

Exercise regularly as it helps with neural growth and connections, thus improving your memory and learning abilities.

Overcoming Procrastination

Learning math/science is like laying a brick wall. You need brief periods of focused study to lay the neural bricks, with some time in between for the mortar to dry. Procrastination hinders learning since: (i) it leaves you with no time to explore or synthesize the concepts, and (ii) it's harder to absorb new material when you're stressed.

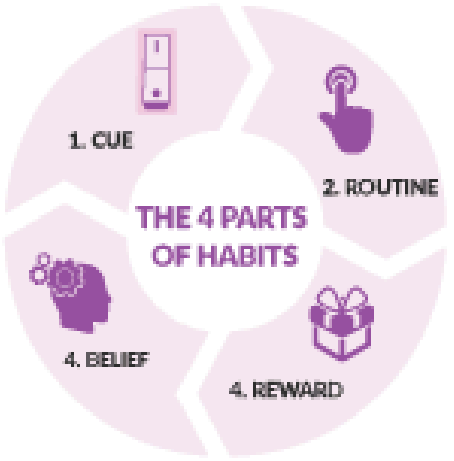
Procrastination is a keystone bad habit that affects all aspects of your life.

"Procrastination is a single, monumentally important 'keystone' bad habit."

- We procrastinate to *avoid anticipated discomfort*. Paradoxically, the more you put off something, the more painful it becomes when you eventually do it. You also start to lose confidence in yourself over time.
- Habits involve *4 parts*: A cue sparks a routine automatically, which gives you a reward that leads to certain beliefs about yourself or your habits. For instance, the sight

KEY QUOTES

of your math homework (cue) may prompt you to start playing video game (routine). This offers temporary pleasure/relief (reward) and you start to think you can never learn to like math (belief), or create excuses (e.g. "If I study too early I'll forget what I learn").



- To *change a habit*, you must reprogram your response to the cue or avoid the cue altogether.

  (i) Track your daily activities for 1-2 weeks. Each time you fail to finish what you intended, identify the procrastination routine and the cue(s) that trigger it.

  (ii) Make a plan to break the routine and establish a new one, e.g. leave your phone in the car and do your math homework in the library where there're no distractions. Do 25 minutes of focused work using the Pomodoro technique (details below), then reward yourself immediately with something you enjoy.

  (iii) The goal is to train your brain to anticipate a reward at the end of your new routine. Over time, you'll become better at what you do and start to enjoy it more.

  (iv) Build supportive beliefs by hanging out with positive people with a "can-do" mindset.

The Pomodoro technique is one of the best procrastination fixes:

- Find a quiet environment, remove all distractions (e.g. turn off your phone, web browsers, and email prompts), and set a timer for *25 minutes*. Work on 1 task with 100% focus until the time is up. Then, reward yourself immediately.

  (i) Make sure you work on *1 task at a time*. Don't multitask as you'll be diluting your attention.

  (ii) After each session, *reward yourself* with a break or something you enjoy, e.g. surf the web or play a video game.

- To get in flow, *focus on the process, not the output*. Don't worry about finishing a task. Just work with full

KEY QUOTES

"Procrastination can be like taking tiny amounts of poison. It may not seem harmful at the time. But the long-term effects can be very damaging."

"Focus on the process (the way you spend your time) instead of the product (what you want to accomplish)."

concentration for 25 minutes without stress or judgment, and you may be amazed by how much you can accomplish.

- Break down your long-term goals into *bite-sized pieces* so you can tackle them in short intense bursts, one day at a time.

  (i) List down the key tasks you wish to accomplish each week.

  (ii) Each evening, select a few key items you can reasonably tackle the next day. This gives your brain some time to figure out how to get things done.

  (iii) Start each day with the most important or difficult task while you're still fresh.

You may be hyper-productive when you're stressed or in flow, but it's not sustainable. To avoid burnout, plan for both work and rest/play.

- Use a *calendar* to schedule time in advance for your daily tasks.

- Plan your *stop time* (e.g. 5pm each day). Then, make sure you stop work once you finish your list or reach the stop-time, so you have time to relax and rejuvenate.

- Include *play time* after your focus sessions and at the end of each day. This gives you something to look forward to, and helps to reduce procrastination.

Procrastination isn't always bad, and there are benefits to waiting.

- Math experts (professors and graduate students) take 45 seconds longer on average to think about a problem before solving it. Novices (undergraduates) tend to rush in after only 30 seconds of thinking. Take some time to *pause and reflect* before taking action. This gives your brain time to access its library, see the bigger picture and connect chunks of ideas/ information.

- Prepare a list of problems you wish to solve in advance. If you know you're procrastinating, write down the equation(s) required for the easiest problem and carry it around with you. This allows your mind to work on the problem in diffuse mode while you're procrastinating, transforming it into "*positive procrastination*".

KEY QUOTES

"It's important to transform distant deadlines into daily ones."

"Staying in the zone too long will send you toward burnout."

"Planning your quitting time is as important as planning your working time."

"Planning your life for 'playtime' is one of the most important things you can do to prevent procrastination."

"Just as focused attention isn't always good, seemingly nasty habits of procrastination aren't always bad."

Use these additional tips to motivate yourself:

- *Hold back all rewards* and dish them out only when you've have finished a task/session.
- Place your list of tasks somewhere visible, and *check off the items* as you complete them. Celebrate every achievement.
- Surround yourself with pictures that remind you of your *goals or desired future*.
- Everyone has *bad days* when they feel negative about work or themselves. If you ignore those feelings and do the work anyway, the feelings will disappear on their own.

To get started, identify a task that you've been procrastinating on, break it down into smaller parts, and start tackling the first piece. Test out the tips/approaches above to find out what works for you.

Redesign your Brain and Build your Confidence

Your brain and mental capacity are not fixed. You can change your brain by changing how you think. The more you practice something, the more chunks and neural highways you build, and the easier it is to learn and solve problems.

- Each chunk of knowledge helps you to *build new chunks*, e.g. knowledge of living cells helps you to study biological evolution.
- You can also *transfer chunks of knowledge*, e.g. once you know how to learn math and science, you can use the knowledge to learn virtually anything.

What matters isn't how smart you are, but how you train your mind to learn in a deliberate and consistent way. Many science and math "geniuses" actually did badly in school and succeeded in spite of it.

- *Learn at your own pace*. Set aside enough time to study complex materials, and do lots of deliberate practice to build the right foundation.

KEY QUOTES

"Accomplishing a lot of difficult tasks is like eating a salami. You go slice by slice—bit by bit. Cheer every accomplishment, even the tiniest ones."

"Persistence is often more important than intelligence. Approaching material with a goal of learning it on your own gives you a unique path to mastery."

- *Take responsibility for your own learning*. Don't rely on your teachers to instruct or motivate you. Ask questions to deepen your learning, do your own research and practice, and seek inputs/advice from others.

- *Embrace failures and mistakes* as a part of the learning process and a chance to learn something new.

Use these tips to prepare for your tests and exams.

- *Prepare well in advance*:

  (i) *Do your homework right*: understand the text and solutions, discuss and check the solutions with your classmates, and try to solve every problem on your own.

  (ii) *Prepare well*: seek help if required, participate actively in homework group discussions, and do all the tests in the study guides. Organize your study materials neatly so you can review them quickly just before a test/exam.

  (iii) Use mini-tests (such as using recall and flash cards) to accelerate chunking.

- *During a test*:

  (i) Use the "hard-start-jump-to-easy technique": Start with the hardest question first, but move on quickly after 1-2 minutes if you get stuck. Tackle the easier questions next so you can get as much covered as possible while your brain continues to work on the tough problems in the background.

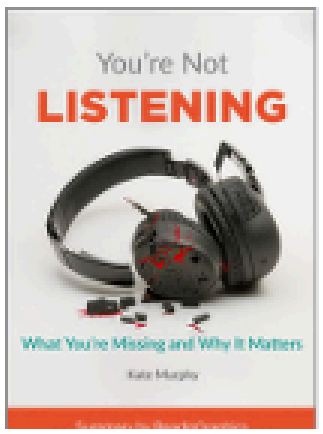
  (ii) Occasionally look away to shift your attention before returning to check your answers.

  (iii) If you feel panicky, reframe the situation by telling yourself, "I'm excited to do my best!" Alternatively, breathe deeply and slowly to calm yourself down.

- Most importantly, *get enough sleep* before the test, or it will negate all your hard work. When you sleep, the brain flushes out toxins, consolidates knowledge/memories into chunks, works on tough problems and finds meaning in what you're learning. It also rehearses and reinforces what's important and prunes away what's trivial. A lack of sleep reduces your ability to think, focus, understand new concepts, and hurts your long-term health.

KEY QUOTES

"I have not failed. I've just found 10,000 ways that won't work."
—Thomas Edison



YOU'RE NOT LISTENING

What You're Missing and Why It Matters

Kate Murphy

The Big "So What"

In this book, Kate Murphy shares research, stories, and actionable tips, to show the importance of listening, why we often fail at it, and how we can become better listeners. This is not a technical how-to guide, but a book to transform how you see and connect with people around you.

Introduction

Good listening isn't inborn; it comes with practice. Anyone can learn to listen well, foster awareness, connection and understanding.

- Murphy's profession as a journalist requires her to listen to others, yet she felt her listening skills were not up to the mark. So, she spent 2 years researching the biomechanics and neurobiology of listening. Along the way, she interviewed accomplished individuals to learn how they define, perceive, and practice listening.

- This book captures her findings in 17 chapters with inter-connected themes and ideas.

In this summary, we've distilled the insights into 2 key sections:

- What is listening and why it matters; and
- Mastering the art of genuine listening.

KEY QUOTES

"Listening is more of a mindset than a checklist of dos and don'ts."

"It is only by listening that we engage, understand, connect, empathize, and develop as human beings."

Part 1: What is Listening and Why It Matters

What is Listening and How it Works

Listening is an active, multisensory process where sound waves are received by our ears, interpreted by our brains, and further contextualized by visual and other non-verbal cues.

- Effective listening requires that you *engage all your senses*, setting aside your own agenda, biases, assumptions, and distractions.
- It involves a *2-way exchange* where you open your mind, listen beyond words to discern emotional nuances, contexts, and intentions, and demonstrate your interest and understanding.
- *Signs of bad listening* include: interrupting, giving unrelated responses, appearing distracted, or fidgeting constantly.

The Neuroscience of Listening

Listening is a multisensory phenomenon, not an auditory one.

- When we listen to people, our brain processes not just the words, but also the *pitch, tone, rhythm*. Just consider the number of ways you can say the word "Sure".
- In a conversation, we interpret sounds along with *other sensory cues*. For example, lip-reading contributes up to 20% of our comprehension, and non-verbal cues (e.g. expressions and body language) carry >50% of a message.
  - (i) If you're not looking at someone when they speak, you'll miss a chunk of the message.
  - (ii) In remote communication, videos are better than voice calls, which are in turn better than texts or email.

We use different parts of the brain depending on how we receive or interpret the message.

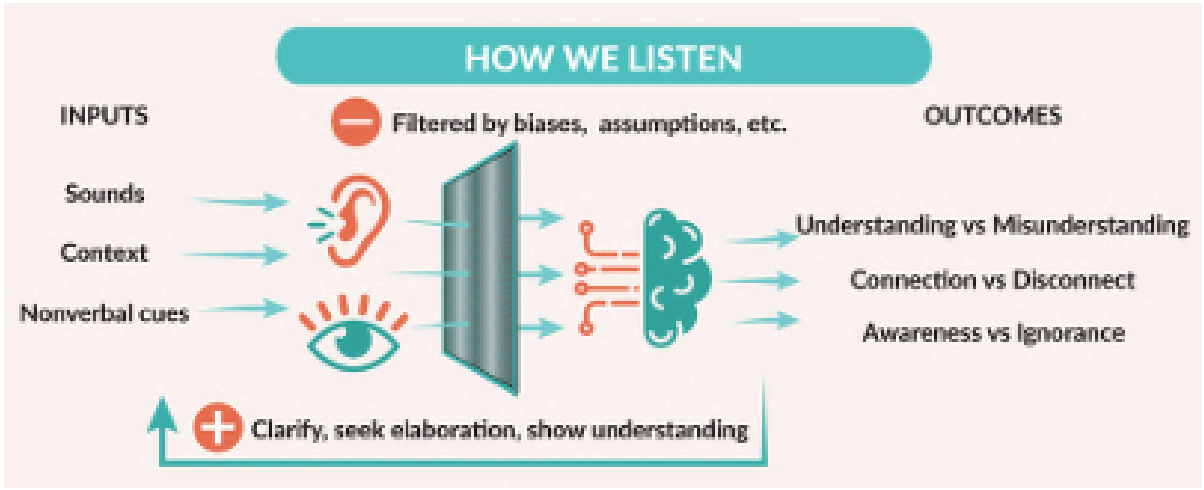
KEY QUOTES

"To really listen is to be moved physically, chemically, emotionally, and intellectually by another person's narrative."

"Listening is intricate and multisensory."

- *Biases and prejudices* literally block out parts of the message.

- Our brain also processes info differently depending on *which ear* receives it. Generally, the right ear is more attuned to emotions while the left ear is more attuned to facts and language. If someone tilts their right ear towards the source, they're probably subconsciously trying to focus on the speaker's emotional intent.



The attachment theory suggests that our ability to listen and connect is shaped during early childhood.

- Children with attentive caregivers are likely to grow up to become more empathetic listeners, while those with inattentive caregivers may struggle with genuine connections later in life.

- The good news is, you can develop healthy listening habits as an adult, regardless of your childhood experiences. All it takes is awareness and effort.

Why Listening Is Important

Listening is essential for building meaningful relationships. Without listening, we cannot understand other human beings.

- At a *personal level*, it affects our ability to be a good friend, parent, or partner.

- At a *professional level*, it affects our ability to understand our colleagues, serve our customers, or sell anything.

Listening is also essential for learning and personal growth. Through listening, we learn about others and ourselves. A keen listener can often help others to articulate the thoughts/

KEY QUOTES

"Evolution gave us eyelids so we can close our eyes but no corresponding structure to close off our ears. It suggests listening is essential to our survival."

"To listen poorly, selectively, or not at all is to limit your understanding of the world and deprive yourself of becoming the best you can be."

"People get lonely for lack of listening."

feelings they hadn't been able to express themselves. When someone listens intently to you, it also encourages you to listen deeply to yourself.

Real listening and connection (or a lack thereof) have tangible effects on our physical, mental and emotional well-being. Active listening combats feelings of loneliness and isolation, which are linked to a host of health issues like heart disease, dementia, depression, and anxiety.

A lack of real listening amplifies conflict and misunderstandings, hurts relationships, and contributes to our current epidemic of loneliness and disconnect.

- We live in a digital age where people appear more "connected" via technology. In reality, the opposite is true—people are feeling more detached and isolated. After interviewing people from diverse backgrounds, Murphy found that *most people feel unheard*. Many are resorting to professional services like counseling or coaching just to find someone who will listen attentively to them.

- Research suggests a direct correlation between unhappiness and *screen time*. This could explain why Generation Z is more likely to feel lonely, isolated, and even suicidal, compared to older generations.

- According to the World Health Organization, *suicide rates* have increased 45% globally in the past decade, with depression and the lack of meaningful connections as key contributors.

Online options like social media do not create real connections.

- In online communities, *the vast majority of users are passive*. Only 1% of participants contribute to the bulk of the content, creating a skewed picture of what people truly feel or believe.

- About 15–60% of social media accounts are either *fake or created by bots*. This means that a large chunk of social media interactions are not even from human beings.

- The most active users are *not truly interested in two-way communication*. They usually aim to broadcast their messages, seek validation, or gain followers/likes/shares. Social media content also tends to be either unrealistically positive or excessively negative.

KEY QUOTES

"Truly listening to someone is a skill many seem to have forgotten or perhaps never learned in the first place."

"We are too busy, or too distracted, to explore the depths of one another's thoughts and feelings."

4

Part 2: Mastering the Art of Genuine Listening

In this section, we'll address the barriers to listening and how to overcome them to become a great listener.

Avoid The Assumption Trap

Assumptions and biases can block communication and understanding.

- We unconsciously use *social signals and stereotypes* to make snap judgments about others. We may gauge others' social status based on the clothes they wear, the schools they attend, the cars they drive, etc.

  (i) Knowing someone's biography or persona (e.g. vegan, democrat) isn't the same as understanding them as a person.

  (ii) Brain scans show that labels and stereotypes can shut down parts of our brain and filter out information that don't fit our preconceptions.

- People in intimate relationships (e.g. married couples, parent-child) often suffer from the "*closeness-communication bias*". They over-estimate how well they can predict the other person's thoughts and feelings, leading to miscommunication. In reality, studies show that partners in a relationship may not understand each other better than strangers.

- Misunderstandings usually occur because *we assume people think like us*, when they don't. Even if you share the same native language, you might interpret the same words or expressions differently, e.g. the word "original" could mean different things to 2 individuals. The potential for misunderstanding multiplies once you add in differing native languages, backgrounds, and personal values/beliefs.

Remember: you can never truly know someone else's mind.

- Evolutionary psychologist Robin Dunbar suggested that we can only manage up to 150 meaningful relationships at a time (*Dunbar's Rule*). Within these, only a handful are deeply

KEY QUOTES

"It's all too easy to get complacent about how well you know those closest to you, just as it's hard not to make assumptions about strangers based on stereotypes."

"No matter how well we try to listen, or how close we feel to another person, it's important to remember we can never really know another person's mind."

It's perfectly fine to say "I need some time to process this" or "I'm not sure what to say."

Manage Distractions

Today, many of us are addicted to our digital devices, such that we're exhibiting similar patterns as substance abuse.

- We *compulsively reach for our phones* whenever we feel bored, or even when we're in the middle of a social engagement. We impatiently switch between tasks, messages, and media channels, and abandon a website if it takes just a few seconds to load.

- Our attention can be further diluted by *ambient distractions*, such as open office setups, noisy restaurants, or the hum of the TV.

A diminished attention span has serious implications.

- We may get so habitually distracted that we can no longer concentrate deeply on any task, or even think deeply. This *impedes creativity and deep work*.

- *Our listening faculties also suffer*. During conversations, our eyes and minds wander habitually. The mere presence of a phone on the table (even if it's silenced) can cause a sense of disconnectedness, leading to dull and unfulfilling conversations, which in turn increases the chance of our attention drifting.

Pick a quiet, distraction-free environment for your conversations. This signals your commitment to listen, and allows you to focus fully on the interaction. Even the simple act of having device-free meals as a family has been found to improve connection.

Listen for Nuances and Underlying Messages

Listening is more than hearing the words or literal content of what's being said. Good communicators exhibit "conversational sensitivity" to detect emotional undertones, nuances, and hidden meanings.

KEY QUOTES

"Device dependency has many of the same behavioral, psychological, and neurobiological components as substance abuse."

"It's hard to concentrate on what's happening in the real world when you're preoccupied with what could be happening in the virtual one."

- This is not an inborn talent, but a skill that comes from practice and listening to lots of people. Good listeners can discern verbal and nonverbal cues to figure out: "*Why are they telling me this?*"

- Retired hostage negotiator Gary Noesner says that the key to successful negotiations is simply to listen and respond empathically. Often, hostage-takers and mass-shooters are just people who feel extremely depressed and alienated. Once they feel heard and understood, *even the tensest situations can be de-escalated*.

Pay attention to every detail. For example, the radio show *Fresh Air* enlists 3 producers just to review and dissect each interview, and properly capture every nuance and detail.

- You can *do some homework* in advance to learn about them, or ask questions to understand where they're coming from.

- If something seems off, *seek clarification* by saying something like: "I was confused about what you said about X. Can you elaborate?"

- The best con artists can hone in on their victims' hopes and fears not because they're talented listeners, but because they're more motivated to listen well. Conversely, people get deceived because they don't listen carefully enough. It all boils down to *motivation and practice*.

Support (not Shift) the Conversation

Keep the attention on the speaker, instead of redirecting the conversation to yourself.

- According to sociologist Charles Derber, we can respond to others in 2 ways:

  (i) *Support responses* focus on the speaker, validating their feelings or experiences, and encouraging them to elaborate.

  (ii) Shifting responses redirect the conversation away from the speak to the listener. This may be done out of self-centeredness, or to avoid discomfort.

KEY QUOTES

"Intuition…is nothing more than recognition. The more people you listen to, the more aspects of humanity you will recognize, and the better your gut instinct will be."

"Everybody is interesting if you ask the right questions. If someone is dull or uninteresting, it's on you."

"It takes awareness, focus, and experience to unearth and understand what is really being communicated."

"Inner dialogue fosters and supports cognitive complexity, that valuable ability to tolerate a range of views, make associations, and come up with new ideas."

Embrace uncertainties and complexities. Accept that you might be wrong—or at least not completely right.

- Instead of seeing things in absolutes or black-and-white, learn to *accept conflicting ideas and shades of gray*. By embracing and connecting diverse viewpoints, you open up new ways of thinking, to bring fresh insights and creative solutions.

- You can listen with an open mind without agreeing with the other person. Often, there are *multiple truths* leading to a larger truth—the more perspectives you consider, the more robust your understanding.

Listen to the Pauses and Silences

Most people feel uneasy with silences during conversations. Often, we rush to fill the gap, or start talking before the other person has finished speaking.

- Generally, people tend to be more comfortable with long silences if they feel *secure* about themselves or their relationships.

- There are also *cultural differences* around silence. In some cultures (e.g. in Japan or Finland), it's a sign of respect and consideration to pause before responding.

Silence can convey much more than words.

- Good listeners wait patiently and *read the pauses and silences*. By keeping quiet, they also encourage others to share more information, which can be an advantage in sales or negotiations.

- *Give people the time/space* to gather their thoughts or feelings, consider their response, or make a decision. You'll end up gathering better information while avoiding impulsive comments you might regret.

Practice intentional silence to cultivate patience and awareness.

- Try being silent for *24 hours*. You'll probably find yourself becoming more aware of the sounds and subtle cues around you (which you'd have missed if you were talking).

KEY QUOTES

"We only become secure in our convictions by allowing them to be challenged."

"To listen does not mean, or even imply, that you agree with someone…Good listeners know understanding is not binary."

"Resisting the urge to jump in makes it more likely you will leave conversations with additional insight and greater understanding."

"To be a good listener is to accept pauses and silences."

"You get so much more out of interactions when you allow people the time and space to gather their thoughts."

facilitator may interrupt anyone mid-sentence and ask someone else to pick up the thread, forcing people to pay close attention.

(ii) Or, members may be asked to mimic their partner's words, expressions and movements. This requires them to connect deeply and sync up physically and mentally.

- During such sessions, it's common for people to show off, hold back, or disrupt the process. Instead of chastising such behaviors, use the chance to *uncover underlying issues* that are blocking listening and collaboration, such as insecurities, the fear of being vulnerable, or the need for control.

Listen to your Inner Voice

Listening to yourself is as important as listening to others.

- *We talk to ourselves all the time*. We judge, analyze, scold/ praise ourselves, and hold internal arguments. Our inner voices are so impactful because they seem louder than external voices.

- Our internal dialogues often *mirror the external voices* we're exposed to. Our thoughts and perspectives tend to reflect those of friends, family members, or media personalities. These in turn affect how we interact with others. For example, if you're used to blaming and criticizing yourself, you're more likely to blame and criticize others.

Pay attention to your inner tone and messages:

- Replace the voice of a critical parent or negative friend with the voice of a *nurturing* counsellor or a respected coach.

- Read widely and *listen to a diverse range of people* to broaden your perspectives, enrich your inner dialogues and cognitive capabilities.

Listening in Gossip and Research

Gossip is often viewed negatively. However, when done with a discerning ear, it can be a useful social tool.

KEY QUOTES

"Connectedness is necessarily a two-way street, each partner in the conversation listening and latching on to what the other said."

"How you talk to yourself affects how you hear other people... our inner dialogue influences and distorts what other people say and thus how we behave in relationships."

- Much like how apes groom each other for social bonding, humans use gossip for *social bonding and learning*. Through gossip, we learn about group dynamics and social norms/values. By talking about shared acquaintances/events, we learn from others' experiences, and figure out what behaviors are rewarded or rejected by others.

- The key is to *listen attentively* to discern nuances and detect false or malicious information.

In an era of Big Data—where the focus is increasingly on numbers and statistics—we still need **keen listening and qualitative data**.

- Quantitative data can give us a broad picture, but it cannot explain human emotions, preferences, habits, or motivations. Moreover, you can't build sound statistical models or algorithms without understanding the issues/people being represented by the data. To *explain the "why" behind the "what"*, we still need qualitative research.

- For *example*, Betty Crocker's cake mix wasn't selling well even though it was so easy to use—you just had to add water. Qualitative research found that homemakers felt guilty using the cake mix because it was *too* effortless. Once the formula was tweaked to require home-cooks to add water and crack in some eggs, sales increased significantly.

- Good qualitative research draws out people's real thoughts, inclinations, and emotions. This in turn requires *active listening and neutrality* on the part of the researcher.

Know When to Stop Listening

Active listening can be mentally and emotionally taxing. It's not sustainable all the time, even for close relationships. Good listeners consciously **choose when to listen and when not to**.

- If you're feeling *too exhausted or distressed* to listen, it may be better to stop the conversation and resume when you're in a better condition to listen and connect.

KEY QUOTES

"Listening...is not only how we learn to be virtuous members of society, it is in itself a virtue that makes us worthy of the most valuable information."

"Even in the era of abundant data, we need to listen to get to understanding."

"Information is only as useful as how it's collected and interpreted."

"You get to decide how much effort you want to put in and when you've had enough."

"Listening is your gift to bestow. No one can make you listen."

- It may also be better to stop listening if you truly *cannot get on the same wavelength* as the other party. This could be due to a lack of reciprocity, circular conversations that go nowhere, or toxic/abusive relationships.

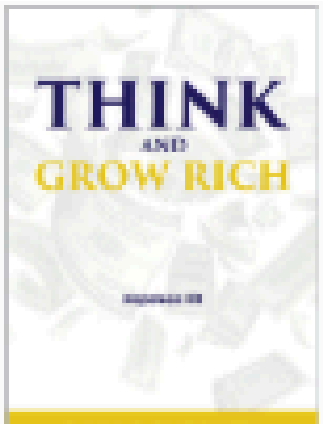
Other Details in the Book to Look out For

How well or badly you listen can decide whether you end up with understanding or misunderstanding, strengthening or hurting a relationship. The book is packed with research references and anecdotes of Murphy's interactions with writers, researchers, show producers, psychologists, hostage negotiator, coaches, and other personalities. For more information, please visit www.journalistkatemurphy.com.

About the Author

Kate Murphy is a Texas-based journalist whose has written for The New York Times, The Economist, Agence France-Presse, and Texas Monthly. She covers a wide range of topics including health, technology, science, design, art, aviation, business, finance, fashion, dining, travel, real estate, and is best known for her work on the science behind human interactions.

KEY QUOTES



THINK & GROW RICH!

HOW TO MASTER SUCCESS CONSCIOUSNESS

Napoleon Hill

The Big "So What"

"This book was written for those who seek the rules which have made others successful, and are willing to stake everything on those rules."

This book was written by Napoleon Hill after more than 20 years of research on the accomplishments and attributes of 500 of the most successful people in business. Between 1937 until Napoleon Hill's death in 1970, the book sold over 20 million copies, and continues to be a best-seller even today. The book can be considered the grandfather of personal development books. Hill's ideas have been expanded upon and developed by many other authors and famous personal development icons worldwide. The book sets out 13 timeless principles for success that are still valuable after almost 80 years.

Introduction

Hill begins his book with the idea that "thoughts are things", and when combined with purpose, persistence and desire, can translate into riches or other material successes. You become and achieve what you think about all day long.

Principle 1: Desire

This is the first and most important step towards riches. Hill stresses that desire is not just a wish or a hope. It must be a "burning desire", such that it is a "consuming obsession", backed by definiteness and persistence.

KEY QUOTES

"When you begin to think and grow rich, you will observe that riches begin with a state of mind, with definiteness of purpose, with little or no hard work".

"When riches begin to come they come so quickly, in such great abundance, that one wonders where they have been hiding during all those lean years".

"Man can create nothing which he does not first conceive in the form of an impulse of thought."

Desire

"Wishing will not bring riches. But desiring riches with a state of mind that becomes an obsession, then planning definite ways and means to acquire riches, and backing those plans with persistence which does not recognize failure, will bring riches".

Hill outlines **6 steps to achieving your desire,** to be applied with the other 12 principles:

1. Fix in your mind the exact amount of money you desire.
2. Determine exactly what you will offer in return for that money.
3. Select a definite date to possess the money.
4. Create a definite plan and implement it immediately.
5. Summarize steps 1-4 by writing down a clear statement of the amount of money you will acquire, the date for its acquisition, what you will give in return, and your plan for accumulating it.
6. Read this statement aloud twice each day, just before going to bed and first thing when you wake up. When reading, you must "see, feel, and believe" that you are already in possession of that money.

Principle 2: Faith

We are not ready to receive something until we believe that we can acquire it. Faith can be developed, and the way to do so is to repeatedly (and with belief) affirm and visualize the attainment of our desire (see the concept of auto-suggestion).

Have faith that you only thought of your desires because they are meant for you to accomplish, so you can definitely attain them. In addition:

- Emotions help to "magnetize" your thoughts. Once magnetized and mixed with faith, thoughts start to translate into their physical equivalent, i.e. manifest in to reality. Hence, we need to affirm or visualize with feeling, as if we were already in possession of what we are asking for.
- The subconscious mind does not differentiate between positive or negative thought impulses, and will translate them equally readily into physical equivalents. Hence, if you hold negative beliefs (such as "bad luck"), you can likewise create your own misfortune.

KEY QUOTES

Faith

"There is a difference between WISHING for a thing and being READY to receive it. No one is ready for a thing, until he believes he can acquire it. The state of mind must be BELIEF, not just mere hope or wish."

"Thoughts which are mixed with any of the feelings of emotions, constitute a "magnetic" force which attracts, from the vibrations of the ether, other similar, or related thoughts. A thought thus "magnetized" with emotion may be compared to a seed which, when planted in fertile soil, germinates, grows, and multiplies itself over and over again, until that which was originally one small seed, becomes countless millions of seeds of the same brand."

Principle 3: Auto-Suggestion

Auto-suggestion is where we put the sub-conscious mind to work for us, through repeated self-suggestions that involve the 5 senses. What we affirm has no impact unless it is mixed with emotion. Hence, you should apply auto-suggestion in conjunction with the 6 steps mentioned earlier, including concentration, feeling and faith in each step:

1. Find a quiet place (e.g. in bed at night), where you can close your eyes and repeat aloud your statement .
2. When reading, concentrate on visualizing the definite amount of money you desire, to the point you can see and feel it in your possession. In the same token, see and feel yourself delivering the intended product or service.
3. Place the written statement where you can see it. Read it every night and morning until you have memorized it and can picture clearly the money and the plan you desire. When your subconscious mind accepts it as a fact, it will find ways to bring it to life.
4. The plans may appear as flashes of inspiration. Make sure you act on it immediately. "Failure to do this will be fatal to your success."

Principle 4: Specialized Knowledge

Knowledge in itself is only potential power and does not generate wealth. It only becomes power if and when it is "organized into definite plans of action, and directed to a definite end."

You require specialized knowledge of the product, service or niche that you intend to serve, so you can offer something of value in return for riches. Rather than work with what you know, Hill suggests that you identify the specialized knowledge you need, and then seek to acquire it.

KEY QUOTES

Auto-Suggestion

"Your subconscious mind recognizes and acts upon ONLY thoughts which have been well-mixed with emotion or feeling."

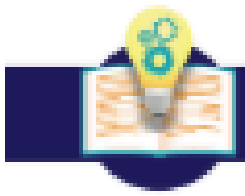
"Your ability to use the principle of auto-suggestion will depend, very largely, upon your capacity to concentrate upon a given desire until that desire becomes a burning obsession."

Knowledge

"Knowledge will not attract money, unless it is organized, and intelligently directed, through practical plans of action, to the definite end of accumulation of money."

Some possible ways to acquire specialized knowledge are:

- Personal experience and education
- Others' experience and education (through a Master Mind group)
- Colleges and universities
- Public libraries
- Specialized training courses

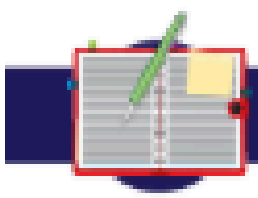


Principle 5: Imagination

Imagination is needed to combine specialized knowledge with ideas, to give form to desire, and create the necessary action to bring riches.

There are two forms of imagination - synthetic imagination (arranging concepts, ideas or plans into new forms) and creative imagination (equivalent to "sixth sense", with hunches and intuition that come through connection with Infinite Intelligence).

The imaginative faculty (both synthetic and creative) are like muscles – they grow stronger with use and weaker with inaction. For converting desire to money, we will rely primarily on synthetic imagination. The greatest leaders in the world leverage on creative imagination (see 6th sense).



Principle 6: Organized Planning

You should create your plans with the help of a Master Mind group:

- Form a Master Mind group: connect with as many people as required for the creation and execution of your plan.
- Decide what to offer (monetary or other benefits) to the Master Mind members in return for their cooperation.
- Meet with Master Mind members at least twice a week, until you have jointly perfected the plan(s).
- Maintain total harmony with Master Mind members.

KEY QUOTES

Imagination

"The desire ...is given shape, form, and action through the aid of the imaginative faculty of the mind."

Organized Planning

"No individual has sufficient experience, education, native ability, and knowledge to insure the accumulation of a great fortune, without the cooperation of other people."

You can create the plans, but the details should be checked by members of the Master Mind group for feedback and approval before implementation. If your current plan fails, you should keep replacing it with a new one until you find a plan which works.

To acquire riches, it is important to become a leader in your field. You may start as an intelligent follower, and can learn efficiently from your leader to develop your own leadership qualities. Hill highlights the changing nature of leadership and explains 11 qualities of leaders of the future:

1. Unwavering courage
2. Self-Control
3. A keen sense of justice
4. Definiteness of decision
5. Definiteness of plans
6. The habit of doing more than paid for
7. A pleasing personality
8. Sympathy and understanding
9. Mastery of detail
10. Willingness to assume full responsibility
11. Cooperation

He also provided 10 major causes of failures in leadership, a range of tips to position and market yourself in your career, 30 reasons why most people fail, and a self-assessment questionnaire. Hill also shares the "QQS formula" (Quality, Quantity and (positive) Spirit of service) which affects your ability to market yourself effectively.

Principle 7: Decision

Successful and wealthy people have one thing in common – "the habit of reaching decisions promptly, and of changing these decisions slowly, if, and when they were changed". The reverse holds true for those to fail to accumulate money.

These people are able to reach decisions promptly and stand by their decisions because they have definite purpose, backed by strong desire and faith. According to Hill, indecision is a habit. It develops in youth, and gains permanence over time, without

KEY QUOTES

"Temporary defeat should mean only one thing, the certain knowledge that there is something wrong with your plan..... Build other plans. Start all over again."

"Decide at the outset whether you intend to become a leader in your chosen calling, or remain a follower. The difference in compensation is vast."

"The relationship of employer and employee, or of leader and follower, in the future, will be one of mutual cooperation, based upon an equitable division of the profits of business."

Decision

"Procrastination, the opposite of decision, is a common enemy which practically every man must conquer."

"Tell the world what you intend to do, but first show it."

definiteness of purpose. Courage is equally important to put the decisions to action. Hill cautions against talking too much and listening or doing too little. "Genuine wisdom is usually conspicuous through modesty and silence", and he advises that we use more of our eyes and ears, and less of our mouths.

Principle 8: Persistence

Persistence is built on will-power; it is what keeps you going in face of hurdles, and produces the sustained effort required to generate faith. Persistence as a state of mind is a function of several factors: desire, self-reliance, definiteness of plans, accurate knowledge, cooperation, will-power and habit.

There are several ways to strengthen your level of persistence:

- Have a definite purpose, backed by burning desire
- Have a definite plan and act on it continuously
- Close your mind to all negative or discouraging influences
- Develop an alliance with people who will encourage you to follow through with your plan and purpose.

As Hill points out, applying the 13 principles of this book, and following through with the 6 steps provided is in itself the first test of your persistence. The good news is, every adversity and failure "brings with it a seed of an equivalent advantage."

Principle 9: Power of the Master Mind

Power is required both for the accumulation and retention of money. It requires "organized effort" of at least two people working in harmony, toward a definite goal.

We can acquire knowledge from various sources, including infinite intelligence, accumulated experience, experiment and research). However, to convert that knowledge to power, you must assemble it into definite plans and take concrete action, which is hard to achieve on your own.

KEY QUOTES

Persistence

"There may be no heroic connotation to the word "persistence", but the quality is to the character of man what carbon is to steel."

Power

"Power may be defined as organized and intelligently directed knowledge."

Master Mind

"The coordination of knowledge and effort, in a spirit of harmony, between two or more people, for the attainment of a definite purpose."

Hill suggests that for great wealth and success, Masterminding is crucial. Master Mind is the "coordination of knowledge and effort, in a spirit of harmony, between two or more people, for the attainment of a definite purpose."

There are 2 features underlying the Master Mind principle:

- Economic: The advice and cooperation by people who support your goals whole-heartedly and in harmony bring direct economic advantages.
- Psychic: This is a spiritual, abstract benefit. Hill likens the human brain to batteries - a group of brains connected in harmony will provide more thought-energy than a single brain, and this increased energy becomes available to every brain in the group. In creating this "third mind", the group becomes more than the sum of their parts.

In other words, when two or more people coordinate harmoniously toward a definite purpose, they place themselves in a position to absorb the power from Infinite Intelligence, which is "the greatest of all sources of power."

Principle 10: The Mystery of Sex Transmutation

Transmutation refers to the changing of one form of energy into another. Of all human desires, sex is the most powerful, and can stimulate great drive, imagination, persistence, courage and creative ability etc. Such desire or energy can be harnessed and redirected away from physical expression to other forms, including the accumulation of riches.

Hill states that "sex transmutation will lift one to the status of a genius", and explains why this is so:

- What separates a genius from an ordinary man is his "sixth sense", which comes from the use of his creative imagination. This involves increasing his thought vibrations to the point where he can receive ideas that otherwise cannot be received.

KEY QUOTES

"No two minds ever come together without, thereby, creating a third, invisible, intangible force which may be likened to a third mind."

Sex Transmutation

"When driven by this desire, men develop keenness of imagination, courage, will-power, persistence, and creative ability unknown to them at other times."

"Love, Romance, and Sex are all emotions capable of driving men to heights of super achievement... When combined, these three emotions may lift one to an altitude of a genius".

- A mind stimulant is any factor that can temporarily or permanently, increase one's thought vibrations. Sex is the most powerful mind-stimuli that can elevate men into a higher plane of thought. Other common stimulants include: love, a burning desire, music, friendship, master mind alliance, mutual suffering, auto-suggestion, fear, narcotics and alcohol.
- On its own, sex energy may be uncontrollable or even destructive. However, it becomes balanced and constructive when mixed with emotions of love and romance, and the barriers between the finite mind of man and Infinite Intelligence are removed.

Essentially, successful men are often highly sexed, and harness this energy for the fulfilment of their definite purpose.

Principle 11: The Sub-Conscious Mind

The sub-conscious mind is the bridge to Infinite Intelligence. Here, every thought that reaches our objective mind through our 5 senses is classified, recorded, and can be retrieved at will. The sub-conscious mind has several characteristics:

- It works day and night, and it receives and files all impressions and thoughts, positive or negative, true or false.
- You can't fully control it, but you can voluntarily plant in it any plan, thought, or purpose.
- It will act first on the dominating desires which are "magnetized" with emotions, and translate them into their physical equivalent.
- All 13 principles in this book act as stimulus for you to reach and to influence your subconscious mind. Since it can only be directed through habit, the process will take time.

Positive and negative emotions are mutually exclusive in your mind. Hence, when giving instructions to your sub-conscious mind, draw on positive emotions and avoid the negative ones. 7 of the key positive emotions include: desire, faith, love, sex, enthusiasm, romance and hope. 7 of the key negative emotions include: Fear, jealousy, hatred, revenge, greed, superstition, anger.

KEY QUOTES

The Subconscious Mind

"The subconscious mind is the connecting link between the finite mind of man and Infinite Intelligence. It is the intermediary through which one may draw upon the forces of Infinite Intelligence at will."

"Positive and negative emotions cannot occupy the mind at the same time. One or the other must dominate. It is your responsibility to make sure that positive emotions constitute the dominating influence of your mind."

"Sometimes men speak lightly of the intangibles--the things which they cannot perceive through any of their five senses, and when we hear them, it should remind us that all of us are controlled by forces which are unseen and intangible."

Principle 12: The Brain

Our brains are like broadcasting stations, constantly broadcasting and receiving thought vibrations. To operate our stations, we use the 3 principles of the Subconscious Mind, Creative Imagination and Auto-Suggestion, using Desire to put them into action:

- The sub-conscious mind is the "sending station" of the brain: When we mix feeling with thoughts, we pass them to our sub-conscious mind, and it broadcasts them to ether.

- Our Creative Imagination acts as the "receiving station" of the brain. We receive our creative Ideas in the form of hunches or inspiration, which come from Infinite Intelligence, one's sub-conscious mind, or the mind of another person (who released the thought consciously or subconsciously).

The greater the vibration for receiving, the more open our brain is to external signals. These vibrations can be increased through emotions and having more people in a Master Mind group.

Principle 13: The Sixth Sense

This last principle "can be assimilated, understood, and applied only by first mastering the other twelve principles", by those who meditate and develop the mind from within. Through the sixth sense, you can access Infinite Intelligence naturally, without effort or demand.

Through your creative faculty, ideas, plans and thoughts are received in the form of hunches or inspiration. With sixth sense, you will be notified of impending dangers to avoid, potential opportunities to leverage, and have access to the Temple of Wisdom at will.

KEY QUOTES

The Sixth Sense

"The sixth sense defies description! It cannot be described to a person who has not mastered the other principles of this philosophy, because such a person has no knowledge, and no experience with which the sixth sense may be compared."

Outwitting the Ghost of Fear

To successfully Think and Grow Rich, we must prepare ourselves by eliminating the 3 negatives of indecision, doubt and fear, which are mutually reinforcing. Indecision forms doubt, and the two combine to become fear. Because the combination process is slow, it is likely for the negatives to germinate and grow without our awareness.

Hill lists the 6 basic fears that limit most people, provides the symptoms to identify them, and the solutions to address them. The 6 fears are: Poverty, Criticism, Ill Health, Loss of Love, Old Age and Death.

Other Useful Details in the Book to Look Out For

The book is filled with illustrations and examples of how the world's greatest people accomplished the seemingly-impossible through the 13 principles. Hill reinforces his key messages and ideas in various ways throughout the book, and shows repeatedly how each step or principle is inter-woven with the rest. Re-reading the materials and examples after you have applied the concepts will likely bring a new depth of understanding.

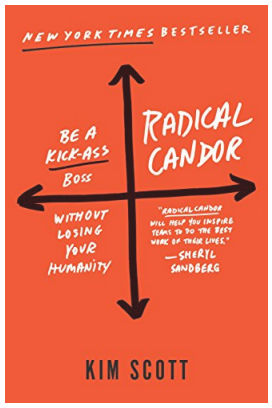
Having said that, Hill stresses time and again that the 13 principles must be understood and applied in entirety. He repeatedly assures the reader that the habits take time to forge, but with repeated use, the 13 steps will eventually yield riches.

KEY QUOTES

Fear

"Fears are nothing more than states of mind. One's state of mind is subject to control and direction."

"Man's thought impulses begin immediately to translate themselves into their physical equivalent, whether those thoughts are voluntary or involuntary."



RADICAL CANDOR

Be a Kick-Ass Boss
Without Losing Your Humanity

KIM SCOTT

The Big "So What"

Great bosses can retain talent and deliver superior results, while bad bosses do the opposite. Most bosses are worried they aren't doing a good job, yet they're afraid to seek help. This book explains how you can become a kickass boss to build sound relationships, achieve results, and create a better workplace.

Introduction

"Bosses" in this book refer generically to all supervisors, leaders and managers. After years of working with top companies in Silicon Valley (such as Google and Apple) and running her own businesses, Scott realized that what sets great bosses apart from bad ones is their ability to build good relationships that keep people happy and challenged. Scott calls this "Radical Candor". In this summary, we'll outline the philosophies and techniques to apply this framework.

A New Management Philosophy

Bosses achieve results not by doing everything themselves, but by guiding a team to do so. Thus, they must excel in their own work and 3 key areas:

- Guidance: soliciting and offering constructive feedback, and encouraging feedback between people;
- Team-building: putting the right people in the right roles and keeping them motivated; and
- Results: managing your team members to deliver results.

KEY QUOTES

"I hope that these ideas will help you find your own way to be a better boss, have more success at work, and make the world a little happier."

"Too many good people become bad bosses, and bad bosses are a major source of unhappiness in our world and dysfunction in our workplace."

"At the very heart of being a good boss…is a good relationship."

"Guidance, team, and results: these are the responsibilities of any boss."

"Your ability to build trusting, human connections with the people who report directly to you will determine the quality of everything that follows."

Building Trusting Relationships

As a boss, your relationships with your direct reports have a huge impact on them and the people they lead. Mutual trust with your direct reports creates a virtuous cycle of constructive feedback, strong teams and results. Radical Candor builds trusting relationships by working concurrently on 2 dimensions:

Care personally. Bring your whole self to work, and care about each of your team members as whole persons with lives and aspirations beyond their work. To do this, you must debunk 2 myths:

- *Myth #1: To be professional, you must hide your feelings*. Radical Candor is about allowing your direct reports to know you as a person (with hopes and vulnerabilities) and making it safe for others to do the same.

- *Myth #2: Bosses are superior*. A "boss" is merely a role; it does not define your value or how smart you are.

Challenge directly. Learn to give/receive feedback, make tough decisions and uphold high standards. People may get upset at times, but trust and understanding are eventually built and people feel safe to challenge one another.

Giving/Receiving Guidance

These 4 quadrants summarize how we tend to give guidance/feedback. Note that they represent *behaviors*, not personalities, i.e. no one is an asshole or a saint *all* the time

Manipulative insincerity: you don't care enough to challenge someone directly, and only give feedback in a way that advances your interest, e.g. telling someone he's doing great so he won't quit while quietly planning to replace him. Such behaviors build distrust.

KEY QUOTES

"The relationships you have with the handful of people who report directly to you will have an enormous impact on the results your team achieves."

"Caring personally is the antidote to both robotic professionalism and managerial arrogance."

"Being a boss is a job, not a value judgment."

"If nobody is ever mad at you, you probably aren't challenging your team enough."

"You need to do that in a way that does not call into question your confidence in their abilities but leaves not too much room for interpretation…and that's a hard thing to do."
- Steve Jobs

Ruinous empathy: you withhold feedback to avoid conflict or to avoid making others feel bad. You're actually doing your team a disservice because people can't learn/grow if they don't know where they stand, and will eventually stagnate or even get fired. When you accept sub-par work, you also send a wrong message on what's acceptable and make other members bear the burden of the under-performer. This creates resentment and lower standards.

Obnoxious aggression: you criticize someone without first trying to understand them or showing that you care. In such cases, your feedback will seem arrogant and aggressive, and the other party is likely to get defensive or switch off. Patronizing or insincere praise can be as harmful as harsh criticism. The worst thing you can do is to deliberately target someone's vulnerability—this destroys trust and spreads toxic feelings.

Radical Candor: you give someone clear, honest feedback (be it a praise/criticism) for their benefit, and help them to understand how the feedback can help them to move toward their goals. This builds trust and understanding to pave the way for results.

KEY QUOTES

"Almost nothing will erode trust more quickly than using one's insights into what makes another person tick to hurt them."

Team: Understand People to Motivate Them

We tend to define ambition and potential in terms of people's desire and ability to move up the hierarchy. Instead, it may be better to **rethink ambition and potential** in terms of growth. In any organization, you'll find superstars and rock stars.

- *Superstars* desire a steep growth trajectory—they crave challenges and opportunities to grow and learn rapidly (though not necessarily get promoted).
- On the other hand, *rock stars* are solid and prefer a gradual growth trajectory—they may be people who've mastered their craft, love their work and won't be happy if they're promoted to other roles.
- You need both superstars and rock stars for a *blend of growth and stability.*

"To build a great team, you need to understand how each person's job fits into their life goals."

"Shifting from a traditional 'talent management' mind-set to one of 'growth management' will help you make sure everyone on your team is moving in the direction of their dreams, ensuring that your team collectively improves over time."

Growth management helps you to motivate individuals to deliver the best possible results based on what they want.

- It involves considering (a) the growth trajectory that each person wants to be on now, and (b) if/how you can match opportunities with their desires bearing in mind the team's overall needs. In short, you must know your direct reports well enough to identify the *perfect role* for each person at a specific time in his/her life.

- *Don't put permanent labels on people*. People shift between steep and gradual growth trajectories at various stage of their lives/career. Likewise, no one is always lousy or outstanding; they just happen to be performing poorly or well this quarter.

Managing Top Performers. Treat your rock-stars and superstars as partners. Focus on removing obstacles and giving them everything they need to perform and grow.

- *Managing Rock-Stars*. At certain phases in their lives, people may slow down due to family/health or to regroup/recharge. They can still grow rapidly as a whole person even if they're growing slowly in their career.

  (i) Develop *respect for people* on the gradual growth trajectory and recognize the stability they bring. Give *fair ratings* based on performance and contributions in terms of expertise, knowledge etc., not just leadership potential.

  (ii) Use *other forms of reward and recognition* besides promotion, e.g. a pay raise, bonuses, or giving them roles as go-to experts. They'll probably be much more effective as trainers/mentors than external parties.

- *Managing Superstars*. Superstars want opportunities to learn, grow and shine. Don't keep them in their current role just to make your work easier, or to hold them back so they won't "overtake" you. Instead, help them to achieve *their* dreams. Find people who can replace them and/or get them to teach others to do their job, so they can move on with minimal gaps.

Manage Middle/Poor Performers. Everyone is good at *something* and no one is a chronic B-Player. Yet, people often stay in a role that they're mediocre at because they don't want to

KEY QUOTES

"Only when you get to know your direct reports well enough to know why they care about their work, what they hope to get out of their careers, and where they are in the present moment in time can you put the right people in the right roles and assign the right projects to the right people."

"Recreation is essential for creation."

"Too many companies hire people for training whom they would never hire to do the actual job."

"Great management is important. But it's certainly not the only path to major impact."

"Raise the bar—there's no such thing as a B-Player."

start afresh, while bosses keep such people because they can't find a replacement or feel bad to remove the person.

- If someone is underperforming, you must first find out why so you can help them improve. There are *5 common reasons* why great people may be produce lousy work:

  (i) They're in a wrong role for their strengths.

  (ii) They're new to a job and lack training/clear expectations.

  (iii) They're facing some personal problems.

  (iv) They have the right skills/experience but the wrong culture fit.

  (v) They've changed and their roles no longer suit them.

- If someone's really not suited for a job, it's better to let them go so they can find better options elsewhere. Before *firing someone*, consider (a) if you have given Radically Candid guidance, (b) if/how the person's poor performance is affecting the rest of the team, and (c) if you've sought an objective opinion.

Driving Results Collaboratively

Use the **Get Stuff Done (GSD) wheel** to adopt a collaborative approach, involve your team in decisions and get buy-in for better long-term results. Don't skip any of these steps.

Listen to ideas that people have, and create a culture of listening. Create systems for staff to share ideas and complaints, define a budget for such issues and explain why certain issues aren't addressed. At meetings, ensure everyone gets to voice their views and listen to others.

Clarify: It's ineffective to try to solve a problem that has not been clearly defined.

KEY QUOTES

"Part of getting a good job is leaving a bad one, or one that's bad for you."

"Don't put people in boxes and leave them there."

"You'll get more done if you take the time to incorporate their thinking into yours, and yours into theirs."

"The essence of making an idea clear requires a deep understanding not only of the idea but also of the person to whom one is explaining the idea."

- Create a safe space to *nurture new ideas*, e.g. have 1:1 meetings to discuss ideas or give people time off to develop ideas. Don't insist that people only come to you with solutions. Instead, help them to clarify their thinking before they put ideas up for debate.

- Push yourself and your team to *clearly express* your thoughts and ideas. To present an idea in a clearly comprehensible way, the communicator must understand both the idea and the recipient.

Debate the ideas, polish and test them rigorously. As the boss, you shouldn't be in every debate, but you must create a culture of debate in your team.

- *Focus on ideas, not egos*. Step in if you see people protecting their ideas or trying to win an argument, instead of seeking facts to improve an idea.

- If everyone at a meeting agrees to something, make it mandatory for someone to offer a different view to *force dissent*.

Decide. With the earlier steps, your team is ready to make decisions based on facts, not subjective opinions. As the boss, you should not be making most of the decisions. However, occasionally get involved in the details to show nothing's too small for your concern.

Persuade those who haven't been involved so far, but are needed for implementation. You will need to (a) establish your *credibility* by humbly showing your track record, (b) address the listener's *emotional response* (e.g. fatigue, worry), and (c) show your work to illustrate the *logic* behind the idea (vs just explaining with words).

Execute. As the boss, you need to toggle between leading and executing. Don't waste time with unnecessary meetings or reports. To avoid getting too caught up in collaborative tasks, block off time for execution and get your hands dirty occasionally to get a good grasp of what's going on.

Learn from mistakes and start the GSD cycle again. Don't be afraid to change your mind in fact of new facts—explain the reasons for the change clearly and persuasively.

KEY QUOTES

"Debate takes time and requires emotional energy. But lack of debate saps a team of more time and emotional energy in the long run."

"Bragging doesn't work, but neither does false humility."

Tools and Techniques

Build Trusting Relationships with your Direct Reports

Center yourself. You can't lead well if you're struggling with your own issues.

- Seek *work-life integration* by bringing your best self wherever you go. See work as part of your self-expression and life-fulfillment, and see rest/family/personal time as part of improving work productivity.

- Find your own *unique formula* to stay centered (e.g. mix of sleep, exercise and/or time with loved ones). Commit time for such activities like how you'd show up for an important meeting.

Create the **right environment** where your team members also feel free to bring their best selves to work, but don't impose your values/ approach on them. Let them do what they're comfortable with.

Use your daily interactions at work to build relationships, so you can **minimize redundant social events** after work.

Master your emotions. Instead of trying to hide your emotions at work, *recognize your feelings* and let people know what you care about. Master how you react to *others' emotions*. When your direct reports react emotionally, don't second-guess the reason or tell them how they should feel; acknowledge their emotions (e.g. "I can see that you're upset"), ask questions and listen. If you're affected by them, it's ok to ask for a moment to recover and promise to return to the topic.

Giving/Receiving Guidance Effectively

As the boss, it may be awkward to get feedback. To **solicit feedback**:

- *Accept public criticism* so people feel safe to speak up. [Note: this applies only to you; team members should be criticized privately.]

KEY QUOTES

"Be relentlessly insistent on bringing your fullest and best self to work—and taking it back home again."

"Live your values. Don't try to list them like an HR exercise."

"It's fine to push yourself past your comfort zone, but not fine to make others uncomfortable."

"Sometimes, the greatest gift you can give your team is to let them go home."

- Use opening questions like “Is there anything I could do or stop doing to make it easier to work with me?” People are likely to claim that everything’s fine. *Persist until you get an honest response*, e.g. count to 6 and say, “surely there’s something I could do better at”. When people offer feedback, thank them and promise to work on it. Don’t defend yourself.

- When you *show that you’ve heard the criticism* and are taking action, people will be more likely to share in future. Even if you disagree, find something in the criticism you can agree with. Then, repeat what you’ve heard (to ensure you got it right), say you’d like to think about it and schedule a time to discuss it again.

- *Create systems* so that criticism feels natural. You can place a feedback box where anyone can drop questions or feedback and pick a few questions to answer during your all-hands meetings. Google holds “management fix-it weeks” where issues raised by staff are consolidated and addressed by assigned managers.

KEY QUOTES

Give **impromptu guidance** as you make the observations.

- *Be humble*. Realize that your opinions don’t represent reality.

  (i) *Situation-behavior-impact*. State the situation, the behavior you saw and the impact you observed. This makes your feedback more precise and less arrogant.

  (ii) *Left-hand column*. Divide a piece of paper into 2 columns. Think of a frustrating conversation and write down what you said on the right column, and what you thought in the left column. Notice how your assumptions affect your response.

- Focus on *helping people* to move forward positively.

  (i) *Share your intention* to lower defences, e.g. “I’m going to share an observation which I hope will help with your project. If I’m wrong, please feel free to tell me.”

  (ii) *Be specific*. It’s more useful to say “she explained the problem and solution clearly in 5 minutes” than “she is brilliant.”

  (iii) You don’t have to *fix things yourself*, e.g. to help a staff who stammers, you can suggest a speech coach or get their views.

- *Give feedback immediately* while the details are still fresh in your minds. When you withhold the feedback, it may create pent-up frustrations and leave people wondering how they're doing.

- Ideally, *do it face-to-face* so you can clarify or adjust your message based on their body language. If this is not possible, go for a video call or phone call (in order of effectiveness). Avoid email or text as they tend to create misunderstanding. Follow up on 1:1 feedback with an email to the whole team for best results.

- As a rule of thumb, *praise in public and criticize in private*. Praising someone publicly makes them feel good and help others to learn what went right. Criticize in private so you can take time to understand them and move them forward positively.

- *Don't personalize* praises or criticisms (e.g. assume someone is lazy or greedy rather than acting out of situational factors). It's often inaccurate and makes the problem harder to solve. To avoid personalization, (a) use the situation-behavior-impact or the lefthand column techniques and (b) use words like "that's wrong" or "I think that's wrong" (not "you're wrong").

Formal performance reviews are vital for reinforcing the informal feedback. Solicit feedback for yourself first, and use 360 degree feedback if possible so the appraisal doesn't seem like a 1-way judgement.

- *Write down what you want to say* before the review: it gives you clarity and gives people a chance to return for clarification later.

- Spend 50% on past performance and 50% on the future. Get your direct reports to come up with their *development plan* and identify what they'd do differently.

- *Set aside enough time*, with ≥50min for each person and ≥10min between sessions so you can recover emotionally. Schedule regular follow ups to assess how the plan is working.

- Hold separate sessions for *performance review vs rating/ compensation*. This prevents people from being so distracted by compensation that they can't focus on improvements.

KEY QUOTES

"If you don't know whether what you said was clear to the other person, you may as well not have said it."

"Caring personally is good. Personalizing is bad."

"Don't let perfection be the enemy of good."

Encourage peer guidance, e.g. at all-hands meetings, you can (a) get people to share stories of exceptional work by colleagues and vote for them and (b) let people confess their screw-ups to help others avoid the same mistake. However, don't let any member of your team talk to you about another team member behind their back; if need be, hold 3-way conversations to resolve the conflict.

Never try radical candor on your boss by criticizing him/her. Instead, roll out Radical Candor with your own team and only explain it to your boss if the opportunity arises. You can also ask your boss for guidance (rather than giving it). No matter how receptive your boss seems, don't give guidance without seeking permission, e.g. by asking "would it be helpful if I shared what I thought about this issue?"

Once a year, you can do "skip-level meetings" with the staff reporting to your direct reports (without the direct reports around).

- *Explain your goal*—to help your direct reports become better bosses and help their staff feel comfortable to give feedback. Then, *demonstrate* it by asking your boss to do a skip-level on you. Always get your direct report's prior consent, and do it for *all* your direct reports (not selectively).

- *Get feedback* on what the manager is doing well, what could be better, then what sucks. *Take the notes yourself* and verify the notes with the team before you finalize them, to make sure you got it right. Share the notes right after the meeting. Share all feedback with the direct report, but not who said it.

- Work with your direct reports to identify *1-2 specific things* they can change immediately. Get them to share with their teams what they've learned and what they intend to do differently.

Managing your Team for High Performance

Hold career conversations to understand each of your direct reports' ambitions, so you can to help them move toward their dreams.

KEY QUOTES

"Open, fair, and fast conflict resolution is one of the services you owe your direct reports."

"Giving space for people to talk about dreams allows bosses to help people find opportunities that can move them in the direction of those dreams".

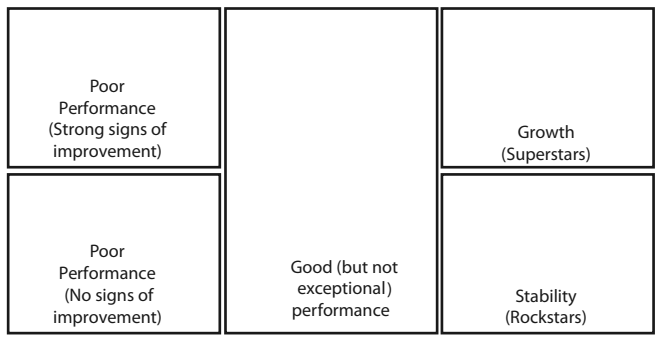
- Ask about their *lives since childhood* and why they made the key changes they did. These can shed light on their key values and what matters most to them.

- Learn about their *dreams*, i.e. what they envisage their career and best life to be like. Don't ask for their "career aspirations" or "5-year plans" which tend invite formal replies. Get them to follow up with a list of their key dreams, the skills needed (in order of importance) and their current competency level.

- Work with each direct report on an *18-month plan*. Jointly identify specific ways to narrow the key skills gaps, e.g. useful people/resources or how to change their roles to help them learn the required skills.

Create a **growth management plan** for each direct report yearly.

- *Put names temporarily into 3 groups*: top performers, good performers, and underperformer. Then, validate this with someone who's familiar with your team's work.



- Develop *growth plans* for each person with 3-5 bullet points (e.g. projects to stretch superstars, support for rock stars, ways to help good/poor performers to improve).

- *Compare notes* with your peers doing similar plans, to avoid biased ratings, build shared standards and perceived fairness.

Invest in **hiring the right people** with the skills *and* team fit.

- Don't rely on paper qualifications alone for *pre-screening*. Use projects or problems to assess the potential candidates' skills.

- Don't make the decision on your own. To reduce subjectivity and bias, use an *interview committee* with ideally 4 people of varying background, e.g. gender, ethnicity, teams.

- Use *casual interactions* for deeper insights. Talk to candidates over lunch, walk them to their car, or ask the receptionist about their experience with the candidate.

KEY QUOTES

"It's scary to move confidently in the direction of one's dreams. Part of your responsibility as the boss is to help people find the courage to do just that."

- Jot down your thoughts after each interview, and have the committee meet after every 3-4 candidates for a *debrief*. Don't make an offer if you're not dying to hire the person, or if another interviewer feels strongly against hiring the person.

Firing people. Once you identify someone with performance issues:

- *Don't wait too long* to admit he/she is underperforming. Delaying is unfair for everyone as (a) the staff has less time to address the issues, (b) the company needs time for proper processes in case you must fire the person, (c) it's ad for your reputation and (d) your team will be affected by this member's performance.

- Don't just follow HR/legal processes. *Consider the staff's needs* and remember that they're not bad people; they've just been hired for a job that's bad for them.

Promote fairly. You can use calibration meetings between bosses to ensure promotions are fair. At Google, anyone can recommend themselves for promotions and decisions are made by a committee than by the managers.

Reward both rock stars and superstars. Don't over-emphasize promotions and status—praise and celebrate exceptional work, innovation, teamwork, efficiency etc. Say "thank you" in person, publicly and/or via a note, explaining why the work matters and why it matters to you. Find ways to recognize people for their areas of expertise, e.g. put them in charge of teaching others or create opportunities for their work to be shared publicly/made more visible.

Improve Results with Better Communication

Radical Candor is fundamentally about improving team collaboration for results. This requires great communication at each step of the GSD wheel.

1:1 Conversations. These are informal sessions where your direct reports set the agenda to discuss what matters to *them*. Your role is to listen, help them gain clarity, and get to know them personally.

KEY QUOTES

"Remember, the reason you have to fire them is not that they suck. It's not even that they suck at this job. It's that this job—the job you gave them—sucks for them"

"Focus on the work the person is doing, not the status they've achieved in the company for doing it."

"The ultimate goal of Radical Candor is to achieve results collaboratively that you could never achieve individually."

- Follow *their agenda, not yours*, though you can set the structure and ground-rules. Use questions like "why?", "how can I help?", "what can you do to…?" to help them clarify their thinking. Make this a safe space for people to bounce or nurture new ideas.

- Choose a *frequency* that works for your team size. Ideally, set aside 50 minutes weekly for up to 10 direct reports each. Never cancel your 1:1 meetings.

Staff meetings should meet 3 key goals:

- *Learn (20min)*. Prepare your key metrics, so you can identify what went well or badly the previous week, and why.

- *Share (15min)*. Take 5-7 minutes for everyone to write down 3-5 important updates that others need to know (e.g. potential reorganization, revised targets). Then, take another 5-7 minutes to read others' updates without discussion.

- *Clarify (30min)*. Define the 1-2 most important decisions and the 1 most important debate for that coming week, for your next Big Debate and Big Decision meetings. Share the topics/agenda in advance with the rest of the team. Besides those identified to be present, anyone else can attend if they wish to.

Big Debate meetings force you to take time to consider key decisions deeply, and to build a culture of debate. The "owner" of the session must ensure that people put their egos aside to focus on gathering facts, clarifying issues/options and finding the best answers before you move into decision-making.

Big Decision meetings force you to stop debating and start deciding. The "decider" must ensure that the best decision is made based on facts, not egos. Anyone can attend the meeting—once the decision is made, it's final and notes are shared with everyone involved. If someone with veto power can't be present, he/she must indicate prior so the decision can be approved before the notes are released.

As the team gets bigger, it's harder to get buy-in from people. **All-hands meetings** help you to reach everyone. They typically include a presentation to persuade people about the company's direction, and Q&As to encourage dissent and address questions.

KEY QUOTES

"When you're the boss and shit happens, it's your responsibility to learn from it and make a change."

Thinking time. Block off 1-2 hours on your calendar daily just to clarify your own thinking (and let your team members do the same).

Execution time. Block off meeting-free slots in your calendar where you can be alone and focus on execution.

Kanban Boards are shared boards with 3 columns: To Do, In Progress and Done. Each person/team writes down their tasks on different colored post-its and move them around the board. That way, everyone can see the overall workflow, progress, bottlenecks, and build respect and understanding of others' work.

Make time to walk around, observe what's going on and ask people about their work and challenges. It allows you to stay in touch with large numbers of staff beyond your direct reports, and shows that no detail is too small for your attention.

Be culture-conscious. As a boss, everything you say and do (or don't) has ripple effects across the organization. Every small detail—from the name of your annual party to how you respond to mistakes—shapes the culture. Once something is embedded in your culture, it takes a live of its own.

KEY QUOTES

"Being ruthless about making sure your team has time to execute is one of the most important things you can do as a boss."

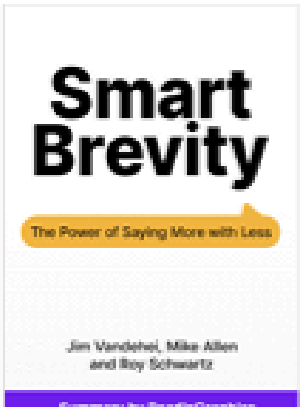
"The small choices you make will persuade people to act in accordance with the culture you want to build with your team."

"A team's culture has an enormous impact on its results, and a leader's personality has a huge impact on a team's culture."

Conclusion & Details in the Book to Look out For

Radical Candor takes time and energy to implement, but the results can be massive, as new ideas emerge and problems get solved without your involvement as the boss.

To get started, share your own stories and invite feedback while getting to know your people with career conversations and 1:1 conversations. When you (a) are better at getting/giving guidance (b) know your direct reports and (c) are happy with your 1:1s, you can move on to staff meetings, debate and decision meetings to improve productivity, before working on growth-management plans and rewards, as well as company processes like hiring, firing, promotion, and formal performance reviews. The book includes numerous other examples and detailed tips on the philosophy and techniques of applying Radical Candor. For more details, please visit www.radicalcandor.com.



SMART BREVITY

The Power of Saying More with Less

Jim Vandehei, Mike Allen and Roy Schwartz

The Big "So What"

Are you tired of writing long emails and reports that no one reads? Imagine if your messages could stand out and be understood in seconds. Smart Brevity shows you how to communicate clearly and efficiently, so you get your point across with less effort and more impact. Whether you're a student, leader, or professional, these strategies will help you to get noticed and remembered.

What is Smart Brevity and Why It Matters

In a digital age, people are suffering from **information overload and constant distractions**.

- This has fundamentally *changed the way we consume content*, and reduced our attention span. On average, we:

  (i) Check our phones >344 times a day (at least every 4 minutes);

  (ii) Scan content on our screens instead of reading them;

  (iii) Spend only 26 seconds on a piece of content;

  (iv) Spend less than 15 seconds on most web pages we visit;

  (v) Decide in 17 milliseconds whether we like something we clicked (and if not, we move on); and

  (vi) Share most stories without even reading them.

- *People have no time or patience for lengthy texts.* Yet we continue to ramble ineffectively in our daily communication. We write an entire book when the ideas can fit in a 1000-word

KEY QUOTES

"You will learn to punch through the noise, be heard on what matters most and win recognition for your most important ideas."

"It has never been harder to get people focused on what matters most."

"Never in the history of humanity have we vomited more words in more places with more velocity."

"We consume all kinds of digital content in short bursts, then quickly move on."

article, or write a long article when the ideas can fit in 1 paragraph.

- To be influential, you must *communicate with crystal clarity*. After all, you can't unite people behind an idea or strategy if they can't understand your message, or if they tune out altogether.

Smart Brevity is a more effective way to think and communicate in a noisy digital world. It helps you to **say more with less**, convey your message powerfully, and save everyone time.

- The authors initially developed Smart Brevity during their time at Politico and refined it further at their media company, Axios. They've since created *Axios HQ*—an AI-powered platform designed to help people communicate effectively using Smart Brevity.

- In *this summary*, we'll explain (i) how Smart Brevity works, followed by (ii) ways to apply Smart Brevity in real life.

How Smart Brevity Works

Research data shows that **most people just read the headlines and the first few paragraphs** of any article/story they see. They will read the rest of the article only if you hook their interest upfront.

Smart Brevity is built on several principles for effective communication, with 4 core elements to be applied in any communication.

- These are meant to serve *as guidelines* to help you think and write more effectively; they're not strict rules to be followed rigidly.

KEY QUOTES

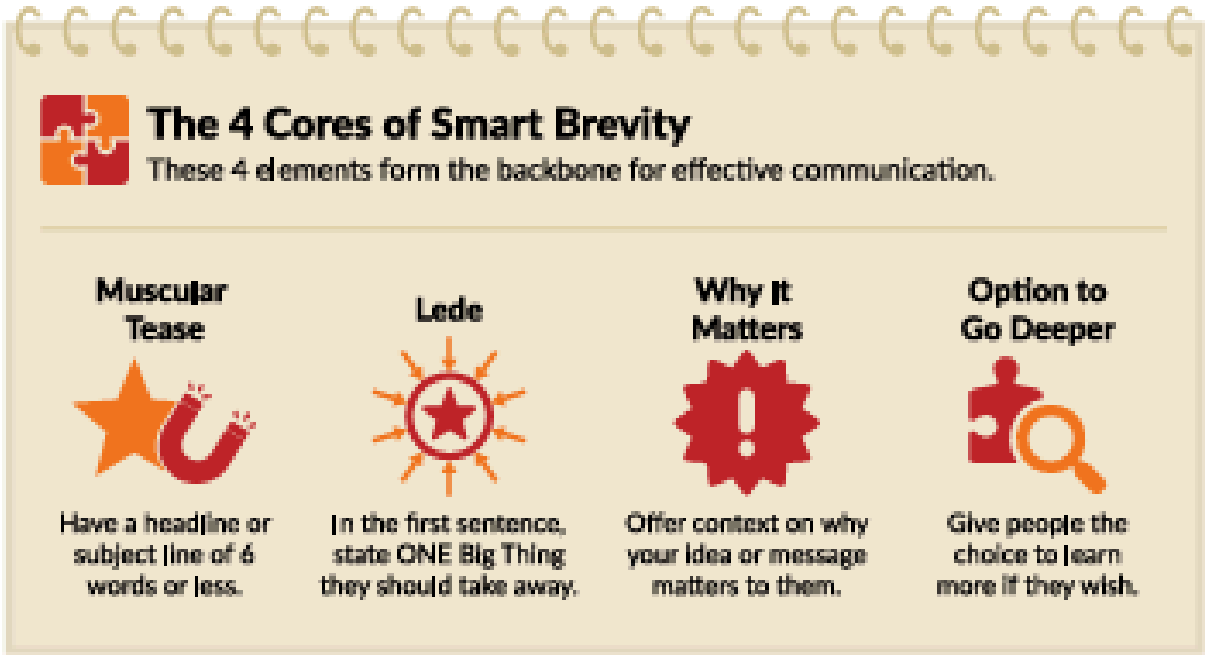
"You can't rally people around a strategy or an idea if they don't understand what you're saying—or zone out."

"I didn't have time to write you a short letter, so I wrote you a long one."
—Mark Twain

"If you want vital information to stick in the digital world, you need to radically rethink—and repackage—how you deliver it."

"Brevity is confidence. Length is fear."

"These are guardrails, not hard-and-fast, never-break-them rules."



"Muscular tease" or an attention-grabbing headline/subject.

- Your audience will make a split-second decision on whether to read your content. Make sure your *subject line or headline* (or the first line of your Tweets/notes) can grab their attention, and yank them away from other distractions.

- Get right to the point, ideally keeping to *6 words or less*. Avoid technical terms, jargon, and don't try to be funny or clever–you will just confuse your audience.

- Start by expressing *why you're writing this content* in 10 words or less, then reduce it to fewer words.

  (i) Express your idea in a provocative but accurate way.

  (ii) Use short, strong words that zing.

  (iii) Always use active verbs.

- *Read your headline aloud*. Does it sound like something you'd be curious to learn more about? Refine it until you're satisfied.

- *Additional tips*:

  (i) Consider adding a famous name/brand that your audience relates to (e.g. Warren Buffett for investors).

  (ii) Useful content like "tips" and "free training" tends to increase engagement.

KEY QUOTES

" Smart Brevity will make your messages clear and memorable, so everyone stays aligned and inspired."

"Just say what you mean, sincerely and short."

"There's a foolproof way to know if you have a good attention grabber: Would you read it if you hadn't written it?"

"Smart Brevity is music theory—it gives you logic and elegance. But that magnificent architecture leaves room for... jazz."

- Here are several *examples*:

Example	Bad	Good
News Headline	An Overview of the Latest Developments in AI Technology	AI Breakthrough: What's Next?
Workplace Update	Please be reminded that the quarterly review meeting will take place next week.	Quarterly Review: Prepare Now.
Health and Wellness	Why It's Important to Stay Hydrated Throughout the Day	Hydration: 5 Key Benefits

"Lede" or an effective opening sentence.

- In the first sentence after the headline, *state the ONE thing* you want people to take away. Lead with the most important idea, because it's probably the only thing your audience will recall later. If you don't know this, your reader won't either.

- Distill down to your *most crucial point*. This should be something your audience doesn't know, wants to know, or should know.

- Be *direct, clear, and succinct*.

  (i) Keep to 1 sentence, without repeating the headline.

  (ii) Skip the anecdotes, adverbs, weak words, or extra words.

  (iii) Check your 1 thing by asking: If this is the ONLY thing that sticks, is it what you want them to remember? If the answer is "no", rework it until you get a "yes".

- Here are several *examples*:

Example	Bad	Good
Sharing Vital News	I wanted to let you know that something significant has happened. We're merging with XYZ Corp, and I think it's going to change things for us moving forward.	Big change coming: We're merging with XYZ Corp.

KEY QUOTES

"Make news and information not just smart, but as clean and efficient as possible."

"The first sentence is your one—and likely only—chance to tell someone what they need to know and convince them not to move on."

"If there is one thing you take away from this book, it is this: Learn to identify and trumpet ONE thing you want people to know."

"One of the media's dirty little secrets is that most journalists suck at writing tight ledes. So don't feel bad: They're paid to do it, and they struggle."

Example	Bad	Good
Discussing a Critical Issue	I've been thinking about the recent challenges we've faced, and I believe there's something we need to address.	Our biggest client is unhappy—we need to act.
Asking for Support	I'm reaching out because I could really use some help with a new project that's been assigned to me.	I need your support on a new project.

The context or "Why It Matters." Most people are too busy to read and digest a piece of content in detail; they will only skim through it. Offer some context on why your idea, fact, or message matters to them personally or professionally.

- Use the words "Why It Matters" to capture their interest. Then, explain clearly and succinctly *why they should care*.
- Be direct, and declarative. Tell them what/how to think about the opening line. *Offer perspectives* like: What does it signal or change? Is there a wider context like a trend or an anomaly?
- Besides "Why it matters", you can use *other axioms* like: The Big Picture, What's Next, What We're Reading, Between the Lines, The Backstory, Zoom In, Zoom out.
- *Bold the words* so they stand out like a street sign.
- Your *headline, lede and axiom* should jointly convey your main message clearly and directly. From there, they can decide whether to keep reading.

Option to "go deeper": Give people the choice to learn more if they want to.

- Include a *link to additional details* (e.g. video, podcast, bio, book excerpts). This allows you to deliver depth and detail, while keeping your content lean and elegant.
- *Use axioms* like "Go Deeper", "The Big Picture", or "Learn more." Bold the axioms so they stand out.
- Make sure the *additional details* are really worth your readers' time.

KEY QUOTES

"Most people are too busy to understand not just what is important, but why it's important. Be a hero: Tell them in a brisk, clear, illuminating way."

"People are crazy busy. They yearn for context. Scratch that itch for your reader."

"Simply seeing the 'Go deeper' material shows the reader that you're on their side...It says: I've done the work so you don't have to."

Let's combine the 4 Cores into an example below:

4 Cores	Example
Muscular Tease	AI revolutionizes medical diagnostics.
First Sentence (Lede)	A new AI system now diagnoses cancer with 98% accuracy, outperforming top human doctors.
Why It Matters (Context)	This AI advancement could drastically reduce misdiagnosis rates, saving thousands of lives annually and cutting healthcare costs by billions. Early, accurate detection means treatment can start sooner, increasing survival rates and improving patient outcomes.
Option to Go Deeper	Explore how this AI works, its real-world applications, and what it means for the future of healthcare in our full report.

Guiding Principles of Effective Communication

Smart Brevity is built on several powerful principles, which we have distilled and reorganized below.

It's all about brevity: being **short, but not shallow**.

- Aim to *do more with less*. Pack more into your communication, using arresting headlines, effective graphics, fewer but stronger words and sentences.
- However, be careful not to lose the nuances, oversimplify concepts, or omit vital facts. There are also *exceptions* where brevity isn't the ideal, such as in poetry, nonfiction books, or casual conversations.

Always put your audience first. Prioritize your audience's needs to ensure your message is relevant and engaging.

- Visualize your target audience, focusing on just ONE person you're targeting. Imagine someone smart, curious, but extremely busy.
- Tailor your message specifically to that person. What's the ONE thing you want them to remember? Consider what they want or need to know, not what you wish to say.

KEY QUOTES

"We hide the good stuff in piles of words. We make people deduce what we're trying to say instead of just blurting it out. Don't be fancy—be effective."

"We committed to stop wasting people's time...To open their eyes to the idea that less is more, and that short does not mean shallow."

"Don't omit important facts or nuance, oversimplify or dumb down. 'Short, not shallow,' is what we tell our reporters."

"Tightly tailor your message to your target reader."

"We tend to think too much about what we want to say versus what others need to hear."

Respect their time and intelligence. Be brief and clear, ensuring what you're saying is worth saying.

- Write down the points you wish to make, rank them in order of importance, then filter down to the *most important points*. Do a gut check: is every point truly essential?
- Write these down as bullet points, not chunks of text. Go through your sentences word by word. Polish them to the *fewest possible words*, using strong, crisp, vivid, and memorable language. Make every word count.
- Don't force them to wade through lengthy preambles and fluff. *Get right to the point, then stop*. Don't blabber on.

Write as a human, for humans. Speak plainly, as if you're communicating 1-1 with someone.

- Write the way you speak. Keep it *clear, direct, authentic, and relatable*.
- Be inclusive. Communicate in a way that anyone—regardless of their background, level of expertise, or personal circumstances—can understand. This involves:

  (i) Using clear, simple language, not jargon and technical terms;

  (ii) Tailoring your communication for diverse backgrounds, e.g. cultural, linguistic, and educational differences; and

  (iii) Making your messages accessible to all, including those with disabilities. For example, include visuals with alternative texts, and include captions for videos.

Speak with authority: You need expertise in order to communicate effectively and credibly.

- An expert has a deep understanding of their field, can assess what's new or important, and has the ability to distill their know-how into clear, actionable insights.
- If you're not an expert, then find an expert. Make sure the information you share is accurate, relevant, and valuable.

Convey information in the **simplest and cleanest way**.

- Limit each paragraph to 2-3 sentences. Break down clumps

KEY QUOTES

"Writing is like a stacked buffet, where it's up to you to pick and choose what you want."

"In a world full of noise, people reward you if you respect their time and intelligence."

"If you're not communicating inclusively, you're not communicating effectively."

"Once you see yourself as serving your audience, people take notice, reward you, trust you, welcome you and actually read or listen to you."

"Smart Brevity jams essential information into the most digestible and delicious packaging."

- Emojis are useful 👍 for conveying emotion, intent, and nuances. Used appropriately, they help us to say more with less 💡. Some examples in business include:

  (i) Data or poll 📊

  (ii) Perfect: 💯

  (iii) Deadline: ⏰

  (iv) Restaurant review: ⏰🍽️

  (v) Checkmark: ✅

  (vi) Goal or Target: 🎯

- Here's a quick **recap of the key principles** discussed so far:

KEY QUOTES

"Emojis as a powerful tool for business and casual communication when used wisely, cleverly and—most important—with restraint."

"Emojis as a powerful tool for business and casual communication when used wisely, cleverly and—most important—with restraint."

"An emoji in a subject line will make it instantly stand out in your inbox. Try it and you'll quickly see the effect."

How to Apply Smart Brevity (SB) in Real Life

You can use the 4 Cores and guiding principles of Smart Brevity in all your communications to increase your impact and save time for everyone.

Newsletters. People hate long reports, emails and memos, but they will love a newsletter done in SB format. This is a great way to share impactful information and get everyone on the same page.

- Choose a *catchy name for the newsletter* that conveys your ethos and purpose in 1-2 words.
- Clearly indicate your *wordcount and how long it will take to read* the newsletter. The average reading speed is 265 words a minute.
- Start with your *1 big thing* in the headline, and have no more than *5-10 items in total*. Ensure every item is truly essential for the reader, and consider numbering them in order of importance. Most people will only read the first 2 items and scan the rest.
- Make your newsletter *tidy and uncluttered*: Use 1 font type, 1 text size, bullet points, and graphics.
- Trim to *less than 1,000 words*, with each item being ≤200 words. Details can go into the "Go Deeper" links.
- Aim to make the reader *smile or feel excited*, and try to end with something funny or personal.

Workplace communication: In the modern workplace, employees expect transparency and purpose at work. You can gain a real advantage by communicating clearly and authentically.

- Use SB to write all your *messages, emails, memos, and updates*. People will appreciate how clearly you present your ideas and save them time.
- Encourage the entire team to do the same. *Make SB a company-wide practice* to save time and accelerate learning for everyone.

KEY QUOTES

"There is no better way to communicate multiple things of importance—and get people to pay attention—than a smart, zippy newsletter, all in Smart Brevity."

"This is the dawn of remote idealistic employees demanding transparency and meaning at work. Culture will be as important as strategy or execution."

- If you're the CEO, consider a weekly employee newsletter in SB format, to *align people behind your mission and values*. Include:

  (i) Key updates impacting your mission and "why it matters";

  (ii) A real story of how you're impacting customers' lives;

  (iii) 5 big things each week to highlight the top priorities; and

  (iv) Recognition for your team.

- Write with *candor and transparency*, and poke fun at yourself if possible.

Emails: Gallup's survey found that 70% of employees want shorter communications at work. This is unsurprising since the average business user receives 126 emails daily as of 2019. To SB your emails:

- Have a short, direct *subject line* that tells people why they should open this email now.
- Put your most important information or request in the *first sentence*, to make it clear why they must read on.
- Add some context on "*Why it matters*". Do this consistently so people will start to look out for it.
- *Use bullets* to make it easier for people to skim your email.
- *Bold the main words and figures* that you want to stand out.
- Use *clean, intuitive visuals* to highlight important points.

Meetings: SB your meetings with the same principles.

- *Decide if you truly need to meet*, or if the issue can be addressed in a 1-1 chat.
- *Set a time limit* for the meeting. Most meetings can be finished in 20 minutes and you can even have 5-10 minute micro-meetings.
- The person calling the meeting should *send out an email* (ideally the day before) to specify a 1-sentence objective, and a bulleted agenda (with no more than 3 points).

KEY QUOTES

"Managers and colleagues will notice—and reward you—for making them smarter, saving time and providing helpful context."

"Communicating a company's values is now essential to both attracting and retaining the best talent."

"The way most people write emails screams "blow me off." But you can entice more people to read your work faster or skim more effectively if you Smart Brevity it before hitting send."

- Start and end meetings on time. *During the meeting*:

  (i) Open with the 1-sentence objective.

  (ii) Explain "why it matters" and help everyone to understand their role and what they can contribute.

  (iii) Specify the decisions to be made to keep everyone focused. If anyone goes off-topic, point it out gently with a smile.

  (iv) Be inclusive. Encourage everyone to contribute.

  (v) When you have 2 minutes left, close the meeting by summarizing the take-aways and next steps.

- Send out a *follow-up email* with bullet points detailing who to do what by when.

Speeches: A great speech needn't be long, and you can SB your speeches to make them more powerful.

- Speak authentically, human-to-human. Don't rely on Powerpoint slides, notes, or teleprompters. Get people to focus on you, and rehearse looking at people in the eye.

  (i) Focus on just *ONE point or lesson*. Write down your big thought in 15 words or less, then polish it using the tips earlier.

  (ii) Open your speech by stating: "The one thing I want you to remember from my speech is..."

  (iii) Reinforce the idea at the end: "If you were to take away only 1 thing from this speech, it will be...."

  (iv) Bring your big idea to life using interesting statistics, great stories, and memorable quotes.

- Explain "*Why it matters*" and why they should pay attention.

- *Number your points* to create verbal bullet points in your speech.

- You can learn a lot from *TED Talks*. For example, can you identify the SB elements in this excerpt of networking guru Pamela Meyer's speech?

KEY QUOTES

"In speeches, like life, you don't need to say a lot to make a big difference."

"You're doing their brains' work for them—sorting the gist from the fluff."

TED Talk by Pamela Meyer in 2011

"I don't want to alarm anybody in this room, but it's just come to my attention that the person to your right is a liar.

Ever since I wrote this book Liespotting, no one wants to meet me in person anymore, no, no, no, no, no. They say, 'It's OK, we'll email you.'

So before I get started, what I'm going to do is I'm going to clarify my goal for you. Lying is a cooperative act... Its power emerges when someone else agrees to believe the lie."

Etc.

Presentations. Simplify your presentations to amplify their impact. Use fewer visuals, less words, and delete anything that distracts the audience from your most essential points.

- An ideal presentation should have *1 big idea backed by 3-5 points*. Write down your ONE desired outcome or request in 6 words or less. Then, list down the 3-5 points you must make.

  (i) Start and end with your big idea.

  (ii) End your presentation with a direct recap, distilled into as few words as possible. For example: "I called this meeting [or created this presentation] so I can _____"

- *Develop 1 slide for each point* and your overall outcome.

  (i) Treat each slide like a billboard, so people can get the point within 3 seconds.

  (ii) Distill down to single sentences of 20 words or less. Ideally, use minimal or no text.

- *Keep it short*. As a rule-of-thumb, use just 2 slides for every 20 slides you want to include. If possible, limit your presentation to 5-6 slides, with 1 point per slide.

- *Use great visuals* to convey your message and tell a vivid story. Arresting images get burned into the listener's brain to help them remember the message.

- Use *1 font and 1 visual style* throughout.

KEY QUOTES

"So many presentations are stressful for the presenter, boring for the audience and a waste of time for both."

"You can talk, you can use slides, you can show pretty pictures. None of it matters if you don't have a crystal-clear idea of what you want the audience to remember."

"Simplify to exaggerate. Think fewer words, fewer slides, fewer visuals—destroy anything that distracts from the essential points."

Social Media. SB your social media posts so they stand out amidst the noise and clutter. The less you say, the more likely you will get clicks or shares.

- *Know your audience and platforms*. Pick simple, arresting images that will appeal to your audience. Align your content with what each platform values the most, e.g. Twitter loves facts and urgency, Instagram loves images with minimal text, while Facebook thrives on provocative ideas and hot news.

- *Write in SB style*, with a headline, 1 big idea, context, options to go deeper, and emojis that make sense. Rinse and repeat.

- *Use infographics* to tell complex stories with as few words as possible. People should be able to tell at a glance what you're trying to say.

Conclusion and Other Details in the Book

In a hyperconnected world filled with noise and distractions, the need for **efficient, precise communication** has become more crucial than ever. Smart Brevity helps you to cut through the clutter, reduce overwhelm, get heard and remembered.

- When you adopt Smart Brevity throughout your organization, it helps to *create a culture of transparency and clarity*, and eliminate gossip, secrecy, and confusion.

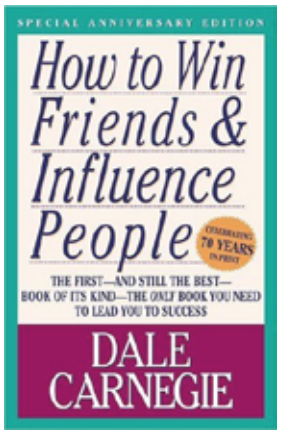
The book is filled with **practical case studies**, showcasing before-and-after examples of various types of communication ranging from news articles, to emails and social media posts. The also authors share their real-world experiences at Politico and Axios to illustrate Smart Brevity applications. For more details and resources, please visit SmartBrevity.com.

KEY QUOTES

"Social media is the hand-to-hand combat of attention warfare."

"On social media, you're ONLY going to tell them that one thing. Tease them with a newsy nugget. Provoke them with a surprising quote. Wow them with a memorable data point."

"A magical thing happens when you communicate crisply and transparently: You cut out all the employee gossip and pot-stirring that come from being confused or kept in the dark."



HOW TO WIN FRIENDS & INFLUENCE PEOPLE

Your Handbook on Human Relations

By Dale Carnegie

The Big "So What"

Next to health, people's next biggest interest is human relationships: to understand and get along with others, be well-liked and win people to their way of thinking. This book serves just that objective. Although it was first published in 1936, its principles and insights are timeless and are still powerful today for any situation that involves people.

Introduction

Carnegie starts by stating a pre-requisite to getting the most from this book, which is "a deep, driving desire to learn, a vigorous determination to increase your ability to deal with people." His methods represent a way of life that can be achieved through practice, and will only work when they are applied sincerely from the heart, rather than used as techniques to cajole others. The core idea of his book is to always consider things from the other person's point of view, as well as your own.

Fundamental Techniques in Handling People

1 Don't criticize, condemn or complain

Everyone wants to feel important/ wanted. Criticizing someone is not only fruitless, it will put him on the defensive, hurt his sense of pride, and even arouse resentment. Instead of criticizing, try to understand why people do what they do.

KEY QUOTES

"As much as we thirst for approval, we dread condemnation."
- Hans Seyle

Understand, not criticize

"Instead of condemning people, let's try to understand them. Let's try to figure out why they do what they do. That's a lot more profitable and intriguing than criticism; and it breeds sympathy, tolerance and kindness."

2 Give honest and sincere appreciation

The only way to make someone do something is to make them want to do it. People want to do things because of the gratification they get, and the need to be appreciated or feel important is one of the deepest human desires. If you can fulfil that need, people will love you.

Constantly ask yourself: "What can I honestly admire about this person?", and show people your appreciation, every time, everywhere. Carnegie highlights that appreciation is different from flattery - the former comes sincerely from the heart, with no selfish agenda.

3 Arouse in other person an eager want

To inspire an "eager want" in someone, you need to first think from his perspective and put his needs before your own. In Henry Ford's words: "If there is any one secret of success, it lies in the ability to get the other person's point of view and see things from that person's angle as well as from your own."

Talk about what they want and explicitly explain how your suggestions will accomplish their goals. Try to enjoy the feeling of unselfishly trying to serve others without any recourse to yourself.

Six ways to make people like you

1 Become genuinely interested in other people

"We are interested in others when they are interested in us", and we tend to like people if they admire us. Greet others with enthusiasm that shows you are pleased to see and talk to them,

KEY QUOTES

Give appreciation

"The only way I can get you to do anything is by giving you what you want."

Focus on others' needs

"When I went fishing, I didn't think about what I wanted. I thought about what they wanted...why not use the same common sense when fishing with people?"

Be interested in others

"One can win the attention and time and cooperation of even the most soughtafter people by becoming genuinely interested in them."

genuinely care about them and their interests, and take time and energy to do thoughtful, selfless things that matter to them.

2 Smile

Give a real, heart-warming smile that is uplifting and shows you are happy to see the other person. Even when you smile on the phone, your smile will come through in your voice. Insincere grins, however, have the reverse effect. If you don't feel like smiling, you can start by getting yourself in a better mood by acting as you if you were happy - force yourself to smile in private, and manage your thoughts.

3 A person's name is to that person the sweetest and most important sound in any language

People value their names, as it is the one item that they own completely, and sets them apart from others. "Make an effort to remember their names and make them feel important. This includes pronouncing and spelling it correctly.

4 Be a good listener. Encourage others to talk about themselves.

To be a good conversationalist, you need to be an attentive listener. Take genuine interest in people, ask questions that they will enjoy answering and listen attentively. Encourage people to share about themselves and their achievements; share yours only if they ask.

KEY QUOTES

Smile

"The expression that one wears on one's face is far more important than the clothes that one wears on one's back."

Magic of the Name

"We should be aware of the magic contained in a name… The name sets the individual apart; it makes him or her unique among all others."

Be a good listener

"To be interesting, be interested… the person you are talking to are a hundred times more interested in themselves and their wants and problems than they are in you and your problems."

5 Talk in terms of the other person's interests

Focus on what the other party is interested in, and talk about it first (don't talk about your own interests unless asked). It is worthwhile to invest time and effort to do prior research on the topics of interest. Talking about what people cares about most opens the way to their heart, and also broadens your horizons.

6 Make the other person feel important – and do it sincerely

People want others' approval, they want to feel important, and they want to be recognized. "Do unto others as you would have others do unto you" - In order to feel important and appreciated, start by giving others that feeling first.

How to Win People to Your Way of Thinking

1 The only way to get the best of an argument is to avoid it

You can never win an argument; even if you "win" it, you still lose because you would have embarrassed someone and lost good will.

To prevent a disagreement from becoming an argument:

- Welcome the disagreement as an opportunity to be corrected
- If you feel defensive, don't trust your first instinct
- Control your temper and listen first.
- Look for areas of agreement.
- Be honest & apologize for mistakes or errors if you made any.
- Promise to think over the person's ideas carefully (& mean it)
- Thank the person for his interest and give both sides time to study the issue

KEY QUOTES

Talk about others' interests

"The royal road to a person's heart is to talk about the things he or she treasures most."themselves and their wants and problems than they are in you and your problems."

Make others feel important

"There is one all-important law of human conduct…Always make the other person feel important."

Avoid arguments

"A man convinced against his will is of the same opinion still."

2 Show respect for the other person's opinions. Never say, "You're wrong."

Never tell someone they are wrong, including implying it through your look, gesture or tone. Instead, take the initiative to be open-minded; learn to use phrases like these to stop arguments and inspire open-minded discussions: "I may be wrong. I frequently am. Let's examine the facts." If you are ever going to prove something, do it so subtly that no one knows you are doing it, or you will only arouse opposition.

3 If you are wrong, admit it quickly & emphatically

If you know you will be rebuked anyway, it is much better to take the first step and do it yourself enthusiastically, rather than have someone do it. Not only will this remove guilt and defensiveness, it usually address the problem caused by the mistake & encourage the other person to be open-minded too.

4 Begin with a friendly way

When people are feeling upset, no amount of logic can win them over. As Abraham Lincoln says, "If you would win a man to your cause, first convince him that you are his friend." Hence, start handling any situation with a kind, friendly and appreciative approach.

KEY QUOTES

I may be wrong...

"You will never get into trouble by admitting that you may be wrong. That will stop all argument and inspire your opponent to be just as fair and open and broad-minded as you are."

Admit to your mistake

"Any fool can try to defend his or her mistakes – and most fools do – but it raises one above the herd and gives one a feeling of nobility and exultation to admit one's mistakes."

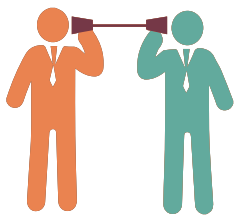
Be gentle and friendly

"People don't want to change their minds. They can't be forced or driven to agree with you or me. But they may possibly be led to, if we are gentle and friendly, ever so gentle and ever so friendly."

5 Get the other person saying "yes, yes" immediately

When someone says "No", it triggers a series of neuro-muscular responses that puts him on the defensive, while saying "Yes" keeps him open and accepting. Hence, if possible, keep your opponent from saying "No." Instead, use the Socratic approach - ask a series of questions to which your opponents will reply "yes" to.

6 Let the other person do a great deal of the talking



Allow people to talk themselves out, and share about their businesses and problems. Ask questions and listen sincerely and patiently, with an open mind. Do not interrupt even if you disagree with them.

To be liked by our friends, make them feel important by allowing them to excel us and share about their accomplishments (rather than boast about ours).

7 Let the other person feel that the idea is his or hers

We tend to have more faith in ideas that we discover on our own. Hence, rather than presenting an idea as your brilliant solution, make a suggestion and allow the other person to draw his own conclusion. If possible, even allow the other person to claim credit for the idea, as it will yield better results.

KEY QUOTES

Getting "yeses"

"Keep emphasizing, if possible, that you are both striving for the same end and your only difference is one of method and not of purpose."

Listen rather than talk

"(People) know more about their business and problems than you do. So ask them questions. Let them tell you a few things."

Let people own the ideas

"No one likes to feel that he or she is being sold something or told to do a thing. We much prefer to feel that we are buying of our own accord or acting on our own ideas."

8 Try honestly to see things from the other person's point of view.

Never condemn someone for being wrong. Instead, assume the other person always as a valid reason for his/ her actions; try to put yourself in his shoes and understand why he would do or say what he did. Consider from the other person's point of you why he would want to hear or adapt to your point of view.

9 Be sympathetic with the other person's ideas and desires

To get others to be sympathetic to your points of view, you need to first be sympathetic with theirs. Remember that just because their views are different from yours doesn't mean they are wrong. A good line to turn hostility into friendliness and good will is this : "I don't blame you one iota for feeling as you do. If I were you I would undoubtedly feel just as you do." When we are open to others, we have a better chance of winning them over.

10 Appeal to nobler motives

According to J. Pierpont Morgan, people typically have two reasons for doing anything: their real reason (which only they will know) and a reason that sounds good. Appeal to the latter, and show how your suggestion will fulfil the nobler cause. This is built on the assumption that, if you treat people as if they are upright, fair and honest, most of them will act accordingly.

KEY QUOTES

See his perspective

"There is a reason why the other man thinks and acts as he does. Ferret out that reason – and you have the key to his actions, and perhaps to his personality."

Be sympathetic

"You deserve very little credit for being what you are – and remember, the people who come to you irritated, bigoted, unreasoning, deserve very little discredit for being what they are."

Appeal to noble motives

"All of us, being idealists at heart, like to think of motives that sound good. So, in order to change people, appeal to the nobler motives."

11 Dramatize your ideas

To get attention, you need to make the benefits of your ideas more obvious, interesting and vivid to people. You are presenting the truth, but using drama and showmanship to capture their attention and imagination, and make your ideas more impressive.

12 Throw down a challenge

People are motivated by opportunities to prove themselves and to win. Stimulate competition or throw a challenge to appeal to people's desire to be important, to excel and win.

Be a Leader: How to Change People Without Giving Offense or Arousing Resentment

1 Begin with praise & honest appreciation

Praising someone sincerely builds their confidence and sets a positive foundation for them to receive feedback on potential areas of improvement. It is like the dentist administering local anaesthetics before drilling, to dull the pain.

2 Call attention to people's mistakes indirectly

Rather than criticize someone directly, call indirectly to his attention the behaviour that you wish him to change. This helps people – especially sensitive ones – to realize their mistake without resentment. If you praise someone before

KEY QUOTES

Dramatization

"Merely stating a truth isn't enough. The truth has to be made vivid, interesting, dramatic. You have to use showmanship."

The challenge

"The desire to excel! The challenge! Throwing down the gauntlet! An infallible way of appealing to people of spirit."

Praise before correction

"It is always easier to listen to unpleasant things after we have heard some praise of our good points."

criticizing them, also be conscious to avoid the word "but" and replace it with "and", e.g. "I'm so proud that you completed the task on time, and it would be even better if..." This makes your praise seem sincere, rather than a manipulative way to criticize.

3 Talk about your own mistakes first

When you talk about your mistakes before criticizing others, you bring yourself to their level and make yourself more relatable. Regardless of whether you have already corrected your mistakes, it makes it easier for the other person to hear his faults if you start with yours.

4 Ask questions instead of giving direct orders

No one likes to take direct orders. Asking questions help people to feel that they are a part of the decision-making process, improve buy-in and can stimulate creativity.

5 Let the other person save face

Rather than threatening, belittling or directly finding fault, make an effort to protect the other person's dignity with kind and understanding words. Assure them of their value and give them the confidence to do better next time.

KEY QUOTES

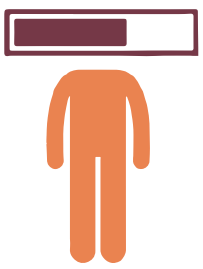
Start with your mistakes

"It isn't nearly so difficult to listen to a recital of your faults in the person criticizing begins by humbly admitting that he, to, is far from impeccable."

6 Praise every improvement and praise the slightest improvement

Praise works better than criticism because people would do almost anything to get appreciation and recognition. When we help people to realize the true potential they possess, they will be inspired to transform for the better.

7 Give the other person a fine reputation to live up to



When we respect people for their ability, they are more ready to be led. To improve someone, act as if he or she is already outstanding in that particular desired trait or virtue. Give someone a big reputation to live up to, to inspire change in his attitude or behaviour.

8 Encourage. Make the fault seem easy to correct

To help people get over the obstacle of change, we should let them know we have faith in their abilities and their chances of success. Praise their good points, minimise their faults, and be generous with our encouragement so they will practise the necessary skills and excel.

KEY QUOTES

Praise improvements

"Abilities wither under criticism; they blossom under encouragement."

"You who are reading these lines possess powers of various sorts which you habitually fail to use; and one of these powers…is your magic ability to praise people and inspire them with a realization of their latent possibilities."

9 Help them see their benefits

To make someone glad to do your suggestion:

- Be sincere and focus on the benefits to the other person
- Know exactly what you want the other person to do

- Focus on what the other person really wants and consider the benefits he will receive from doing what you suggest; then match these benefits to his wants.
- When you make your request, clearly convey the benefits to that person.

For example, you can offer someone a good title for his work, or offer a substitute immediately after turning down an offer.

Other Useful Details in the Book to Look Out For

Carnegie conveys his ideas using examples and stories from English kings, Civil War generals, and other famous personalities like Franklin and Teddy Roosevelt, Abraham Lincoln, John D. Rockefeller. There are many powerful situation-specific tips and useful phrases embedded in his case studies that can be applied in our day-to-day dealings with people. He suggests 9 ways to get the most from his book:

- Develop a keen desire to master human relationship
- Read each chapter twice before going on to the next one
- As you read, stop often to consider how to apply the suggestions
- Underline important ideas
- Apply the principles whenever possible, to solve your daily problems
- Create a game: Give a friend a dollar each time he catches you violating the principles
- Review your progress and learning points weekly
- Keep notes of how and when you have applied the principles

THE OUTWARD MINDSET

Seeing Beyond Ourselves

THE ARBINGER INSTITUTE

The Big "So What"

Our mindsets affect how we see the world and respond to people or events around us. This book explains how to create lasting change by adopting an outward mindset that improves your personal and professional relationships, team collaboration and innovation.

Introduction

Many of us unknowingly operate from an inward, self-focused mindset, which generates tension and conflict. When you switch to an outward mindset, you intuitively understand what your colleagues, friends, and family need. Your relationships flourish, your teams and communities thrive, and you become **happier and more successful**.

In this book, the Arbinger Institute draws on decades of research and application, to explain how we can **create lasting change** at a personal, family, team, and organizational level. The ideas are presented through a series of real-world examples to help us understand the outward mindset and its potential impact.

Why Mindsets Matter

Mindsets Drive Performance and Results

Our results are determined by our actions/behaviors, which are in turn shaped by our **mindsets and perspectives**. Mindsets are more than self-beliefs. They affect how you see things/people, the options you think of, and how you choose among those options.

KEY QUOTES

"This book is about…how to experience a way of seeing, thinking, working, and leading that helps individuals, teams, and organizations significantly improve performance."

"Mindset drives and shapes all that we do—how we engage with others and how we behave in every moment and situation."

"While behaviors drive results, behaviors themselves are informed and shaped by one's mindset."

Without a change in mindset, you cannot create lasting change. Technical skills or behavioral interventions may deliver short-term results, but you'll eventually lapse into old ways of thinking and acting.

- For example, you can learn new techniques from a communication course, but you won't be able to apply these effectively until you change how you see others. If you dislike and distrust someone, the other person can pick up the negative vibes regardless of what you say or do.

- By contrast, once you change your mindset, it fundamentally changes how you see and approach things. A study by McKinsey & Company found that organizational change is 4x as likely to succeed if you target underlying mindsets from the onset.

Example: the Kansas City Police Department (KCPD).

- In the past, the KCPD used to take a hard stance with suspects. During drug busts, they would take down suspects aggressively, thrash their homes and even shoot their pets. This only led to increasing tension, worsening crime rates and community complaints.

- Then, the team considered a new perspective: what was it like to be on the other side of the fence? They realized that the drug peddlers were also people trying to make ends meet. Damaging their homes and terrifying their families did nothing to control crime.

- This simple mindset shift led to a major transformation. During drug busts, SWAT team members started to protect the civilians and their properties, and they even prepare milk formula to calm terrified mothers and their babies. Before long, complaints went down, and suspects even cooperated with the police to reduce drugs and guns on the streets.

KEY QUOTES

"As the mindset changes, so does the behavior, without having to prescribe the change."

Inward Mindset vs Outward Mindset

When we **focus inward** on our own needs and goals, we perceive others as objects, or just a means to our own ends. We may:

- Treat others like tools or vehicles to achieve our goals;
- Blame them for obstructing our goals; and/or
- Ignore them because they seem irrelevant to our goals.

When we **focus outward**, we see others as people like us. We see both our needs and theirs, and realize how we're interconnected. This broadens our perspective and helps us to see new possibilities. When we see others as people, we also want to help them and make a positive impact on their lives.

Inward and outward mindsets are not about personality types (e.g. introversion vs extroversion) but **perspectives**.

- The inward mindset arises because we see the "self" as a separate entity, and *imagine boundaries and separations* when they don't exist. In reality, no human being can be truly "independent":
  i. Our physical bodies are shaped by the genes we inherit, our thoughts/beliefs are shaped by the people and environment we're born into, and our moods/feelings are influenced by the people around us. Even when we're alone, our state of mind is affected by our thoughts about other people.
  ii. Everything we say and do also impacts others around us, to create ripple effects on our communities.
- The 2 mindsets fall on a *continuum*. All of us exhibit both mindsets, and we can intentionally shift toward an outward mindset to improve our personal and professional outcomes.

INWARD MINDSET	OUTWARD MINDSET
See Others As Objects:	See Others As People:
Tools for our goals	Interlinked with us
Obstacles to blame	Have their needs/goals
Irrelevancies to ignore	Deserve our help

KEY QUOTES

"Separation is an abstraction. Together is our reality."
—Martin Buber

"People are at once independent and dependent, both alone and fundamentally together, at the same time influencing others and being influenced by them."

"Accountability, collaboration, innovation, leadership, culture, and value to customers all improve as organizations increasingly apply an outward mindset in their strategies, structures, systems, processes, and day-to-day-work."

Inward and outward mindsets are manifested as 2 types of **leadership**:

- *Isolated leaders* see themselves as separate from those they lead. To them, people are like objects or resources to be managed.

- *Together leaders* realize that they exist as leaders only because of their followers. They see unlimited potential in each person, consider things from others' point of view, and are thus able to find new solutions that are invisible to isolated leaders.

Let's take a look at a few **real-world examples**:

- *Business turnaround*: After a company acquired by a larger firm, it was instructed to cut costs by $100mil within 30 days. The president, Louise Francesconi, gathered her executives to discuss solutions.

  - Initially, the managers adopted an inward mindset, to protect their own position, manpower and budget, while hoping for the layoffs to come from other parts of the business.

  - Then, the team stepped back to consider the impact on each person they laid off. Once they started to see the employees as real people with families and commitments, they decided to avoid layoffs if possible. The executives held 1-1 meetings to understand more about their colleagues' work, and one executive even suggested folding his division into another division. The resulting waves of collaboration improved the company's results so dramatically that they managed to double their business growth without any layoffs.

- *Healthcare*: A team of medical staff were struggling to handle a Vietnamese patient. The patient didn't understand English, was unable to communicate with the medical team at all, and would frequently throw tantrums or hurl stuff. The team debated using medication to calm her, or even discharge her to get her off their hands. Then, a team member asked, "What is it like to be her?" This simple shift—to see the patient as a person instead of just a problem to be dealt with—changed the team's perspective. They started to find ways to ease the patient's stress and frustration, e.g. getting her Vietnamese food and connect her with the local community.

KEY QUOTES

"The truth, once seen, enables change even where change seems most unlikely."

- *Father-son relationship*: William Cornia was a famer with drinking and anger management issues. He frequently took his anger out on the farm animals, so much so that his son, Ivan, lived in fear that William would one day turn the anger on him. Then one day, Ivan himself lost his temper and started to beat a cow violently. William finally realized how deeply he had affected his son. Once he shifted his focus away from his own frustrations toward his son's well-being, he was able to overcome his anger management issues and become a changed man.

Shifting to an Outward Mindset

Breaking Free from Inward Thinking

Often, we are the biggest obstacles to our own freedom and growth. When we feel overwhelmed by challenges in life, we tend to look inward and blame others for our circumstances, failures, and disappointments.

- We *see others in distorted ways* to justify our own actions or inactions, e.g. "I'm not helping him because he's lazy and irresponsible" or "I'm withholding information only because he did it first." Such behaviors worsen the problem, conflict, tension, or lack of cooperation.

- During hard times, an outward mindset is even more crucial to help you *get unstuck*. For example, Chris Wallace was a young man who felt trapped on his family's ranch. He blamed his father for his lack of opportunities and the family's financial distress. After his father committed suicide, Chris continued to blame him for everything that went wrong in his life. Then, a chance encounter with a stranger helped Chris to realize that he had never stopped to consider his father's burdens. He had focused only on what he wanted, and was ultimately responsible for his own self-defeating thoughts. From then on, he stopped obsessing over his father's failings, and started to take responsibility for his own life.

At other times, we think we're being outward-minded when we're actually adopting an inward mindset. For example, a father thought he was spending quality time with his daughter by

KEY QUOTES

"The most troubling areas of our lives will be those in which we resist what the humanity of others invites us to see."

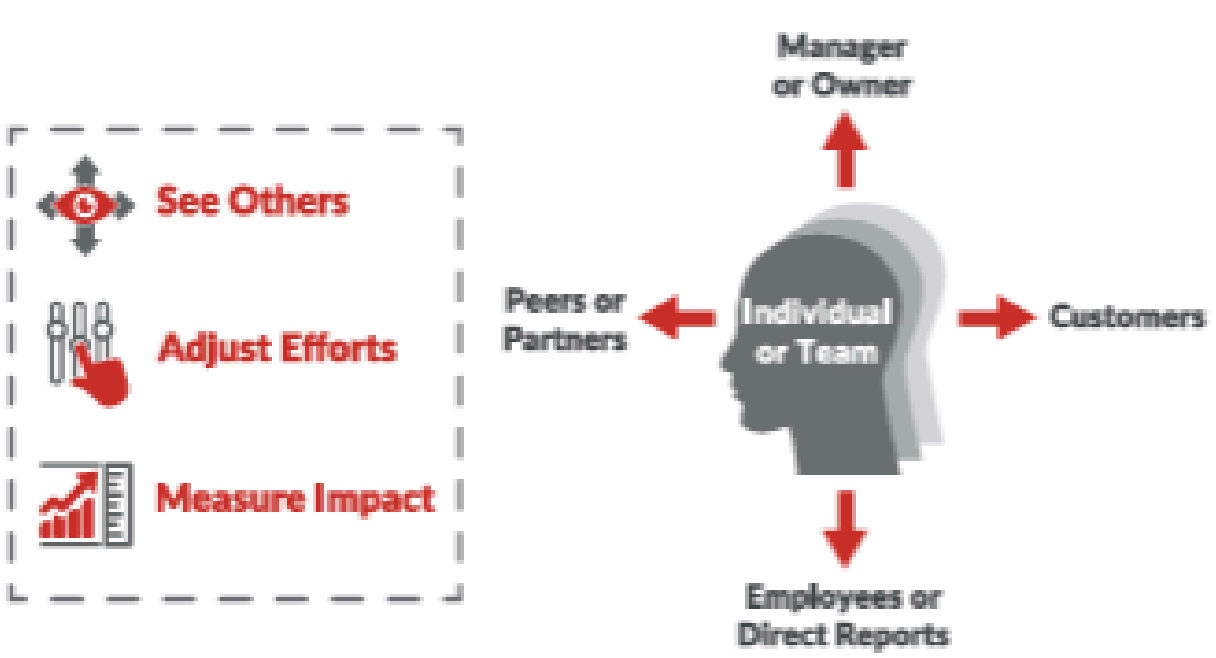
playing basketball with her in the evenings. Then one day, he realized that his daughter didn't like basketball at all. He had been doing what he wanted to do, and not what she needed from him.

The 3-Part Approach to an Outward Mindset

There are 3 steps that any individual, team, or organization can use to shift to an outward mindset:

- *See others'* needs, goals, and challenges;
- *Adjust your efforts* to become more helpful to others; and
- *Measure your impact* on others and hold yourself accountable for your impact.

In an organizational setting, these 3 steps should be applied to your stakeholders including: your (i) manager or business owner, (ii) employees or direct reports, (iii) peers or partners, and (iv) customers.



Example: Ford. When Alan Mulally became the CEO of Ford in 2006, the company was losing $17bil per year. Yet, people didn't feel responsible for the company's problems, and continued to rate their work highly.

- To develop ownership and accountability, Mulally introduced 2 weekly meetings: the Business Plan Review (BPR) and the Special Attention Review (SAR). At the BPRs, senior executives had to personally account for their key areas of responsibility using color codes—green for items that were on-plan, yellow for items at risk of going off-plan, and red for things that were already off-track.

KEY QUOTES

- Due to Ford's culture of hiding mistakes, all the executives initially reported their items as 100% green. One day, an executive had no choice but to report a red item, because a faulty tailgating system made it too risky to launch a new vehicle on schedule. Instead of reprimanding the executive, Mulally praised him for the visibility and asked, "Who can help him with that?" Soon, other executives also started to share honest updates and participate actively in the weekly discussions.

- The BPR helped the executives to (i) see how their roles related to one another and to Ford's wider objectives, (ii) adjust their work to help one another, and (iii) assess if their actions were making any difference. The turnaround was dramatic. During the 2008 financial crisis, Ford was the only U.S. automobile manufacturer that didn't need a federal bailout.

Example: CFS2. Bill Bartmann was the founder and CEO of CFS2, a debt collection company that operated with an outward mindset.

- CFS2 realized that people owed money because they didn't have money in the first place. In fact, many debtors felt so defeated that they had no motivation to turn things around.

- Instead of trying to squeeze every drop from the debtors, the team brainstormed ways to help, e.g. writing resumes for their clients, and reminding them to show up at the interviews on time. CFS2 employees were rewarded based on how far they helped their clients, rather than how much debt they collected. Once the debtors had money, they could repay their debts and wanted to do so, creating a win-win outcome.

- By seeing and understanding the debtors' needs, the CFS2 team was able to adjust their efforts and create a much larger impact.

To **see others**, be genuinely interested in them.

- For instance, if you dislike client meetings or engaging people at a party, stop trying too hard. Instead, try saying "Tell me more" or "*How can I help?*"

- At an organizational level, develop *lateral awareness*, i.e. be conscious of the needs, goals and challenges of those working alongside you. Try this exercise:

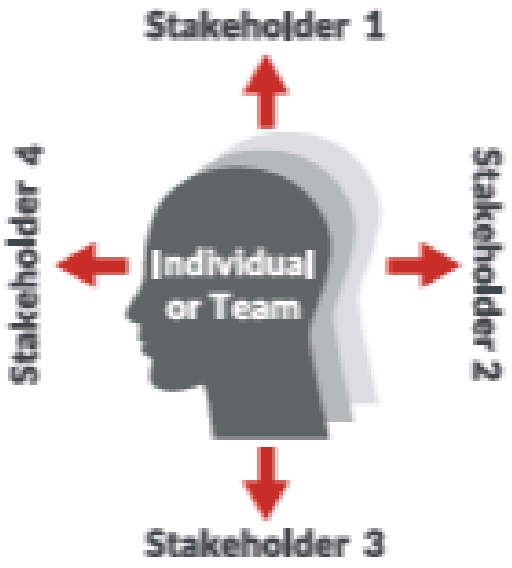
KEY QUOTES

"Outward-mindset people and organizations help others to be able to do things."

- Get each team or individual to list down the names of people or groups who're affected by their work. Have them map it out on an outward-mindset diagram, talk to one another to understand their respective processes, and refine the diagrams.

- Then, discuss how they can better help one another to achieve their goals, and how to measure their impact.

The Outward Mindset Diagram



- Once you look outward, you'll start to see solutions you didn't previously consider. Others also feel seen/heard and become more willing to look outward too. This allows an entire organization to start *breaking free from an inward mindset*.

The next steps are to **adjust your efforts and measure the impact:**

- You can adopt *self-accountability checks* by getting regular feedback from your clients/stakeholders to ensure they are satisfied with the value they are getting.

- You can also develop *metrics* to measure what others could achieve because of your efforts. Hope Arising, a non-profit organization, sought to help orphaned and at-risk children in rural Ethiopia. Initially, they measured their efforts in terms of the amount of clean water they delivered, but this didn't tell them the extent of their impact. After speaking with the villagers, they found that clean water reduced the children's risks of falling sick, so they could go to school and get the education they needed to improve their circumstances. By measuring the number of days children went to school, they could find even more ways to improve clean water supply and get kids to school.

Don't Wait for Others to Change — Take the First Step

One of the problems of the inward mindset is that **we wait for others to change** before we do anything. If everyone waits for everyone else, nothing ever happens.

KEY QUOTES

"When we are listened to, it creates us, makes us unfold and expand. Ideas actually begin to grow within us and come to life."
—Brenda Ueland

"If we don't measure the impact of our efforts on the objectives of those we are serving, we will remain blind to important ways we need to adjust and will end up not serving others well."

"No problem could be solved if individuals were not willing to address how they themselves were part of the problem."

- To create outward mindset shifts, you must be willing to *make a unilateral change* even if others do not, and to sustain those changes even if others don't reciprocate them.

- Leaders play a vital role in *bringing people together* to align their perspectives.

    - For example, a company's sales and credit teams were at odds because the sales team blamed the credit team for rejecting customers' applications, while the credit team blamed the sales team for bypassing the credit application process and increasing bad debts.

    - Finally, the credit department head got the teams to jointly explore ways to close sales and minimize bad debt. They agreed on a common goal—to keep bad debt at 2.5% of the company's revenues in a way that helped the sales team and company to achieve their sales and profit goals respectively. This paved the way for them to start collaborating instead of pointing fingers.

Approach any problem with the mentality: "As far as I'm concerned, the problem is me". **Make the outward shift yourself** regardless of what others do or don't do.

- An outward mindset won't allow others take advantage of you. It only increases your awareness so you can respond more intelligently to others. On the other hand, an inward mindset is more likely to lead you to placate or indulge others.

- As an organization shifts to an outward mindset, those who're unwilling to change will also leave eventually, since they won't be able to contribute at the new levels expected of them.

Shifting Outward as a Team or Organization

Any change will be much faster and longer-lasting if you **start with mindset shifts**, and let it lead the behavioral changes. Before resorting to behavioral interventions, consider if you have:

- Understood the needs, goals, and challenges of all parties involved;

- Adjusted your efforts in view of those issues; and

- Held yourself accountable for your impact on those people.

KEY QUOTES

"The outward mindset doesn't make them soft; it makes them smart."

"You will make progress toward change much more quickly to the degree you first attend to mindset."

Rally people around a **collective goal or outcome** that's bigger than any individual.

- Often, people focus on narrowly on their individual roles because (i) they don't understand how their roles fit into the wider picture and/or (ii) they're unclear on their impact or accountabilities. When leaders *clarify the collective result*, it helps people to figure out what they can do rather than wait for specific instructions.

- Even if your organization doesn't have a clear collective goal, you can still use the outward mindset diagram above to *understand your role* relative to the needs, goals and challenges of your stakeholders. Then, adjust your efforts and measure your impact accordingly.

Let people plan and execute their work, so they can **take responsibility for their roles and results.**

- Often, leaders assign people with narrowly-defined tasks, then blame them for poor performance. On the other hand, the executers blame the leaders for unrealistic targets or poor planning.

- Don't expect people to mindlessly execute what you tell them to do. Coach them to use the outward mindset diagram and 3-part approach so they can rethink their own roles and decide on the results they must deliver. Use the same approach to own your plans, actions, and impact. For example:

  i. A couple couldn't get their kids to do the chores assigned to them. Then, they started to involve the kids in the planning process. Once the kids had a say on what should be done and how, they took ownership of the tasks and founds ways to make them fun and enjoyable.

  ii. The new leader of a healthcare facility was struggling to get people to speak up and share their ideas. So, he started to work alongside them, chatted about their work, and invited them to share/expand on their ideas (instead of interjecting with his own). Before long, people opened up and started to explore ways to improve their efforts and impact.

KEY QUOTES

"Wherever people are organized together, a collective result already exists, just waiting to be named, collaborated around, and worked toward."

Wherever possible, **remove unnecessary distinctions** that distance senior executives from the rest of the organization, e.g. exclusive offices on the top floor or private parking lots.

- When senior leaders abide by a different set of rules or privileges, it creates a perceived gap that reduces their influence. Likewise, it's easier for parents to influence their children if they *follow the same set of rules*.

- Leaders must *walk the talk*. Make the changes yourself before asking others to do so. Start by considering your employees' perspectives, needs and goals, and adjusting your efforts and measurements to help them achieve those needs/goals first.

Develop **outward systems and processes** to support the mindset you're trying to cultivate.

- For example, it's hard to get people to be outward-minded if your *performance system* is based on inward results. If your organization rewards only the top 10% and fires the bottom 10%, people will be too focused on keeping their jobs to collaborate and innovate toward organizational goals. Instead, focus on developing people and holding them accountable for growing their impact and results.

- Institutionalize outward-minded *strategies and practices*, e.g. discuss collective goals, actions, and challenges at team meetings, or regularly review examples of outward-minded actions.

Other Details in the Book to Look out For

It takes time and effort to shift from an inward mindset to an outward mindset. The good news is, the more you do it, the easier it becomes, until it becomes your default way of thinking. This book is full of real-world stories and examples—from education to business, healthcare, and Navy SEALS—to help the readers understand the outward mindset and how to apply it. For more information, please visit https://arbinger.com/.

KEY QUOTES

"When leaders begin to take seriously the project of not taking themselves too seriously and begin collapsing the distinctions between themselves and others, they are positioned to begin scaling mindset change."

"Create an organizational ecosystem that energizes people rather than manages objects."

"Outwardness does to inwardness what light does to darkness: it chases it away."

THE MOM TEST

How to Talk to Customers & Learn If Your Business is a Good Idea When Everyone is Lying to You

Rob Fitzpatrick

The Big "So What"

Most startups fail because they build something that nobody wants. The biggest trap? Asking bad questions that lead to misleading answers. *The Mom Test* is a guide for talking to customers in a way that reveals the truth—so you can build something people will actually buy.

Why Customer Conversations Go Wrong

It's important to **talk to customers to understand their needs**. Yet, most entrepreneurs get it wrong.

- They ask family, friends, or prospects if their business idea is good. But *people lie* because they want to be polite and supportive, especially when they see how passionate you are. This leads to false validation, sending the startup down a wrong path and wasting valuable time and resources.

Rob Fitzpatrick, a tech entrepreneur, learned this the hard way after years of building startups and mentoring founders. In this book, he explains how to get real, actionable insights using **The Mom Test**—a set of rules to help you uncover what your customers truly need and will pay for, and avoid the pitfall of building something no one wants.

KEY QUOTES

"Trying to learn from customer conversations is like excavating a delicate archaeological site. The truth is down there somewhere, but it's fragile."

"Questions are our tools. But we must learn to wield them. It's delicate work. And well worth learning."

"Doing it wrong is worse than doing nothing at all... collecting a fistful of false positives is like convincing a drunk he's sober: not an improvement."

"I learned that there's a big gap between textbooks and check books."

- The method integrates *proven insights* from design thinking, lean startup, sales, customer development, and user experience, validated by the author's real-world experience. They are useful for anyone launching a startup, validating a business idea, or improving an existing product.

- In this summary, we present the insights in *2 parts*:

  (i) What is The Mom Test?

  (ii) How to apply The Mom Test effectively.

The Mom Test: The Art of Asking Good Questions

The Mom Test has **3 simple rules** for asking the right questions so even your mom can't give you misleading answers.

- *Talk about their life, not your idea.*
  - Instead of asking, "Do you like this idea?", ask "How do you currently solve this problem?"

- *Ask about specifics in the past*, not hypotheticals about the future.
  - Instead of asking, "Would you pay for this?", ask "The last time you faced this problem, what did you do?"

- *Listen more, talk less*. The more you talk about your idea, you more you bias their response. To learn what matters to customers, let them do the talking.

If possible, ask about their problems without mentioning your solution—if they don't know your idea, they can't give false validation. So, **what questions should you ask or avoid?**

- *Do* get specific facts about customers' lives—problems, behaviors, goals, and constraints.
  - *Pain points*: What's the hardest part about dealing with this issue?
  - *Current solutions*: How are you solving this today?
  - *Past behavior*: When was the last time you faced this problem? What did you do?

KEY QUOTES

"I can't teach you how to make your business huge... But I can give you the tools to talk to customers, navigate the noise, and learn what they really want."

"The Mom Test is a set of simple rules for crafting good questions that even your mom can't lie to you about."

"The more you're talking, the worse you're doing."

"The measure of usefulness of an early customer conversation is whether it gives us concrete facts about our customers' lives and world views."

- *Spending habits*: Have you ever paid to solve this problem? How much did you pay?

- *Don't* ask about the solution you should build, including:
  - *Their opinions*: Do you think this is a good idea?
  - *Hypotheticals*: Would you use this if it existed?
  - *Leading questions*: Don't you think this feature is cool?
  - *Fishing for approval*: We're working on this—do you like it?

Managing Misleading Responses

Watch out for **3 types of bad data** which can lead startups to chase false signals, build the wrong product, and waste time/money. Learn to identify and correct them, to keep your customer conversations on track.

Compliments are empty validations. When people say they "like" your idea, it doesn't mean they will use it or pay for it.

- Beware of *vague, positive comments* like "Great idea!" or "I love it!" These have:

  (i) No mention of specific pain points, frustrations, or past behaviors; and

  (ii) No signs of real engagement, such as asking for details, discussing how they'd use it, or committing to next steps (e.g. asking for a demo or offering to make an introduction).

- Deflect compliments and *redirect the conversation to facts.* If they say, "That sounds great," clarify with "What makes you say that? Have you struggled with this problem before?"

Fluff refers to vague, hypothetical, or overly-optimistic claims about what someone might do in the future. People are bad at predicting their own behavior, so don't trust such hypothetical statements.

- Listen out for *3 warning signs*:

  (i) Generalized claims like "I never", "I always", or "I usually";

  (ii) Future-oriented promises like "I will" or "I would"; and

  (iii) Hypotheticals like "I could", or "I might".

KEY QUOTES

"It boils down to this: you aren't allowed to tell them what their problem is, and in return, they aren't allowed to tell you what to build. They own the problem, you own the solution."

"Bad data gives us false negatives (thinking the idea is dead when it's not) and—more dangerously—false positives (convincing yourself you're right when you're not)."

"Compliments are the fool's gold of customer learning: shiny, distracting, and entirely worthless."

"You want facts and commitments, not compliments."

- Dig deeper into specifics and past behavior.

  (i) If they say "I usually...", ask for specifics, e.g. "Can you walk me through the last time you faced this issue?"

  (ii) If they say "I would pay for that," follow up with, "Have you ever paid for a similar solution before?"

Wishlists: Customers love suggesting features and improvements, but these may not reflect what they truly need. Blindly following such requests can lead to bloated products and wasted resources.

- Beware of *broad suggestions* without specific pain points or struggles, e.g. "You should add this feature", "It would be great if it could also do X" or "I think it should be more like product Y".

- Listen for *emotions* (e.g. frustration, excitement) that suggest it's a real problem for them, and *dig deeper* to uncover the real issue they're trying to solve.

  - People describe symptoms, but it's your job to diagnose the underlying problem and design the best solution for it.

  - Ask: Why do you want this feature? What problem would it solve for you? How are you handling this issue today? Tell me why this is so terrible for you.

- Ideally, *observe what they do* rather than trust what they say. If possible, ask them to perform a task that they struggle with, so you can see the issue first-hand.

If possible don't even mention your idea, so you can **focus the conversation on them**.

- If they ask about your product, *promise to share more later* and redirect the conversation back to their needs.

- If you *accidentally start pitching*, apologize and refocus on them : "Oops, I got carried away. Let's return to what you were saying earlier about..."

- When they share about a problem, resist the urge to correct them or start offering solutions. *Listen* to understand their real frustrations.

KEY QUOTES

"Reject their generic claims, incidental complaints, and fluffy promises. Instead, anchor them toward the life they already lead and the actions they're already taking."

"Ideas and feature requests should be understood, but not obeyed."

"Digging into a signal is basically just giving them permission to do a brain dump."

"When you hear a request, it's your job to understand the motivations which led to it."

"Once you start talking about your idea, they stop talking about their problems."

Asking The Right Questions

If a question won't change your business, then it's not worth asking. Focus on **tough, important questions** that help you make better business decisions.

- Focus on confirming or debunking *critical assumptions* that can make or break the business. Ask yourself:

  (i) What can cause your business to fail?

  (ii) What must be true for your business to be wildly successful?

- For example, if your startup has legal ambiguities, talk to a lawyer before scaling up. *Don't avoid tough questions*.

Embrace bad news. The sooner you realize you're on a wrong path, the faster you can pivot.

- If you have $50k capital and spend $5k to learn you're off-track, you still have $45k to pivot. But if you spend all $50k before realizing nobody wants your product, there's no turning back.

- If you only receive good news, then you're not learning anything useful. *Negative and lukewarm responses* signal low interest—investigate them to challenge your business assumptions.

Don't **zoom in too early on a specific problem**, such as asking "What's your biggest problem with going to the gym?" before verifying if they even care about fitness.

- Just because someone has a problem doesn't mean they care enough to solve it. *Ask broad questions initially*, e.g. "What are your biggest challenges right now?"

- Only zoom in when a problem is mentioned unprompted in multiple conversations. Look for strong, recurring signals that it's a *must-solve-now problem*, not a nice-to-have improvement.

  - Look for people who get emotional about the problem. Someone who says "That's annoying" is unlikely to be a good lead. But if someone says, "This is ruining my life! I'd pay you right now to fix it!" it sends a much stronger signal.

KEY QUOTES

"Every time you talk to someone, you should be asking a question which has the potential to completely destroy your currently imagined business."

"You should be terrified of at least one of the questions you're asking in every conversation."

"You're searching for the truth, not trying to be right. And you want to do it as quickly and cheaply as possible."

"There's more reliable information in a "meh" than a "Wow!" You can't build a business on a lukewarm response."

"Most people have lots of problems which they don't actually care enough about to fix, but which they'll happily tell you the details of if you ask them."

Address both **market and product risks**. An idea is worthless if no one wants it (market risk), or if you can't execute it (product risk).

- Make sure you address *both critical factors* for business success:

  (i) Market risk: Do customers want this? Will they pay? Are there enough customers?

  (ii) Product risk: Can you build it? Can you scale it?

- Identify and *remove your biggest risks first*.

  (i) If your idea faces market risk, validate demand first.

  (ii) If your idea has product risk, test feasibility before scaling.

- If your business has more product risk than market risk, then you can't rely on conversations alone. You need other techniques like *rapid prototyping* to mitigate technical risks.

KEY QUOTES

"It's tempting to obsess over the most interesting of several failure points and ignore the others. It's a great way to miss important questions."

Processes & Tips for Early Customer Conversations

Now, let's explore the strategies and processes to apply The Mom Test for effective customer feedback.

Define a Strong, Specific Niche

Beware of 3 traps that lead you to talk to the wrong people.

- Targeting *too broad a segment*: Don't try to target everyone, as it dilutes your focus and leads to conflicting insights.
  - For example, "students" is too broad—it includes PhD students, prep-school kids, homeschooled kids, rural students, and city college students, all with different needs, budgets, and behaviors. A specific segment could be "final-year students preparing for job interviews."
  - If you don't see consistent patterns in problems and goals, it's a sign that you must drill down to a more specific niche.

"When the feedback is all over the map, it's really hard to extract value. Once you get specific, you can learn."

- *Missing key customer segments*. For example, if you're building an app for students, you can't target students alone. You should also consider parents, schools, and administrators.

- *Neglecting stakeholders* in a complex buying purchase. If you're selling to public schools, you also need buy-in from teachers, principals, school boards, and even taxpayers. If your product relies on partners or distributors, do consider their constraints. Talk to decision-makers, influencers, and end users to get a fuller picture.

A **good niche** is one that needs a solution urgently, will pay for it, and is easy to reach. When you're launching a startup or new product, it helps you to focus on the right customers first.

- *Big companies all started small*. For example, Google initially helped PhD students to find obscure code, while Evernote helped moms to save recipes.

- *Who*: Start with a broad group, then use customer slicing to narrow down your target segment.

  (i) Within this group, who wants it most?

  (ii) What's their real motivation (problem or goal)?

  (iii) Are there other groups with the same motivation?

- *Where*: identify behaviors and where they gather:

  (i) What are these people already doing to solve this problem?

  (ii) Where can we find them (e.g. online communities, events, professional groups)?

- A good segment = *who + where*. If you can't clearly define both, it means you must refine your segment further.

Move Through Discovery Conversations Quickly

According to Steve Blank's Customer Development model, we should hold **3 distinct types of conversations** for: (i) understanding the customers and their problem, (ii) presenting a solution, and (iii) selling the product. This prevents early customer discovery from being biased by pre-conceived solutions.

KEY QUOTES

"You can't get the data you need if you're talking to the wrong people."

"When it comes to avoiding drowning and making faster progress, good customer segmentation is your best friend."

"Before we can serve everyone, we have to serve someone."

"Good customer segments are a who-where pair. If you don't know where to go to find your customers, keep slicing your segment into smaller pieces until you do."

"A customer segment isn't very useful if there's no way you can get in touch!"

"The structure of separate problem/solution/sales conversations is critical for avoiding bias, but it's important to realise that the first one doesn't actually need to be a meeting."

- However, *you don't need formal meetings* to get valuable insights. Quick, casual chats often work better because:

  (i) Formal meetings are time-consuming: a 1-hour meeting often takes >4 hours including prep, commute, and follow-up.

  (ii) Early-stage founders may struggle to secure meetings since they lack credibility.

  (iii) Formal meetings can set the wrong expectations. Customers assume they'll be pitched a product, leading to polite but biased responses.

Casual conversations can give faster insights and less biased responses than formal meetings.

- Rather than spend weeks trying to schedule meetings, just ask about people's problems in *casual settings* whenever the opportunity arises.

- The goal in early-stage customer learning is to validate if a problem exists and if customers care enough to solve it. You can gather valuable insights in 5-15 min by *asking good questions without pitching your solution*. For example:

  - At conferences: "I'm curious: how did you land this speaking gig?"

  - At networking events: "What tools do you currently use for X?"

  - Over coffee: "What's the hardest part about managing your team?"

- Longer discussions (30–60 min) might be needed later when you investigate workflows or industry dynamics. Still, *keep these casual* to increase the likelihood of honest, unbiased feedback.

  - For example, Fitzpatrick once assumed that investors struggled with too many startup leads. Instead of pitching a solution outright, he opened a meeting with a casual question: "You must get tons of leads—how do you handle them?" The investor replied that their analysts filter out most leads, leaving them with only 10 serious ones

KEY QUOTES

"Learning about a customer and their problems works better as a quick and casual chat than a long, formal meeting."

"You can talk anywhere and save yourself the formal meetings until you have something concrete to show."

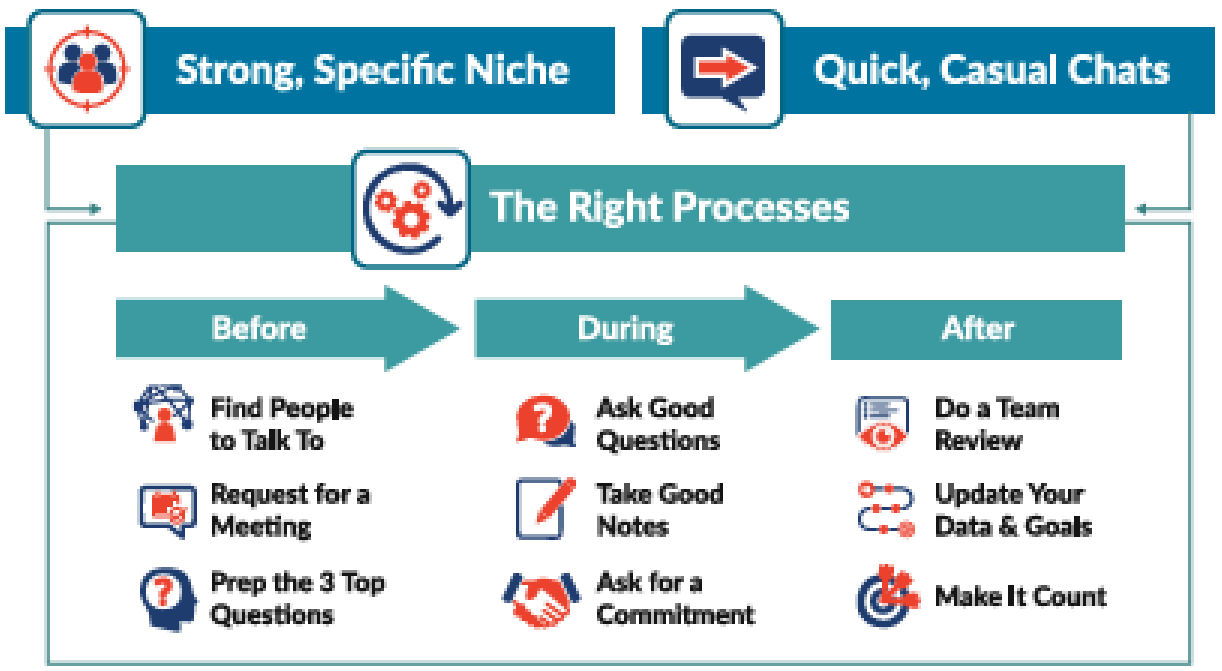
"If it feels like they're doing you a favour by talking to you, it's probably too formal."

"Give as little information as possible about your idea while still nudging the discussion in a useful direction."

to track. Within 5 min, Fitzpatrick had established that the problem didn't exist.

Adopt the Right Processes

Treat customer conversations not as isolated events, but part of a **structured learning process**. Make sure the insights are gathered effectively, shared throughout the team, and acted upon.



- *Beforehand*, you must find people to talk to and prepare your questions in advance.
- *During meetings*, ask good questions, take good notes, and secure an advancement.
- *After each conversation*, review results with the team, and update your database/goals.

First, **find the right people to talk to**. If you have customers, start by talking to them. If not, you'll need to seek out conversations.

- *Nurture prospects* over time for warm introductions.

  (i) *Cold calls and messages* have a high rejection rate. But even 1-2 "yeses" out of 100 contacts could open new doors.

  (ii) Spark *spontaneous, casual conversations* in daily interactions. People love talking about their challenges —you simply need to ask good question, show genuine interest, and listen.

KEY QUOTES

"The customer and learning has to be shared with the entire founding team, promptly and faithfully."

"Having a process is valuable, but don't get stuck in it. Sometimes you can just pick up the phone and hack through the knot."

"The only thing people love talking about more than themselves is their problems."

(iii) Use *landing pages* to collect emails of people who're interested in your product, then reach out to start a conversation.

- You can also *bring prospects to you*:

  (i) Host *meetups or events*, e.g. "happy hour for designers". Or, let's say you want to connect with top universities but lack credibility—try hosting an online "knowledge exchange" between department heads of elite schools and invite other universities to listen in. This builds credibility and gives you instant access to high-value contacts.

  (ii) *Speak or teach* through workshops, online videos, or free consulting hours to build credibility and relationships.

  (iii) Use *blogging* to build an audience, credibility, and organize your thoughts to communicate more clearly.

- *Ask for introductions* through mutual contacts.

  (i) Tap on direct/indirect contacts in your network. A group of graduates got 3 introductions just by standing up in a coworking space and asking, "Does anyone know someone at McKinsey? We'll buy you a beer!"

  (ii) Reach out to industry advisors (for industry contacts), investors (for B-to-B contacts), or university professors.

  (iii) Call in favors from people who invited you to keep them in the loop in past meetings. Say something like, "Hey, we're finally ready to talk to [desired contact]. Would you be open to making an intro?"

Ask for meetings the right way. Set the right expectations so people don't assume you're pitching a product.

- Use this 5-*part meeting request formula*:

  (i) Vision: Share the industry problem you're solving, without mentioning your solution.

  (ii) Framing: Say you're still learning and have nothing to sell.

  (iii) Weakness: Show you need their help.

KEY QUOTES

"If it's a topic you both care about, find an excuse to talk about it. Your idea never needs to enter the equation and you'll both enjoy the chat."

"Blogging about an industry is... a good exercise to get your thoughts in a row. It makes you a better customer conversationalist.

"The world is a relatively small place. Everyone knows someone. We just have to remember to ask."

(iv) Pedestal: Show why they're the right person to help.

(v) Ask: Request a chat.

- *Meet in person where possible*. It's harder to assess body language in phone/video calls, or to build relationships for future introductions.

- Don't approach customer conversations with a sales mindset, as it creates a needy vibe and weakens your position. *Shift your mindset*—you're just looking for advisors who could get excited about your idea and share valuable insights. This will make your conversations more casual and natural.

Prepare your 3 biggest learning questions for every conversation.

- Consider the biggest risks and questions based on the *type of person* you're speaking with. If you're meeting a potential customer, then ask about pain points, options, and purchasing habits. If you're meeting an investor, ask about market size, risks, or revenue potential.

- *Involve the entire team* (including members from product development and sales/marketing).

- List down what you think the customer wants, and do *desk research* so you don't waste time asking for answers you can find online.

During the meeting, ask the right questions, manage misleading information, and keep it casual. It's also crucial to **take good notes**.

- If possible, *have 2 people attend* the meeting, so 1 person can lead the conversation while the other takes notes.

- Fitzpatrick recommends writing your notes using *tools* like Google Docs or Evernote, so it's easy to reorganize them later.

- Record important points including:

(i) Pain points or problems;

(ii) Goals or job-to-be-done;

(iii) Obstacles in their way;

KEY QUOTES

"Phone calls end up sounding more like scripted interviews than natural conversations, because they are. It's a constraint of the medium."

"You are just trying to find helpful, knowledgable people who are excited about your idea."

"If you don't know what you're trying to learn, you shouldn't bother having the conversation."

"Taking good notes is the best way to keep your team (and investors and advisors) in the loop. Plus, notes make it harder to lie to yourself."

"Ask learning questions which pass The Mom Test. Then confirm by selling it. This happens over both the life of your company and during a single meeting."

(iv) Current workarounds; and

(v) Context (or background).

- Use *symbols and emojis* to capture the context and emotional reactions quickly. Star ★ any follow up actions required.
- Capture *exact quotes* in quotation marks, especially about pain points or constraints.

Never close a meeting without **asking for a commitment**.

- *A meeting is only successful if there's an advancement*, i.e. they make a commitment that moves them closer to a purchase. A commitment involves giving up something valuable, such as:

  (i) *Time*: Committing time for further discussions/demos.

  (ii) *Reputation*: Introducing you to a decision-marker or vouching for you publicly.

  (iii) *Money*: Pre-ordering, paying a deposit, or signing a letter of intent.

  The more they give up, the stronger their interest.

- After gathering insights using the Mom Test, confirm if they're truly interested by *giving them a chance to commit or to reject you*.
  - If they say, "That sounds interesting," ask: "Would you be open to introduce me to the person in charge of this?"
  - If they hesitate, it's a red flag that they might not really care about the problem. This is still useful information, as it helps you to cut through the noise and focus only on those who're truly interested.

Right after a meeting, **review the notes** with your team to ensure nothing gets lost in translation.

- Share the *main takeaways*, including the key quotes, insights, and problems encountered.
- Consider *what worked and what can be improved* in future conversations.

KEY QUOTES

"A meeting has succeeded when it ends with a commitment to advance to the next step."

"By giving them a clear chance to either commit or reject us, we get out of the friend-zone and can identify the real leads."

"It's not a real lead until you've given them a concrete chance to reject you."

"In early stage sales, the real goal is learning. Revenue is just a side-effect."

"If you don't know why you're there, it becomes a sales meeting by default."

- *Regularly update* your customer knowledge base and learning goals: What insights have emerged? What else must we learn?

If you're going to invest time/resources to talk to customers, then **make it count**.

- Ensure you *reap the rewards* by (i) focusing on questions that truly matter, and (ii) sharing the learning throughout the team.

- Your goal is to *have just enough meetings* to extract key insights and move forward. So, talk to people until you stop hearing new info. If your niche is well-defined, this might take just 3-5 conversations. But, if you're still getting confused signals after more than 10 meetings, then you probably need to narrow or refine your target segment.

Other Details in the Book to Look out For

Using the tips above, you can systematically gather insights that lead to sound business decisions. The book also includes many real-world examples, detailed scripts for different scenarios, and practical refinements to improve customer conversations over time. For more details, visit www.momtestbook.com.

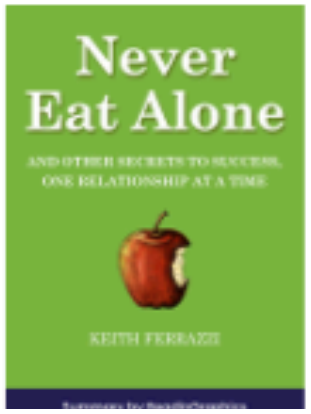
About the Author

Rob Fitzpatrick is a serial entrepreneur, startup mentor, and author. He spent over a decade working in startups, sales, and product development, and has advised thousands of founders on how to validate their ideas without misleading feedback. He currently runs workshops, writes extensively about startup best practices, and builds tools to support founders in making smarter business decisions.

KEY QUOTES

"Talking to customers is a tool, not an obligation."

"You can't outsource or hire someone to do customer learning."



NEVER EAT ALONE

And Other Secrets to Success, One Relationship at a Time

KEITH FERRAZZI

The Big "So What"

Relationships are a crucial part of both our professional and personal lives. They can open doors and bring success and fulfillment that you cannot achieve on your own. This book explains why you should make relationship-building a way of life, and how to build your personal network and brand.

Join the Club

To succeed, you can't rely on hard work and talent alone—you also need others' help and support. The rich get richer not just because of their financial resources, but because they have well-connected friends and associates who share valuable advice and open doors to the right people and opportunities. It's like being part of a privileged club.

It's never too late to join the club by cultivating the right relationships in the right way. By seeking the help and advice of successful people, building his relationship skills and network, Ferrazzi became the Chief Marketing Offer (CMO) at Deloitte & Touche Consulting, the youngest-ever CMO at Starwood Hotel & Resorts, then the CEO of Yaya Media, before starting his own company. In this book, he shares the insights accumulated from more than 2 decades of relationship-building. By applying these strategies and tips, you too can become a highly-accomplished connector.

Adopt the Right Mindset

Networking has a bad connotation because of people who build relationships just to exploit them. The key to successful networking is to add value to help *others* to succeed.

KEY QUOTES

"Relationships are all there is. Everything in the universe only exists because it is in relationship to everything else. Nothing exists in isolation."
—Margaret Wheatley

"You can't get there alone. In fact, you can't get very far at all."

"Business is a human enterprise, driven and determined by people."

"I learned that real networking was about finding ways to make other people more successful."

Don't keep score

Connecting is a two-way process of giving and receiving. Contribute generously to others *and* be willing to ask for others' help. Adopt the philosophy that everyone has the potential to help and be helped.

- When someone asks you for a small favor, just do it. Relationships are like muscles that grow stronger with regular use. The more people you help, the more people will help you and one another, to create a *multiplier effect*.

- In every interaction, ask "How can I help you?" instead of "How can you help *me*?" *Don't keep score*. Keep giving your time, money or expertise, and you'll eventually be rewarded.

- *Be generous to everyone*. Things move in cycles and you never know when you'll be the one who needs help. Someone who's insignificant today can very well become influential tomorrow.

Crystallize your mission and strategy

It's always easier to achieve something with a proper goal and strategy. Use 3 steps to make relationship-building a part of your strategy.

- Take time to figure what you truly want to do. *Find your "Blue Flame"* which lies the intersection of your mission, passion, and ability.

  (i) Look *inward*. Brainstorm a list of your dreams and goals, followed by a list of things that bring you joy/pleasure. Then, connect the 2 lists to look for intersections.

  (ii) Look *outward*: ask people who know you well what they admire most about you (your strengths) and what areas you need help in (your weaknesses).

KEY QUOTES

"Until you become as willing to ask for help as you are to give it...you are only working half the equation."

"The currency of real networking is not greed but generosity."

"Business cycles ebb and flow; your friends and trusted associates remain."

"Our achievements grow according to the size of our dreams and the degree to which we are in touch with our mission."

"Most people...accept what they 'should' be doing, rather than take the time to figure out what they want to be doing."

- *Fill in the Networking Action Plan (NAP)* to identify how to acquire the required skills, tools and resources. Put your goals down in writing. Keep them specific, believable, and challenging. Share your goals and put your plan somewhere visible.

  (i) Define the *interim goals* (in 3 months, 1 year and 3 years) that'd bring you toward your mission.

  (ii) List down the *people, places, and things* you'd need.

  (iii) Assess the best *strategies* to acquire them.

- *Create a personal "Board of Advisors"* to help you stay on-track. At one point, Ferrazzi's goal was to be a CEO of a big corporation. After filling out his NAP, he sought inputs from his board. They pointed out that he lacked the qualifications to be the CEO of a large corporation, and he should go for a smaller company he could grow with. Ferrazzi redirected his focus and soon found an ideal role as the CEO of YaYa—a company that was pioneering online games as an advertising platform.

KEY QUOTES

"An unwritten wish is just a dream. In writing, it's a commitment, a goal."

"A goal is a dream with a deadline."

Build it before you need it

Relationships take time to build. It'll be too late to start building your network only when you need for it, e.g. when you lose your job or start a business. Start building your community today.

- Begin by connecting with and through the *people you already know*. For example, you can volunteer for a company project to learn new skills and meet new people, take on leadership positions outside work (e.g. in hobby or community groups), join an alumni club or attend a course where you can meet people with your dream job. Each new person you meet will bring even more connections and opportunities.

- Let's say you wish to start your own public relations (PR) firm the in future, but lack the necessary experience. Consider the industries you wish to specialize in, the future clients you'll need, and start making the connections now. Treat people as friends, not potential

"Building a relationship is necessarily incremental. You can only truly gain someone's trust and commitment little by little over time."

"The law of probability ensures that the more new people you know, the more opportunities will come your way and the more help you'll get at critical junctures in your career."

customers. Offer your services for free initially (say, at a nonprofit organization) so you can *gradually build your skills, credibility, and network*. By the time you start your business or make a career switch, you'd already have a ready pool of contacts who can provide vital references and world-of-mouth.

Have the courage to ask

It's much easier to stick to people you know than to approach people you don't know and/or ask for help. Be audacious enough to put yourself out there and ask for help or connections. People are often glad for the chance to contribute!

To overcome your fears:

- Realize that *it's normal* to feel anxious and uncomfortable.
- Weigh your fear of embarrassment/rejection against the *price of failing* in your goal/mission.
- Make a *commitment to improve*. For example, you can learn from role models who're great with people, improve your speaking skills (e.g. join the Toastmasters club, get a coach or join a course), practice your interpersonal skills in a club/community, or challenge yourself to meet 1 new person a week.

Don't be a networking jerk

Seek to build meaningful relationships. *Don't* swoop around shaking hands and collecting cards, engage in gossip, or blast out mass emails. *Do* have something meaningful to share, treat everyone with respect, honesty and transparency, and make genuine personal connections.

Develop the Required Skills

Be intentional about who you meet, how you meet them, and the impression you create.

KEY QUOTES

"Nothing in my life has created opportunity like a willingness to ask, whatever the situation."

"The choice isn't between success and failure; it's between choosing risk and striving for greatness, or risking nothing and being certain of mediocrity."

"Being liked can be the most potent, constructive force for getting business done."

Do your homework

Develop your name list. After you've defined your mission and interim goals, you must identify the names of specific people who can help you to get there.

- Start with people in your *existing network*, which is wider than you think. Consider the people connected to your relatives (and *their* friends), current and former colleagues, members of social/professional/religious groups, your children's friends' parents, former teachers/employers, existing suppliers etc.

- Keep expanding your *aspiration list*, i.e. the people you'd want to know but may not know yet. Organize your list using an app or software.

Always prepare before a meeting: research about their company, industry or job, their personal affiliations, and read up on articles written by or about them. Your goal is to get to know them as human beings: what they feel strongly about in/out of work, including their interests, hobbies, goals and challenges. Consolidate the points into a 1-page synopsis. Use the insights to connect with the person emotionally and start a real friendship.

Approaching new contacts

Don't make cold calls. Instead, warm up the cold leads in advance.

- Once you've researched the person's interests and associations, work backward to find people you know who're involved in similar causes/circles. Ask for an *introduction* or referral. If people are busy or slow to respond to your request, just put aside your ego and keep reaching out.

- Once you have the contact or referral, persist until you've set up a meeting. Use these *4 rules to warm up the call*:

  (i) Establish *credibility*: mention the familiar person/organization who referred you.

KEY QUOTES

"Find a way to become part of those things that are of most interest to them, and you will have found a way to become part of their life."

"Cold calls are for suckers. I don't call cold—ever."

"Selling is, reduced to its essence, solving another person's problems. And you can only do that when you know what those problems are."

(ii) State your *value proposition*, i.e. how you can solve their problem. Give just enough info to be enticing.

(iii) Convey both *urgency and convenience*: suggest follow-up details and state that you'll do what's needed to meet on their terms.

(iv) Start big and offer a *compromise* to secure a follow-up.

Manage gatekeepers artfully. See them as your allies and associates, and treat them with respect and dignity. Be persistent but not aggressive, always express appreciation for their help and never offend them. Remember: gatekeepers have a job to do. It's your responsibility to show why their boss should hear from you, e.g. make it clear that you were referred by the boss's friend or associate.

Be visible

Fill your social and events calendar. Never eat alone.

- Find meaningful ways to *multiply your time and network*. For instance, instead of meeting 3 people separately, you can invite all 3 to dinner. This allows you to concurrently meet more people *and* connect others in your network. You can always add some 1-1 time before/ after dinner for deeper interactions.

- *Go for quality over quantity*. It's much better to make a quality connection in a first-class flight cabin than to meet a bunch of desperate job-seekers at a networking event.

Share your passions. Focus on what you excel in or are passionate about—you'll be much more comfortable and compelling in those areas. If you love food, music and sports, then invite people to join you for meals, concerts and sporting events. Match people's interests to the events.

Follow up consistently

People won't remember you unless you rigorously follow-up with them. Always follow up within 12-24 hours from a meeting.

KEY QUOTES

"Always respect the gatekeeper's power. Treat them with the dignity they deserve."

"The more new connections you establish, the more opportunities you'll have to make even more new connections."

"Shared interests are the basic building blocks of any relationship."

"The follow-up is the hammer and nails of your networking tool kit."

- Express your pleasure and gratitude for the meeting, cite a common interest that you discussed, and thank them by name. You can also send relevant information on an issue they're facing, or send an additional handwritten thank-you note for a personal touch. *Focus on what you can do for them* (not vice versa).

- If any *commitments* were made, recap it in writing and arrange for a next meeting. For example, "I enjoyed our discussion yesterday. I've given some thought to [the issue discussed] and how [my company] can help to advance [your goal]. When I'm next in town, I'd love to arrange to meet for 5-10 minutes so I can share some of these finer details."

- Update *the person who referred you* and thank them for the help.

KEY QUOTES

"Conferences are good for mainly one thing. They provide a forum to meet the kind of like-minded people who can help you fulfil your mission and goals."

"As an information resource, you're someone always worth knowing."

Become a conference commando

Don't attend conferences to listen to the speakers or sell your products. Your goal should be to meet like-minded people who can advance your mission. Get them to like you and set up follow-up discussions *after* the conference.

Get the most from conferences using these tips:

- Focus on *the people, not the content*. Only attend conferences if the value of the potential relationships outweigh the fees and time spent.

- *Help or be the organizer*. Volunteer your services so you can get inside information on the attendees and the best events for networking.

- Familiarize yourself with the event details and establish yourself as a *go-to info source* so people will want to connect with you.

- *Be a speaker*: This is one of the best ways to build visibility, credibility, and connect with other speakers/ participants. Just get to know the organizer and have great content that's relevant to the conference guests.

- *Organize your own event(s)* within the conference, e.g. host a private tour or dinner/drinks to informally discuss a topic.

- Identify the most *prominent figures* at the conference, attend their sessions and make an impression early (before their talk). They can open the doors to other key people at the conference.

- *Know your targets*. At each conference, Ferrazzi focuses on checking off a list of 3-4 key people whom he wants to meet. Strategically "bump" into them. Have a pre-prepared sound bite, i.e. 2-3 sentences that convey what you can do for them.

- *Master the "Deep Bump"*. Once you bump into your target, you have only 2 minutes to make a deep connection so they'll like you and agree to reconnect again later.

- Make sure you *follow up* after the conference.

KEY QUOTES

"Don't think of your next conference as a business-related retreat. Think of it as a well-coordinated campaign to further your mission."

Expand your social circle

Connect with the super-connectors. Generally, we're just 6 degrees away from anyone else in the world because someone will know someone who knows someone etc. *Super-connectors* are those who know thousands of people (from different worlds or social circles) well enough to give them a call. Once you're familiar with a super connector, you're just 2 degrees away from any person you wish to know. A disproportionate number of super-connectors can be found in these 7 professions: restaurateurs, headhunters, lobbyists, fundraisers, politicians, journalists, and PR specialists.

"In one word: Connect. In four better words: Connect with the connectors."

Another efficient way to grow your network is to link your circle with someone else's.

- Identify the world you want to access, and *exchange networks* with a key figure in that world. For instance, to meet doctors for your new product, you can host dinners for a well-connected doctor and his contacts, while similarly linking him to relevant contacts in your network.

"The underlying dynamic at work has to be mutual benefit. It should be a win-win for all involved."

- This requires *mutual contribution and trust* between the 2 partners. Set clear expectations upfront, and ensure that your contacts also benefit from the connections. Never give anyone full access to all your contacts.

Master the art of small talk

The goal of small talk is to start a conversation, engage the other person and leave with them with a deep liking for you. The best way to stand out is simply to be yourself. Dare to be vulnerable and share from the heart. In so doing, you invite others to open up, allowing commonalities to surface and real bonds to be formed.

- *Nonverbal cues* are vital in creating positive first impressions. Give a warm smile, maintain eye contact, nod, lean in slightly, and add a light touch on the elbow if appropriate.

- Be prepared with *conversational content* on current affairs or a niche/specialty you're passionate about.

- *Make them feel special*. Be genuinely interested in what they say. Ask questions, listen fully, nod, laugh at their jokes, and always remember their name.

- Match or *mirror the other person's Johari Window* or how much you reveal of yourself.

- Exit gracefully. End with an *invitation to meet again*.

Convert Connections Into Compatriots

Create an emotional impact thru' health, wealth & children

When you help someone to achieve what they really want, you win their loyalty and create deep bonds that last the test of time.

Often, people's deepest desires come down to one of 3 things: making money, finding love, or changing the world.

KEY QUOTES

"Charm is simply a matter of being yourself. Your uniqueness is your power."

"Power, today, comes from sharing information, not with holding it."

"When you understand someone else's mission...that will help you create deep, long-lasting bonds."

- *Self-actualization* (the desire to maximize one's potential) is at the top of Maslow's hierarchy of human needs.

- But to get there, you must first meet your basic needs. When you help someone through a *health* crisis, improve their personal *wealth*, or show genuine interest in their *children*, you address their basic needs while empowering them to move up Maslow's hierarchy to seek higher aspirations, thus creating a big emotional impact. However, if you make empty promises and fail to deliver on these important issues, it'll also backfire.

Practice social arbitrage

The best way to gain power is to become indispensable to others by brokering contacts, information and goodwill. Social arbitrage is about linking people and opportunities from different worlds that wouldn't otherwise meet.

- You can *introduce people* from different circles who can mutually benefit, e.g. a friend who urgently needs to find a house and a reliable realtor who specializes in that area.

- You can also *trade in knowledge*, e.g. reading up on a topic, then share the insights with people who can benefit from them. Or, pass on the insights from 1 party to another.

Ping constantly

The only way to remember people (and vice versa) is to constantly stay in touch. "Pinging" is any form of fast, casual greeting.

- In *new relationships*, people must see/hear your name in ≥3 modes of communication (e.g. e-mail, phone call, face-to-face meeting) before they can recognize you.

- To cultivate a *developing relationship*, you must call or e-mail at least once a month.

KEY QUOTES

"It's a sort of ongoing puzzle, matching up the right people and the right opportunities."

"You have to feed the fire of your network or it will wither or die."

- To *convert a contact into a friend*, you need minimally 2 face-to-face meetings outside the office.
- To maintain a *secondary relationship*, you must ping minimally 2-3x per year.

You can ping people anytime, anywhere. Use personal events (e.g. birthdays and anniversaries) as opportunities to reach out. Develop a system for regular pinging:

- *Segment your contacts* based on your goals and mission (e.g. personal, customers, key associates, aspirational contacts).
- *Number each contact* based on the mode/frequency that you'd ping them.
- Create *call lists* by categories (e.g. reach out to people in a certain area or city during your travels).

Find and feed your anchor tenants

A shared meal in the comfort of your home is a great way to bring together people from different worlds and create new friendships.

Find "anchor tenants" or people outside your social circle who're interesting and can bring positive brand associations. Examples include journalists, artists, actors, or C-level executives.

- Once you've successfully invited an anchor tenant to your party, it's easier to attract others who wouldn't normally attend. Have a blend of *energetic, interesting people* you want to do business with, in addition to your friends and family.
- Your main goal is *relationship-building*, so keep your events fun and minimize business agendas.

KEY QUOTES

"When it comes to relationship maintenance, you have to be on your game 24/7, 365 days a year."

"Anyone who can add a little electricity to your dinner party is an anchor tenant."

Trade Up and Give Back

Stand out with interesting content

To stand out as a marketer or networker, you *must* have an interesting, unique point of view and specialized knowledge that others lack. To become a content expert in your field:

- Pick a niche that has real value for you and your company. Immerse yourself in *cutting-edge ideas and info*, and get to know people in that space (e.g. early adopters, knowledge brokers.) Get creative insights by asking lots of questions and connecting the dots between seemingly-separate things.
- Digest and distill the insights into a *clear message* about how these will impact people in your industry or domain.
- *Share* by teaching, writing and speaking about your expertise. Progressively master your brand, content and hooks (i.e. something that interests you and others).
- Your end-goal is to present your content as a *compelling story* that'd move and mobilize people.

Build and broadcast your personal brand

Your personal brand is what people think of when they hear your name. A strong brand builds your network by (i) providing a credible and unique identity, (ii) presenting a compelling message, and (iii) attracting people to you and your cause.

There are 3 steps to developing a strong personal brand:

- *Define your personal branding message (PBM)*, which is the culmination of what we've discussed so far: Mission → Goals → Content → PBM. This should include the words you want people to use when they speak of you.
- *Package your brand* with a distinct style that stands out.

KEY QUOTES

"Being known is just notoriety. But being known for something...That's respect."

"You have to believe in something...for people to believe in you."

"Perception drives reality and that we are all, in some sense, brands."

"The world is your stage. Your message is your "play." The character you portray is your brand. Look the part; live the part."

- *Broadcast your brand*. Once you have great content, present it in a way that'd be picked up by others.

Create a PR strategy to broadcast your brand and create buzz.

- You can engage PR companies as facilitators, but always *take charge of your own PR*. Build personal relationships with the media *before* you need them: contact reporters who cover your industry, send them info and inside scoops, bring them for lunch etc.

- *Help the journalists to do their jobs*. Know the media landscape, each publication's focus and target audience, and tailor your pitch for their audience. Give them a great story and show appreciation for their work.

- Find creative ways to make your pitch sound *original and fresh*. Master your sound bites, i.e. explain in ≤10 seconds why they should write about you *now*. Associate yourself with a celebrity or big name to make your pitch more interesting.

- *Start small* with a local newspaper, magazine, a college paper or even a free industry digital newsletter. The more people write about you, the more other reporters will find you.

You can also write your own articles to boost your visibility and credibility. Figure out your content and hook, pitch your idea to an editor and persist/re-pitch until you get published.

Get close to power

To truly grow your network and influence, you must learn to reach out to important people.

- You can gain power through *internal associations* (e.g. being an assistant or gatekeeper to the decision-makers) or *external associations* (e.g. links with politicians and celebrities).

KEY QUOTES

"If you don't promote yourself, however graciously, no one else will."

"There are no new stories, it has been said, only old stories told in new ways."

- Famous and powerful people are also human beings. To *gain their trust*, you must be discreet, treat them as real people, be genuinely interested in them (not their fame), and help them to achieve their goals and dreams.

There're many places where you can meet powerful people or rising stars. Join a political fundraising campaign, become a conference speaker, support nonprofit organizations, or take up sports (especially golf).

You can also build your own club. Once you've figured out your Unique Selling Proposition (USP) for a cause, passion or expertise, use it as the basis to start your own club. Invite like-minded people to join you and let *them* invite others to grow the club.

As you get closer to powerful people and gain recognition, never get arrogant and entitled. This is a sure way to lose friends and offend people. Stay humble and never forget those who helped you in the past.

Continually find mentors and mentees

Learn from successful and inspiring people. An experienced mentor can make a profound impact on your career.

- The best mentor-mentee relationships are based on *mutual benefits and emotional connections*, e.g. the mentee offers hard work and loyalty in return for the mentor's time and advice. Be humble. Listen carefully to what your mentor has to share. Ask great questions and apply their advice. Consider your mentor's needs, be willing to contribute (e.g. help out in their company or community), and show your gratitude and passion to learn.

Deliberately reach down to help others who haven't "made it" yet.

KEY QUOTES

"Building a community of like-minded people around a common cause or interest is, and has always been, a very compelling proposition in its own right."

"Arrogance is a disease that can betray you into forgetting your real friends and why they're so Important."

"The less you say, the more you'll likely hear."

Make relationship-building a way of life

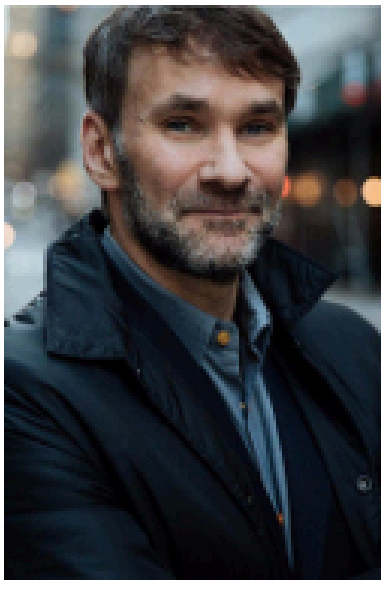
The Internet has removed traditional boundaries and made everything more interdependent. There's no better time to find your blue-flame, connect with others and grow your network.

When you're surrounded by deep, meaningful connections that concurrently serve your work/life goals *and* benefit others, there's no need for "work-life balance". If you're joyful and enthusiastic about what you do each day, then you're already in balance.

Other Details in the Book to Look Out For

This is a practical guidebook for becoming a great connector. For each of the insights captured in this summary, the book also includes other useful tips, ranging from how to host a great party to lines you can use in your interactions. Ferrazzi also includes many examples from his personal experience, with short profile stories of notable relationship-builders such as Bill Clinton, Katharine Graham and Dale Carnegie. For more details, please visit www.keithferrazzi.com.

About the Author

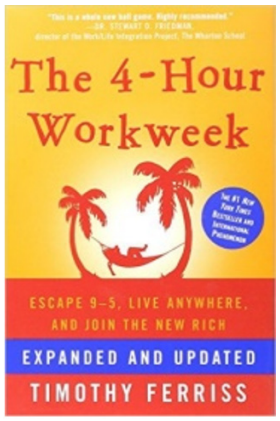


Keith Ferrazzi is an American author and entrepreneur. He's the founder and CEO of research and consulting firm Ferrazzi Greenlight. After graduating from Yale University and Harvard Business School, Ferrazzi joined Deloitte as an entry level analyst and rose to become the chief marketing officer (CMO). At 32, he became Starwood Hotels' CMO—the youngest Fortune 500 CMO at that time. In 2000, he became the CEO of YaYa Media, which was later sold to American Vantage in 2003.

KEY QUOTES

"The best thing about a relationship-driven career is that it isn't a career at all. It's a way of living."

"Life is about work, work is about life, and both are about people."



THE 4-HOUR WORKWEEK

Escape 9-5, Live Anywhere, and Join the New Rich

TIMOTHY FERRISS

The Big "So What"

Most people are resigned to the 9-5 lifestyle, deferring their lives in hope that they'll someday earn enough to retire and live their dreams. This book is about reinventing your life to create time, money and mobility, so you can focus on what truly matters to you. Join the New Rich (NR)—have the freedom to have, do and be what you want, and to live your life fully.

Introduction

To redesign your life, you need to break free from norms, create an automated income stream, and liberate yourself from unproductive tasks. Only then will you have the time and resources to focus on truly meaningful things in life.

This is a detailed "how-to" guide for reinventing your life, including tools, Q&As and action steps, following the 4-step "DEAL" process (or "DELA" for full-time employees). In this summary, we'll outline the main ideas, steps and tips involved. To put the ideas to work, we recommend that you read the entire book and other useful tips from Ferriss' blog.

Step 1: Definition

Define the New Game (and Beat the Rules)

To become a part of the NR and enjoy an extraordinary life, you must understand the rules and objectives of the new game. The goal is not to stop work or do nothing, nor is it to work hard now to enjoy life later. It's about creating the freedom of time, money and location, so you can design and live the life you want, now.

KEY QUOTES

"The New Rich (NR) are those who abandon the deferred-life plan and create luxury lifestyles in the present using the currency of the New Rich: time and mobility."

"Everything popular is wrong."
- Oscar Wilde

"You can make…a lot more money… by doing half of what you are doing now."

"Options – the ability to choose – is real power. This book is all about how to see and create those options with the least effort and cost."

"The goal is not to simply eliminate the bad, which does nothing more than leave you with a vacuum, but to pursue and experience the best in the world."

Time, lifestyle and freedom of choice are valuable to us. In fact, they're probably worth more than the paper value of money per se.

Time. Someone who works 80 hours a week and earns $1 million is probably less well-off than someone who works 20 hours a week and earns $100,000.

Lifestyle. Most of us want to be millionaires because we want the *lifestyle* that the money could bring (e.g. to travel the world or pursue our passions). Rather than slog for the million dollars first, focus on how you can achieve that lifestyle via other alternatives.

Choices. The NR lifestyle is about quality over quantity, and doing the minimum necessary to achieve maximum results. *Doing less* is not about taking shortcuts, but to do what's effective even if it's uncomfortable. Likewise, *achieving more* is not about owning everything, but to have the options to choose what matters to you.

However, don't challenge the norms for the sake of doing so. Do it only if current methods aren't effective. Here are some useful rules of thumb to remember:

The 10 Commandments of the NR Lifestyle

- **Think of retirement as your worst-case scenario.** Why slog or spend the bulk of your life doing what you dislike, then spend the rest of your days trying make do with whatever savings or physical conditions you have? Treat retirement as your fall-back plan, not your goal.

- Instead, immerse yourself fully in meaningful work, and take "mini-retirements" to fully recharge your batteries. This allows you to **harness the cyclical nature of interest and energy**, keeping you more productive and energized.

- **Less isn't laziness**. Laziness is blindly following what everyone does, *not* spending less time at work. Focus your effort on doing what's meaningful and productive.

- **There's no "right time",** so stop waiting for it. Get started and make refinements along the way.

KEY QUOTES

"The question is… How can I achieve the millionaire lifestyle of complete freedom without first having $1,000,000?"

"Money is multiplied in practical value depending on the number of W's you control in your life: what you do, when you do it, where you do it, and with whom you do it. I call this the 'freedom multiplier'."

"Retirement planning is like life insurance. It should be viewed as nothing more than a hedge against the absolute worst-case scenario."

"Alternating periods of activity and rest is necessary to survive, let alone thrive."

"Doing less meaningless work, so that you can focus on things of greater personal importance, is NOT laziness."

- **Don't wait for permission** to do what you want. At worst, take action first, and seek forgiveness if it really turns out badly.

- **Focus on strengths, not weaknesses.** Fixing weaknesses gives marginal improvements while using strengths multiply results.

- **Too much of anything isn't good**. Too much time and money isn't desirable—use your free time wisely.

- Money is useful, but **money alone won't solve all problems**.

- **Measure wealth using relative income,** i.e. money and time, rather than just absolute income (just money).

- **Remove distress, increase eustress**. Distress can harm us, while eustress ("healthy stress") can bring growth and happiness.

KEY QUOTES

"If it isn't going to devastate those around you, try it and then justify it… Most people are fast to stop you before you get started but hesitant to get in the way if you're moving."

"(Ask) for forgiveness instead of permission."

"Focus on better use of your best weapons instead of constant repair."

Define the New Game (and Beat the Rules)

Most of us are held back by our fear of the unknown. To conquer your fears, start by defining them—It'd probably become obvious that the life-changing outcome of your best-case scenario far outweighs of the risks of the worst-case scenario. This realization was what prompted Ferriss to buy a 1-way ticket to Europe and take a 1-year sabbatical from his business.

"Measure the cost of inaction, realize the unlikelihood and repairability of most missteps, and develop the most important habit of those who excel and enjoy doing so: action."

Start defining your fears with these questions:

- What's your worst fear and what's the worst thing that could happen if it's realized?

- If this worst case happened, what can you do to repair the damage or improve the situation?

- Besides the worst-case scenario, what are the more probable scenarios and their short- and long- term benefits?

- If you were fired from your job today, what would you have done to manage your financial situation?

"What we fear doing most is usually what we most need to do."

"A person's success in life can usually be measured by the number of uncomfortable conversations he or she is willing to have."

- What's the cost of your inaction—financial, emotional, physical—relative to the cost of action?

- What's holding you back?

Define your Dreams (with Dream-lining)

Rather than focus on your fear of possible failures, you should be concerned about wasting your life doing things that bore you. Start by asking: what will excite you?

The most exciting options are often also "unrealistic" ones. Rather than dismiss your dreams, use "Dreamlining" to break down your dreams into concrete timelines and actions. You can refer to detailed worksheets and tools on his blog. Here's an overview of the process:

Define your dream (what you'd do if you could not fail). Create a *6 and 12 month timeline*, listing up to 5 things you wish to *have*, *be* and *do* (in that sequence).

- Don't worry if they're realistic.
- Define what "being" means in terms of activity (e.g. "being a great dancer" could mean performing with an international dance troupe).

Identify the **4 key and most exciting dreams** from your 6- and 12-month lists, and work out **how much they'll cost**.

- Break the figures down into your *Target Monthly Income (TMI)* and *Target Daily Income (TDI)*.
- The number is often less than expected, especially when you start to *declutter your life*—itemize your monthly expenses and identify non-essentials that can be removed.

Identify **3 steps for each of the 4 dreams** in the 6 month timeline.

- *Do research*, and seek advice from someone who has done it before.
- Break these down further into simple and well-defined

KEY QUOTES

"Remember – boredom is the enemy, not some abstract 'failure."

"Excitement is the more practical synonym for happiness, and it is precisely what you should strive to chase. It is the cure-all."

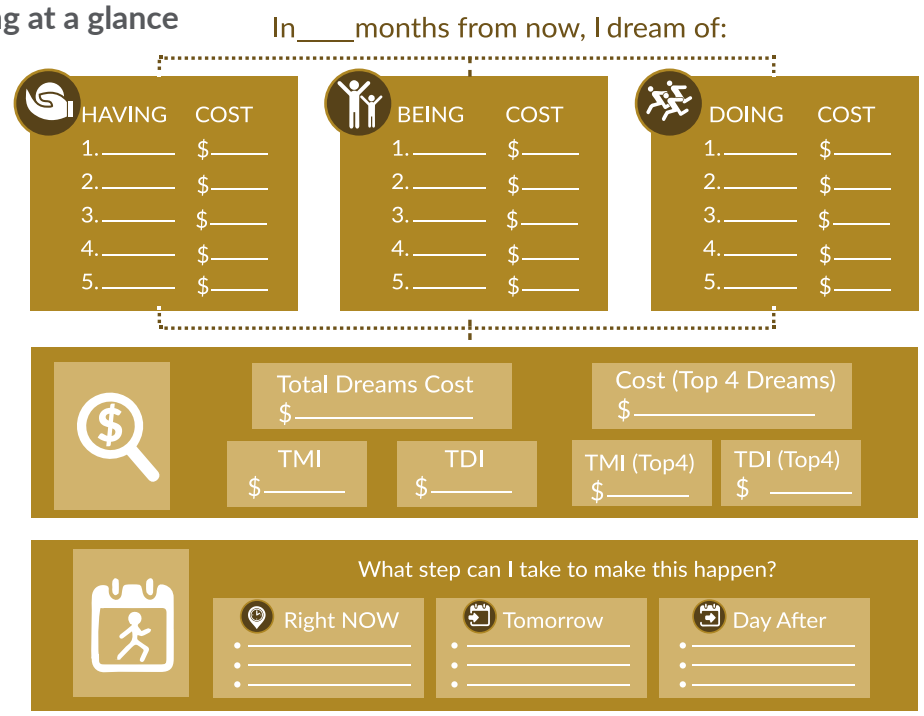
"Dreamlining is so named because it applies timelines to what most would consider dreams."

"I'm not a big believer in long-term planning and far-off goals…I generally set 3-month and 6-month dreamlines."

"Tomorrow becomes never. No matter how small the task, take the first step now!"

activities to complete (a) *now* (b) *tomorrow* before 11am and (c) the *day after* before 11 am. Don't over-analyze or seek perfection – just take action.

Dreamlining at a glance



Step 2: Elimination

Be Effective: Free up your time

Busyness is often an excuse to avoid doing what we should. The book contains numerous tips to help you improve personal productivity. Your goal is to increase your income and flexibility (for employees) or to prepare for automation to liberate yourself (for entrepreneurs).

To get productive, you need to focus on doing the right things first (effectiveness), before doing it right (efficiency). There are **2 laws you must understand and apply**:

Pareto's Law: 80% of your outputs will come from 20% of your inputs. Ferriss found that 5 of his 120 wholesale customers brought in 95% of his revenues; the bottom clients were giving him 100% of the problems. The same thing happened for advertising, affiliates and partners. By eliminating the less productive majority, he freed up time and unproductive energy.

Pakinson's Law: Work will expand to fill the allotted time. Thus, working 9-5 is inefficient - you'll create activities to fill that time.

KEY QUOTES

"Being busy is most often used as a guise for avoiding the few critically important but uncomfortable actions."

"Efficiency is still important, but it is useless unless applied to the right things."

"More customers is not automatically more income… maximum income from minimal necessary effort…is the primary goal."

Aim for "fat-free performance", to free up time for meaningful things:

Develop a to-do list, and a not-to-do list, by identifying the 20% of sources that are causing 80% of your problems, and the 20% of sources that are bringing you 80% of positive results.

Use questions like these to trigger answers:

- If you suffered a heart attack and could only work 4 hours a week, what would you do and how would you do it?
- If you could only achieve one thing today, what will make you feel satisfied and fulfilled with your day?

Reduce time for work. Shorten your deadlines so you're forced to take focused action. Take 1-2 days off a week to force yourself to prioritize your time. At least thrice a day, set reminders to ask yourself if you're creating work to avoid do the important things.

Use single-tasking. Multi-tasking gets less (not more) done.

Adopt a Low-Information Diet

We are surrounded by too much (and often wrong) information which hinders productive action. Ferriss personally doesn't read the news, and only checks his business emails for an hour each week. To keep abreast of what's going on, he asks people, "What's new in the world?", and pays attention to what others talk about.

Ferriss advocates that we pay attention only to information that's relevant, important and actionable. Here are some ideas in the book:

Go on a **1-week media fast immediately**. Lay off *all* news, web-surfing (unless needed for a specific work task), and redirect the time toward your family, friends and colleagues. As a last resort, get a 5-minute update from a well-informed contact.

Get data only *if* you'll definitely use it for something **immediate and important**. Otherwise, you'll end up repeating the process.

Learn to stop. It's ok to not-finish something if it's useless.

KEY QUOTES

"Simplicity requires ruthlessness…what would you eliminate to keep the negative effect on income to a minimum?"

"One does not accumulate but eliminate. It is not daily increase but daily decrease. The height of cultivation always runs to simplicity."

- Bruce Lee

"Problems, as a rule, solve themselves or disappear if you remove yourself as an information bottleneck and empower others."

"It is imperative that you learn to ignore or redirect all information and interruptions that are irrelevant, unimportant, or unactionable. Most are all three."

"More is not better, and stopping something is often 10 times better than finishing it."

Learn to Say No

Constant interruptions are a major time-waster. To master your time, set the rules in your favour:

Limit your accessibility. Identify what you can ignore or minimize, with little/ no ramifications, and "train" people to define their objectives before investing time with them. For example:

- *Emails*: Turn off email alerts. Only check your email 1-2x daily (during non-prime hours like 12pm and 4pm);
- *Phone-calls*: Limit time on the phone, e.g. separate your work number from an urgent-only number, start each call by stating you only have a few minutes, and ask how you can help (rather than engage in idle chit-chat);
- *Meetings*: Ferris shares many tips on how you can refuse or avoid meetings, e.g. use lines like "I can't be at the meeting, but I'll catch up later", don't accept "casual visitors" at your cubicle, keep meetings to 30 minutes, and use them only to make decisions for pre-defined problems.

Batch repetitive activities. Use time-batching for routine, menial tasks or requests, so you reduce setup costs and free up time for more important priorities. Group these repetitive tasks into batches, e.g. batching your emails, errands, bills.

Minimize interruptions. When people cannot complete a small task without prior data or approval, you get interrupted unnecessarily. The key is to set up, or request, clear rules and guidelines to facilitate autonomy (and review them occasionally):

- If you are a *micromanaged employee*, initiate an open chat with your boss; say you wish to be more productive and to interrupt him/ her less.
- If you are a *micromanaging entrepreneur*, learn to empower others to act, e.g. train your team to approach you only with proposed solutions for approval, rather than for answers.

KEY QUOTES

"Do your own thinking independently. Be the chess player, not the chess piece."
- Ralph Charell

"Learn to be difficult when it counts. In school as in life, having a reputation for being assertive will help you receive preferential treatment without having to beg or fight for it every time."

"Don't suffer fools or you'll become one."

"It is your job to train those around you to be effective and efficient. No one else will do it for you."

"People are smarter than you think. Give them a chance to prove themselves."

Check out the book for a comprehensive list of tools, apps and tips to help you get more effective, efficient, and free up your time.

Step 3: Automation

To design your NR lifestyle, you'll need a steady source of income. The conventional approach is to find a well-paying job (even if it takes up the bulk of your time). A better way is to build a "muse"—an automated revenue-generator that brings in cash without your hands-on involvement. Unlike a conventional business, a muse is in line with what you really want to do, and is less business-like.

Learn to Outsource and work with Virtual Assistants

If you recall, our goal is be able to run a business from anywhere in the world (ideally without your direct involvement). To do so, you must learn to outsource effectively. The key is to refine your rules and processes, so you can automate the process, delegate low-value tasks to focus on the high-value ones.

- By outsourcing low-end tasks (e.g. research, email administration) to smart, capable virtual assistants (VAs) from countries like India, you can focus your time on more meaningful activities. Even if you earned $25 an hour, and paid $30 an hour to a high-quality assistant, it would still be worth it, if the assistant could do the job much faster and better.

- If you are an employee, you can start by outsourcing personal items like errands, or delegating work tasks that don't require you to share your company or work details (e.g. research).

Here are some important outsourcing tips:

- **Delegate what's clear**. Before you delegate tasks, make sure you've eliminated the unnecessary (Step 2 above), and are clear on the scope and rules—delegate only tasks that are well-defined and time-consuming.

- **Remote vs local**. Outsourcing to less developed countries has its benefits, including lower per-hour costs, currency exchange savings, and time zone differences (so your team can work while you sleep). You may want to consider paying more for experience and native speakers, to minimize the need for "hand-holding".

KEY QUOTES

"Find your focus and you'll find your lifestyle."

"Becoming a member of the NR is not just about working smarter. It's about building a system to replace yourself."

"Refine rules and processes before adding people."

"Cash flow and time. With these two currencies, all other things are possible. Without them, nothing is possible."

"Eliminate before you delegate. Never automate something that can be eliminated, and never delegate something that can be automated or streamlined."

"Unless something is well-defined and important, no one should do it."

- You won't know who to hire until you **try out a few candidates**.
    - Use a *trial project* to test suitability/ capability;
    - Assess *per-task cost* rather than per-hour cost, and remember to set a time-cap or budget-cap for each task;
    - If possible, use a *VA firm with at least 3 people*, rather than solo freelancers, to avoid a single point of failure; and
    - Ferriss also shared many *other tips* e.g. how to set priorities and instructions, and protect confidential information via NDAs.
- Learn to **have fun** in the process.

Build your Muse

There are 4 key steps to finding and building your muse:

Step 1: Market Selection. Pick a profitable niche market which you can affordably reach, and define your target customers:

- Consider the social, industrial or professional groups you belong to, and/or are familiar with (e.g. doctors, dancers, engineers).
- Identify the groups that have their own magazines, with full-page ads that cost less than $5,000.

Step 2: Product Brainstorm. Think of products that you can find or develop, which your customers will likely buy:

- It's easier to *satisfy existing* demand than to build new demand. Figure out your customers' pain points, to identify products that they'll be willing to buy.
- Do not invest in the products yet; start by creating ads *that can be tested* with real customers.
- Check that your product can be *automated*, using these criteria:

(i) The main benefit can be summarized in 1 sentence, and the product can be explainable in a good online FAQ;

KEY QUOTES

"Using people to leverage a refined process multiples production; using people as a solution to a poor process multiples problems."

"This…is not for people who want to run businesses but for those who want to won businesses and spend no time on them."

"Creating demand is hard. Filling demand is much easier."

(ii) It can be sold for $50-200 (not cheap nor high-maintenance);
(iii) It has a good margin of ideally 8-10x; and
(iv) It can be produced in 3-4 weeks.

- There are *3 ways to get a product* that meets the criteria above:

  (i) *Resell a product:* This option is the fastest, but also least profitable and most vulnerable to competition.

  (ii) *License a product*: Usually, the licensor gets lower fees (3-10% of sales), and the licensee produces/ sells the products for the remaining 90-97%. This is profitable for both licensor and licensee, but the deal-making processes can be complex.

  (iii) *Create a product*: One of the best products to create are information products, which are low-cost and quick to produce [In the book, Ferriss provides many tips on how to develop your product].

Step 3: Micro-Test your products with the 3-part strategy below to ensure they're commercially sound, before producing them.

- *Study your best competitor* and create a better offer on a basic 1-3 page website. [Refer to pxmethod.com on how to setup a testimonial-rich webpage that highlights your unique factors].

- *Test actual responses* with real customers, using eBay auctions, or Google Adwords campaigns detailed in the book (or refer to Ferriss' blog for more PPC/ Google AdWords strategies).

- *Review the results*, dropping obvious losers and manufacturing the winner(s) for sales rollout.

Step 4: Rollout and Automation. People management is one of the most complex parts of a business. Since our goal is to create a business which can run itself, Ferriss suggests that you operate your business via "remote control", away from your team. That way, you'll be forced to develop rules, and empower people to solve problems. Ferris' company, Brain-QUICKEN LLC, was run by 200-300 people, but he was the only employee - he focused his efforts on policing and refining the system.

KEY QUOTES

"I tell you to solve the problem by eliminating it altogether. Remove the human element".

"Limiting contact with managers forces the entrepreneur to develop operational rules that enable others to deal with problems themselves instead of calling for help."

In the book, he recommends how you can gradually remove yourself from the day-to-day operations of your business, over 3 phases. Some recommendations include:

- *Progressively outsource every step of your business* to specialist companies who can scale up as your business expands, and allow the various outsourced partners to communicate among themselves.

- *Minimize the number of decisions for your customers*, e.g. offer only 1-2 purchase options, provide only 1 fast shipping option (charged at a premium), and avoid overnight or international shipments (which are more complex).

- When your business has a steady income stream, start to *filter out the bad customers* from the good ones. For example, offer a low-priced starter product instead of a free sample, to weed out those who won't buy from you.

- Offer a *lose-win guarantee* to completely remove the risk for the customer, e.g. Dominos promises that your pizza is free if it's not delivered in 30 minutes.

KEY QUOTES

"Our goal isn't to create a business that is as large as possible, but rather a business that bothers us as little as possible."

"The art of 'undecision' refers to minimizing the number of decisions your customers can or need to make."

Step 4: Liberation

Liberation means having the mobility to run your business from anywhere in the world. This involves 3 key components or phases.

"The New Rich are defined by a more elusive power than simple cash – unrestricted mobility."

Free yourself geographically

If you are an entrepreneur, you'll need to free yourself from the "boss mentality", and remove constraints that tie you to a fixed location. If you are an employee, you'll need to plan an "escape" from your boss and office—here's how you can achieve that in 5 steps:

"The new mantra is this : Work wherever and whenever you want, but get your work done."

- Speak with your boss to take up **additional training** that can improve your productivity—the more the company invests in you, the greater its cost of losing you.

- **Call in sick for 2 days and work from home**, ensuring you produce better work. Develop a bullet point list of how you achieved more outside the office, and quantify the business benefits.

- Casually mention to your boss that you were surprised at how much more you achieved while you were away. **Propose a revocable trial** for two days a week, for the next two weeks – highlighting that your boss can veto it anytime if there are work contingencies. Make sure you produce better results from home.

- Set a follow-up meeting with your boss to compare the results of working from home vs office, and propose to **expand the remote hours** (e.g. 4 days each week on a trial basis). Again, your boss has full veto powers to change the arrangement any time.

- Keep following up until you can propose a **permanent work arrangement** away from office. With a solid business case, your boss has no reason to refuse. In the event that he/she refuses, you should consider if it's time to take the plunge and resign. Ferriss addresses several fears or concerns that hold people back from quitting, with tips on how to manage the transition, e.g. knowing how long you can survive financially without a job, and filling up your transition periods with interesting projects so your resume looks colourful.

KEY QUOTES

"Being able to quit things that don't work is integral to being a winner."

"It's not that you don't know what to do... You are just terrified that you might end up worse off than you are now."

Take Mini-Retirements

Rather than do "binge travelling" at a stretch after you retire, it's better to take multiple "mini-retirements". It's a lot more enjoyable, less tiring and much more affordable than you think. Taking time out to slow down and free yourself—mentally, emotionally and physically—from the rat-race will also bring you fresh perspectives, and renewed energy for your work/ business.

In the book, Ferris explains mini-retirements in detail, including:

- A break down the **cost of traveling** to show that it's cheaper to take mini-retirements throughout your life, than to try and retire overseas at the end of your career.

- **Common excuses** not to travel (e.g. belongings, children)—he recommends that you let go of things that you don't need or use, as they create clutter and distractions.

- Detailed **steps and Q&As** on how to prepare for your first mini-retirement.

"Add it all up and you may well realize, like I did, that traveling around the world and having the time of your life can save you serious money."

Focus on Something Meaningful

Even if you are living your craziest dream—e.g. dropping everything and moving to the Caribbean—you will probably start to feel bored after a while. Having too much idle time and doing nothing can actually make you depressed. It's better to use your free time to live fully, to do and be more.

- One of the best ways is to **keep learning**—pick up a new skill, hobby, or language. Learning a new language can be especially meaningful, as it sharpens your mind and gives you new lenses to view and understand the world.

- There are many things that we can do to improve others' life. **Offer your service** to a cause you believe in; don't try to justify it.

- Try out a new part-time or full-time **vocation** that fulfills you.

- Don't dwell on what to do with your life, or how to find your true calling. The ideas above are merely starting points that lead you to new paths and options. **Just start doing something that fulfills you**, and let things unfold naturally. If you're still feeling lost, check out more ideas in the book to get yourself started.

Other Details in the Book to Look Out For

This is essentially a workbook to help you think about, and more importantly, take action toward your dream lifestyle. Although there are enough "how-to" tips to guide you through the process step-by-step, the biggest takeaway is probably the message that, by learning to think for yourself and break free from widely-accepted rules, you can create new options for yourself, and live an exceptional life.

It's impossible to capture all the ideas, tips and examples in this summary. Some other useful details to look out for include:

- A set of Q&A and "comfort challenges" at the end of each chapter, designed to increasingly push you out of your comfort zone (e.g. learning to eye-gaze, being a "terrible two" kid); and

KEY QUOTES

"Decreasing income-driven work isn't the end goal. Living more – and becoming more – is."

"Too much free time is no more than fertilizer for self-doubt and assorted mental tail-chasing."

"To live is to learn. I see no other option."

"Service is an attitude. Find the cause or vehicle that interests you most and make no apologies."

"Full-time work isn't bad if it's what you'd rather be doing. This is where we distinguish 'work' from a 'vocation'."

"It's about being smart and putting your effort where it can make the biggest difference for yourself and others."

"It isn't enough to think outside the box. Thinking is passive. Get used to acting outside the box."

- Pages of suggested tools, useful websites, scripts and resources for designing and implementing your NR lifestyle.

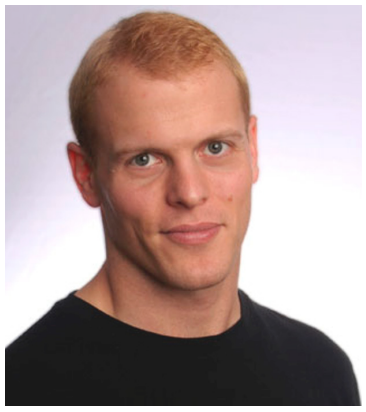
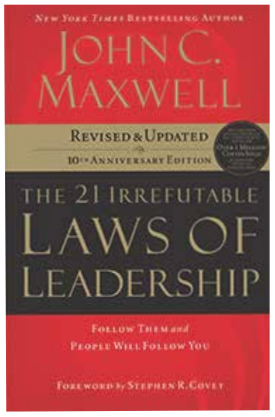
About the Author



Timothy "Tim" Ferriss (born 1977) is an American author, serial entrepreneur and public speaker. In addition to speaking six languages, Ferriss runs a multinational firm from wireless locations worldwide. His eclectic passions include being a world record holder in tango, a national champion in Chinese kickboxing and a guest lecturer at Princeton University in high-tech entrepreneurship and electrical engineering.

He has been profiled by The New York Times, National Geographic Traveler, NBC and Maxim. Ferriss is a graduate of Princeton University. For more details, visit www.fourhourblog.com

KEY QUOTES



THE 21 IRREFUTABLE LAWS OF LEADERSHIP

Follow Them and People will Follow You

By John C. Maxwell

The Big "So What"

"Everything rises and falls on leadership." The book covers 21 principles that help you to become a more powerful and effective leader, based on Maxwell's insights from over 40 years of leadership successes, mistakes, and observations of leaders in business, politics, sports, military etc.

Introduction

The principles of leadership do not change over time, though their application may vary. There are several important points to note:

- To lead well, you must do all 21 things well. Yet, no single person can apply all 21 laws perfectly. Besides constantly improving yourself, the other way is to develop a strong leadership team, so that all 21 laws can be satisfied.
- All 21 laws can be learned and mastered.
- Each law stands alone (hence you need not learn them in sequence) but they complement/reinforce one another.
- The laws bring consequences. People will follow or not follow you, depending on whether you apply or violate the laws.
- The laws need to be applied in real life to form the foundation of leadership.

1. The Law of the Lid

Leadership ability determines a person's level of effectiveness

Your level of effectiveness and accomplishments is determined by your level of leadership. In fact, leadership has a multiplier effect on success – by raising your leadership ability, you can increase your overall effectiveness many times without increasing your success dedication.

KEY QUOTES

"Everything rises and falls on leadership."

"Whatever you will accomplish is restricted by your ability to lead others."

"The higher you want to climb, the more you need leadership. The greater the impact you want to make, the greater your influences needs to be."

Applying the Law of the Lid:

- **List your major goals** - identify those that need others' cooperation
- **Assess your leadership ability** (using the assessment in the book)
- **Ask others** to rate your leadership
- Compare the ratings and **evaluate gaps if any**. Decide how willing you are to grow your own leadership abilities

2. Law of Influence

The true measure of leadership is influence – nothing more, nothing less.

Contrary to myths, leadership is not the same as management, entrepreneurship, knowledge, pioneer-ship, or position.

The proof of leadership is in the followers. People follow leaders due to 7 factors, namely their :

- Character - who they are
- Relationships - who they know
- Knowledge - what they know
- Intuition - what they feel
- Experience - where they've been
- Past successes - what they've done
- Ability - what they can do

Applying the Law of Influence:

- Identify the myths you were susceptible to + **changes in thinking** required
- Rate yourself on & identify ways to **improve the 7 factors**
- Test your leadership abilities - **lead a volunteer organization** for 6 months

3. The Law of Process

Leadership develops daily, not in a day.

KEY QUOTES

"If you don't have influence, you will never be able to lead others."

"True leadership cannot be awarded, appointed or assigned. It comes only from influence, and that cannot be mandated. It must be earned."

"When the real leader speaks, people listen. Leadership is influence – nothing more, nothing less."

Leadership is like investing – it compounds over time, and you won't make a fortune overnight. Leaders' abilities to learn, develop and improve their skills set them apart from their followers.

There are **5 phases to leadership growth**:

Phase 1 : I don't know what I don't know – which is a barrier to growth

Phase 2 : I know that I need to know – becoming conscious of your ignorance is a first step to knowledge.

Phase 3 : I know what I don't know – & have a plan for personal growth

Phase 4 : I know and grow, and it starts to show - but leadership is still a conscious effort

Phase 5 : I simply go because of what I know – the ability to lead has become almost automatic.

Applying the Law of Process:

- Create your personal plan for growth
- Provide opportunities for growth to your followers
- Create a culture of growth in your organization

KEY QUOTES

"See what a person is doing every day, day after day, and you'll know who that person is and what he or she is becoming."

"The goal each day must be to get a little better, to build on the previous day's progress."

4. The Law of Navigation

Anyone can steer the ship, but it takes a leader to chart the course

Good leaders are navigators and set the direction for their team. They have a clear vision for their destination, see the entire trip in their minds, understand who and what they need to be successful, and recognize the obstacles in advance. The larger the organization, the harder it is to make a mid-course correction, and the more clearly the leader must see ahead.

Being a good navigator requires preparation

- **Look inward**: Draw on your past success and failures. A good way to learn from past experiences is to do reflective thinking
- **Look outward**: Examine the conditions before making commitments for you and your team
- **Listen to what others have to say** and gather information from multiple sources
- **Balance faith** (confidence to make the trip) **and fact** (of what needs to be done)

"A leader is one who sees more than others see, who sees farther than others see, and who sees before others do."
- Leroy Eims

"Balancing optimism and realism, intuition and planning, faith and fact can be very difficult. But that's what it takes to be effective as a navigating leader."

Applying the Law of the Navigation:

- Set aside time for **reflective thinking** - Reflect weekly, or immediately after every major success or failure.
- **Do your homework**
- Know whether you naturally lean towards faith or fact, & **have someone with the opposite inclination to complement you** in your team

Navigation strategy

Predetermine a course of action
Lay out your goals
Adjust your priorities
Notify key personnel
Allow time for acceptance
Head into action
Expect problems
Always point to the successes
Daily review of your plan

5. The Law of Addition

Leaders add value by serving others

Effective leaders understand that to increase profits, they should add value. They also recognize that it takes many people to build a successful organization; they share and give credit rather than claim credit for themselves.

To lead effectively, it is important not to have unresolved relational conflict with others. When we adopt a genuine attitude of serving others, it removes the wrong leadership agenda, and clears the way for greater achievements.

To know if you are adding value to others, ask this question: *are you making things better for your followers?*

How to add value as a leader:

- Truly value others, and demonstrate that you care
- Make yourself more valuable to others - the more you pursue personal growth, the more you have to offer
- Know and relate to what others value – to do so, listen to others, learn what's valuable to them, then lead based on that

[Maxwell shares a 4th personal guideline - Do things that God values - i.e. treat people with respect, reach out to and serve them. This should be skipped if it does not relate to your faith/beliefs.]

KEY QUOTES

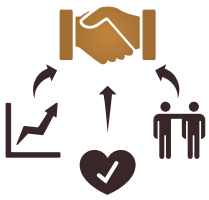
"The bottom line in leadership isn't how far we advance ourselves but how far we advance others."

"Inexperienced leaders are quick to lead before knowing anything about the people they intend to lead. But mature leaders listen, learn and then lead."

Applying the Law of Addition:

- Perform **small acts of service** for others, without seeking recognition or credit. Keep doing it until you feel no resentment doing them.
- List down the **people closest to you**, what they value, and rate how well you know it. Spend time with those you need to get to know better.
- **Start adding value** to the people on your list

6. The Law of Solid Ground



Trust is the Foundation of Leadership

Without trust, there can be no influence. Trust is built when a leader consistently demonstrates competence, connection & character. A sound character is key to building long-term trust for it conveys consistency, potential & builds respect.

When you make a mistake as a leader, others can see it. But, if you have been consistent as a leader, your followers are usually prepared to forgive lapses in ability, especially if you are ready to confess and apologize to regain the trust.

Applying the Law of Solid Ground:

- **Assess how trustworthy you are** to your followers (by how open they are with you) and to your colleagues and leaders (by how much responsibility they entrust to you)
- **Build your character** by focusing on integrity (be totally honest, even when it hurts), authenticity (be yourself with everyone) and discipline (do the right things despite of how you feel)
- Apologize to those you have hurt or betrayed in the past and commit to **slowly re-earn their trust**

7. The Law of Respect

People naturally follow leaders stronger than themselves.

KEY QUOTES

"When it comes to leadership, you just can't take shortcuts, no matter how long you've been leading your people."

"Character makes trust possible. And trust makes leadership possible. That is the Law of Solid Ground."

When people first come together in a group, they all go about their own ways, in different directions. As they interact more, the strongest leaders tend to stand out and people will follow them.

Maxwell observes these ***top 6 ways that leaders gain respect***:

- Natural leadership ability
- Respect for others
- Courage to do what's right, even at the risk of failure
- Success, in terms of past accomplishments and track record
- Loyalty to stick to the team until the job is done, stay with the organization and followers through tough times
- Value added to others

To measure your level of respect as a leader, look at the calibre of the people that you attract, and how they respond when you ask for change or commitment.

Applying the Law of Respect:

- Assess your **current level of leadership**: Review the response you received when you last asked for commitment or change.
- Rate yourself on the **6 leadership qualities**. Identify 1 practice/habit/goal to improve in each area, and work on each one for a month
- **Ask people closest to you** what they respect most about you, and which areas you need most to grow in.

8. The Law of Magnetism

Who you are is who you attract

As leaders, we usually have a mental list of the qualities we want in our people. However, we attract not what we want, but who we are. People are drawn to others with similar characteristics: generation, attitude, background, values, energy levels, giftedness, and leadership ability. Hence:

- If you are dissatisfied with the ability of people you are attracting, improve your leadership skills.
- If you are dissatisfied with the reliability of your followers, develop your character.

KEY QUOTES

"How do leaders earn respect? By making sound decisions, by admitting their mistakes, and by putting what's best for their followers and their organization ahead of their personal agendas."

"Who you attract is not determined by what you want. It's determined by who you are."

- If you are happy with who you are attracting, recruit people who are different from you, to fill your area of weaknesses.

Applying the Law of Magnetism:

- Write down the **qualities you desire** in your followers, and why. Test your self-awareness: ask someone you trust if you have these qualities
- Identify if you need to develop your character and/ or leadership skills. **Find mentors** who can and will help you - ideally from a similar profession and are several steps ahead of you in their career.
- List your 5 biggest strengths and weaknesses in terms of skills. Create a profile of the kind of **people who can take you to the next level**.

9. The Law of Intuition

Leaders evaluate everything with a leadership bias.

We are naturally intuitive in our area of strength, be it communication, arts, etc. How we see people and events is determined by who we are – hence, leaders see things with a leadership bias.

Leaders use informed intuition, i.e. they gather facts and intuitively read what's going on, to make sound decisions. It involves both natural ability and learned skills:

- **Leaders read their situation**: They sense attitudes, team dynamics, when things are improving or declining, and they know it even before they have hard facts like reports and statistics.
- **Leaders read trends**: They step back and look years or decades ahead, beyond individual projects or goals.
- **Leaders read resources**: They intuitively focus on optimizing resources. They look beyond their individual efforts, to mobilize people and leverage resources.
- **Leaders read people**: They sense people - their hopes, fears and concerns - and this is one of the key intuitive leadership skills.
- **Leaders read themselves**: They know their own strengths and weaknesses, skills and blind spots, and current state of mind.

KEY QUOTES

"Who you are dictates what you see."

"Natural ability and learned skills create an informed intuition that makes leadership issues jump out at leaders."

"A leaders has to read the situation and know instinctively what play to call."

"Leadership is really more art than science. The principles of leadership are constant, but the application changes with every leader and every situation. That's why it requires intuition."

Applying the Law of Intuition:

- Determine which is your **strongest natural talent**, and focus on trusting your intuition in that area, before developing it for leadership.
- Improve your **ability to read people** (if you are not strong in it) through books on relationship, conversing more with people and watching people.
- Train yourself to **mobilize people and harness resources** – think through how you can achieve your current projects/ goals without doing the work yourself (except for recruiting, empowering and motivating).

10. The Law of Empowerment

Only secure leaders give power to others

To lead well means to help people reach their potential - build them up, give them resources, authority, responsibility, and autonomy to achieve. The main ingredient of empowerment is belief in people.

Leaders usually fail to empower others due to ***3 key barriers***:

- Desire for job security, i.e. fear of becoming dispensable
- Resistance to change, which is inevitable for progress
- Lack of self-worth, and they can't give power to others because they feel they have no power themselves

Applying the Law of Empowerment:

- Assess your **self-worth and sense of security**. Take positive steps to add value to yourself and improve your self-worth.
- Grow your **belief in people**. Help them to use their gifts & opportunities.
- Learn to **give your power away**: Set your best people up for success.

11. The Law of Connection

Leaders touch a heart before they ask for a hand

KEY QUOTES

"Great leaders gain authority by giving it away."
- James B. Stockdale

"The best executive is the one who has sense enough to pick good men to do what he wants done, and selfrestraint enough to keep from meddling with them while they do it."
- Theodore Roosevelt

"To keep others down, you have to go down with them. And when you do that, you lose any power to lift others up."

We need to connect with people emotionally before we can move them to action. The bigger the challenge, the stronger the connection needed. The stronger the connection, the easier it is to enlist support.

It's the leader's job to initiate connection with the people, not vice versa. The key to connecting with people is to relate to them as individuals, even if they are in a group. When speaking to a large group of people, focus on talking to one person. To connect well:

- **Connect with yourself**: Belief in who you are & where you lead
- **Communicate with openness and sincerity**
- **Know your audience**: learn their names, histories, goals
- **Live your message**: To be credible, practice what you preach
- **Go to where they are**: Remove physical barriers and try to attune yourself to their culture, background, education etc.
- **Focus on them, not yourself**
- **Believe in them**: Communicate not because you have something of value to say, but because you believe your audience has value
- **Offer direction and hope**

Applying the Law of Connection:

- **Connect with yourself** (become more self-aware, value your strengths and deal positively with your weaknesses).
- Maxwell listed **10 questions** for you to assess your level of self-awareness and identify your blind spots
- Learn to "**walk slowly through the crowd**" – spend a few minutes a day building relationships & connecting with people
- If you'd rate yourself <8 out of 10 as a public speaker, improve your **communication skills**.

12. The Law of the Inner Circle

A leader's potential is determined by those closest to him

Your inner circle members are those you turn to for advice, support and assistance. You need to be intentional about who you draw into your inner circle, and to constantly improve yourself and your circle.

To filter good candidates for your inner circle, ask these questions:

KEY QUOTES

"When it comes to working with people, the heart comes before the head."

"The stronger the relationship and connection between individuals, the more likely the follower will want to help the leader."

"People's opinion of us has less to do with what they see in us than it does with what we can help them see in themselves."

"It may sound corny, but it's really true: people don't care how much you know until they know how much you care."

- Do they have **high influence** with others?
- Do they bring a **complementary gift** to the table?
- Do they hold a **strategic position** in the organization?
- Do they **add value** to me and to the organization?
- Do they have a good fit with and **positively impact** other inner circle members?

You should identify and cultivate before you recruit your inner circle members, so you can assess if they display excellence, maturity, and good character in everything they do.

Applying the Law of the Inner Circle:

- List down the names of your inner circle members and what each one contributes. Identify people to **fill gaps and eliminate redundancies**.
- **Develop your current and future inner circle members** by strategically mentoring them/ developing relationships, giving extra responsibilities, accountability and credit.
- Create a **smaller inner circle group** if you are leading a large team.

KEY QUOTES

"Only if you reach your potential as a leader do your people have a chance to reach their potential."

"You can do what I cannot do. I can do what you cannot do. Together we can do great things."
- Mother Teresa

13. The Law of the Picture

People do what people see

Great leaders show the way with the right *actions*, which are copied by their followers to success. Leaders understand the ***role of the vision***:

- A mission provides the purpose or the "why"
- A vision provides a picture of the "what"
- A strategy provides a plan or the "how"

Besides having a clear vision of the future and what must be done, leaders bridge the vision gap between them and their followers. To bring the picture alive, **they don't just communicate the vision; they effectively model the vision, setting the right example and showing the way**. Such clarity and credibility produces belief, energy, passion, and motivation for people to keep going.

"Great leaders always seem to embody two seemingly disparate qualities. They are both highly visionary and highly practical."

"Followers may doubt what their leaders say, but they usually believe what they do."

"More than anything else, employees want leaders whose beliefs and actions line up. They want good models who lead from the front."

Applying the Law of the Picture:

- Give yourself **a character audit**. Review your actions last month against your list of core values - identify gaps & inconsistencies for improvement (in both actions & attitude)
- Ask someone you trust to **observe and note inconsistencies** between what you teach and do. Review the results without defending yourself.
- List **3-5 things you wish people will do better**. Rate yourself - Improve on items with low scores and set visible examples for items with high scores.

14. The Law of Buy-In

People buy into the leader, then the vision

The message being received is always filtered through the messenger. People follow worthy causes because they first buy into worthy leaders who promote those causes. They listen to people whom they believe in, feel are credible, and want to go along with.

Leader + Vision = Results

When followers buy-in to both the leader and the vision, they will follow the leader through any challenge, i.e. both components are eventually needed for breakthrough results. However, people need to first buy into the leader.

Applying the Law of Buy-In:

- Write down the **vision statement** for your leadership & organization. Make sure it is worthy of your time and effort. If not, rethink it.
- **Rate the buy-in** of each person you lead on a scale of 1-10.
- Develop a strategy to **earn credibility** with each person.

15. The Law of the Big Mo

Momentum is a leader's best friend.

KEY QUOTES

"The leader finds the dream and then the people. The people find the leader and then the dream."

"Every message that people receive is filtered through the messenger who delivers it."

Often, momentum is the determining factor between losing & winning. An organization or team with momentum is like a train moving at high speed that can plough through obstacles. ***The Big Mo…***

- **Is a great exaggerator.** It magnifies both obstacles & possibilities to make them look bigger than they really are.
- **Makes leaders look better than they are.** A leader starts getting credit when he creates success for his team, and this is compounded over time to make him seem more successful.
- **Helps followers perform better than they are.** With the Big Mo, even average people can deliver above-average results.
- **Is easier to steer than to start.**
- **Is the most powerful change agent.** People are more willing to be a part of the change if there's strong momentum and past successes.
- **Is the leader's responsibility.** Leaders should initiate and sustain momentum, as they have the vision and ability to assemble/ motivate a team.
- **Begins inside the leader:** A leader drives his vision consistently and enthusiastically, until enough momentum is generated.
- If you are faced with a huge inertia and massive negativity, the only way to create positive momentum is **to start small and gradually build up momentum over time**, until it reaches a tipping point.

Applying the Law of the Big Mo:

- Check in on yourself: Are you consistently enthusiastic about your vision?
- Identify demotivating factors in your team & how you can remove/minimize them
- Celebrate and reward accomplishments in your team

16. The Law of Victory

Leaders find a way for the team to win.

Victorious leaders don't accept defeat. To them, there's no alternative to winning & they keep fighting till they succeed. In fact, great leaders are at their best when faced with a great challenge that pushes them to do whatever it takes to bring their people to victory.

KEY QUOTES

"When you have no momentum, even the simplest tasks seem impossible…When you have momentum on your side, the future looks bright, obstacles appear small, and troubles seem inconsequential."

"Momentum is like a magnifying glass; it makes things look bigger than they really are."

"Getting started is a struggle, but once you're moving forward, you can really start to do some amazing things."

"Given enough momentum, nearly any kind of change is possible in an organization."
"You cannot kindle a fire in any other heart until it is burning within your own."
- Eleanor Doan

There are ***3 components of victory*** in any field or domain:

- **Unified vision**, with all players working towards the same agenda
- **Diverse skills**, and an appreciation for each unique skill
- **Right leadership**, i.e. a leader who's dedicated to victory, and brings players to their potential, towards the common vision

Applying the Law of Victory:

- **Be absolutely dedicated** to the success of your team. If not, it is either the wrong vision, or you are in the wrong organization/ leadership role.
- List down all the skills needed to achieve your goals. Bring the **right members** on your team/ train current members.
- Speak with individual team members to understand what they value. Consistently **articulate a single vision** that aligns all members' goals.

17. The Law of Priorities

Leaders understand that activity is not necessarily accomplishment

Not every leader practices prioritization because:

- They confuse activity with accomplishments.
- It's hard work, as prioritization means constantly thinking ahead, and working to align the moving pieces with the vision.
- It involves doing what's uncomfortable or painful

To become more effective, ***prioritize your lives using the 3Rs***:

1. **What is Required?** What must you do that nobody can or should do for you? Focus on those and eliminate/ delegate the rest.
2. **What gives the greatest Return?** Focus on your natural gifts and strengths to get more productive and fulfilled. If something can be done 80% as well by someone else, delegate it.
3. **What brings the greatest Reward?** Make time for the things that gives you greatest personal satisfaction.

Use similar considerations to prioritize and make decisions ***at an organizational level***.

KEY QUOTES

"Victorious leaders have one thing in common: they share an unwillingness to accept defeat."

"When the pressure is on, great leaders are at their best. Whatever is inside them comes to the surface."

"Busyness does not equal productivity. Activity is not necessarily accomplishment."

"Leaders should get out of their comfort zone but stay in their strength zone."

"Passion provides the fuel in a person's life to keep him going."

Applying the Law of Priorities:

- Identify an area in your life that is not working well. Determine how you can solve the issue and realign your priorities.
- Write down your answers to the 3Rs. Create a list of the things you are doing that don't fit solidly into one of the 3Rs: redesign or eliminate them
- Regularly revisit the priorities for you and your team

18. The Law of Sacrifice

A leader must give up to go up

True leadership is not all about freedom, power and wealth. It requires sacrifice, to trade something of value that you possess, for something even more valuable that you don't yet possess. Leaders may not even see the success from their sacrifices, but someone in the future will benefit from it.

- **There is no success without sacrifice**: Good leaders understand trade-offs. They sacrifice the good for the great.
- **Leaders are often asked to give up more than others**: With greater responsibilities comes greater sacrifice. Good leaders prioritise what's right for the team, ahead of themselves.
- **You must keep giving up to stay up**: Successful leaders continuously change, improve and sacrifice.
- **The higher the level of leadership, the greater the sacrifice**

Applying the Law of Sacrifice:

- **Create 2 lists** – the things you are willing to give up, vs those you are not willing to give up, to advance as a leader
- List down **what you're prepared to offer** that's of value (e.g. time, energy, resources) for something of even greater worth
- Identify possible "**destination disease**" you may have (the thinking that you can sacrifice for a limited period of time then "arrive"), & write down a statement of ongoing-growth to counter that mind-set

KEY QUOTES

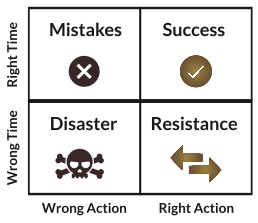
"Effective leaders sacrifice much that is good in order to dedicate themselves to what is best."

"Leaders must be willing to give up more than the people they lead."

"In leadership, sacrifice is an ongoing process, not a onetime payment."

19. The Law of Timing

When to lead is as important as What to do and Where to go



Timing is everything. It can make the deciding difference between success and failure. Only the right action at the right time will deliver results in success.

Good leadership timing involve the following factors:

- Understanding of the situation
- Maturity of motives
- Confidence in what's to be done
- Decisiveness
- Experience
- Intuition
- Preparedness

Applying the Law of Timing:

Review the recent and major actions you've initiated and how much attention you gave to timing.

Analyse some failed initiatives for your organization or team to determine whether they were caused by the wrong action or timing (Maxwell listed a list of questions to help with the assessment)

Use the list of factors above to prepare for the timing of your actions

20. The Law of Explosive Growth

To add growth, lead followers. To multiply, lead leaders.

Why develop leaders? Maxwell summarizes it as such:

> "If you develop yourself, you can experience personal success. If you develop a team, your organization can experience growth. If you develop leaders, your organization can achieve explosive growth"

To lead leaders, you need a different focus and attitude:

KEY QUOTES

"When the right leader and the right timing come together, incredible things happen."

"Reading a situation and knowing what to do are not enough to make you succeed in leadership. If you want your organization, department, or team to move forward, you must pay attention to timing."

"Leaders who develop leaders multiply their organization's growth, because for every leader they develop, they also receive the value of all that leader's followers."

"Proactive leaders…know that if they develop the best, the best will help with the rest."

Leaders who attract followers…	Leaders who develop leaders….
…Need to be needed	…Want to be succeeded
…Develop the bottom 20%	…Develop the top 20%
…Focus on weakness	…Focus on strengths
…Treat everyone the same	…Treat individuals differently
…Spend time with others	…Invest time in others
…Grow by addition	…Grow by multiplication
…Impact only people they touch	…Impact people beyond their reach

It can be ***challenging to lead leaders***:

- There are more followers than leaders, and they don't flock, so leaders are **hard to find**.
- Leaders are **hard to gather**, because you need to create an attractive environment that they can thrive in.
- Leaders are **hard to keep**, and will only follow you if you constantly grow and stay ahead of them.

Applying the Law of Explosive Growth:

- **Identify the stage you are at**: developing yourself, your team or leaders.
  Start developing leaders if you are not already doing so.
- Identify how you can **find and gather potential leaders**
  Identify how you can **gather and hold leaders**

21. The Law of Legacy

A leader's lasting value is measured by succession

A leader's lasting value is measured by what he leaves behind. This in turn requires a leader to be highly intentional about his legacy:

- **Know the legacy you want to leave**: How do you want to be remembered when you are gone? Decide on the one sentence that will summarize your life.
- **Live the legacy you want to leave**
- **Choose who will carry on your legacy**: A legacy can only live on in people, not things or lifeless objects.
- Make sure you **pass the baton**

KEY QUOTES

"Leadership development compounds. The more you invest in people and the longer you do it, the greater the growth and the higher the return."

"Leaders are like eagles – they don't flock That's why they are so hard to find."

"The only way to lead leaders is to become a better leader yourself."

'Our ability as leaders will not be measured by the buildings we built, the institutions we established, or what our team accomplished during our tenure. You and I will be judged by how well the people we invested in carried on after we are gone."

"Most people simply accept their lives – they don't lead them."

Applying the Law of Legacy:

- What will your life stand for? Summarize it in one line. This may take time to crystalize and could change with maturity and experience.
- What must you change in order to live that legacy?
- Identify and start to invest in the person(s) who will carry out your legacy.

Other details to look out for in the book

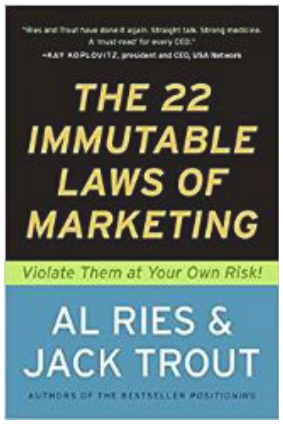
The book was first published in 1998. In this 10th Anniversary Edition, Maxwell updated the 21 Laws based on what he learned from leaders applying the principles in real-life.

The book includes many leadership examples including Maxwell's personal experiences, sportsmen, corporate leaders, US presidents, and leaders of social causes. Some of the real stories and case studies include those of Mother Teresa, Abraham Lincoln, Theodore Roosevelt, Harriet Tubman, George W Bush, Herb Lance Armstrong, Martin Luther King Jr, Nelson Mandela, Mahatma Ghandi, Jim Sinegal, and Ray Kroc.

After each chapter, Maxwell provides several tips on how to apply the leadership law in your life, as well as a leadership evaluation/ assessment in Appendix A.

KEY QUOTES

"If you want to create a legacy, you need to live it first. You must become what you desire to see in others."



THE 22 IMMUTABLE LAWS OF MARKETING

Violate Them at Your Own Risk!

BY AL RIES & JACK TROUT

The Big "So What"

As world-renowned marketing consultants with more than 25 years of marketing experience, the authors have discovered that some things work in marketing, while others don't. This book presents 22 fundamental marketing laws that have stood the test of time and affect the success of your marketing strategy. It's an essential resource for any business owner, marketing or business executive.

Introduction

According to the authors, the 22 Laws of Marketing are like the laws of nature. If you violate them, your marketing program is doomed to fail, regardless of what you throw at it—be it the brightest, most creative people, or tons of time, energy and money. To succeed, marketers and business managers must learn these laws and work within their framework; otherwise, the laws will automatically work against them.

The Fundamental Laws of Marketing

1. The Law of Leadership

It's better to be first to market, than to wait for a better product.

In marketing, it's always more effective to get into the prospects' minds first, than to try to convince them later that you have a better product.

Think of Heineken (the first imported beer to establish itself in America), Harvard (the first college founded in America), Gillette (the first safety razor), and Charles Lindbergh (the

KEY QUOTES

"There are laws of nature, so why shouldn't there be laws of marketing?"

"Once you open your mind to the possibility that there are laws of marketing, it's easy to see what they are. In truth, they are obvious."

"Many managers assume that a well-designed, well-executed, well-financed marketing program will work. It's not necessarily so."

"The leading brand in any category is almost always the first brand in the prospects' mind."

first person to fly the Atlantic Ocean solo). People tend to **remember the firsts**, but not the seconds, because:

- Humans tend to stick with what we've got; and
- The first brand to market often becomes a generic term for that product category.

Not all first movers succeed, especially if they have bad timing or a bad idea. Still, there's a significant first mover advantage in marketing. Rather than try to watch the market then develop a better product than competitors, focus on developing an entirely **new category** altogether.

2. The Law of the Category

If you aren't the first in a category, create a new category you can be first in.

Amelia Earhart was not the first to fly Atlantic solo, but she was the first *woman* to do so; Dell got a foothold in the crowded personal computer space as the first to sell computers *via phone*. You can always create another category where you can be first in.

Think in terms of **categories rather than brands**. Consumers may be defensive about their preferred brands, but they're more open to a new product in an entirely different category.

Once you're the first to market in a new category, promote that category intensively, focusing on why consumers should buy a product in that category. With no competitors in that category, consumers will naturally buy from you, and you can **"own" that category**.

3. The Law of the Mind

It's better to be first in the consumers' minds, than to be first to market.

The goal of being the first in your category is to get into the minds of consumers first.

After all, marketing is all about perception; what prospects *think* is more important than the reality of the marketplace.

KEY QUOTES

"Benchmarking doesn't work. Regardless of reality, people perceive the first product into the mind as superior."

"The basic issue in marketing is creating a category you can be first in—not in convincing people you have a better product."

"Forget the brand. Think categories."

"When you launch a new product, the first question to ask yourself is not, 'How is this new product better than the competition?' but…what category is this new product first in?"

"Being first in the marketplace is important only to the extent that it allows you to get in the mind first."

Once someone's mind is made up, it's very **hard to change**.

The most effective way to get in consumers' minds is to make a big enough splash to **be noticed**, rather than to worm your way in gradually. This doesn't necessarily involve tons of money. Apple wasn't first to market, but its name was much easier to remember, compared with the first 5 personal computers—Commodore Pet, IMSAI 8080, MITS Altair 8800, and Radio Shack TRS-80.

4. The Law of Perception

Marketing is a battle of perceptions, not products.

The best products may not win in the long run, because what's "best" is totally subjective. What's "real" and "true" to the customers are what they perceive in their minds, and marketing is about addressing those perceptions.

Marketers often try to get the "truth" on their side by using factual comparisons to justify why their product is superior. However, what drives purchases are **people's perceptions**. Toyota sells 4 times as many automobiles in Japan as Honda, because Honda is perceived to be a motorcycle company in Japan.

In fact, most people form their perceptions from just **bits of information**, e.g. an ad-hoc experience, or what they hear from someone else's experience.

The most successful products focus on creating the right perception in the mind of the prospect.

5. The Law of Focus

A key to marketing success is to own a word in the prospect's mind.

This law suggests that marketing is like a magnifying glass: use it to focus your messages until you "burn" your way into the prospect's mind, linking your product with one single word or concept. That way, the prospect will think of your product whenever that word comes up. For example, Fedex is linked with "overnight", Volvo with "safety", and Crest with "cavities".

KEY QUOTES

"If marketing is a battle of perception, not product, then the mind takes precedence over the marketplace."

"There is no objective reality…The perception is the reality."

"Most marketing mistakes stem from the assumption that you're fighting a product battle rooted in reality. All the 22 laws of marketing are derived from the exact opposite point of view."

"The only reality you can be sure about is in your perceptions… Marketing is a manipulation of those perceptions."

"The essence of marketing is narrowing the focus… You can't stand for something if you chase after everything."

You must choose a word that's not owned by anyone else. The most **effective words** are (a) simple, (b) benefits-oriented, and (c) create the halo effect, i.e. association with that word brings to mind other benefits (e.g. a "thicker" sauce suggests better quality and richer taste). The narrower and more precise the focus, the more effective it'll be.

However, the word won't work if there's no one claiming the **opposite point of view**, e.g. you can't own "quality" or "honest", since no one will declare they offer poor quality or dishonesty.

Rather than try to protect your word through legal trademarks, focus on getting as many people to **use the word** as possible, so you own it in people's minds.

6. The Law of Exclusivity

No two companies can own the same word in the prospect's mind.

If a competitor already owns a word, go for a different, unique word instead that you can own. The authors gave several examples to show it's almost impossible to claim someone else's word, e.g. how Fedex failed to take "worldwide" from DHL, and Energizer failed to take "long-lasting" from Duracell.

People rarely change their minds, and you're better off owning a unique word, than to throw resources at a competitor's word. In fact, if you try to "steal" your competitor's word, your promotions may end up reinforcing their position instead.

7. The Law of the Ladder

Your strategy depends on the rung of the ladder that you occupy.

In consumers' minds, there's a decision-making hierarchy, like the rungs of a ladder, and each rung is occupied by a brand.

Some product category ladders (e.g. automobiles, toothpaste) can have many rungs, while others may only have 2-3. As a **rule of thumb**: (a) people usually can handle only up to 7 rungs at a time, and (b) you'd have twice the market share of the brand in the next rung. Thus, it can be more attractive to be #2 or #3 on a big ladder, than to be #1 on a small ladder.

KEY QUOTES

"The trick is to get others to use the word. To be a leader you have to have followers."

"The single most wasteful thing you can do in marketing is try to change a mind."

"There's a relationship between market share and your position on the ladder in the prospect's mind."

Ideally, you should be on the top rung of your ladder. However, even if you're perceived to be #2 or #3 in your field, you can still take advantage of your **current position**. Start by assessing where you are on the ladder (or if you are on the ladder at all). Then, develop a marketing strategy that reflects your position on the ladder.

Our minds only take in new data that's **consistent** with our perception. By recognizing where you are in consumers' minds, you could get better results. For example, Avis didn't do well when it marketed itself as the finest rent-a-car service, a position clearly occupied by Hertz. Avis later changed its message to: "Avis is only No. 2 in rent-a-cars. So why go with us? We try harder." This new message was well-received by consumers, and Avis became profitable as a credible #2 player.

8. The Law of Duality

In the long run, all market battles finally come down to 2 key players.

New product categories typically start with many rungs on the ladder. This law predicts that over time, the rungs get reduced and it eventually becomes a battle between two major players, e.g. Crest vs Colgate, Nike vs Reebok, or Coke vs Pepsi.

The **timeframe** for this shift may vary from seasons to decades, depending on the category. As the 2 major players fight on, the #2 (which is usually an upstart) will gradually gain market share, while the #1 loses market share.

In the early stages, it can still be attractive to have an increasing share of a big market as the #3 or #4 player. However, as the market matures, consumers will prefer the leading brand, as they assume the market leaders have the best products. Besides the 2 key players, everyone else has only **supporting roles**; the #3 brand will have an unstable market share.

If you can't become #1 or #2 in your industry, you should focus on the niches you can fill profitably as the market leader.

9. The Law of the Opposite

If you're going for the 2nd spot, your strategy is defined by the leader.

KEY QUOTES

"The mind is selective…In general, a mind accepts only new data that is consistent with its product ladder in that category. Everything else is rejected."

"Only businesses that are No. 1 or No. 2 in their markets could win in the increasingly competitive global arena."
- Jack Welch, ex-CEO, General Electric

"In strength there is weakness. Wherever the leader is strong, there is an opportunity for a would-be No. 2 to turn the tables."

If you're aiming for the 2nd place in your industry, an effective strategy is to examine where the leader is strongest, and position yourself to offer the opposite. In so doing, you attack the leader's weakness, and take away business from all other alternatives to the leader.

The weakness must be one that your prospects can **readily accept**. For example, Scope positioned itself as the good-tasting mouthwash (in contrast to the "medicine breath" associated with Listerine); Pepsi positioned itself as the youthful choice of the new Pepsi Generation, as opposed to Coca-Cola's old, established product.

When you offer the opposite from the market leader, you present yourself as the **best alternative** for people who prefer not to buy from that leader for whatever reason. This is much more effective than trying to copy the leader.

10. The Law of Division

Gradually, a category will split into more categories.

A new category will eventually divide into many sub-categories, e.g. the category "computers" has split into mainframes, minicomputers, workstations, personal computers, tablets, etc.

Each **new segment** has reasons to exist separately, and operates with different market dynamics from the original category leader.

To avoid confusing customers, an established category leader should develop **a new brand** for each new segment that it chooses to enter. For example, General Motors created Chevrolet, Pontiac, Cadillac etc., as the automobiles industry expanded.

Many companies make the mistake of believing that their industries are **converging**. Categories don't merge; they split. This pattern is seen in every established industry from TV to beer.

11. The Law of Perspective

Marketing results are only visible after a long time.

KEY QUOTES

"Marketing is often a battle for legitimacy. The first brand that captures the concept is often able to portray its competitors as illegitimate pretenders."

"Too many potential No. 2 brands try to emulate the leader…You must present yourself as the alternative."

"Each segment is a separate, distinct entity. Each segment has its own reason for existence."

"It's better to be early than late. You can't get into the prospect's mind first unless you're prepared to spend some time waiting for things to develop."

"Categories are dividing, not combining."

In marketing, the long-term effects are often the opposite of the short-term effects.

Sales promotions may bring **short-term revenues**; but in the long-term, they educate consumers not to buy at "regular" prices. In retail, the most effective discount strategy is that of "everyday low prices", e.g. Wal-Mart or K-Mart. Line-extensions (see the next law) may also boost short-term sales, but dilutes the focus and value of the brand in the long-term.

Always adopt a **long-term focus** in your marketing programs, as the short term results tend to paint a temporary, false picture.

12. The Law of Line Extensions

It's tempting to extend the equity of a successful brand into new areas.

Often, a successful company starts to believe it can succeed in anything, and starts extending its line of products, by putting its brand on new products in unrelated categories.

When a company tries to be everything to everyone, it **loses focus** on what made it successful in the first place. The authors share several examples of companies that diversified and lost market share in the long term, e.g. IBM extended from mainframe computers into PCs, workstations, software, networks, telephones, copiers, and many other categories.

The more products you stretch your brand across, the less money you'll make. The **winning strategy** is to narrow your focus to build a strong position in the prospects' minds.

13. The Law of Sacrifice

To be successful, you must give up something.

To stay focused, there are typically 3 things to be sacrificed:

A full product line. Specialization beats generalization. Brands like Kraft may be well-known, but they don't have the biggest market share in most product categories. Many general stores like Ames and Macy's have also gone bankrupt in the past decade. When Interstate Departmental Stores went bankrupt, it chose to refocus on toys, renamed itself Toys "Я" Us, and went on to become profitable.

KEY QUOTES

"Any sort of couponing, discounts or sales tends to educate consumers to buy only when they can get a deal."

"Couponing is a drug. You continue to do it because the withdrawal symptoms are just too painful."

"When you try to be all things to all people, you inevitably wind up in trouble."

"The more products, the more markets, the more alliances a company makes, the less money it makes."

"If you want to be successful today, you should give something up."

A broad target market. When you try to serve a vast market demographic, no one is happy. Instead, when you have a laser-sharp focus, you create a deep impression and end up reaching beyond your target market. For instance, by focusing on youths, Pepsi also appealed to older people who wanted to feel youthful; by focusing on cowboys, Marlboro reached non-cowboys who wanted to feel like "real men".

Constant changes. If you change your marketing strategy each time the market shifts, nobody will understand what you stand for, and you get nowhere. Be prepared to stick to your focus.

14. The Law of Attributes

There's an effective, opposite attribute to counter every attribute.

Don't try to copy, or even find a word that's similar to the market leader. Go for something that's the complete opposite, which you can own in prospects' minds.

Instead of trying to dislodge the market leader, focus on the segments that the leader currently ignores. For instance, **opposites** to "cavity" (owned by Crest) could be "whitening", "breath protection", or "taste".

You can't predict the size of these neglected segments; the best strategy is to **play up the value** of the new attribute you've selected, to secure the biggest possible market share. If your competitors respond with fear, you'd know you have hit a sweet spot.

15. The Law of Candor

If you admit to a negative, your prospects will treat it positively.

Honesty can be very appealing in marketing, because it's unexpected and thus refreshing. People expect proof for positive statements in advertising, but they're ready to believe a negative statement.

When you start your marketing message by confessing to a problem/negative, people tend to open up their minds and become more **receptive**. This puts you in a better position to present the positive points.

KEY QUOTES

"The target is not the market. That is, the apparent target of your marketing is not the same as the people who will actually buy your product."

"Good things come to those who sacrifice."

"Too often a company attempts to emulate the leader. It's much better to search for an opposite attribute that will allow you to play off the leader. The key word here is opposite—similar won't do."

"Your job is to seize a different attribute, dramatize the value of your attribute, and thus increase your share."

"Candor is very disarming. Every negative statement you make about yourself is instantly accepted as truth. Positive statements, on the other hand, are looked at as dubious at best."

You can even **turn the negative into a positive**. When Scope entered the mouthwash market, it presented itself as the "good-tasting" mouthwash to counter Listerine's bad taste. Rather than deny the fact, Listerine played on the idea and promoted "the taste you hate twice a day"—it admitted to its bad taste, and played on the perception that something that tasted like a disinfectant must kill more germs.

There are **2 key criteria** for this law to work, (a) the prospect must instantly agree with the negative (otherwise they'll get confused), and (b) your message must move quickly to the positive, before benefit of your honesty is lost.

16. The Law of Singularity

There's always one bold move that can bring massive success.

You won't succeed in marketing by having more strategies, nor by working harder on many small actions. Winning in marketing is like winning on the battlefield—there's always one bold manoeuvre that brings spectacular results. The challenge is to find and exploit it.

Your competitors will have **one spot** where they are the most vulnerable. Don't attack them where they're strongest; instead, focus your marketing entirely on their Achilles heel, i.e. exploit the crack in their armour and attack where they least expect it.

You won't find your competitors' weakness by strategizing in the head office. To know what works and doesn't work, you must know the market first-hand. To gain true insights, marketing managers must **be personally involved** at the frontlines of the battle; important marketing decisions simply can't be delegated.

In 1985, Coca-Cola launched a reformulated "**New Coke**" to hit back at Pepsi's sweeter drink. This was a flop, and Classic Coke was quickly reintroduced in 3 months. The authors believed that Coca-Cola's single advantage against Pepsi-Cola was consumers' perception that Coke was "The Real Thing"; Coca-Cola could've killed Pepsi as a rival if it had focused on this message to the Pepsi Generation, "Kids, come get The Real Thing when you're ready". Unfortunately, New Coke had the opposite effect. [Note: New Coke was discontinued in 2002, after this book's publication in 1994].

KEY QUOTES

"Marketing is often a search for the obvious. Since you can't change a mind once it's made up, your marketing efforts have to be devoted to using ideas and concepts already installed in the brain."

"This law only proves the old maxim: Honesty is the best policy."

"The only thing that works in marketing is the single, bold stroke. Furthermore, in any given situation there is only one move that will produce substantial results."

"Marketing managers have to know what's happening in the marketplace. They have to be down at the front in the mud of the battle."

"Successful generals study the battleground and look for that one bold stroke that is least expected by the enemy."

17. The Law of Unpredictability

Since you don't write your competitor's plans, you can't predict the future.

Marketing plans are often based on wrong assumptions of the future. You can't accurately predict the future or what competitors will do.

It's important to be aware of the **general trends**. However, avoid jumping to conclusions or extrapolating too far. Remember that research only measures the past; don't assume that past or current trends will continue in the future.

Instead, build **flexibility** into your organization and plans, so you can respond to changes as they occur. Anticipate what you'd do if something totally unexpected happens; you can even take calculated risks on the future (e.g. gourmet popcorn was launched on the chance that people would pay double for premium popcorn). See change as an opportunity, rather than a threat.

18. The Law of Success

Success breeds arrogance, which breeds failure.

When a brand becomes successful, it's easy for people to lose their objectivity and stop doing what made them successful in the first place.

Their egos get inflated, and they start to impose their own views and preferences, rather than offer what the market wants. They stop following the **laws of marketing**, lose their focus and start putting the brand name on all sorts of products and categories.

It's also common for CEOs of big companies to lose touch with the frontlines; they get bogged down by meetings, events, reports, and delegate the marketing function—which is a big mistake. Marketing is the lifeblood of any company. As a manager, you can delegate your charity events or meetings, but always make time to walk around, see and hear things for yourself. Gather your market intelligence through **first-hand experience**, not via your staff.

KEY QUOTES

"No one can predict the future with any degree of certainty. Nor should marketing plans try to."

"One way to cope with an unpredictable world is to build an enormous amount of flexibility into your organization."

"Ego…can be an effective driving force in building a business. What hurts is injecting your ego in the marketing process."

"When you're blind, it is indeed hard to focus."

"The more you identify with your brand or corporate name, the more likely you are to fall into the line extension trap."

19. The Law of Failure

Failure is inevitable; expect and accept it.

In business and experiments, there will always be failures. Accepting failure as a natural part of the process allows you to admit mistakes early, make adjustments and/or cut your losses.

In most organizations, personal agenda takes precedence over corporate interest—people are afraid to take risks, make mistakes, or disrupt status quo, as it could affect their own career. To address this:

Create an **environment** where people aren't punished for experimenting and trying to find solutions for the company; and

Bring everything out in the open. Separate the evaluation of the concept from the person who'll benefit from it, so the idea can be judged on its own merits.

20. The Law of Hype

What's reported in the press is often the opposite of reality.

Media hype is almost always wrong. Developments that are reportedly going to change the industry (or even the world) often turn out to be failures. New Coke received about $1 billion worth of publicity, while NeXt computer and USA Today were promoted with great fanfare. All of them failed.

What improves viewership often isn't what will **revolutionize** a market. In fact, companies that are doing really well are often too busy to spin stories in the press.

In any case, major revolutions don't happen overnight. Personal computers and fax machines started out sluggishly, but slowly gathered momentum over the years. Instead of focusing on front-page news, look for the less-sensationalized **stories and clues** buried in the news or market.

21. The Law of Acceleration

Successful marketing is built on trends, not fads.

KEY QUOTES

"Too many companies try to fix things rather than drop things."

"If you learn something and you're trying something, then you probably get credit for it. But woe to the person who makes the same mistake twice."
- Sam Walton, Wal-Mart

"No one can predict the future…The only revolutions you can predict are the ones that have already started."

"For the most part, hype is hype…Real revolutions arrive unannounced in the middle of the night and kind of sneak up on you."

Fads are short-term occurrences, whereas trends play out over a long period of time. Companies that invest huge resources to satisfy a spike in demand can collapse when the fad passes.

If you see a business growing rapidly, treat it as a fad first. Try to dampen the demand a little while testing its underlying strength. If it's a long-term trend, it will sustain the momentum and keep going. It's better not to fully satisfy the market demand, than to over-extend yourself and end up in financial crisis.

22. The Law of Resources

To get an idea to take off, you need adequate funding.

No idea in the world can go far without resources. Thus, big boys do have an advantage, and the rich can get richer. You need money to get into the consumers' minds, and you need money to stay there. While publicity is cheaper than marketing, you still need some money to get things rolling. Meantime, venture capital is hard to find.

If you're a **small player** with an idea but no money, you have to use your idea to *find money*, then get marketing help. Some options are:

- Franchise your idea (like how Monaghan started Domino's Pizza);

- Marry the money (e.g. Georgette Mosbacher who started La Prairie), divorce the money (e.g. Frances Lear who used part of her divorce settlement to start Lear's magazine), or get money at home (e.g. Donald Trump was backed by his dad's wealth).

If you're a **big company** with huge resources, you already have an advantage. Your challenge will be to distinguish the good vs bad ideas, and spend the money in the right places. *Front-load* your investment by ploughing all your initial earnings back into marketing for the first 2-3 years.

KEY QUOTES

"A fad is a wave in the ocean, and a trend is the tide…Like a wave, a fad is very visible, but it goes up and down in a big hurry. Like the tide, a trend is almost invisible, but it's very powerful over the longer term."

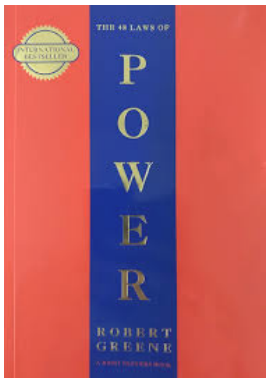
"One way to maintain a long-term demand for your product is to never totally satisfy the demand."

"Even the best idea in the world won't go very far without the money to get it off the ground."

"Here is the bottom line. First get the idea, then go get the money to exploit it."

"You'll get further with a mediocre idea and a million dollars than with a great idea alone."

"Money makes the marketing world go round. If you want to be successful today, you'll have to find the money you need to spin those marketing wheels."



THE 48 LAWS OF POWER

ROBERT GREENE

The Big "So What"

Power is an integral part of our societies and lives. This book distills 3,000 years of history into 48 laws that help us to understand the rules of power, how we can masterfully acquire power and avoid being crushed by others.

Introduction

No one likes being powerless, yet we don't take well to power-hungry people due to our modern ideologies of fairness, equity etc. It's important to realize that power is amoral—it's neither good nor evil. You can choose *how* to use power once you have it, but it'd be foolish to dismiss power as bad or unimportant. In fact, there's much that we can learn from the masterful scheming of the aristocratic courts of the past—those who can subtly charm, deceive and manipulate without others' awareness can rise to power without others' resentment or resistance.

Green encourages us to think of power-play as a game. You can use this book to learn about power in general, or study and reflect deeply upon the ideas to truly understand people and the world you live in.

- Don't judge people by their declared intentions, but the **actual outcomes** of their actions. People who claim to reject power due to moral values are often the true manipulators (or are simply naïve).

- To master the game of power, you must fundamentally **shift your perspective, learn and practice new skills** including the ability to master your emotions (so they won't cloud your judgment),

KEY QUOTES

"If the world is like a giant scheming court and we are trapped inside it, there is no use in trying to opt out of the game."

"Today we face a peculiarly similar paradox to that of the courtier: Everything must appear civilized, decent, democratic, and fair. But if we play by those rules too strictly…we are crushed by those around us how are not so foolish."

"Those who make a show or display of innocence are the least innocent of all."

"If deception is the most potent weapon in your arsenal, then patience in all things is your crucial shield."

objectively examine the past and future (to learn and identify problems) and accept deception and masquerade as a part of human interaction (not something immoral or ugly).

The 48 Laws of Power

Law 1: Never outshine the master

- In your quest to impress the people above you, **don't flaunt your talents too much**. If your superiors feel insecure, they'll find ways to replace you. Even if you're currently in favor, don't take it for granted as the tides can easily change if you make the wrong moves.

- Instead, **make those above you seem superior** and smarter than you, e.g. ask for their help and attribute your ideas to their great advice. Give them the limelight rather than outshine them.

Law 2: Don't over-trust friends. Use enemies

- **Don't hire your friends** for familiarity or as a favor. Friends are more likely to envy and betray you, and also limit your power since it's harder to keep a professional distance. It's better to hire people with the skills and competencies to advance your interests.

- In fact, **your enemies can be more useful**; use them to create a sense of danger or rally people to your cause. If you can win over a former enemy, he's also likely to be more loyal than a friend.

Law 3: Mask your intentions

- Many people are open books: they can't control what they say or mistakenly believe that honesty can win hearts. It's better to retain the upper hand by **hiding your goal** till you're ready to strike.

KEY QUOTES

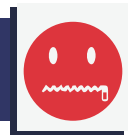
"Make your masters appear more brilliant than you are and you will attain the heights of power."

"Keep friends for friendship, but work with the skilled and competent."

"Honesty is actually a blunt instrument, which bloodies more than it cuts."

- Here are 2 effective tactics to conceal your true purpose:
  - *Throw people off the scent* by pretending to support an idea or position that's opposed to your true interest. Or, share a heartfelt thought on something unimportant—people will mistake your sincerity for honesty and believe you when you lie later on.
  - Distract and misdirect people with a *smoke screen*. Show them something they're familiar with so they'll let down their guard and be led in the direction you want them to go, without realizing your true intent. Combine this with other smoke screens e.g. a poker-face, noble gesture, or setting a pattern (then breaking it unexpectedly).

Law 4: Always say less than necessary



- The more you say, the less impressive and in-control you seem to be and the higher the chance that you'd say something foolish.
- Powerful people tend to say little. This makes them impressive and intimidating; people can't guess what they're thinking and hang on to their every word and reaction. Short answers and silences also put people on the defensive; when they try to fill the silence by talking, they give away useful information.

Law 5: Protect your reputation at all cost

- Your reputation is like your calling card. It's the foundation of your power. If you're known to be honest, it's easy to get away with deception; if you're known to be ruthless, people will be afraid to cross you. If your reputation is damaged, you'll become vulnerable; seek to elevate yourself by associating with people with the desired image.
- You can also destroy your enemies by hurting their reputation. Once that's done, don't attack them directly; let the public do the work.

KEY QUOTES

"The best deceivers…cultivate an air of honesty in one area to disguise their dishonesty in others. Honesty is merely another decoy in their arsenal of weapons."

"If you lead the sucker down a familiar path, he won't catch on when you lead him into a trap."

"A person who cannot control his words shows that he cannot control himself, and is unworthy of respect."

"Reputation is a treasure to be carefully collected and hoarded."

Law 6: Be conspicuous. Stand out.

- Everything is judged by appearance, and you are inconsequential if you're unseen. **Become an attention-magnet** by seeming larger-than-life, more colorful or mysterious than others.
  - o A good way to gain attention is to *make yourself notorious*: surround yourself with scandals or sensational people. Bad publicity is still publicity.
  - o You can also *create an air of mystery* around yourself to draw attention and anticipation. It stimulates people's imagination and makes you seem more intriguing and powerful.
- Initially, to rise to power, you must seek attention at all cost. Once you're in the limelight, you must **constantly adapt**—keep people guessing by acting in unexpected ways, and learn when to pull back so you don't seem desperate for attention.

KEY QUOTES

"Better to be slandered and attacked than ignored."

"The mysterious cannot be grasped. And what cannot be seized and consumed creates power."

Law 7: Get others to do the work & take the credit

- This law has **2 parts**: (a) don't let others ride on your hard work or steal your credit, and (b) tap on others' work (wisdom, knowledge, effort) to save your own time/energy and build your power base.
  - o In reality, the world is made up of hunters vs prey. You won't go far if you try to do all the work yourself or let others take advantage of you. *Become the hunter* instead.
  - o You can also *build on others' past achievements*, e.g. Shakespeare built his plots, characterization etc. from other writers' works.
- A **note of caution**: If your power is still not established, don't try to take credit for others' work lest you seem dishonest. Only take credit for the work of those *below* you, but give credit to those *above* you.

"Never do yourself what others can do for you."

Law 8: Make people come to you

- Stay in control by getting your enemies to respond on your terms.
  - *Bait your enemies* with attractive gains or provoke them to anger, then attack on your terms/turf. For meetings and negotiations, always lure people to your territory.
  - When people respond to your moves, they'll be abandoning their plans while you *hold the cards* and stay in control. To succeed, you must master your own emotions while you push/bait others into getting angry or impulsive.
- However, if your enemies are already cornered with nowhere to run, you may consider pressing your advantage to strike where they are.

Law 9: Win through actions, not argument

You can never win through a verbal argument. Such "victories" are temporary at best as people stay resentful beneath the surface. Instead, use actions to *indirectly demonstrate* that your ideas are correct. That way, you can prove your point without offending anyone.

Law 10: Don't get infected by misery & misfortune

Feelings of misery and helplessness are infectious, and people who're drowning can drag others down with them. It's ok to help those who've fallen temporarily due to circumstances beyond their control, but stay away from people who have brought misfortune or unhappiness on themselves due to their toxic attitudes. Instead, associate with happy, positive and successful people.

KEY QUOTES

"When you force the other person to act, you are the one in control."

"Demonstrate, do not explicate."

"Emotional states are as infectious as disease."

Law 11: Make yourself indispensable

- Make people depend on you for their prosperity, success and/or happiness. The more they want and need you, the greater your power and freedom.
  - You may seem indispensable due to your *unique skills/talent*. Never teach others so much that they can do without you.
  - People may also find it hard to cut you off because your fates are *too closely intertwined* or if you know their secrets. Unfortunately, this means that you are to some extent also dependent on others. This is the price to pay for power.

Law 12: Disarm with strategic honesty & generosity

- No matter how tough or cynical someone is, you can distract and disarm him/her with carefully-timed acts of honesty, generosity or kindness.
  - Use *selective honesty* to bring down people's guard, then manipulate them later. This is most effective at your first meeting when first impressions are formed.
  - You can also disarm others with *selective generosity*, e.g. a seemingly-selfless act, a generous gift, or a calculated act of kindness which touches their hearts and earns their trust.
- This will only work if your gestures seem real and sincere. If you have a bad reputation, flip this law around by playing the rogue, e.g. appearing to have selfish reasons for your actions so people will believe you are acting authentically.

Law 13: Appeal to self-interest, not virtue

- When seeking help or an alliance, focus on the other party's interests and everyday realities rather than noble causes or your own interests. You can also play on their desire to feel superior to you or be publicly seen for their generous contributions.

KEY QUOTES

"Necessity rules the world…If you create no need for yourself, then you will be done away with at first opportunity."

"Better to have others depend on you out of fear of the consequences of losing you than out of love of your company."

"Open-hearted gestures of honesty and generosity bring down the guard of even the most suspicious people."

"A gift is the perfect object in which to hide a deceptive move."

"When people choose between talk about the past and talk about the future, a pragmatic person will always opt for the future and forget the past."

- Don't appeal to others' mercy or gratitude. Even if you've helped them in the past, people dislike being reminded of their debts or obligations.

Law 14: Be a spy. Gather intelligence.

- It's invaluable to know how your opponent will move and where you should strike. Get to know your rivals, especially their secrets and hidden intentions.

- You can use spies or gather intelligence personally by posing as a friend. Use every opportunity to probe for information. You can ask casual/indirect questions at social events, pretend to bare your heart so they're also likely to share their secrets, or lay little traps for them to reveal their weaknesses and intentions.

Law 15: Crush your enemy totally

In your rise to power, you will inevitably make enemies. A strong enemy must always be crushed totally—in body and in spirit—or he/she will eventually retaliate. You cannot afford to show mercy or stop halfway. Banish your enemies totally so they won't pose any future threats.

Law 16: Raise your value via absence & scarcity

- When you are too easily available, you seem common. Once you've established yourself, learn to withdraw temporarily from your community, so people will feel your absence and value your presence even more when you return.

- This law only works if you've already attained a certain level of power and presence. Master the art of alternating presence and absence; withdraw just before people start taking you for granted.

KEY QUOTES

"Arm yourself with a little knowledge and your aim improves."

"Give them a false confession and they will give you a real one."

"If one ember is left alight, no matter how dimly it smolders, a fire will eventually break out."

"What withdraws, what becomes scarce, suddenly seems to deserve our respect and honor."

Law 17: Be unpredictable: keep others in suspense

- Humans feel uncomfortable about uncertainty. By being unpredictable, you **keep others off-balance** as they try to guess your goals and next moves. At the very least, it will stimulate interest and suspense; at an extreme (e.g. if you use deliberate attacks or ambushes) you can even instill fear or terror.

- You can also use predictability to **lull others into complacency** before you attack or disrupt them.

Law 18: Don't isolate yourself behind a fortress

- When you face uncertainty and danger, resist the temptation to hide behind a fortress to protect yourself. **Isolation is dangerous** as it cuts you off from valuable information and makes you an easy target.

- It's better to **hide yourself in the crowd**, build alliances far and wide and have your eyes and ears everywhere.

Law 19: Know who you're dealing with

- To gain and retain power, you must acquire the vital skill of **assessing people**—know who and what kind of people you're dealing with, so you can work with the right people and avoid offending the wrong ones. If you offend or deceive someone who's extremely insecure, suspicious or calculative, he/she is likely to come after you with a vengeance.

- Don't trust appearances; **gather concrete knowledge** about your opponents rather than rely on instincts.

KEY QUOTES

"When people cannot figure out what you are doing, they are kept in a state of terror—waiting, uncertain, confused."

"Isolation exposes you to more dangers than it protects you from."

Law 20: Stay independent (for as long as possible)

- Show just enough interest for people to think you may be willing to support them, but **don't commit** to anyone or any cause (except your own). That way, you can be courted by all parties.

- Stay neutral so you're not drawn into petty quarrels. This allows you to play people against one another or to gain power as a mediator.

Law 21: Make your victims feel smarter than you

- People don't like to feel stupider than others. If you appear to be less intelligent or sophisticated than your victims, they won't suspect that you're capable of ulterior motives or outsmarting them.

- The exception is when you want others to believe you. In such cases, it's better to seem smarter than you really are to project authority and knowledge.

Law 22: Use surrender as a tool

If you're obviously in a weaker position, there's no point fighting your opponent directly. Use surrender as a tactic to lull your enemy into complacency. Pretend to be defeated, but take the time to recover, unsettle your enemy and eventually retaliate.

Law 23: Concentrate your forces

Don't spread your resources too thin by fighting multiple battles. Concentrate your power—focus it like the tip of an arrow for the greatest impact. Likewise, it's better to find 1 strong patron with deep pockets to support and elevate you, than to rely on many minor ones.

KEY QUOTES

"To reveal the true nature of your intelligence rarely pays; you should get in the habit of downplaying it at all times."

"This is the essence of the surrender tactic: Inwardly you stay firm, but outwardly you bend."

"Intensity defeats extensity every time."

"Concentrate on a single goal, a single task, and beat it into submission."

Law 24: Be a masterful courtier

A successful courtier knows how to juggle the complex power-play at court. Be modest (not flamboyant), get noticed (without being too brazen), tailor your approach to each opponent, assert power subtly, flatter indirectly, be observant, master your emotions, and be a source of pleasure and good news.

Law 25: Create your own identity

- Break free from the **roles and expectations** imposed by society. If you don't define your own image, others will do it for you.

- **Create identities** to suit different roles and treat them like costumes that you can change. Keep your identity interesting. Incorporate drama (e.g. surprise, suspense, sympathy and symbols) to gain attention and make yourself seem larger than life.

Law 26: Don't dirty your hands

Have a convenient scapegoat (ideally someone innocent and powerless) to take the blame for mistakes. Get someone else do the nasty work (e.g. be the executioner or announce bad news) so you're only associated with positive news and events.

Law 27: Create a cult-like following

- Humans *need* to believe in something bigger than themselves. If you give them the right **focal point**, they'll follow you religiously.

- To **create a cult**, use vague but promising words that help people to dream and see what they *want* to see, focus on sensations and visuals, create rituals/hierarchies and ask for sacrifices that'll enrich you. Show symbols of wealth, but hide the fact that your wealth comes from your followers. Identify/invent an external enemy so you can use "us-vs-them" to rally people around you.

KEY QUOTES

"Courtiers are like magicians: They deceptively play with appearances, only letting those around them see what they want them to see."

"The first step in the process of self-creation is self-consciousness—being aware of yourself as an actor and taking control of your appearance and emotions."

"Our good name and reputation depend more on what we conceal than on what we reveal."

Law 28: Act with boldness

- When people perceive you to be **bold**, they're more likely to believe you, overcome their own doubts and give in to your requests.
- **Timidity** produces the opposite effects. If you are unsure about a decision, don't proceed as others will sense your doubts.
- Both boldness and timidity are **acquired habits**, i.e. they can be learned. Plan ahead so you can take bold actions at the right time.

Law 29: Plan till the end

Consider all possible outcomes and obstacles, so you're prepared to deal with unforeseen circumstances and know when to stop/change the plan. The key is to gain clarity and be confident about adapting to changing circumstances, not to be tied down by over-planning.

Law 30: Make your achievements seem effortless

- **Research and practise repeatedly** behind the scenes before you show your work publicly, so you seem to achieve the results effortlessly.
- Don't show the tricks or hard work behind your results—it will demystify you and allow other to copy what you do. It's ok to show *part* of your tricks/techniques so long as you maintain the **illusion of superiority**.

Law 31: Control the options

- The best way to manipulate people is to give them the ***perception* that they're making a choice**. In reality, you're the one dealing the cards and whichever option they choose would be in your favor.

KEY QUOTES

"Everyone admires the bold; no one honors the timid."

"Gently guide fortune and help determine the future by thinking far ahead."

"One never sees the source of a god's power revealed; one only sees its effect."

- Some **common tactics** include: present a few options and make your preferred option look clearly better, force them to choose between the lesser of two evils, or raise the price each time the buyer delays making a decision (until they dare not delay further).

Law 32: Play to people's fantasies

- People **prefer to believe in fantasies,** like a windfall or a sudden rise to success, rather than face the harsh realities of hard work, learning from mistakes or gradual change.

- An effective fantasy should be like a **mirage in the distance**—clear enough to be tempting but vague/far enough that they have to keep desiring and reaching for it.

Law 33: Find your opponent's fatal weakness

To penetrate someone's defences, you must identify their fatal weakness: this may be in the form of an insecurity, an uncontrollable emotion/need or a secret desire. Look out for subtle cues in your interactions, triggers that make them react like a child, and prod for the source of their insecurity, unhappiness, or fear.

Law 34: Act in the way you want to be treated

The way you carry yourself affects how people respond to you. Adopt the "Strategy of the Crown", i.e. act like a king (regal and confident, but not arrogant) so you'll be treated like one. Make bold demands without wavering, approach the highest person in the hierarchy with dignity, or give a gift to someone above you as if you're equals.

Law 35: Master the art of timing

Never seem to be in a hurry; learn to hold back until the time is ripe, then strike decisively to reach a swift conclusion. To grasp the right timing, you must (a) be able *think long-term* so you can see

KEY QUOTES

"Life is so harsh and distressing that people who can manufacture romance or conjure up fantasy are like oases in the desert: Everyone flocks to them."

"How you carry yourself reflects what you think of yourself."

"Learn to stand back when the time is not yet ripe, and to strike fiercely when it has reached fruition."

the big picture and be patient, (b) be able to *use forced timelines* to make others wait, hurry, or lose their sense of time and (c) time your actions so you *bring things to an end* at a strategic time.

Law 36: Ignore what you can't have

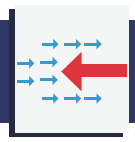
- Don't allow petty issues to bother you. When you pay attention to a problem or person, you give it credibility and power. When you want something desperately, you become weak. The less interest you show, the more power you retain.

- If there's something you want but cannot have (and it won't hurt you in the long-term), its best to **show disinterest** or even contempt for it. If you're being attacked by someone inferior, ignore them to show you're unconcerned or unaffected.

Law 37: Dazzle people with spectacles

Use compelling visuals and powerful symbols and associations (e.g. linking yourself with famous people or events) that make you larger than life and amplify your aura of power. When people are so overwhelmed by appearances and what you seem to represent, they'll overlook what you are really doing.

Law 38: Hide your unorthodox thinking



- Don't flaunt your **unconventional ideas**—especially if they involve strongly-held beliefs and values—as people may think you're seeking attention or putting them down.

- Instead, pretend to be like others. Share your radical ideas only with your inner circle who can appreciate your uniqueness, and use **indirect ways** to publicize these ideas (e.g. pretend to argue against the radical ideas but use the chance to expose them).

KEY QUOTES

"Learn to play the card of disdain and turn our back on what cannot harm you in the long term."

"People love what is grand, spectacular, and larger than life. Appeal to their emotions and they will flock to your spectacle in hordes."

Law 39: Stir up waters to catch the fish

If you lose your temper or control, you lose your followers' respect and confidence. However, if you can make your enemies angry while you stay calm, you gain a huge advantage. Play on your opponents' pride, love, hate, or vanity—throw them off-balance so they'll act recklessly and give you the chance to crush them.

Law 40: Beware the free lunch

- Don't trust what's offered for free or a bargain—it usually means lower quality or a psychological price tag, e.g. feelings of obligation or guilt which lead to compromises later.

- If something has real value, pay for it so you avoid the traps and deceit. Build a reputation of being generous and use strategic gifts/spending to increase your influence and power.

Law 41: Don't try to fill a great man's shoes

When you step into a great man's shoes, you'll have to achieve *much* more to outshine them. The best way to avoid being lost in your predecessor's shadow is to chart a new course and establish your own name with your own style, symbols and rituals. You don't need to start from ground zero; simply play down the past and amplify the differences of the present times. Gain power by shining in your own way.

Law 42: Strike the shepherd to scatter the sheep

- Trouble in a group can usually be traced to a single person who's stirring up dissent and anxiety. Left unchecked, the negative vibes will spread until it's too late.

- Strike at the source of the problem by removing the person (physically, politically or psychologically) to stop his/her toxic influence. Such isolation will also dishearten the person and make him/her vulnerable.

KEY QUOTES

"Stir the waters, force the fish to the surface, get them to act before they are ready, steal the initiative."

"In the realm of power, everything must be judged by its cost, and everything has a price."

"Powerful people give freely, buying influence rather than things."

"Cancer begins with a single cell; excise it before it spreads beyond cure."

Law 43: Win both hearts and minds

A person who is forced to do something will eventually retaliate. To gain power and loyalty, you must make others *want* to do what you desire. Step back to understand the other party's emotional makeup and psychological weakness. Then, soften their resistance: play on their *key emotions* (love, hate, jealousy) and demonstrate how something will serve their *self-interests*.

Law 44: Unbalance and confuse with the mirror effect

Mirrors simulate reality. You can use the "Mirror Effect" to throw your enemy off-balance in at least 4 ways:

- Copy their actions while you lay invisible traps, so they're unsettled and can't see what you're up to.
- Find out their deepest desires/values and reflect it back to them so they naturally like you and lower their defences.
- Teach them a lesson by giving them a taste of their own medicine.
- Create an illusion that they mistake for the real thing.

Law 45: Go for gradual change, not drastic reform

People resist change, even if they understand the need for it. Don't push for drastic changes as it could backfire. If you are new to a position or community, start by showing respect for the old ways of doing things, then introduce changes gradually as small improvements, linked to ideas that people already accept.

Law 46: Don't seem too perfect

When you seem to be better than others—or worse, to have no flaws—people get envious and silently resent you. Don't flaunt your

KEY QUOTES

"Ignore the hearts and minds of others and they will grow to hate you."

"Everyone understands the need for change in the abstract, but on the day-to-day level people are creatures of habit."

"The fool dares the gods of envy by flaunting his victories."

wealth, power, superior qualities or victories. Instead, occasionally show that you have harmless vices or minor weaknesses, so you seem more human and approachable.

Law 47: Don't push too far in victory

- When you're victorious, know when to stop. Don't let success get to your head; resist the temptation to push too far beyond your original goal. Arrogance and overconfidence can attract enemies and make you blind to your vulnerabilities.

- Maintain your rhythm of success—plan carefully, stop when you reach your goal, consolidate and plan again before moving forward.

Law 48: Be formless

Your enemies can't attack what they can't see. Learn to adapt, move rapidly and in a non-linear way so your opponents can't grasp what form you will take, nor have the time to respond to your unexpected attacks. Train yourself not to reveal your emotions, don't adopt a fixed strategy/style and don't follow conventional advice.

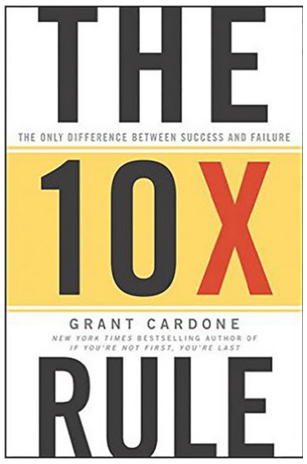
Other Details in the Book to Look out For

This is packed with stories and examples of court politics, courtship, and warfare involving kings, emperors, nobility and famous people from different countries and cultures from the past. For each of the laws, Greene includes stories and interpretations to illustrate the laws at work, as well as the exceptions to the laws.

KEY QUOTES

"Power has its own rhythms and patterns. Those who succeed at the game are those who control the patterns and vary them at will."

"The best way to protect yourself is to be as fluid and formless as water."



THE 10X RULE

The Only Difference between
Success and Failure

GRANT CARDONE

The Big "So What"

The 10X Rule is the single most important principle or ingredient needed to achieve extraordinary results. This book explains how you can use big thinking and massive actions to create unstoppable momentum for phenomenal success.

Introduction

This book is written for people who want to achieve colossal success and are not afraid to take the actions to achieve it. It's *not* for those who want comfort or are satisfied with average results.

Most of us fail to achieve our goals because:

We set **sub-par goals** that are too low or not motivating enough.

- In reality, our perceptions of what's "good", "ethical", "rich", "hardworking" etc. are largely influenced by *societal norms*. We may not even realize that these are not our own standards.

- Instead of creating breakthroughs, we end up *competing on existing levels*. Worse, we set low standards to avoid disappointment, or lie to ourselves that certain goals are unimportant if we fail to achieve them.

We **underestimate** the amount of challenges we must overcome, as well as the amount of effort/resources needed to achieve our goals.

- Success is not a single event, but an accumulation of *many activities and milestones* that jointly create our desired

KEY QUOTES

"Regardless of how you define success, this book will show you how to guarantee the attainment of it—with any dream and in any economy."

"Success…is an accumulation of events turning out well or desired outcomes being achieved."

outcomes. When we go for overnight success or get-rich-quick schemes, we grossly underestimate what it takes to succeed and therefore fail.

- As a result, we get disappointed, discouraged, and start finding *excuses* to quit or shift our goal-posts.

The key to success is to prepare yourself mentally for the actual amount of work needed *and* build in the buffers for unplanned variables that'll crop up. Achieving success is a never-ending process. People who are extraordinarily successful never stop seeking higher levels of accomplishments. They know that once they become complacent, they will slow down and eventually slide backward.

The 10X Rule Behind Massive Success

The 10X Rule says that you can only achieve phenomenal success if you upsize your thinking and action to 10 times that of others', i.e. set targets that are 10X bigger and take 10X the amount of action. This single discipline will make the biggest difference between massive success and failure.

Defining Success

Fundamentally, success is about attaining your desired outcomes. It's subjective as each of us define success differently and have varying goals at different points in our lives. A student may define success as popularity or good academic results, a young adult may define success as a promotion or owning his/her own apartment, while a retiree may define success in terms of health, legacy and meaningful relationships.

Regardless of how you define success, it's vital that you start with a *desire* to achieve it.

- Success is important for the survival of any individual, group or community, as it provides confidence, security, a sense of purpose and identity.

- It's your duty and responsibility to fulfill your potential. Don't wait for success to come knocking or hope for lucky breaks. Take concrete actions to define, seek and create your own success.

KEY QUOTES

"It is better to be pleasantly surprised than greatly disappointed."

"Success is...like a breath of air; although your last breath of air is important, it's not nearly as important as the next one."

"You must set targets that are 10 times what you think you want and then do 10 times what you think it will take to accomplish those targets. Massive thoughts must be followed by massive actions."

"Success is the degree or measure of attaining some desired object or end."

"Success is not something that happens to you; it's something that happens because of you and because of the actions you take."

Success is unlimited. It's not a finite product to be acquired, nor does it deplete with use. It's something you *create*, and there are infinite ways to create success, through new innovations, ideas, solutions etc. It's not true that others have to lose in order for you to win. Others' successes won't reduce your chances for success and can even create opportunities for you.

Taking 10X Actions

Generally, there are 4 levels of action that all of us use at some point in our lives. However, most of the time, most people only use the first 3 levels of action. Normal levels of activity deliver at most normal results; you need extraordinary levels of activity for extraordinary results.

Level 1: Doing nothing. People in this group feel bored and aimless. They spend their time and energy finding excuses or engaging in unproductive activities like gaming or watching movies.

Level 2: Retreat. People in this group play it safe; they're afraid of rejection or failure due to their upbringing or past experiences. They justify their actions (or lack of action) as the way to survive.

Level 3: Normal amount of action, i.e. simply doing what's widely acceptable, not what's truly needed to achieve your goals. This is the most common and also the most dangerous level, as it results in widespread mediocrity.

Level 4: Massive action. People in this group are insanely driven. They don't monitor their work hours and simply do whatever it takes to achieve their goals. You know you're entering this zone when:

KEY QUOTES

"Success is not a zero sum game, there can be many winners."

"Money and power follow attention, so whoever can get the most attention is the person who takes the most action and sooner or later will get the most results."

"Remember: If you don't create new problems, then you're not taking enough action."

- Your massive actions start to *create new problems* (which drive you to take even more action to address them); and

- You start to get *criticisms*, negative labels and warnings from others, telling you that you're crazy, off-balance etc. Keep going—you'll eventually get the attention and results you seek, and these criticisms will turn to praise/admiration.

Setting 10X Goals

Being "average" is a formula for failure. You don't gain enough momentum for real success and tend to lose what you have during bad times.

- People in the *middle class* (those earning about US$22,000-65,000 annually as of 2008) may enjoy some comfort during good times, but struggle with job/income loss and debts during bad times. They do enough to get by, but not enough to enjoy real success, security or fulfillment.

- *Top earners* make 319 times more money than average people. Those who complain that this is unfair fail to consider the fact that top earners also take significantly *more action* to develop skills, connections etc.

- The average person reads less than 1 book a year, while the *top US CEOs* averagely read more than 60 books a year. During the 2008 economic downturn, Starbucks' founder Howard Schultz cut expenses, closed down under-performing stores, *and* travelled around the country to personally meet with customers for feedback. Schultz took massive action despite already being a billionaire, or perhaps he became a billionaire precisely because he had been taking massive action.

The only way to win big is to **set ambitious, 10X goals.**

- *Small or realistic goals* that you look at once a year cannot inspire the big thinking needed for massive action.

- Ensure that your goals are (a) *big and exciting* and (b) *aligned with your purpose*, so you'll feel motivated to think and act on them every day. Benchmark your goals minimally against

KEY QUOTES

"Average never yields anything more than average and usually much less."

"There are no shortcuts. The more action you take, the better your chances are of getting a break."

"Realistic thinking is based on what others think is possible—but they are not you and have no way of knowing your potential and purposes."

the top players in the field. If you're willing to take 10X actions, you can achieve any goal, no matter how ambitious.

- Cardone's 10X goals include: "I own 5000+ apartments that return over 12 percent positive cash flow", "my marriage is alive and healthy and a positive model for others", and "I have written 12 or more best-selling books."

Components/Principles behind the 10X Rule

Take control of your life. Accept that *everything* that happens—be it good or bad—is a result of what you do and don't do.

- When you blame other people or circumstances for what happens to you, you're essentially giving up control of your life and adopting a *victim mindset*.

- There's always something you can do to improve your situation, and lessons you can learn to avoid repeating the same mistakes. When things go wrong, rather than blame external factors, ask yourself, "What can I do to ensure this doesn't happen again?" Push yourself to find the untapped strengths, resources and potential that you can call upon to *create your desired outcomes*.

- All of us make excuses for things that we do or don't do. Write down all your excuses, e.g. I have no money, I have no time, I'm too young/old, the economy is bad etc. You can only improve your situation if you *get past your excuses* to deal with the real reasons behind them. For example, being late due to traffic is merely an excuse; the true reason you're late is because you didn't leave early enough to cater for traffic.

Don't compete. Dominate. When you focus on competing, you waste energy chasing after your rivals. Aim to dominate your sector, i.e. be amongst the top in your industry, and ideally dominate the sector so completely that you're the *only one* in consumers' minds. Set the pace/trend and let others try to copy you instead.

KEY QUOTES

"Nothing happens to you; it happens because of you."

"Excuses are…just a revision of the facts that you make up in order to help yourself feel better about what happened."

"Making excuses won't change your situation; only getting to the real reason behind it can do this."

- It's ok to study best practices and learn from others, but *go beyond existing practices* to play at a different level. Hammer away at your competitors' specialties until they become *your* unique advantage. You'll need a lot of activity to penetrate a sector, and even more activity to dominate a sector.

- Ask yourself: what are the *unreasonable things* that only you would do? Do what others won't do, go where they won't go, and take so much action that no one can catch up with you. For example, one of Cardone's clients decided to call customers just before they left the carpark and give them a special counter-offer. By doing what their competitors didn't or wouldn't do, they managed to convert a large number of potential customers they would otherwise have lost.

Build omnipresence. You can add value by helping one person, but you become truly phenomenal when millions or billions of people know you and need your services regularly.

- Your name is your *most vital asset*. Your goal is to have people see you so often that they think of you all the time, and immediately associate your name/face/logo with your sector and what you stand for.

- Aim for a *global footprint* and to become a household name like Coca-Cola, Google, Starbucks, McDonald's, or Visa. Such a mindset will fundamentally change how you think and act, and you'll find yourself taking extreme measures and saying "yes" to opportunities.

Get obsessed with your big dream and let it dominate your thoughts and feelings.

- Think *daily* about what you must do to dominate your sector and take action persistently until you succeed. It's better to be obsessed with your goal than with your excuses.

- Obsessive people get labeled as crazy or off-balance. Yet, once they achieve their breakthroughs, they're suddenly regarded as geniuses and revolutionaries. Treat obsession as an *essential ingredient* for success, rather than the exception to the norm.

KEY QUOTES

"Market conditions won't improve until you improve the way you think and approach the market."

"Forward thinkers don't copy. They don't compete—they create."

"It is impossible to amass true success without thinking in terms of making your ideas, products, services or brand universal."

"The higher your purpose, the more fuel it will provide for your 10X actions. This is what it takes to rocket to omnipresence."

"The way to approach a sector, goal, or any endeavor (is) to own it completely."

"What if the only thing standing in the way of your greatness was that you just had to go after everything obsessively, persistently, and as though your life depended on it?"

Go all-in. In poker, this means placing all your chips on a bet. In the case of your goals, it means putting in 100% of your effort, energy, focus, persistence and creativity toward achieving success.

- The good news is, there's *no limit* to your energy, creativity or persistence. So, you can go all-in over and over again until you succeed.

- People are likely to warn you not to overexpose yourself. The 10X Rule says the opposite—*overcommit* so you have no choice but to keep pushing ahead until you reach your goals. For example, if you're in sales, don't just aim to reach a sales target; overcommit to every step of the sales process, including your number of appointments, marketing materials, pitches, follow ups etc. You will create new problems, e.g. have more appointments than you can fit into your calendar. However, as you tackle the problems, you'd find yourself achieving much bigger results than you imagined possible.

Expand. Never contract. During bad times, people naturally cut back on expenses and activities, i.e. they retreat. Push yourself to continue with massive 10X action, so you expand while others contract. Remember:

- *Never follow the masses* blindly, as they're usually wrong. By the time everyone is retreating, the market is usually already on the way to recovery.

- Expanding doesn't mean spending money recklessly. It's about putting in 10X the energy, creativity and resilience, all of which are *abundant* and won't run out.

Build massive momentum. When you start to see results, do not slow down or stop. Keep going by adding new ideas and activity until you're unstoppable.

- It's like *adding fuel* (efforts, ideas and creative resources) to your fire until it becomes a raging forest fire. On the other hand, If you stop feeding your fire, it will gradually be reduced to ember or ashes.

KEY QUOTES

"Devoting yourself to something all the way means that there's no backing out."

"One of the major differences between successful and unsuccessful people is that the former look for problems to resolve, whereas the latter make every attempt to avoid them."

"You never want to blindly follow the masses; they are almost always wrong."

"Your fire has to continue to be stoked, and that means more wood, more fuel, and in your case, more actions."

"Keep adding wood until the fire is burning so hot that no one—and nothing—can put out your success."

- As you push ahead, you'll encounter new challenges that'd fire you up. *Stay in level 4 action* and address each wave of challenges as they come. When you move at this pace, none of your competitors can keep up even if they try to duplicate your efforts.

Do what you fear. Fear is an emotion triggered by what we *think* may happen. In other words, fear is unreal and most of our fears are never realized.

- Instead of treating fear as a sign to retreat, *treat it as a sign to take action* and do what others refuse to do. If you fear rejection from a client, it means you must approach the client; if you fear public speaking, it means you must take on a speaking engagement.

- The best way to tackle fear is to *take action immediately*, so your fear has no time or chance to grow. When you use fear to fuel your actions, it makes you appear fearless and gives you huge momentum.

Don't manage time. Optimize it. It doesn't make sense to try to manage time if you don't know how much time you have, or how long you need to accomplish something. Instead, aim to get the most value from your time: know how you're using your time, direct most of your time toward your priorities, and squeeze the most out of every second.

- *Start a time-log* to become aware of how you're currently using your time.

- Then, calculate *how much time you have* and what you must achieve with your available time. For example, if you're 40 years old, believe you'll live till 80 and want to make $10mil, then you have at most 350,400 hours left to generate $10mil. Or, if you want to make $10,000 a month with 40 hours a week, then you must ensure every hour of work is worth $62.50.

- Rather than drag yourself to work, plan your day in advance and make it a game to *see how much more you can achieve*. For example, you can challenge yourself to make $100 an hour instead of $10 an hour, or redirect 5 more hours a week for quality time with your kids. When you increase the value you get from every second, you're effectively multiplying your time.

KEY QUOTES

"Fear is actually a sign that you are doing what's needed to move in the right direction."

"Starve the fear of its favorite food by removing time from its menu."

"Most people have no clue what they are doing with their time but still complain that they don't have enough."

"If you don't manage your time, I promise that you will waste it."

Expect criticism. Your massive actions and results will attract both admiration and envy/jealousy. People may criticize you for spending too much time on work, making the wrong decisions, taking too much risk etc.

- Expect criticism so it won't overwhelm you. *See it as a sign of success* and keep moving with 10X actions. With enough success, the people who initially criticized you will eventually start to admire you.

- *Don't try to stay under the radar* to avoid being noticed and attacked by competitors. To become a market leader and dominate your sector, you *must* get noticed.

Go for market share, not customer satisfaction. Most companies fail not because of an inferior product, but because they don't get enough customers. There's no point in worrying about customer satisfaction if you can't acquire them in the first place. Focus on expanding your market share—this pushes you to attract customers, get them to use/pay for your solutions *and* stay with you. The larger your customer base, the higher your chances of finding quality customers to focus on.

- Your first priority should be to *acquire customers*: get their attention and impress them with a great solution.

- Then, use the complaints/problems from existing customers to *identify areas for improvement*—when you solve your clients' problems, it builds loyalty and generates word-of-mouth publicity. Concurrently get feedback from people that you do not acquire, to identify the gaps or issues in your buying process.

- In short, expanding your footprint is a more meaningful goal as it forces you to tackle the *entire value chain* from product to processes and promotions, which ultimately deliver customer satisfaction.

KEY QUOTES

"Some will admire you, some will want to learn from you, but unfortunately, most will envy you."

"Criticism is not something that you want to avoid; rather, it's what you must expect to come your way once you start hitting it big."

"Customer acquisition is the primary target, followed by customer loyalty, followed by customers who spread the word about you."

Winning Big in Life

Ingredients for Success

The difference between successful and unsuccessful people lies not in their background or circumstances, but with the way they think, talk and act. Cardone breaks this down into 32 traits/habits, which we've condensed into 8 key principles below:

Have a "Can Do" attitude. Look for opportunities, possibilities and solutions in any situation. Even if you don't have a ready answer, have the faith and willingness to take action anyway, and figure things out along the way.

Embrace challenges, fear and discomfort. Courage is about acting in spite of fear. You can't create breakthroughs without changes, so you must try new things and take bold actions even if they make you extremely uncomfortable. Use challenges to sharpen and stimulate your growth. Realize that the bigger the problems you solve, the bigger the rewards.

Dare to be unreasonable. Our so-called practical realities are merely artificial limits—electricity, air travel, and the internet were all considered impossible until someone made them real. Even the most cautious people will suffer losses and mistakes, so you might as well take risks, knowing you can always try again if you fail.

Aim to create wealth, not just earn money. True wealth is created via the exchange of new ideas and solutions, and you can create unlimited wealth through creative solutions to universal problems. When you help others in your team/community to succeed, it will also indirectly help you to succeed.

Commit and go all-in. You have 100% control of the actions you take. Say "yes" to life and possibilities, take massive action *now*, and go all-in such that you have no option to quit or cut back.

KEY QUOTES

"The more you win in life, the higher your potential will be—and the more you will grow to love challenges."

"Don't focus on how hard the work is but rather on how rewarding the results are!"

"Man would do nothing exceptional if it were not for the willingness to be unreasonable."

Persist till the end. Have the discipline to do whatever you must until you achieve your goal. The more you persist, the more you develop your mental, emotional, and financial strengths, and build positive habits from your repeated activities.

Focus on goals and results. Don't focus on the amount of attempts or time spent, or get lost in mundane tasks. Focus on your goals, results and the wider mission to change/impact the world.

Grow yourself relentlessly. When you invest in knowledge and improve yourself, you can get the most from your efforts and multiply the results from your 10X actions. Surround yourself with people who're better educated, more connected and more successful than you. Keep pushing yourself to higher levels of action and achievements, so you fulfill your duty to live to your full potential.

Getting started with 10X

Cardone learned from **personal experience** how powerful the right mindset and level of actions can be.

- He had been playing it safe until he was attacked by people who didn't want him to succeed, and decided to take massive action. In 18 months, he recorded more than 200 videos, wrote 150 blog articles and did 700 radio interviews. Then, he generated TV exposure and put up thousands of social media posts.

- All these added up to give him massive exposure. As business flooded in, his footprint expanded further and he even got his own TV show. This huge success was the best revenge he could've had on those who tried to drag him down.

Start applying the 10X Rule by focusing on your big vision of the future but taking action in the now:

- *Make an initial list of your 10X goals*. At this point, don't reduce the size of your goals nor worry about how you'll achieve them yet.

KEY QUOTES

"Until an action is turned into a success, it is not done."

"Quit patting yourself on the back for trying, and save your rewards and accolades for actual accomplishment."

"Successful people assume that their future achievements rely on investing in actions that... when taken consistently and persistently over time will sooner or later bear fruit."

"The best payback possible...(is) simply amassing more success."

- *List down the actions* you can take by asking, "What actions can I take now to move me toward these goals?"
- *Start taking action immediately*, regardless of how you feel and don't prematurely evaluate the outcome of your actions.
- *Review and rewrite your goals daily* when you wake up and before you go to sleep. Remember the points above, and keep pushing ahead toward your dreams and goals.

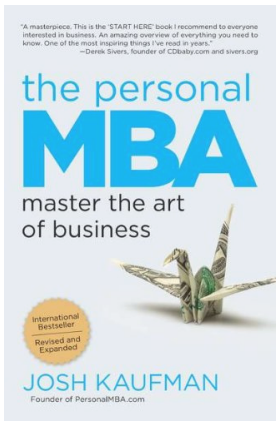
Other Details in the Book to Look out For

In the book, Cardone shares many of his personal observations and experiences about success. Each chapter also includes a short exercise to help you recap what you've learnt. For more details and resources, please visit grantcardone.com.

About the Author

Grant Cardone (born 1958) an American author, motivational speaker, real estate investor and sales trainer. He has worked with Fortune 100 companies such as Google, Wells Fargo, and Ford to customize sales processes and improve customer experience. He is also the owner of Whatever It Takes Network, a digital network where he hosts, directs, and produces programs that help people do whatever it takes to create success in their lives.

KEY QUOTES



THE PERSONAL MBA

Master the Art of Business

BY JOSH KAUFMAN

The Big "So What"

MBA programs are expensive, many of their ideas haven't been updated for the ever-changing business world, and there's no strong evidence that an MBA improves business or career success. Kaufman recommends that you save on MBA program fees, and use the time and resources for real-life education instead. This book provides an overview of vital business concepts, presented in layman terms, to help new entrepreneurs and experienced executives alike to fast-track their real-world learning for better results.

Introduction

Our mental models shape how we view the world, the actions we take, and the results we achieve. This book provides anchor concepts that we can use to filter and shape our real-world experiences. It's organized into short segments, covering 248 key business concepts. This summary consolidates some of the core concepts into 3 parts:

- How businesses work;
- How people work; and
- How systems work

How Businesses Work

Every business involves **5 essential parts** - Value Creation, Marketing, Sales, Value Delivery, and Finance. We'll address them in this segment.

Value Creation: Discover & create what people need/ want

There are more than enough problems in the world to be solved, and businesses exist to provide the solutions that people need/ want.

KEY QUOTES

"My aim is to help you build a solid understanding of general business practice from scratch, regardless of your current level of education or business experience."

"Skip business school. Educate yourself."

"Mental models are concepts that represent your understanding of 'how things work'."

"Business is not (and has never been) rocket science – it's simply a process of identifying a problem and finding a way to solve it that benefits both parties."

The **"Iron Law of the Market"** says that your business' success depends on the *size and quality* of the market you serve.

- Starting a business is *always harder initially* than you imagine. Don't do it just for money, nor just for interest/ passion. Always cover your financial bases first, so your efforts are sustainable.

- Before entering a market, assess if it's *attractive* enough:

10 Market Evaluation Questions

i. How *urgently* do people need/ want this?

ii. What's the *market size* (how many people are buying stuff like this)?

iii. What's the highest *price* people will pay?

iv. How easy or costly is it to *acquire new customers*?

v. How much will it cost to create and *deliver* your offer?

vi. How *unique* is your offer (is it easily replicable)?

vii. What's your *speed to market* (how fast you can create the offer)?

viii. How much must you *invest upfront* to create a sale-able offer?

ix. Are there secondary offers you can *upsell?*

x. Is the offer *lasting* (is new effort needed after creating the initial offer?)

- A market with *existing competitors* proves there're ready customers, and you can learn from your competitors to develop a better offer.

Value is subjective. To create value, **know what people want:**

- Lawrence & Nohria presented *4 core human drives* that shape our decisions and actions. These are the drive to:

  o *Acquire* e.g. gain wealth, fame, influence, power;

KEY QUOTES

"Without value creation, a business can't exist – you can't transact with others unless you have something valuable to trade."

"There's often a huge difference between an interesting idea and a solid business."

"Learn everything you can from your competition, and then create something even more valuable."

"All forms of value are not created equal. 'Value' is in the eye of the beholder."

- o *Bond* with others, e.g. be well-liked, respected, attractive;
- o *Learn* e.g. be smarter, more competent; and
- o *Feel* e.g. enjoying new experiences and stimulations.

The more drives you satisfy, the more attractive your offer is.

- People also generally value ways to achieve *higher status*, and to *minimize pain or hassle*.
- Kaufman explains *12 forms of economic value* any business can offer: product, service, shared resource, subscription, resale, lease, agency, audience aggregation, loan, option, insurance, capital. You can create *modular* offers, then *bundle* or *unbundle* them to cater to different customer segments.

To translate an idea into a viable offer, you must **test and refine** it:

- Identify your *critical assumptions* - what must happen for your business to succeed - and test them in advance.
- Before investing in the full product, test your concept using *prototypes*. *Shadow test* your offer (i.e. sell it before creating it, making it clear the product's still under development). A *Minimum Viable Offer* is a prototype (e.g. a video) that conveys enough to persuade customers to buy. This helps you to validate the offer, get cash-flow, and identify barriers to purchase.
- Integrate feedback, test and measure improvements using small *"iteration cycles"*, to discover what works asap. You can also *field-test* the products with your employees to improve them before rolling them out to customers.

Marketing: Get attention and demand for your offer

Your prospects' attention is limited, and spread across competing demands. To get their attention, you must trigger their curiosity, concern or surprise.

You can't make people want something; you can only present your offer in a way that connects it with an **existing desire.**

KEY QUOTES

"The more drives your offer connects with, the more attractive it will be to your potential market."

"The more hassle you eliminate for your customers, the more you'll collect in revenue."

"Find a way to give people more flexibility, and you may discover a viable business model."

"Ideas are cheap – what counts is the ability to translate an idea into reality."

"The faster you learn, the more quickly you'll be able to improve."

"Using what you make every day is the best way to improve the quality of what you're offering."

"Everyone has too many things to do, and too little time to do them all."

- *Frame* your offer to emphasize details that're vital for decision making. Focus on the *outcome/ benefit*, to convey a feeling or experience related to a core human drive.

- Help your prospects to *visualize* what it'd be like to accept your offer, so you invoke their emotions and trigger their inner desire.

- Get attention using a *hook* - a phrase/ sentence that conveys your offer's main benefit (e.g. iPod's "1,000 songs in your pocket").

- Use *narratives* or stories to engage your prospects, including testimonials and case studies.

- Taking a *controversial stance* can also catch people's attention and trigger constructive debate/ discussion.

- Include a *call-to-action* for every marketing message, to direct your prospects to take 1 clear, simple action, e.g. enter an email address, or click on a link.

- You can offer a *free* sample to let your prospects experience the value you provide. Clarify how you'll continue to engage them, how they'll benefit, and seek *permission* rather than spam them.

You should focus your resources only on **probable buyers.**

- Qualify your prospects, to maximize highly-profitable clients and minimize high-risk, high-maintenance clients.

- Identify your *point of market entry* when people become interested to hear from you, e.g. giving pre-natal care samples straight after someone discovers she's pregnant.

- Start with *addressable markets* that you can reach (e.g. certified professionals are easier to find than people with chronic diseases).

Sales: Convert prospects into paying customers

A **transaction** is an exchange of value, and it requires that you (a) offer something of *value*, and (b) develop mutual *trust* and common ground.

KEY QUOTES

"Your job as a marketer isn't to convince people to want what you're offering: it's to help your prospects convince themselves that what you're offering will help them get what they really want."

"Tell your prospective customers the stories they're interested in hearing, and you'll inevitably grab their Attention."

"The more legitimate value you can provide to others up front, the more receptive they'll be when it's time for your pitch."

"Not every customer is a good customer."

"Always focus the majority of your efforts on serving your ideal customers."

- People *resist* if they feel they're being pushed toward a deal that's not in their best interest, or if the seller seems desperate/ is chasing them. However, if you offer small tokens of value, and make the prospects comfortable, they'll tend to reciprocate and be more *receptive* to your pitch later on.

- Admitting your offer's *flaws or limitations* upfront can also improve trust levels.

People will accept any **price** you set, so long as you can justify it.

- Your *price range* affects who you attract; raising prices over time could actually attract *more* profits and customers.

- Learn what your clients want, and use *value-based selling* to show how you add value - if your service costs $100, but can generate $1,000 for your clients, they'll probably use it. Use *education-based selling* when you have a strong offer, to lead your prospects to an informed decision. If there's no common ground, consider your prospects' *next best alternative*, so you can bundle or unbundle your offer to match it.

There are **3 universal currencies** involved in any transaction - *resources* (tangible items like money or gold), *time*, and *flexibility*. Explore options and combinations using all 3 currencies.

Understand and address prospects' **barriers to purchase,** which can include: "it costs too much", "it won't work", "it won't work for me", "I can wait", or "it's too difficult." Mitigate risks for buyers using *risk reversals* e.g. money-back guarantees or risk-free trials.

Manage the **3 areas of negotiations**: *Prepare* by researching on the other party and creating an ideal environment. *Structure* your proposal with the aim of finding common ground. Consider your offer, how you'll frame it, the next best alternative, trade-offs and barriers to purchase. The *discussion* may lead to a deal, more counter-offers, or suspension if there's no common ground.

KEY QUOTES

"The more your interests are aligned with your prospects', the more they'll trust your ability to give the what they want."

"Your prospects know you're not perfect, so don't pretend to be."

"All prices are arbitrary and malleable… Any price can be set to any level at any time, without limitation."

"Value-based selling is not about talking – it's about listening."

You can also **reactivate** past clients if you have permission to follow up with them. e.g. Netflix sends an offer for past customers to re-subscribe at greatly reduced rates.

Value Delivery: Deliver your promise & satisfy your clients

Happy customers are more likely to buy again and refer you to others.

To ***increase satisfaction***, provide *predictability* (i.e. reliability, uniformity of experiences, consistency of value) and exceed *expectations* (e.g. with surprise bonuses). Instead of fighting head-on with your competitors, get ahead by innovating and *creating more value* for customers.

Map out your **value stream** – all the steps and processes needed to deliver the outcome to your clients – to find areas for improvement:

- Consider your *throughput* (how fast your system achieves its goal, e.g. dollars, units, satisfaction) and *systemization* (how to make processes explicit and repeatable).
- When you can *duplicate* and *automate* your processes and systems (e.g. replicate a latte production or an entire Starbucks store), you can reach more people and multiply the value delivered. By using the right *tools* to amplify your efforts, and improving your offer with each *iteration*, you can achieve massive, cumulative results over time.

Finance: Earn enough to make your business viable & worthwhile

Finance is about knowing how the money flows in and out of a business, so you can decide how to allocate it, and assess if it's producing the desired results.

Businesses must capture some of the value they create, in the form of **profits** (revenue minus expenses). Achieving **sufficiency** means generating enough profits to justify the owners' efforts, and to tide the business through unexpected bumps. Set a monthly sufficiency target - so long as your business reaches the target, it is successful.

KEY QUOTES

"People love pleasant surprises, but they hate to be caught off guard."

"Don't focus on competing – focus on delivering even more value. Your competition will take care of itself."

Quality tools give you maximum output with a minimum of input."

"Business is not about what you make – it's about what you keep."

To **increase profits**, you can reduce costs or increase revenues, though it's always better to create more value than to simply cut costs. To increase revenue, you can increase the number of *customers*, the average *size* of each transaction, the *frequency* of transactions, and/or your *prices*.

In the book, Kaufman explains many **financial terms** (e.g. profit margin, breakeven, amortization, financial ratios etc). He also briefly explains the types of **financial statements**:

- *Cash flow statements* show how money flows in and out of a business during a certain period. Ideally, cash inflow should be more than outflow, and total cash level stays above zero.

- *Income statements* show a company's revenues and expenses for a certain period, to facilitate business decisions.

- *Balance Sheets* are a snapshot of what a business owns and owes at a point in time. Both sides of the sheet always balances.

Some useful **financial tools and concepts** in the book include:

- The *Customer Lifetime Value (CLV)* is a client's value for his entire relationship with your business. The higher the CLV, the higher your *Allowable Acquisition Cost (AAC)*, or *marketing budget*.

- *Bootstrapping* is to build and run a business without external funding. It offers more flexibility and control, and you should consider external funding only if it gives you vital resources you can't otherwise obtain.

- *Opportunity costs* are the value of options you're giving up when you make a choice. Rather than analyze all your options, you can simply consider the value of your next best alternative.

- *Sunk costs* are the resources that can't be recovered once they're expended. They must not be considered when decided whether to continue a project.

- The *time value of money* says that a dollar today is worth more than a dollar tomorrow. By reinvesting your revenues, you can multiply your original resources through

KEY QUOTES

"Control your costs, but don't undermine the reason customers buy from you in the first place."

"Having 100 percent ownership and control of a profitable, self-sustaining business is a beautiful thing."

"Don't continue to pour concrete into a bottomless pit – if it's not worth the additional investment, walk away."

compounding. Some people even use this to borrow money (say, at 2% interest) to generate higher returns (say, 10%) elsewhere – this approach is risky, and should be used only if you can bear the risk.

How People Work

Businesses are created by humans, to serve humans, so it's vital to know what makes people tick.

The Human Mind

Our body is a physical system and needs nutrients, rest and exercise. Peak performance must start with proper **care for the body.**

We seek to keep our (perceived) world within acceptable limits, and we'll only take action if our "**reference levels**" are breached. For instance, you may tolerate your long working hours, until it starts to exceed 12 hours a day, or if you're diagnosed with an illness.

Our brain is constantly taking "**shortcuts**" to help us respond quickly with minimal effort. It finds *patterns* and matches them with those stored in our memories. To deal with incomplete information, it fills in missing pieces using past patterns. It also makes subconscious *associations* (e.g. linking "grapefruit" with "sour" and "orange"), and taps on stored patterns to *mentally simulate* future outcomes. Thus, developing **accurate mental patterns** (via experience or experimentation) is crucial to help us respond effectively. We can also *reinterpret* any situation to support our goals.

- There's a **cognitive limit** to how much our brain can process. Dunbar's number says that humans can only handle up to 150 stable social relationships at a time, beyond which we start to see people as objects. Personalizing the situation (e.g. imagining your loved ones being affected by your decisions) can change your choices.

When we feel threatened, we naturally go into **threat lockdown** (fight, flee or freeze). In this defensive state, nothing works. Calm your mind with exercise, meditation or sleep, acknowledge the signal and convince your mind it's safe to move on.

KEY QUOTES

"Businesses are built by people for people."

"If you want to do good work, taking care of yourself isn't optional."

"Reinterpret your past, and you'll enhance your ability to make great things happen in the present."

To inhibit our natural reactions, we need **willpower**, which is a limited resource that depletes with use. To conserve your willpower, use it to *change your environment* (e.g. remove all chocolates from your house, so you won't be tempted by them), or cultivate new *habits* (e.g. replacing snacking with walking).

Humans suffer from **absence blindness,** i.e. we can't identify what we can't see. Something doesn't seem clean unless it sparkles or smells clean. We may even take irrational actions if we're worried about not seeing progress. Through experience and the use of checklists, we can know what to look out for, and sense the unseen.

We tend to evaluate things by **comparing** them with what's readily visible. A $10,000 sofa may seem pricey against a $5 vase, but less so against a $10million house. Frame your offer such that the cost seems small (but the value seems big) next to other options.

We are naturally **loss-averse**, i.e. we hate to lose things more than we like to gain them. To shift decisions, help people to reinterpret the *risk of loss* (e.g. money-back guarantees). *Scarcity* also creates an urgency for people to buy now instead of later.

Motivation is an emotional state, and is best triggered using mental simulations, re-interpretations etc. *Novel, sensory data,* also helps to sustain interest.

Working with yourself

In this segment, we'll look at how to work more effectively.

Get in flow by removing distractions, focusing singularly on 1 thing, and doing a 10-30 min "dash" to jumpstart your mental engine. To minimize *cognitive switching penalty* when you switch tasks, set aside chunks of time (a few hours) for major tasks, and complete your minor tasks in pockets of spare time. Setting *artificial time limits* will also help you get the same work done in less time.

Process your **to-do list** in 4 ways: *complete* key tasks that you excel in, *delete* what's unnecessary, *delegate* tasks that others can do 80% as well, and *defer* tasks that aren't time-critical.

KEY QUOTES

"Save your Willpower: focus on using it to change your Environment, and you'll have more available to use whenever Inhibition is necessary."

"Our perceptual faculties are optimized to notice contrast, not to compare what we perceive with things that aren't there."

"Continue to offer something new, and people will pay attention to what you have to offer."

"Viewing your mind as a muscle is the best way to help it grow."

Every day, identify 2-3 **most important tasks** - set a deadline and focus on doing them first.

To be most effective, frame your ***goals*** in *PICS* (positive, immediate, concrete, specific), and focus on things within your *locus of control* (what you can control or strongly influence). Define what will bring your desired *states of being* (e.g. what makes you feel happy or fulfilled). Establish *habits* (e.g. exercising, reading) that support your goals, focusing on building 1 new habit at a time.

We work better with **external stimuli** than thinking in our heads. By writing, drawing or talking aloud, you can get new perspectives and insights.

Ask good questions to evoke good answers. Ask "*Why" 5 times* to uncover what you really want, so you can find new ways to achieve the ultimate goal. Ask "*How" 5 times* to identify options and the best action you can take. Ask "*what if*" to get your mind to simulate the desired outcomes, e.g. "what'd have to happen in order for…".

Imagine the **worst case scenario** – when you define your worst fears, you'll realize they're not as bad as you imagined. Identify **limiting beliefs** by listening for words like "I can't, I'm not good at".

We tend to *overestimate* our own abilities (especially when we're inexperienced), and pay attention only to info that supports our views (*confirmation bias*). *Mystery* can also make things (e.g. being a celebrity, owning a business) appear more alluring than reality. **Validate your views** by looking for counter-evidence and consulting others with experience.

Work with your body's natural **energy cycle**. Learn your energy patterns, use *peak-cycles* for creative or vital work, and use *down-cycles* to rest. Set aside *scheduled downtime* to recharge and evaluate new inputs/ changes.

For **long-term happiness**, create meaningful experiences (not just material gains), pay attention to your health & energy, spend time with people you like, remove sources of constant frustrations, and pursue new challenges.

KEY QUOTES

"The more you Externalize, the clearer your thoughts will become, and the faster you'll make progress toward your goals."

"Discover the root causes behind your Goals, and you'll discover new ways to get what you actually want."

"Asking yourself good questions helps you discover good answers."

"When you actually examine your worst fears, you'll discover that things won't be as bad as you fear."

"There's a big difference between liking the idea of being/ doing something and liking the actual being/ doing."

"Taking a break isn't a sign of laziness or weakness – it's a recognition of fundamental human need."

"You can't make positive discoveries that make your life better if you never try anything new."

Commit time and resources to **learn and experiment** (e.g. courses, field trips). Use *iterations* to test and improve any area of your life.

Working with Others

As **social creatures**, we're sensitive to *social signals* (e.g. luxury goods) that affect our perceived status. We withdraw when we feel judged or looked down upon. Make others feel *safe and important* show *appreciation* for what they're doing, be *polite*, and *respect* them as individuals.

Be deliberate about the **social circles** and company that you keep, as you become more like those you spend time with. We also prefer to work with those whom we know/like, and *referrals* transfer that sense of affinity.

The best way to get people to do what you want is to grow your **influence**. Convey belief in people, as they generally live up to your expectations (*pygmalion effect*). People also like to be *consistent* - once they've agreed to consider your offer, they'll feel obliged to do so. We tend to listen to *authority* figures (e.g. doctors, scientists); establish yourself as an expert to improve others' receptivity to you. Be deliberate about the *incentives* you offer (e.g. sales commissions vs long-term performance bonuses), as they skew behaviours.

Management is about achieving a goal by coordinating people's efforts and handling change. Keep teams *small and autonomous* to minimize the time needed for coordination. Use *comparative advantage* by having people specialize in their areas of strength and collaborating/ outsourcing their weaknesses. Always assign *1 owner* for each task, so there's clear responsibility. Focus on improving the *5 parts of the business*, using the tips above.

Explain the reason for a task or goal - it improves compliance, and allows people to take appropriate actions without checking with you all the time.

We are prone to *model bias* (assuming our ideas or approach are the best) and *attribution bias* (attributing others' mistakes to their personality, and attributing our own mistakes to circumstances). Learn to **suspend judgement** and be open to alternative views.

KEY QUOTES

"The more people who know, like and trust you, the better off you are."

"The groups you spend time with automatically and profoundly influence your behaviour."

"Obtain a small Commitment, and you'll make it far more likely that others will comply with your request."

"Management is simple, but not simplistic."

"Focus on what you can do well, and work with others to accomplish the rest."

"People will be more receptive to any request if you give them a reason why. Any reason will do."

"Keep an open mind, and you'll enhance your ability to make wise decisions."

Use **performance-based hiring** to find good candidates, e.g. examine their past achievements (not credentials), use questions that test for specific know-how, and give the top candidates a short project to test things out.

How Systems Work

Every business is a complex system, that exists within other systems.

Understanding Systems

A **complex system** is made up of interdependent parts, arranged to self-perpetuate and form a unified whole. Every system has a *flow* of resources that accumulate in *stocks* (pools of resources e.g. queues or inventories). One business challenge is to maintain an optimal amount of *slack* (so you don't have wastage nor run out of stock).

Systems also have **feedback loops**, i.e. a system output becomes an input for the next cycle. *Balancing loops* maintain equilibrium (e.g. the thermostat of a thermometer), while *reinforcing loops* amplify the output (e.g. compound interest). When a reaction creates an output that forms raw materials for a similar reaction (e.g. ads increase sales, which increase ad investments), we have an *auto-catalyzing system* that supports business growth.

Like evolution in nature, systems must pass **environment selection tests** to survive and thrive. Business systems can only survive in their markets with enough revenues. Use prototypes and iterations to test if your system is viable, before scaling and improving it incrementally.

To address **bottlenecks** in a system, you must identify the *limiting factor*, temporarily deploy all related resources and redesign other system parts to *support* the constraint, before permanently adjusting capacity and re-assessing the whole system.

Due to the number of **interconnected** parts, complex systems are hard to manage. Wherever possible, minimize *critical paths* (where 1 failure can cripple the whole system), and *counterparty risk* (where you're dependent on others delivering their promises). Moreover, complex systems are constantly

KEY QUOTES

"Businesses are complex systems that exist within even more complex systems – markets, industries, and societies."

"Selection Tests are ruthless: satisfy them, and you'll thrive. Fail to adapt to changing conditions, and you'll die."

"The more complex a system is and the longer it operates, the more likely it is to suffer a major failure. It's not a matter of if – it's a matter of when."

changing, and 1 change can trigger *domino effects* in other areas. We also need to manage *risks* (known unknowns), *uncertainties* (unknown unknowns) and *normal accidents* (which are inevitable). The best way is to stay flexible, build resilience and the ability to recover (which we'll explain later).

Analyzing Systems

To improve systems, we must first know how they're performing.

Deconstruct your complex system into its smallest possible sub-systems, to understand the components (e.g. inflows, outflows, feedback loops) and their interdependencies.

Then, **measure** how well the core and sub-systems are working, e.g. power consumption for devices, conversion ratios for sales. Establish *Key Performance Indicators (KPIs)* for critical system parts, which should relate to the 5 parts of the business. Use *ratios* to see relationships between the system components (e.g. profit per employee).

When **collecting data**, you can use *proxies* to measure 1 thing using something else (e.g. using website clicks to measure interest). *Sampling* (randomly testing a small segment as a proxy for the whole system) is a good way to find systematic errors, though smaller samples will come with higher *margins of error.*

Data is only useful with **context** (e.g. 1 million visitors to your website means nothing without details or past data for comparison). Use narratives to *humanize* the data and relate it back to the people behind it. Identify your *norms* (e.g. a 50% sales increase during Christmas), and review them periodically to make sure they're still valid. Try splitting data into *segments* (e.g. past performance, customer demographics and psychographics) for added context. Be *objective* when analyzing the data, rather than get defensive over it.

Improving Systems

Finally, learn to optimize your system, i.e. maximize the overall system output and/ or minimize the required inputs.

After you've deconstructed and analyzed your system, you may be able to *refactor* it, by grouping similar system components together for greater efficiency. Improve only up to the point

KEY QUOTES

"Measuring something is the first step to improving it."

"Find your system's KPIs, and you'll be able to manage your systems without drowning in data."

"Constant experimentation is the only way you can identify what will actually produce the results you desire."

when you see *diminishing returns*. When the incremental returns for the same input starts to decrease, focus on something else. The only way is to know what works and doesn't is to **constantly experiment.**

To keep the critical processes moving, we must constantly remove **friction** from the system (e.g. customers' effort to place an order).

- *Standard Operating Procedures (SOPs)* are useful to reduce friction for key repetitive tasks, and also to train new partners or employees. *Checklists* are a useful SOP to help you define a still-not-formalized process, so you can work toward automating the system.

- *Automation* is about operating a system/ process without human intervention, and is ideal for clearly-defined, repetitive tasks (e.g. automated receipts). Ironically, when an automation works well, *unchecked errors* can multiply very quickly. Yet, early *human intervention* (which would have been critical to stem the problem) is unlikely, as human resources aren't typically assigned to monitor a reliable system. One solution is to regularly sample and test the system, and have a recovery process in place.

Every system will fail at some point. It's inevitable, and the ability to **recover** is vital. *Stress-test* your system by simulating various conditions to see what could break your system, and use *scenario planning* to identify possible challenges. Build *resilience* (e.g. have a cash reserve, insurance, and optional strategies), and create a *fail-safe* in advance (i.e. backup systems like backup generators or external hard drives). Set aside time just to think about and *plan for the future.*

Use the **80-20 rule** to focus on critical areas that affect the bulk of your desired results. For instance, maintaining high system *reliability* is costly, so you should focus on improving the reliability of your most critical business processes first.

To avoid adding layers of **unnecessary** measures, use the *null hypothesis* to consider: what will happen if you treat an incident as a normal accident and did nothing? Consciously *stop* doing things that're counter-productive (e.g. stopping a product line, terminating an abusive client).

KEY QUOTES

"Efficient Automation makes humans more important, not less."

"Don't waste time trying to predict an unknowable future – construct the most likely scenarios and plan what you'll do if they occur, and you'll be prepared for whatever actually happens."

"Doing something is not always the best course of action. Consider doing nothing instead."

All systems have an optimal size, and sustainable systems go through the **cycle** of (i) *expansion* (focusing on new markets, new offers, creating and testing marketing, sales and value-delivery approaches), (ii) *maintenance* (focusing on execution and systemization) and (iii) *consolidation* (focusing on analysis and removing what doesn't work). You can only find the *right balance* through experience.

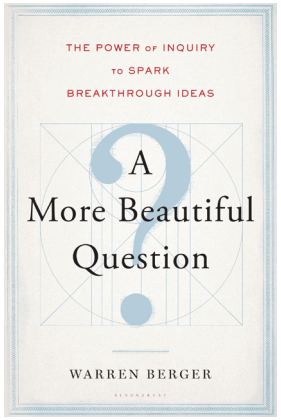
Other Details in the Book to Look out For

In the book, Kaufman explains more than 200 business concepts (including brief definitions and examples), in short segments averaging 2 pages each. This summary provides a quick overview of the various components. To get the most from the book, Kaufman recommends that you zoom in on the parts that're most relevant for you, apply them, and revisit the book regularly as a reference material. You can also refer to the official website for more resources and recommended reading.

KEY QUOTES

"Find the right balance, and you can accomplish anything."

"Self-education, whether it's about business or anything else, is a never-ending process."



A MORE BEAUTIFUL QUESTION

The Power of Inquiry to Spark Breakthrough Ideas

WARREN BERGER

The Big "So What"

Questions are an important discovery tool. In our dynamic world, the ability to ask the right questions has become increasingly important. This book explains why it's crucial to question all aspects of our work and personal lives, and how to use inquiry to uncover creative solutions and breakthroughs.

Introduction

As a journalist, Berger has widely researched and interacted with some of the world's most brilliant innovators and creators. He found that many breakthroughs can be traced back to the types of questions that are formulated and answered. In a fast-changing world where knowledge can become obsolete quickly, the ability to ask the right questions and break old ways of thinking has become more important.

Without action, questions will be philosophical at best. However, the right questions, when combined with action, bring innovation. The book addresses "**beautiful questions**", which are questions that are ambitious yet actionable. These catalyze change by helping us to see and think differently, and motivate action.

In this summary, we've condensed the key ideas into **3 parts**:

- Why Ask Questions?
- The 3-Part Framework of Innovative Questioning
- Putting Inquiry to Use

KEY QUOTES

"In such times (of constant change), the ability to ask big, meaningful, beautiful questions… can be the first steps in moving beyond old habits and behaviors as we embrace the new."

"In a time when so much of what we know is subject to revision or obsolescence, the comfortable expert must go back to being a restless learner."

"Whether or not we were ever properly taught how to question, we can develop the skill now, on our own, in our own spaces."

"We're all hungry for better answers. But first, we need to learn how to ask the right questions."

Part 1: Why Ask Questions?

The Power of Questions

Today, we can find information everywhere, and knowledge has become a form of commodity.

Many people are feeling overwhelmed by the rapid rate of change, the sheer amount of information, and the wide range of data sources—some of which can be inaccurate or conflicting. Thus, having more data can be less useful than having the ability to **contextualize** and look at things from different angles, so you can decide what to believe.

Even **technology** is better at helping us to document and organize information than to help us ask good questions. Berger argues that we should no longer focus on teaching students to memorize facts, which is better done by computers. Instead, we should train people to (a) ask the right questions, and (b frame the questions in a way that can guide computers to extract the best possible responses from the vast amount of information now available.

Questions are a powerful way to achieve creativity, innovation and change.

Questions frame our thoughts, and can be used to expand/ focus our thinking:

- Asking open or speculative questions (e.g. "why is punishment effective?") can help us to *expand our thinking*. On the other hand, asking closed, convergent questions (e.g. "is punishment effective?") can help us to *direct or focus* our thinking, to find consensus or specific answers.

- The *tone* of our questions also affects the outcome. For example, a question like, "How can we possibly survive this?" can have a very different effect from, "How can we make the most of this situation?"

The right questions, when followed through with action, can lead to **innovation and change**. For example:

KEY QUOTES

"The value of questions is going to keep rising as that of answers keeps falling."

"In some sense, innovation means trying to find and formulate new questions that can, over time, be answered."

- The question, “What if we could paint over our mistakes?”, led to the invention of the *“Liquid Paper”* correction fluid in the 1950s.

- Thee question, “Why aren’t the players urinating more after games?” led to the creation of the sports drink, *Gatorade*.

Why do we stop questioning?

Research shows that children ask about 40,000 questions between the ages of 2 to 5. Each time the brain connects stimuli or thoughts, synapses are formed, contributing to rapid brain development during this period. As students move through pre-school to elementary school and high school, the number of questions they ask decrease drastically.

If questioning is so important, why don’t more of us do it? Why isn’t questioning an official part of education and training? Berger suggests several possible reasons:

In most **schools**, the teachers are under pressure to impart tons of mandated information, and there’s no time for extra questions.

- When children are fed information and offered answers to questions they haven’t yet asked, it dampens their curiosity.

- Students are also discouraged from asking questions, and learn quickly that there are more “right” answers from text books or Google than from asking people around them. Such learning habits continue into the workplace.

Questions seem to be disruptive and challenge **authority and status quo**. Leaders, authority and experts are expected to have the knowledge and answers, and questioning brings a sense of uncertainty and vulnerability.

It’s not easy to find answers to meaningful questions, and many people don’t have the **time or patience** for them. At the workplace, people are also too busy trying to take action, and asking questions seems unproductive.

KEY QUOTES

“When we start teaching too much…we’re inadvertently cutting off paths of inquiry and exploration that kids might otherwise pursue on their own.”

Can education be built on questions?

"Teaching to the test" may have been effective in producing labour for routine factory and office work in the past. However, in our modern society, what would be the right model of education? How can we nurture learners who can be productive and thrive in the 21st century?

When students ask questions, they have more ownership of the question and are more engaged in finding the answers.

In 1974, Deborah Meier, a renowned figure in modern education, started the alternative Central Park East school, which has delivered great results. The school helped kids to understand and apply knowledge, by focusing on **5 learning skills** or "habits of mind": evidence (how you know if something is true or false), *perspective* (what are the possible viewpoints), *connection* (what are the patterns and applications), *conjecture* (what if we had different assumptions), and *significance* (why does this matter).

Montessori schools—which are **inquiry-based schools** that focus more on projects and learning rather than tests—have also nurtured many high-profile entrepreneurs, such as Wikipedia's Jimmy Wales, Amazon's Jeff Bezos, and Google's Sergey Brin and Larry Page.

However, simply asking more questions isn't enough; people must also know how to analyze their own questions and decide which ones to pursue in depth. Berger observed that there's a process of inquiry that can bring about innovation and change.

The 3-Part Framework of Innovative Questioning

Problem-solving involves different phases. Each phase comes with unique challenges, and requires a different mentality and types of questions. By giving structure to our questions and problem-solving process, we can use the right tools and approach at each stage.

In particular, there are 3 key parts to innovative inquiry:

KEY QUOTES

"Schools in many industrialized nations were not, for the most part, designed to produce innovative thinkers or questioners—their primary purpose was to produce workers."

"Being willing to question is one thing; questioning well and effectively is another."

Why: Someone comes across a less-than-ideal situation, and asks "Why" to understand the situation/problem;

What If: The questioner begins to imagine possible solutions or improvements, by asking "What If"; and

How: The person zooms in on one of the possibilities, and figures out "How" to make it a reality.

In 1976, Van Phillips lost his limb in a water-skiing accident, and was given a fake foot which was no more than a block of wood with foam rubber attached to an aluminium tube. He started to question why prosthetic feet weren't better designed, and went on to study prosthetics to learn more about the field. After 10 years of experimenting with different prototypes, he finally developed the FlexFoot line of prosthetic foot products, with breakthrough designs that changed how amputees could move and live.

Asking WHY: Step Back to Move Forwarda

Asking good "Why" questions help us to see and understand issues around us. This involves several components:

Step back, in at least 2 ways:

- *Stop "doing"*. Most of us feel pressured to keep "doing", due to our packed schedules and endless to-do-lists. In the process, we push aside questions, as they seem to hold us back. Distance yourself from the daily busyness to consider new perspectives. Ask questions like, "why am I doing this?" or "why am I doing it this way?"

- *Stop "knowing"*. The more knowledge we acquire in a field, the less receptive we become to new ideas and possibilities. Step back to review your assumptions and "expert knowledge"

Take notice of what others may have missed, and **challenge assumptions**:

- Adopt the Zen principle of Soshin, or "*beginner's mind*". Bring back your childlike abilities to see things as they are, and be open to all possibilities.

KEY QUOTES

"The mind, if preoccupied with a problem or question long enough, will tend to come up with possibilities that might eventually lead to answers."

"Asking Why can be the first step to bringing about change in almost any context."

"With more distance, a bigger picture comes to view."

"At least temporarily, it's necessary to stop doing and stop knowing in order."

"Beginner's mind is akin to adopting a more childlike mind-set."

- Don't be afraid to ask *naïve questions*, as it forces people to explain things simply and clearly.

- You can never truly be really at a *dead end*. If you look at things from another angle, there'll always be new details and possibilities.

Build a deeper understanding of the problem or situation through **contextual inquiry**. If you're too far from the problem, you cannot effectively ask the right questions. Get close to the question, so you can personally observe and understand the issue in context.

Question your questions. Sometimes, our biases and assumptions are hidden in the question we ask. Ask yourself, "What are the assumptions behind this question?" and "Should I be asking a different question?"

Use these tips to **improve and deepen your questioning**:

- To avoid circuitous questioning, use the *5 Whys method* by Toyota founder, Sakichi Toyoda. Basically, you ask "why" 5 times:
  Why am I exercising? (To lose weight);
  Why am I trying to lose weight (To be healthier);
  Why am I trying to be healthier? (To fall sick less);
  Why am I trying to fall sick less? (To be more energetic)
  Why do I want to be more energetic? (To be free to do what I want).

- The Right Question Institute (RQI) found that you can *open and close a question* to improve it. For example, you may start with an open question like, "Why is my boss hard to get along with?". Then, ask a closed question, "Is my boss hard to get along with?". You may realize that other colleagues do get along with your boss, and hence revise your open question to, "Why do I find it hard to get along with my boss?"

Take ownership of your chosen question, and be prepared to persist to find your answers and solutions. One subset of "Why" questions are "*challenger questions*". They come with an attitude of rebelliousness and an unwillingness to conform, e.g. "Why should we accept this?" or "Why can't something be done?". Such questions can be uncomfortable as they're

KEY QUOTES

"You have to be adventurous enough (and humble enough) to enter the 'know nothing' zone of a constant questioner."

"Contextual inquiry requires a commitment to the question you are exploring."

"A game-changing question can come from anyone… nonexperts or outsiders are often better at questioning than the experts."

"To question well, you must have the ability to say, 'It doesn't have to be that way.'"

disruptive and challenge authority. You're also likely to be counter-challenged, as people question, "What makes you think you know more than the experts?"

Asking WHAT IF: Imagining Possibilities

During the "What If" stage, we are in brainstorm/dreamer mode, where nothing's impossible. At this phase, it's important to allow the ideas to surface, however crazy and improbable they may seem.

Connective inquiry. Breakthrough ideas often involve mixing and matching different ideas or things that may seem totally unrelated.

- Our brains are made of huge networks of neurons. Whenever we make associations or connections, new synapses are created. Regular questioning helps to enrich the network of *neural pathways*, to build the foundation for insights and breakthrough ideas later.

- Although you start with a beginner's mind, make sure you acquire knowledge from *different viewpoints* along the way Ask yourself questions like, "What if we combine A and B, or F and Z?"

- For example, Van Phillips did a lot of connective inquiry in exploring options for the prosthetics foot. One of the biggest breakthroughs was the Cheetah, which combined inspirations from animal legs, diving boards and curved Chinese swords, in a way that allows an amputee to walk, run and jump.

Allow ideas to incubate. During the "What If" stage, it's important to *allow an idea to "sit" with you* for a while, i.e. think deeply about something, then step away and allow your brain the chance to work on it and develop fresh insights. Our brains are more creative when we are relaxed. Hence, it's most productive to do such inquiry when you're having a walk, or just before bedtime (so your unconscious mind can work on the question while you sleep).

Jumbling your brain. Sometimes, our conscious mind may be resistant to certain ideas. You can "force" your brain to become more open, by deliberately coming up with ideas that are

KEY QUOTES

"Getting to a better alternative may be a long process, but it has to start somewhere—and that starting point often involves questioning the status quo."

"The What If stage is the blue-sky moment of questioning, when anything is possible."

"What If possibilities are powerful things; they are the seeds of innovation."

"Coming up with original ideas or insights…often involves the ability to combine ideas and influences, to mix and remix things that might not ordinarily go together."

"Exploring What If possibilities is a wide-open, fun stage of questioning and should not be rushed."

clearly nonsensical or "wrong". These trigger new synapses in the brain to loosen old, persistent neural connections and make it easier to forge new ones.

- Create *unusual word-combinations* to get your creative juices flowing. Consider questions like, "What if we sold socks that don't match?", or "What if students go to school to teach rather than learn?"

- The goal of these exercises is not to find the creative ideas per se, but to *train your "What If" muscles*.

Asking HOW: Making Things Happen

This stage is about finding workable solutions and implementing them. It's the slowest stage fraught with difficulties, and most of your "What If" ideas will fail in this phase.

Decide which ideas you're willing to take to the next level. To commit to an idea, you need to **give form to it**, e.g. by sketching it on paper, or creating a video or prototype that you can test/ get feedback.

The key to success is to **fail forward**: keep experimenting, learning from your failures and finding ways to improve.

- In an experiment, kindergarten kids beat Harvard MBA graduates in a challenge to build the tallest possible structure with a range of materials. The kids won because they *moved quickly from "What If" to "How"*, trying various combinations to learn what worked, while the adults spent too long in the "What If" phase.

- To *stay positive* in face of failures, focus on questions like "What have I learned?" and "How can I try a better approach?". So long as you are failing for a different reason each time, and trying new things, you're learning.

Collaborative inquiry. If you don't know the solution, link up with people who may know the answers. By sharing your question or challenge, you invite like-minded people to find solutions with you. These answers are often not conclusive, but will lead you to another level of questions and exploration.

KEY QUOTES

"The How stage of questioning is…the point which things come together and then, more often than not, fall apart, repeatedly."

"The basic principles of the test-and-learn approach apply in almost any situation where people are trying to solve problems in dynamic, uncertain conditions."

"The trick is to go from one failure to another, with no loss of enthusiasm."
- Winston Churchill

The point is to keep moving your idea forward, bit by bit, with continuous question-answer cycles.

Putting Inquiry to Use

Questioning in Business and at the Workplace

Most companies aren't built for questioning. Senior management tend to see questions as a threat to their credibility, chain of command and accepted practices. People also feel they have no time to ask questions, and they may not even know what to ask.

In fact, many business leaders probably rose to their positions because they could provide answers, and asking questions make them feel exposed and vulnerable. A **good leader** must also know when to stop questioning, and to start narrowing down potential outcomes to move forward.

Yet, no leader can know the answer to every question. Leaders can **empower people** to ask questions and share perspectives, to get questions and ideas from both inside and outside the company.

To succeed, businesses must now ask more expansive questions involving "why", "what if", and "how", rather than old/closed questions involving "how many", "how much" or "how fast".

A good place to start is to ask **questions about purpose**, as they guide leaders to take the right actions, especially in times of uncertainty or change. Most great companies exist to answer a question and solve a problem. Good questions can refresh that sense of purpose, e.g. "Why are we in business?", "What business are we really in?", "If our company didn't exist, who would miss us?", "Who were we when we were at our historical best?", or "Who must we become to fulfil our purpose?".

You can use **What if questions** to unlock good ideas or manage constraints, e.g. "What if we had unlimited budget to create our solutions?", or "What if we could charge $1 for something worth $10?"

KEY QUOTES

"Inquiring minds can identify new opportunities and fresh possibilities before competitors become aware of them."

"While the leader can look outside for help with questioning, certain core leadership questions can only be answered by looking inward."

"Purpose questions are important because if you can answer them, that frees up company leaders to pursue all kinds of far-reaching opportunities and questions, knowing all the while they are on firm footing."

Use questions to unleash your **entrepreneurial spirit**, e.g. "How can we experiment better?", "What can we learn?" and "If we're a startup again, what will we experiment with?"

Group brainstorming may not always deliver fresh ideas, due to the effects of peer pressure and influence. An alternative is **questionstorming**, suggested by Hal Gregersen. Unlike brainstorming (which focuses on the number of ideas), question-storming focuses on quickly improving the questions, to eventually focus on, say, the 3 best questions to be explored further.

Rather than state your mission statement as if you have already arrived, it may be more effective to list it as a **mission question**, by using the words, "*How might we*?". For example, instead of "To inspire healthier communities through real food", your mission question can be, "How might we inspire healthier communities through real food?"

- Presenting your mission to answer an ambitious statement can actually sound more humble and impressive. It also reminds people to keep asking if the mission is still relevant as a driving force, and if the company still lives up to its mission.

- Pair your mission question with questions like, "Why are we doing what we're doing?" and "How might we do it better?".

A **culture of inquiry**—where employees are encouraged to question—can bring dynamism and creativity to a business. At Google, anyone can ask questions, and an intra-social network is used to manage the Q&A.

However, not all companies are ready for such a culture, as it requires **system-wide changes** to policies, practices and leadership. The shift must *start at the top*, with leaders being willing to ask, accept and answer questions—including tough questions—from anywhere in the organization.

This must also be supported by a **conducive learning environment**:

- This may include *opportunities* to learn from both insiders and outsiders, collaborate with others, share work-in-progress, exchange questions and ideas. Google allows

KEY QUOTES

"When a business culture is inquisitive, the questioning, learning, and sharing of information becomes contagious—and gives people permission to explore new ideas across boundaries and silos."

employees to devote 20% of their time to independent projects, and created Google University to make the workplace into a learning place.

- Eric Ries (the author of "Lean Startup") suggests that both successful and "failed" experiments should be *rewarded*, so long as they provide valuable learning.

To grow and maintain a culture of inquiry, it also helps to add **new people** who're naturally inquisitive. When interviewing new hires, you can require all candidates to come with a few "Why", "What If" and "How" questions. You can also ask questions during the interview and ask the candidates to build on these questions.

Questioning for Life

Most of us are too busy to really stop and ask why we're doing what we're doing. Berger suggests that we may even avoid the difficult questions as we silently fear the answers they'd bring.

Seminars, self-help books etc. may provide off-the-shelf answers, but they cannot replace the role of **self-questioning**. Only you can find the answers to your life and unique situation.

- Don't just focus on getting things done. Step back, slow down and *gain clarity*, so you can move forward with focus and energy.

- Rather than ask questions like "How can I get promoted?", try asking questions like, "What's at the top of the ladder?", "What will I do after I get there?", "Am I enjoying the climb?", "What am I leaving behind for the climb?"

When innovating, don't just look for what's missing; **consider what is already there**, e.g. existing strengths and assets. Use *appreciative enquiry* to make positive changes in your life, e.g. "What has worked for me before, and how can I create more of that in my life?", "What am I naturally drawn to repeatedly?"

"Live your questions" by trying them out to see the outcome. For example, to find the best career shift, try out different projects or contract roles, to experience what really works for you. You may be surprised at what you'd discover.

KEY QUOTES

"Company leaders and managers may be able to provide some basic tips on what to look out for, but the most important thing they can offer employees is the freedom to venture outside the bubble and do their own investigations."

"One of the hallmarks of innovative problem solvers is that they are willing to raise questions without having any idea of what the answer might be."

"Experimentation can be thought of as, simply, the ways you act upon questions."

Failure is inevitable in innovation and entrepreneurship. It's often recommended that you ask, "What would I do if I could not fail?" to free yourself to think big. However, success requires the ability to persist in face of failure. Alternative questions to ask could be, "How will I recover if I fail?" or "What's worth doing regardless of whether I succeed or fail?"

Questions, when properly formulated, can encourage people to break away from their own points of view, to consider different perspectives and engage in a **real dialogue**.

- For example, people may react defensively to statements like "Gun owners must be more responsible", but be *more open* to questions like, "Do you believe in gun responsibility?"

- To *open up your own mind*, ask questions like, "Why might they see the issue differently?", or "What are the assumptions that we're each holding?".

- *Empathic questioning* also helps us to narrow the gaps, connect with others, and find common ground. To strengthen relations, try questions like, "Why do I feel as if we're not getting along and how can I change that?" or "What went well in the family this week and how can we do better?"

Finding your beautiful question takes time.

- Reflect on it, and allow the ideas, possibilities and connections to **sit with you**. If the question is too big and overwhelming, break it down into smaller Why, What If and How questions.

- **Express your personal purpose** in the form of a question, as it helps you to focus, become more open to new options, and pursue your your purpose adventurously without feeling the need to know all the answers.

- **Test out the questions** with small actions, starting with the one that resonates with you most. As you pursue a question, you may be surprised at how much you know, as well as how much you can learn.

KEY QUOTES

"There is a way back from almost anything, and once you acknowledge that, you can proceed with more confidence."

"Questions—if worded sensitively—can show respect to both sides of an issue, invite participation, and open up conversation."

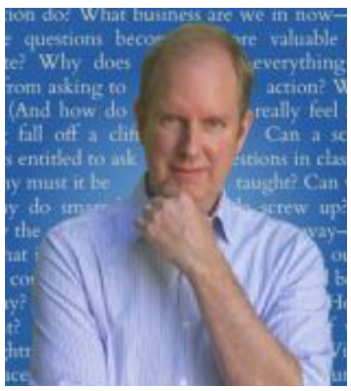
"What will make it a beautiful question for you, and one worth staying with, is the passion you feel for it."

"You may have lists of things to do, goals to achieve… but if you have one compelling question, it's harder to set aside and ignore."

Other Details in the Book to Look out For

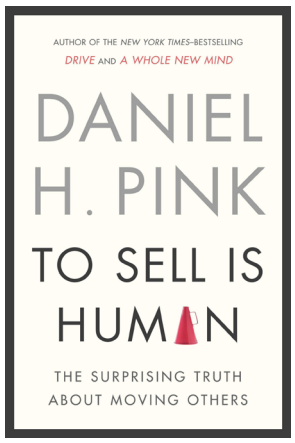
The book is organized into 5 parts. It includes over 40 segments, each structured around a question about education, innovation, problemsolving, or business, e.g. “Why do kids ask so many questions?” and “Why are you evading inquiry?”. It presents examples, background and perspectives to help us think about each question. In this summary, we’ve captured some of the key ideas and tips. You can get more articles, quizzes and resources at http://amorebeautifulquestion.com.

About the Author



Warren Berger (born 1958) is an American journalist, blogger and author, who has written primarily on innovation, design, mass media, and popular culture. He worked as a newspaper journalist and a magazine editor before founding his own independent writing business in 1990. Berger graduated from Syracuse University’s S. I. Newhouse School of Public Communications.

KEY QUOTES



To Sell is Human

The Surprising Truth About Persuading, Convincing and Influencing Others

BY DANIEL H. PINK

The Big "So What"

When we think of "sales", most of us think of pushy door-to-door salespeople or slimy used-car salesmen. In this book, Pink shows how outdated this perspective is. In fact, *all* of us sell – as part of our work and lives, we constantly influence, sway or persuade others to take action. Whether you are in a sales role, or need to influence others at work, this book provides fresh perspectives and useful techniques to help you improve your ability to move and influence others.

Redefining Sales

Most of us don't consider ourselves to be salespeople. In fact, we tend to associate sales negatively with words like "slimy", dishonest", or "pushy". In the book, Pink shows us how outdated our notion of sales can be, how the world of selling has changed, and why everyone sells. In fact, many companies that thrived on the traditional sales approach (e.g. the Fuller Brush Company, Encyclopedia Britannica) have already faded into oblivion.

The Shift from Selling to Moving

Monetary sales. In today's digital internet age, consumers are able to do their own research and comparisons, and get purchase advice from their social networks. In most cases, consumers have as much (if not more) information as the salesperson – cajoling or withholding information can no longer work, and the traditional way of selling is dead. To persuade people, you must move them.

Non-monetary sales. Most people spend about 40% of their workhours doing "non-sales selling", i.e. convincing others to

KEY QUOTES

"The ability to move others to exchange what they have for what we have is crucial to our survival and our happiness."

"We're persuading convincing, and influencing others to give up something they've got in exchange for what we've got."

"Like it or not, we're all in sales now."

"To sell well is to convince someone else to part with resources – not to deprive that person, but to leave them better off in the end."

"In a world where anybody can find anything with just a few keystrokes, intermediaries like salespeople are superfluous."

"As we rely ever more on websites and smartphones to locate and purchase what we need, salespeople themselves – not to mention the very act of selling – will be swept into history's dustbin."

exchange their resources (e.g. expertise, time, effort, attention) for something they want. Such activities are a significant part of work, and are vital for one's professional success.

Everyone sells. When we consider both sales and non-sales selling, *everyone sells*. However, instead of product pushing, we must now move people into action. In Pink's words, we're all in the "moving business".

The 3Es Behind the Moving Business

How did so many of us end up as salespeople, or rather, movers? The book explains 3 key factors (or 3Es) behind this trend:

Entrepreneurship: The Web and smartphones have made it easier and more affordable to start a business, bringing a surge in the number of small and micro businesses (small businesses operated by 1-2 people). While large organizations rely on specialization, small business owners must wear multiple hats; they must oversee all aspects of their business, including sales. As the number of entrepreneurs continue to grow, so will the number of salespeople.

Elasticity: In steady, unchanging environments, specialized skills can be highly effective. However, in today's ever-changing landscape, we must learn and adapt quickly - "elasticity" is now an essential skill for success. This involves:

- Doing jobs and applying skills that go *beyond artificial boundaries* like marketing, design, or accounting; and
- *Developing skills that can be repurposed or applied in new ways* to match industry changes.

Whether you are an employee or a business owner, your work will become increasingly elastic. For example:

- *Atlassian*, an enterprise software developer, achieved $100 million in annual sales without a single "salesperson". Instead, everyone in the company - from the engineer to the customer service staff - focuses on sales.
- *Palantir*, which specializes in big data analytics and software,

KEY QUOTES

"The very technologies that were supposed to obliterate salespeople have lowered the barriers to entry for small entrepreneurs and turned more of us into sellers."

"Being an entrepreneur, for at least part of one's livelihood, could become the norm rather than the exception. And a world of entrepreneurs is a world of salespeople."

"A world of flat organizations and tumultuous business conditions…punishes fixed skills and prizes elastic ones."

"What an individual does day to day on the job now must stretch across functional boundaries… And when the next technologies emerge and current business models collapse, those skills will need to stretch again in different directions."

uses "forward-deployed engineers" to interact with customers. That way, the engineers can directly address customers' problems, learn what customers need, find problems and figure out what sells. Palantir doesn't even provide sales training; instead, all its staff read 2 books that emphasize the importance of understanding market information, and nimbleness in thinking.

The skill of moving others is an example of an elastic skill that's relevant across time, functions, and industries.

"**Ed-Med**": Education and Healthcare are 2 of the fastest-growing industries, and Pink refers to them as "Ed-Med". Motivating students to pay attention and learn, and encouraging patients to adopt healthier lifestyles, are all aspects of non-sales selling. At the core, Ed-Med is about moving people to take action, so they can achieve an outcome that's good for them. The only way to convince people to change their behaviour is to engage them as partners or participants. Only then can you find a way to match what they want with what you can offer. As the Ed-Med industry grows, more people need to become well-versed in the art of moving others.

From Caveat Emptor to Caveat Venditor

In the past, sellers had more information than buyers, and the onus was on buyers to check the quality and suitability of the products, before making a purchase (**Caveat Emptor**). People had no recourse even if they were cajoled into bad deals.

However, with the internet, the power has shifted in buyers' favour.

- Buyers today have almost **equal access to information** as sellers. For example, if you wish to buy a pre-owned car, you can do your online research on various car models, used-car companies, and even a vehicle's accident and repair history.

- Buyers also have the **option to retaliate** (e.g. share bad reviews on the internet or social media) if they're unfairly treated.

The new rule is now **Caveat Venditor** (i.e. seller-beware, with the seller being accountable for providing the necessary info to the buyer). Effective selling is no longer about being the most persistent

KEY QUOTES

"Most of us are movers; some of us are super-movers."

"To move people fully and deeply requires something more – not looking at the student or the patient as a pawn on a chessboard but as a full participant in the game."

"In a world of information parity, the new guiding principle is caveat venditor – seller beware."

"When buyers can know more than sellers, sellers are no longer protectors and purveyors of information. They're the curators and clarifiers of it – helping to make sense of the blizzard of facts, data and options."

"In a world of information parity, the new guiding principle is caveat venditor – seller beware."

"Whether you're in traditional sales or non-sales selling, the low road is now harder to pass and the high road – honesty, directness, and transparency – has become the better, more pragmatic, long-term route."

or aggressive. It's about being transparent and empathetic, and helping buyers to make sense of available facts and options, so they can make the best choices.

To achieve this, it's important to bust 3 myths about sales:

- **Selling is not a role for less intelligent people**. In fact, the skills needed for sales are as valuable, if not more so, than high-IQ roles like engineering or medicine.

- **Salespeople are not money-grabbers**. Outstanding salespeople are often driven by a wider purpose, and non-sales selling is primarily motivated by non-monetary factors.

- **There are no "natural salespeople"**. Everyone sells, and we all sell naturally.

How to Be a Good Mover

Many successful salespeople live by this age-old adage, "Always be Closing". They're singularly focused on getting their prospects to say "yes" to what they're selling. Pink proposes a new set of ABCs – Attunement, Buoyancy and Clarity – that are better suited for the new paradigm.

Attunement

Attunement is about aligning yourself with others and the situation, stepping outside your own perspective and putting yourself in others' shoes. To effectively attune yourself to others' perspectives, there are 3 key rules or principles:

Lessen your power to amplify it. Research has shown that people with more power are usually less sensitized to others' points of view. Hence, regardless of your actual position, assume that you are starting with a position of lesser power. This helps you to attune yourself to others' perspectives and become a more effective mover.

Amazon founder, Jeff Bezos, always adds an *empty chair* in his meetings, to remind everyone to consider the perspective

KEY QUOTES

"Each of us – because we're human – has a selling instinct, which means that anyone can master the basics of moving others."

"Attunement, buoyancy, and clarity: These three qualities… are the new requirements for effectively moving people on the remade landscape of the twenty-first century."

"Attunement is the ability to bring one's actions and outlook into harmony with other people and with the context you're in."

"The ability to move people now depends on power's inverse: understanding another person's perspective, getting inside his head, and seeing the world through his eyes.""

of an important stakeholder - the customer. Try this at your meetings.

Use your head + heart. To be effectively attuned, you need both cognitive thinking and empathy (i.e. logic *and* feelings). In fact, you should consider not just the people themselves, but also their wider social networks and relationships (which affect their biases, preferences etc.). Try these 2 exercises to hone your attunement:

- *Meet the time traveller*. Try to explain a modern item (e.g. a smartphone) to an imaginary person from 300 years ago – it'll force you to consider how different others' perspectives are.

- *Draw a discussion*. To tune in to others' behaviours and moods, map out the flow of content and feelings at a meeting.

Strategic mimicry. We naturally (and often sub-consciously) mirror the behaviours of the people we interact with. Strategic mimicry (e.g. repeating others' words, aping their mannerisms) can produce better results in negotiations or sales. However, it has to be sincere and natural, like a chameleon blending into its environment.

- Try the *Watch-Wait-Wane* approach. *Watch* the other person, then *wait* a while before copying something (e.g. words, tone, gesture). Slowly *wane* to become less conscious of your mimicry.

- *Mirror image*. Pair up with a partner. Study each other for 30s, then turn around and change a part of your appearance. Face each other again after 60s and try to identify the change(s).

Many people assume that good sales people should be extraverts. However, research suggests that ambiverts – people who are neither extremely introverted nor extroverted – fare even better at moving others. That's because they can balance between listening (and keeping quiet) and speaking up. Identify your natural tendencies at www.danpink.com/assessment, and learn to adjust your behaviours - introverts should learn to speak up more, while extroverts should learn to hold back and listen.

KEY QUOTES

"Synching our mannerisms and vocal patterns to someone else so that we both understand and can be understood is fundamental to attunement."

"The key is to be strategic and human – to be strategic by being human."

"Most of us are ambiverts, sitting near the middle, not the edges, happily attuned to those around us. In some sense, we are born to sell."

Buoyancy

One of the toughest aspects of sales is the sheer volume of rejections. Buoyancy is about balancing determination with optimism. Use these 3 tips *before*, *during*, and *after* the sales process, to cope with rejections:

Questioning Self-Talk. Use this to prepare yourself ***before*** the sale. Pink suggests that this is even more effective than affirmations or positive self-talk. Instead of affirmations like "I can do this" or "I will achieve this", ask yourself, "Can I do this?" or "Can I achieve this?". Then, list down 5 reasons why the answer should be "yes". Such questions draw out your intrinsic motivations, as well as strategies and answers needed to complete the task.

Positivity Ratio. ***During*** the sales process, negative emotions, like fear or anger, can trigger the fight-or-flight response in others. Positivity, on the other hand, brings several benefits:

- It puts people in an *expansive mode*, so they focus on possibilities and are more open to ideas for a mutually-beneficial outcome;
- It's more effective in *transferring belief* or conviction; and
- It paves the way for a long-term relationship or *future dealings*.

However, some negative experience is still good to keep us on our toes and motivate growth. Research suggests that a positivity-negativity ratio of about 3:1 is most ideal – having 3 positive encounters (e.g. a praise, a happy customer) for every negative encounter (e.g. a rejection, an embarrassing incident) helps you to flourish.

- *Aim to achieve the 3:1 ratio*. Identify and monitor your ratio via this website/link. Focus on displaying positive emotions throughout the day; it'll also boost your chances to move others.
- Count the number of rejections you've had in a day or week, and frame up some of them. *Embrace the rejections* and remind yourself how much you've already survived.

KEY QUOTES

"Positive self-talk is generally more effective than negative self-talk. But the most effective self-talk of all doesn't merely shift emotions. It shifts linguistic categories. It moves from making statements to asking questions."

"While negative emotions help us see trees, positive ones reveal forests."

"Actually believing in what you're selling has become essential on sales' new terrain."

"A particular recipe – a golden ratio of positivity – leads to the best results."

"Optimism, it turns out, isn't a hollow sentiment. It's a catalyst that can stir persistence, steady us during challenges, and stoke the confidence that we can influence our surroundings."

Explanatory Style. How we explain our experiences ***after*** the sales process can determine if we feel helpless or resilient. Renowned psychologist, Martin Seligman, found that people who explain negative experiences as permanent, pervasive and personal, tend to develop "learned helplessness".

- Learn to *adjust your explanatory style*. Think of a rejection as temporary (it'll pass), specific (it's unique to this incident) and external (it's not about me), so you can cope and perform better.

- Write yourself a *rejection letter*. Use this to get over the fear of rejection, and possibly identify blind spots in your proposal.

Clarity

We've no shortage of information today. The ability to cut through the clutter, identify problems, and present solutions clearly, has become more valuable.

Identify problems. With the internet, finding information is easy. What's more challenging is helping people to find or identify problems that they didn't previously see – these new perspectives move people and influence their choices.

To identify the right problems, we need to get skilled in 2 areas:

- **Curating information**. Rather than present more data, learn to sort through the sea of information, and present the most relevant and illuminating pieces. Try this approach: Seek (define the topic and collect the best possible data), sense (make sense of the info), and share them (through social media, email, etc.)

- **Asking questions**: Rather than present answers, learn to ask good questions that help to uncover underlying issues. For example:

  - Use these *2-questions*: "On a scale of 1 to 10, how ready are you to…(do the desired action)?" Then ask, "Why isn't your number *lower*?" When you ask for a lower (rather than higher) score, it makes people examine their existing motivation for action.

KEY QUOTES

"Clarity (is) the capacity to help others see their situations in fresh and more revealing ways and to identify problems they didn't realize they had."

"The ability to move others hinges less on problem solving than on problem finding."

"One of the most effective ways of moving others is to uncover challenges they may not know they have."

- Try the "*Five Whys*" approach: Identify an issue, and find the underlying problems by asking "Why" 5 times.

Frame your Offer. Try using one or more of these 5 frames to highlight the value of your solution:

- *Reduce*. When you give people *fewer options* to choose from, sales can actually increase. Removing inexpensive items from a bundle can also increase the *perceived value* of the bundle. Remember: less can be more.

- *Experience*. Experiences generally bring greater customer satisfaction and repeat business (vs mere products). Sell experiences, not products (e.g. sell indulgence, not chocolates).

- *Labels*. When people are labelled positively (e.g. "generous", "kind"), they tend to raise their behaviour to fit the labels.

- *Blemishes*. If your offer won't be scrutinized in detail, try adding a small blemish to the list of positives. This highlights your positives by contrast, and adds a touch of honesty.

- *Potential*. Research shows that people are actually more receptive to things that have great potential ("this could be the next game-changer"), than things that're already good ("this has totally changed the game"). Don't just emphasize your past achievements; highlight what you can achieve in the future.

Give clear directions. Once people see the problems and the value of your solutions, make sure you provide details on what exactly they should do next.

What To Do to Move People

Now that we know the qualities required to effectively move people, let's look at the 3 things we need to do – Pitch, Improvise and Serve.

KEY QUOTES

"Being honest about the existence of a small blemish can enhance your offering's true beauty."

"Today, we have more opportunities to get out our message…But our recipients have far more distractions."

Pitch

A pitch is not mean to convince others; it merely arouses interest and draws others into a conversation. For many years, salespeople practiced "elevator pitches" – a succinct way of presenting what you offer, in the short time you have with a stranger in a lift. Well, this is outdated, says Pink. Today, everyone is constantly on their mobile phones, and we should learn 6 new tricks to replace the elevator pitch:

1. **One-word Pitch**. The idea (conceptualized by advertising veteran Maurice Saatchi) is to distill what people associate with you to just one word. For example, Google has claimed the word "search", MasterCard has claimed the word "priceless", and President Obama built his strategy around the word "forward". Start with a 50-word pitch, reduce it to 20 words, 6 words, and eventually 1 word.

2. **Question Pitch**. When you make a statement, it's received passively. When you ask a question, people respond aloud or in their heads, and they consider why they agree or disagree with you. Find your strongest arguments and frame them into questions.

3. **Rhyming Pitch**. Use sentences that rhyme (e.g. "Leaders are readers" or "Life is mostly strife"). These are more easily processed and remembered, and people tend to unconsciously believe them to be true or accurate.

4. **The subject-line pitch**. Every email that we send is actually a pitch – the title determines if someone will read it. Generally, people open emails when:

   - It contains something obviously *useful* to them, i.e. they have something to gain or lose (e.g. "5 proven ways to double your income"); or

   - It's uncertain what the email contains, i.e. it piques their *curiosity* (e.g. "5 strange ways to make money").

   The former is more effective if the recipient has a high email load.

KEY QUOTES

"The purpose of a pitch…is to offer something so compelling that it begins a conversation, rings the other person in as a participant, and eventually arrives at an outcome that appeals to both of you."

"In a world where buyers have ample information and an array of choices, the pitch is often the first word, but it's rarely the last."

"By making people work just a little harder, question pitches prompt people to come up with their own reasons for agreeing (or not)."

"Remember: Pitches that rhyme are more sublime."

Twitter pitch. A tweet has 140 characters or less, and should get the reader to reply, click a link, or share with others. Better-performing tweets tend to ask questions, provide useful info and/or links to the latest news. Try developing your pitch in 120 characters or less.

Pixar pitch. Pixar films usually follow a 6-part narrative structure: "Once upon a time, ... Every day, ... One day, ... Because of that, ... Because of that, ... Until finally, ...". Try applying this structure to your pitch.

Practice sheets for the above are available from Pink's website. In the book, Pink also provides a range of other tips, such as considering what you want someone to know, feel, and do after hearing your pitch, using visuals or props, and learning from others' pitches.

Improvise

Things don't always go according to plan and we need to improvise. Here are 3 useful tips for improvisation:

Listen out for offers. Often, what we perceive to be a rejection is actually an offer. For instance, "I'm not ready to buy that *yet*" could be an offer to buy later, or "$100 is out of my budget" could be an invitation for a lower quote. During your conversations, try *pausing for 5 seconds* before you respond, so you learn to slow down and listen.

Use "Yes and...". Instead of saying "No" or "Yes, but...", use "Yes, and..." to shift your mind toward possibilities. For example, "Yes, I understand your concerns, and...."

Make others look good. Rather than focus on sharing your views, ask questions and be genuinely interested to find out why others see or feel differently from you. Try this exercise: Find a partner, select a topic with 2 distinctly different views, and have each person adopt a stance. Get your partner to make his/her case – you can only listen and reply with open-ended questions that are do not convey an opposite or contradicting view.

KEY QUOTES

"The best pitches are short, sweet and easy to retweet."

"The only way to hear (offers) is to change the way you listen and then change the way you respond."

"Many of us have become desensitized to 'win-win' from hearing it so regularly but experiencing it so rarely."

Serve

When people are genuinely moved, the impact can be long-lasting. Here are 2 principles to make selling more meaningful:

Be Personal. When you put a face to an issue or situation, it makes it personal and tangible. A medical report (full of test results and diagnosis) can feel cold and distant. However, when you add the patient's photograph to the report, it creates a strong reminder that there's a real person whose life or health is at stake.

There are 2 sides to making something personal. First, you need to think of the *people you serve* as unique individuals (e.g. put yourself in their shoes, or treat everyone like how you'd treat your grandmother). Second, you want them to *know who you* are, as the person behind the product or service (e.g. include your photograph when inviting feedback).

Focus on purpose. Research found that people are more willing to take action for a bigger purpose, than for their personal gains. For example, hospital professionals were more willing to wash their hands when they were reminded of the effect on their patients' health (than when they were reminded of the effect on their own health). Sales and participation increased when people heard stories of how their contributions would improve others' lives. Hence, remind people of the reason for participating, and appeal to their sense of purpose or empathy.

- Rather than try to sell more to people, try to deliver beyond expectations. In other words, *upserve, don't upsell*.

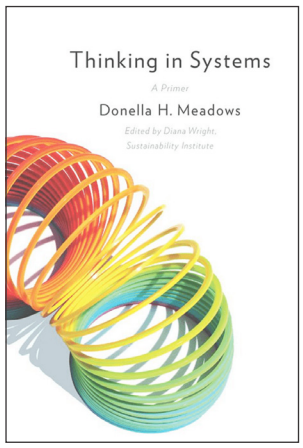
- *Do a self-check*. Always ask yourself: (a) If the person agrees to buy what I'm selling, will his/ her life improve? (b) Will the world be a better place after I finish this interaction? If your answer isn't "yes" to both questions, review what you're doing.

KEY QUOTES

"In both traditional sales and non-sales selling, we do better when we move beyond solving a puzzle to serving a person."

"The stories made the work personal; their contents made it purposeful. This is what it means to serve: improving another's life and, in turn improving the world."

"Don't try to increase what they can do for you. Elevate what you can do for them.""



THINKING IN SYSTEMS

A Primer

DONELLA H. MEADOWS

The Big "So What"

We live in a complex world of inter-locking systems. Systems thinking helps us to understand how things work, so we can better identify root problem causes, see new opportunities, make better decisions and adapt to changing circumstances. In this summary, we will:

- Give an overview of systems thinking concepts and principles; and
- Explain how to apply systems thinking in real-life.

Systems: Concepts and Principles

What are Systems?

Definition: A system is a set of interlinked elements that are organized to achieve a goal.

- Every animal, plant, organization and society is a complex system. A system's structure defines its *behavioral pattern*. While systems may be influenced by external forces, the *way* they respond to these forces tend to come from their inherent characteristics.
- This means that the economy will move in cycles regardless of what political leaders do. Companies that lose market share would've done so regardless of how competitors respond. Unless we can see how systems operate and create their own problems, we can't identify and address the *root causes*. We'll be like the proverbial blind men, each touching a different part of an elephant and drawing different conclusions about what an elephant is like.

KEY QUOTES

"We know a tremendous amount about how the world works, but not nearly enough."

"Systems happen all at once. They are interconnected not just in one direction, but in many directions simultaneously."

A system is **more than the sum of its parts**. Its elements are interrelated, e.g. the organs in your digestive system jointly break down the food you consume. Systems can be a part of larger systems, and may be able to achieve goals, evolve or even self-repair.

- *System elements* can be physical (e.g. machines, people, products) or intangible (e.g. culture, values, skillsets).

- Due to the sheer number of elements and sub-elements, it's more useful to examine the *interconnections* between elements—these may be physical (e.g. how products move through a factory) or information-based (e.g. how a customer decides to buy something).

- A system's *purpose* is the hardest to decipher—the only way to do so is to observe exactly how the system behaves. Since each sub-system has its own goals, a system can have a complex network of sub-systems and goals. For example, the students and staff in a university will have different goals from the university itself.

- Elements are the most observable but least crucial. The *greatest impact* comes from changes to the system's purpose, followed by its interconnections and elements.

KEY QUOTES

"The behavior of a system cannot be known just by knowing the elements of which the system is made."

"Purposes are deduced from behavior, not from rhetoric or stated goals."

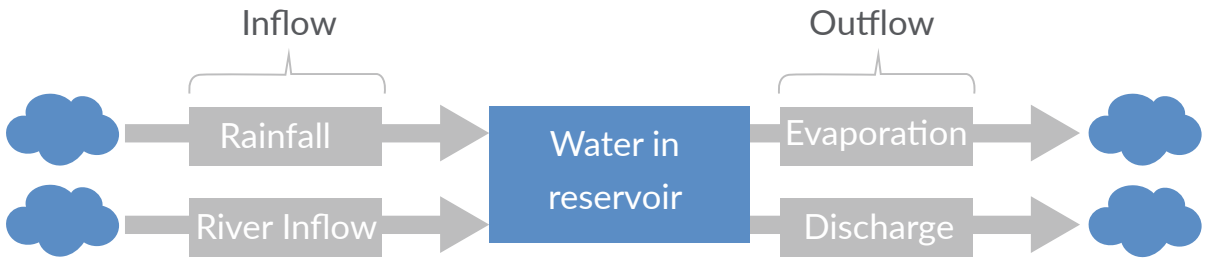
"A change in purpose changes a system profoundly, even if every element and interconnection remains the same."

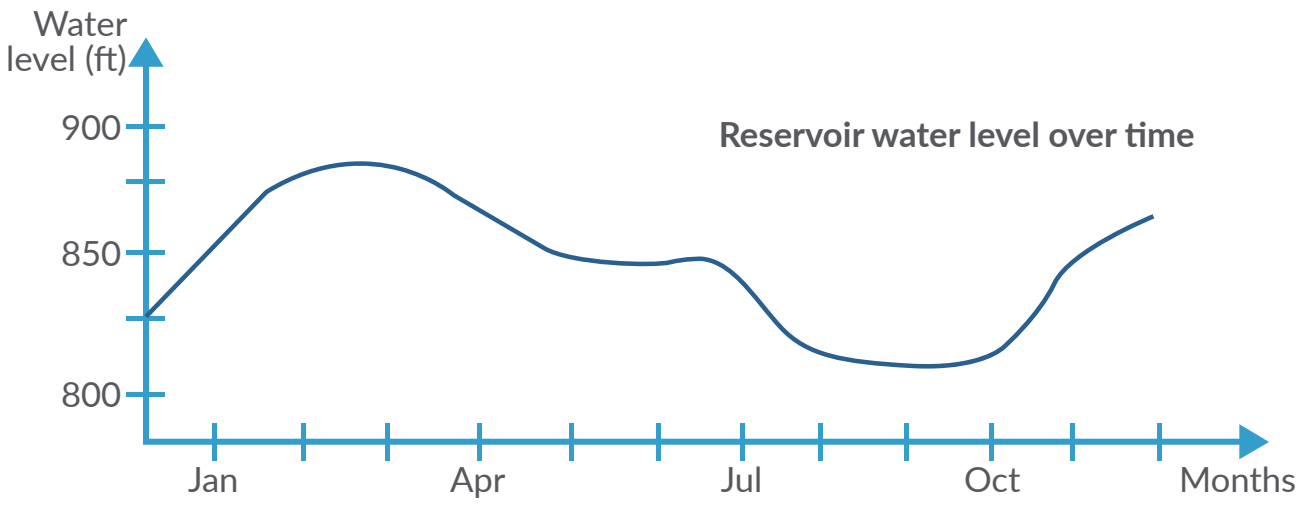
Stocks, Flows and Feedback Loops

Stocks and flows help us to understand how a system behaves.

- A *stock* is an observable or quantifiable aspect of a system, e.g. population size or inventory levels. It can be accumulated or depleted, and thus captures the history of *inflows and outflows* in the system. Stock levels rise when inflow is greater than outflow and vice versa. Stock levels stay constant and achieve dynamic equilibrium when inflow = outflow.

- The best way to understand a system is to (i) map out a *system diagram* and (ii) plot the variables/stocks on a *time graph*. For example, the simple diagram below shows the key factors that affect the water level in a reservoir. When you examine it alongside time-graphs, you can get a better grasp of how each variable affects the water levels.





- Stock levels tend to change gradually, thus providing *stability or momentum* in a system. We use stock levels to make decisions (e.g. offer discounts when there's excess inventory, spend less when the bank balance is low). Remember: flows take time and things can only happen as fast as they happen. To achieve your desired stock levels, you need to take such delays into account.

A **feedback loop** is formed when a change in stock affects the inflow/outflow for that stock, i.e. it triggers a process to increase, decrease or maintain the stock level. When you see a consistent pattern of behavior, there's always a feedback loop at work.

- A *balancing loop* is goal-seeking. For example, a thermostat regulates temperature—it warms up a room if it gets too cold, and cools it down if it gets too hot. Such loops bring stability but also resist change.

- A *reinforcing loop* amplifies an existing effect to trigger a virtuous or vicious cycle. For example, the more people catch a virus the faster it spreads, or the more you save the faster your bank balance grows from the compound interest. Such loops bring exponential growth but can also cause things to spin out of control and collapse.

Systems Behaviors

Just like how animals in the zoo give us a snapshot (but not the full picture) of wildlife, systems diagrams represent a **simplified**

KEY QUOTES

"A stock is the memory of the history of changing flows within the system."

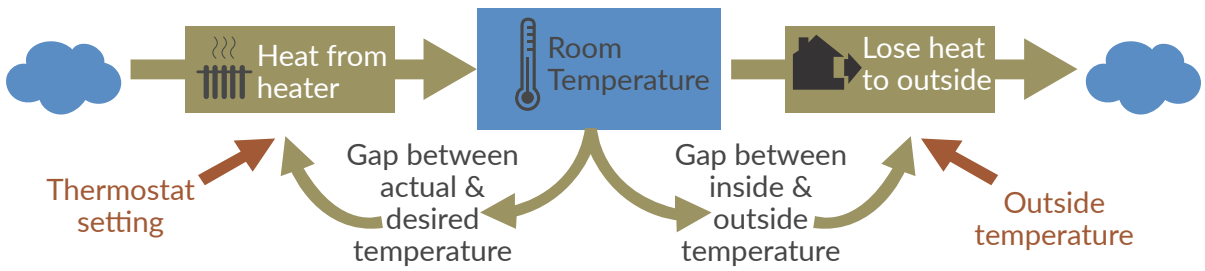
"A stock takes time to change, because flows take time to flow."

"Systems with similar feedback structures produce similar dynamic behaviors."

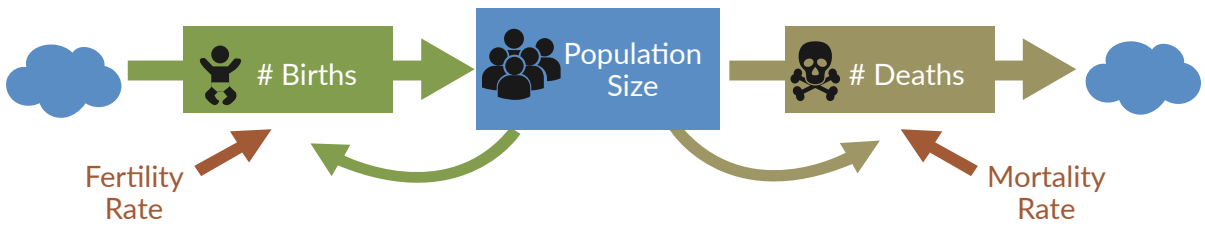
model of the world. Two systems that appear very different can exhibit similar patterns so long as they have similar feedback loops.

A **one-stock system** can have many feedback loops.

- During winter, the room temperature is affected by the thermostat setting (which controls heat released from the heater) and the outside temperature (which affects heat loss). These are *2 conflicting balancing loops* that affect the room temperature. A feedback loop can break down (e.g. if all the windows are opened to cause excessive heat loss).



- A country's population is determined by the nett effect of *a reinforcing loop (# births) and a balancing loop (# deaths)*. These are in turn driven by fertility and mortality rates. It's always easier to predict behavioral patterns than actual numbers, e.g. the exact population size could fluctuate as (i) fertility/ mortality rates change over time, (ii) a feedback loop becomes more dominant, and/or (iii) additional factors emerge (e.g. migration).



- There's always a *time lag* between something happening and the feedback loop registering it and taking corrective action. In balancing loops, a delay in 1 part of the system is likely to lead to oscillation (e.g. delay in product delivery → shop runs out of stock → perceived shortfall → place larger order → overstock). This effect, when combined with imperfect information and multiple feedback loops operating concurrently, can create massive ripples throughout a system.

A **two-stock system** can be much more complex, especially when 1 stock limits another stock, e.g. a mining company's money being limited by the availability of precious metals in the mines.

KEY QUOTES

"Dynamic systems studies usually are not designed to predict what will happen. Rather, they're designed to explore what would happen if a number of driving factors unfold in a range of different ways."

"We can't begin to understand the dynamic behavior of systems unless we know where and how long the delays are."

"Any real physical entity is always surrounded by and exchanging things with its environment."

- No physical entity/system can grow indefinitely—at some point, balancing loops will kick in to *limit growth*, e.g. a company can only grow insofar as it has manpower, customers, materials and resources. The nature of the constraints depend on whether the critical resources for growth are renewable or non-renewable.

- *Non-renewable stocks* are fixed in supply, e.g. once an oil field is depleted, there'll be no more oil. Your rate of extraction is only limited by your capital or resources. However, there's an inherent balancing loop in place: the faster you grow, the faster you'll drain the resources, making it progressively harder to grow until the stock is totally depleted.

- *Renewable stocks* can be living (e.g. fish or grass) or non-living (e.g. sunlight or wind), and can be regenerated through a reinforcing loop or a constant supply. They're limited by flow, i.e. they're inexhaustible so long as they're harvested at a rate slower than their rate of regeneration. However, once they're driven below a critical threshold, they can become non-renewable. For example, in overpopulated waters, fishes' rate of reproduction may improve initially if a slight decrease in fishes leaves more food for the remaining fishes. However, once the population drops beyond a critical point, reproduction plummets and the fish can become a non-renewable resource.

Applying Systems Thinking

3 Characteristics of Effective Systems

Systems thrive with 3 key characteristics: resilience, self-organization and hierarchy.

Resilience in this book refers to elasticity, or the ability to bounce back to the original state after being strained or manipulated.

- Resilient systems are *dynamic*. A system is more resilient when (i) it has multiple feedback loops (so when 1 loop fails, another kicks in) and (ii) there's at least 1 loop that can repair other loops. The most resilient systems are those that can self-organize.

- Unfortunately, resilience is not obvious unless you have a full system perspective. We tend to *sacrifice resilience for stability or productivity*. For example, growth hormones can increase a

KEY QUOTES

"A quantity growing exponentially toward a constraint or limit reaches that limit in a surprisingly short time."

"Nonrenewable resources are stock-limited… Renewable resources are flow-limited."

"Systems need to be managed not only for productivity or stability, they also need to be managed for resilience—the ability to recover from perturbation, the ability to restore or repair themselves."

cow's milk-production but reduces its long-term immunity. Pesticides kill pests, but they also kill off other species to disturb the eco-system's bio-chemistry, reduce its resilience and trigger long-term ecological disasters.

- Look beyond productivity or observable properties to consider how you can *strengthen a system's resilience* and self-regeneration capabilities. For example, instead of simply giving food and money to the needy, develop programs that increase people's ability to generate their own food and money.

Self-organization is the ability to learn, evolve and create new complex systems/structures to survive, rebuild and thrive.

- For example, the human body is developed from a single cell and constantly repairs itself. A company converts raw materials into a much more sophisticated form (e.g. a car or computer).

- Self-organization is spontaneous and unpredictable; it requires freedom and experimentation. However, complex creations are often built upon a few simple rules, like how all lifeforms are captured in a series of DNA, RNA and protein molecules.

Complex systems require **hierarchies** to organize the huge amounts of information/interactions and operate stably.

- For example, each cell in our body is part of an organ, which is a part of a system (e.g. digestive or reproductive system), which is a part of our human body. Each of us in turn is a part of a family, community, nation etc. Ideally, each sub-system should be able to manage itself while serving the needs of a larger system. The larger system in turn should integrate/augment the sub-systems *synergistically*.

- A system is *sub-optimal* when hierarchies don't work in sync. In such cases, imposing centralized control won't work and may even backfire. The only sustainable approach is to understand and address the needs of the sub-systems so the entire system can flourish dynamically. When hierarchies malfunction, the entire system can break down, e.g. when certain cells in the body multiply out of control and attack other cells.

KEY QUOTES

"Productivity and stability are the usual excuses for turning creative human beings into mechanical adjuncts to production processes."

"The ability to self-organize is the strongest form of system resilience. A system that can evolve can survive almost any change, by changing itself."

"Hierarchical systems evolve from the bottom up. The purpose of the upper layers of the hierarchy is to serve the purposes of the lower levels."

"When a subsystem's goals dominate at the expense of the total system's goals, the resulting behavior is called suboptimization."

Thinking in Systems

We tend to get **surprised by systems** because we over-estimate how much we know and under-estimate how complex systems are.

- Real-world systems are complex networks of stocks, flows, and feedback loops. Systems thinking helps us to consider the relationship between system structures, behaviors, and events. By asking what-ifs, we can *consider possible scenarios* so we're less likely to be surprised.

- Yet, in most cases, it's *impossible to accurately predict the future*. For example, there's no way to account for all the variables, relationships and events that affect economic growth or stock market indices. That's why complex modeling may still work for short-term predictions, but not for long-term forecasts.

Watch out for these **thinking gaps**:

- *Linear vs nonlinear relationships*. We tend to think in linear relationships (i.e. assume things run in a straight line) when most relationships are actually non-linear (i.e. there's no proportionate relationship between variables). For example, once vehicle density reaches a certain level, traffic jams get much worse.

- *Imaginary boundaries*. For simplicity, system diagrams use clouds to denote the stocks at the start/end. In reality, there's no finite start or end to a system. For instance, the earlier diagram on population size doesn't address the drivers for mortality/death rates, nor other factors that affect population size e.g. migration. It's unrealistic to try and capture *everything*—the key is to be aware that all system boundaries are imaginary.

- *Multiple constraints*. Every outcome is influenced by multiple factors, but we tend to think in terms of singular cause-effect relationships. Over time, a system's limiting factors (what's most vital for growth) will also change, e.g. a startup faces different constraints as it grows to a mid-sized firm. At some point, you must choose your limits (e.g. the maximum population size to maintain acceptable living standards), or the system will decide it for you (e.g. resource shortages, declining air quality).

KEY QUOTES

"Structure is the key to understanding not just what is happening, but why."

"The world is nonlinear. Trying to make it linear for our mathematical or administrative convenience is not usually a good idea."

"Remember that boundaries are of our own making, and that they can and should be reconsidered for each new discussion, problem, or purpose."

"Ultimately, the choice is not to grow forever but to decide what limits to live within."

- *Pervasive delays*. Things take time to happen, and there're delays in most feedback loops—delays in shipping, perception, processing etc. Mail takes time to reach the recipient and viruses take time to develop into diseases with observable symptoms. If there're long delays in the feedback loop, it'll be too late to take action when the symptoms surface, e.g. if you only start to build power plants when there're electricity shortages, you'll end up with cycles of under-capacity and over-capacity.

- *Bounded rationality*. We make the best possible decisions based on what we know to satisfy a current need. However, we (i) won't have perfect information, (ii) can't see all options, viewpoints or implications, and (iii) will always interpret info subjectively. Thus, a sound decision that meets a personal short-term goal can create long-term problems for ourselves and others. The best way to get a bigger picture is to experience the system from a different position, e.g. an activist going to work for the government body he's been campaigning against. Each shift gives you a wider system perspective to make better decisions.

KEY QUOTES

"To act only when a problem becomes obvious is to miss an important opportunity to solve the problem."

"Change comes first from stepping outside the limited information that can be seen from any single place in the system and getting an overview."

Identifying System Traps and Opportunities

Learn to recognize the "behavior archetypes" or system structures behind common problems, so you can deliberately restructure them to fix the problems at cause.

Resistance to change. Balancing feedback loops can sustain behavioral patterns to make them change-resistant.

- In 1967, the Romanian government tried to increase birth rates by making abortions illegal for women under 45 years old. There was a temporary spike in birth rate, then people turned to illegal abortions or abandoned the children they couldn't afford to raise. So long as the sub-systems have different goals with players pulling in different directions, there'll be *policy resistance*. The harder 1 player pushes an outcome, the harder the other players in the balancing loop will resist.

- A better approach is to step back, identify all the players' goals and how to incentivize them to move in the desired direction. For example, to increase birth rates, you need to know why people aren't having more children. In the 1930s, Sweden's birth rate was declining. Instead of trying to forcibly increase family sizes,

"The most effective way of dealing with policy resistance is to find a way of aligning the various goals of the subsystems, usually by providing an overarching goal that allows all actors to break out of their bounded rationality."

the Swedish government rallied the country behind the *common goal* of improving the quality of child care so every child is wanted and nurtured.

The **"tragedy of the commons"** comes about when a shared stock is eroded or destroyed because people exploit more and more of the stock instead of conserving it.

- Such problems arise in any *common resource* (e.g. public parks, common toilets) where users benefit directly from the stock, but share the cost of stock depletion. For example, a farmer can directly use every tree he cuts down, whereas the costs of deforestation is shared with everyone else. The more users there are, the scarcer the resource and the more people rush to consume it before it's depleted.

- *Solutions* include: (i) educating people on the implications of uncontrolled usage and appeal to their good sense, (ii) privatizing/splitting the resource so people are accountable for their own usage and (iii) using regulations (e.g. taxes, quotas, permits) to limit consumption. Paid parking lots, traffic lights, broadcasting licenses etc. are all examples of ways to manage the commons.

Systems may experience **sliding standards** or a "drift to low performance" if (i) the players perceive things to be worse than they are, and (ii) such perceptions affect their future targets.

- For example, you may accept lower-than-desired air quality because it doesn't seem any worse than before. The new (lower) standard becomes the norm and the *negative loop* continues.

- *Solutions* include: (i) sticking to absolute goals (vs being influenced by past/existing performance) or (ii) benchmarking only against the best historical performance.

Escalation arises when competing players try to outdo one another in a reinforcing loop, e.g. price war, shouting match, weapons race.

- Even escalation for positive things (e.g. efficiency, morality) can become negative when taken to the extreme. If left unchecked, it usually ends up with at least 1 of the players *collapsing*.

KEY QUOTES

"The tragedy of the commons arises from missing (or too long delayed) feedback from the resource to the growth of the users of that resource."

"Standards aren't absolute. When perceived performance slips, the goal is allowed to slip."

- *Solutions* include: (i) one party taking the first steps to unilaterally reduce the stocks (and stop the reinforcing loop) or (ii) negotiating balancing loops that can keep escalations in check.

Widening winner-loser gaps occur when winners get rewarded with resources that help them to win even bigger in future. This creates a reinforcing loop that could eliminate losers from the system, e.g. the rich using their wealth and access to gain even more wealth and access.

- *Solutions* include: (i) Diversification (e.g. a company moving to a new niche to exploit new resources), (ii) adding balancing loops to prevent domination (e.g. antitrust laws) or equalize the playing field (e.g. handicaps for weaker players), and (iii) finding ways to break the reinforcing loop (e.g. progressive taxes, public welfare).

Addictions. Just like how people can get addicted to alcohol or drugs, players in a system can get addicted to a solution that eases problem symptoms without addressing the root causes.

- Such interventions are usually introduced to boost a stock. However, if the root cause isn't addressed, problems will resurface and demand an even bigger fix. Worse still, the intervention could cause a *degeneration of the original system capabilities*, and shift the burden increasingly to the intervener. For example, kids' reliance on calculators can reduce their capacity for mental arithmetic, and the use of pesticides can destroy the pests' natural predators so farmers need to use even more pesticides.

- *Solutions* include: (i) withdrawing from the addiction (gradually or going cold-turkey), or (ii) avoiding it from the onset by strengthening the system's abilities instead of taking on its burdens.

In any system, there'll be people trying to **break the rules**, i.e. they seem to be following the rules but are actually working around them, e.g. drivers keeping to the speed limit only when there're speed cameras or police cars. Use rule-beating as a form of feedback to refine the rules, or design rules that specifically incentivize people to self-organize in the desired way.

KEY QUOTES

"Addiction is finding a quick and dirty solution to the symptom of the problem, which prevents or distracts one from the harder and longerterm task of solving the real problem."

"The secret is to begin not with a heroic takeover, but with a series of questions."

"Wherever there are rules, there is likely to be rule beating."

"Systems…have a terrible tendency to produce exactly and only what you ask them to produce. Be careful what you ask them to produce."

Systems will deliver whatever they're designed to deliver—if you **set the wrong goals**, you'll get disastrous outcomes. For example, an education system will deliver vastly different outcomes depending on whether you measure "good education" using expenditure or test results. Don't confuse efforts with results.

Creating Effective System Changes

The best way to **change a system** is to (i) identify the leverage points where a tiny shift could trigger a large change in behavior, then (ii) figure out the right direction to push. This is a difficult process that requires hard work and an open mind (to explore new ideas and options).

Use these **leverage points in order of impact**:

- Every system or society comes with its own *paradigm*, i.e. a set of unspoken assumptions and beliefs (about what's good, right, fair, etc.). Paradigm shifts can be achieved in any system with the right reinforcements and change agents. However, the ultimate leverage comes from *transcending* paradigms, i.e. realizing that there's no single "right" or "true" paradigm.

- A system's *goals* define its behaviors. Most systems (including cancer cells) seek to survive and grow. The key is to deliberately choose how far to grow and to what end, so we prevent 1 system's unchecked growth from destroying others.

- Increase a system's *self-organization* abilities so it can change dynamically. The best way to do so is to promote learning and evolution through diversity and experimentation.

- Use *rules*—including rewards, penalties and constraints—to directly shape behavior.

- Typically, system players will organize themselves with the right info. Design *information flows* to incentivize players to act in the desired way, e.g. show the increasing cost per unit to discourage people from consuming too much of a limited resource.

- Build in checks and balances to curb the momentum of *reinforcing feedback loops* to prevent long-term system collapse.

KEY QUOTES

"There are no cheap tickets to mastery. You have to work hard at it."

"If no paradigm is right, you can choose whatever one will help to achieve your purpose. If you have no idea where to get a purpose, you can listen to the universe."

"Missing information flows is one of the most common causes of system malfunction."

- A complex system comes with many *balancing feedback loops*, each designed to maintain a sub-goal and jointly define the overall system strength. Ensure that each balancing loop is strong enough relative to the impact it's designed to achieve, e.g. governments can only manage big industry players if they have enough power. Be careful when removing balancing loops e.g. an emergency cooling system may seem unimportant since it's usually inactive, yet its removal will weaken the system.

- Adjust the *length of delays* in feedback loops (where possible) to influence system behaviors and the level of oscillations.

- A system's behaviors are determined by the *structure* of stocks, flows and their interconnection. Your best leverage is to design a great system from the onset, since it's hard to change a system once it's built. You can only improve existing systems by addressing the bottlenecks and limiting factors.

- Build stocks that are big relative to the flows, so they can act as a *buffer* to stabilize the system, e.g. a lake is much less likely to overflow than a bathtub.

- *Numbers* seldom result in real change (e.g. tweaking minimum wages or tax rates won't restructure the economy), unless the change is big enough to trigger other leverage points above.

Conclusion

Ultimately, it's impossible to fully understand dynamic, self-organizing, nonlinear systems, much less predict or control them. The real value of systems thinking is in helping us to understand the complexity of the world we live in, so we can manage our expectations, learn from surprises, and actively design/refine systems and find creative ways to bring our visions to life.

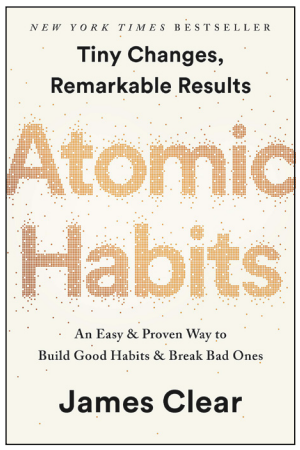
The book is packed with examples and diagrams (ranging from business to sociology and economics) to help us understand systems at work. Meadows also presents several rules of thumb to help us navigate more effectively in a world of systems. For more details, please visit academyforchange.org.

KEY QUOTES

"The only way to fix a system that is laid out poorly is to rebuild it, if you can."

"The future can't be predicted, but it can be envisioned and brought lovingly into being."

"The thing to do, when you don't know, is not to bluff and not to freeze, but to learn."



ATOMIC HABITS

An Easy & Proven Way to
Build Good Habits and Break Bad Ones

JAMES CLEAR

The Big "So What"

To achieve greater success in any field, we must break bad habits and build good ones. In this book, James Clear draws on insights from cognitive and behavioral sciences to provide a powerful step-by-step plan that can help you to create better habits in any area of life.

Atomic Habits: The Power of 1% Gains

Why Atomic Habits Matter

Atomic habits are **tiny routines and behaviors** that build on one another to multiply outcomes over time. We tend to prioritize big breakthroughs over tiny improvements. However, it's those small daily decisions and actions that really matter.

- If you improve by 1% a day, you don't just become 365% (or 3.7x) better in 1 year. Because of the *compounding effect*, you actually become 37x better. The reverse is also true if you slide by 1% per day. Thus, regardless of where you are now, your habits define your trajectory and future outcomes (for better or worse).

- For more than 100 years since 1908, British Cycling had nominal international success. In 2003, Dave Brailsford became its Performance Director. He transformed the team's results through a program of *1% changes*—from redesigning bike/racing suits to experimenting with massage gels and mattresses/pillows for sleep-improvement. The British team won 60% of all available gold medals at the 2008 Beijing

KEY QUOTES

"With the same habits, you'll end up with the same results. But with better habits, anything is possible."

"Changes that seem small and unimportant…will compound into remarkable results if you're willing to stick with them."

"Habits are the compound interest of self-improvement."

"Success is the product of daily habits—not once-in-a-lifetime transformations."

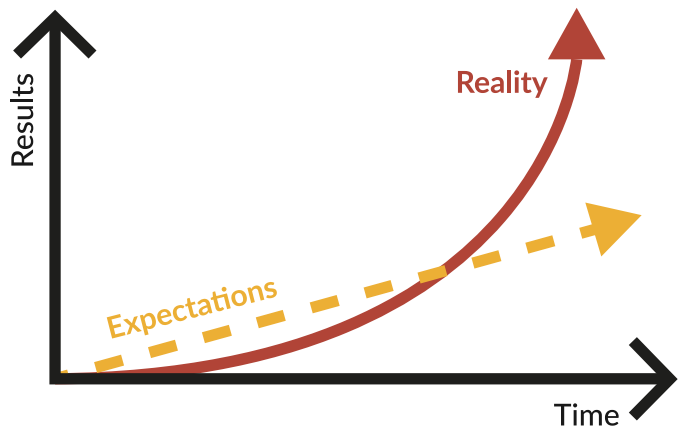
Olympics, then went on to set 9 Olympic records and 7 world records at the 2012 London games. From 2007-2017, they won 178 world championships and 66 Olympic/Paralympic gold medals, achieving one of the most successful runs in cycling history. All these came from incremental 1% changes.

Tapping on the Compound Effect

Habits are hard to change partially because they take a long time to deliver visible results. For example, you won't become a millionaire after saving money for 6 months and you'll still be out of shape after going to the gym for 3 days. Often, we make a few changes, fail to see results and quickly slide back into our old routines.

For maximum positive compounding, you must stick to your daily actions and habits long enough to cross the Plateau of Latent Potential.

- An ice cube sitting on a table looks the same as the temperature rises from 25 to 31 degrees Fahrenheit. But at 32 degrees, you suddenly see visible signs of the ice melting. Likewise, bamboo can shoot up 90 feet in 6 weeks after quietly developing roots underground for 5 years.



- It's the same with good habits: you may not see results for some time, then one day you suddenly start to see exponential growth. The key is to keep going until you reach that tipping point.

KEY QUOTES

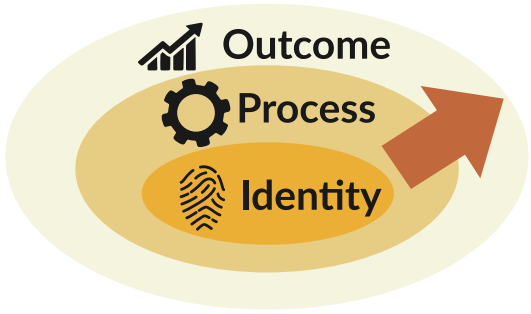
"Once your habits are established, they seem to stick around forever – especially the unwanted ones."

"We expect progress to be linear and quick. In reality it can take months or years to realize the value of our previous work."

"It's a hallmark of any compounding process: the most powerful outcomes are delayed."

Effecting Behaviour Change at 3 Levels

There are 3 key levels of change: Outcome, Process and Identity. While all 3 are important, the best way to change your habits is from the inside out, i.e. focus on the person you wish to become rather than the outcomes you want to achieve.



Focusing on outcomes or goals alone (e.g. target weight, grades or business profits) won't guarantee success and may even create problems.

- *Goals can reduce happiness* because if we don't reach the target, we'll think that we've failed even if we've made a lot of progress.

- When we achieve our goals, we tend to relax and break our good habits, creating a "*yo-yo effect*" that hurts long-term progress.

- When we focus on outcomes, we also tend to address the *symptoms instead of the causes*. For example, you can clean up a messy room, but it'll become messy again quickly if you don't change your habits.

Long-term change must be sustained at the **systems level**. With the right systems in place, the results will take of themselves. Specifically, habits are formed and reinforced via a constant feedback loop: Cue → Craving → Response → Reward. The key to habits transformation is to create a system that consistently improves this feedback loop (elaborated in the next section).

The most powerful source of habitual change is at the **identity level**.

- *Your identity and habits reinforce each other*. Your sense of identity shapes what you do, which in turn reinforces how you see yourself. Someone who's rejecting a cigarette as a goal may say, "No thanks I'm trying to quit" while someone who's rejecting it as part of his identity may say, "No thanks I'm not a smoker."

KEY QUOTES

"Fix the inputs and outputs will fix themselves."

"Building habits in the present allows you to do more of what you want in the future."

"It's not about any single accomplishment. It is about the cycle of endless refinement and continuous improvement."

"Your habits shape your identity, and your identity shapes your habits."

- You may start a habit due to short-term motivation, but you'll only stick to it if it becomes a part of who you are. Don't just read a book or have a reading routine; *become* a reader. Don't just run a marathon or work out regularly; *become* a runner. To fulfill your potential, keep *expanding and elevating your identity*. Change your habits (*what* you do) to shape your identity (*who* you are).

The Habit Loop: 4-Steps to Building Better Habits

Habits are mental shortcuts to help us solve problems, i.e. to get something we want or avoid something we don't want. Specifically, there are **4 parts to habits-formation**: The *cue* (e.g. phone buzzing when a message comes in) sparks a *craving* (e.g. the desire to know what's in the message), which triggers a *response* (e.g. you grab the phone and read the message), which brings a *reward* (e.g. you know what's in the message). Over time, the brain links the cue with the reward, so you automatically reach for the phone once it buzzes. The loop is complete and the habit is formed.

Using the habit loop, Clear presents **4 simple laws** to build good habits and break bad ones.

Building Good Habits	Breaking Bad Habits
1. Make it obvious	1. Make it invisible
2. Make it attractive	2. Make it unattractive
3. Make it easy	3. Make it hard
4. Make it satisfying	4. Make it unsatisfying

Law #1: Make the Cue More Visible

Habits become automatic when our brains pick up cues and predict certain rewards without conscious thought. To start a new habit, make your cues more obvious.

KEY QUOTES

"Becoming the best version of yourself requires you to continuously edit your beliefs, and to upgrade and expand your identity."

"Without the first three steps, a behavior will not occur. Without all four, a behavior will not be repeated."

"Behaviors followed by satisfying consequences tend to be repeated and those that produce unpleasant consequences are less likely to be repeated."
—Edward Thorndike

"Until you make the unconscious conscious, it will direct your life and you will call it fate."
— Carl Jung

To change your habits, you must first become aware of them. Use a **habits scorecard** to list down all your daily behaviors, from the time you wake up till the time you go to bed. Mark each habit as positive, negative, or neutral based on whether it helps you to become the person you aspire to be.

Use the 2 most common cues—time and location—to implement your goals. Explicitly state your **intention to act** using this formula: "I will [do this] at [this time] in [this location]". For example, "I will meditate for 10 mins daily at 6am in the study".

Stack your habits by tying a desired habit to an existing habit using this formula: "After [an existing habit], I will [do this new habit]". For example, "after I finish my tea each morning, I will meditate for 10 min".

- You can stack multiple habits, e.g. after finishing your tea, you'll meditate for 10 min, after which you'll plan your daily tasks, after which you'll start doing the top task. This creates a *chain of habits* that you're more likely to sustain.

- It's vital to *choose the right cue* as the trigger. It should be (i) something that you do without fail, (ii) has the same frequency as the new habit you're trying to build, and (iii) is very specific (e.g. when you step out of bed or brush your teeth).

Design your environment to shape your behavior. Our environment influences our behaviors more than our willpower/motivation, e.g. shoppers tend to buy items that are placed at eye level and within easy reach.

- To *create a habit*, redesign your work/home to (i) make the cues for the desired habits more visible and (ii) make the cues for bad habits invisible. For example, if you want to encourage your employees to drink more water, hide the soda in the fridge and place water everywhere in the office and café.

- Consider your *relationship* with the objects in your environment, e.g. if the couch is your spot for relaxing while watching TV, it'll be hard to start a work-related habit there. Link your habits to the environment and have unique locations for different habits (e.g. work, relaxation, relationships).

KEY QUOTES

"Habit stacking allows you to create a set of simple rules that guide your future behavior."

"Environment is the invisible hand that shapes human behavior."

"A stable environment where everything has a place and a purpose is an environment where habits can easily form."

Once a habit is formed, it's hard to forget. Once you're exposed to the cue, you tend to fall into the habit. Hence, the best way to **break a bad habit** is not through self-control, but by removing temptation. Reduce your exposure to the cues that trigger those bad habits, e.g. if your phone is distracting you from work, put it in a different room.

Law #2: Make the Habit Attractive

We take action only when we expect it to produce a reward. The more rewarding the action, the more we'll repeat it, until it becomes a habit that we do automatically or subconsciously. Thus, to form good habits, we need to make them more attractive.

Dopamine is a hormone and neurotransmitter which affects our motivation levels. When dopamine levels rise, we feel more motivated to take action.

- Human beings are programmed to respond to certain inbuilt motives e.g. conserving energy, getting food/water, feeling loved/connected/accepted, reproduce etc. A craving is merely an expression of such *underlying motives*; the goal is never in the action itself, but to change an inner state. People smoke to relieve stress, and spend hours on social media to feel connected.

- Dopamine is released not only when we experience pleasure, but also when we *expect* it. Habits are so powerful because the cue is enough to trigger an *anticipation of a reward* and hence motivate you to act. If you're addicted to smoking or gambling, you'll experience a spike in dopamine levels *before* you even light that cigarette or place your bet, which prompts you to take action.

Temptation bundling increases a habit's attractiveness by pairing an action we *need* to do with one that we *want* to do. For example, only allow yourself to watch reality TV (what you *want* to do) when you're working out at the gym (what you *need* to do). Alternatively, you can combine temptation bundling with habit stacking, e.g. you'll watch 30 min of reality TV (the habit you *want*) after 30 mins of gym workout (the habit you *need*).

KEY QUOTES

"This is the secret to self-control. Make the cues of your good habits obvious and the cues of your bad habits invisible."

"We need to make our habits attractive because it is the expectation of a rewarding experience that motivates us to act in the first place."

"When you binge-eat or light up or browse social media, what you really want is not a potato chip or a cigarette or a bunch of likes. What you really want is to feel different."

"It is the anticipation of a reward—not the fulfillment of it—that gets us to take action."

Our behaviors are strongly influenced by our **community**. Every human being has an innate need to belong and we tend to imitate the habits of 3 groups of people:

- *People close to us* (e.g. family, friends, colleagues). Habits that're common in our culture will seem more attractive and achievable.

- *The masses*. We'd rather change our habits to fit in with our tribe or the masses, than challenge them by doing something different.

- *Those with power and status*. We copy the behaviors of successful people in hope of gaining approval and respect.

To build better habits, join a culture where your desired behavior is the norm. It'd be even better if you share something in common with that group, e.g. an interest in reading or fitness. When you develop a shared identity ("We're readers" or "We're runners"), it reinforces your personal identity to facilitate long-term change.

In short, the key to building a good habit is to create the belief that an action is worth repeating. **Associate good habits with positive feelings** instead of negatives, e.g. saving money means financial freedom (not sacrifices), exercising means better health/fitness (not exhaustion). Or, do something enjoyable and motivating before tackling a difficult habit.

On the other hand, if you want to **break a bad habit**, play up the negatives and bad feelings to make the habit unattractive.

Law #3: Make the Steps Easy

To more you practice something, the better you become at it and the easier it seems. The best way to build a habit is to practice it, and the best way to start practicing is to make it easy.

We tend to spend so much time and energy trying to figure out the best way to do something that we never get around to taking action, i.e. we end up with **analysis paralysis**. Thinking, researching and planning may *feel* like progress, but real learning and progress comes from actively *doing* something.

KEY QUOTES

"Surround yourself with people who have the habits you want to have yourself. You'll rise together."

"Habits are all about associations."

"Habit formation is the process by which a behavior becomes progressively more automatic through repetition."

"If you want to master a habit, the key is to start with repetition, not perfection."

The **law of least effort** says that we're programmed to conserve energy and will gravitate toward options that're the least effortful.

- When you first try something, it requires a lot of effort. Over time, it *becomes easier* and eventually automatic.

- Habit formation depends more on the *frequency* with which you perform the action than how much time has passed. To master a habit, you need to repeat it so many times that it becomes automatic, i.e. you've built both muscle memory and brain memory to make the behavior effortless.

Design your tasks and environment to **reduce friction**, i.e. make the actions as easy to do as possible.

- The *less energy* required by a habit, the more likely it'll occur. You're much more likely to start and continue 1 push-up a day (which requires almost no effort) than to do 100 push-ups per day (which requires massive effort).

- Fit the desired habits into the *existing flow of your life*, e.g. you're more likely to go to a gym that's located on the way to office than one that requires a big detour.

- You can also automate or *set up your environment* to reduce friction for future action, e.g. lay out your workout clothes at night to make it easier to start your morning exercises.

In any day, there're a few **decisive moments** that shape the trajectory of your actions/habits. For example, whether you decide to bike or drive to work affects your commute/activities for the day; whether you change to your workout clothes or pajamas decide what you do thereafter. Master those key moments.

Use the "**2-minute rule**" to develop mini habits that lead to bigger ones.

- Identify a *simple, 2-minute version* of your desired habit. To run a marathon, the mini habit could be to change into your workout clothes. To master the piano, the first step could be to play the piano for 2 minutes a day.

KEY QUOTES

"Trying to pump up your motivation to stick with a hard habit is like trying to force water through a bent hose."

"Redesign your life so the actions that matter most are also the actions that are easiest to do."

"Each day is made up of many moments, but it is really a few habitual choices that determine the path you take."

"The feeling of success is a signal that your habit paid off and that the work was worth the effort."

- You must *establish a habit* before you improve it. Use the 2-minute rule to get into the habit of showing up and to nurture your desired identity. Once you've mastered the 2-minute habit (i.e. consistently changing into your workout clothes), you can progressively move on to *subsequent phases*, e.g. walk for 10 minutes → walk 10,000 steps → run 5km → run a marathon.

Do the reverse for bad habits, e.g. unplug the TV and remove the batteries from the remote control so it's hard to watch TV.

- You can use a "*commitment device*" e.g. buying food in small packs so it's inconvenient to overeat, or leaving your wallet at home to reduce spending.

- Ideally, take *one-time actions* that make the bad habits almost impossible, e.g. replace all your big plates with small ones so you'll eat less, or set up an automatic bank transfer for your savings plan.

Law #4: Create Instant Satisfaction

Laws #1-3 motivate you to take action once. Law #4 closes the habit loop to decide if you'll *repeat* the action. Basically, actions that deliver instant rewards will be repeated; those that deliver instant punishments will be avoided.

Logically, most of us know the value of delayed gratification. Yet, our brain naturally seeks **instant gratification**—it attaches a higher value to a definite reward *now* over a possible reward in the *future*.

- Bad habits (e.g. smoking, over-eating, unsafe sex) persist because the *immediate outcomes* feel good, whereas good habits are hard to form because the immediate outcomes feel bad (e.g. giving up chocolate for a salad).

- Businesses play on this need for *instant gratification*. The minty flavors in toothpaste are added not to make your teeth cleaner, but to make your mouth *feel* clean and fresh, thus giving you a satisfying experience when you brush your teeth.

KEY QUOTES

"The greater the friction, the less likely the habit."

"The best way to break a bad habit is to make it impractical to do. Increase the friction until you don't even have the option to act."

"Pleasure teaches your brain that a behavior is worth remembering and repeating."

"We all want better lives for our future selves. However, when the moment of decision arrives, instant gratification usually wins."

Use this tendency to your advantage by **giving yourself an immediate reward** whenever (i) you complete a good habit or (ii) avoid a bad habit. For example, when you pass on a milkshake, transfer $5 to your account for holiday savings. In short, ensure the desired action ends off with a satisfying experience that's aligned with your desired identity.

To motivate yourself to take action daily, use a **habit tracker**.

- Make your progress *more visible and satisfying*, e.g. mark on a calendar each time you complete your desired habits. This (i) acts as a visual cue to trigger repeat action, (ii) creates satisfaction each time you complete the habit, and (iii) shows the progress you've made.

- Don't break the *chain of continuity*. Never miss twice, as that's the start of a bad habit. It's much better to do 5 push-ups on a bad day (instead of your usual 20) than to miss it altogether.

To **break bad habits**, make them instantly unsatisfying or painful. Write a habit contract (a verbal/written commitment to a habit and how you'll be punished if you violate them) and get a partner who'll hold you accountable to it. Since we want others to like and respect us, this will add a social cost to make our habit failures more painful.

KEY QUOTES

"The mere act of tracking a behavior can spark the urge to change it."

"The first mistake is never the one that ruins you. It is the spiral of repeated mistakes that follows."

"Knowing that someone is watching is a powerful motivator."

Becoming Exceptional

Align Habits with Talents, Interests and Context

We're all born with different genes and abilities. These don't predetermine our successes/failures, but they do influence **what we're most suited to do**. For example, people with longer bodies tend to be better swimmers than runners; someone who's very tall may have an advantage in basketball but not in gymnastics.

When you **align your habits** with your natural abilities and your environmental context, you'll improve much faster. On the other hand, when you try to build habits that go against your

"Genes do not determine your destiny. They determine your areas of opportunity."

"Habits are easier to perform, and more satisfying to stick with, when they align with your natural inclinations and abilities."

personality, interests and abilities, you'll struggle. So, if you prefer rock-climbing to running, then build exercise habits around the former.

Explore various options and gradually narrow down to the areas that fit your natural strengths and inclinations. Tasks that fit your strengths are likely to (i) be enjoyable for you but not others, (ii) get you in flow (i.e. you're so immersed in it you lose track of time), (iii) give you higher-than-average returns, and (iv) feel natural and energizing for you. When you specialize in your areas of strengths, it'll be hard for others to compete with you.

Stay Motivated

How do some people stick to their habits when others give up? **The Goldilocks Rule** says that our motivation peaks when we work on tasks that're just at the edge of our abilities, i.e. they're not too difficult nor too easy.

- If you play tennis with a young child, you'll get bored. If you played against Serena Williams or Roger Federer, you'll feel demotivated since it's too challenging.

- It's a delicate balance between (i) constantly challenging yourself and (ii) making enough small improvements to stay motivated. Make it easy at the start (Law #3), then push yourself progressively to the next level, scoring a few wins along the way so you can see the progress and feel inspired to repeat the cycle.

Act in spite of boredom. *Everyone* experiences boredom and a lack of motivation; the difference between people who succeed and those who fail is this—successful people keep working in spite of it.

- Mastery takes practice, but repetitive practice can become boring. When we're bored, we *abandon old strategies* (which are still working) to try new but unproven strategies, thus jeopardizing our own success.

- Slot machines and video games are so habit-forming because they provide a constant stream of novelty and surprises.

KEY QUOTES

"The human brain loves a challenge, but only if it is within an optimal zone of difficulty."

"Professionals stick to the schedule; amateurs let life get in the way."

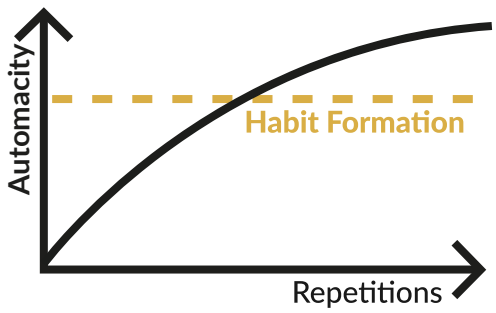
"The only way to become excellent is to be endlessly fascinated by doing the same thing over and over. You have to fall in love with boredom."

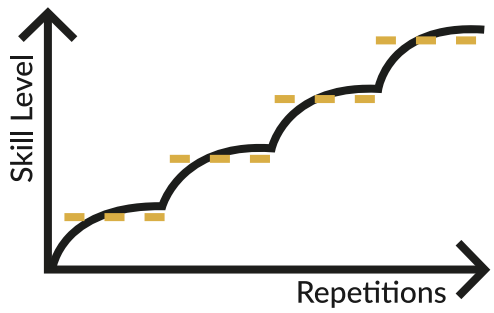
Use *variable rewards* to keep your routines fresh—vary the type and pace of your rewards to maximum dopamine levels, memory trigger/recall, and speed up habit formation. A good mix of successes and failures also keeps complacency at bay.

Manage the Downside of Good Habits

Habits can be a **double-edged sword**. Once you master something, you can do it automatically without thinking, but you also stop trying to improve it consciously. In fact, research shows that once we've mastered a skill, our performance tends to slide over time.

To **attain mastery**, we must combine habits with deliberate practice. Zoom in on the smallest success ingredient, practice it until you've internalized the skill, then build the next ingredient upon this foundation. For 18 years, comedian Steve Martin worked on gradual improvements to his routine. Each week, he focused on adding 1-2 minutes of new material, then practicing, experimenting and refining his approach to achieve his eventual level of mastery.





Establish a **system of review and reflection**, so you know if you're improving, plateauing, or declining.

- Elite athletes make daily *records* of their workouts, training performance, diet and rest. Comedian Chris Rock tests new material with small audiences, makes notes on which jokes work (or don't), and selects only the best lines for his show.

- Do *regular reviews* (say, quarterly or annually) to honestly assess if you should upgrade your habits, take on new challenges, or redirect your focus/efforts. You can evaluate your progress in terms of:

  (i) Your habits/activities, e.g. what went well, what didn't go well and what you've learned.

KEY QUOTES

"Mastery is the process of narrowing your focus to a tiny element of success, repeating it until you have internalized the skill, and then using this new habit as the foundation to advance to the next frontier of your development."

"Habits create the foundation for mastery."

"Sustaining an effort is the most important thing for any enterprise. The way to be successful is to learn how to do things right, then do them the same way every time."
—NBA coach, Pat Riley

(ii) Your self-identity, i.e. whether you're becoming the person you wish to become. Evaluate the core values driving your life/work, whether you've been living with integrity and how you could set higher standards for yourself.

Initially, a desired identity can help us to build a habit. However, **your identity can also restrain your growth**.

- *Pride* associated with an identity can prevent us from facing our shortcomings, e.g. a teacher may stick with tried-and-tested teaching methods instead of trying new approaches, or a surgeon may dismiss ideas from younger colleagues.

- When you identify too much with 1 aspect of your life, it could bring an *identity crisis* when that thing is removed, e.g. when a vegan changes his diet, when a solder leaves military service, or when an entrepreneur sells his business.

- *The solution*: Don't allow any single aspect of your desired identity to define who you are, so you can redefine yourself when your circumstances change. Keep reviewing your performance and habits to develop self-awareness and ensure your habits continue to serve you.

Conclusion

- The holy grail of habit change is not a single 1% improvement, but a thousand of them. Initially, small habitual improvements may not deliver a noticeable difference. However, if you keep layering small changes on top of each another, **the results add up** and you'll eventually reach a tipping point where it's much easier to stick with your good habits. Whatever your goals and circumstances, so long as you commit to building 1 atomic habit at a time, you will achieve extraordinary results.

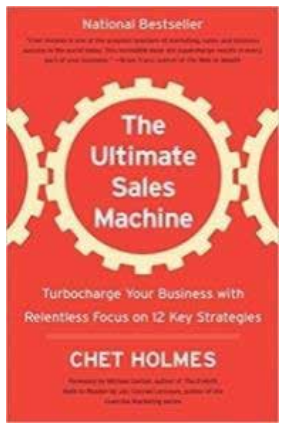
- The book also includes **other details** such as (i) Clear's personal journey/experience with atomic habits and (ii) many true stories of people (from artists to business leaders) who achieved mastery and success using atomic habits.

KEY QUOTES

"When you cling too tightly to one identity, you become brittle. Lose that one thing and you lose yourself."

"A lack of self-awareness is poison. Reflection and review is the antidote."

"Success is not a goal to reach or a finish line to cross. It is a system to improve, an endless process to refine."



THE ULTIMATE SALES MACHINE

Turbocharge Your Business
With Relentless Focus On 12 Key Strategies

CHET HOLMES

The Big "So What"

To succeed in business, you must master 3 vital areas: management, marketing and sales. This book breaks down exactly how to do that with 12 proven strategies which Holmes has used to build various businesses and to train business owners and employees. These tips are useful for anyone involved in sales, marketing or operating a business/team.

Introduction

Ideas alone, no matter how good, are useless if they're not implemented. To master something, you must practice the same thing consistently until it becomes second-nature to you. To build the Ultimate Sales Machine, you must apply the 12 strategies in this book with "pigheaded discipline", honing and perfecting them until they become an integral part of how your organization operates.

The book is organized into 12 chapters on time management, training, meetings, talent management, strategy, marketing, sales, ideal buyers, presentations, closing skills, follow-ups, and implementation. By mastering all of these areas, you can ensure the success of any business.

In this summary, we've organized the inter-related strategies and tips into 4 key parts: Management, Marketing, Sales, and Operating your Ultimate Sales Machine.

Part 1: Management

Every company has finite resources. To build an effective

KEY QUOTES

"The promise of this book is that you will learn how to create mastery in your business resulting in the finest, most profitable, and best-run business you can have."

"Mastery is not about being special or more gifted…Mastery is a direct result of pigheaded discipline and determination."

"It is the same with any business; there are basics that you can do over and over again until every aspect runs like a machine."

organization, you must gain control of your time, maximize your productivity, and help your team to do the same.

Improve Productivity with Key Impact Areas

Rather than react to issues as they surface, gain control of your time by managing key "impact areas".

Identify your key impact areas, i.e. areas that directly affect the bottomline, e.g. customer service, inventory control, external sales, internal telemarketing, technology, partner relations. The number of impact areas will depend on the size and nature of your business.

Set aside 1-hour weekly for focused meetings to **improve each impact area,** with the goal of making incremental improvements that add up to massive progress.

Instead of spending 70-80 hours a week tackling ad-hoc issues, you can now spend several hours focused on upgrading the key aspects of your business, thus **multiplying your impact with less time.** To do this, you must say "no" to ad-hoc requests and insist on focusing your time only on vital issues in your weekly meetings.

Improve Productivity with Great Time Management

These 6 steps can be done in just 5 minutes—apply them in your whole organization to significantly increase your productivity.

Touch it once. Only touch something if you're prepared to act on it, so you don't waste time revisiting issues or rereading material. Insist that your staff use specific and descriptive titles for their emails and update the titles as the content changes—that way, you can choose to only open emails that you can deal with immediately.

Make daily lists of your **6 most important tasks,** and make sure you finish them. This is better than having a long list of items and feeling bad about not completing them.

Allocate time to each task in advance, to ensure you can complete all 6 tasks. Ideally, you should spend about 6 hours

KEY QUOTES

"Good time management shouldn't take a lot of time."

"Email is there for your convenience. If it's not convenient, don't answer it."

for the 6 tasks; if a task requires too much time, break it down into smaller parts.

Plan your day: **assign specific time slots** for each task and stick to it.

Prioritize the most important and difficult projects first in your schedule, so you have enough time and energy for them.

- If you're a *salesperson or 1-man team*, make sure you spend at least 2.5 hours a day growing your business.

- Even if you're in a *"reactive" role* like a receptionist or personal assistant, you can still dedicate time daily to improve the company rather than wait passively for instructions.

About 80% of our files and stored information is never used again. Ask yourself "will it hurt me to throw this away?" and **remove what you don't need.**

Reprogram your Organization with Effective Training

Your training system is robust only if (a) all your staff define "great performance" the same way and can perform their jobs consistently well, and (b) all your clients receive a similar experience.

Unfortunately, 90% of people won't actively seek to improve themselves unless it's a job requirement. To ensure your team performs well and constantly improves, **make continuing education mandatory.**

Use these tips to **make your training effective:**

- Design *regular programs* to (a) train new employees, (b) upgrade the skills/effectiveness of existing employees, (c) provide professional development, and (d) solve problems.

- *Prepare people in advance*, by letting them know what to expect (training duration, objective, takeaways etc).

- Use a *blend of methods* (e.g. lectures, discussions, role-plays, quizzes, demos, case studies). Keep it fun and stimulating so people will look forward to it and retain the learning.

KEY QUOTES

"Master these six steps and you won't believe the difference. Implement them companywide and you will be operating at maximum productivity before you know it."

- It's better to teach a few items and reinforce it with practice/ application, than to teach a lot of new things each time. Use regular training to *reinforce the same skills and information repeatedly* until it is permanent.

Use "Workshop Meetings" to Improve your Company

To grow a large company, you must be able to hire 50 new people in a week and help them perform at their peak quickly. Structured workshop-style meetings are one of the best ways to concurrently train people and improve your business.

During workshops, you work with your staff to **jointly develop ideas to improve your business,** rather than give instructions on what to do. This provides a platform for people to solve problems, improve outcomes and deliver a shared vision.

To run effective workshops:

- *Run workshops weekly.* Each workshop should have up to 30 people and focus on 1 small part of the business. For large companies, hold separate weekly workshops for each department.

- *Define a key challenge* to solve at each workshop. You can get participants to brainstorm key challenges, giving them 3 minutes to list down 3 areas to be improved in the company/ department, then get everyone to share their ideas on a whiteboard. A good topic is: "What else can we offer the buyer at the point of sale?"

- Next, *prioritize the list of issues*. Give the participants 30 seconds to write to down their top 3 choices in order of priority, then add up the scores to identify the top 5 issues.

- Tackle each issue in a separate workshop. After each session, *summarize the solutions* in 1-2 page memos (e.g. "9 ways to handle an angry customer", "7 ways to improve product consistency"). Compile them and use them as training manuals.

- Test and refine the procedures over time, removing ineffective solutions and finalizing the proven ones as your standing *policies*.

KEY QUOTES

"No one gets good at anything without repetition."

Use these 10 steps to **implement a new policy effectively:**

- To get buy-in and motivate learning, you must *get people to feel the pain*. Get people to discuss and vote for their top 3 problems. Then, ask questions like, "what if you could put in extra work now but remove most of these issues?" Amplify the pain with questions like "what are the drawbacks of not addressing this issue?" and get them to write down their answers.

- *Generate solutions* through a workshop, using the tips earlier.

- From the list of solutions generated, define a *conceptual solution* to be tested.

- Get your *top leaders or talents* to test and improve the solutions before training others.

- Set a *deadline to complete the testing*, with updates at your weekly meetings.

- Document the *step-by-step processes*, including scripts, activities, procedures, expected outcomes etc.

- Get your top performers to *teach others using show-and-tell* and role-play.

- Hold another workshop with your staff to *refine and perfect the solution* before rolling it out.

- *Monitor the procedures* weekly (or even daily) so you can observe and make corrections immediately.

- Set specific criteria, *measure results and reward your team* for the desired new behaviors or outcomes, until they become second nature to every employee.

Hiring and Managing Superstars

As an employer, you must be able to attract and manage top producers. As an employee, you must know how to be a top producer.

KEY QUOTES

"I had learned the secret to creating change: you have to put people in pain."

"I always recommend testing new ideas with your top performers."

"People respect what you inspect."

Top producers take the initiative to do more, excel and keep learning. They can turn around a bad situation, outperform all your staff and deliver results beyond expectations. The tips below relate to sales positions, but you can adapt them for other positions.

To hire superstars, be prepared to share the wealth if they successfully build your company.

- Estimate *how much you can afford* to pay if they perform. For SMEs or 1-person armies, estimate the monetary rewards/ value of your top 3 initiatives if they're executed well. For medium to large companies, list up to 3 core positions which are not currently filled by superstars, and estimate the value that a superstar could generate. If you can share 30% of a $100,000 sales target, that means an attractive $30,000 monthly income for that superstar.

- *Hire for personal qualities,* not background. Identify the personality profile of someone who'd succeed in the job, then find tools to assess the desired profiles. For example, a good salesperson is likely to have high scores in "Dominance" and "Influence" using DISC personality profiling—such people can relate to and influence customers, dare to make decisions and deal with rejections.

- *Design your ads,* using the highest possible income figure and word it to attract confident people, e.g. "Superstars only. $180-$300k. Don't call unless you're an overachiever and can prove it."

- *Pre-screen the applicants:* Explain your objectives over the phone, and say something like "Our ad says we're only hiring superstars. Tell me why we should hire you." After they've done their pitch, reject them just to see their response (e.g. "That's great, but I don't hear a top producer"). A true superstar will challenge and persuade you, instead of accepting the rejection.

After shortlisting your potential candidates, use this 3-step process to interview your superstars:

o *Relax.* Start by being friendly so they'll relax and be at their best.

KEY QUOTES

"(You can) grow any company or area faster if you're wise enough to share the wealth."

"If you want to have the Ultimate Sales Machine, you need to have the ultimate salespeople."

o *Probe*. Explain that your company hires based on personality profile, and that you'll be asking a series of personal questions to understand them. Probe to see if they offer details and stories to win you over. Some areas to cover include:

(a) Childhood, e.g. "What aspects of your childhood have shaped who you are today?" or "What was the biggest challenge you've faced in your life?";

(b) Areas of accomplishment e.g. "Tell me 2-3 things you're most proud about yourself" or "Can you share an area in life where you've reached a high level of achievement?";

(c) Commitment to self-improvement, e.g. "How do you improve yourself?" or "What's the last self-help book you've read?";

(d) Benchmark against the best: e.g. "Who is the best salesperson you've ever met?"—see if they name themselves, or can differentiate themselves from the person they've named;

(e) Their resume, e.g. "Why did you leave your last job?", "Tell me about a disagreement you've had with a boss and what happened." Look for those who can identify gaps in their previous jobs without complaining.

- *Attack*. By now, you have a good idea of how they think. Launch a strong but tactful attack to assess their response. Say something like, "This has been great, but I don't really get the impression you're a superstar." A real superstar will remain confident and present his/her case.

Managing superstars. To retain top producers:

- *Never say "no"*. Instead, redirect their energy or throw them a challenge, e.g. get 30% more sales to grant their request, or challenge them to solve a problem they've raised.

- *Compliment them* when they meet and exceed your challenge.

KEY QUOTES

"Superstars never crumble. They have tremendous faith in themselves."

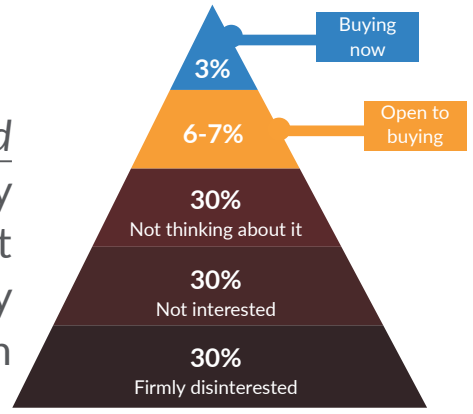
Part 2: Marketing

Multiply your Impact with Sound Strategies

To be a great strategist, you must be able to see the big picture and implement the strategies at the tactical level.

One of the biggest challenges in business is to catch and retain the attention of your prospects. Use the "**buyers pyramid**" to look at your market strategically. Based on 20 years of research, Holmes found that at any one time, for any product or "service"

- 3% of the market are *buying now*;
- 7% are *open to the idea of buying*;
- 90% are *currently not interested* in your product: 1/3 are simply not considering it, 1/3 are not interested, and 1/3 are strongly disinterested and want to stay with the status quo.



Most businesses focus only on the first 2 categories. It's more strategic to concurrently nurture the other 90%.

Focus on market data instead of product data. A headline like "5 ways to benefit from our video-conferencing services" will only appeal to the 3%+7%, while "5 reasons why 96% of businesses fail" could appeal to a much bigger prospect base.

Education-based marketing is one of the most effective ways to reach the entire buyers pyramid.

- Most people are not experts in the products they're buying, and you can *"reset" customers' buying criteria* by teaching them how to be better customers of your product/services.

- For the 90% who're not currently considering your products, your goal is to *capture their interest, build rapport, add value and position yourself as an expert*, so you become the obvious choice when they're ready to buy in the future. For

KEY QUOTES

"The hardest thing we need to do today is grab the attention of potential buyers and keep their attention long enough to help them buy your product."

"One of the most strategic things you can do is to find market data that makes your product or service more important."

"When you sell, you break rapport. When you educate, you build it."

"You will attract way more buyers if you are offering to teach them something of value to them than you will ever attract by simply trying to sell them your product or service."

example, you may offer a free course on "5 Reasons Why Businesses Fail", with useful insights on business challenges like customer service, management or communication. This allows you to incorporate case studies of how certain companies used your video-conferencing solutions to deepen relationships with customers and staff.

Find your marketing angle using the **"stadium pitch"** exercise:

- If you could fill a stadium with your *ideal prospects*, who will be in that stadium (i.e. what's the profile of your buyers pyramid)?
- In order to get everyone in the stadium to stay and listen to you, what must the *title of your talk* be?
- Invest time and resources to develop your stadium pitch, supporting it with data that set the buying criteria in your favor. This will become the your "*core story*" and the anchor of your marketing strategy.

There will always be some fact that will position you as the indisputable choice for your prospects—this is your "**smoking gun**", and it's your job to find it. For example, the smoking gun for selling art to hospitals could be the evidence that certain types of art can drastically improve patients' rate of recovery.

It takes **time and persistent effort** to find your smoking gun and develop a great core story. Use *workshop meetings* to develop ideas with your team and dedicate some time weekly to do market research until you find your smoking gun.

Master the 7 Marketing Essentials

These are the key marketing tools you'd need to build your Ultimate Sales Machine. Identify the ones that will give you the best returns on investment, run workshops with your team to master these tools and keep finding ways to incorporate your core story.

Advertising. To have a big impact, your ads must meet these criteria:

- *Be distinctive,* i.e. they stand out and stop people in their tracks.

KEY QUOTES

"No matter who you are or what you sell, you need to take the time to collect market data and build your core story or your stadium pitch."

"Tell a story that intrigues the imagination and you stand a better chance of people actually watching your commercial."

"Like the headline, the body copy should be benefit-oriented. Don't tell me what it is. Tell me why it is valuable."

- Have an *attention-grabbing headline* with a self-explanatory benefit focused on "you" (the buyer).

- Have a *body copy that holds the prospects' interest* and focuses on the key benefits for them.

- Include a *call-to-action*, e.g. a number to call or a coupon for the first X callers.

Direct mail. Use your stadium pitch as the foundation for your direct mails. Entice people to open your mail with benefits-oriented messages on the envelope, bright colours and even creative gifts (see Part 3 for more ideas). You'll need to send your direct mail frequently and follow up with a phone call.

Brochures. Your corporate brochures should summarize the key points from your core story. Remember to focus on the buyers and how they can benefit, not on how great your company is.

Personal contact with your clients (be it a phone call or a meeting) by your salespeople and customer service staff can be one of the most powerful marketing opportunities.

Market education can be delivered in many ways, e.g. trade shows, speaking engagements and education-based marketing.

Public Relations (PR) can include trade shows, press parties, speaking-engagements, press releases or articles about you.

- *A good PR piece* should cover a broad issue that affects many people, with mention of your company without focusing on it. You should include credible/mainstream sources of information, and cite a Fortune 500 company if you have good reason to do so. Include data from your core story that would interest your target readers, and follow up on each press release with a phone call. Even if you're brushed off initially, you can build a relationship over time with the editor, and position yourself as a domain expert.

- *Charity events and award ceremonies* can also generate great publicity, especially if you can invite market influencers, notable people and/or your dream clients.

KEY QUOTES

"None of your marketing efforts will have as much impact on your client as personal contact with your salespeople or customer service reps."

Use the **internet**—including email, websites, and affiliate marketing—to capture leads, build relationships, interact with prospects, offer webinars, and convert leads to sales. You can build databases by having many microsites that focus on just 1 thing—e.g. www.howtodoublesales.com—then connect subscribers with the rest of your content. You can also build a community around your websites, e.g. if you sell filtered water, your sites can educate people about water, discuss how to protect our natural water sources etc.

Part 3: Sales

Getting your Ideal Buyers

For any product/service, there's always a small group of ideal clients who will buy more, and buy more frequently, than all other clients. Capturing this segment is the fastest and most cost-effective way to grow your business. Holmes call this the "Dream 100 strategy".

The best way to secure your ideal buyers is through **sheer determination**.

- When you *consistently add value*, they'll eventually notice you, and even feel obligated to do business with you. Once you've sold to an ideal buyer (e.g. a Fortune 500 company), it becomes easier to convince others to do business with you.

- *For example*, a real estate broker was able to serve the bulk of an upscale neighborhood after she consistently marketed to the neighbourhood for years. With the same perseverance, Holmes made himself visible to the top names in Hollywood until his screenplay was noticed and eventually bought by Warner Bros.

The same principle applies to getting your **dream affiliates**, i.e. people who don't sell your product/services, but have access to your customers and can help to promote your solutions. For 2 years, Holmes called and wrote to Jay Abraham every other week to pitch for a collaboration, before Jay decided to meet him. This meeting led to sales worth over $15mil, with profits shared by both sides.

KEY QUOTES

"Every product or service can create a community—even bottled water or shaving cream."

"The fastest way to grow any company is to focus a special and dedicated effort on your dream clients."

"The more they become familiar with your name, the better your chance of gaining them as clients."

"To build the Ultimate Sales Machine, you must devote machinelike precision to chase and tackle those dream prospects."

6 Steps to implement your "Dream 100 strategy"

Identify your dream clients. List down your ideal buyers, then refine your criteria. Collect as much information as possible about the companies that meet these criteria—through their websites, phone calls or research sites like Hoovers.

Select great gifts. One of the best ways to get noticed is to send small gifts every 2 weeks. Choose useful but inexpensive gifts that are relevant to your pitch—these won't seem like bribes, and will likely be used by the prospects.

Create your letters to go with the gifts. Keep it short and link the message creatively to your gift, e.g. flashlight ("don't be kept in the dark…"), Rubik's Cube ("don't be puzzled by…."), calculator ("calculate your savings…"). Always include a call-to-action that focuses on your offer (e.g. free course or consultation).

Map out your calendar and what you'll send for the next 3-6 months. You should send something minimally once a month, and ideally every 2 weeks. You can combine these with marketing tools like cards, surveys, coupons, PR articles etc.

Follow up with phone calls. Your goal is to secure an appointment to get the core story in front of them.

- For B-to-B sales, it can be hard to *reach the decision maker*. Use an authoritative tone, sound important and stay in charge of the conversation. For example, don't start your call with "how are you today?". Instead, say "Hi, this is Bill Allen. Is Tom in?".

- During the appointment, use the earlier tips to *present your core story*: educate them using market data, target their pain points, set the buying criteria in your favour, and use the "smoking gun".

Mastering your Presentations

Use these tips for effective presentations.

- *Use compelling visual aids*. 85% of information to our

KEY QUOTES

"Build that list, organize your approach, and never say die."

"Massive and diligent follow-up can penetrate just about any company if you are determined."

brain comes through our eyes. The right visual aids (e.g. using specific colours, pictures of human figures) can help to capture attention, communicate more and improve retention.

- *K.I.S.S. (Keep it Simple, Stupid):* Limit each slide to 1 big heading and 3-4 bullet points.

- *K.I.F.P. (Keep it Fast Paced):* Cover 2-3 slides per minute, with a new point appearing visually every 15s. For webinars, flash new images across the screen constantly.

- *Use WOW Facts* or stats that your audience will remember and share with others.

- *Use stories* to illustrate a point and make it stick.

- *Maintain curiosity:* offer facts followed by explanations, and keep telling them what else is coming up.

- *Use every headline* to sell the slide and keep things interesting.

- *Be confident* but not arrogant. Convey authority using your words, tone of voice and body language. Try to build a rapport with everyone in your audience, e.g. getting them to talk about their problems.

- Always *focus on them*, not on you.

Avoid these common presentation mistakes:

- Don't thank them or apologize for taking up their time.

- Don't present sitting down or with your hands in your pockets. Stand up and keep your hands outside, above your waist.

- Don't lose control, e.g. let questions to disrupt your presentation.

- Don't read off your slides.

- Don't be too serious. A little humor always helps.

- Don't underprepare. Always rehearse out-loud before every

KEY QUOTES

"Don't be lazy. Work to make every headline work hard for you."

"Misery loves company, so engaging (your prospects) on problems creates an instant bond."

"Never apologize or thank them for their time. If you do a good job, then they will thank you."

"Often, a great education can make people realize they need your product."

presentation. Know your whole presentation so you can insert criteria and ideas to presell what's coming up.

Perfecting your Sales Engine

Master the 7 Steps in Selling. Get your entire team to memorize and practice these steps until they are ingrained in their "subconscious competence". Use workshops to teach, practice and perfect your sales process.

- *Establish rapport.* The better your rapport with a client, the more secure the account. You should minimally know their background, family, interests and personal goals, and ideally become friends with them. Role play with your team on how to ask great questions, find common ground and build trust.

- *Discover their buying criteria,* and concurrently work to reset it so your solutions become the obvious choice. Work with your team to develop questions that they can use to know the prospects better.

- *Build value around your product/service,* e.g. teach your customers about manufacturing and how to identify a good vs bad product.

- *Create desire.* Develop a series of questions and killer data to help your prospects see why the status quo is unacceptable.

- *Overcome objections.* Learn your buyers' criteria and pain points with questions like: "What is your biggest marketing challenge?" or "What would it cost you to not fix this problem?". Seek to isolate an objection, e.g., "That's a good reason not to invest in this today. [Add a meaningful pause.] I'm just curious: is money the only thing standing between you and the purchase of this solution?". If there are no other objections, then ask, "So, if we can make this product affordable for you, you will buy it?"

- *Close the sale.* If you truly believe that your prospect will benefit from your product or service, go ahead with the close.

- *Follow-up.* Even after closing a sale, you need to constantly remind your buyers why they bought from you, and find new ways to keep educating them and adding value. The

KEY QUOTES

"The secret to building an excellent sales force (or team of any kind) is in repeating core training on basic sales skills again and again."

"Your job is to set up systems, procedures, and training that create a machine where every salesperson gets deep with your prospects."

more you focus on the prospect during the 6 steps above, the more information you'll have for your follow up.

10 steps to great follow up. Systemize your processes to strengthen client bonds and keep them happy.

- *Send your first letter* within 1-2 hours of your meeting. Start with something personal, include a compliment, push the hot buttons, recap the benefits you can offer and end with a personal close.

- *Follow up with a call,* focusing on providing value such as ideas or information for their challenge.

- Each month, *share something of personal interest* to the client.

- *Ease into their personal lives* with bonding events like parties or meals.

- Follow up from each event with a *letter/card/fax/email,* keeping it short and personal. Reinforce what else you'll do for the relationship.

- Plan something fun that can *involve their family.*

- Offer ways to *help your client succeed,* e.g. connect them to other potential clients or bring them to a useful seminar.

- Stay top of mind with *more cards/letters/emails.*

- Keep offering your help to become an *asset and confidant.*

- Aim to eventually *invite them to your home or be invited to theirs.*

Part 4: Operating your Ultimate Sales Machine (USM)

To build your USM, you need to apply, track and consistently improve the strategies above until it comes naturally to you.

Your Organizational USM. Identify the measures of effectiveness for your key goals (e.g. the number of calls or presentations made), track them and reward performance

KEY QUOTES

"If you are friends with your clients, it is very hard for another salesperson to take them away from you."

"Become involved in (your clients') lives and in the success of their businesses. Make it your personal mission to help them succeed."

"Implementation, not ideas, is the key to real success."

until these are part of your organization's DNA.

Your Personal USM. You can use the same approach to train yourself to naturally focus on opportunities around you.

- Your brain's *reticular activating system (RAS)* scans the environment based on the often-subconscious instructions that you give it. Focus your mind on success and keep demanding your brain to find solutions.

- Use *workshops* to define your goals (e.g. lifetime goals, annual goals), or find ways to create success (e.g. 3 things to do each month to improve your life, 3 things to do each month to make your team more effective).

The idea is to have the discipline and determination to stay focused on what matters, until it's second-nature for you to achieve your goals.

Other Details in the Book to Look out For

This book is packed with resources and detailed examples to help you understand and apply the strategies outlined in this summary. These include:

- Examples, scripts and tips for workshop training, recruitment, interviews, advertising/marketing campaigns, pitches, letters and follow-up;

- Stories and anecdotes from a wide range of businesses, based on Holmes' and his clients' experiences; and

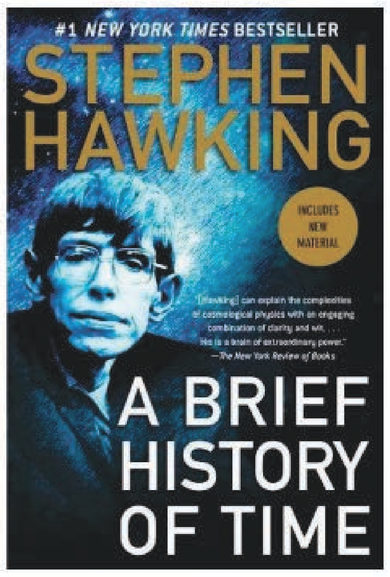
- Exercises (including reflections, assessments etc.) to help you apply and customize the tips for your business.

For more details and resources, please visit www.chetholmes.com.

KEY QUOTES

"Attitude is the only thing we can control in life, yet it's also the most powerful."

"If you make this book your sales, marketing and management bible and study it again and again, you'll never need to know anything else to rule your market. That and pigheaded determination."



A BRIEF HISTORY OF TIME

STEPHEN HAWKING

The Big "So What"

Mankind has always sought to understand our world. We want the answers to questions like: When/how was universe created? Where did we come from? Where are we going? Using simple layman terms, this book explains abstract concepts about cosmology—such as space, time, black holes, quantum theory and the expanding universe—to help us understand our universe in scientific terms.

Introduction

To have a meaningful discussion of the universe, we must first understand **what a scientific theory is**.

- A *good theory* must (i) accurately describe events (with rare exceptions) based on a model, and (ii) accurately predict future outcomes or observations.

- However, *all theories are provisional* because something that has been true so far can still be contradicted in the future. All it takes is 1 false event to disprove a theory. We can have more confidence in a theory if it makes accurate predictions consistently, but we can never prove a theory definitively.

While the universe may seem vast and unknowable, it actually follows certain laws that can be observed, understood and predicted. Over the centuries, mankind has vastly **updated our knowledge** by making observations, forming theories, then constantly testing, discarding or refining them based on how well our observations matched our predictions.

KEY QUOTES

"A theory is just a model of the universe, or a restricted part of it, and a set of rules that relate quantities in the model to observations that we make."

"Any physical theory is always provisional, in the sense that it is only a hypothesis: you can never prove it."

- For instance, Aristotle first theorized in 340 B.C. that Earth was round (not flat) and that the sun, moon, stars and planets moved around Earth in circular *orbits*. Many different theories were debated thereafter. In the 1600s, our predictions finally aligned with our observations, when it was theorized that the moon, stars, and planets (including Earth) orbited around the sun in ellipses (elongated circles). Then in 1687, Newton's theory on gravity explained *why* this happened—the celestial bodies were being attracted to one another by gravitational forces.

- Today, we still have an incomplete understanding of our universe. We can explain and predict parts of it through separate theories, but *we lack a unified theory* that fully explains the whole universe. *This* is the ultimate goal of science and our quest for knowledge.

What We Know about our Universe

Everything is relative. Nothing is absolute.

Everything is in motion. In the past, people assumed that an object's natural state was at rest, i.e. it'd stay totally immobile if there was no force acting on it. Sir Isaac Newton disproved this with his Laws of Gravity. The laws state that everything is *already* in motion and objects are constantly moving in relation to one another. A stationary chair may *seem* to be at rest, but it's in motion since it's sitting on a moving Earth. Specifically:

- The *first law* says that an object will keep moving in a straight line provided it is not acted on by another force, e.g. balls will roll down a slope in a straight line if gravity is the only force.

- *The second law* says that an object will accelerate at a rate proportional to the force acting on it, e.g. a car with a strong engine will accelerate faster than one with a

KEY QUOTES

"Today we still yearn to know why we are here and where we came from...And our goal is nothing less than a complete description of the universe we live in."

weak engine. And, the greater the body's mass, the less its motion is affected by the force, i.e. a heavier car takes longer to accelerate.

- *Newton's third law* says that all bodies attract other bodies with a force proportional to the mass of each object.

Space and time are not absolute; they are relative to the observer.

- *Space is relative*, i.e. there's no absolute standard of space. Since everything is constantly moving relative to everything else, it's impossible to determine if 2 events occurring at different times actually happened in the same space.

- *Time is also relative*, i.e. it moves at different speeds for different observers.

  (i) Ole Rømer discovered that light moves at a uniform speed (186,000 miles/second) regardless of the observer's position or speed of travel. But, Newton's law says that nothing is fully at rest, so light must travel at a constant speed relative to *something*. Speed is calculated as the distance travelled divided by time (S = D/T). If you drive at 100km/hr, you'll be 100km closer to your destination after 1 hour. But if you travel at the speed of light which is *always* the same, S is constant as D changes, which means T must also be changing.

  (ii) Albert Einstein and Henri Poncare separately and independently concluded that time slows down as you approach the speed of light. Einstein's equation $e=mc^2$ (where e = energy, m = mass and c = speed of light) says that an object's mass increases as its energy and speed increase. Objects can approach the speed of light but never actually reach it, and nothing can travel faster than the speed of light.

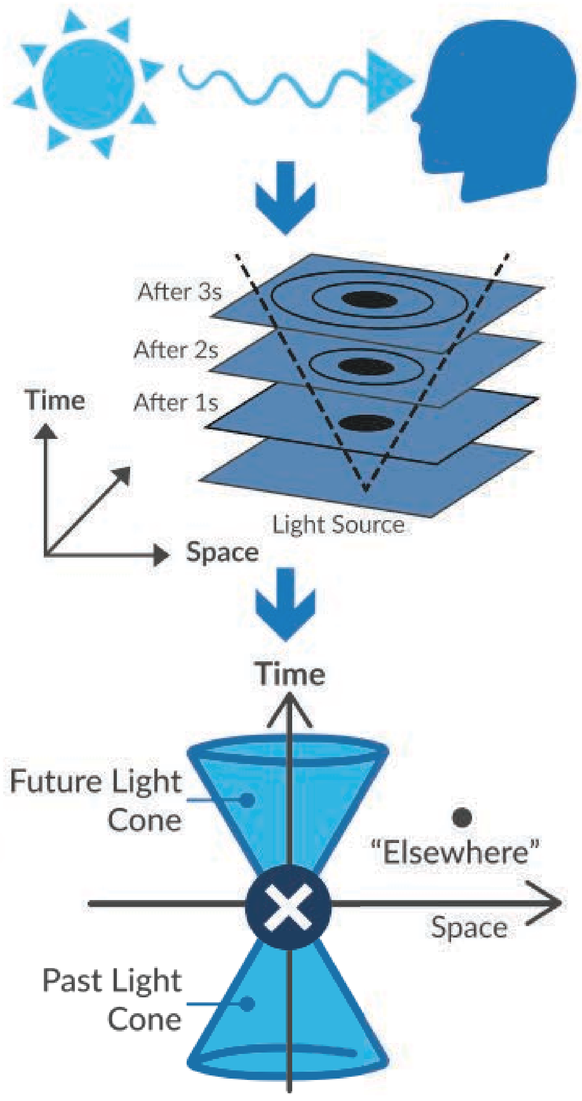
As we've seen, space and time can't be treated separately. They are interwoven into the fabric of space-time.

KEY QUOTES

"The theory of relativity... [forces] us to change fundamentally our ideas of space and time. We must accept that time is not completely separate from and independent of space, but is combined with it to form an object called space-time."

- All events must be mapped in space-time relative to *4 coordinates*: (a) a point in time and (b) a point in space, relative to (c) the observer's position and (d) the observer's motion.

- Light moves in waves and expands in a widening curve as it travels through space-time, just like how a rock creates ripples in a pond. You can visualize the effect as a *light-cone*. The audience in the future light cone can see Event X. Event X in turn can receive signals from those in the past light cone, and possibly be influenced by them. Events that lie outside the future/past light cones are said to lie in the event's "elsewhere"—they neither affect nor are affected by what happens at X.



- Let's imagine that Event X is the sun burning out. Since the sun is so far away, it takes time for the light-waves to reach us. By the time we see the sun burning out, the event is long past. So when you look at the starry sky, you're seeing how the universe looked like *in the past*, i.e. you're in the future light cone of the light from those stars.

In 1916, Einstein's general theory of relativity added gravity to the picture. Einstein theorized that space-time isn't flat and doesn't travel in a straight line.

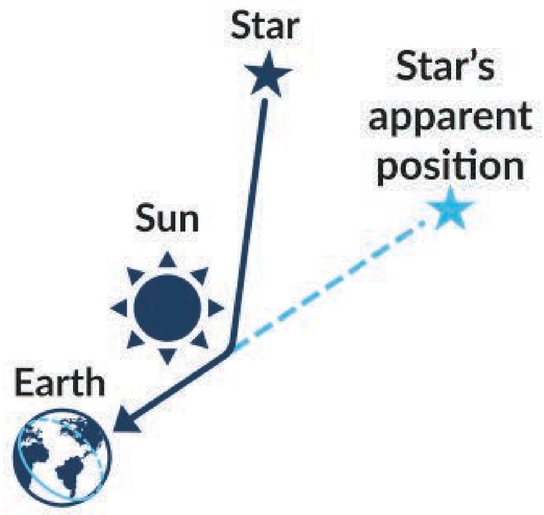
- Imagine putting a heavy object on a stretched-out piece of fabric—the weight of the object will cause the fabric to sink. Likewise, gravity warps the *curvature of space-time* so it travels with a slight curve instead of a straight line. Due to the space-time curvature, distant stars actually appear to be in a different position than their actual location.

KEY QUOTES

"Space and time not only affect but also are affected by everything that happens in the universe."

"When we look at the universe, we are seeing it as it was in the past."

"In the theory of relativity there is no unique absolute time, but instead each individual has his own personal measure of time that depends on where he is and how he is moving."



- You'll *experience time differently* depending on where you are and how you're moving. If you're travelling in space at close to the speed of light with a low gravitational pull, 50 years later you'll look much younger than your twin who stayed on Earth.

- Einstein's general theory of relativity explains most things in the universe. Yet, it is *incomplete* because it can't explain how the universe was started. This is where quantum theory comes in.

The Uncertainty Principle and Quantum Mechanics

For a long time, scientists believed in determinism, i.e. we'd be able to predict everything so long as we had perfect and complete info. However, this was quashed in 1926 when scientist Heisenberg presented the **uncertainty principle**. To measure the position and velocity of a particle, you must shine a high-frequency light on it. This would disturb the particle and disrupt its velocity in unpredictable ways. So, it's impossible to accurately observe and gauge a particle's position and speed. If we can't precisely measure the state of the universe at any point in time, then we can't accurately predict the future.

This laid the foundation for the new field of **quantum mechanics**:

- Quantum mechanics recognizes randomness and adopts a *probabilistic approach*. Instead of trying to predict exactly how particles will move to get 1 definitive result, it predicts the probabilities of various possible outcomes.

KEY QUOTES

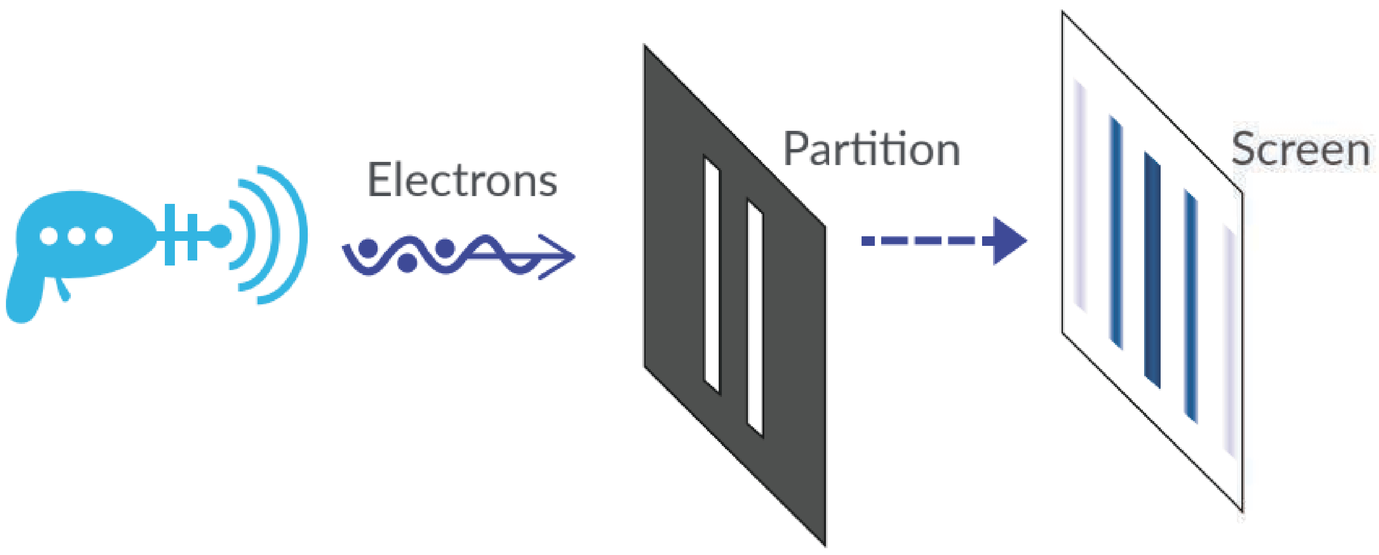
"We have seen…how, in less than half a century, man's view of the universe, formed over millennia, has been transformed."

"One certainly cannot predict future events exactly if one cannot even measure the present state of the universe precisely!"

"One could predict the approximate number of times that the result would be A or B, but one could not predict the specific result of an individual measurement."

- It also looks at the physical world in terms of both particles (e.g. atoms) and waves (e.g. light or radio waves). This is significant because there may be interference when 2 sets of *waves or particles* coincide—they may (i) reinforce each other to form stronger waves or (ii) cancel each other out.

- The two-slit experiment shows that light/matter can display the characteristics of both *waves and particles*. When you shine a light-source through a partition with 2 parallel slits, you'll see bright-and-dark bands on the screen behind—this shows the wave characteristics of light. Even if the electrons are sent one at a time, you'll still get the fringes instead of a uniform distribution, i.e. each electron is passing through both slits concurrently.



The Building Blocks of Nature

To understand how the universe works, we must understand its building blocks. Quarks are the smallest known bits in the universe that are believed to make up everything.

- *Atoms* are the basic building blocks of matter, and can be combined to create molecules. By the early 20th century, we know that each atom is made of negatively-charged electrons orbiting around a positively-charged nucleus (made of positive protons and neutral neutrons).

- In the 1960s, scientists discovered that protons and neutrons are made up of even smaller particles—*quarks*.

  (i) A quark's "*spin*" describes how it looks from different angles (e.g. a particle that looks the same from any direction has a spin of 0).

KEY QUOTES

"We do have some theoretical reasons for believing that we have, or are very near to, a knowledge of the ultimate building blocks of nature."

(ii) The *exclusion principle* says that 2 similar particles can't have the exact same position and velocity.

(iii) Every particle has an *antiparticle* that can annihilate each other (e.g. electron vs positron). The existence of observable matter means that the universe has more quarks (and the protons/neutrons they form) than antiquarks, antiprotons, and antineutrons.

Matter particles interact via force-carrying particles.

- A matter particle (e.g. an electron) can emit a force-carrying particle. This creates a recoil that changes the velocity of the matter particle. The force-carrying particle then collides with another matter particle to change the latter's velocity. With repeated collisions, they can create strong forces.

- There are *4 types of force-carrying particles*, each with different force-levels and nature of interactions: (i) *gravitons* carry gravitational forces, (ii) *photons* produce electromagnetic forces, (iii) *bosons* create weak nuclear forces and (iv) *gluons* bind quarks to protons and neutrons to create the nucleus in atoms.

The **grand unified theory (GUT)** says that at extremely high energies, nuclear forces can be weakened to unbind gluons and quarks so they act like free agents. At such energy levels, it's theoretically possible to merge electromagnetic, weak, and strong forces into a single force. However, there's currently no conceivable way to generate that level of energy. The GUT also predicts that it's possible for protons to randomly decay into particles like antielectrons, though this phenomenon has yet to be observed.

The Big Bang and the Expanding Universe

For the bulk of human history, people assumed that the universe either (i) had always existed in an infinite, unchanging state, or (ii) was created at a finite point in time (by God or a Creator in line with religious and theological beliefs). However, we later discovered that the universe is actually dynamic and expanding.

KEY QUOTES

- Light is made up of the spectrum of component colors found in a rainbow. The *Doppler Effect* says that the frequency of sound/light/other waves changes as the source moves toward or away from the observer. The wavelength of the waves you receive is longer if the source is moving *away* from you (called "red-shift" since the longest wavelengths are at the red end of the spectrum). The wavelength is shorter if the source is moving *toward* you (called "blue-shift"). That's why the engine sounds of a car approaching you seems to have a higher pitch compared to one that's driving away from you.

- By studying wavelengths of visible light, astronomers found that most galaxies are *red-shifting* or moving away from us. The universe is expanding at a rate fast enough to overcome the forces of gravity (which would otherwise have caused it to contract). This is similar to how a rocket must travel fast enough to escape Earth's gravitational pull to enter orbit.

If the universe has been expanding for eons, then there must have been a time when it was infinitesimally small. That's **the Big Bang**.

- For the bulk of the 20th century, the *"Hot Big Bang" model* was used to explain how our universe came to be. According to this model, the universe was incredibly hot right after the Big Bang explosion. Particles moved rapidly to form protons, neutrons, atoms, and molecules. Within seconds, the universe had expanded, started to cool, and particles slowed down to form new elements though a series of nuclear fusions. Within a few hours, most of the hydrogen and helium in our universe today were formed in huge clouds. Over millions of years—as the universe kept expanding and cooling—these became the building blocks of new atoms and molecules that eventually made up all other matter (including Earth and humans).

- This model explains much of our observable universe, but not all of it. One of the unanswered questions was: *why/how did the universe expand so uniformly* across space-time on a large scale? It's tempting to use theology to explain away such unknowns—maybe God simply

KEY QUOTES

"The old idea of an essentially unchanging universe that could have existed, and could continue to exist, forever was replaced by the notion of a dynamic, expanding universe that seemed to have begun a finite time ago, and that might end at a finite time in the future."

"So long as the universe had a beginning, we could suppose it had a creator. But if the universe is really completely self-contained, having no boundary or edge, it would have neither beginning nor end…What place, then, for a creator?"

decided on those conditions for His divine purposes. Yet, scientists continue to search for concrete laws to explain these observations.

Guth's **inflationary theory** helps to explain this strange uniformity. This theory says that after the Big Bang, the universe ballooned to a million million million million million times its radius in <1 second. This rate of expansion was much faster than the Hot Big Bang model, and would've caused the universe to supercool so fast that forces would stay unified instead of decoupling. The resulting energy and anti-gravitational effects would further accelerate the expansion of the universe to create the large-scale smoothing and uniformity that we observe today.

The Big Bang is what we call a **singularity event**, i.e. a point where the changes in conditions are so infinite and irreversible that all rules of "reality" are changed. In less than a second, the universe had exploded to millions and millions of its original radius. The Big Bang can be considered *the beginning of time*, since the laws of physics (and even the concept of time itself) only started with it. All prior events fall in the "elsewhere" of our light cone and are both unobservable and inconsequential.

Will our universe expand indefinitely? If space-time began with the Big Bang singularity, it could also end with a singularity, be it (i) a big crunch singularity (where the whole universe re-collapsed), or (ii) a singularity inside a black hole (specifically for the object that fell in). Current evidence suggests that our universe is expanding 5-10% every 1000mil years, and is **likely to expand forever**. Even if it were to re-collapse, it won't happen for at least 10,000 mil years.

Black Holes

How are black holes formed? Stars are created by clusters of free-floating hydrogen atoms brought together by gravity. The atoms interact to produce nuclear reactions, leading to the formation of other elements (mainly helium).

KEY QUOTES

"Time had a beginning at the big bang."

- Stars have a huge gravitational pull. They remain *stable* when the outward pressure from the core nuclear reactions is balanced with the inward gravitational pressure.

- A star will eventually exhaust its supply of fuel. As it starts to cool and contract, its fate depends on the *Chandrasechar Limit*:

  (i) If a star has <1.5x the mass of our sun (i.e. it's *below* the limit), it'll shrink to a fraction of its original mass and become what's known as a white dwarf or neutron star.

  (ii) If a star is *above* the limit, it'll become too dense to withstand its own gravitational force, thus collapsing to become a black hole.

Black holes have such **infinite gravity** that even light can't escape. So, objects can enter but nothing can exit. Inside a black hole, normal scientific laws break down just like the conditions prior to the Big Bang. "Time" and "space" have no meaning.

- It was originally believed that black holes are invisible and can only be detected via their gravitational forces. Later discoveries show that they actually glow like hot bodies due to particles (*x-rays and gamma rays*) escaping from the area around them.

- Earlier, we explained the existence of particles (with a positive charge) and antiparticles (with a negative charge) which would normally annihilate each other. These also exist in the spaces around black holes. However, the gravity near a black hole is so immense that a negative-energy particle can fall in and get transformed into a positive-energy particle. This allows the partner particle to "survive" and escape the area. Black hole regions *emit so much energy* that 1 black hole alone could meet our world's electricity needs—if we could find a way to harness it.

While there's no conclusive evidence of black holes yet, scientists have (i) identified possible black holes in the observable universe and (ii) proven the existence of neutron stars (which have similarly high density). In the meantime,

KEY QUOTES

"Black holes are one of only a fairly small number of cases in the history of science in which a theory was developed in great detail as a mathematical model before there was any evidence from observations that it was correct."

black holes' proven radiation emission have **major implications** for science and metaphysics. Any object that falls into the black hole is emitted as radiation, which means that matter is never truly destroyed but recycled as energy. A human who fell into a black hole may die, but his mass or energy will still continue to exist in some other form.

Why Backward Time Travel is Unlikely

We've established that time is relative. The next question is **whether time moves in a certain direction** and if it can travel backward. In imaginary time, you can move forward or backward without any difference. But in "real" time, the direction of time matters.

An arrow of time is what differentiates the past from the future to give direction to time. Hawking believes that backward time travel is unlikely due to **3 arrows of time**.

- *The Thermodynamic Arrow*: According to the second law of thermodynamics, entropy or disorder in a closed system can only increase or stay constant—it can't decrease. Moving time backward means that a broken cup can be made whole again, which violates the law.

- *The Psychological Arrow*: Psychologically, we can only remember events in the past, not the future. We experience time from a known past to an unknown future with increasing entropy.

- *The Cosmological Arrow*: Entropy increases as the universe expands (not as it contracts), again implying that time must move forward, not backward.

There are also **inherent paradoxes to backward time travel**.

- To travel back in time, you must be able to *travel faster than the speed of light*. Imagine if you were traveling from Point A to Point B. If you moved so fast that you arrive at Point B before the light waves arrive, you can observe your past self leaving Point A. Yet, we've established that it isn't possible to travel faster than the speed of light.

KEY QUOTES

"The laws of science do not distinguish between the forward and backward directions of time. However, there are at least three arrows of time that do distinguish the past from the future."

"The progress of the human race in understanding the universe has established a small corner of order in an increasingly disordered universe."

- Another paradox is the "*grandfather paradox*". If you could go back in time to kill your grandfather, you won't exist in the present, which means you couldn't have gone back to kill your grandfather, and so on. This can only be reconciled if backward time travel doesn't allow you to alter past events, i.e. you enter an alternate history that doesn't affect the current space-time.

For now, **wormholes** offer the best possibility for time travel. The no-boundary proposal says that at the start of space-time, the universe had a warped curvature that allowed time to travel in any direction. This no longer seems possible after the universe expanded and flattened, but perhaps such curvatures still exist in certain areas. If so, quantum physics says that it's possible to bend space-time to let a wormhole cut through 2 regions of space-time.

The Quest for a Unified Theory

We've learned a lot about our universe within a relatively short period of human history. However, we still have some way to go before we have a **unified theory** that can explain the entire universe. The laws of general relativity don't work at sub-atomic levels and for singularity events. Quantum mechanics, on the other hand, work for all scenarios but we don't have a consistent theory that incorporates it with gravity. So, a unified theory must somehow combine the laws of general relativity and quantum mechanics.

So far, the **string theory** comes closest to bridging this gap.

- The theory basically *replaces particles with strings*—instead of a particle in a point in space at a point in time, we have strings in a line in space at each point in time. So, every point corresponds to a time and to a position on the string. Waves move up and down the string (similar to how particles collide with one another), to cause strings to combine or split apart.

- String theories seem to describe and predict our universe better than other theories. However, they need *up to 26 dimensions of space-time* to work. This contradicts

KEY QUOTES

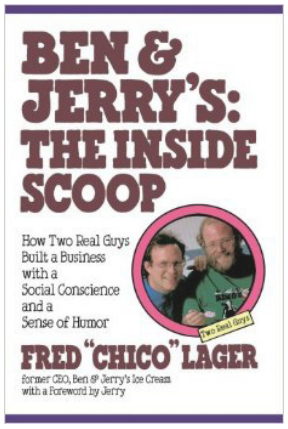
"A complete, consistent, unified theory is only the first step: our goal is a complete understanding of the events around us, and of our own existence."

our longstanding notion of a four-dimensional space-time. It's possible that we don't see the extra dimensions because they're too tiny to be observable on a large scale, or because we only exist in the regions of the universe with four dimensions.

As explained earlier, we can never prove a theory 100%. So, we might never know if we've discovered the unified theory. We can only be confident that our theory consistently make predictions that're in line with our observations. Just like how the general relativity and quantum theories are now widely accessible to the masses, the discovery of a unified theory will allow mankind to completely grasp the laws that govern our universe. Only then will our **quest for understanding** finally be fulfilled.

KEY QUOTES

"If we do discover a complete theory…Then we shall all, philosophers, scientists, and just ordinary people, be able to take part in the discussion of the question of why it is that we and the universe exist."



BEN & JERRY'S: THE INSIDE SCOOP

How Two Real Guys Built a Business with a Social Conscience and a Sense of Humor

By Fred 'Chico' Lager

The Big "So What"

In less than 15 years, Ben & Jerry's grew from an ice cream parlour in an abandoned gas station (with $12,000 investment), to a publicly traded corporation with annual sales of over $100 million. The book traces the inside story of how Ben & Jerry's evolved from a start-up to leading company, yet remained one of the most innovative, progressive and socially responsible businesses in the world.

Introduction

This anecdotal story is told through the eyes of Fred Lager ("Chico") who was hired in 1982 as the Ben & Jerry's General Manager and became President and CEO in 1989. The book gives us a glimpse of:

- Ben Cohen and Jerry Greenfield as individuals and entrepreneurs;
- How they conceptualized and grew their start-up;
- The various struggles and growing pains that the company faced; and
- How the company overcame these challenges to become one of the leading premium ice cream brand.

The story stopped in 1994 (when the book was published) and didn't include subsequent developments e.g. Ben & Jerry's acquisition by Unilever in 2000. Nonetheless, it provides useful insights on how the company grew from a struggling start-up to a successful listed corporation. It's an entertaining and inspiring read for ice-cream lovers and entrepreneurs alike.

In this summary, we'll first outline the key milestones of Ben

KEY QUOTES

"Other than its ice cream and yoghurt, the company is perhaps best known for bringing 'sixties values' to today's business world."

'The most amazing thing is that our social values…have actually helped us to become a stable, profitable, high-growth company… Like individuals, businesses can conduct themselves with the knowledge that the hearts, souls and spirits of all people are interconnected; so that as we help others, we cannot help helping ourselves."
- Ben Cohen

"I'd rather fail at something new than succeed at something old."
-- Ben Cohen

"We can't just optimize profits. We have to optimize the community as well."
-- Ben Cohen

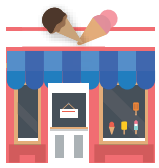
& Jerry's growth from start-up to 1994, before distilling the highlights and insights that we've gleaned from their journey.

Key Milestones

Jerry and Ben went into business without a real plan, business background nor knowledge of ice-cream making. They simply figured things out along the way and overcame each challenge with creativity and great work ethics.

1977: A decision is made

Ben Cohen and Jerry Greenfield met in high school. Since young, Ben could put 100% into something he believed in, but be totally uninterested in something imposed on him. He eventually dropped out of university, tried a year of pottery course and took on a range of jobs before deciding to go into business in 1977. Jerry, on the other hand, did well in school academically. However, his grades slipped as he took on more sporting activities, he couldn't get a place in medical school, and ended up as a lab technician. When he was temporarily ditched by his girlfriend Elizabeth Skarie (whom he eventually married), he accepted Ben's invitation to start a business.



1978: In Business!

Jerry and Ben decided on an ice-cream business, and invested $5 in an ice cream making course. Since most warm cities already had homemade ice cream shops, they settled for Vermont despite its cooler climate. They got a bank loan of $4,000; put in $4,000 of savings each, and started Ben & Jerry's with a working capital of $12,000.

The company was incorporated in Vermont on 17th December, 1977. Jerry and Ben took over an old service station building in February 1978, scrimped and saved to renovate it, concurrently figured out how to make ice cream, and opened the shop for business in May 1978.

KEY QUOTES

"With the exception of buying a big rig and becoming cross-country truck drivers, most of Jerry and Ben's ideas for a business involved food."

"Our original concept for the store was "Ice Cream for the people". We wanted to make the best ice cream available and sell it at a price that everyone could afford."
- Jerry Greenfield

1979: One-year Anniversary & Free Cone Day

When sales tapered off nearing winter, they started to promote the store to stay in business. They worked with a local graphic artist to develop ads using hand lettering, and tried a range of promotions, including a new company slogan, throwing an annual gala (with stilt walking, ice-cream eating contests, frog jumping etc.), launching a "Penny Off Per Celsius Degree Below Zero Winter Extravaganza", and running a free outdoor movie festival during the summer .

They also launched their first-ever Free Cone Day on the annual anniversary of their store's opening, giving out free scoops to everyone. This tradition still continues today . But, despite strong sales, they were still losing money.

1980: Wholesale took off

Their wholesale business started with Ben driving to restaurants to ask if they wanted ice-cream. The company soon needed additional production capacity, and secured more loans to convert an old textile mill for manufacturing.

By summer, they had a manager running the shop, while Jerry churned ice cream and Ben handled sales and delivery. Although their shop was now making money, it wasn't enough to cover the increased overheads.

One day, Ben hit on the idea of packaging ice cream in one-pint containers for sale through groceries and mom-and-pop shops. The new pint containers were launched in February 1980 with the slogan "Vermont's Finest All Natural Ice Cream" . They printed a picture of the 2 founders on the lid and a money-back quality guarantee at the back of each container . Sales took off and within a few months, they grew from 35 wholesale accounts to more than 200.

1981: Franchise

Their first franchised scoop shop was launched in Vermont in July 1981. Around that time, Time magazine ran an article about homemade premium ice cream, hailing Ben & Jerry's

KEY QUOTES

"The gas station was the embodiment of funk – which, like pornography, is hard to define, but easy to recognize when it's staring you right in the face."

as “the best ice-cream in the world”. This gave an added boost to the already-booming sales.

1982: Move to Downtown Burlington

By 1981, both Jerry and Ben were burnt out, worried about not living their values as successful businessmen, and considered selling the business. Ben eventually decided to stay, convinced that he could run business in accordance with his personal values, rather than traditional business notions. Jerry sold off 40% of his shares (retaining 10%), followed his girlfriend to Arizona, but agreed to return about 4 times a year under a consulting agreement. They brought in Fred “Chico” Lager as General Manager, so Ben could continue to focus on sales and marketing.

At the same time, they moved out of their signature gas station outlet to a location in downtown Burlington.

1984: IPO & Pillsbury Showdown

By this time, Ben & Jerry’s had successfully entered Boston, their first metropolitan market. They needed $2.5 million to build a new plant, and decided to partially fund it with a Vermont-only IPO. The offering was over-subscribed, and Ben & Jerry’s raised $700,000 in new equity. They also secured the debt funding required for the plant expansion.

Around mid-1984, Häagen-Dazs (the leading premium ice cream brand and subsidiary of conglomerate Pillsbury Corporation) tried to force Ben & Jerry’s Boston distributors to cease carrying their ice cream. Ben & Jerry’s decided to launch a media campaign against Pillsbury – “What’s the Doughboy afraid of?”.

- They portrayed Pillsbury as the big boy trying to unfairly quash 2 hippies from Vermont (who embodied the American Dream).
- Jerry came out of retirement, and started a one-man picket outside the Pillsbury corporate office. They offered write-in kits with sample letters of protest, campaign T-shirts, and put stickers on their ice cream containers with an 800-number for people to comment about Pillsbury’s

KEY QUOTES

“If there’s something you don’t like about the business, change it.”
- Maurice Purpora, restaurateur

“Other than the founders themselves, nothing personified the business more than the original store. Without it and Jerry, Ben was now running a much different business from the one the two friends had started four and a half years earlier.”

“In retrospect, the key to the case had been the decision to retain lawyers who were already completely familiar with the relevant case law, not someone who’d have to spend time in the library, researching precedents.”

actions. They received extensive media coverage.

- Ben backed up the publicity campaign by hiring an established attorney with strong experience in antitrust litigation.
- In less than a year, they secured an out-of-court settlement, which effectively prohibited Häagen-Dazs from interfering in Ben & Jerry's distribution arrangements. They had also received more publicity than ever possible with paid advertising.

1985: Ben & Jerry's Foundation

Just after their Vermont IPO, Ben & Jerry's found themselves growing so fast that they were 2 years ahead of projections. In May 1985, they raised another $5 million in shareholder funding on Nasdaq to fund further capacity expansion.

In the meantime, the Ben & Jerry's Foundation was set up to fund projects for social change, supported by 7.5% of pretax profits from Ben & Jerry's. Ben also gave 50,000 of his personal shares as an initial endowment.

1986: Dreyers & Cowmobile

Soon after the Pillsbury saga, Ben & Jerry's faced another competitive threat, this time from Richie Smith, who was acquiring Steve's (a homemade ice cream maker) to directly compete with Ben & Jerry's.

Ben responded with the near-impossible goal of entering the remaining major markets, to achieve national distribution before Steve's was relaunched. They broke into the first 4 new markets with just Ben and 1 other sales staff . Fortunately, a distribution deal with Dreyers took care of their next 4 major markets and many other smaller cities.

Smith re-launched Steve's as a direct imitation of Ben & Jerry's, down to their best-selling flavours, packaging, and their claim of "Boston's Best" to pit against Ben & Jerry's "Vermont's Finest" . By now, Jerry was back on the payroll. He and Ben decided to personally do a cross-country scoopathon.

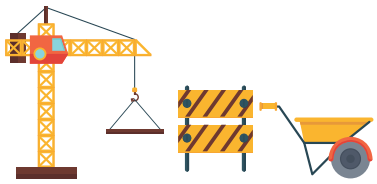
KEY QUOTES

"They had unwittingly handed us a public-relations bonanza that had created brand awareness for our ice cream far in excess of anything we could have generated with paid advertising."

"Ben and I found it somewhat amusing to watch our stock price go up and down with very little correlation to how things were going at the company. Most of the movement was tied to investment reports that the brokerage firms were now publishing about our stock."

"The second brand in (a market) faced a huge uphill battle, not just with the ultimate consumer, but with distributors and retailers who would question the need for a "me too" product."

They created "Cowmobile" from an old recreational vehicle, and drove across the country giving away free ice cream cones. The campaign created awareness for their ice cream around the country, and generated more than $1 million of free publicity . Sales doubled for the 3rd year in a row, to reach almost $20m.



1988: Strengthening foundations

Ben & Jerry's ended 1988 with more than 80 scoop shops in 18 states, and sales growing by about 50% for the 2nd consecutive year. The company had been struggling to keep pace with its explosive growth, and saw the critical need for organizational development, succession planning and mission clarification and actualization.

In the meantime, Ben & Jerry's embarked on several innovative social-mission projects, e.g.

- Introducing a novelty bar (Peace Pops) to promote having the Federal Government allocate 1% of the annual defense budget to promote world peace;
- Taking brownie supplies from a small bakery which hired homeless and unemployable people;
- Opening a scoop shop in partnership with a community group to provide job experience and business training for youths; and
- Changing to environmentally-friendly packaging and taking on related environmental initiatives.

They concurrently decided on a co-packing arrangement (to support their growth without constantly adding new plants and employees), and set up a franchise advisory council to improve their franchise arrangements. However, human resources - filling key management positions, training, staff alignment – continued to be an issue.

1990s: Stability and Recognition

By 1990, the organization development work was starting to pay off, with the majority of staff feeling satisfied with their jobs, and supportive of the company's social mission. The company also started to win several awards for its products,

KEY QUOTES

"(Jerry) was once again an integral part of the company, contributing to its success on many levels."

entrepreneurship and social responsibility, e.g. making it to the Forbes Magazine list of "200 Best Small Companies in America" for the 3rd successive year in 1992, and having one of its flavors selected as one of Fortune Magazine's "Products of the Year".

Their social mission was also taking shape with several new initiatives:

- They sought alternative producers and suppliers, including fruit from the Passamaquoddy Indians in Maine & Brazil nuts grown in rain forests (rather than from cut-down trees);
- Ben & Jerry's replaced Oreo cookies in its recipes because the supplier also sold cigarettes;
- When milk prices dropped, Ben & Jerry's paid Vermont farmers a premium based on historical prices; and
- Ben & Jerry's promoted a social pressure group called ACT NOW which took a public stand on various issues with social impact.

After a few years of slower but steady growth, Ben & Jerry's pulled just slightly ahead of Haagen Dazs in market share in end-1994, and a new CEO, Bob Holland, came onboard.

KEY QUOTES

The Inside Scoop and Useful Insights

Behind Ben & Jerry's phenomenal success were numerous challenges, many of which were not obvious to the external world. Lager shared the inside story through anecdotal examples in vivid detail. In this segment, we present some of our key takeaways.

Staying True to Themselves

The 2 founders were instrumental to the company's success. Their business philosophies influenced all aspects of business, and were probably best represented in their quotes on the first Free Cone Day:

"Their involvement in the business was so personal that it was impossible to delineate where Ben and Jerry ended and where Ben & Jerry's began."

"Jerry and Ben had decided early on in their business careers that they would only do the jobs they liked to do."

"If it's not fun, why do it?" – Jerry
"Business has a responsibility to give back to the community from which it draws its support." – Ben

The duo worked hard, but also focused on what they enjoyed, and this led them to play to their complementary strengths:

- Ben was optimistic, entrepreneurial, driven, set uncompromising quality standards, and had great marketing instincts & creativity. However, his perfectionist standards, endless ideas and constant changes made him hard to work with.
- Jerry was accessible, down-to-earth & loved experimenting with ingredients, making him a great operations chief and ombudsman.

A Commitment to Quality

Jerry and Ben developed their first ice creams at home. Due to a sinus problem, Ben had a deficient sense of taste and smell. Hence, their ice-cream had to be heavily flavored with lots of chunky ingredients before Ben could even decipher the flavors.

From the onset, they wanted their ice-cream to be the best - rich, creamy, smooth, dense and chewy – even if it cost more. They were willing to put a money-back guarantee behind their quality .

They were constantly experimenting with new flavours and retiring less popular ones.

More than money

Making money was never Jerry and Ben's main priority, and book-keeping was certainly not their strength. How did they succeed?

With no real business plan nor knowledge of what was involved, Jerry & Ben started by **improvising and learning on-the-job**:

- To approach the bank for loans, they took a copy of their friend's pizza parlour plan, and substituted the word "slices" with "cones" . Having no idea how much things

KEY QUOTES

"No matter how many variations of a product Ben tasted, and how many times he changed the formula, he was always convinced he could further improve what he was working on."

"Jerry liked experimenting with ingredients, and to this day maintains that there is no such thing as an unredeemable batch of ice cream."

"Ben often spoke of the competitive advantage that came from producing a product that was so difficult to make that no one else would put themselves through it."

'We didn't have a lot going for us. We had no assets or collateral to speak of. We were new to the area. We were young. We weren't married. And we had no business experience."
-- Jerry Greenfield

would cost, they guessed a reasonable selling price, and work backwards assuming 40% cost-of-goods-sold.

- A couple of months after opening, they put a sign on the door that said: "We're closed today so we can figure out if we're making any money" . Their accountant soon revealed they were making losses despite average sales of $650 per day . They ended their first year with double the projected sales, but no profit.
- In 1982, when Chico joined the company, Ben & Jerry's reported a loss of about $4,000 despite sales of almost $1 million. They finally setup a better accounting system in 1983. Despite tight cash flows, they were always contributing to the community.

Jerry and Ben **scrimped and saved**, always putting the business first:

- During the startup phase, they ate saltine crackers and canned sardines to conserve cash for the renovations. Even after the store opened, they survived on crepes and sundaes that customers left behind;
- To open their first shop with $12,000, they bought used equipment at a bargain. They also offered "ice cream for life" to their building contractor and plumber, and eventually to one of their customers in return for his live piano music in the store.
- By the end of 1980, they had more than $370,000 revenues and a profit of $33,000, but paid themselves only $8,000 per year.

Social Responsibility

At the core of Ben & Jerry's social philosophy is "linked prosperity" -the idea that a company shares its rewards with its community and employees. To bring this to life, they formalized 2 policies:

Corporate Donations. The company would commit 7.5% of its pretax profits to the Ben & Jerry's Foundation, a non-profit organization that funded projects for social change; and

The five-to-one salary ratio, which stipulated that no one in the company could earn more than 5 times what was being paid to the entry-level staff. To attract top management talent, this ratio was increased to 7-to-1 at the end of 1990.

KEY QUOTES

"So here were Ben and Jerry, in the midst of the rubble that was being transformed into what they fully expected to be their first and only outlet, trading the promise of free ice cream from a nationwide chain of stores that existed only in their plumber's mind, for a couple of hundred feet of copper pipe."

"We began to talk about the concept of 'linked prosperity' …What it meant was that as the company grew and prospered, the benefits would accrue not just to the shareholders, but also to our employees and the community."

Even when raising equity, they focused on giving back to the customers who had supported them. During their first IPO in 1984, Ben insisted on selling stock only to residents of Vermont (despite everyone's objections), with the goal to give their earliest supporters a chance to profit from their success. They also set the minimum purchase at 12 shares for $126 (despite administrative burdens), so more people could afford it.

Although Jerry and Ben initiated many successful social missions, these created tension within the company.

- For example, in 1988, Ben wrote to supporters about Peace Pops (his brainchild), making commitments on behalf of the company without prior consultation with the management team. The team was very upset, and the lack of internal alignment led to delays in the launch and other product and marketing issues which were costly to fix.
- Jerry and Ben finally realized that they had to help the rest of the organization to understand the mission statement. A meeting was held with all 300 employees to explain their mission, and to inspire employees to leverage on company resources to make an impact. This was a turning point, inspiring new social champions within the company and resulting in their most successful environmental initiatives.

By 1991, more than $1.5 million had been allocated to the Ben & Jerry's Foundation. What was most surprising was that none of the social programs had negative impact on the company's bottomline.

Growing Pains

For many years, there was no long-term planning at Ben & Jerry's. Decisions were made as and when new opportunities and problems surfaced. Ben also didn't want the company to grow too big (though being creative by nature, he'd inadvertently push for new products and ideas which propelled the company's growth).

For almost every year until 1988, the company was grappling with the construction of new facilities, cash flows and talent shortages:

- When the first store opened in May 1978, construction was still going on and they ran out of ice-cream regularly.
- In 1980 they expanded to the old-textile-mill, and by

KEY QUOTES

"The object of the in-state offering is to allow the average Vermonter the opportunity to invest in and hopefully profit from Ben & Jerry's – an ice cream company which the average Vermonter supported, made famous, and allowed to prosper."
- Ben Cohen

"Ben was always better working one-on-one than in big groups, preferring to do things his own way without discussing with everyone else."

"Most people suspend their values about contributing to society when they go to work…Its when we're at work that we're most powerful, because we're organized and we have the financial resources of the company behind us."
- Ben Cohen

It's not a question of making great ice cream, making some money, and then going and doing socially responsible things. Caring about the community has to be imbued throughout the organization so that it impacts every decision we make."
- Ben Cohen

the next year, they moved to a factory that was 4 times larger. Concurrently, they had to find the best way to fill pint containers, being the industry pioneers to sell in pints.

- Despite raising $2.5m in 1984 for a new plant, they had to raise money again the next year for even more, all the while struggling with teething problems and cost overruns for the first plant.

In all successful ventures, at some point the company's **entrepreneurial founders must hand the baton over to a management team.** By the late 1980s, it was clear that Ben & Jerry's had reached that stage of growth, but the transition was painful.

- Besides constant capacity shortage, the company's systems were not keeping up with its explosive growth. This included inadequate computer systems, loose financial controls, lack of training and procedures, and poor communication/ coordination. Ben & Jerry's was becoming more departmentalized, less connected, and employees no longer understood the vision, values and philosophy .
- For example, the management were having a heated discussion on production shortfalls (yet again) when Jerry and Ben marched in and announced they were starting a committee to focus on joy at work. **There was a disconnect** - Management felt the founders and Board had lost touch with reality, while Jerry and Ben felt that the company was losing its soul.

Finally, a Ben & Jerry's Mission Statement was developed in 1988, focusing on linked prosperity and breaking it down into 3 interrelated components - their product mission, their social mission, and economic mission. The all-staff meeting highlighted earlier played a crucial role in bringing people together .

- In fact, these **all-employee meetings** were useful for 2-way communication and joint decision making. Staff broke up into small groups to problem-solve on specific issues, allowing people take part in the decision making process. Stories were shared to reinforce the company's culture, values, and operating philosophy, and staff were recognized and celebrated for all sorts of accomplishments or contributions.

KEY QUOTES

"Working smarter, not harder, would have been an option, but no one know how."

"Ben and I had no long-term strategy plan for the business. Decisions were made incrementally, from month to month and summer to summer, as opportunities and problems presented themselves."

"One reason the transition in leadership was so difficult was that it was taking place at the same time that the company's values were being redefined."

"The environmental projects were the most successful actualization of the three-part mission to date…the idea had emerged from within the organization…and it proved, for the first time, what we could accomplish when everyone was headed in the same direction."

"Staff meetings were also the means through which we preserved and passed on the company's culture, values and operating philosophies."

Sales and Marketing

Ben & Jerry's marketing efforts were very much an extension of who they were – unpretentious, all-American, socially responsible and a little funky. This gave them a unique niche in the super-premium ice cream segment which, in the 1980s, was characterized by sleek, foreign-sounding brands.

Giving away ice cream had been a natural part of Ben & Jerry's:

- From the one-for-one promotion on their opening day, to the Free Cone Day every anniversary, Jerry and Ben just loved giving away ice cream;
- When they decided to enter the major markets (starting with Boston), most of the key players were spending a lot on TV advertising. Ben & Jerry's did the bare minimum (as expected by the major supermarket chains), but focused their resources on giving away free pints and spoons of their ice cream;
- When faced with direct competition from Steve's in 1986, Jerry and Ben responded with their cross-country scoopathon, which was highly effective in raising awareness for the brand.

Engaging with their customers was also a natural gesture:

- It was common for new ice cream flavours to be developed using customers' suggested ingredients, and some of their best-selling flavours (e.g. Chunky Monkey, Chocolate Chip Cookie Dough) came from customers' suggestions.
- Since the early days, Jerry personally replied to all customer mails and enquiries. As the volume grew, they hired help to craft personal responses to each letter, and Jerry still added a handwritten note to each reply. This built greater loyalty for Ben & Jerry's, though that was not the original intention.
- Under the new marketing head, they offered tours of their factory–a powerful way to educate & engage their visitors.

KEY QUOTES

"Some of what transpired at the staff meetings took on an air of tribal celebration."

"If Häagen-Dazs and the clones were worldly and elegant, we were funky and unpretentious. If they were slick and sophisticated, Ben & Jerry's was down-home and genuine."

"Giving away ice cream came to them naturally, and they did it without a premeditated calculation as to what the payback might be down the road."

"They had connected with their customers, who felt like they were an integral part of what was happening, not merely a source of revenue to some faceless businessmen…. There was a sense from the beginning that this was something special."
- Caryl Stewart
(leasor for the gas station)

Their **bold, personal and fun marketing approach** cut across promotions, IPOs and even in their Pillsbury campaign:

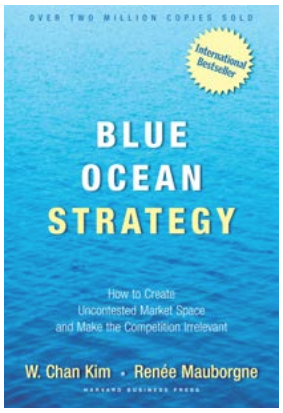
- For their Vermont IPO, they broke norms by running teaser ads that said "Get a scoop of the action!" and advertised a toll-free number for people to call for the Prospectus. Instead of using brokers and underwriters, they sold the shares via informational meetings around Vermont.
- When recruiting their new CEO in 1994, they launched a "Yo, I'm Your CEO" contest. Each applicant had to submit an essay on why he should be the new CEO. The 1st prize was the job, and the 2nd prize was membership in their "free-ice-cream-for-life club" .

Other Useful Details in the Book to Look Out For

It is impossible to replicate the vivid anecdotes and humour in the book, and there are many details in the stories that are entertaining and insightful at the same time. While we have tried to capture the key highlights and takeaways that can be applied in your work and business, nothing beats reading the book yourself . You can also get more updates and information at Ben & Jerry's official website.

KEY QUOTES

"We weren't aware of it at the time, but studies indicate that someone who has a problem with a company that the company resolves to their satisfaction is more likely to be a loyal customer in the future than a consumer who's never had a negative experience."



BLUE OCEAN STRATEGY

How to Create Uncontested Market Space And Make the Competition Irrelevant

by W. Chan Kim & Renée Mauborgne

THE BIG "SO WHAT"

Based on a study of 150 strategic moves spanning more than 100 years and 30 industries, the book provides a systematic approach to making the competition irrelevant, charting a "bold new path to winning the future".

UNDERSTANDING BLUE OCEAN VS RED OCEAN

Why bother with Blue Oceans to begin with? Essentially, they create new demand, leading to easy uncontested growth in sales and profits, and wider and deeper market opportunities in the unexplored space.

Here is how the Blue Ocean Strategy (BOS) differs from the conventional Red Ocean Strategy:

Blue Ocean Strategy

- Create uncontested market space
- Make the competition irrelevant
- Create and capture new demand
- Break the value-cost trade off
- Pursue low cost ***and*** differentiation

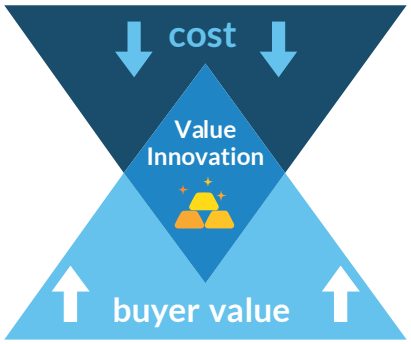
Red Ocean Strategy

- Compete in existing market space
- Beat the competition
- Exploit existing demand
- Make the value-cost trade off
- Pursue low-cost ***or*** differentiation

KEY QUOTES

"The only way to beat the competition is to stop trying to beat the competition."

VALUE INNOVATION



A cornerstone of the BOS is Value Innovation, which is essentially the area where a company's actions concurrently reduce costs and increases its value offering to buyers. The company saves costs by eliminating and reducing its investments in certain factors that its industry competes on. It increases buyer value by raising and creating new value elements not previously offered by the industry. The latter may mean a short-term increase in investment, but this will be addressed once economies of scale kicks in.

It is about creating a quantum leap in value for your buyers, thereby creating new and uncontested market place. This strategy needs to span across the entire system of a company's activities.

ANALYSING THE MARKET: TOOLS AND FRAMEWORKS

The following tools and frameworks are used across the formulation and execution of the BOS.

Strategy Canvas

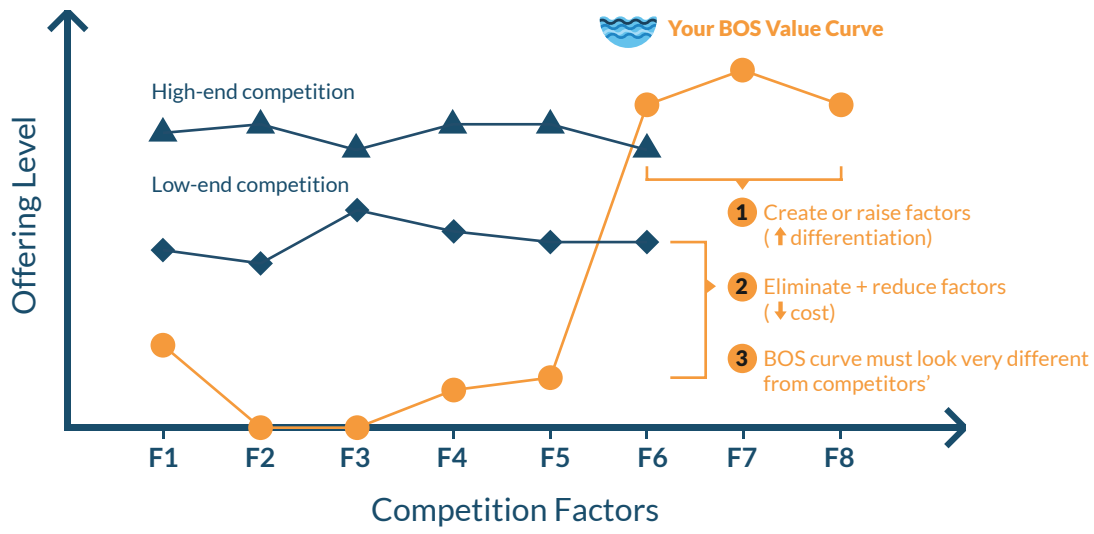
This is a tool to capture the current state of play in the marketplace, so you can understand:

- Where the competition is currently investing
- How the industry currently competes (in products, service, delivery)
- What customers receive from existing competitors in the market

KEY QUOTES

Value Innovation

"Instead of focusing on beating the competition, you focus on making the competition irrelevant by creating a leap in value for buyers and your company, thereby opening up new and uncontested market space…Value innovation is more than innovation. It is about strategy that embraces the entire system of a company's activities."



Your BOS strategy curve should:

- Look significantly different from existing competitors'
- Involve cutting back and/ or eliminating competition factors that were taken for granted in your industry (thereby reducing cost)
- Involve raising and/or creating new competition factors that your industry doesn't offer (thereby increasing differentiation)

The book also highlights 3 components of a good strategy:

1) Focus : Do not diffuse your efforts across all factors of competition

2) Divergence : The shape of your value curve looks totally different from other players'

3) Tagline : the tagline must deliver not only a clear message but advertise your offering truthfully

Four Action Framework and ERRC Grid

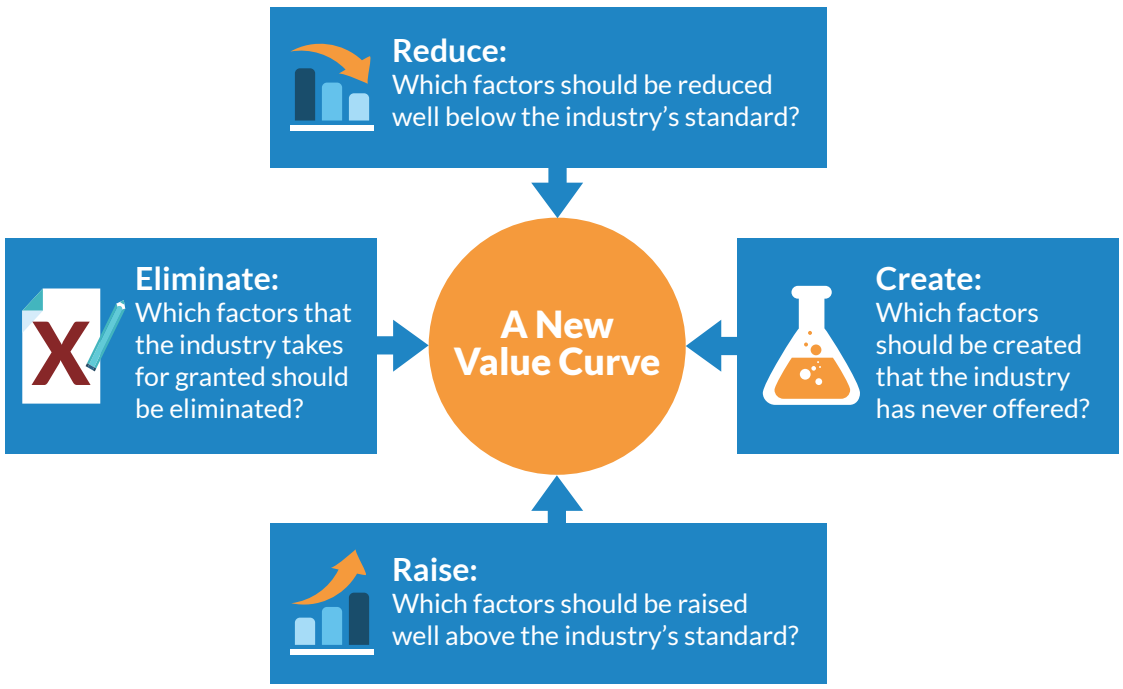
These 2 tools can be used in conjunction with the Strategy Canvas to develop a strategy that will create an uncontested market space.

The Four Action Framework is used to break the trade-off between differentiation and low cost to create a new value curve, using 4 key questions to challenge an industry's logic and business model:

KEY QUOTES

Strategy Canvas

"To fundamentally shift the strategy canvas of an industry, you must begin by reorienting your strategic focus from competitors to alternatives, and from customers to noncustomers of the industry… to gain insight into how to redefine the problem the industry focuses on and thereby reconstruct buyer value elements that reside across industry boundaries."



With this approach, companies can determine which product characteristics to increase or decrease focus on. Next, the **Eliminate-Reduce-Raise-Create (ERRC) Grid** pushes companies to specify the actions that they can eliminate and reduce, so they can communicate their strategy internally and take concrete action.

Eliminate:	Raise:
Reduce	**Create**

The Pioneer-Migrator-Settler (PMS) Map

Plotting your company's current and planned portfolios gives you perspective on your potential for growth. Your businesses or offerings fall into 3 key categories:

1) Settlers : Me-too offerings/ businesses.
2) Migrators : Offerings/businesses above market average.
3) Pioneers : Offerings/businesses of unprecedented value.

KEY QUOTES

Four Action Framework

"There are four key questions to challenge an industry's strategic logic and business model."

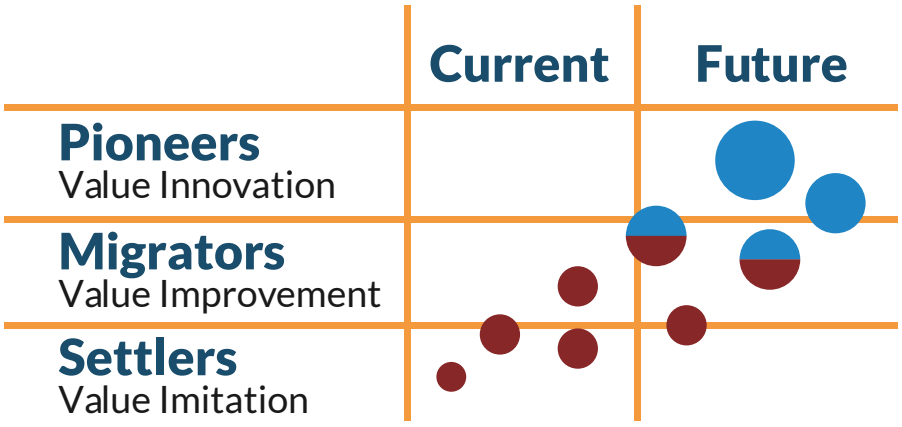
ERRC Grid

"The grid pushes companies not only to ask all four questions in the four actions framework but also to act on all four to create a new value curve."

PMS Map

"Senior Managers' goal here should be to manage their portfolio of businesses to wisely balance between profitable growth and cash flow at a give point in time."

Pioneers are drivers of your BOS and your most powerful sources of profitable growth, but settlers are frequently today's cash generators. Your goal is to have a balanced portfolio for current and future cash flow and growth.



The Buyer Utility Map

This map shifts the focus to buyers, helping to identify the utility spaces that a product or service can potentially fill. *The Buyer Experience Cycle (BEC)* outlines the 6 stages of buyers' experience, with a range of experiences within each stage. The *utility levers* cut across stages of the buyers' experience.

Managers can use the map to consider ways to offer new/different utility, and also ways to remove barriers that hinder conversion of non-consumers to consumers. Exceptional utility is achieved when the offering removes the greatest blocks to utility across the entire buyer experience cycle. This gives customers a compelling reason to use the product.

Six Stages of Buyer Experience Cycle (BEC)

Six Utility Levers	Purchase	Delivery	Use	Supple-ments	Mainte-nance	Disposal
Customer Productivity			●			
Simplicity		●			●	
Convenience						
Risk						
Fun & Image			●			
Environmental Friendliness						

● Current Industry Focus ● Blue Ocean Strategy

KEY QUOTES

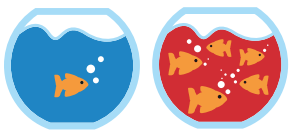
Buyer Utility Map

"To test for exceptional utility, companies should check whether their offering has removed the greatest blocks to utility across the entire buyer experience cycle for customers and noncustomers."

FORMULATING BLUE OCEAN STRATEGY: 4 KEY PRINCIPLES

1. Reconstruct Market Boundaries

Examine how the market is currently performing and competing, then create a strategy that is drastically different from the rest of the players. The book outlines 6 paths you can take to identify blue ocean opportunities and reconstruct your market boundaries:



Look across alternative industries:
These include products or services that have different functions and forms, but serve the same purpose.

Look across strategic groups within industries:
i.e. those pursuing similar strategies. Draw on the distinctive strengths from different groups and eliminate and reduce everything else.

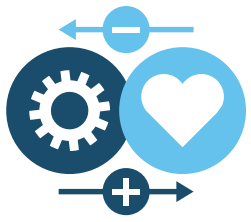
Look across the chain of buyers:
Consider whether your industry focuses on the purchasers, users and influencers of a product or service. Identify if there is potential to unlock new value by shifting the customer focus.

Look across complementary product and service offerings:
Identify the context in which your product is used, including what happens before, during and after your product is used. That can shed light on the pain points you can eliminate.

KEY QUOTES

Reconstructing boundaries

"To break out of red oceans, companies must break out of accepted boundaries that define how they compete."



Look across functional or emotional appeal to buyers:

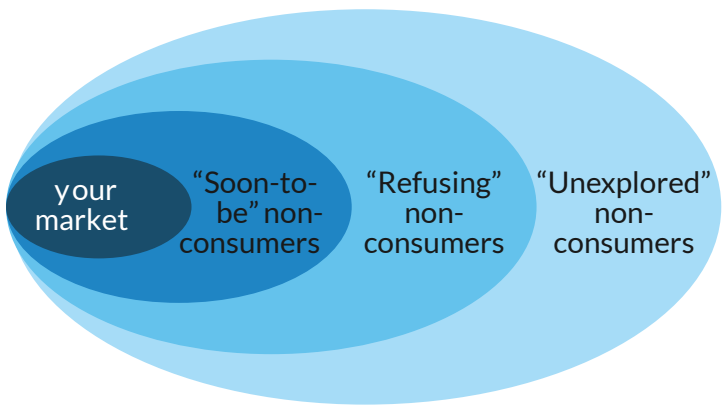
Consider how your industry competes primarily, then see if there are elements you can strip out of emotional appeal to compete functionally, or elements you can add to functional appeal to compete emotionally.

Look across time:

Identify trends that have a high probability of impacting your industry, are irreversible and evolving in a clear trajectory, and participate in shaping external trends over time.

2. Reach Beyond Existing Demand

To maximize the size of the blue ocean, you need to look to 3 tiers of non-consumers. Focus on the tier that represents the biggest catchment at the time, but also explore and build on overlapping commonalities that applies to different tiers of non-consumers:

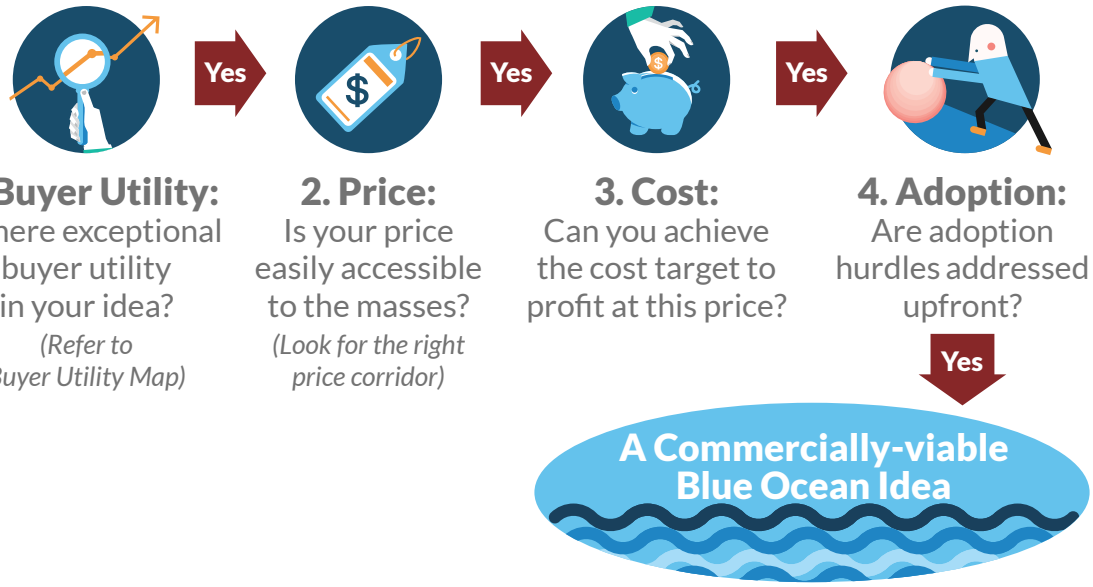


- *First tier* : *"Soon-to-be" non-consumers* who are at the edge of your market, waiting to jump ship
- *Second tier* : *"Refusing" non-consumers* who consciously choose against your market
- *Third tier* : *"Unexplored" non-consumers* who are in markets distant from yours

3. Getting The Strategic Sequence Right

There are 4 key steps that must be covered, to develop a robust strategy. If the answer is "no" to any of the steps, you need to re-work the strategy until the item is addressed:

KEY QUOTES



4. Focus On The Big Picture

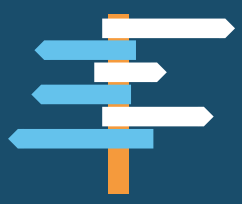
Visualize your Strategy to unlock the creativity of people within your organization, help them see the blue oceans, and communicate the strategy for effective execution. This includes 4 components:

VISUAL AWAKENING

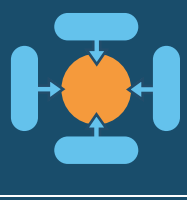
- Compare your business with your competitors by drawing your "as is" strategy canvas
- See where your strategy needs to change

VISUAL EXPLORATION

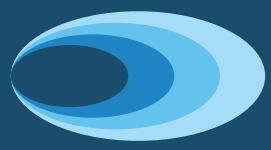
- Explore 6 paths to creating blue oceans



- Observe from the field distinctive advantages of alternative products & services

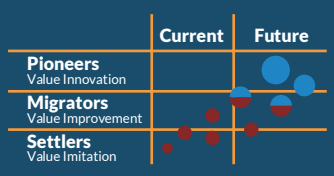


- See which factors you should eliminate, create or change

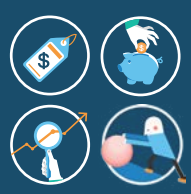


VISUAL STRATEGY FAIR

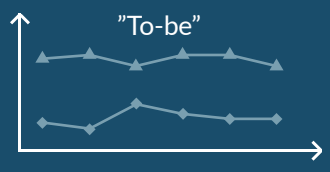
- Draw your "to be" strategy canvas with insights from the field



- Get feedback from customers & non-customers



- Use feedback to build the best "to be" future strategy



VISUAL COMMUNICATION

- Distribute your before-and-after strategic profiles on one page
- Support only those projects & operational moves that allow your company to close the gap to actualize the new strategy

KEY QUOTES

Visualizing Strategy

"By building a company's strategic planning process around a strategy canvas, a company and its managers focus their main attention on the big picture rather than becoming immersed in numbers and jargon and getting caught up in operational details."

EXECUTING BLUE OCEAN STRATEGY: 2 KEY PRINCIPLES

1. Overcome Key Organizational Hurdles

Because BOS represents a huge shift from status quo, the challenge of execution is amplified. The book recommends using the approach of "tipping point leadership" to overcome the 4 key hurdles to change:

Cognitive Hurdle (waking up employees to the need for change):

Rather than rely on numbers to convey the message, tipping point leaders focus on making people see and experience the harsh reality firsthand, in 2 ways:

a) Get managers to face the worst operational problems

b) Get managers to meet with their most disgruntled customers

Resource Hurdle (executing a strategic shift with fewer resources):

Rather than try to secure more resources, tipping point leaders focus on multiplying the value of the resources they have, in 3 ways:

a) Redistribute resources to hot spots

b) Redirect resources from cold spots

c) Horse-trade resources you don't need for those that you need

Motivational Hurdle (motivating key players to move fast and tenaciously):

Instead of trying to win over everyone, tipping point leaders focus on 3 areas of disproportionate influence :

a) Zoom in on Kingpins (key influencers)

b) Use fishbowl management for Kingpins (spotlight on their actions)

c) Atomize the challenge to bits that are relatable and attainable

KEY QUOTES

Tipping Point Leadership

"Tipping point leadership allows you to overcome these four hurdles fast and at low cost while winning employees' backing in executing a break from the status quo."

Political Hurdle (overcoming age and treachery): These can be overcome through 3 ways:

a) Leverage your angels

b) Silence your devils

c) Secure a consigliore in your top management team

2. Build Execution into Strategy

There will always be resistance to change, and much more so with BOS, as it pushes people out of their comfort zones and challenges past practices. To minimize the risk of distrust, non-cooperation and even sabotage, the book recommends a "fair process" in making and executing strategy. The Fair Process involves 3 "E Principles":

Engagement:
Involving individuals in the strategic decisions that affect them

Explanation:
Helping everyone involved and affected to understand why the decisions are made as they are

Expectation Clarity:
Stating clearly the new rules of the game after a strategy is set

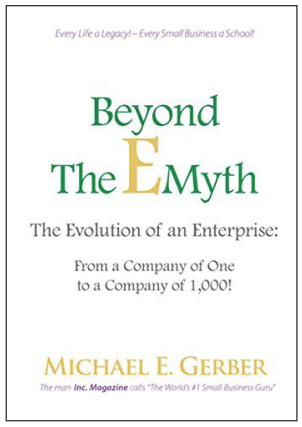
KEY QUOTES

Fair Process

"To build people's trust and commitment deep in the ranks and inspire their voluntary cooperation, companies need to build execution into strategy from the start."

OTHER USEFUL DETAILS IN THE BOOK TO LOOK OUT FOR

The book is packed full of great ideas, tools and frameworks, but the real-life examples and case-studies are what really brings them to life. The book covers examples of [yellow tail], SouthWest Airlines, Cirque du Soleil, NetJets, Curves, NTT DoCoMo, Home Depot, Ralph Lauren, Toyota, Novo Nordisk, Bloomberg, QB House, Apple, European Financial Services, Pret a Manger, IKEA, Swatch, and many more.



BEYOND THE EMYTH

The Evolution of an Enterprise: From a Company of One to a Company of 1,000!

BY MICHAEL E. GERBER

The Big "So What"

Most small businesses fail, and those that are profitable often rely on their founder to survive. Business owners put in years of hard work, only to end up with a job that they are stuck with. The solution is to build your business with the intent to sell it. Gerber's best-selling "The E-Myth" and "The E-Myth Revisited" focus on helping business owners to think differently about their business. This book takes it beyond the E-Myth to focus on how to start and build a scalable business that can be sold.

Introduction: Growing from 1 to 1,000

Most business owners start a business to make money, focusing on selling products/ services to generate income. However, the business remains dependent on the founder for survival, i.e. it's a "Company of One", and the owner is stuck with a job.

Ultimately, a successful business is not one that sells a lot of products or services; it's one that is such a great product in itself, that people want to buy the *entire business*. In short, your business is your primary product, and a great business is one that can scale without its founder.

You need not actually build a company of 1,000 employees, but you must demonstrate that your company has the *capability* of growing to 1,000 people and beyond. Building your business from this perspective means an entirely different business model, from the products/ services you offer, to the clients you serve and the way you operate. Rather than try to fix the company you already have, Gerber suggests that you apply his framework to a "NewCo", i.e. to create a new business that's designed from the onset to grow from a Company of 1 to 1,000.

KEY QUOTES

"It is easy to start a company. It is difficult to sell a company. If you don't consider your Exit Strategy from the beginning, you're simply creating a job for yourself."

"This book is going to teach you how to design, build, launch, and grow your company so that it can scale."

"If you own a small business, and if your business depends upon you to survive, it's what I call 'a Company of One.'"

"The sad and tragic story of most small business owners when their business comes to a close is that… so does their life!"

"Unless you start your business with the intention of selling it, it will almost always turn out to be a disaster."

For this to work, you as the business owner must meet a few criteria:

- Your **passion** must be stronger than your excuses, fears and inertia.

- You must be **teachable**, willing to learn and try new ideas. Even if you've heard a concept before, refrain from dismissing it too early as a cliché. Until you've personally lived/ experience the concept, you don't really know it.

- The journey to exponential growth is a step-by-step process. It's not easy, and it won't happen overnight. To succeed you must be **committed** to stick to the end.

This summary organizes the ideas and examples in the book into 5 parts, mirroring the 5 steps to grow from a Company of 1 to 1,000.

Part 1: Why Do You Exist?

To stand out from the crowd, you must be able to answer this question, "What does my company exist to do, and why?" This will encompass your Dream, Vision, Purpose and Mission (elaborated below).

Since the inception of the E-Myth paradigm in 1977, Gerber has worked with more than 100,000 small business clients. He realizes that most of these business owners are functioning like technicians, working in their business like how they would in a job. To make the switch and start working on their business, they need to awaken the entrepreneur in them. Every entrepreneur is not just one personality, but 4 personalities rolled in one: The Dreamer, Thinker, Storyteller, Leader. Combined, they hold the answer to the key question above.

The Dreamer and The Dream

In every entrepreneur, there's a Dreamer with a Dream. Your Dream is the **great outcome** that your company will create.

KEY QUOTES

"Everything is a cliché… until you live it… when you experience them, they cease being clichés. They're what's called, instead, life."

"You've got to be a stayer if you're going to be a player."

"From its very beginning… you (must) intentionally and consciously and audaciously design, build, launch, and grow your company as if you intend to franchise it."

"Your buyer isn't looking for the company you are today. Your buyer is looking for the company you'll become in the future."

"A true entrepreneur's Dream is not personal. It's impersonal. It's not about the Dreamer; it's about the consumer."

- The Dream is not about what you want personally (e.g. your desired lifestyle, amount of wealth. **It's *all* about your customers**– who they are, the pains that they face, the cause of the pain, and how things will be like when your company excels at solving the pain.

- In expressing your Dream, you must consider **2 sets of customers**:
  - The *strategic customers* who will buy your company; and
  - The *retail customers* who will buy your products/ services.

  When buyers evaluate a company, they have their own exit strategies in mind (e.g. going for IPO, getting the company acquired or growing it as part of their business). Your strategic customers are most likely to be companies that share your customer base, and can realize huge value by incorporating your solutions with their own businesses. Focusing on these customers helps you to build the right company that serves the right customers, with the right solutions.

- **How do we find the dream?** Well, we all have the Dreamer in us –we just need to step aside and allow the Dreamer to express him/herself.
  - The Dream often surfaces in an unplanned fashion, as a flash of inspiration or intuition. This happens when our mind is *open and receptive*, like an open channel or door. Unfortunately, most of us are constantly caught up in the daily grind, and distracted by irrelevant information/ clutter. Only by putting aside what you know (or think you know), can you truly discover and create something new.

  - To help small business owners to discover their dreams, Gerber designed *The Dreaming Room*™. Over 2½ days, business owners literally rediscover themselves with a blank sheet of paper, and a "beginner's mind", answering fundamental questions like: "Who am I?", "Why am I here?", and "What do I *really want*?".

  - Gerber found that *everyone* has one thing they stand for, e.g. love, spirituality, personal responsibility. It calls to us personally and specifically, for reasons we cannot define. It's the *essence* of who you (The Dreamer) are. Hence, your Dream is a part of who you are, and it powers your Vision, Purpose and Mission.

KEY QUOTES

"Unless… you have a clear picture of who's going to buy your company, you will more than likely spend years going after the wrong retail consumer, with the wrong product, and end up creating the wrong company."

"How you start NewCo will determine how you end NewCo."

"(The Dream)…happens right now, not in the future. It's a state of being, a presence, not a pursuit of something."

"They were accessible to what 'came to them.' They were literally an open door. A clear channel."

"Our job was to get out of the way of The Dreamer within… (so we could) fulfill the promise we had each, knowingly or unknowingly come to fulfill."

"Before we discovered our Dream, we first… had to discover (or uncover, or recover) our Dreamer."

The Thinker and The Vision

To manifest your Dream, you need a Vision, and in every entrepreneur there's also a Thinker with a **Vision** - the form your company must take (including how it how it thinks, acts, and looks), to deliver that great outcome of your Dream.

Rather than learn everything from scratch, it's more effective to model a proven system - a real-life company that has (a) already delivered similar end results, and (b) has a turnkey capability to predictably deliver those results again and again. Gerber cites McDonald's as one of the best references.

The idea is not to copy the model company exactly, but to learn what works, and adapt them for your desired outcomes. A vivid Vision helps you to visualize in detail the Franchise Prototype you must build. Your end-goal is to build a scalable company, by having a model that anyone can duplicate in a predictable way.

The Storyteller and The Purpose

In each entrepreneur, there's a Storyteller with a Purpose. Your Purpose is the **big result** that you'll deliver for your most important customer ("MIC"); it's the story of why your company is valuable.

When you share your story, people will listen from different perspectives and respond differently - they may love it, hate it, or totally not grasp it. Yet, someone who loves your story may not take action, while another person who's clueless may resonate with it in future. You can't predict who'll be your MIC; just share your story with passion to anyone who'll hear it.

Telling your Story serves 2 objectives:

- It spreads your Dream/ Vision; and
- It stimulates your imagination, to give you a bigger vision and new possibilities you may not otherwise see.

It's important to remember that the Storyteller tells the story, not sell it. A great story touches its audience's mind and heart, and the way to do so is to focus singularly on **one core frustration**. To get inspiration on how to express your dream with passion, watch Dr. Martin Luther King's "I Have a Dream" speech.

KEY QUOTES

"You must first see what you're about to create, if you are ever going to be able to actually create it. And, of course, both must happen if you are ever going to be able to sell it."

"The intensity with which you impress your subconscious with a picture of your plan directly affects the speed with which the subconscious will go to work to attract the picture's physical counterpart by inspiring you to take the right steps."
- Napolean Hill

"Your Story has got to address one thing, and only one thing."

The Leader and The Mission

Finally, every entrepreneur has an inner Leader, who's on a Mission to bring the Dream, Vision, and Purpose to life. Your Mission is the **turnkey operating system** that makes it possible for your company to operate successfully. "Turnkey" is basically the opposite of randomness – it affects your ability to repeatedly deliver and duplicate your success.

In Parts 2 and 3, we'll take a closer look at your turnkey systems, including Client Fulfilment, Client Acquisition, Management and Leadership.

Putting it Together

In the book, Gerber elaborates on the E-Myth journey since 1977, using it as a case study to inspire our own Dream, Vision, Purpose and Mission.

For Gerber and E-Myth, the big "Why" is as follows:

- **Dream:** "To transform the state of small businesses worldwide."
- **Vision:** "To invent the McDonald's of small business consulting". Specifically, the E-Myth vision is to have such a well-orchestrated consulting system that any novice can be coached to deliver a scalable business.
- **Purpose:** "To provide every small business owner with the ability to succeed, just like the McDonald's franchise does".
- **Mission:** "To invent the turnkey Business Development Operating System essential for every small business company to operate as effectively and efficiently as the most successful of companies do. All at a cost any small business owner could readily afford."

Recall that you have 2 sets of customers: your retail and strategic customers. Knowing your intent helps you to define your potential buyers, and package your company to make them fall in love with it. For example, the potential buyers of a small-business consulting franchise like the E-Myth are: Intuit, Microsoft, Gallup Organization, or companies that incubate or fund start-ups.

KEY QUOTES

"Your Dream gives it energy. Your Vision gives it form. Your actions give it the life needed to produce it in reality."

"The System runs the business, and the people run the System!"
- Ray Kroc, McDonalds

Part 2: Client Fulfilment System

Uncovering the Truth

Many of us have become dependent on technology (like calculators, mobile apps, social media) to do much of our thinking and connecting for us. We've learnt to rely on data and numbers, and stopped asking important questions like "Who are you?", or "What's causing this pain and how can we solve it?"

To build a great company, your biggest job is to think – get to know your customers better than they do, so you can offer them solutions they can't find themselves. From Part 1, we've developed a rough idea of your exit strategy, customers and desired outcome. Now, you must start working on your company, by talking to your customers and asking questions (but *not* selling to them).

Specifically, your goal is to establish who your customers really are, why they behave the way they do, what are their key frustrations, what they do to cope, and what's the underlying cause for these frustrations. To deliver a promise that deeply impacts them, you must uncover the problems beneath their frustrations. Ask yourself, "What's missing in this picture?"

For example, the E-Myth started in 1977 as Michael Thomas Corporation (MTC, a collaboration between Gerber and his partner, Thomas). They called every small business owner in their area, explained their research goals, and made appointments to speak with the owners. They asked about the most difficult problems for the owners, how these showed up in the business, and what solutions had worked so far. They then invited the owners to a free meeting to address these frustrations.

Through these sessions, they discovered that the underlying problem for small business owners was this: they were essentially technicians (e.g. accountants, designers) who had specific skillsets, operated their businesses like a job, and thus limited their own ability to expand. They were not behaving like entrepreneurs; they were "technicians suffering from entrepreneurial seizures".

Narrowing the Gap

Once you've found the underlying cause and solution, your goal is not to give your clients the answers. Instead, help them to find the key to their core problem, i.e. help them to *pinpoint their gap*. It's

KEY QUOTES

"Our power to think is being rapidly deteriorated…Use it (our minds) or lose it has become a reality today."

"Your credibility is measured according to the model you're using."

crucial to develop a *measurement or metric* for whatever model or system you create. This sets a context for your relationship with your most important customer, and allows you to demonstrate that their gap is being narrowed (with verifiable results).

Going back to the E-Myth example: having identified the problem, MTC's next task was to create a system that could help their clients to make the switch from technicians to entrepreneurs, e.g. focus on equity (not income), define their reason for existence (not solve day-to-day problems).

They developed the "Needs Analysis Process" – an entirely-scripted process, which was used by their senior marketing associates to engage clients-to-be. The business owners were systematically taken through 6 progressive stages or benchmarks, until they realized they had gaps and missing systems they had to plug. This process allowed clients-to-be to experience a "live demo" of a system at work, and reinforced the business model and promise that was defined earlier for MTC. The Needs Analysis also comes with a checklist of systems that a business requires – by revisiting the checklist, the client can see how far the gap has been narrowed.

Capturing the Process

Initially, you'll need to work both ***in*** your business (calling/ meeting/ talking to people to understand them and what it takes to fulfil your dream) and ***on*** the business (improving and coding the processes). This is a rigorous process of documenting *everything* - including the visual, emotional, functional and financial components of your company - to show how you think, do, and grow as a business. When complete, your Client Fulfilment System has all the "how-to" manuals in place, to deliver the promise to your most important customer, as defined in your Dream, Vision, Purpose, and Mission. You're now ready to grow your company.

Part 3: Client Acquisition System

In this phase, your goal is to ensure there are enough potential customers for all the franchise companies you'd want to replicate.

Compelling Story

Acquiring customers goes beyond manipulation, persuasion or sales transactions. It's about *moving* people with your compelling Story.

KEY QUOTES

"Your job is to help (your clients-to-be) discover the answer to the main underlying problem they have... to help them identify their gap."

"The point of Client Acquisition is not to make a sale. The point of Client Acquisition is to make a true believer."

- Unfortunately, there's no magic formula for your Great Story. You can't blindly follow the standard formulas from "marketing gurus", or you'll just sound like every other company.

- A Great Story comes when you persistently seek the truth, putting your customers' needs above yours. Consider Steve Jobs, Ray Kroc, and Richard Branson – they're all brilliant businessmen, yet what draws people to them are the fact that they are much bigger than their businesses. Your story is not a marketing pitch, but serious work that stems from a real calling.

How do you go about crafting this story?

- You must first probe deeply to find what's truly missing, the price that your clients are paying for it, and the truth that your story will reveal. Your work in Parts 1 and 2 is the foundation for your story.

- Then, start with a blank sheet of paper (literally), and just allow the story to flow. Focus on your audience, presenting the truth about their needs and underlying problems. Don't worry about grammar, structure etc. Allow the story to flow from and through you.

KEY QUOTES

"(Your Great Story) will only come to you when you take your audience more seriously than you take yourself."

"A Great Story lives within the truth it reveals."

Acquiring Clients

Leads Generation (attracting people to you). This includes: identifying your best customers, finding them, and having them say (via a click, email, or response), "I'd like to know more".

Leads conversion (making them customers). This primarily involves needs verification and the offer for your solution. Gerber advocates that you establish a sound Client Fulfilment System (including production and delivery), before building your Client Acquisition System. Otherwise, you won't be able to convert the clients that you painstakingly attract into long-term customers.

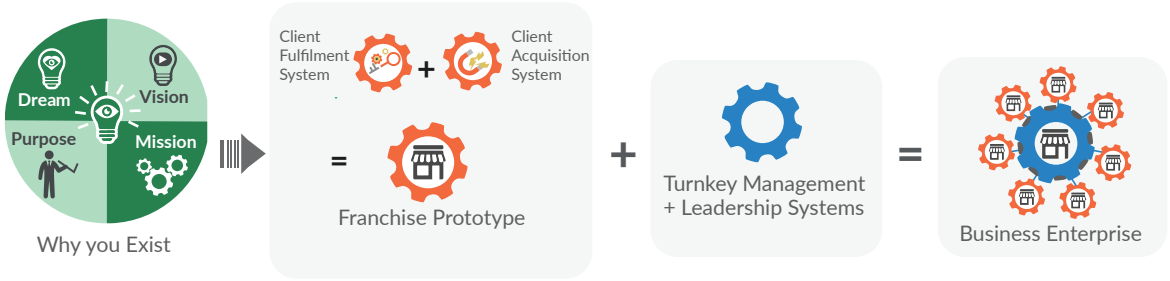
Gerber advocates that you establish a sound Client Fulfilment System (including production and delivery), before building your Client Acquisition System. Otherwise, you won't be able to convert the clients that you painstakingly attract into long-term customers.

Your Franchise Prototype is what you must build to demonstrate that your company can grow from 1 to 1,000. It allows you to work *on* your business and your life (not *in* it), so you can see the bigger picture of how you can create value and a legacy that can change the world.

Part 4: Turnkey Management System

Geber defines a business as the sum of up to 7 turnkey practices, powered by a turnkey Management System. Assuming you've completed all the parts above, you're now ready to replicate your Franchise Prototype, and develop a system to manage all the component parts.

Specifically, your Client Fulfilment System functions as the hub of your business wheel, while your turnkey Management System is the supporting software which empowers every person/ role to function smoothly, to keep the hub and spokes spinning.



The turnkey Management System acts as the glue to enforce your brand and hold the pieces together, so things don't fall apart. It includes 4 key components:

Innovation. Put in place a leadership system that encourages people to constantly find better ways to do things;

Quantification. Test / measure results from innovations to assess if they are working (e.g. customer responses, conversion ratios);

Orchestration. Once an innovation works, document what is done and how, so you can integrate it into your systems and equip anyone to deliver the improved results; and

Continuous improvement. Every innovation eventually

KEY QUOTES

"We were all born… to create the world. And the way we do that… is to go to work ON our lives, not just IN our lives."

"If there's a way of doing something, there's a better way of doing something."

"Every company is a school… for… the people it attracts, hires, inspires, teaches, trains, coaches, and mentors, to become masters at everything they are expected to do."

becomes dated, and the only way to stay ahead is to continuously improve and grow. Treat your company like a school, with opportunities for your stakeholders to learn and improve with each iteration.

Part 5: Turnkey Leadership System

In Part 1, we covered how the Dream, Vision, Purpose and Mission stem from who you are. It forms the DNA of your company and enterprise. To lead, you must inspire, which requires that you are first inspired by a higher calling. The turnkey Leadership System in turn inspires every person in your organization to discover the leader in themselves.

Such leadership is manifested in several ways:

- The company's Great Story is built on such profound truths and passion that everyone knows it, believes in it, and can **retell the Story** with their own perspectives and flavour.

- There is so much conviction in the company's vision, and such deep understanding of the organization and customers, that the leader can practically **foretell the future** with certainty.

- The leader is sensitive to the flow of energies and the company's **evolution**, and repositions resources effectively.

- The leader **listens** to both expressed and hidden messages, and is sensitive to both the verbal and non-verbal cues, to know when the Company has fallen out of sync with its core Purpose.

- The leader has **defined standards** (which are aligned with the Dream, Vision, Purpose Mission) and lives by them.

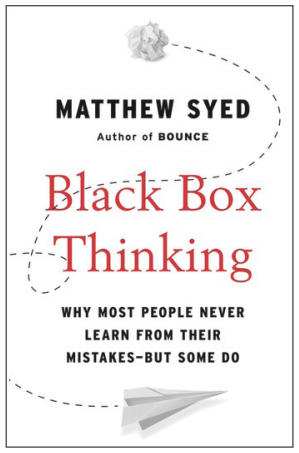
Other Details in the Book to Look out For

This is more of a conceptual than "how-to" book. Gerber uses the EMyth journey as a case study to show how the company evolved from the early stages of founder-driven information-gathering and prototyping to the systems today. The book ends with a promotion of "The Program", which will take you through the process outlined in this book, to identify your Dream, Vision, Purpose, Mission, and grow your enterprise from a Company of One, to 1,000 or more. For more details, please visit emyth.com.

KEY QUOTES

"This purest manifestation of inspiration is not driven by some obligation to be 'good', for gain or reward, but rather as a calling, invisible such as that might be."

"Your company is the product you're creating to produce the legacy of your life."



BLACK BOX THINKING

Why Most People Never Learn from Their Mistakes—But Some Do

MATTHEW SYED

The Big "So What"

Everyone makes mistakes. It's how you respond to those mistakes that'll determine whether you succeed or fail in the long term. Specifically, your ability to learn from failures decides whether you repeat the same errors or use them as building blocks to move toward success. This book explains how to harness the power of failure to grow, improve and succeed.

Introduction

To learn from failures, you need the **right systems and mindsets**. This is exemplified by the aviation industry and its progressive approach to failures:

- There're *2 black boxes* on an aircraft: one that records mechanical information (e.g. fuel levels), and another that records sounds in the cockpit (including the pilots' conversations). During accident investigations, these black boxes provide holistic, unbiased information to uncover what happened, so corrective measures can be taken to prevent future accidents.

- Pilots are typically rewarded (not penalized) for reporting mistakes. Accidents are investigated in depth and insights are shared throughout the industry to facilitate *learning and improvement*.

In this book, Syed examines case studies from many domains and industries—from healthcare to aviation, non-profits and sports—to show why some people/organizations fail to learn from mistakes while others use them to improve and succeed. In this summary, we've organized the key ideas in 2 parts:

KEY QUOTES

"If we wish to fulfill our potential as individuals and organizations, we must redefine failure."

"Learning from mistakes relies on two components: first, you need to have the right kind of system—one that harnesses errors as a means of driving progress; and second, you need a mindset that enables such a system to flourish."

- Why we must redefine failures; and
- How to learn from mistakes.

Part 1: Redefining Failures

Why We Avoid and Deny Failure

In any society, there's a tendency to avoid failures, especially when our self-image and professionalism are at stake.

Cognitive dissonance. We feel conflicted when our beliefs or self-image are threatened by our failures. In such cases, we can either (i) accept our mistakes, re-evaluate and adjust our thinking/actions, or (ii) try to protect our ego by denying the error and twisting the facts. Most people tend to adopt the latter. Research shows that we may even erase such failures from our memory. The greater our personal stakes, the more likely we'll experience failure-denial. That is why professionals (whose self-identity and image are strongly tied to their work) often find it hard to admit to their mistakes.

- In 1987, Jimmy Bromgard was convicted of rape and sentenced to prison for 40 years. 13 years later, new DNA tests proved that the crime scene DNA did *not* match Bromgard's, i.e. he had been wrongly convicted. The prosecutor for the case refused to accept the new evidence, since it'd mean that he had made a huge professional mistake in the past. Instead, he came up with many reasons to refute the DNA results, including absurd alternatives (e.g. Bromgard was a chimera with 2 blood types).

- In 2003, the U.S. invaded Iraq on the basis that the latter possessed weapons of mass destruction (WMD). Even when it became clear that there was no WMD in Iraq, more than half the Republicans denied the evidence and insisted that they believed the WMD had been found.

KEY QUOTES

"We cover up mistakes, not only to protect ourselves from others, but to protect us from ourselves."

"The more we have riding on our judgments, the more we are likely to manipulate any new evidence that calls them into question."

"When we are confronted with evidence that challenges our deeply held beliefs we are more likely to reframe the evidence than we are to alter our beliefs."

- In 1954, a cult claimed that the world would end in a flood on 21 Dec 1954, and an alien spaceship would arrive to save believers. Cult members quit their jobs and devoted themselves to spreading the word. When the doomsday hour passed with no flood or spaceship, the members refused to admit their mistake. Instead, they claimed that they had saved the planet with their faith, and went on to recruit even more members.

Such examples may sound ludicrous, yet we don't realize it when we ourselves are thinking and acting in the same way.

A related psychological bias is the **confirmation bias**: we tend to look for facts that confirm our views and filter out the rest.

- In an experiment, volunteers shared their views on capital punishment before they were given 2 reports—one with strong evidence *for* capital punishment and the other with strong evidence *against* it. After reading the reports, volunteers *stuck to their original views*—they cited only evidence from the report that supported their views and dismissed the evidence in the other report as flawed.

- The more *experience or expertise* we have in an area, the more entrenched we become in our beliefs and perspectives, and the more we resist conflicting evidence.

Anticipating and avoiding blame. We're all prone to the fundamental attribution error, i.e. we tend to assign blame to people instead of situational factors. When things go wrong, we're quick to blame others. This keeps us from considering the complexities of a situation, blocks us from identifying the real causes, leads people to hide their mistakes, and hurts those who're unfairly blamed. Everyone loses as a result.

Culture. When cognitive dissonance and blame-avoidance becomes the norm, people don't even *realize* that they're evading their errors. As a result, honest and well-meaning people may end up perpetuating the very problems they seek to solve. For example, in most hospitals, it's taboo for junior staff and nurses to speak up against senior staff and doctors. Errors are rarely disclosed because of (i) a fear of backlash, and (ii) because the medical staff genuinely don't know that they've erred. Medical errors are often

KEY QUOTES

"Intelligence and seniority when allied to cognitive dissonance and ego is one of the most formidable barriers to progress in the world today."

"The most effective cover-ups are perpetrated not by those who are covering their backs, but by those who don't even realize that they have anything to hide."

reframed as “one-off accidents” or “complications” instead of being properly examined. Thus, the same errors get repeated over and over, leading to millions of preventable deaths and tragedies.

Why We Avoid and Deny Failure

Failures tell us that there’s a gap between our expectations and reality. They offer valuable information about what went wrong and how we can adjust our assumptions and approach.

There are 2 types of mistakes:

- Mistakes that occur because we *don’t know the answer* (e.g. a pharmaceutical company trying to find a drug for a disease); and
- Mistakes that we make even though we *know the answer* (e.g. a surgeon forgetting a standard procedure in a surgery).

In either case, the ability to learn from mistakes is crucial for future successes.

Specifically, **we can approach failures in 2 ways**:

- In *closed-loop systems*, people do not learn from failures. Data from errors are ignored, and the same mistakes get repeated over and over, often unknowingly.
- In *open-loop systems*, data from failures are collected, examined and the resulting patterns/insights are translated into practical learning points to facilitate system-wide improvements.

Your approach to failure determines your outcomes. This can be seen in the contrast between the **healthcare and aviation industries**.

- As of 2013, there was only 1 aviation accident per 2.4 million flights for Western-built jets. On the other hand, there were so many people dying from preventable medical errors that it was equivalent of two B747 aircraft crashing daily.

KEY QUOTES

“Failure is…a signpost. It reveals a feature of our world we hadn’t grasped fully and offers vital clues about how to update our models, strategies, and behaviors.”

“When people don’t interrogate errors, they sometimes don’t even know they have made one.”

- Elaine Bromiley died from brain damage after what was supposed to be a routine operation. When her husband Martin tried to find out what happened, he was told that such inquiries weren't done in healthcare, and Elaine's death was an unexpected complication that couldn't have been avoided. In reality, Elaine had trouble breathing after the anaesthesia was administered. The doctors couldn't diagnose the cause and got so preoccupied with trying to insert a tube down her airways that they didn't hear a nurse's suggestion for a tracheotomy which could've saved Elaine's life. Martin finally secured an investigation which uncovered many areas for improvement, and led to recommendations that helped save many other patients' lives.

- By contrast, the crash of American Airlines' Flight 173 in 1978 was investigated in depth as a norm in the aviation industry. This led to the development of NASA's Crew Resource Management procedure, which was tested, refined, and shared with all airlines to help improve their crew communication and crisis management skills. The number of aircraft accidents fell significantly since the 1970s, and countless lives were saved due to those new processes.

In reality, failures are essential building blocks to success.

- In any competitive sport or craft, you can only gain mastery through *repeated practice*. Football legend David Beckham started practicing kick-me-ups since he was 6 years old, trying to keep the ball in the air as long as possible. After 3 years of daily practice (and lots of trial-and-errors), his kick-me-up record increased from 5 to 2003. He then moved on to practicing free kicks, doing tens of thousands of practice kicks (and refining his techniques with each failure) to master his technique.

- However, practice is only effective with *instant feedback*, e.g. Beckham could only refine his kicks based on the results of his previous attempts. In situations with delayed feedback—e.g. radiologists diagnosing tumors or psychotherapists treating mental illnesses—it's much harder to learn what truly works.

KEY QUOTES

"Learn from the mistakes of others. You can't live long enough to make them all yourself."
—Eleanor Roosevelt

"If a culture is open and honest about mistakes, the entire system can learn from them. That is the way you gain improvements."

"This is the paradox of success: it is built upon failure."

"Feedback, when delayed, is considerably less effective in improving intuitive judgment."

- *Science* is a great example of a discipline that systematically uses mistakes to make progress. Scientists are constantly testing their theories to confirm what they know, while seeking contradicting info that can disprove their theories. For example, if you only conduct tests at low altitudes, you may conclude that water boils at 100°C. However, the statement "water always boils at 100°C" will be disproved once you conduct tests at a higher altitude.

The good news is, with the right systems and mindset, any person or organization can start to **learn from mistakes**.

- To reduce preventable medical errors, Dr. Kaplan introduced a Patient Safety Alerts system at Virginia Mason for the hospital staff to report mistakes. Initially, very few reports were made due to the deeply-entrenched culture.

- The wake-up call came when an old lady died in 2004 after being injected with a wrong substance. As people started to report mistakes (and were praised instead of penalized), the culture began to shift. By the time this book was published, about 1,000 alerts were reported each month, allowing errors to be addressed and prevented. For example, texts were added to color-coded wristbands after the crew realized that they didn't work for color-blind nurses. Liability insurance premiums fell 74% and by 2013, Virginia Mason was rated one of the safest hospitals in the world.

Part 2: Learning from Mistakes

Closed loops are usually sustained by (i) people hiding their mistakes, (ii) reframing/justifying their errors, and (iii) interpreting data in a biased way. In this section, we'll explain how to overcome these challenges. Specifically, black box thinking is about cultivating 2 crucial components to empower people to learn from failure:

KEY QUOTES

"By finding the places where a theory fails, we set the stage for the creation of a new, more powerful theory."

- The right systems where mistakes are used to drive progress; and
- The right mindsets to support these systems.

Developing the Right Systems

In complex environments, it's impossible to know everything, and you'll inevitably encounter failures and mistakes. Instead of pretending that you're infallible or all-knowing, acknowledge your limits and build failures into your processes. Develop sound theories/plans, then test and evolve them using real-world feedback and control groups.

Cumulative selection is about using trial-and-error to test many alternatives, weed out failed options that don't work and refine viable solutions that can work. To succeed, the lessons and insights from each round of experimentation must be passed on to the subsequent rounds.

- This mirrors Nature's *evolutionary process* where only the strongest organisms survive to pass on their genes. Unilever used this approach to fix a malfunctioning nozzle in its detergent manufacturing factory. The team mimicked the process of natural selection to randomly test 10 nozzle design variations. They then replicated the best variation for the next batch of 10 design variations. After 45 rounds of tests (and systematically discarding 449 options), they had a significantly superior nozzle design.

- This approach explains why *free market economies* are so much more efficient than centrally-planned economies. In free markets, only viable businesses survive and their models/ideas are replicated by other companies. This form of "cumulative adaptation" allows only the survival of the fittest.

To succeed, you still need strong theories and concepts. The key is to test your assumptions by **seeking real-world feedback**, as early and frequently as possible.

KEY QUOTES

"Evolution as a process is powerful because of its cumulative nature."

"Markets work not in spite of the many business failures that occur, but because of them."

- Technologists often use the *Lean Startup approach*. Instead of trying to build a perfect product from the onset, they create a "minimum viable product" (or MVP), test it with real customers, then use the feedback to adapt the solution until they have a commercially-viable product. This approach combines top-down theories with bottom-up inputs, using an iterative approach to test, learn and improve.

- When Steve Jobs wanted to launch *Apple's retail stores*, he started by testing the retail concept in a warehouse. It took several revamps to arrive at a viable concept. He then opened 2 stores to test and refine the concept further. Finally, after rounds of feedback and changes, Apple rolled out its proven retail concept nation-wide.

- When *Dropbox* founder Drew Houston was developing his cloud storage business concept, he started by releasing an MVP—a video demonstrating how Dropbox would work. This allowed him to test if people were interested in the concept before he even wrote a single line of code. Thereafter, he secured the funds and built the program, using iterations to incorporate users' feedback.

Data, when analyzed out of context, can be misleading. To ensure that you're interpreting data meaningfully and accurately, conduct **randomized control trials (RCTs)** to test the counterfactual.

- For example, if your sales increased after you changed an offer on your website, you may think that the offer worked. In reality, the spike in sales could've come from an influencer recommending your product. If you had tested your website across 2 randomized groups—1 with the old offer and 1 with the new offer—you may have found the old offer to generate even more sales.

- Scared Straight was a TV program from the '70s that exposed delinquent teens to the reality of prison life, with the goal of scaring them to stay away from crime. For decades, the program was publicized as a success, based on surveys from parents. However, a scientist did a longitudinal study to compare 2 random groups of

KEY QUOTES

"It is by getting the balance right between top-down strategy and a rigorous adaptation process that you hit the target. It is fusing what we already know, and what we can still learn."

"To leverage the power of failure, you have to be resilient and open."

delinquent youths—one that went through the program and one that didn't. The results showed that teens who went through Scared Straight were actually 28% *more* likely to commit crime than those who didn't.

- In reality, most policies and interventions are done without proper tests or control groups. They're often evaluated based on a single set of observational data, leading to biased and inaccurate conclusions. To get a more valid assessment, use RCTs to compare the effects of a change against a control group that's not subject to that change.

However, RCTs are not viable on a large scale where there're too many variables to create an effective control group. In such cases, **dissect a complex problem into smaller parts**.

- The *marginal gains approach* is about combining measurements (to assess your current performance) with creative ideation (to discover new ideas for improvement), then applying them in an ongoing loop. Isolate a problem or variable you can test on a small scale, collect data sets and test/iterate the incremental changes. Once you've completed a trial, move on to test other variables, or to test the same variable on a larger scale. Using this approach, you can implement small changes that add up to create massive results.

- For example, to *alleviate poverty in Africa*, you can break down the problem into smaller sub-components (education, malaria, infrastructure etc.). Then, run RCTs for 1 program at a time. A group of economists wanted to improve children's grades in impoverished parts of Africa. They did a small test by giving free textbooks to 1 group of students in Kenya but not another. When this didn't produce results, they did another test using flipcharts (again with no results). In the end, they discovered a cheap and effective solution: de-worming medication. The medicine removed parasites to boost the children's growth, energy and school attendance by 25%, thereby improving their grades.

- Sir David Brailsford used the marginal gains approach to transform the mediocre *British track cycling team* into Olympic gold medalists. He achieved this by breaking

KEY QUOTES

"Science is not just about a method…it is also about a mindset."

"Success is a complex interplay between creativity and measurement, the two operating together, the two sides of the optimization loop."

"Marginal gains, as an approach, is about having the intellectual honesty to see where you are going wrong, and delivering improvements as a result."
—Sir David Brailsford

down his big goal into smaller parts. He tested and made incremental changes to many small variables, from the cyclists' bike designs to the mattresses they slept on. These small gains added up to significantly improve the cyclists' overall performance.

- This approach is also adopted by *Formula One pit stop teams*. They start by developing high-level strategies and identifying the data points needed to test each assumption. Then, they do pit stop practice-runs, examine the data, identify missing data points to be added, and do the practice-runs again in an ongoing loop. This iterative process allows them to test their strategies while collecting multiple sets of data to deepen their understanding of the problems and possible solutions.

Developing the Right Mindsets

Problems and failures are **vital ingredients for innovation**. The typical creative process goes like this:

- The innovator encounters a *failure or problem*, which gives him the motivation or reason to innovate.
- He *investigates* the problem, studying it from multiple angles, exploring and rejecting many options.
- A brilliant solution or *epiphany* emerges after a gestation period, and usually involves the synthesis of seemingly-separate ideas or technologies. This typically happens in 2 scenarios:

  (i) He's in a relaxed or "switched off" state (e.g. taking a stroll or shower) instead of focusing narrowly on the problem. In this zoomed-out state, the brain is more likely to make creative associations to see new solutions.

  (ii) He's facing disagreement, critique, or contradicting info, which forces him to consider the problem from new perspectives. That's why groups with diverse backgrounds tend to be more creative.

KEY QUOTES

"If you break down a big goal into small parts, and then improve on each of them, you will gain a huge increase when you put them all together."

"Removing failure from innovation is like removing oxygen from a fire."

"Without a problem, without a failure, without a flaw, without a frustration, innovation has nothing to latch on to."

"Creativity is just connecting things."
—Steve Jobs

- The innovator must now put the idea to the test, going through rounds of *iteration* (test → fail → refine → test again) until he arrives at a viable solution.

In short, successful innovations don't happen overnight. They take months or years of research, conceptualization, marginal changes, and failures, all of which cumulate in a breakthrough. This requires **discipline and persistence**.

- *James Dyson* first conceived the notion of a bagless vacuum cleaner when he was struggling with a vacuum bag choked with dust. He researched and incubated the idea for 3 years before he had an epiphany—to combine a vacuum cleaner with a sawmill. Thereafter, he relentlessly created and tested >5000 prototypes before he arrived a design suitable for commercialization. Dyson certainly wasn't the first to conceive a cyclone vacuum cleaner, but he was the first to persist through many failures to create a workable model.

- Likewise, *Pixar* doesn't create blockbuster movies like "Toy Story" or "Finding Nemo" by chance. After a storyline is conceived, every frame and element is discussed, critiqued and tested. A typical film goes through >125,000 iterations before the final storyboard is delivered. There are so many changes that the final movie often ends up being totally different from the original concept.

Cultivate a **growth mindset**, i.e. the belief that people can change and learn from mistakes (as opposed to a fixed mindset that your skills/abilities can't be changed).

- Psychologist Carol Dweck found that children with a growth mindset saw challenges as *learning opportunities* and were more perseverant compared to those with fixed mindsets. Companies with growth mindsets were more open to collaboration and sharing mistakes, whereas those with fixed mindsets were more preoccupied with hiding mistakes and avoiding blame.

- Willpower and discipline *can* be nurtured. *The more you overcome challenges, the easier it becomes*. In an experiment, a group of students was given easy tasks that they excelled in, while another group was given harder tasks that they struggled with. When both groups were

KEY QUOTES

"Insight often requires taking a step back and seeing the big picture....But to make a creative insight work requires disciplined focus."

"Winners require innovation and discipline, the imagination to see the big picture and the focus to perceive the very small."

"We progress fastest when we face up to failure—and learn from it."

"If we interpret difficulties as indictments of who we are, rather than as pathways to progress, we will run a mile from failure."

later presented with a tough problem, the 1st group became demoralized quickly while the 2nd group embraced the challenge and even asked for more. Don't allow your self-esteem or the fear of failure to handicap you—instead, use each challenge and failure as an opportunity to grow.

To embrace mistakes, facilitate learning and growth, we must shift away from a culture of assigning/avoiding blame to a culture that's **fair and transparent**.

- Employees must be able to *trust* their leaders and organizational systems to evaluate mistakes fairly and transparently. Differentiate between honest mistakes and justifiable blame (e.g. negligence). Give people the room to fail and learn from mistakes.

- Create *supporting systems* to identify and report errors, collect and analyze data sets, diagnose mistakes and share corrective actions and insights.

KEY QUOTES

Putting it Together

With the right systems and mindset, we can start to transform *any* area of failure into **stepping stones for success**.

- In the past, the legal and criminal system was considered to be infallible. The discovery of DNA brought new evidence to suggest that hundreds of men had been wrongfully convicted of rape. The Innocence Project was founded to exonerate wrongly-convicted individuals using DNA tests. Initially, they faced strong resistance from judges, prosecutors and legal professionals who had devoted their lives to solving crime and found it hard to face their own mistakes.

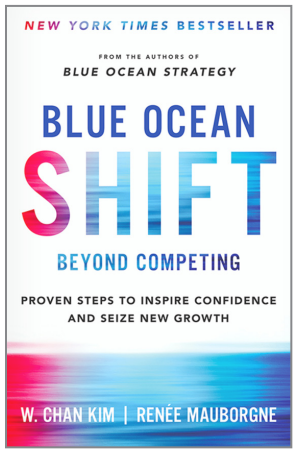
- It took years for The Innocence Project to uncover numerous flaws in the legal system and present concrete improvements, ranging from eye-witnessing processes to interrogation techniques and forensic sciences. People finally began to accept that addressing mistakes didn't weaken the legal system. It actually strengthened

"Failure is simply the opportunity to begin again, this time more intelligently."
—Henry Ford

"Systems that do not engage with failure struggle to learn."

the system by ensuring that innocent people weren't wrongly convicted while guilty people didn't walk free.

KEY QUOTES



BLUE OCEAN SHIFT

Beyond Competing—Proven Steps to Inspire Confidence and Seize New Growth

RENÉE MAUBORGNE & W. CHAN KIM

The Big "So What"

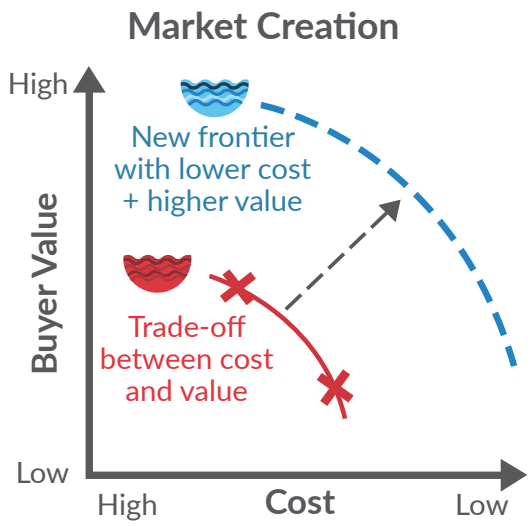
Blue Ocean Strategy was first published in 2005 to explain how organizations can successfully make the leap from cut-throat "red oceans" to wide-open "blue oceans". This book organizes the tools and framework into a systematic 5-step process and explains how to mobilize your people for a smooth transition. This strategy guide is built on 30 years of research, and can be used by any organization—from profit, non-profit or public sectors—to make the shift from an existing, crowded market to a new, uncontested one.

KEY QUOTES

"Blue ocean shift is a systematic process to move your organization from cutthroat markets with bloody competition...to wide-open blue oceans, or new markets devoid of competition, in a way that brings your people along."

Introduction

Today, every industry faces the challenges of rising costs, intense competition, and rapid changes. A "red ocean" is a saturated market where organizations must compete to survive. A "blue ocean" is a market with little/no competition. To move from red to blue oceans, you must create a new frontier where you can deliver both lower costs *and* higher value. This requires 3 key ingredients:



- *Embracing a blue ocean perspective* with a fundamental change in thinking. Stop focusing on competition within existing markets. Instead, expand your horizons and consider fresh perspectives to create real breakthroughs.

"Too many organizations are wedded to industry best practices even as they strive to break away from them."

"By opening up a new value-cost frontier that is a leap beyond the existing industry productivity curve, a blue ocean is created and competition on the existing frontier is made irrelevant."

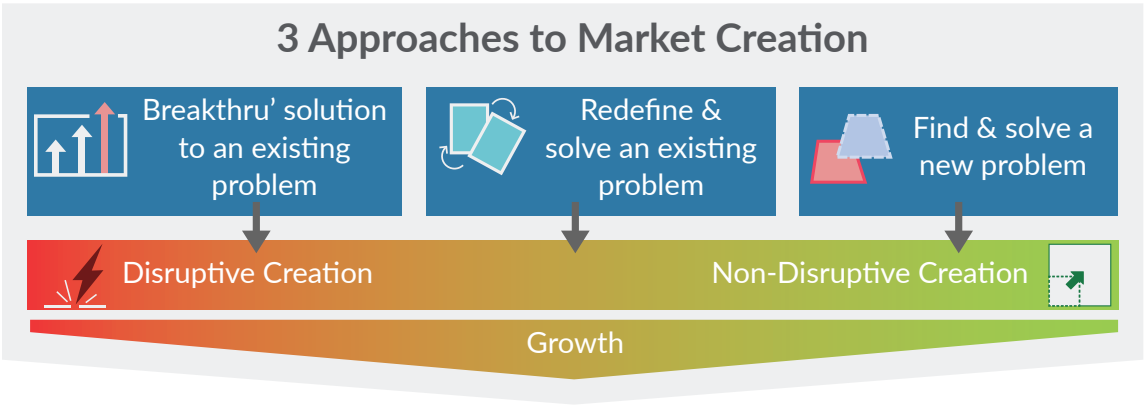
- Equipping your people with the *practical tools/ approaches* so they can create and implement the strategic shift.

- *Embracing "humanness"*: A strategic shift can only happen if people follow willingly. Don't treat strategy formation and implementation as 2 separate processes, nor try to push people to change using structural changes or carrot-and-stick methods. Instead, (i) involve people from the onset, and (ii) win them over by giving them the inspiration and confidence to take action.

Fundamental Concepts

1. Understanding Market Creation

Market creation doesn't have to mean a disruption or destruction of existing markets. There are 3 market-creation approaches, each with a different **mix of disruptive vs non-disruptive creation**.



- *Providing a breakthrough solution to an existing problem*. This typically disrupts existing firms/markets, even though the overall pie may grow. For example, cassette tapes were displaced by CDs, which were later displaced by the iPod and digital music libraries.

- *Redefining and solving an existing problem* to change industry assumptions and boundaries. This has both disruptive and nondisruptive elements. Cirque du Soleil combined elements of traditional circus (e.g. tents, clowns, acrobats) with elements of theatre and ballet (e.g. story,

KEY QUOTES

"Making a blue ocean shift is a transformational journey…To move toward the new frontier, you have to bring people along."

"Growth has always been generated by market-creating moves based on both disruptive and nondisruptive creations."

music, dance). In so doing, they captured a slice of each industry, while concurrently creating a new market for circus-goers.

- *Finding and solving a new problem*. In this case, there's no disruption, since new value and demand are created in a brand-new market beyond the current industry. For example, Sesame Street created a new market for early childhood education without displacing preschools, libraries, or storybooks.

Focus on value innovation, not technological innovation. A blue ocean comes from unparalleled buyer value, not new/superior technology. Starbucks and the Grameen Bank are examples of new markets created without new technology.

You don't need to be an entrepreneur to create a new market. All you need are the proper tools and processes to (i) translate innovation into buyer value and (ii) help people to overcome their fears and inertia.

2. The Blue Ocean Mindset

Use these **4 guiding principles** to break free from a red ocean mindset and open up new blue ocean possibilities:

- Your existing industry boundaries and conditions aren't fixed. You can *shape and transform the boundaries*—you're limited only by your imagination.

- Don't focus on beating your rivals. *Seek to make your competition irrelevant* by delivering a quantum leap in value. Ask yourself: how can we deliver such a compelling offering that we'd win masses of buyers even without marketing? This forces you to rethink the bases of your competition and investment.

- Don't fight over existing customers. Focus on *creating and capturing new customers*, which unlocks a much larger untapped demand or market.

- Don't choose between low cost or differentiation. Create superior value by offering both *low cost and differentiation*.

KEY QUOTES

"Adopting the perspective of a blue ocean strategist opens your mind to what could be, instead of limiting it to what is."

"While technology innovators may lay extraordinary eggs, they are seldom the ones who ultimately hatch them."

"You can't expect to create a blue ocean if you think like a red ocean strategist."

"Industry boundaries are not fixed. They are as fluid as your imagination."

"On your blue ocean shift journey, noncustomers, not customers, provide the greatest insight into what your industry is doing to limit demand and how you can overcome this."

3. Humanness

People want to make an impact, yet they're afraid to fail. Adopt a humanistic approach: give people inspiration, confidence and direct their creative energy with **3 elements**.

- *Atomization*: A big leap to a blue ocean can seem daunting. Instead, break it down into tiny, specific steps that people can grasp and execute to achieve quick wins.

- *Firsthand discovery*: If you tell people to change, they'll resist. Instead, create the conditions where people will discover for themselves the need for change. Give them the tools to arrive at the conclusions themselves, and get them out on the field so they can see/experience the buyers' pain points and alternatives.

- *Fair Process*: This involves 3 principles to develop trust and cooperation: (i) engagement (actively involving people in the process), (ii) explanation (helping people to understand the rationale for each step) and (iii) clear expectations (giving clarity on roles, responsibilities and what to expect).

Equip people with **specific tools and frameworks** (using the 5-step process below) to direct their creative competence.

The 5 Steps of a Blue Ocean Shift

1. Get Started

The first step is to identify the area with the biggest potential gain and put together the right team for your blue ocean initiative.

Focus your blue ocean initiative on the single most feasible product offering. Use the **Pioneer-Migrator-Settler (PMS) map** to get a visual overview of your organization's value innovation pipeline.

KEY QUOTES

"People are paradoxical. We aspire to make a difference… Yet, simultaneously, most of us fear we can't."

"When confidence to act and creative competence meet, real results are achievable."

"While achieving a blue ocean shift may seem like magic, it is not. There is actually a systematic process that is accessible to everyone."

- Organizations tend to focus on market share and industry attractiveness, which reflect past (not future) performance. The PMS map focuses on the *value* being delivered to buyers and *innovation* to overcome industry constraints. The innovative value of your offerings reflects how healthy your portfolio truly is.

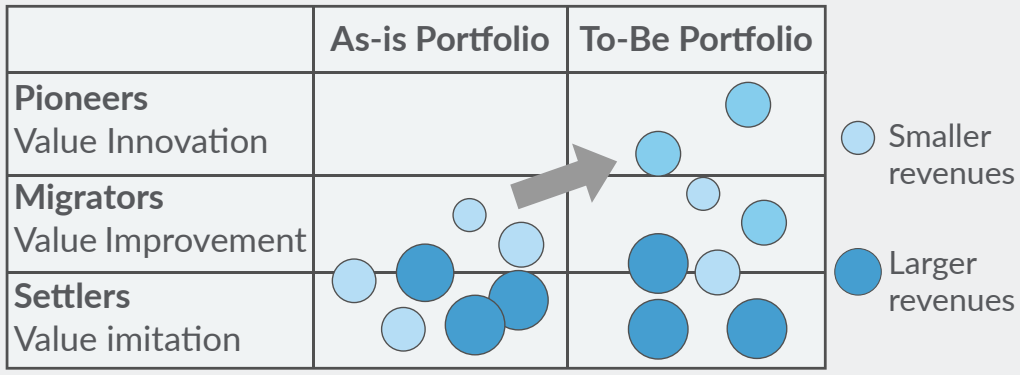
- The Map is split into 3 segments: *pioneers, settlers and migrators*.

  (i) Pioneers are offerings that offer *value innovations*. They break away from the competition to open up new frontiers, and are your keys to future growth and profitability.

  (ii) Settlers lie on the other extreme with *value imitation*. They compete mainly on price and small changes, with low prospects for growth. Microsoft's Office and Windows are decades-old Settlers that still contribute to the bulk of its profits.

  (iii) Migrators lie in between: they offer some *value improvement* over competitors, but not innovative value.

The Pioneer-Migrator-Settler Map



- *Plot your Pioneer-Settler-Migrator map*:

  (i) Get your key managers (minimally the unit heads) to list down your *key businesses* and *products/services*. Then, identify if each offering is a pioneer, migrator or settler, in terms of the *current* value and innovation from the *buyer's perspective*. The circle sizes should reflect each offering's relative revenue. A real pioneer must deliver a quantum leap in buyer value—if any of the pioneers are small circles, examine *why* it is so.

KEY QUOTES

"In organizations with blue ocean offerings, you will see pioneers that are planting the seeds for tomorrow's profit and growth."

(ii) Have the managers do the exercise individually, then *collectively discuss and plot the Map*. Involve all key decision-makers (e.g. product owners, legal and finance teams). This creates a fair process, allows people to share perspectives and feel invested in the process and outcome.

- *Evaluate your map*. Your goal is to have a healthy balance of settlers and migrators (for cash and stability) and pioneers (to drive future growth). If you already have a balanced portfolio, there's no need for a blue ocean initiative yet. Otherwise, upgrade your portfolio by *choosing 1 offering* that best meets these 4 criteria:

  (i) It's a settler or low migrator (i.e. already in a red ocean);

  (ii) It's headed by a manager who wants to shift to a blue ocean;

  (iii) There're no other major initiatives in that unit; and

  (iv) The unit is under clear pressure to take action (e.g. it's facing intensifying competition or is already in the red).

KEY QUOTES

"In the end, the offerings…get plotted…by the people running those units. It's their call, not yours, which is the outcome you want."

Put together the right team to drive the initiative and involve them from the onset. Ensure *all* key functions involved in the offering are represented (about 10-15 people). Choose people with the right character, i.e. respected, credible, good listeners, ask good questions and can get things done. They must know their functions well, and be willing to spend about 10% of their work hours on the initiative. Include 1 (maybe 2) naysayers, but ensure they're a minority. Appoint a strong team leader.

"When it comes to whom to select for the team, job title is not the most important factor. Character is."

2. Establish the Current State of Play

The next step is to capture your strategy clearly so everyone's aligned on the strategic landscape and exactly where you stand.

The **Strategy Canvas** provides a 1-page picture that helps you to crystallize your strategy and put everyone on the same page.

"When people see what the strategic reality is, and agree on the need for change, you can create real alignment and a collective will to make the shift."

- The horizontal axis captures the *key factors* that the industry invests in or competes on. The vertical axis shows the *offering level* buyers get for each factor. The canvas also shows how similar or different the key players' *strategic profiles* are.

- A *good strategic profile* should meet 3 criteria:

  (i) It has a *divergent* shape from the industry norm;

  (ii) It's *focused* on the key factors that deliver a leap in buyer value (while cutting down the rest); and

  (iii) It has a *compelling tagline* that captures how the offering is unique.

Draw your "as-is" strategy canvas for the current state of play.

- Identify *5-12 key competing factors* that describe the offering's value from the buyers' perspective. These can involve the product, service, or delivery platforms, e.g. charity fund-raisers may offer gala events, advocacy, donor recognition etc.

- Get managers to draw up their own lists, then consolidate the inputs, discuss and *decide on the list of key factors*. Don't confuse brand or organizational strengths (e.g. new technology) with competing factors (e.g. ease of use, reliability).

- *Choose up to 3 key player(s) to compare against*, including the industry leader or your strongest competitor(s). Using a

KEY QUOTES

"Remember you are looking to capture the big picture from buyers' perspective, not technical differences from the supplier's perspective."

5-point scale, have the team rate the offering level for each factor for your product followed by the reference company.

- The canvas shows exactly where you stand and provides a baseline for subsequent discussions. Do you have a unique or "me-too" strategic profile? Get the managers to write down, *share and discuss their insights*.

3. Explore What Could Be

Next, help the team to envisage how to shift from the current red ocean into a new blue ocean by uncovering buyer "pain points" (caused by your industry's hidden constraints) and identifying how new demand can be unlocked.

Use the **Buyer Utility Map** to identify the hidden "pain points" in your industry—things that reduce buyers' utility or cause them to choose other alternatives. The Map lists (i) 6 stages of the Buyer Experience Cycle and (ii) 6 Utility Levers that can affect the 6 experiences.

Six Stages of the Buyer Experience Cycle (BEC)

Six Utility Levers	Purchase	Delivery	Use	Supplements	Maintenance	Disposal
Customer Productivity			0			
Simplicity					X Detailed Notes	
Convenience	0	0				
Risk Reduction				X Detailed Notes		
Fun & Image			X Detailed Notes			
Environmental Friendliness						X Detailed Notes

0 Current Industry Focus

X Buyer Pain Points

- Have the team imagine the buyer's activities for the 6 phases of the *Buyer Experience Cycle*: Purchase → Delivery → Use → Supplements (what's needed to make your offering work) → Maintenance → Disposal. Then, consider the 6 *Utility Levers*: Productivity, Simplicity, Convenience, Risk Reduction, Fun and Image, and Environmental Friendliness.

KEY QUOTES

"The challenge is to help team members not only see the need to make a blue ocean shift, but also make room in their mental cups so that they have the space and thirst to look at the world anew."

"The Buyer Utility Map…lets the team identify not only the full range of ways an industry delivers utility to buyers, but also…where it blocks utility."

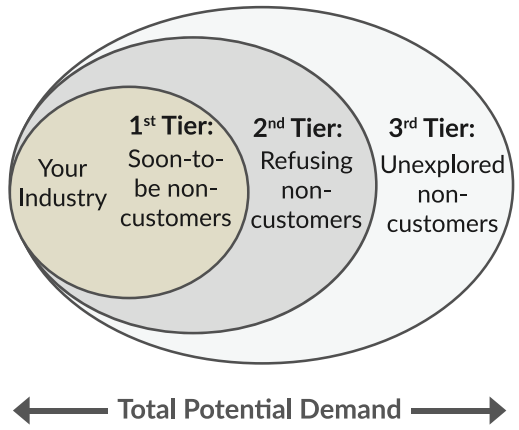
- For *each of the 36 utility spaces*, ask "What's the biggest block to this lever at this stage?" and "What are the main reasons for this block?" Put an "X" in spaces with a pain point, an "O" for spaces that the industry currently focuses on, and keep your detailed notes. For example, furniture sellers may only deliver the furniture to a buyer's building, when buyers struggle to get the bulky furniture from the lobby up into their apartment.

- This process helps the team to see the spaces neglected by the industry, i.e. *where hidden value may be unlocked*. You don't need a perfect analysis to get useful insights. Get the managers to share/discuss what they've learned, focusing on the opportunities behind the pain points. Consider sending the team into the field to experience the full buyer cycle beyond the initial point of sale, so they can gain deeper insights.

Now, the team is ready to dig deeper into who the noncustomers are and why they don't use your offering. Specifically, there are **3 tiers of noncustomers**.

- Your total potential demand = existing customers + *3 tiers of noncustomers*.

3 Tiers of Noncustomers



(i) *Soon-to-be noncustomers* who patronize your industry only because they have no choice. They'll to switch to better options once those are available.

(ii) *Refusing noncustomers* who considered but rejected your offering in favor of another alternative (e.g. choosing painting over wallpapering the house).

(iii) *Unexplored noncustomers* who could've benefit from your offering, but never considered it because it's too unviable or unattractive. Square Inc. realized that small businesses like food-truck vendors weren't accepting credit/debit card payments—by shrinking the credit card readers and leveraging smartphone capabilities, they created smaller, cheaper point-of-sale devices suited for these noncustomers.

KEY QUOTES

"In the blue ocean shift process, pain points…are blatant opportunities to change the playing field of strategy."

"The universe of noncustomers not only exists, but provides expanding growth opportunities."

- *To identify your noncustomers*:

  (i) Expand the team's minds by sharing case studies of how various industries have unlocked noncustomers.

  (ii) Get the team to brainstorm and discuss who are (a) the customers who buy/use your current offering vs (b) the 3 tiers of noncustomers in your industry. The goal is not to segment the market in detail, but to see the big picture of the untapped demand.

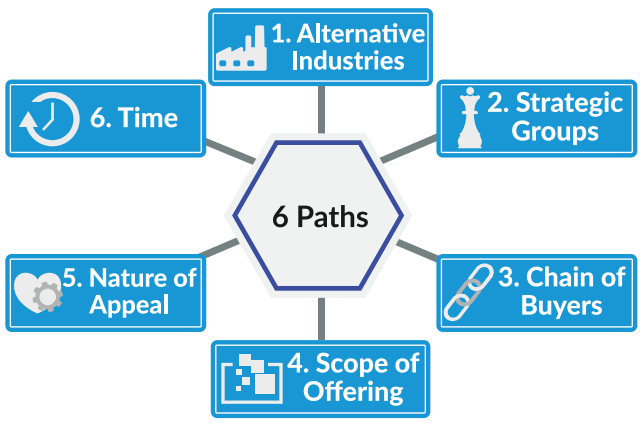
  (iii) Break up into subgroups to quickly research the rough size of the untapped demand, i.e. estimate how valuable each tier could be if unlocked.

- Get the team to *share and discuss their insights* and recap all the discoveries you've made so far.

4. Define How to Get There

This step is about translating the big picture into practical blue ocean strategic moves by reconstructing your market boundaries and identifying factors you can eliminate, reduce, raise and create.

Organizations tend to define (and unknowing limit) their playing field with 6 boundaries. Use the **Six Paths Framework** to break free from these artificial constraints.



- Explain the big picture, goals and processes, then split the team into *2 sub-groups*, each focusing on 3 paths:

  (i) For each path, the team members will go into the field and interview 10-12 people (customers + noncustomers). They should take pictures/videos and record *all* their insights (including outliers) since the details can add up to provide a breakthrough idea.

  (ii) Then, have members regroup to share/discuss their insights, and arrange follow-up interviews if needed.

KEY QUOTES

"The purpose is to seek a higher-level understanding of the macro contours and commonalities that cut across and unite existing customers so you'll be able to see the forest for the trees."

"Boundaries do not define what must be or should be. They merely define what is."

"No observation is too small, as many seemingly small observations can later add up to the big insight that creates a blue ocean."

- Here's a *breakdown of the 6 paths* to be explored:

Shift in Lenses Red → Blue Ocean	**Key Steps & Questions to Address**
Path 1: **Industry** Focus on rivals within the industry ↓ Look across alternative industries	(i) What key buyer needs do you address? → (ii) What other industries serve the same needs? → (iii) Which ones attract the most buyers? → (iv) Interview buyers (your noncustomers) from those industries → (v) Ask why they rejected your industry (the negatives) and why they chose the alternative industry (the positives) e.g. why they chose to travel via train instead of airplane → (vi) Record your insights.
Path 2: **Strategic Group** Focus within a strategic group ↓ Look across strategic groups	(i) Define the strategic groups in your industry or target industry (i.e. companies with similar business models/ offerings, e.g. "fast food" or "fine-dining" restaurants) → (ii) Pick 2 largest groups → (iii) Interview buyers from each group → (iv) Ask why they traded up/down from 1 group to another, focusing on key factor(s) behind their choices → (v) Record your insights.
Path 3: **Buyer Group** Focus on the existing industry buyer group ↓ Look across the full chain of buyers + redefine industry buyer group	(i) Define the chain of buyers (users, purchasers, influencers) in your industry or target industry → (ii) Define the main buyer group that the industry focuses on → (iii) Focus on the neglected groups (e.g. the parent who pays for their teen's gadgets) → (iv) Interview buyers in their natural setting (e.g. interview retailers in their retail stores)→ (v) Learn how they define value + observe the biggest challenges/burdens they face from the current industry focus → (vi) Record your insights.
Path 4: **Scope of Offering** Maximize offering value based on the industry's definition ↓ Look at how complementary products/services can add/reduce your offering's value	(i) Observe buyers as they use your offering → (ii) Consider the total solution the buyer seeks by observing what happens before, during, and after its use → (iii) Watch for things that trigger the need/desire for your offering + inconveniences or blocks to utility → (iii) Group your insights by frequency or importance (e.g. in rural South Africa, the main block to TV purchase was the lack of electricity, so TVs with car batteries unlocked a huge demand) → (iv) Use the buyer utility map and 3 noncustomer tiers as a guide → (v) Record your insights.
Path 5: **Nature of appeal** Improve offering based on the industry's functional emotional orientation ↓ Rethink the orientation	(i) Identify your industry's current basis of appeal—is it mainly functional (common for supermarkets or legal services) or emotional (common for luxury goods)? → (ii) Ask customers/noncustomers to describe the industry with 3-5 adjectives (and probe for reasons) → (iii) Identify commonalities → (iv) Explore how the offering would be like if you flipped the orientation (emotional ↔ functional) → (v) Record your insights.
Path 6: **Trends over Time** Adapt to external trends as they occur ↓ Proactively shape external trends that decisively impact your industry	(i) Get the team to research and identify 3-5 trends with the most decisive impact on your industry or target industry in the next 3-5 yrs → (ii) Discuss if/how each trend has a decisive impact on your industry, how irreversible it is, and if there's a clear trajectory → (iii) For each trend that's impactful, irreversible and has a clear direction, consider how it'll affect buyer value and your business model over time → (iv) Record your insights.

KEY QUOTES

"The paths show you how to look at the market universe anew and to see what others don't see."

"Organizations that are big on segmentation…often have a tougher time distinguishing the forest from the trees."

"Observe them actually using the product or service, so the unvoiced, taken-for-granted assumptions they make and the steps they take can be revealed."

- It takes a lot of *time and effort* to do the fieldwork and interviews, but it's extremely rewarding if done properly. You'll gain valuable insights and the team will experience a shift in mindset and perspective.

The team is now ready to use the **Four Actions Framework**: to translate the firsthand insights from the 6 Paths fieldwork into concrete options for achieving both low cost *and* differentiation.

- Challenge the *factors that the industry has been taking for granted*, by asking:

  (i) What can be *Eliminated*? These are factors that no longer add value and may even decrease value.

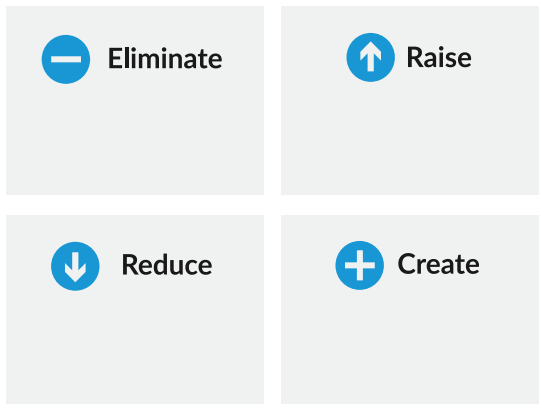
  (ii) What should be greatly *Reduced* below industry standard? These are over-designed factors where costs exceed value.

  (iii) What should be greatly *Raised* above industry standard? These are factors that buyers want more of.

  (iv) What should be *Created*? These are new factors that create new buyer value to convert noncustomers to customers.

Combine the insights into the **3 key outputs for Step 4**:

- For each of the 6 Paths earlier, the team should've discussed their insights and agreed on a set of key factors that're relevant to consumers and nonconsumers. Put them into the 4 sections of the *ERRC Grid*: Eliminate, Reduce, Raise, or Create. Ensure all 4 sections are filled, though it's normal for only 2-3 paths (out of 6) to deliver useful blue ocean insights.



- Then, create a *"to-be" Strategy Canvas*: Overlay the factors onto the original canvas on a scale of 0-5, with 0 being factors to be eliminated. You can now see your new strategy profile.

KEY QUOTES

- Develop a succinct *tagline* that captures how each proposed offering will create a leap in buyer value.

5. Make your Blue Ocean Move

The final step is to select and launch your strategic move, testing and refining your business model quickly to maximize its potential.

By now, you have up to 6 potential offerings, each with a "to-be" Strategy Canvas. Use the **Blue Ocean Fair**—which brings together your team members, key decision makers, customers and noncustomers—to decide which strategic offering to pursue.

- *During the Fair*:

  (i) Present an overview of the current red ocean and why you need a Blue Ocean Shift. Then, get the team to present each of the strategic options (including the to-be strategy canvas, the ERRC grid, benefits for the buyers and the organization).

  (ii) The team splits up to man separate display stations for each strategic option.

  (iii) The attendees visit all the stations, share their views and cast their votes. Probe for the rationale behind their votes.

  (iv) The executive team decides which option to pursue (and explains the choice if it's not the one with the most votes).

Once the decision is made, the team should quickly develop and market-test a prototype to confirm what they've learned, make refinements and assess the market potential. To **formalize the business model** and generate profitable growth, you must address both the value and the cost aspects of the new offering.

- The *initial team is now expanded* to include all key operational expertise. It'll work full-time on the initiative

KEY QUOTES

"The fair is designed to take the politics out of the decision-making process, obtain validation and feedback on the strategic options, and consolidate people's commitment to and support for the chosen move."

"Your to-be strategy canvas has to be non-negotiable. What is negotiable is how your business model delivers it."

with top management's mandate. The goal is to deliver the strategic offering from the ERRC Grid and to-be strategy canvas.

- Decide on the *ideal strategic price and profit margin* for the offering, then work backwards to calculate your target costs. Challenge the whole organization to achieve the *target costing* through (i) strategic partnerships, (ii) operational streamlining and innovations and (iii) ways to boost people's positive energy and contributions.

- *Implement your Blue Ocean Shift*, starting small (so you can iron out any kinks) before building your momentum.

Putting it Together

Blue Ocean Shifts won't happen overnight. But if you follow the steps above, you'll be able to see tangible results within a year.

Let's wrap up with an example of how **Group SEB** created a blue ocean from the saturated red ocean for kitchen appliances.

- French multinational Group SEB was facing growing competitive pressures, especially in the shrinking market for *electronic French-fry* makers. After applying the Blue Ocean tools and processes, they realized that there were 2 industry assumptions that created huge pain points for customers: (i) great-tasting fries had to be fried with (ii) lots of oil. Fieldwork with customers uncovered many concerns, e.g. risks during frying, the cost of oil, the difficulties of storing and disposing used oil, and the hassle of cleaning the machines.

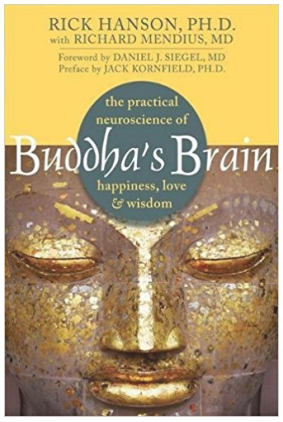
- The team fundamentally redefined the problem from "how to make the best electric French-fry maker" to "how to make tasty and healthy fries without traditional frying". This led to the launch of *ActiFry* in 2006—it can produce 2 pounds of tasty fries with just a tablespoon of oil. It doesn't involve frying, has no safety nor oil disposal problems, and is easy to clean. Not only did ActiFry

KEY QUOTES

"A big-picture business model shows how the value and cost sides of an organization's blue ocean move come together to generate strong profitable growth at the set strategic price."

capture a huge share of the original market, it also created new demand from people who're now purchasing French-fry makers because they're healthier and easier to use.

KEY QUOTES



BUDDHA'S BRAIN

The Practical Neuroscience of Happiness, Love & Wisdom

RICK HANSON, PH.D
(WITH RICHARD MENDIUS, MD)

The Big "So What"

In this book, the authors share the latest neuroscience discoveries that explain how our minds work and how 2,000 years of Buddhist contemplative practices can help to awaken our minds and create positive change.

Introduction

Our brains are made of 1.1 trillion cells, including 100 billion neurons, which are constantly transmitting signals and information via synapses. Science has shown that our brains continue to change throughout our lives.

Every thought and feeling that we have generates mental activity. **Our mind** is the combination of all the energy and information flowing through our neural circuits. These affect our neural structures to shape our brain.

Our brain regulates complex functions in the body, which in turn allow us to interact with the outside world (e.g. by using our senses, arms or legs). It affects what we perceive to influence our mental activities.

In short, the mind and brain are co-dependent, and we can deliberately **shape our brain** by managing our mental activities.

This book is structured like an operating manual for your brain. The authors present a mix of:

Scientific background, including the parts of the brain, how they work, and the body's biochemical processes; and

Practical tips and exercises that are scientifically proven to bring positive change.

KEY QUOTES

"Buddha's Brain is an invitation to use the focus of your mind to harness the power of attention to enhance your life and your relationships with others."

"We can actually use the mind to change the brain."

"You can do small things inside your mind that will lead to big changes in your brain and your experience of living."

"This book is about how to reach inside your own brain to create more happiness, love, and wisdom."

"Learn both brain science and practical inner ways to enhance well-being, develop ease and compassion, and reduce suffering."

In this summary, we'll start by explaining why we suffer (from both Buddhist and scientific perspectives), before moving into specific practices to shape our minds and brains for greater happiness, love and wisdom.

Part 1: Why we suffer

"Suffering" in this book refers to our feelings of frustration, stress, hurt, loneliness etc. In Buddhism, suffering is said to come from 3 poisons: *greed* (chasing after rewards), *hatred* (avoiding threats) and *delusion* (of how things really are). Science helps us to understand how such feelings arise, and how we can reduce the suffering.

Evolution and Suffering

One reason for our suffering is the conflict between our survival strategies and how the world works.

Mankind has evolved with **3 key survival strategies**:

- We create a *mental division* between ourselves and the world, and between different mental states;
- We seek *stability*; and
- We seek opportunities and avoid threats to our *survival and reproduction*.

However, **the world often works in the opposite way:**

- *Everything's connected*, from how our body parts work together, to how we interact with the people and elements in our environment (like the air and water we need for survival). We suffer when we try to isolate what's fundamentally connected.
- *Everything keeps changing*, from our body systems (e.g. temperature, neural synapses, heart beat) to the shifting clouds and rivers. When we seek predictability and control in an everchanging world, it creates stress and frustration.

KEY QUOTES

"When you understand why you feel nervous, annoyed, hassled, driven, blue or inadequate, those feelings have less power over you."

"Since we are each connected and interdependent with the world, our attempts to be separate and independent are regularly frustrated."

- *We can't satisfy all opportunities and remove all threats.*

  i. When we *experience rewards*, dopamine and "pleasure chemicals" are released in our bodies and we seek out more of the rewards. We suffer because (a) it's unpleasant to crave for something, (b) we feel disappointed when our expectations aren't met or when we get decreasing satisfaction from the same reward, and (c) all experiences eventually end.

  ii. We also feel anxious because we have a *negativity bias*. Our brain (a) constantly scans the environment for threats, (b) is more sensitive to negative inputs than positive inputs, and (c) pulls up negative memories whenever we encounter similar triggers. This creates a vicious cycle of pessimism and negative experiences.

The conflict above is amplified by our **mental simulator**. Our brain creates its own virtual reality, filling information gaps and simulating the future, all without our awareness. These mini-movies in our minds:

- Take us away from the *present*;
- Create assumptions and *limiting beliefs* about how things will turn out; and
- Reinforce *negative experiences* which may not actually happen.

Self-Compassion is a key ingredient to help us cope with difficult situations, build resilience and self-worth. You can nurture self-compassion by strengthening its related neural circuits:

- *Activate the circuits in your brain* by thinking of (a) how it feels to receive care from someone who loves you, and (b) how you feel toward a child or someone you love.
- Think of your own suffering and *extend the same compassion to yourself*. Allow the sensation to fill your whole body. Heighten the feeling by putting your palm on your cheek/ heart and saying, "May I be happy again. May the pain of this moment pass."

KEY QUOTES

"Everything that begins must also cease. Everything that comes together must also disperse. Experiences are thus incapable of being completely satisfying."

"The simulator takes you out of the present moment and sets you chasing after carrots that aren't really so great while ignoring more important rewards (such as contentment and inner peace)."

The First and Second Darts

All of us experience physical pain, which is the "first dart" in Buddhist terms. However, most of our suffering comes from the "**second darts**" that we throw at ourselves.

- For example, if you trip and fall, you'll feel the first darts of pain. If you get angry at yourself for being clumsy or upset at your spouse for not helping you, you're *throwing second darts*.

- Most second-dart reactions occur without first darts, i.e. we *create our own suffering*, even in positive situations, e.g. you receive a birthday gift from a colleague but end up feeling guilty that you didn't give her one for her birthday. Each dart you throw can trigger even more darts.

Overheating the system. Suffering is a tangible phenomenon that can be observed and felt in your body, through your Sympathetic Nervous System (SNS) and the Hypothalamic-Pituitary-Adrenal axis (HPAA) of the endocrine system.

- When faced with a threat (e.g. a bike is speeding toward you), your body naturally snaps into *red alert*. Your body releases signals, chemicals, and stress-related hormones. You become fully alert and *ready for action*, with increased heart rate, dilated pupils, suppressed reproduction and digestion systems, etc.

- Such reactions help us to deal with tough or dangerous situations. However, second darts can put us on red-alert all the time, which is bad for *physical and mental wellness*. Constant stress causes both *physical issues* (like ulcers, constipation, heart attacks, lowered libido) and *mental issues* (like anxiety and depressed moods).

Cooling the system. The Parasympathetic Nervous System (PNS) is your normal resting state; it helps you to stay calm and clear-headed, and quietens the mind to support contemplative insight. The SNS is like the accelerator of your car while the PNS is like the brakes—ideally, the 2 systems should be balanced like this:

- PNS is activated as your *baseline*, offering ease and peace;

KEY QUOTES

"As long as you live and love, some of those darts will come your way."

"Suffering is not abstract or conceptual. It's embodied: you feel it in your body, and it proceeds through bodily mechanisms."

"Even if your pot isn't boiling over, just simmering along with second-dart activation is quite unhealthy."

"Suffering has clear causes in your brain and body, so if you change its causes, you'll suffer a lot less."

- SNS is mildly activated for *vitality and enthusiasm*; and
- There are occasional SNS spikes for *challenging situations*.

Practicing awareness. You can shape your mental and physical reactions by becoming aware of your suffering as it arises. Observe your feelings and responses, so you can regulate your impulses until you no longer throw second darts and react to the suffering. For the rest of this summary, we'll look at how you can manage your mental activities to shape your neural connections and your brain for greater happiness, love, and wisdom.

Part 2: Happiness

Since our brains have a negativity bias, we tend to accumulate negative experiences faster than positive ones. The key to happiness is to boost the positive experiences, so they can take root.

Absorb the Positives

Positive emotions bring physical and mental health benefits, e.g. stronger immune system, stress-resilient cardiovascular system, etc.

To **internalize the positives**, use these 3 steps:

- Look out for *positive facts* (e.g. an act of kindness, a blooming flower) and convert them into positive experiences (by focusing on how they affect you).
- *Savor the experiences*, intensifying the sensations to fortify the memory thread. Focus on the rewarding aspects of the experience to increase dopamine release for positive neural associations.
- Imagine the experience (thoughts, emotions, sensations) being *deeply absorbed* into your mind and body.

Each time your brain calls up a memory, it modifies it by filling gaps and reinterpreting details, all without your conscious realization. When you hold 2 things in your mind at the same time, your brain also forms new neural connections. Thus, you can **rebuild your memories to heal pain**, using these tips:

KEY QUOTES

"As the saying goes pain is inevitable but suffering is optional. If you can simply stay present with whatever is arising in awareness… without reacting further, then you will break the chain of suffering right there."

"Much as your body is built from the foods you eat, your mind is built from the experiences you have."

"Positive experiences can also be used to soothe, balance, and even replace negative ones."

- Deliberately call up positive thoughts/feelings while recalling a painful memory, so you gradually *dull the old pain*.

- Take notice of your *recurring upsets* to identify the root causes. Use positive experiences to treat the causes of the old pains. In addition, each time the negative material surfaces, neutralize it with positive emotions.

By using just a few seconds each time, you can build new, positive structures in your brain to alter your thoughts and actions.

Calm Yourself

You can stimulate the PNS to calm your body, brain, and mind.

To activate the PNS:

- Practice *relaxation*. Scan your body mentally and progressively relax each part of your body, e.g. your eyes, jaw, left foot. You can also use *imagery* to help yourself relax e.g. imagine sitting by a peaceful lake.

- *Practice breathing*. Try breathing from your *diaphragm* for 1-2 minutes. Or, take a *deep breath*, hold it for a few seconds and exhale slowly as you relax. You can also balance your heartbeat: inhale and exhale evenly, and imagine the breath going through your heart area alongside feelings like gratitude or love.

- Adopt a *daily meditation* routine, no matter how brief. Here's an example of a mindfulness meditation:

i. Find a comfortable place where you won't be disturbed. Breathe deeply and relax. Put down your burdens like putting down a heavy bag, knowing you can pick up what you want after the session.

ii. Be aware of sounds around you, without thinking about them. Focus on your breathing, feeling the cool air entering and warm air leaving, and your chest/belly rising and falling.

iii. If your mind wanders, simply bring it back to your breathing. Anchor yourself in your breath and allow all thoughts,

KEY QUOTES

"The art is to find a balance in which you remain mindful, accepting and curious regarding difficult experiences—while also taking in supportive feelings and thoughts."

feelings, images etc. to pass through. Stay with the feeling of peace, space and awareness.

Although you can never be 100% safe, you can **soothe your fears** and avoid overreacting to threats.

- *Relax your body* using the methods above.
- Connect with *nurturing and supportive people* in person or via visualization.
- Visualize *protective figures* (e.g. your parents, a guardian angel), or being surrounded by a protective force field. Pay extra attention when people care for and stand up for you, and carry the feeling with you.
- *Evaluate your fears realistically*. You may realize they're not as likely or as bad as you'd feared. Focus on what you can do and the resources you can tap on. When fear surfaces, simply observe what's happening and let the feeling pass without being alarmed.

Seek refuge—be it people, activities, places, or thoughts—that energize you and make you feel safe. This is where you can let down your guard, learn freely and refuel yourself to face challenges. *Make a list* of as many of your refuges as possible. Think about them and get familiar with the *associated feelings and sensations*.

Fortify your Intentions

It's possible to tap on your mental strength to improve happiness.

Understand your motivation hubs.

- There are *2 key motivation hubs* in your brain:

  i. *The amygdala hub* is more primal in nature. It constantly scans what's happening around you to identify opportunities and threats, providing information for decision-making.

  ii. The *Anterior Cingulate Cortex (ACC) hub* holds your

KEY QUOTES

"Deliberately feeling safer helps control the hardwired tendency to look for and overreact to threats."

"In effect, you are giving yourself today the attention and attunement you should have received as a child."

"Keep separating from the fear; settle back into the vast space of awareness through which fear passes like a cloud."

"The amygdala is at the center of bottom-up, reactive, distributed, passionate motivation."

"The ACC is at the center of top-down, deliberate, centralized, reasoned motivation."

"working memory", where your brain places information to solve problems and make decisions. The ACC sets your intentions, decides where you focus your attention, and how you pursue your goals and deal with conflicts.

- The 2 hubs influence each other in a *feedback loop*. When they are in conflict, you feel as if your head and heart are pulling in different directions. When they are aligned, your motivation is the strongest.

- Intention is a form of desire, and desires need not cause suffering. Your intentions only lead to *suffering* when (a) it involves craving, i.e. you'll be upset if you don't get something, and (b) the desire is for harmful purposes, e.g. the 3 poisons.

Strong intentions are associated with energy and determination:

- *Bring up the feeling of determination* by quickening your breathing slightly or tightening your shoulders as if you're going to carry a heavy load. Use facial expressions to intensify your emotions.

- *Reinforce associated neural pathways* by visualizing a time you felt really strong, and observe how your body feels. Carry this feeling with you, and call it up when dealing with challenges. Reinforce it with words like "I'm feeling strong", "I have the right to be strong."

Seek Equanimity

Equanimity means staying centered, so you do not react to your reactions.

Understand that both pain and pleasure are transient. Let them pass and focus on what you can do now to shape future outcomes. Learn to **accept and be at peace** with whatever you feel—whether it's pleasant or unpleasant—so you create a buffer between your triggers and suffering. When you no longer react, identify with or own your pain and pleasure, you feel a sense of peace and freedom.

The equanimous state of mind can be cultivated through **4 neural conditions.**

KEY QUOTES

"Desire per se is not the root of suffering; craving is."

"When you are equanimous, you don't chase after enjoyable experiences or resist negative ones."

"Neither pleasure nor pain is worth claiming as your own or identifying with."

"Over time, equanimity deepens into a profound inner stillness that is a defining characteristic of contemplative absorption."

- *Stay "disenchanted"*, so you're not disappointed or dissatisfied with life. Set the intention not to react to your reactions.

- *Cultivate a steady mind*, by being aware of passing thoughts and feelings without being attached to them. Pay attention to how you feel/think when your mind is still and neutral, and bring yourself back to this state whenever you feel agitated.

- *Develop spacious consciousness*, and treat your fleeting thoughts and emotions like shooting stars in an infinite space.

- Make a list of situations that trigger big reactions in yourself, and rate their intensity. Use the PNS-activation approaches earlier to *practice tranquillity*, starting from the least intense situations.

Part 3: Love

The 2 Wolves in your Heart

We all have 2 wolves inside us: one of love and one of hate. Whichever wolf we feed will grow stronger.

- **Love**. We're evolved to bond emotionally with significant people like our family members. Love feels good due to associated chemicals like oxytocin and dopamine. Losing love feels bad as it activates neural systems for physical pain.

- **Hate** also evolved out of the need for protection against "outsiders". We tend to feel loyalty for "us" but aggression for "them". We can't kill the wolf of hate, but we can leash it and feed the wolf of love.

Compassion and Assertion

To nurture the wolf of love, we need empathy, compassion (to offer care and understanding) and assertion (to address your own needs).

Empathy is about understanding someone. It's a foundation to any meaningful relationship. Humans are capable of empathy

KEY QUOTES

"The space of awareness allows every content of mind to be or not to be, to come and to go."

"Although the wolf of hate gets more headlines, the wolf of love has been painstakingly bred by evolution to be more powerful."

"The wolf of love sees a vast horizon, with all things included in the circle of 'us'. That circle shrinks down for the wolf of hate."

"There is no killing the wolf of hate… But you can keep that wolf carefully tethered."

because of neural systems that allow us to simulate others' actions, emotions and thoughts.

- When we see others do something, our brain's perceptual motor systems light up as if we're doing those *actions* ourselves;

- When others experience strong *emotions* (e.g. fear or anger), it triggers similar neural connections in us. The more we're aware of our inner states, the more we can relate to the feelings.

- We observe others' actions, emotions and thoughts, make an educated guess of what they're *thinking*, then test it on ourselves to understand where they're coming from.

To build empathy:

- Set the *conscious intention* to understand the other person. Relax and open up to the person while maintaining a safe space.

- *Pay attention* to the other person's actions (e.g. movements, posture), feelings (both verbal and physical expressions) and thoughts (e.g. background, motivation, and desires).

- *Check back* to ensure you've understood them correctly, e.g. "It sounds like….is that right?" or "I get the sense that …."

- Be willing to request for and *receive empathy*.

Cultivate compassion by calling up feelings of love and gratitude before focusing on the person/problem, mentally wishing the other party well, and practicing compassion with 5 different types of people daily (e.g. a friend, a stranger, etc.).

Assert yourself by staying true to your goals and truths.

- Living with *unilateral virtue* means acting according to your principles and goodness, rather than responding to what others say/do. Write down your personal code of virtues to guide your actions (e.g. "listen more, talk less" or "keep my promises").

KEY QUOTES

"Compassion widens the circle of 'us' while assertion protects and supports everyone inside it."

"Virtue sounds lofty, but it's actually down to earth. It simply means living from your innate goodness, guided by principle."

- To reach an *equilibrium*, your must satisfy both your head (logically) and your heart (emotionally).

Loving Kindness

Compassion usually relates to others' suffering, whereas kindness (wishing others well) can apply to all contexts.

You can **wish others well** either generally (e.g. for health or happiness) or specifically (e.g. to secure a desired job or be at peace with a painful loss).

- Do a *loving-kindness meditation* by modifying your usual meditation to focus on a kind wish with each breath.

- *Offer kindness daily* through your intentions, words and actions.

Your ultimate test will be to show kindness to someone who has treated you badly. To **drop ill-will and cultivate goodwill**:

- Look for things that bring you *positive emotions*, while diffusing negative triggers and feelings as early as possible.

- *Avoid arguments* by separating your thoughts from others', e.g. imagine your conflicts are separated by a waterfall.

- *Don't assume negative intentions* by others. Consider the possible reasons they may have acted in a hurtful way.

Expand your "us" circle to eventually include the whole world.

- *Redefine your "us" categories*. Focus on *similarities* rather than differences, and challenge how you've defined your "not me" categories (e.g. different interests, religions).

- Reduce the sense of threat by asking if others will really harm you. Look for *mutual benefit* or opportunities for collaboration.

- Practice the *loving-kindness meditation*. Focus on the feeling of being loved. Allow that feeling to flow through you, toward the people closest to you, then to acquaintances

KEY QUOTES

"If compassion is the wish that beings not suffer, kindness is the wish that they be happy."

"Goodwill and ill will are about intention."

and strangers, until it covers all other living beings on the planet.

Part 4: Wisdom

Mindfulness is the ability to direct your attention at will. It determines what flows through your mind and thus how you shape your brain.

Train your Mind

Our brain is constantly balancing **3 key needs**: keeping information in awareness, updating awareness with new information, and seeking the right level of stimulation (e.g. food, mates, resources). Imagine information is being held in a working space in your brain. When the contents are stimulating, dopamine is released and the door to the space is closed, allowing you to focus. If the stimulation drops, dopamine levels fall and the door opens to new inputs.

You can **train yourself** to be more mindful:

- Before starting any activity that requires focus, *set the intention* to be mindful. Think of someone who's extremely focused and simulate the sensations and state of mind.
- To cultivate *daily mindfulness*, slow down, talk less, single-task instead of multi-task, stay centred and focus on breathing during daily activities. Reflect more and simplify your life.
- *Stay alert* by getting sufficient rest, sitting in an erect position, visualizing light to brighten your mind, and breathing deeply to oxygenate the brain.
- *Quieten the mind* from distracting thoughts. Suppress left brain chatter by developing awareness of your body as a whole. Instruct your brain's verbal centre to be silent, e.g. tell your mind, "shhh, it's not the time to talk right now", or use mantras/prayers to replace mindless chatter.
- Learn the difference between your awareness (which is an infinite, unchanging space) and *fleeting "mind objects"*. Relax, breathe and observe the mind objects passing through

KEY QUOTES

"When your attention is steady, so is your mind."

"Being mindful simply means having good control over your attention."

"Attention is like a spotlight, and what it illuminates streams into your mind and shapes your brain."

"The brain can't be fully attentive unless it's fully awake."

"Notice the spacelike qualities of awareness: it is boundless, still and silent, empty until something appears, vast enough to hold anything, always present and reliable, and never altered by the mindobjects passing through."

your mind like watching a movie. Realize that your likes and dislikes are merely passing objects.

Improve your Concentration

Meditation is powerful because it focuses your attention like a laser beam. It can improve 5 factors that affect your concentration.

Factors 1 & 2: Applied and sustained attention. You *apply attention* when you initially direct attention to an object. You *sustain attention* when you stay focused on the object.

- Practice focused attention by counting your breath from 1-10 (1 set), and gradually increase the number of sets.

- To *filter out distractions*, start your meditation by noticing the distractions around you. Invite them into your mind, then ask them to go out before refocusing on your object of attention. If you can't remove the distraction, then make it the focus of your meditation.

- To satisfy your mind's *desire for stimulation*, focus on novel details like the sensations in a body part (e.g. your tongue), a body area (e.g. your chest area), or break up your breathing into parts (e.g. inhale-pause-exhale).

Factors 3 & 4: Rapture and joy: When you feel intense interest in an object (rapture), or feelings of joy, more dopamine is released and you concentrate better.

- *Set intention* for rapture and joy, pay attention to them and *invite them in*. Imagine you're breathing in bliss and joy.

- Make rapture and joy the *focus of your meditation*. Notice the various shades of happiness, contentment, joy or tranquillity.

Factor 5: Singleness of mind. This comes from all 4 factors above. Unify the mind by focusing on the sense of your *entire body* working as one. Drop the past and future and *focus fully on the present*. In the book, the authors also take us through a "*concentration meditation*" combining various techniques covered so far.

KEY QUOTES

"Mindfulness brings insight and wisdom—and the best way to increase your mindfulness is through meditation."

"Singleness of mind involves the unification of awareness, grounded in a deepening absorption in the object of attention.

Relax the Sense of Self

All of us have an "apparent self", which is merely a concept. There's no permanent concept of "I". We are constantly changing as new stimuli and synapses flow through our minds, and the "self" is merely a temporary mind-object. We need the self to function in society, e.g. identify people, connect our life experiences and build relationships, but we needn't be limited by it. The key is to play the role of self without being attached to it.

When you hang on to self, you separate yourself from others and identify with (or try to possess) things that inevitably end, bringing yourself suffering. **Relax the sense of self** and flow with life, so you feel a greater happiness and satisfaction.

- *Take your body for a walk*. Enjoy the sights, sounds and sensations without relating to "I". Realize that you don't need a sense of self to experience all these.

- *Perceive experiences from the body-mind* without identifying with them, e.g. observe that "thoughts are surfacing" rather than "I think….".

Move away from **envy, possessiveness and self-importance:**

- *Give generously* to others, by offering your time, money, patience, forgiveness etc. Focus on compassion and kindness.

- Cultivate *healthy humility*, by noticing the good things about yourself and nurturing your self-worth, while acknowledging and caring for others. When your heart is full, you won't feel the constant need to impress others.

Increase your **connection with the world and with life:**

- Reflect on how your body exchanges *energy and matter* (e.g. sunlight, food and water) with the world. Think deeply about what you use daily, e.g. how your food is produced, distributed, and returned to the environment.

- Notice the space around you and how objects fit in as *part of a whole*. Realize that everything changes, including the

KEY QUOTES

"Try to keep remembering that who you are as a person dynamically intertwined with the world— is more alive, interesting, capable, and remarkable than any self."

"Paradoxically, the less your 'I' is here, the happier you are."

"It is not so much that we have a self, it's that we do self-ing."

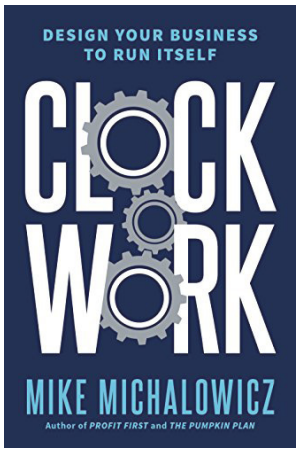
"Self is like a knotted fist: when you open the hand to give, there's no more fist— no more self."

"Fill the hole in your heart by taking in the good, once brick at a time."

"Love the person you are, much as you would care about any person dear to you. But don't love the self or any mere mind-object."

self. Reflect on how all life forms fit in this world and wish them well.

KEY QUOTES



CLOCKWORK

Design Your Business To Run Itself

MIKE MICHALOWICZ

The Big "So What"

Many entrepreneurs start out with a dream, but end up as slaves to their businesses. This book provides the principles and tools to help you design businesses that run like clockwork, so you can achieve success *and* regain your freedom to enjoy a healthy work/life balance.

Why Clockwork?

Many entrepreneurs are trapped in their businesses. They work long hours and even on vacations, are perpetually stressed and constantly think about work. They're **short of both time and money**, and dare not slow down lest the business collapses. Michalowicz's goal is to end entrepreneurial poverty. In his earlier book "Profit First", he tackled the lack of money. In this book, he tackles the lack of time.

Clockwork is built on a core principle: **Work smarter, not harder**.

- *Increasing productivity won't reduce your work hours*. Parkinson's Law says that work will expand to fill available time. When you're more productive, you complete your tasks faster but keep adding more to your plate to fill the free time, resulting in a vicious cycle of greater productivity but more work.

- Regardless of your company size (be it 1 person or 100), *organizational efficiency* is about getting the most important work done with the least resources. It's *not* about doing more. Unfortunately, it's easier to keep doing more of

KEY QUOTES

"It's not about doing more with less. It's about doing less with less to achieve more."

"I am committed to never again letting an entrepreneur live with lack: Lack of money. Lack of time. Lack of life."

"The more money we have to spend, the more we spend. The more time we have, the more of it we spend working."

"'Work harder' is the mantra of both the growing and collapsing business."

what's familiar (even if it's unpleasant or unimpactful) than to do what's truly important (but new or unfamiliar).

- Stop trying to solve every problem yourself. Don't get caught in the "*survival trap*", where you drop everything each time a crisis surfaces—you may feel good about solving a problem, but the business actually goes off-track and suffers in the long run.

- To regain your freedom, allocate *less* time for your business and force yourself to achieve more within that limited time. That way, you can *increase your impact and free up time* for other life priorities.

The 4Ds and 7 Stages of a Clockwork Business

The 4Ds. There are 4 key sets of activities that any entrepreneur must perform:

- *Doing*: In the start-up phase, most entrepreneurs (especially solopreneurs) do everything themselves.

- *Deciding*: As the owner hires employees or contractors, he/she may assign tasks to others. However, the owner is still giving all the instructions and making all the decisions. Until employees are given the chance to make their own decisions and take responsibility for them, they can't truly learn.

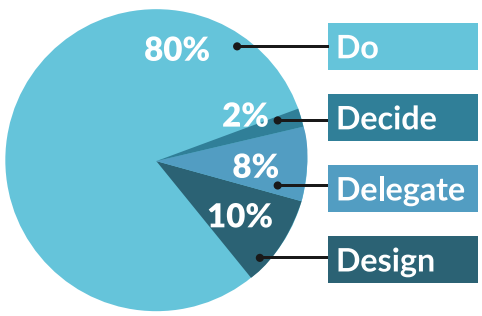
- *Delegating*: The employees are now empowered to make decisions about the task and are fully accountable for the results. However, the owner must let go of the need for perfection or full control.

- *Designing*: By now, the business can run on its own, and you're focusing on improving the business flow instead of being stuck in the daily grind. This is when you're truly free to enjoy your business and build your dreams.

The ideal 4D mix is:

- 80% doing

- 2% making decision for others



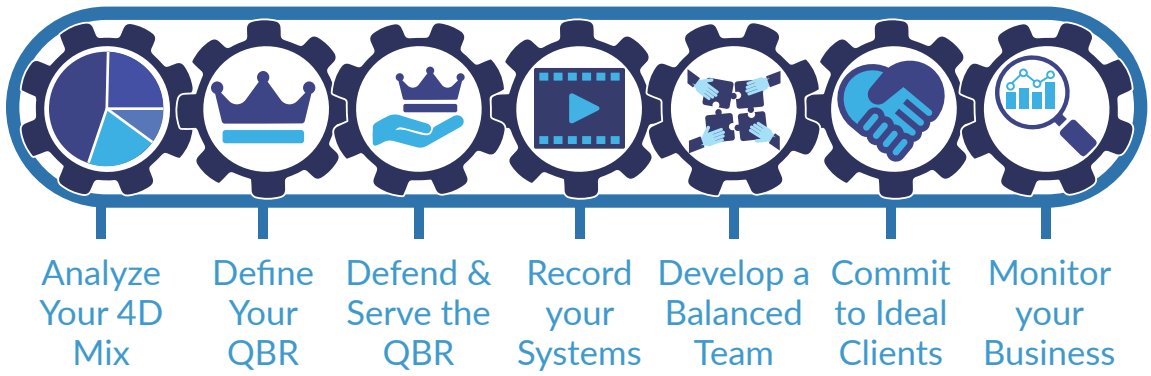
KEY QUOTES

"Life is about impact, not hours."

"Organizational efficiency is when all the gears of your business mesh together in harmony...It is about managing resources so that the important work gets done, instead of always rushing."

- 8% delegating outcomes
- 10% designing

Most entrepreneurs spend too much time Doing and not enough time Designing their business. You can progressively shift to the ideal 4D mix and build a Clockwork business in 7 stages.



Before you begin, **commit to the process**. Make yourself accountable to someone, e.g. send an email to a colleague/ friend to outline your commitment to redesign your business.

KEY QUOTES

"Trying to build a business by just Doing and without Designing is like walking through a dense forest while blindfolded."

Implementing The 7 Stages of Clockwork

1. Analyze Your 4D Mix

Analyze your company's 4D mix, starting with your own 4D mix.

- Fill in the *Time Analysis Worksheet* below for the last 5 days you worked, or start tracking your next 5 days of work.

TIME ANALYSIS WORKSHEET					
DATE	ACTIVITY	START	FINISH	TIME SPENT	WORK TYPE
					Do/Decide/Delegate/Design
					Do/Decide/Delegate/Design
					Do/Decide/Delegate/Design
					Do/Decide/Delegate/Design
					Do/Decide/Delegate/Design
TOTAL TIME: Doing _____ Deciding_____ Delegating _____ Designing _____					

- Add up the *total time spent* on each of the 4Ds and calculate the % of time spent on each component.

- Find the *4D mix for your company*, i.e. the aggregate of all employees' 4D mix. If you have a large company, develop charts to show the 4D mix for different departments.

- Compare your existing and ideal 4D mix to *identify the gaps*. For example, if your company's mix for Doing, Deciding, Delegating and Designing is 55/30/0/15 (vs the optimal mix of 80/2/8/10), too much time is spent directing people when it should be used to get things done or train people to make their own decisions.

Key Action(s)

- Set aside just **1% of your work time** to start designing your business.
- **Commit weekly time** in your calendar for the next 18 months. Choose a slot at the *start* of the week while your mind is fresh.

KEY QUOTES

"When your desired outcome is also their desired outcome, you are better able to let go and let your team do their jobs."

2. Define Your Organization's Queen Bee Role

Every bee colony has a queen bee, whose primary role is to lay eggs. Without this **Queen Bee Role (QBR)**, the colony can't thrive and grow. Hence, every bee's top priority is to protect and serve the queen bee so she can focus on performing the role. Only when the Queen Bee is properly performing her role do the bees go about doing their Primary Job. Your organization's QBR is the key function that your business success hinges upon.

Use the **Sticky Note Method** to define your company's QBR. Do this with your team (or on your own if you're a solopreneur).

- Prepare at least 6 sticky notes per person. Everyone writes down his/her *6 most important tasks* and the estimated time spent on each. Use 1 note per task (e.g. sales, communication).

- Next, each person *removes the 2 least important tasks*, i.e. pretend they can't do the tasks *at all* in future.

"A clockwork business is a business that delivers consistent results, including growth goals, without your active involvement."

Put away the 2 notes, explain why the 4 remaining tasks are more crucial, and how they'd elevate those tasks to cover the loss of the other 2.

- Remove 1 more task and repeat the justification process. Keep going until each person is left with only 1 most crucial task—this is the *Primary Job* which is second only to the QBR. Use the discussions to align what you and your employees think the Primary Jobs should be.

- If you're a solopreneur, your Primary Job *is* the QBR. If you have a team, collect all the notes with the Primary Jobs and repeat the process to distill the *company's QBR*. Different employees may have the same Primary Job, but there should only be 1 overarching QBR for the company. Ask yourself: does the success of your business truly rely on that *one role*? For example, the Savannah Bananas baseball team's QBR isn't to play extraordinary baseball; it's to provide the crowd with "extraordinary entertainment". Such clarity helps *every* person on the team to focus on entertaining the crowd before they move on to their Primary Jobs.

Key Action(s)

Use the Sticky Note Method to identify your company's QBR. Announce it to the entire organization.

3. Defend and Support the Queen Bee Role

Once you've identified your QBR, every person on the team must **protect and serve the QBR as a top priority**.

- Support people who're performing the QBR so they can give it their full attention. Once the *QBR is properly served*, things will fall in place and people can return to their own Primary Roles.

- In a hospital *emergency room (ER)*, the QBR is to accurately diagnose the medical issue and define the right course of action. This QBR is literally a matter of life and death, and every ER staff and system must protect the doctors' ability to perform that role. For example, doctors shouldn't have

KEY QUOTES

"If you don't pick the one thing, you will continue to dilute your business's uniqueness and cripple its ability to run on automatic."

"The QBR is never a person, or machine, for that matter. It is always a role, a function, or a task."

"The QBR is the linchpin to a business designed to run itself."

"Protect and serve the QBR as though your life depends on it, and your business becomes the 'must go there' for customers."

to handle admin tasks when there're ER patients waiting to be diagnosed.

Use the **Hub and Spoke Exercise** to see how far you (and your team) are focusing on the QBR, Primary Job vs other distractions.

- Create a *hub and spoke diagram*. Draw your QBR, add the other 5 key tasks (from the Sticky Note exercise) in boxes around the QBR, and connect them with spokes. The length of each spoke should be proportionate to the time spent on the task.

- Create a table of up to *10 additional tasks* with the time spent on each (refer to your earlier Time Analysis).

- The diagram and table will jointly give you a visual representation of the tasks keeping you from your QBR. "*Trash, Transfer and Trim*" the items, starting with those with the longest spokes and work your way inward to the QBR.

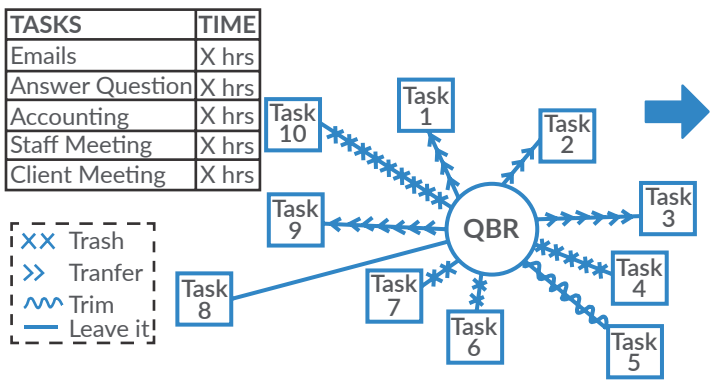
  (i) Cross out non-essential items that you can *thrash*, e.g. create an FAQ so you can stop replying to every question.

  (ii) Draw arrows for less-skilled tasks that you can *transfer* or delegate. If you have no one to delegate to, consider hiring an intern or freelancer to perform and trim the task.

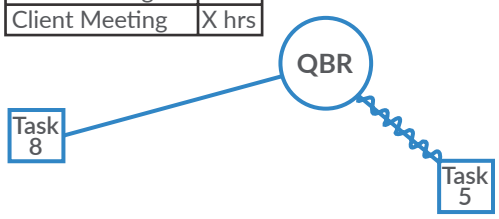
  (iii) Draw a squiggly line on tasks that can be *trimmed*, i.e. things that only you can do but may be made more efficient.

  (iv) Darken the lines for items that you must *continue* to do in the near future, e.g. due to contractual obligations.

TASKS	TIME
Emails	X hrs
Answer Question	X hrs
Accounting	X hrs
Staff Meeting	X hrs
Client Meeting	X hrs



TASKS	TIME
~~Emails~~	~~X hrs~~
~~Answer Question~~	~~X hrs~~
Accounting	~~X hrs~~
Staff Meeting	X hrs
Client Meeting	X hrs



KEY QUOTES

"Transfer work down to the most inexpensive resources and empower the new owner(s) of the task to achieve the intended outcome more efficiently."

"The goal is to have a few expensive skilled team members at your business, focused almost exclusively on doing the skilled work, and transferring all the other necessary, but easy, repeating tasks down the skill chain."

- Any time saved must be *redirected to the QBR*. Do the exercise yourself then for your entire company. Keep repeating the process so everyone is progressively maximizing their time on the QBR.

- *If you're currently the only one serving the QBR*, you can:

  (i) Get others to serve the QBR, by engaging your team in discussions on how best to protect/serve the QBR; or

  (ii) Choose to keep serving the QBR personally because you enjoy it (knowing that the business will still rely on you).

Key Action(s)

- Use the Hub and Spoke exercise to progressively remove distractions and increase focus on the QBR.
- Decide if you want to serve the QBR or have others do it for you.

4. Record your Systems

The QBR (and its related tasks) must be **delivered consistently**.

- Companies often use *Standard Operating Procedures (SOPs)*. This involves a laborious process of identifying your goals, breaking down the steps, documenting and updating them, yet people don't always follow the SOPs.

- Well, there's a simpler way. In reality, you *already* have a set of processes in your head that you currently use. All you need to do is to capture it: *record a video* of the task being performed and make it available as a training video.

- Even if you're a startup with no established systems, you can *find existing systems* on Youtube, then adapt them for your business.

To **record your systems:**

- Start by identifying the processes and approach involved, including (i) verbal/written communication, (ii) physical action and/or (iii) interaction with something (e.g. a

KEY QUOTES

"When you serve the QBR you are the heart of the organization. When you choose to have others serve the QBR, you become the soul of the organization."

"Waste of materials, waste of money, and waste of time are the bane of every business and must be addressed constantly."

"The systems have already been created. Your job is to capture what is in your head, or to use what other people have already captured from their heads."

"The goal is not to create systems; the goal is to capture systems—and do it easily."

computer or cash register). Every business activity can be captured under one of these *4 categories of the ACDC model*: Attract, Convert, Deliver and Collect.

- *Create a directory* titled "Systems", with 4 folders for the 4 categories above. Make this accessible to your team. Capture each activity in a video, label it clearly and file it in the right folder.

- You can now *delegate the task*. If an employee has a question, guide him then get him to improve the existing video, so you create a learning cycle where the student becomes the teacher.

- Have only *1 person accountable for each outcome*, determine how to measure the system's success and who to report it to.

- You can also use the *Traffic Light System* to help team members to prioritize tasks with labels: red (urgent), green (not urgent), and yellow (in between).

To free yourself from the QBR, you need to **delegate properly**.

- This is actually an *educational process* that happens in stages. Initially, you assign the tasks (but still make the decisions). Then you offer up the decision-making responsibility (but still own the results). Eventually, the employee is responsible for setting *and* achieving the outcomes. If your team isn't doing what you want, it means you need to give more detailed guidance.

- *Get your employees to interview you* and record the processes, so they can extract the details needed to perform the tasks ideally.

- Once you've delegated a task, *don't intervene* whenever a staff asks for direction. Instead, ask questions like, "What do you think is the best approach?" Even if you

KEY QUOTES

"Always have one person accountable to the outcome... That way, you know who to talk to when there are problems in need of a solution."

"We get upset that 'they can't do what I want,' but that's because we haven't told them what we want."

"Stop training your employees to be idle by deciding for them. Have them move your business forward by empowering them to make decisions."

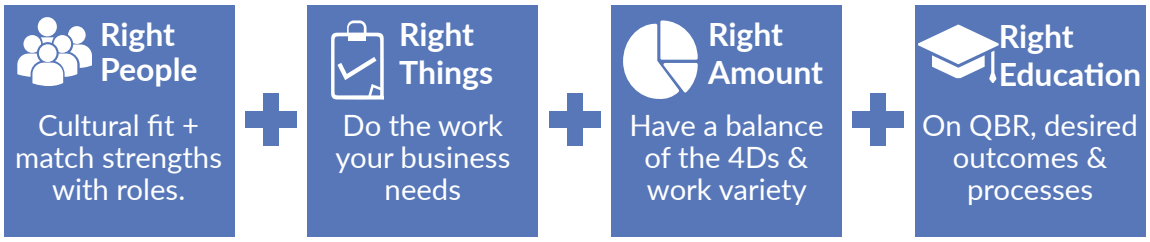
disagree with their solution, let them proceed unless there'll be dire consequences. Only do a debrief after they've executed the decision.

Key Action(s)

Start by capturing just 1 system: Record it, delegate the task and let the person continue the cycle of teaching and refinement.

5. Develop a Balanced Team

Everyone has strengths and weaknesses. Focus on what you thrive on, and delegate other tasks to people who can do them much better. Your income may dip temporarily when you hire someone, but the right hires should deliver results within a year and gradually free you up to focus on what you do best and love most. Build a **balanced team with complementary skills**. The key is to "have the right people, do the right things, in the right portions, right".



Hire the Right People. You need a team for your company to run without you. Hire the right people with the cultural fit, then put them in the right roles that match their strengths/passions.

- *When to hire*: It's never too early to start hiring; the challenge is finding the *right person* for your business at any point in time. Even if you can't afford a full-time employee, you can find a part-timer who can relieve you of some of your workload.

- *Who to hire*:

  (i) Hire for *personal traits* like attitude, passion, strengths and cultural fit. Don't hire for skills—skills can be taught, but the other elements can't.

  (ii) Don't hire people who're just like you. Go for *diversity and the required complementary strengths*, e.g. do you need someone analytical or creative, detailed or strategic?

KEY QUOTES

"You want to hire people with a great get-it-done attitude, high energy, and high intelligence, people who are a strong cultural fit and who have a desire to do the work you need done."

"Have the right people, do the right things, in the right portions, right."

"Hire diversity. Don't hire people you like; hire people you respect."

- In your job ads, describe your culture and job role, with an instruction toward the end e.g. use "This is my dream job!" as the application email title. This will *weed out job spammers* who apply without reading the job details.

- *Build trust gradually*: start the new hires with small tasks, then gradually increase their responsibilities until they can operate independently.

- The right people will resonate with your mission and see themselves as an integral part of your company. *Align your team* by sharing and telling stories about your mission.

Put people in the right role. Do away with the traditional hierarchy and focus on placing the right people for each role.

- Do the *Job Traits Analysis*: List down the jobs/tasks for each position, identify the core traits needed to excel in the role, the level of impact on the company, and the current vs ideal person for the role.

JOB TRAITS ANALYSIS				
JOB/TASK	TRAITS TO EXCEL	IMPORTANCE (QBR/ High/ Med/ Low)	CURRENT person serving the job	BEST person for the job

- Do the *Time Analysis for your team* to determine individuals' 4D time allocation and the team average. Work toward the ideal 4D mix of 80/2/8/10, focus on QBR, leverage strengths for each employee, and have the entire company Trash, Transfer and Trim. These jointly ensure that everyone is progressively focusing on the highest value tasks while retaining a company-wide balance.

Key Action(s)

- Each week, focus on 1 exercise in this step so you'll progressively put the right people on the right jobs, with the right 4D balance.
- Define the traits for your 10 most important daily tasks, and match them with the employees with those traits.

KEY QUOTES

"Purpose is the intersection of something that gives you joy and has a positive impact on others."

"Instead of a traditional topdown organization chart, an optimized company is more like a web. You never restrict employees to one job function."

"Your goal: Match people's best traits to the jobs and tasks that need those traits."

6. Commit to your Ideal Customers

Clarify who your top/ideal clients are and commit to them so you have a singular focus for your QBR. The end-goal is to have a simple company mantra: "Our commitment is to serve [Whom] by [How]."

- The more variables you have, the harder it is to deliver a consistent outcome. By focusing on 1 specific group of people, you *reduce the # variables* to deliver your QBR predictably.

- Beware of focusing so much on customer needs that your business no longer reflects *your* goals and passions. Instead of pivoting your business to suit what customers want, *align* what you want with what the customers want.

- Once you know your target audience, you can duplicate them. Companies often define target customers by psychographics, then realize they don't know how to reach those customers. It's more useful to identify target customers by *congregation points*, i.e. physical or virtual spaces where like-minded communities meet regularly, e.g. a book club or farmer's association. Get access to the communities and show that you can address their needs and wants.

Clarify your top clients ("whom") using the Crush/Cringe Analysis:

CRUSH/CRINGE ANALYSIS			
Customer	Crush/Cringe	Community	Congregation Points

- List your *existing customers* in order of revenue (most to least). Indicate if you love them (crush), hate them (cringe) or a mix of both (crunge).

- List the *communities* they belong to (e.g. industry, consumer groups) and their *congregation points* (e.g. trade associations, Facebook groups).

- *Note*: The crush/cringe label does *not* reflect market viability since there're good/bad customers in all segments.

KEY QUOTES

"Know your QBR first. That is your and your company's heart. Then know the whom. And pair it with the how."

"Don't pivot to the customers' desires. Instead, align your desires with the customers who want it."

"The Commitment concentrates the awesome energy of the QBR in a way that will ignite your business efficiency (and growth) like never before."

The goal is to help you to focus narrowly on a niche then broaden it. Focus on segments with (i) active communities and (ii) multiple congregation points that you have access to.

To serve your ideal customers ("how"), start with a small niche that you serve really well. Then, expand to new markets as you continually deliver your QBR and improve your solution. For example, UGG started with boots that kept surfers' feet warm and dry; over time they expanded their range/reach, and now offer a variety of footwear globally.

Key Action(s)

- Develop your company mantra by defining your commitment of "Whom" and "How". Place it somewhere visible.
- Assess if your team has the traits needed to serve this niche. If not, rebalance and restructure your team accordingly

7. Monitor Your Business

Set up your business such that you can **monitor it at a strategic level**. To do that, you need metrics that give you a good overview of the business. It's like how the car dashboard shows you all the critical indicators (e.g. speed, petrol level, engine temperature) so you can see at a glance if everything is going smoothly or if something needs attention.

- With the right indicators, you can manage your business with just a few hours a week, like how a master chess player moves the pieces on a chess board. Your goal is to identify *bottlenecks* to business productivity, and remove them one by one, starting with the weakest link.

- A metric must be measurable and comparable (e.g. a number, a binary "yes/no"). Identify *5-8 key metrics* that'd give a good overview of your business. Make sure you include:

  (i) ≥1 metric for each of the *4 ACDC categories*, e.g. # people visiting your store (Attract), # of customers (Convert), # positive reviews (Deliver), % customers who pay (Collect)

  (ii) ≥1 metric for your *QBR*. Since the QBR is unique to each company, you must choose the metric carefully.

KEY QUOTES

"If you want big success, you need to first focus on a small community, and then empower that community to carry you to bigger markets."

"The goal of metrics is to measure the effectiveness of your company, and likely areas to find bottlenecks."

For example, Profit First's QBR is to spread the word on Profit First, and they measure this via the number of presentations being made (including live events, podcasts etc).

- Any metric that's higher or lower than expected should be investigated. To identify the root cause, *test 1 variable at a time* and record the results. Do *not* test multiple variables concurrently as they may influence one another to mask the real issue. However, you can do multiple tests if the outcomes are clearly independent.

When you successfully serve your QBR, you may find yourself struggling to cope with the **growth in demand**. For example, an explosion in new leads can create a conversion bottleneck. If you need $1mil sales this year (50 clients x $20k each) to achieve your long-term goals, then you can ease the conversion load by creating an automated process to filter out customers with >$15-20k budget for follow up.

Key Action(s)

Take 20 minutes to determine the core metrics for your business. You can also get professional advice from RunLikeClockWork.com.

Building your Clockwork Business

Building a Clockwork business takes time and effort, and you'll definitely experience **resistance to change** at various levels:

- *Self*: As your business starts to run without you, you may feel redundant and unappreciated. Resist the temptation to reinsert yourself in the business and start Doing things. Stay focused on the hardest work: to think deeply and Design the business.

- *Partners and stakeholders*: Your business partners, employees, vendors and other stakeholders are likely to push back. They may argue that you aren't doing enough, or question the changes out of insecurity. Generally, partners are the hardest stakeholders to manage—help everyone

KEY QUOTES

"Yes, change is hard. It is also going to get you what you want: a business that runs itself."

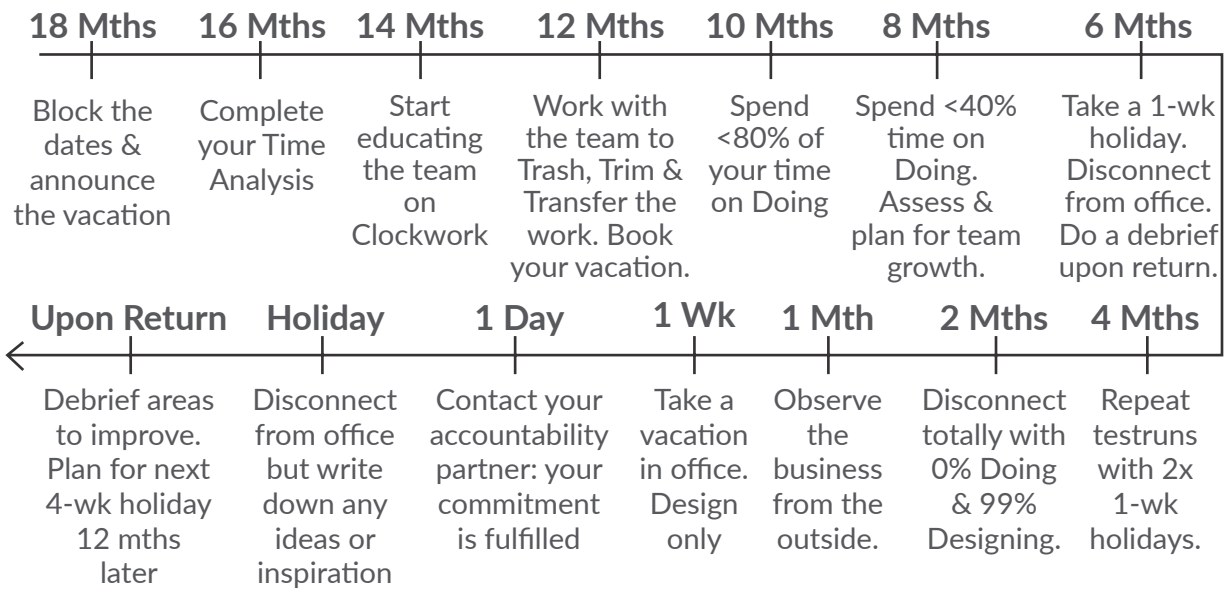
"Instead of doing the work, you need to be thinking about the work, and who you can get to do it."

on the executive team to understand the value of creating a Clockwork company and why you must shift from Doing to Designing. Set aside time to communicate your plans and goals, gather feedback, address concerns and help people to understand what to expect and where they'll fit in.

The final step is to take a four-week vacation, during which you disconnect from the business and let it run by itself.

- A 4-week period is typically long enough to complete a business work cycle. If your business can survive without you for 4 weeks, it can probably continue to run on its own.

- In the book, Michalowicz details an 18 month plan to help you work toward that 4-week holiday. Here's a brief outline:



Key Action(s)

- Engage people in open conversations about the company's direction and address their concerns on the transition.
- Start working toward your 4-week holiday 18-24 months later.

Other Details in the Book to Look out For

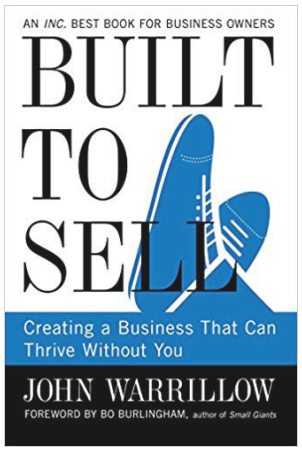
This is a detailed guidebook with many case studies of the various Clockwork concepts at work, including examples of real-life entrepreneurs who have used the principles in their businesses. Michalowicz ends with a detailed 18-month plan to help you roll out the 7 steps. For more details, and resources, please visit RunLikeClockWork.com.

KEY QUOTES

"Clockwork is not a system for you. It is a system for your entire company. Everyone needs to know it. Everyone needs to be on the same page."

"That is the power of Clockwork. You aren't forced to leave your business; you are freed to leave."

"No matter what you have or don't have; no matter what challenges you face and what mistakes you've made; no matter what, you can grow a profitable business that runs itself."



BUILT TO SELL

Creating A Business That Can Thrive Without You

JOHN WARRILLOW

The Big "So What"

One of the most common mistakes entrepreneurs make is to build a business that depends too much on them. They become stuck in the business and can't sell it even if they want to. Through a parable, Warrillow illustrates an 8-step model that you can use to turn your business into one that you can sell. This is a must-read book for any business owner to learn how to develop options to exit their business.

Introduction

For many small businesses, especially service firms, the owners *are* the business. They are so good at what they do that they become the go-to person in the company. Unfortunately, such businesses aren't scalable or sellable, so the owner has no choice but to keep slogging on.

Warrillow estimates that probably only 1 in 100 businesses are saleable. Regardless of whether you intend to sell your business in future, you should always create options for yourself by building a business that's valuable, scalable and sellable. After studying and interviewing hundreds of entrepreneurs, and building/selling his own businesses, Warrillow presents an 8-step action plan to help you build a sellable business.

The fable is about a fictional entrepreneur, Alex Stapleton, who is struggling to sell his marketing agency. With the help of a family friend, Ted, Alex manages to transform and sell his company. In this summary, we'll explain the 8-step model (with associated tips) for selling your business as we follow Alex on his journey.

KEY QUOTES

"The best businesses are sellable, and smart businesspeople believe that you should build a company to be sold even if you have no intention of cashing out or stepping back anytime soon."
—Bo Burlingham

"The idea is to have as many choices in the future as possible."
—Bo Burlingham

Backdrop to the Fable

When Alex started The Stapleton Agency, he envisioned hiring top talents, doing prestigious marketing projects and growing a multi-agency holding company. Yet, 8 years later, he finds himself with an average team that's underqualified for the wide range of marketing services they offer. Alex has to personally bring in the sales, manage the clients (who will *only* deal with him) and struggle to make the monthly payments. Although he manages to clinch a large account with the First National Bank after years of serving small businesses, Alex finds himself at the client's beck and call and feels as if he's groveling for scraps.

Alex is tired, wants more time for himself and his family, and decides to sell his company. He approaches Ted Gordon, a family friend and serial entrepreneur, for help. Alex is shocked when Ted tells him that his business is worthless—The Stapleton Agency has no differentiating factor, is overly-reliant on him and 1 large client that contributes to 40% of its revenues.

A generic, owner-dependent business like The Stapleton Agency can at best be sold under an earn out agreement, which means that Alex will get a small amount upfront for the company, with the remainder being paid only *if* he successfully achieves pre-agreed targets for 3-5 years. He'll bear the bulk of the risks, while the acquirer enjoys the bulk of the reward from success. To sell his company without getting stuck in an earn out arrangement, Alex must first transform it with Ted's help.

KEY QUOTES

"A business reliant on its owner is unsellable so the owner becomes trapped in the business."

The 8-Step Model to Sell Your Business

Before you start on the 8 steps below, make sure you engage an accountant to help you strategize how to minimize your taxes when you sell your business.

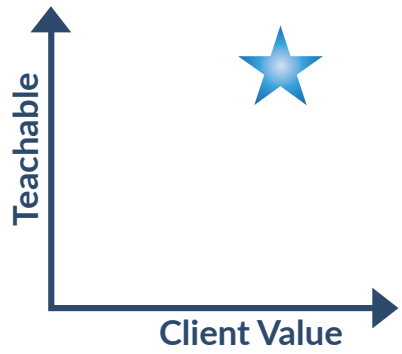
1. Develop a Standard Service Offering (SSO)

The Model. An SSO is a consistent process for delivering a specialized service that you focus exclusively on.

- *Identify a service* that's valuable to your client *and* can be taught to someone else. List down all the services you

"If you specialize, you can hire specialists and improve the quality of your work."

currently provide and plot them along 2 axes: teachability and client value. Your goal is to identify a service that (i) is high on both axes and (ii) will be needed by your clients on a regular basis (to provide a source of recurring revenue). You can also bundle ≥2 services to find your ideal offering.



- *Document your process*, breaking it down into specific steps that can be consistently repeated. Write an instruction manual detailing each step, including examples and templates to make it as easy to follow as possible. Test it on your team and keep refining it until your team members can deliver the service independently without your intervention. Be patient since the process will take time and multiple rounds of revisions.

- *Brand your offering* by (i) naming the SSO, (ii) naming each of the steps, and (iii) briefly describing the features and benefits for each step. It's vital to position your company and offering, so you can stand out from competitors and command the desired price and payment terms. Include your SSO in all your customer-facing communications, e.g. website and brochures.

The fable. Alex's first task is to identify what The Stapleton Agency is *really* good at. The answer is logo creation, which they do using a proven 5-step process. Clients need logos each time they launch a major new product or unit, and are typically willing to pay a good fee since each logo will be used for a long time.

- With Ted's guidance, Alex develops the "*Five-Step Logo Design Process*" which includes:

  (i) Visioning: Clients are asked to describe their product vision and differentiation.

  (ii) Personification: Clients are asked to personify their product e.g. if the product is a famous person, who will it be?

  (iii) Sketch Concepts: Initial ideas are presented to clients using freehand sketches. Such sketches help clients to

KEY QUOTES

focus on high-level concepts, whereas computer drafts tend to shift their focus to minor design details like font, lines or colors.

(iv) Black & White (B&W) Proofs: The client's preferred concept is developed into computer-generated options in B&W.

(v) Final Design: Detailing and colors are added only after the client has selected a B&W concept.

- Alex condenses the 5-step process into 1 page, and starts contacting dormant clients to pitch the SSO, *refining his pitch* as he goes. Within 2 weeks, he has contacted 24 clients, held 6 meetings and closed a $10,000 sale to Ziggy, a past client who's about to launch a new line of low-fat yogurt.

- Alex then creates an *instruction manual*, capturing details for each of the 5 steps above, such as the exact questions to ask clients, personification examples, logo color combinations etc. He keeps testing and editing the manual to help the team execute the process without him.

Tip: Be a specialist, not a generalist. It may seem scary to cut back from a full-service marketing agency to focus *only* on logo design. However, a small firm that tries to do too many things will end up hiring generalists who're mediocre compared to talents from larger firms. By focusing on a specific area, you can hire specialists to become #1 in your niche. When you're truly confident about your expertise, it also makes your pitches much more compelling.

2. Build a Positive Cash Flow Cycle

The model. Buyers will only be interested in a business with a positive cash flow cycle, i.e. it generates cash.

- To achieve that, you must *charge upfront* for your SSO. Ideally, get the full payment upfront. If not, use progressive billing so you have enough cash to cover the expenses as you work on each project.

- This allows you to operate without extra loans or equity injection, and will fetch a higher valuation from acquirers. However, you need a *strong SSO* from Step 1 above.

KEY QUOTES

"Pitching a process you own puts you in control."

"Create a positive cash flow cycle, which will give you the cash you need to operate without diluting yourself with other shareholders."

The fable. Alex realizes that he's been struggling with his bills because of the firm's negative cash flow cycle—there's a 4-5 months' gap from the time they start working on a job till the time they get paid. The more projects they have, the worse the cash flow. Alex revises the terms of payment for logo creation: by collecting $10,000 for each logo upfront, they get enough cash to finance the projects and create a positive cash flow cycle.

Tip: Think like a product company, not a service company. Clients are typically prepared to pay upfront for a product, but not for a service. Moreover, services rely on people who may come and go anytime, whereas standard products can be delivered without relying on any one person, including the owner.

3. Hire a Sales Team

The model. To build a sellable business, you need to show that (i) you don't need a superstar to bring in the sales and (ii) you have a diverse client base (such that no single client constitutes more than 10-15% of your revenue). The 2 steps above (creating, packaging and charging upfront for an SSO) paves the way for you to build a sales engine that delivers predictable, recurring revenues.

- Your goal is to set up a *sales process that works consistently across all clients*. Avoid salespeople who're used to selling professional services—they tend to use consultative selling which ends with heavy customization. Hire salespeople who (i) love to sell, and (ii) are strong in selling products.

- Ideally, *hire ≥2 salespeople* to generate friendly competition and to show that your process works for various salespeople.

- Track your *sales conversion rates* so you can better estimate your market potential.

The fable. For weeks, Alex manages his existing business while he works on the Five-Step Logo Design Process. After he sells his 2nd logo for a condo project, Ted advises him to hire a sales team that can predictably generate logo sales without him.

KEY QUOTES

"A service company is simply a collection of people with a specific expertise who offer their services to the marketplace."

"To sell your business, you need to demonstrate to a buyer that you have a sales engine that will produce predictable, recurring revenue."

- To work out *how many sales reps* are needed, Ted and Alex research the number of target companies in the area with ≥$1mil annual revenue. If they can close cold prospects at half of Alex's 4.5% closing rate with existing clients, the market potential should be around $11.6 mil (2% x 58,000 target companies x $10,000 per logo). If each salesperson can sell 50 logos per year, they'll need 2 salespeople to hit a $1 mil revenue target.

- Earlier, Alex had shared the company's new direction with the team, and received mixed responses. To hire the sales reps, he decides to *let go of existing staff*, including his lousy copywriter and 2 designers (one with an inflated ego and another who isn't keen to do templated logo designs).

- Alex hires Angie, a top saleslady who loves to sell and is experienced with selling mobile phones and yellow pages ads. Angie is competitive, disciplined and systematic, and keen to help build a sales team with a *structured sales process*. Meanwhile, Ziggy is pleased with the logo created by Alex's staff, Rhina and Chris. Alex decides to split the 5-step process between them, with Rhina handling account management (steps 1-2) and Chris handling the design work (steps 3-5).

4. Stop accepting projects outside of your SSO.

The model. Commit to your SSO and reject all other projects. This is the toughest step, since your clients and employees will keep pushing you to make exceptions, and you'll be plagued by self-doubt. Transforming a business for sale takes time—resist the temptation to give in, stick to your SSO and you *will* see a distinct shift over time.

- The short-term revenue and cash flow from other projects are not worth the *long-term costs*.

  (i) Clients will know you aren't serious about specialization, and continue to push for more customization.

  (ii) You must hire more people to handle the generalized services, most of which will be outside your sweet spot or core capabilities. This distracts you from building a real differentiating factor.

KEY QUOTES

"Not only is an acquirer going to want to know how big your business could become, they will also want to know that you have a predictable sales engine that allows you to estimate how many sales you can make."

"You can't be "kind of" a specialist. Either you specialize or you don't."

- Once the first 3 steps are in place—i.e. you have an SSO you can charge upfront for and a team to independently deliver the sales and products—you must *drive the model as fast/far as possible for at least 2 years*. This is vital to (i) build your business and financial track-record and (ii) strengthen your cash position so you won't need an earn out to survive. During this period, do not add projects outside the SSO, or get personally involved in sales/operations. If problems arise, focus on fixing them at a systems level.

- In the first year of your switch, ignore your *profit and loss* (P&L) and focus only on cash flow. Your P&L may look bad on paper because of accounting practices to spread the revenue across the product delivery period. In reality, your cashflow will improve.

The fable. Alex soon finds himself struggling with his decision to specialize. First, he has to pass on an invitation to pitch for an ad campaign. Then, he receives word that the proposal he submitted earlier to a huge sports company has been accepted. Alex badly wants the contract as it'll bring a significant $50,000 revenue a month. He also has to inform his existing clients that he can no longer support them on marketing areas outside of logo design. Faced with the financial impact and his clients' disappointment, Alex finds himself having second thoughts.

- However, Ted reminds Alex that true specialists don't take on random work, e.g. heart surgeons won't treat ankle sprains. He assures Alex that The Stapleton Agency will get many *more referrals* once it establishes itself as the world's best logo creator.

- Meanwhile, Alex hires a 2nd sales rep, Seamus. Angie and Seamus soon develop a *sales rhythm*, with 8-10 weekly appointments and 1 weekly logo sale each. For the first time, Alex is no longer the one bringing in the sales.

- Despite the progress, Alex is shocked to hear from his accountant that they're making losses. Although they're collecting $10,000 upfront per logo, the revenues are spread across 3 months to show only $3,333 per month. *Lower profits* mean lower bonuses that year.

- During his planning exercise, Alex decides on the *dream figure* of $5 million to sell his company. Ted advises him to

KEY QUOTES

"There is a point where the wind will start blowing the other way and your clients, employees, and stakeholders will finally realize that you're serious about focusing on one thing."

"Think of this as very mild short-term pain for a very big gain down the road."

write down the number on a card, seal it in an envelope and keep it safe. Alex also sets the target of $2.5mil annual revenue the following year with 15% pre-tax margin. He reflects with satisfaction that he now has a steady stream of new customers, a team that can operate without him, and extra cash to invest each month.

5. Launch a Long-Term Incentive Plan for Key Managers

The model. It's vital to have a management team that (i) can run the business without you and (ii) will stay after the company is sold.

- *Don't use equity* as a retention tool as it'll only complicate things. Moreover, equity is only valuable if there's a demand for the shares (which may not be the case for a small service firm).

- It's better to develop a *long-term incentive plan* for key managers. For example, you can reward managers with performance bonuses for achieving their annual targets. In addition, set aside matching annual bonuses into a long-term incentive account. After 3 years, each manager can withdraw 1/3 of the amount from their pool of funds. The pool will grow each year to match their personal achievement, but they can only access it if they stay for at least 3 years.

The fable. With his new focus, Alex steadily expands his team to 5 salespeople, 2 account directors, 2 designers, 1 coordinator and 1 accountant. However, the original team is starting to feel stretched between their own work and the burden of training and managing the new staff. It's time for Alex to build a management team that can run the business without him.

- Angie is promoted to Vice President (VP) of Sales, Rhina to VP of Client Services, and Chris to VP and Creative Director. They're offered the long-term incentive plan and given a 7% pay raise for the additional management roles. The Stapleton Agency sells 250 logos and closes the year with $2.7mil sales and $490k pre-tax profit. Alex aims to double revenues again the next year to $5mil with $1mil pre-tax profit.

KEY QUOTES

"Only use equity as a last resort for motivating and retaining your management team. Consider alternative forms of long-term incentive plans."
"As an employee, I'd much rather have an understandable cash bonus plan over being a minority shareholder in a closely held small business."

6. Find a Suitable Broker

The model. As you drive the model over the 2 years, your business may improve so much that you no longer wish to sell it. However, if you're still committed to proceed, then you must find a broker to represent you.

- Get recommendations from entrepreneurs who have successfully sold their firms. An *ideal broker* should (i) have a proven track record in your industry, (ii) truly appreciates your SSO so they can push for a competitive selling price, and (iii) be of the right size such that you're neither their largest nor their smallest client.

- Avoid brokers who only propose a single buyer, as they may be using you as a pawn to please their top client. You'd want some *competition* to generate the best selling price.

- Your broker will work with you to create "*the Book*"—a document that describes your business, performance and future plans and prospects. They'll usually charge a percentage of the deal value.

The fable. By now, The Stapleton Agency is doing much better and Alex is less stressed. If they hit $5mil pre-tax revenues this year, Alex can probably sell the business for his target price. Ted warns him that if he proceeds, there'll be a 6-8 months roller coaster ride and no turning back thereafter. An alternative is for Alex to declare a larger bonus and keep growing the company. Alex decides to go ahead with the sale.

- Ted refers Alex to 2 *brokers*. One of the brokers instantly suggests a potential buyer, while the other (Peggy) is impressed with what Alex has built and suggests researching into companies with a strategic fit (e.g. printing companies that can use logos as a trojan horse for larger printing contracts). Alex decides to go with Peggy.

- Next, Alex must develop a *3-year business plan*. Since the acquirer will be a large company that wants rapid growth, Ted advises Alex to think big and show how huge the logo-creation business can grow given unlimited resources. Using Starbucks as a benchmark, Alex draws up a plan to show how they can reach $12 mil annual revenues in 3 years,

KEY QUOTES

"The firm you select needs to be large enough to be respected by a potential buyer, yet small enough that your deal will be important to them. Ideally they will have also done some deals in your industry."

"For you to get the highest valuation for [your company], you need to show how you can be an engine of growth for an acquirer."

by adding satellite sales offices and telemarketers to reach more businesses.

- Based on this plan, Peggy works with Alex to shortlist 23 *potential acquirers* with a strong strategic fit and enough cash. She contacts the companies with a 2-page teaser on the business opportunity, and interested buyers will sign a non-disclosure agreement to get The Book.

Tips/Insights:

- Continue to keep a close eye on your *business performance* even as you work on selling the company.

- *Be deliberate with your choice of words*. Use words like "Current Year" to describe your first year numbers instead of "Forecast". Present your business as a product company with a scalable, repeatable process. Use products-related words (e.g. customers, company and contract), and avoid services-related words (e.g. clients, firm and engagement).

- *Strategic vs financial buyers*. Strategic buyers tend to pay more as they consider your business' long-term value assuming they put their resources behind it. Financial buyers tend to push for a lower price to maximize their return on investments.

7. Inform your Management Team

The model. The prospective buyer will eventually need to meet your team. It's better for the team to hear about the sale from you than from the grapevines.

- *Present the sale from the managers' perspective*: help them to see what's in it for them if the deal goes through, e.g. better career prospects, higher chances of hitting their personal bonus targets and growing their long-term incentives.

- You can also offer a *cash bonus* if the deal is closed successfully, but pay it out in ≥2 installments as an incentive for people to stay.

KEY QUOTES

"Think big; remember that the company that acquires you will have more resources for you to accelerate your growth."

"Stop using the language of a service firm and start using the language of a sellable business."

"Take off your conservative business owner hat and imagine what is possible."

The fable. Of the shortlisted companies, 4 signed an NDA to get The Book. It's time for Alex to tell his management team of the potential sale. Alex feels guilty about reaping the financial gains after the team has worked so hard to grow the business. Ted reminds Alex that he's spent *years* building the business and bearing the full financial risk. Alex calls for a meeting to explain why they need more resources for the next level of growth, and how the team can benefit from being part of a bigger company. To Alex's surprise, the team welcomes the news.

Tip: When you meet the prospective buyers, be prepared to answer in-depth questions about your business model, sales process, cash flow, profit margin etc. You're also likely to be asked why you are selling the business. Ideally, convey your excitement about the company's future, say you want to tap on the buyer's resources for the next level of growth, get some liquidity for the value you've created, while having the option to participate in some of the upside in future. You don't have to commit to an earn out, but you should minimally indicate your *willingness to help with the transition*.

KEY QUOTES

"Buyers understand that entrepreneurs want to put some cash in their jeans but nobody wants to buy a sinking ship where the captain is about to jump."

8. Convert the offer(s) into a binding deal

The model. After the management presentations, you may get offers in the form of non-binding Letters of Intent.

- It's common for the offer to include an *upfront fee and an earn out fee*. Review the offer based on the upfront fee. Treat the earn out fee as an optional bonus, i.e. you must be able to walk away anytime if things get unpleasant after the sale. Don't be swayed by your advisor (who has a vested interest to close the deal) nor by promises to help you achieve your earn out targets.

- Be prepared for a relatively painful *due diligence period* of 60-90 days. Stay calm and present the best possible picture without lying. Since most offers are non-binding, the buyer may walk away from the deal at any time. It's also common for the buyer to reduce the offer price after the due diligence period, knowing that you're already heavily invested in the process. Review the new offer objectively and walk away if it doesn't meet your goal.

"As long as you get what you want for the business up front, and treat the earn out as gravy, you can walk when things get nasty."

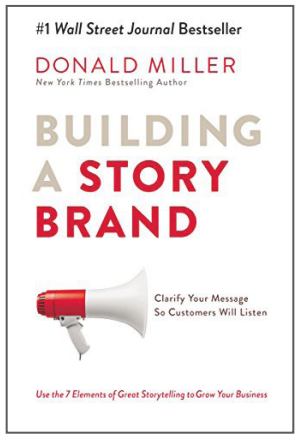
The fable. Alex and Peggy meet with 2 different printing companies. After weeks of anxious waiting, they receive an offer from one of the companies, PTG, for $6mil plus an additional $3mil if the revenue/profit projections are achieved at the end of 3 years. However, this is a non-binding offer contingent on an exclusive 60-day due diligence process.

- Over the next 45 days, Alex endures an exhausting *due-diligence process*. He's interrogated on details like their market projections and processes, while PTG's rep scrutinizes their ops and documents. Ted then advises Alex to apply some pressure for a decision by the end of the 2-month exclusive window—he assesses that PTG probably won't want to waste its weeks of effort/resources.

- Finally, after 8 weeks of due diligence and 6 months of hard work with Peggy, Alex receives a final offer of $5.2mil. The number was revised downward from the original $6mil since PTG disagrees with the market potential calculations. Alex almost rejects the deal in anger. However, he opens the dream figure that he sealed away over a year ago, and realizes that the revised figure still meets his target. He accepts the deal and *The Stapleton Agency is finally sold*.

KEY QUOTES

"Every negotiation reaches a point where you need to communicate to the other side that they've pushed you as far as they can."



BUILDING A STORYBRAND

Clarify Your Message So Customers Will Listen

DONALD MILLER

The Big "So What"

Marketing campaigns are often a waste of money because of ineffective messages. This book presents a 7-part framework to help you present a clear, effective message that'd get your customers' attention and grow your business. It can be used for any industry or size of business.

Introduction

To win over your potential customers, you must first understand how they think. All human beings are fundamentally driven by our primitive survival instincts.

- We're constantly scanning the environment for things that can help us to *survive and flourish*; and
- We try to do this with the *least amount of energy/effort*.

Most brands make **2 key mistakes** in their marketing campaigns:

- They *focus on their brand/company* instead of how they can help the customers to survive/thrive.
- The message is *too complex*. If your message can't be understood in 5 seconds, it's not simple and repeatable enough.

Stories are powerful because they combine seemingly-disconnected parts/events into a coherent whole, and are thus easy to follow and remember. The StoryBrand framework is a proven formula for storytelling and communication.

- The key to a great message is *clarity*. To achieve clarity, you must *eliminate noise*, i.e. cut out irrelevant information that creates clutter and confusion.

KEY QUOTES

"Whether we're writing a story or attempting to sell products, our message must be clear. Always."

"What we think we are saying to our customers and what our customers actually hear are two different things."

"People don't buy the best products; they buy the products they can understand the fastest."

"The key to great writing isn't in what they say; it's in what they don't say."

- This framework uses *7 plot points* to filter out noise and present a clear, compelling message. It's like having 7 musical chords that can be combined to create an infinite number of musical pieces. In fact, if you examine any blockbuster movie—from Hunger Games to Star Wars—you'll see the same formula at work.

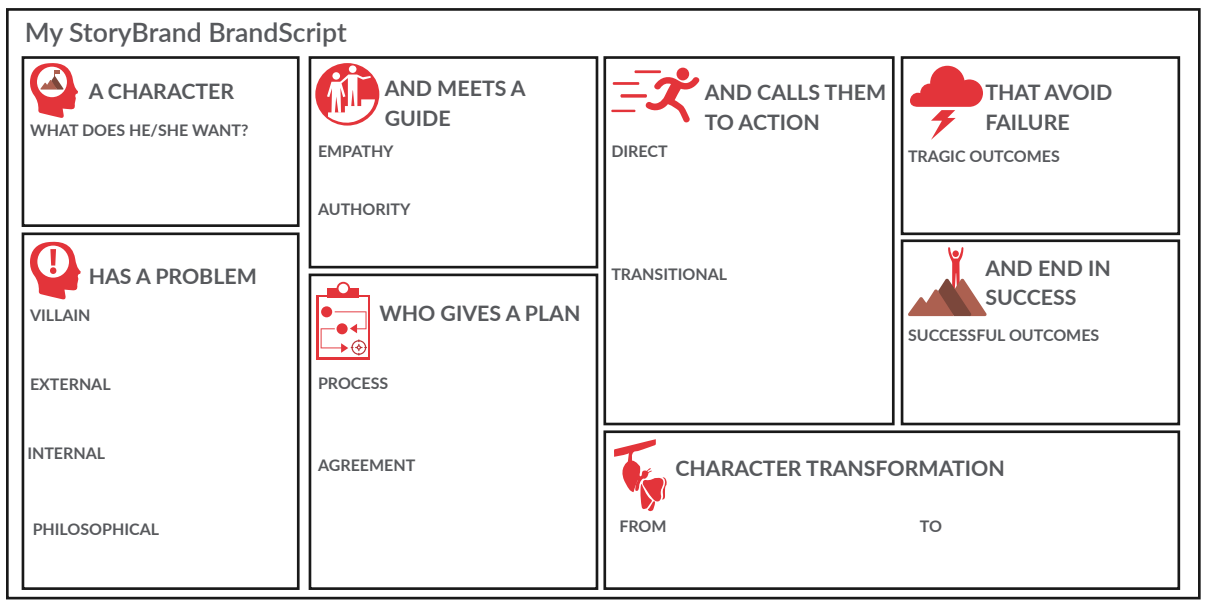
- Your message must be so clear and simple that it passes the "*grunt test*", i.e. even a caveman can instantly grasp it and grunt out the message. When this message is repeated over and over, it crystallizes what your brand stands for and where it fits in your customers' story.

Here are the **7 plot points** in a nutshell: A Character (who wants something) has a Problem that he/she is struggling with. A Guide enters the picture, gives a Plan and calls the character to Action. As a result, the character manages to avoid Failure and attain Success.

In the next section, we'll zoom in on the details for each of these 7 elements. You can create your **1-page BrandScript** for free at mystorybrand.com.

- Miller recommends that you read up on each element, then pause to brainstorm potential options before filtering down to 1 message per section.

- Start by creating the BrandScript for your overall brand, then move into the BrandScript for each of your divisions or even specific products and customer segments.



KEY QUOTES

"If we want to connect with customers, we have to stop blasting them with noise."

Develop your StoryBrand BrandScript

1. The Character

Your customer is the hero of the story, not your brand.

Your first step is to **define who your customer is and what he/she wants** in relation to your brand.

- Think of your customers as hitchhikers: they won't hop onboard unless you can *take them where they want to go*.

- Our brains naturally seek closure. When you show something your customers want, you open a "*story gap*". They'll want to find out if you can bridge the gap between where they are and where they want to be. Will the underdog win the game? Can the hero save the town? However, if you fail to identify a relevant need, you won't open a story gap.

Focus on 1 thing that helps your customers to survive or thrive.

- No matter how many benefits you offer, force yourself to narrow down to *1 core desire*. Have a clear main-plot rather than confuse the audience with too many sub-plots.

- *Survival* refers to our desire to be safe, healthy, strong and happy. We want to *thrive* physically, emotionally, relationally, and spiritually, e.g. to enjoy a luxurious and restful holiday, have a secure retirement plan, leave a meaningful legacy, own our dream home, or have a healthy start to each day. You can explore several areas including:

  (i) *Conserving resources* (e.g. saving time, money, energy) or *accumulating resources* (e.g. making more money, improving productivity);

  (ii) *Building social networks* for security, connection and support;

  (iii) *Gaining social status* which is associated with power, prestige and abundance; and

KEY QUOTES

"The customer is the hero, not your brand."

"Customers don't generally care about your story; they care about their own."

(iv) *Providing a sense of meaning and contribution*, e.g. to be a part of something greater than ourselves, or to help others to survive/thrive.

- Keep the message *clear and simple*. For example, helping your customer to "become everyone's favorite leader" clearly conveys a range of benefits including respect, success and connections.

2. The Problem

Offer a solution that addresses your customers' problems at 3 levels.

Now that you've entered your customers' story, you must **deepen their interest** by identifying a problem they face, e.g. worries about retirement, no time to clean up a messy house. This acts as a "hook" to draw them deeper into the story.

Every good story has a **villain** that disrupts the hero's life and creates frustrations. This evil villain now stands between your customers and their desires. The more you talk about the villain, the more your customers want a tool to defeat it. A villain can be anything from distractions to dust mites, so long as it has 4 characteristics:

- It's a *root cause*, e.g. an unstable economy causing financial fears;
- It's *relatable*, i.e. the customer instantly recognizes and dislikes it;
- It's *singular*, i.e. there's only 1 villain; and
- It's *real*.

Zoom in on **3 levels of problems** created by this villain:

- *External*. This is the obvious obstacle between the hero and his/her prize. In movies, this could be a deadly virus or a ticking bomb. In business, this could be a flabby tummy or a leaky roof.
- *Internal* problems are the underlying causes of external problems. They usually stem from a sense of insecurity from wondering "do I have what it takes to succeed?" Apple is so

KEY QUOTES

"Companies tend to sell solutions to external problems, but customers buy solutions to internal problems."

"People's internal desire to resolve a frustration is a greater motivator than their desire to solve an external problem."

successful because its simple interface addresses an internal frustration—people want to use technology but feel intimidated by it.

- *Philosophical*. This involves the "why" that goes beyond the story, e.g. "good should triumph over evil", "everyone deserves to be loved", "we ought to stand up to injustice"

Businesses typically focus on solving external problems, when people buy things to solve internal problems (e.g. frustration and self-doubt). Ideally, they want a solution that **concurrently solves all 3 levels of problems**. Consider how you can position your solution as a tool for external/internal problems, as well as a way for customers to express themselves and stand for something bigger. For example:

TESLA MOTOR CARS	NESPRESSO HOME COFFEE MACHINES
Villain: Gas guzzling, inferior tech **External**: I need a car **Internal**: I want to be an early adopter of new technology. **Philosophical**: I should choose a car that's environmentally-friendly.	**Villain**: Coffee machines that make bad coffee **External**: I want good coffee at home. **Internal**: I want to feel sophisticated. **Philosophical**: I shouldn't have to be a barrister to make gourmet coffee at home.

KEY QUOTES

"People are looking for a philosophy they can embody or a series of steps they can take to solve their problems."

3. The Guide

Customers want a guide, not another hero.

At various points in our lives, we all encounter "guides" who give us a helping hand and shape our views, actions and lives. Likewise, **every hero needs a guide**.

- Heroes start out with self-doubts and problems they can't solve on their own. They need a guide who has "*been there, done that*" and can point them in the right direction. Star Wars' Luke Skywalker was guided by Yoda, while Hunger Games' Katniss was guided by Haymitch.

- *Don't position your brand as the hero*, or you'll end up competing with your customers. Be the guide they're looking for. If you focus on your customers' success, your own success will follow.

"Nearly every human being is looking for a guide (or guides) to help them win the day."

"Always position your customer as the hero and your brand as the guide. Always."

To establish yourself as a trustworthy guide, you must show **2 characteristics**:

- *Empathy*. All human beings want to be seen, heard, and understood. Show you know your customers' pain and frustration with phrases like "We understand how it feels to ..." or "Nobody should have to go through this . . ." or "Like you, we find it frustrating when..." When your customers feel that you understand them and share something in common, they'll start to trust you.

- *Authority*. Demonstrate that you know what you're doing and can guide them to their desired destination. You can establish your competence (without bragging) using these 4 ways:

  (i) Share a few succinct testimonials of the results that other heroes have achieved with you;

  (ii) Present simple statistics e.g. the number of satisfied customers or the % growth in your clients' profits;

  (iii) Include a few key awards you've won; and/or

  (iv) Include logos of well-known businesses you've worked with (if you're in a B-to-B business).

KEY QUOTES

"The day we stop losing sleep over the success of our business and start losing sleep over the success of our customers is the day our business will start growing again."

"People trust those who understand them, and they trust brands that understand them too."

4. The Plan

Customers will only trust a guide with a plan.

Once you establish yourself as a guide, you have a relationship with the customer. However, to part with their hard-earned money and make a purchase, your customers must be ready to **commit**.

- To win this trust and commitment, you must demonstrate that you have a *clear plan to solve their problems*.

- A *good plan* should (i) lay out how exactly to do business with you and/or (ii) remove the perceived risks that are holding your customers back.

Specifically, there are **2 types of plans** you can present:

- A *process plan* lays out the steps needed to buy and/or use your product. A pre-purchase plan could look like this: fix an appointment → we'll customize a plan for you → we'll execute

"The key to the success of any plan is to alleviate confusion for our customers."

"If process plans are about alleviating confusion, agreement plans are about alleviating fears."

the plan together. A post-purchase plan could involve these steps: download the app → input your expenses → manage your finances. Keep the process to 3-6 steps to minimize confusion.

- An *agreement plan* lists out the assurances to allay customers' fears of doing business with you. You're basically saying, "If you buy this, we'll do all that". List down all the concerns your customer may have, then develop a list of agreements to address them. Besides eliminating customers' perceived risks, the list can increase the perceived value of your solution and clarify your shared values. This plan doesn't have to be featured upfront (e.g. on the home page of your website), but can be presented on your walls, paper bags, FAQ pages etc.

Name the plans in a way that conveys the value or benefits to your customers e.g. "easy installment plan" or "our quality guarantee".

5. Calls to Action

Customers won't take action unless they're challenged to do so.

People don't make major decisions unless they have a clear reason and are pushed to do so. You must call them to action.

- Never assume your customers can read your mind. You must explicitly ask them to buy, and must do so repeatedly. Your customers are flooded by thousands of commercial messages daily—unless you're *loud and clear*, they won't hear you.

- Don't worry about overselling. If you're truly confident of solving your customers' problems, you should have no qualms about prodding them to jump onboard. In fact, if you don't *sell with conviction*, you convey a lack of confidence in your solution.

There are 2 types of calls to action:

- *Direct calls to action* are simply direct purchase requests, e.g. "buy now", "book an appointment today" or "call for an instant quotation". The key is to repeat them in various formats on your website, signboards, emails etc. For example, you should have multiple "Buy-now" buttons on your website in different colors, sizes and fonts. Each call to action should lead to a sale or at least bring the customer closer to a purchase.

KEY QUOTES

"Bodies at rest tend to stay at rest, and so do customers. Heroes need to be challenged by outside forces."

"Most people think they're overselling when, in truth, their calls to action fall softer than a whisper."

"If you aren't asking people to place an order, they won't."

- *Transitional calls to action*: Even if someone isn't ready to buy yet, you can progressively deepen the relationship until they're ready. It's like dating—you won't give up just because someone isn't ready to marry you on the first date. You can share (i) free information (e.g. worksheets, webinars or videos that position you as a guide/expert in an area), (ii) testimonials that reinforce the story map in your potential customers' minds, and/or (iii) samples or free trials that let people experience your products. These help you to claim your niche/territory, develop a sense of reciprocity, and position yourself as a guide in customers' minds.

6. Avoid Failure

Everyone wants to avoid a tragic ending.

All human beings are only motivated by 2 things: to avoid pain (something bad) or to seek pleasure (something good). This element is about **defining what's at stake** so your potential customers feel motivated to take action to avoid failure or disaster.

- We follow a story only because there's something at stake. We want to know if the hero will save the world from disaster or win the girl of his dreams. Likewise, we must show our potential customers the *costs of not using our products or services*.

- There are many opportunities to reinforce what's at stake, e.g. in your website messages, through your blog titles or e-mail content. The key is to *create a sense of urgency* without overdoing it.

There are **2 types of failures** you can highlight:

- *Potential loss*. Human beings are fundamentally loss-averse, i.e. we don't want to lose what we have/own. Help potential customers realize that (i) they're at risk (e.g. 1 out of 4 people get cancer) and (ii) they should take action to reduce their vulnerability. Then specify the call to action and challenge them to take action *now*.

- *Bad outcomes*. Define the negative outcomes you're helping your customers to prevent, e.g. losing money, getting sick, being infested by pests.

KEY QUOTES

"A story lives and dies based on the question: Will the hero succeed or will they fail?"

"Too much and your customers will resist you, too little and they won't know why your products even matter."

"Remember, if there are no stakes, there is no story."

Here are a couple of examples of bad outcomes:

USED CARS	SUMMER CAMP FOR KIDS
Being ripped off by a used-car salesman Being stuck with a lemon Feeling foolish/taken advantage of	A long, boring summer Restless kids running around the house Regret wasting the summer

7. Attain Success

Tell people how you can improve their lives. Don't assume they know.

This is where you give customers the happy ending to their story. Paint a **clear, aspirational picture** of where you'll bring them, i.e. what their life could look like if they use your products or services.

- *Be specific*. For example, J.F. Kennedy painted a simple but powerful vision: "We're going to put a man on the moon."

- You can use this "*Before-and-After exercise*" by Ryan Deiss to crystallize how your brand will change customers' lives.

	Before your Brand	After your Brand
What do they have?		
What are they feeling?		
What's their average day like?		
What's their status?		

* Adapted from Ryan Deiss

There're **3 key ways to end the story powerfully** for your customers.

- *Gaining power or status*, e.g. helping your customers to become more respected, admired or attractive. Perceived status could come from access to privileges, getting something scarce, having a premium status (e.g. being a Diamond member or Star Donor), or being associated with other premium brands.

- *Becoming whole with something extrinsic*, e.g. finding their other half, having tools that let them do superhuman work, having the time and money to do everything they want.

- *Becoming whole with something intrinsic*, e.g. feeling inner peace and self-acceptance when they achieve their full potential or become who they're meant to be. You could provide this happy ending by helping your customers to accomplish inspirational

KEY QUOTES

"Everybody wants to be taken somewhere. If we don't tell people where we're taking them, they'll engage another brand."

feats, accept who they are, or become a part of a wider movement/purpose.

In short, the 3 key elements above can help people to resolve their external, internal, and philosophical problems. By presenting this vision clearly as a core part of your brand promise, you create **closure to the story** and convince your customers to follow you.

Going Beyond the 7 Elements: Personal Transformation

Once you've completed your BrandScript, you can now address the strongest motivator for action: the **human desire for transformation**. All of us want to become a better version of who we are, e.g. to be fitter, wiser, more attractive, more respected etc.

- In any story, the hero will undergo *change and development*. They develop new skills, find inner strengths, build their character and eventually prevail.
- Ask yourself: Who do your customers aspire to become? How would they want others to describe them? How can your brand help them to become that person? Define the *aspirational identity* behind your brand, use it in all your communications and as a guide for your business. For example:

PET FOOD BRAND	SHAMPOO BRAND
From: Passive dog owner To: Every dog's hero	From: Anxious and dull To: Carefree and radiant

Great brands don't just sell a product or service; they are fanatical about their customers' success and transformation. As you help your customers to solve their problems and become the heroes they aspire to be, **you're not just growing a business; you're also changing lives**.

Implement your StoryBrand

Once you've created your BrandScript, you can apply it in several steps.

Improve your website

Your website leaves a critical first impression, much like a first date. Make sure it passes the grunt test and has **these 5 elements**:

KEY QUOTES

"Everybody wants to be somebody different, somebody better, or, perhaps, somebody who simply becomes more self-accepting."

"Brands that participate in the identity transformation of their customers create passionate brand evangelists."

"Participating in your customer's transformation can give new life and meaning to your business."

"Let's do more than help our heroes win; let's help them transform."

"A great digital presence starts with a clear and effective website."

- *A clear offer "above the fold"*. The top part of your website (that's visible without scrolling) must clearly convey what you offer, e.g. "We will make you a golf pro" or "We help you design beautiful websites." The key message (text and image) above the fold must (i) promise an aspirational identity, (ii) promise to solve a problem (e.g. stop hair loss, clear choked drains), and/or (iii) specify what you do (e.g. "we walk your dogs").

- *Explicit calls to action*, e.g. your "register today" or "buy now" buttons. Your customer typically reads your website in a Z-shape, so you should minimally have call-to-action buttons on the top-right, in the middle of the screen just above the fold, and later as people scroll down. Make the buttons obvious, repeat your message and state the transitional actions clearly.

- *Success-related images* of happy, satisfied customers.

- *Snapshot of key revenue streams*. If you have multiple products or revenue streams, start with an overarching message, then break down the specific products/divisions later so people can choose the right options.

- *Few words*. People scan through websites; they don't read them. Wherever possible, use images, 3-4 bullet points or short soundbites. Minimize full sentences and avoid paragraphs.

Stick to the BrandScript. You can vary the choice of words but don't add new ideas outside the script or you'll create noise.

Transform your Organization

- Use the BrandScript to bring internal clarity and create **employee engagement**. In most organizations, there's nothing holding together the mission statement, strategy, operations, guidelines and metrics. As a result, employees feel overwhelmed and confused by the sheer amount of information and noise.

- A story can **bring your mission to life** and help people to understand how the various parts of your business all fit into a grand adventure.

    - In your company story, *your team members are the heroes* and your leaders are the guides. A new recruit becomes a part of

KEY QUOTES

"The stuff you share on a first date should be short, enticing, and exclusively customer-centric."

"The fewer words you use, the more likely it is that people will read them."

"With a StoryBrand-inspired narrative, ordinary jobs become extraordinary adventures."

"A true mission isn't a statement; it's a way of living and being."

this story, gets transformed by the company and is excited to see how the story unfolds with the various stakeholders.

- Your ultimate goal is to align *the company story and customer story*. When your company is on-mission, every staff becomes an ambassador. They know the company story and can spread the message using consistent, compelling soundbites.

Grow your Business

By now, you have a clear, effective message both internally and externally. You're ready to grow your business rapidly with 5 remaining steps:

- *Develop a One-liner* that integrates the Character, the Problem, the Plan, and the Success, e.g. "We provide busy executives and entrepreneurs with easy-to-digest summaries of top business and personal development books so they're equipped to move ahead with confidence and purpose". This summarizes your entire business, and should be used by all your team-members and in all your communications (e.g. website, email, name cards etc.).

- *Create a lead generator* (e.g. pdf, video series) and collect email addresses, with the aim to create value for your customers and position yourself as an authority in your niche.

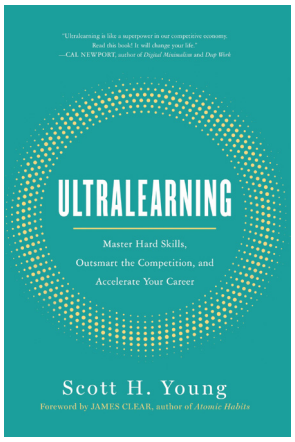
- *Build an automated e-mail drip campaign*. Send your potential customers value-adding emails regularly, e.g. talk about a problem, share a plan to solve it, describe how life looks like with the problem solved, and include a call to action.

- *Share transformation stories*. Collect and share customer testimonials (about the problems and frustrations they faced, how your product helped them and what life looks like now).

- *Create a referral-generation system*. Convert happy customers into brand ambassadors. Define your ideal customers, give your existing customers a good reason to spread the word (e.g. offer a reward) and automate the process.

KEY QUOTES

"Brief, narrative ideas shared from inspired team members spread faster than muddled, confusing explanations shared by bored, disengaged employees."



ULTRALEARNING

Master Hard Skills, Outsmart the Competition, and Accelerate Your Career

SCOTT H. YOUNG

The Big "So What"

Can you get an MIT-level education without attending MIT, become fluent in a new language in 3 months, or develop a multi-million video game by yourself? The answer is "yes". In this book, Young shares the strategies and tactics used by ultralearners to master hard skills more quickly, accelerate their careers, become more productive and fulfilled.

Introduction

Ultralearning is a strategy for acquiring skills and knowledge in a self-directed, intense way. It's about deciding what you want to learn, then committing to a period of deep, focused learning activities that push you to your limits. That's the best way to get in flow and compress your learning into the shortest possible time.

- Young was interested in computer science, but couldn't afford to attend MIT. So, he embarked on a self-education project, researching free MIT classes online, focusing on the final exams and working backward to figure out what he had to learn and how. In just 1 year, he could pass the final exams for the MIT computer science programme. He went on to learn 4 languages in 12 months, and taught himself to draw portraits in 30 days.

- Along the way, he met and researched other "ultralearners", including polyglots who speak many languages, mathematical geniuses, game show winners, etc. Based on his observations and experience, Young identified the *9 common principles* in this book.

KEY QUOTES

"If you can master the personal tools to learn new skills quickly and effectively, you can compete more successfully in this new environment."

"With ultralearning, deeply and effectively learning things is always the main priority."

"Learning well isn't just about following a set of prescriptions. You need to try things out for yourself, think hard about the nature of the learning challenges you face, and test solutions to overcome them."

Ultralearning is not easy, but it can be **extremely rewarding**.

- Ultralearning is possibly one of the best strategies to adapt and compete in a dynamic world. With the rapid pace of change, those who can't renew themselves quickly get left behind. Ultralearning helps you to learn more in a fraction of the time, so you can advance your *career* quickly or even transit to a new career.

- You can also use it to master any area of *personal interest*—be photography or culinary skills—to feel more confident and fulfilled.

Every learning project is different, and you won't learn effectively by rigidly following a fixed sequence of steps. However, you can apply the 9 ultralearning principles below to learn optimally in any area. The key is to decide what matters to you, and **take responsibility** to achieve those goals.

KEY QUOTES

"The best ultralearners are those who blend the practical reasons for learning a skill with an inspiration that comes from something that excites them."

Explore Beyond your Comfort Zone

1. Metalearning: Start with a Road Map

The first step in any ultralearning project is to figure out the most effective and efficient way to learn that subject.

- Formal education often uses a one-size-fits-all approach to cater to a range of students. However, you can *customize your self-learning project* to fit your specific needs and abilities. By investing some time upfront to develop a learning map, you will (i) learn much faster for your current project, and (ii) improve your long-term learning ability to learn faster in any area.

Develop your metalearning map with 3 specific questions:

- Define *why* you want to learn that subject. Your goal or desired outcomes will determine the type of skills and knowledge you need. Try *interviewing experts* in the field to refine your learning plan. For example, you can speak with a successful architect to confirm if learning design skills will indeed help you to become a good architect. Don't be afraid to reach out to experts via social media, email or other channels: many of them will be willing to do a 15 minute phone/video call to help you.

- Once know your "why", you can figure out *what* you must learn.

  (i) On a piece of paper, create 3 columns labeled: *concepts*, *facts*, *and procedures*.

  - *Concepts*: What are the ideas you must understand? For example, to learn math you need to grasp concepts like equality and symbolic representation.

  - *Facts*: What are the things that you must memorize? For example, languages involve vocabulary, pronunciation and grammar.

  - *Procedures*: What are the actions that must be practiced?

  (ii) *Identify your bottlenecks*, i.e. the concepts, facts and procedures that are the hardest for you. Research the

KEY QUOTES

"Metalearning…forms the map, showing you how to get to your destination without getting lost."

"Each project you complete will give you new tools to tackle the next, starting a virtuous cycle."

tools/methods to help you tackle those bottlenecks, so you have a more realistic learning map.

- To figure out *how* to learn what's required:

  (i) *Benchmark* how people typically learn that subject. For example, you can research how it's usually taught in schools or universities, examine the topics in textbooks, or course syllabuses found on websites.

  (ii) Modify the default curriculum, by *emphasizing or excluding* certain topics to suit your personal needs/ preferences. For example, if you're learning French because you're going to Paris in 2 weeks, you'd want to focus more on pronunciation than spelling.

You do *not* need a perfect learning map. The idea is to make sure you've evaluated your options instead of jumping into whatever's easy or convenient. You can always add more details as you go along. So, is there an **optimal amount of planning**?

- As a rule of thumb, invest about *10% of your expected learning time* into the initial research and planning.

- Then, *regularly review* your progress to see if diminishing returns have set in. If so, pause to research new tools/ techniques.

2. Focus: Sharpen your Ability to Concentrate

Focused learning delivers superior results. You can **improve your ability to focus** through practice—by dedicating chunks of time to focus fully on what you're trying to learn.

Ultralearners overcome **3 key obstacles to concentration**:

- *Procrastination*: When it's time to start on your ultralearning project, you may find yourself putting it off, e.g. you tell yourself that you need a break, you suddenly feel hungry, or feel an urge to pack the table. We often procrastinate without realizing it, so the first step is to recognize when you're procrastinating. Then, you can overcome it with the following tactics:

KEY QUOTES

"Find the sweet spot between insufficient research and analysis paralysis."

"Most motives to procrastinate are silly when you verbalize them, yet that doesn't stop them from ruling your life."

(i) Acknowledge the unpleasant aspects of the task (e.g. you worry that you may not do a good job, or feel uncertain about where to start). Tell yourself to just bear with it for *5-10 minutes*. Once you get started, the unpleasant feelings usually fade away and you end up doing much more.

(ii) To stay focused, promise yourself a 5-minute break each time you complete 25 minutes on the project.

(iii) Set a rule that you can only quit after you've *achieved a milestone*, e.g. memorized a vital piece of information.

- *Distractions*: Most learning tasks can be finished in 50-60 minutes of focused learning. Unfortunately, we get distracted easily, e.g. we find ourselves daydreaming or checking our phone. Remove these 3 common sources of distractions:

  (i) Set up your ideal learning *environment*, e.g. have your writing materials at hand, and turn off distractions like the TV/phone.

  (ii) Choose the *learning tool* that best grabs your attention. For example, do you focus better when you read, listen to an audio or watch a video? You can also make notes as you read to help you to focus.

  (iii) *Negative emotions* (e.g. anger, frustration) can hijack your mind. Acknowledge the feeling, allow it to pass, and gently refocus back on your project.

- *Variety*: Often, simpler tasks (e.g. throwing darts or shooting basketballs) are best performed in a stimulating environment (e.g. upbeat music that gives you a burst of mental arousal). Complex tasks (e.g. writing an essay or solving a complex problem) may require relaxed focus and a quieter environment. Experiment to find the ideal states of mental arousal you need for different learning activities.

KEY QUOTES

"Remember: even if your learning is intense, your use of the skill later on will not be."

"A clear, calm mind is best for focusing on almost all learning problems."

3. Directness: Go Straight into Application

Consider the situation/context where you want to apply your learning. Then, plunge right in and **acquire hands-on experience** by learning to do the tasks in a similar situation. Don't settle for other convenient or comfortable activities.

- For example, a fresh graduate couldn't get a job as an architect. He realized that many architecture firms were using a complex design software, so he learned the software and used it to design his own building. With this portfolio, he landed a job quickly.

- The fastest way to learn something is by doing it directly. Yet, most schools use an indirect approach: they teach facts, concepts and skills in a classroom setting, and assume students can transfer the learning to the real world. In reality, different situations come with nuances that require different solutions, and it's not easy to apply theoretical knowledge to a specific context.

Ultralearners engage in **direct practice**. For example, instead of studying trivia from books or websites, *Jeopardy*! champion Roger Craig did simulated practices using past game shows.

- Go for *project-based learning*, not classroom-learning, e.g. learn computer coding by creating a computer game, or learn military history by writing a thesis about it.

- Use *immersive learning*. To learn a new language, immerse yourself in the culture (e.g. visit China to learn Mandarin).

- If you can't practice the skill directly, then use *simulations*, e.g. surgery or flight simulators.

- Aim for an "*overkill*", i.e. put yourself in a situation where the standards are much higher than your goal. If you want to become a great public speaker, don't just join the Toastmasters clubs. Take part in a public speaking contest.

KEY QUOTES

"The easiest way to learn directly is to simply spend a lot of time doing the thing you want to become good at."

"When we learn new things… we should always strive to tie them directly to the contexts we want to use them in."

4. Drill: Attack Your Weakest Point Relentlessly

In any process, a bottleneck can slow everything down, e.g. a limited vocabulary can hinder your fluency in a language. This principle is about isolating your **key constraint**, so you can focus on improving the 1 thing that'll enhance *all* other aspects of your skill.

To master a challenging skill, the best way is to break it down into small parts, master each component, then reassemble them. Ultralearners typically use the "Direct-Then-Drill" strategy:

- Start by *practicing the skill directly* in a situation that most closely matches the context intended for future use.
- Then, *isolate the components* of the direct skill that are limiting your overall performance or pace of learning.
- Ruthlessly *drill those components* before returning to your direct practice, to transfer the learning and see if the drills worked.

To **design effective drills**:

- Start by *forming a hypothesis* about what's holding you back, then use the Direct-Then-Drill approach to test if you're right.
- Use these tips for *designing your drills*:

  (i) Use *time slicing* to isolate 1 action in a series of actions, e.g. practice the hardest few bars of a piece of music before playing the whole song.

  (ii) Drill *cognitive components* e.g. pronounce pairs of words using different tones and record yourself speaking them.

  (iii) *Copy the aspects of the skill you don't need*, so you can drill the aspects that you need. To present his arguments more logically, Benjamin Franklin rewrote the arguments from magazine articles from memory, then compared his version with the original to find his flaws. By "borrowing" others' arguments, he could focus on his writing.

KEY QUOTES

"Drilling problems without context is mind-numbing. However, once you've identified that it's the bottleneck preventing you from going further, they become instilled with new purpose."

(iv) Spend more time practicing 1 component (e.g. your headline or first paragraph) to *magnify* that aspect.

- Regularly remind yourself on your goals to *motivate yourself* to persist in your drills.

5. Retrieval: Use Self-Testing to Learn

Retrieval practice is about trying to recall as much information as possible from memory, without referring to your materials. You learn much better when you (i) push yourself to recall info instead of reviewing it passively, and (ii) test yourself before you feel confident. Retrieval practice is the most effective when you can look up the answers immediately for what you don't know.

Self-testing is so effective because (i) it's the most similar to actual testing, (ii) it gives you specific feedback about what you know and don't know, and (iii) it helps you to measure your progress.

- The method doesn't *feel* effective since you'll find yourself struggling. However, people who tested themselves *recalled much more* than those who did passive review or used concept maps. The gap increased even more after 10 days.

- Psychologist R.A. Bjork coined the term "*desirable difficulty*" to describe how learning deepens when the brain has to work harder. The challenge is to test yourself just far enough to stretch your memory, but not so far that you've forgotten everything.

- In fact, you can use *forward-testing* to enhance your results. Take the final exam before the class even begins. This gives you a perspective of what's important, and prepares your mind to detect relevant information during lessons. In short, retrieval practice can improve both past *and* future learning.

- Use direct practice to determine *what and how much to memorize*. Basically, the things that come up regularly are the things that you must know in your head. Those that're rarely used can be looked up as and when needed.

KEY QUOTES

"The research is clear: if you need to recall something later, you're best off practicing retrieving it."

"Retrieval works to enhance future learning, even when there is nothing to retrieve yet!"

"Being able to look things up is certainly an advantage, but without a certain amount of knowledge inside your head, it doesn't help you solve hard problems."

Here are some **useful methods for retrieval practice**:

- Use digital or paper *flash cards* to pair a cue with a response, e.g. memorizing definitions or foreign-language vocabulary.
- Use *free recall* to memorize key points or arguments. After a lecture or reading a chapter, take a piece of paper and write down everything you can remember.
- Make notes by rephrasing the content in *question-and-answer format*, e.g. "When was the Magna Carta signed? In 1215."
- If you need to practice certain skills (not just remember the information), *create challenges* to be solved later on your own.
- Apply *closed-book learning* by drawing a concept map of what you've just learned, without referring to the texts.

KEY QUOTES

"Retrieval is not a sufficient tool to create genius, but it may be a necessary one."

6. Feedback: Don't Dodge the Punches

Feedback can be really painful and uncomfortable, but **don't avoid constructive criticism**. Learn to manage your ego, and filter out the useful inputs from the noise so you know what to focus on.

- Famous comedians like Chris Rock are known to drop in at the Comedy Celler unannounced, just to test out their new materials on a small crowd to see what works and what doesn't. They understand that when it comes to learning, nothing beats *immediate, accurate and intense feedback*.
- However, feedback is only useful if it provides information that guides your future learning and results. Feedback can actually *backfire* (i) if it focuses on the person (e.g. "you're so smart" or "you're so stupid"), or (ii) if the recipient doesn't receive it in the right spirit.

"Everybody has a plan until they get punched in the mouth."
– Mike Tyson

"Receiving feedback isn't always easy. If you process it as a message about your ego rather than your skills, it's easy to let a punch become a knockout."

There are **3 main types of feedback**:

- *Outcome feedback* tells you how well you're doing (e.g. whether you pass or fail, get an "A" or "C" grade). Such feedback is easy to get, and can motivate you to keep making progress. However, it doesn't tell you what to fix or how to improve.

- *Informational feedback* tells you what you're doing wrong, but it may not tell you how to fix it. An audience's bland response tells the comedian that his joke isn't funny, but it doesn't tell him *how* to make it funnier. Having said that, so long as the feedback is immediate, you can test different solutions to see what works, e.g. a programmer can keep changing his code until the error message disappears.

- *Corrective feedback* is the best type of feedback, since it tells you what you're doing wrong *and* how to fix it. However, this usually requires access to a teacher or coach, and the feedback is only as good as the person's expertise.

Generally, it's the most effective to combine immediate feedback with delayed review. Use these **tactics to get better feedback**:

- *Filter out the background noise* that distracts you from what's important. If you're reviewing the quality of your blog articles, don't just look at the volume of visitors. Look at how many people scroll to the end of your article or click on your links.

- Seek lots of *rapid, high-intensity feedback*. This is the best way to filter out the true insights from the noise.

- Adjust your tasks till you get the *sweet spot for difficulty*, i.e. you can't predict if you'll succeed or fail. That's when feedback truly becomes valuable.

- Look for *metafeedback*, or feedback on the effectiveness of your learning strategy. Analyze your learning rate (i.e. how fast you're improving in an area), or run experiments to compare which approach helps you to learn faster.

KEY QUOTES

"Ultralearning isn't simply about maximizing feedback but also knowing when to selectively ignore elements of it to extract the useful information."

"Extract the signal from the noise, so you know what to pay attention to and what to ignore."

"Sometimes the easiest way to improve feedback is simply to get a lot of it a lot more often."

7. Retention: Stop the Leakages

To excel in any area, you need to remember stuff. Yet, our brain forgets things quickly and consistently, like a **leaky bucket**. Understand why you forget things, so you can deliberately use counter-strategies to remember things for the short-term and long-term.

Psychologist Hermann Ebbinghaus discovered the forgetting curve, which describes the brain's decreased ability to retain information over time. Unless the knowledge is consciously and repeatedly reviewed, we'll start losing it within days or weeks. Subsequent studies identified at least 3 theories to explain **why we consistently forget so much**:

- Our memories *decay* over time, and details fade away quickly. Generally, the farther an event, the harder it is for us to recall the details (unless it's unusually meaningful or vivid).

- In the human mind, memories often overlap, so new knowledge can create *interference*. Specifically, *proactive interference* occurs when past data makes it harder to acquire new knowledge (e.g. when they conflict with each other). Retrospective interference occurs when the new information "overrides" the old one.

- Some memories still exist in our minds, but we can't retrieve them because we've *forgotten the cues*. That's why we may feel like there's something we should remember, but we just can't recall it.

So, how can we counter our natural tendency to forget? Ultralearners deploy at least **4 mechanisms to improve their short-term and long-term retention**:

- *Space out your learning over intervals*. It's better to spend 1 hour over 10 days learning something, than to cram the learning into 10 hours at a go. You can (i) use a system or schedule to methodically revisit a topic at increasingly longer intervals (e.g. start with daily, then weekly, monthly and 6-monthly revisions), or (ii) schedule projects to refresh important skills.

KEY QUOTES

"To retain knowledge is ultimately to combat the inevitable human tendency to forget."

"Many memories we have aren't actually forgotten but simply inaccessible."

"Our minds are a leaky bucket; however, most of the holes are near the top, so the water that remains at the bottom leaks out more slowly."

- *Proceduralize skills* by embedding them into a sequence of steps, just like how typists can type without looking at the keyboard once the letters' position are deeply ingrained in their minds.

- *Overlearn* by practicing something even when you can already do it perfectly. The extra practice may not improve your performance, but it'll help you to recall the skills in future.

- Use *mnemonics* to translate hard-to-remember content (e.g. a sequence of digits) into vivid images or maps to facilitate recall.

8. Intuition: Dig Deep, then Build Up

True masters don't just memorize things. Mastery comes from a deep understanding of each component, how they're inter-related, and what the big picture looks like. Seek to **truly understand what you're learning**: immerse yourself in in a subject so thoroughly that you form mental models of how things really work, and use play/exploration to develop your intuition.

Don't just study hard. Use these **4 rules to develop intuition**:

- *Don't give up too soon on hard problems*. When you're about to give up on a problem, force yourself to keep going for just *10 more minutes*. New ideas and solutions may simply appear. Even if they don't, the extra effort will help you to notice and remember how a solution is derived later.

- *Prove things to understand them*. You'll never fully understand something just by reading someone else's results. Push yourself to prove or replicate the concept, e.g. to prove that you understand how a bicycle works, draw out all the parts in detail (e.g. gear, pedals) and show how they're connected.

- It's hard to learn abstract ideas, so *start with a concrete example*. For example, visualize how you'd apply a broad principle to a specific situation, or look beyond the spelling of a word to consider its deeper meaning, the feelings it evokes, etc.

KEY QUOTES

"Do not ask whether a statement is true until you know what it means."
– Errett Bishop

- *Don't fool yourself* into thinking you know more than the subject experts. After all, you don't know what you don't know. Be willing to ask the "dumb" questions that everyone is afraid to ask.

Young developed the "**Feynman Technique**" based on his extensive research on genius mathematician Richard Feynman:

- Use this method to *improve your understanding* of an idea:

  (i) At the top of a piece of paper, write down the *concept or problem* that you're trying to understand.

  (ii) *Explain the idea* as if you had to teach it to someone else. Specify (a) how you'd explain the concept to someone who has never heard of it before, or (b) what's the process you'd use to solve the problem (and why).

  (iii) If you're stuck, review your materials for the answer.

- The goal is to force yourself to *articulate your understanding*, so what you know (and don't know) becomes explicit. You can use this to (i) learn a new concept, (ii) tackle problems you can't solve, and (iii) expand your intuition on a complex topic.

9. Experimentation: Explore Beyond your Comfort Zone

When you're learning a new skill, it's usually enough to follow someone who's more successful. As you become more proficient, there'll be fewer people who can teach you. You'll also start to encounter new challenges that your predecessors haven't solved. To **become a true master**, you have to unlearn old methods and assumptions, explore new possibilities, expand/combine different skills/techniques, and discover your strengths and signature style.

- Vincent van Gogh didn't start painting till he was 26, and everyone told him he wasn't cut out to be an artist. Van Gogh decided to educate himself. He rigorously studied books and other artists' works, experimented with various materials, methods and philosophies, sought

KEY QUOTES

"Psychologists theorize that the difference between grand masters and novices is…that they have built up huge libraries of mental representations."

"Since many of our understandings are never articulated, it's easy to think you understand something you don't."

"As mastery becomes a process of unlearning over accumulation, experimentation becomes synonymous with learning as you force yourself to go outside your comfort zone and try new things."

feedback, and eventually developed his unique style. Unfortunately, he died at 37 and became famous only after his death.

Push beyond your comfort zone with 3 types of experimentation:

- Test out different learning *resources*, e.g. books, online materials, studying your peers, or practicing in various settings. Apply the insights from 1 resource aggressively, evaluate the results, then try something else.

- Try out various *techniques* by diving into a sub-topic or an area of specialization. For example, if you're trying to master a language, you can zoom into literature, comics, or business discussions, all of which will expose you to different skills and nuances.

- Explore different *styles*, so you can become aware of the full range of existing styles, dissect why other masters stand out, and emulate or integrate those concepts to create your own style.

Ultimately, you'll need to integrate your experiments back into your ultralearning projects, to target the problems you're solving. Here's **how you can start experimenting**:

- *Copy then create*. To build a foundation, start by copying what others are doing. When you've developed enough skills and knowledge, you can start to create your own style and direction.

- *Use split-testing*: Compare 2 methods side-by-side to see which method works better and why. You can eventually create a hybrid style that combines the best features from different approaches.

- *Introduce new constraints* to force yourself to try new solutions.

- *Combine 2 or more unrelated skills* to develop a new superpower. Scott Adams combined his engineering background with his skills as a cartoonist to create the highly-acclaimed Dilbert series.

- *Explore the extremes*, where there's much greater potential for creative breakthroughs than sticking to the

KEY QUOTES

"Careful experimentation not only brings out your best potential, it also eliminates bad habits and superstitions by putting them to the test of realworld results."

middle. Van Gogh used thick applications of paint in bold colors, both of which were unconventional for his time. You can always return to moderation after exploring the extremes—the key is to play with the full spectrum of possibilities.

This principle ties together the other 8 principles above. Learning is by nature full of uncertainty and trial-and-errors. It requires a **growth mindset**, where you continually try new things, obtain feedback, and adjust your course, to keep moving forward on your learning journey.

Getting Started

Ultralearning projects aren't easy, but they are well worth the effort. Your **first ultralearning project** is crucial as it will set the foundation for your future projects. Use these steps to improve your chances of success:

- *Do your research*. Define the topic you want to learn, the rough scope and objective, and the main resources you will use. Research how others have learned this skill successfully, identify the direct practices you can adopt, and consider the drills and backup materials you may need.

- *Schedule your time*. Decide how much time you'll commit, which slots you'll reserve in your weekly schedule, and the duration for your project. Schedule these into your calendar in advance. If your project will last for ≥6 months, try doing a pilot week to test out the arrangements before committing to it.

- Don't wait for the perfect plan. *Start executing your plan*, then periodically review/refine your approach with these questions:

  (i) Metalearning: Have I done my research and spent ≈10% of my total time preparing for my project?

  (ii) Focus: Am I fulfilling my committed learning hours? Am I truly focused during those periods?

KEY QUOTES

"Sticking to the middle and playing it safe…allows you to explore only a subset of the total possibilities of your work."

"The beginning is always today."
—Mary Shelley

"What matters is the intensity, initiative, and commitment to effective learning, not the particulars of your time-table."

(iii) Directness: Am I learning in the way I'll eventually use the skill or knowledge?

(iv) Drill: Am I tackling my weakest points? Am I working on small, manageable parts of a complex problem?

(v) Retrieval: How do I know what/how much I've learned? Am I testing myself?

(vi) Feedback: Am I getting honest feedback and applying them?

(vii) Retention: What am I doing to retain what I've learned?

(viii) Intuition: Do I deeply understand what I've learned?

(ix) Experimentation: Am I trying new things beyond my comfort zone?

- Not every project will be successful. *Review your results* at the end of the project to figure out what went well, and what can be improved in future.

- *Decide what to do with the skill*: You can choose to:

(i) *Maintain it*. Decide how often/when to practice the new skills, and find ways to integrate it into your life. Start with more regular reviews, then space it out with time.

(ii) *Relearn it*. Even though it's not ideal to forget a skill, it's still easier to relearn something than to learn it from scratch.

(iii) *Master it*: Dive deeper into the skill through regular practice, or follow up with another ultralearning project, possibly to focus on a sub-topic or to transfer the skill to a new domain.

Ultralearning is the most effective way to learn a complex skill quickly, and to enhance your overall learning ability. However, it's not meant to totally replace traditional education or good habits. You can apply it alongside **other alternatives**:

- *Low-intensity habits* are great for accumulative learning or adding skills/knowledge through repetitive action, such as adding vocabulary to a language you already know.

KEY QUOTES

"You're the one in charge, and you're the one who's ultimately responsible for the results you generate."

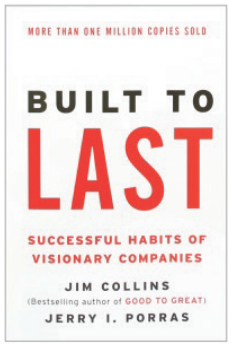
"The goal of ultralearning is to expand the opportunities available to you, not narrow them. It is to create new avenues for learning and to push yourself to pursue them aggressively rather than timidly waiting by the sidelines."

- *Formal/structured education* can also be useful for acquiring formal credentials, and for gaining access to certain communities or apprenticeship opportunities.

Other Details in the Book to Look out For

The book includes many examples of Young's own ultralearning projects as well as insights from other ultralearners in various fields. The book ends with a detailed case study of how the 9 principles were used by László Polgár to nurture his daughters into famous chess prodigies. Young also shares ideas on how to foster ultralearning at home, school or the workplace, and includes an appendix on his ultralearning projects. For more details, please visit ScottHYoung.com.

KEY QUOTES



Built to Last

Successful Habits of Visionary Companies

BY JIM COLLINS & JERRY I. PORRAS

The Big "So What"

The book focuses on timeless success principles that can be learned from visionary companies. Unlike individuals, organizations can transcend time and generations. Although most of the companies in the book are American corporations, the authors have since verified that the principles work across countries, cultures and different organization types e.g. corporations, NGOs etc. The findings debunked many myths about successful companies, and the insights can be applied by anyone, be it CEOs, managers, or entrepreneurs.

Introduction

The findings came from 6 years of extensive research of 18 Visionary Companies, compared to 18 Comparison Companies. As of the end of 1990, the Comparison Companies did twice as well as the stock market since 1926, while the Visionary Companies did 15 times as well as the stock market. Visionary Companies are :

- Premier institutions in their industries.
- Widely admired by knowledgeable business individuals.
- Have made an indelible impact on the world.
- Had multiple generations of chief executives.
- Have been through multiple product/ serviceslife cycles.
- At least 50 years old.

The findings include not just success factors of visionary companies, but also 12 myths about great companies. Some of the Visionary Companies include: 3M (vs Norton), American Express (vs Wells Forge), Boeing (vs Douglas Aircraft), Citicorp (vs Chase Manhattan), Hewlett Packard (vs Texas Instruments), Marriott (vs Howard Johnson), Proctor & Gamble (vs Colgate), and Walt Disney (vs Columbia Pictures).

KEY QUOTES

"Just about anyone can be a key protagonist in building an extraordinary business institution. The lessons of these companies can be learned and applied by the vast majority of managers at al levels."

"Visionary companies are premier institutions – the crown jewels – in their industries, widely admired by their peers and having a long track record of making a significant impact on the world around them."

Clock-Building, Not Time-Telling

Myths debunked:

1. You do not need a great idea to start a great company.
2. You do not need great and charismatic visionary leaders.

Visionary companies' long-term successes do not come from a great idea nor a charismatic, visionary leader. Rather, they are successful because of strong foundations embedded in the organizations that allow them to prosper beyond leaders and product life cycles – the winning creation is the company itself, not the leaders, products or services.

Myth of the Great Idea

Only 3 of the 18 visionary companies studied began with a specific, innovative and highly successful "great idea". Hewlett Packard founders tried everything from automatic urinal flushers to fat-reduction shock machines; 3M was in such bad shape that its second president did not draw a salary for his first 11 years in office. In fact, Collins & Porras found a negative correlation between early entrepreneurial success and becoming a highly visionary company. Most visionary companies start off slow, but win in the long run.

Their ultimate creation is the company itself. Focusing on the company rather than a specific idea or a unique market opportunity provides a critical shift in thinking and focus, away from specific
product lines and market strategies, to organizational design. This builds enduring institutions that outlive specific product lines. Outstanding organizations produce an ongoing stream of products and services, not vice versa.

KEY QUOTES

"Like the parable of the tortoise and the hare, visionary companies often get off to a slow start, but win the long race."

"It might be better to not obsess on finding a great idea before launching a company. Why? Because the great-idea approach shifts your attention away from seeing the company as your ultimate creation."

"Be prepared to kill, revise or evolve an idea, but never give up on the company."

Myth of the great and charismatic leader

Having a charismatic leader is great, but totally unnecessary, in shaping a visionary company. Many of the founding leaders behind visionary companies (e.g. William McKnight of 3M, Masaru Ibuka of Sony, Bill Hewlett of HP, Bill Allen of Boeing) were not high-profile nor charismatic leaders. What makes them successful is their focus on building the foundations of the institution. They are "clock builders", not "time-tellers".

Genius of the "AND", not "Tyranny of the OR

Myth debunked: You can have your cake and eat it.

Visionary companies do not limit themselves to the "Tyranny of the OR" e.g. stability OR change, low cost OR high quality. Instead, they find ways to embrace both extremes of various dimensions e.g. profits AND purpose, conservative AND bold, ideological control AND autonomy. They go beyond mere balance or compromise, to excel at both extremes.

More Than Profits

Myth debunked: Visionary companies do not focus on maximizing profits or shareholder value.

Core Ideology

Visionary companies pursue a cluster of objectives, of which money is only one component. They understand that profitability is necessary for the organization to exist and fulfil its purpose, but they are much more than profits. They pursue both profits and ideology.

A Core Ideology = Core Values + Purpose

KEY QUOTES

"A charismatic visionary leader is absolutely not required for a visionary company... They concentrated more on architecting an enduring institution than on being a great individual leader."

"The test of a first-rate intelligence is the ability to hold two opposed ideas in the mind at the same time, and still retain the ability to function."
- F. Scott Fitzgerald

"A group of people get together and exist as an institution that we call a company so they are able to accomplish something collectively that they could not accomplish separately"
- David Packard, HP

Core values are the organization's essential and enduring tenets and guiding principles. There are usually 3-6 key values, which must be authentic to the company (and not externally derived). They are different from cultural or operating practices, and must not be swayed or compromised for financial gain or short term expediency.

Purpose is the organization's fundamental reasons for existence beyond making money. It acts as a beacon to guide and inspire employees, and need not necessarily be unique or differentiated. Unlike business goals or strategies, a purpose is continually pursued but never fully accomplished. For example, Marriott's purpose is to "make people away from home feel that they're among friends and really wanted".

Deeds, not Words

Myth debunked: There's no set of common "right" core values.

Collins & Porras found that there was no fixed set of core values that were adopted by all the visionary companies. The content or "likeability" of the company's ideology are not the key to success. Rather, it is the depth to which the company believes in its core ideology, and uses it to guide and inspire its people, that makes the difference.

Visionary companies are not perfect; they also struggle to keep their ideologies alive, and they sometimes falter - their commitment to their ideology makes them endure through the challenges. Some visionary companies also took several years before they established a firm ideology is established, though the authors recommend that this be done as soon as possible.

KEY QUOTES

"Profit is like oxygen, food, water, and blood for the body; they are not the point of life, but without them there is no life."

"The authenticity of the ideology and the extent to which a company attains consistent alignment with the ideology counts more than the content of the ideology."

"Visionary companies do not ask, 'What should we value"'. They ask, 'What do we actually value deep down to our toes?'"

Preserve the Core, Stimulate Progress

Myth debunked: Change is not the only constant; The core ideology is anchored firmly In the organization.

A visionary company has a relentless drive for progress, which is a deeper human need to explore, create, discover, achieve and improve. It is however concurrently ideological and progressive, i.e. it adapts without compromising its core ideals.

Like ideology, the drive for progress is an internal force, and comes with a blend of self-confidence and self-criticism. The self-confidence allows the company to set audacious goals and make bold moves (even if it is against industry convention) without worrying about external justifications. The self-criticism ensures the company initiates changes and improvements before the outside world demands it.

There's an ongoing dynamic interplay between the core and progress, and the visionary company embraces both successfully. They do not confuse their core ideals (which should be firmly anchored) with specific, noncore practices which are mere manifestations of the core ideology (and should change and evolve with time). For example, 3M's "respect for individual initiative" is permanent and unchanging, while giving employees 15% of their time to work on projects of their choice is a non-core strategy that can change.

It is not enough to just have a strong ideology and drive. Visionary companies translate them into concrete, tangible mechanisms that are deeply infused into the organization, i.e. they are clock-builders that build mechanisms that preserving the core and stimulate progress. For example, Walt Disney created its Disney University and compulsory "Disney Traditions" seminars to inculcate these elements into all employees.

KEY QUOTES

"There is a difference between merely having a goal and becoming committed to a huge, daunting challenge."

"Core ideology and the drive for progress exist together in a visionary company like yin and yang of Chinese dualistic philosophy; each element enables, complements and reinforces the other."

"Like a persistent and incurable itch, the drive for progress in a highly visionary company can never be satisfied under any conditions, even if the company succeeds enormously."

Visionary companies build tangible mechanisms in 5 key ways:

1. Big Hairy Audacious Goals (BHAGs)

Myth debunked: Blue-chip companies don't always play it safe. They embrace BHAGs at crucial junctures.

BHAGs ("bee-hags") are a powerful mechanism to stimulate progress. For example, General Electric's BHAG is "become #1 or #2 in every market we serve and revolutionize this company to have the speed and agility of a small enterprise."

Good BHAGs:

- Are clear and compelling – they require little or no explanation.
- Are aligned with the core ideology (i.e. preserve the core).
- Are constantly replaced by another, once they are achieved.
- Come with a high level of goal commitment, despite apparent risks.
- Fall well outside the comfort zone, and are backed by the "hubris factor" – people in the organization believe they can pull it off, even if it seems impossible to people outside the organization.
- Are so bold and exciting in their own right, they can outlive any single generation of leaders.

2. Cult-like Cultures

Myth debunked: Visionary companies are not necessarily great places to work for every one. Because they are so clear about who they are and what they seek to achieve, only those who fit with the core ideology and standards find it a great place to work. Those who don't fit will be ejected. "It's a binary. There's no middle ground."

KEY QUOTES

"It is absolutely essential to not confuse core ideology with culture, strategy, tactics, operations, policies, or other noncore practices… Ultimately, the only thing a company should not change over time is its core ideology – that is, if it wants to be a visionary company."

"The BHAGs looked more audacious to outsiders than to insiders. The visionary companies didn't see their audacity as taunting the gods. It simply never occurred to them that they couldn't do what they set out to do."

"It's a binary: You're either in or you're out, and there seems to be no middle ground."

Visionary companies preserve their zealously-held ideology in specific, tangible ways, including:

- Indoctrination, e.g. orientation and training programs, internal "universities", unique language and terminology, myths and stories
- Tight fit, e.g. Tight screening processes, recognition, incentives and advancement criteria aligned with core ideals
- Elitism, e.g. celebrations that reinforce successes, belonging and specialness

For example, all Nordstrom employees are called Nordies. Candidates are closely interviewed and heavily indoctrinated. Everyone works from bottom up, the company structure is presented upside down with
customers and sales and sales support people at the top and Board of Directors at the bottom, everyone puts customer service first and they have exacting personal and professional standards with coveted rewards and recognition for top achievers.

3. Experiment a lot and keep what works

Myth debunked: Visionary companies do not succeed because of brilliant and complex strategic planning. They make some of their best moves by trial-and-error, opportunism and even accident.

Visionary companies do plan, but many of the best moves came from experimentation, trial and error, opportunism and accident. For example. Johnson & Johnson moved into consumer products by accident after the talc they provided with their medicated plasters became a hit with customers.

The organizations behave like evolving species and demonstrate evolutionary progress. Unlike BHAGs, this involves ambiguity (not clarity of goals), and incremental mutations (not big leaps).

KEY QUOTES

"What looks in hindsight like a brilliant strategy was often the residual result of opportunistic experimentation and "purposeful accidents."

"Failure is our most important product."
- R.W. Johnson Jr, J&J

Visionary companies more aggressively harness the power of evolution by trying out loads of stuff and keeping what works. This is in part possible because they concurrently exercise ideological control and operational autonomy – once their people fully understand and own the core ideals, they can be given freedom to experiment, adapt and act.

Such evolution is not by chance. 3M, for example, had a host of mechanisms to stimulate progress and purposeful evolution. These include a "15% rule" to encourage technical people to spend up to 15% of time on projects of their choice, "25% rule" to encourage each division to generate 25% of annual sales from new products and services in the last 5 years, and "own business opportunities" for 3Mers to run successful new products as their own projects or departments.

The authors identified some practical lessons to stimulate evolutionary progress:

- Stay in motion: fix, try, adjust, move, act. Keep trying and moving
- Accept that mistakes will be made
- Take small steps
- Give people the room they need
- Build mechanisms that sustain the stimulating environment
- Remember to preserve the core

4. Home-Grown Management

Myth debunked: You do not need to hire outsider CEOs to stimulate fundamental change. Most CEOs of visionary companies are home-grown – fresh ideas and change can come from the inside.

Collins & Parros found that in 1700 years of combined history of visionary companies, that there were only 4 cases of an outside being brought in for the role of CEO.

KEY QUOTES

"Like the genetic code in the natural world, which remains fixed while species vary and evolve, core ideology in a visionary company remains unchanged throughout all its mutations."

"To have a Welch-caliber CEO is impressive. To have a century of Welch-caliber CEOs all grown from inside – well, that is one key reason why GE is a visionary company."

Visionary companies were 6 times more likely to promote insiders to chief executives than comparison companies. Promotion from within preserves the core and provides continuity of leadership (besides quality) .

It may be harder for small and medium sized enterprises to select a CEO from within the company, but the companies can start developing its people and planning for succession early in the game. If you have to look outside for a top manager, then look for candidates who share the core ideology and core values at the deepest level.

5. Good Enough Never Is

Myth debunked: Visionary companies do not focus mainly on beating the competition. They focus on beating themselves; in so doing, they inevitably beat their competition.

In visionary companies, continuous improvement is not just a program or process improvement. It is an institutionalized habit, a way of life; it means doing everything possible to make the company better tomorrow than it is today. The cycle of self-initiated improvement is never-ending, and the company never is "good enough".

It can be easy to get complacent once you become the market leader. To combat complacency, visionary companies embed mechanisms to create discomfort, and instil a ruthless self-discipline. For example, P&G pits its brands against one another to generate internal competition;

KEY QUOTES

"All individual leaders eventually die. But a visionary company can tick along for centuries, pursuing its purpose and expressing its core values long beyond the tenure of any individual leader."

"Comfort is not the objective of a visionary company. Indeed, isionary companies install owerful mechanisms to create discomfort – to obliterate complacency – and hereby stimulate change and improvement before the external world demands it."

"Creating a visionary company requires huge quantities of good old-fashioned hard work, dedicated to improvement, and continually building for the future. There are no shortcuts. There are no magic potions. There are no work-arounds."

Nordstrom ranks Nordies on their Sales Per Hour (SPH) and links customer feedback to employee compensation; Boeing uses “eyes of the enemy”, a planning process that involves managers developing counter-strategies as if they worked for Boeing’s competitors.

Visionary companies put in much more long-term investment, including investment in human capital, compared to the comparison companies. They are also more likely to be early adopters. They simultaneously build for the future, while ensuring high short-term standards.

The End at the Beginning

Myth debunked: Companies do not become visionary through “vision statements”. Creating a vision statement is only one small step in the never-ending process of expressing their core ideology.

The essence of a visionary company comes in how it translates its core ideology and its drive for progress into every aspect of the company, including goals, strategies, policies, processes, organizational design, cultural practice, job design etc.

After a detailed review of what Ford, Merck and HP did to align their entire organizations, the authors listed several guideposts to help us achieve the same:

Paint the whole picture: Comprehensiveness and consistency over time are key. Signals and actions need to be reinforced everywhere, all the time, to reinforce the core ideology and stimulate progress.

Sweat the small stuff: People function in the day-to-day, nitty-gritty details of the company or business. All cues – big and small – are picked up by people and shape their belief of the big vision.

Cluster, don’t shotgun: The mechanisms or processes should not be random pieces. Rather, they should reinforce each other, and be clustered together to deliver a powerful synergistic punch.

KEY QUOTES

“A visionary company is like a great work of art… it’s the entire work – all the pieces working together to create an overall effect – that leads to enduring greatness.”

“Attaining alignment is not just a process of adding new things; it is also a never-ending process of identifying and doggedly correcting misalignments that push a company away from its core ideology or impede progress.”

Swim in your own current, even if you swim against the tide: Focus first on the alignment with your own internal compass, which will then guide your dealings with reality of your own. There are no universally "good" or "bad" practices; there are only practices that are fits or misfits with your company.

Obliterate misalignments: The only thing that must be preserved is the core ideology; everything else that are not aligned can be changed or eliminated.

Keep the universal requirements while inventing new methods: There are 3 universal/ timeless requirements to anchor: (i) Have a core ideology, (ii) have an unrelenting drive for progress, and (iii) Be well-designed to preserve these two elements. However, the specific methods used to achieve these 3 elements may change over time.

Building the Vision

= the enduring characteristics of an organization, or its self-identity

=

Core Values

(The organization's essential & enduring tenets, a small set of timeless guiding principles that hold intrinsic value to those inside the organization)

+

Core Purpose

(The organization's fundamental reason for being)

IF forced to choose, the core purpose should be prioritised over the core values.

= both concrete & vivid, dreamy & unrealized

A vision-level BHAG can focus on 4 categories - target, common enemy, role model, or internal transformation.

Use vivid descriptions that are vibrant, engaging, and with specific descriptions of what it will be like to achieve the BHAG.

The End at the Beginning

For those who are particular about research methodology, Collins & Porras elaborate on how they selected their choice of companies and their approach (e.g. how they defined and selected "comparison companies") in the preface and research appendices (especially Appendix 1 on research issues).

KEY QUOTES

"A visionary company is like a great work of art... it's the entire work – all the pieces working together to create an overall effect – that leads to enduring greatness."

"Attaining alignment is not just a process of adding new things; it is also a never-ending process of identifying and doggedly correcting misalignments that push a company away from its core ideology or impede progress."

Some other details include:

- Core ideologies in the visionary companies
- A list of the Visionary Companies' Core and BHAGs
- A list of mechanisms used to stimulate progress at 3M
- Detailed case studies of how Ford, Merck and Hewlett-Packard created alignment
- The founding roots of all the visionary and comparison companies mentioned in the book
- A list of Frequently Asked Questions

CREATIVITY, INC.

Overcoming the Unseen Forces that Stand in the Way of True Inspiration

BY ED CATMULL (with Amy Wallace)

The Big "So What"

Being creative and building a creative culture is a complex subject. Ed Catmull, President of Pixar Animation and Disney Animation, brings the process to life by sharing what happens behind-the-scenes in these 2 great companies.

Catmull believes there's no fixed formula for creativity, and innovation management is an ongoing, never-ending job. By sharing his reflections, mistakes, and the approaches used to remove barriers to creativity, Catmull shows us how creativity really works, and how we can likewise build and maintain a creative, solutions-oriented environment in our organizations.

Introduction

The book is written in a chronological order in 4 parts - Getting Started, Protecting the New, Building and Sustaining, and Testing What We Know - with key learning points incorporated in each section. These tips are *not* success formulas, but merely starting points for you to think about, and experiment with, to find what works for you.

In this summary, we'll present the key ideas in 3 parts:

- Key milestones;
- Foundations and barriers to creativity; and
- Building a creative culture.

Part 1: Key Pixar Milestones

In this section, we'll zoom in on some of the key developments that shaped Pixar and Disney Animation.

A dream was born. Since childhood, Catmull has aspired to be a Disney animator, but took the path of a computer scientist

KEY QUOTES

"This book… is for anyone who wants to work in an environment that fosters creativity and problem solving."

"My goal has never been to tell people how Pixar and Disney figured it all out but rather to show how we continue to figure it out, every hour of every day. How we persist."

"My job as a manager is to create a fertile environment, keep it healthy, and watch for the things that undermine it."

"Figuring how to build a sustainable creative culture… wasn't a singular assignment. It was a day-inday-out, full-time job. And one that I wanted to do."

instead. At the University of Utah, he experienced what it was like to be given all the resources and freedom to pursue his passions. By the end of his PH.D program in 1974, he had several innovations under his belt, and had crystallized his goal to make a computer-animated film - something unheard of at that time, when animation was 100% hand-drawn.

Catmull was hired to head the new computer graphics at the **New York Institute of Technology**, and was given full autonomy to assemble his team. Despite his fears, he hired Alvy Ray Smith, whom he felt was more qualified than him. Smith became one of Catmull's closest friends and collaborators, and he learned this key lesson: Always try to hire those who're smarter than you.

Pixar is Born. After the Star Wars movie was launched in 1977, George Lucas hired Catmull to head the *Lucasfilm* computer graphics division, to integrate video editing and digital audio into movies. After 4 years, the *"Pixar Image Computer" (PIC)* was born – it could scan live-action footage, add special effects images, and record the combined output back onto film.

Storytelling. In 1983, Catmull met animator *John Lasseter*, who later lost his job at Disney and joined Pixar. With a storyteller onboard, they created their *first production*. Although the team ran out of time and had to launch with some incomplete wire-frames scenes, , the audience were so fascinated by the story they didn't notice the flaws. They learned another key lesson: technical perfection is less important than the *right story* that touches hearts.

Pixar, a Hardware Company. In the same year, Lucas decided to streamline the business, including selling Pixar. In 1986, *Steve Jobs* bought majority shares in Pixar, and Catmull suddenly found himself as the President of a hardware company selling imaging computers - a role he had no experience in. To learn, Catmull read widely and consulted experts for advice.

- He soon found that the ideas in most books sound good, but hold little practical value, e.g. "have a singular focus" sounds logical, but doesn't tell you what to focus on. "Expert advice" to set high prices for the PICs only created an expensive image that they couldn't reverse. In the search for simple answers on how to price their product, they'd missed the more *vital questions*, like how to meet customers' expectations and how to develop software that make PIC.

KEY QUOTES

"By ignoring my fear, I learned that the fear was groundless."

"Always take a chance on better, even if it seems threatening."

"For all the care you put into artistry, visual polish frequently doesn't matter if you are getting the story right."

"A conversation with Steve took you places you didn't expect. It forced you not just to defend but also to engage."

"There is nothing quite like ignorance combined with a driving need to succeed to force rapid learning."

"Not everything is simple, and to try to force it to be is to misrepresent reality."

- Catmull was also heavily influenced by *Edward Deming's teachings* - to empower employees at all levels to find and fix problems. This would become a key foundation at Pixar.

For years, Pixar was bleeding cash. Finally, in 1991, it secured a **Disney contract**, where Disney would fund, own and distribute 3 Pixar movies. Lasseter assembled a great team for Toy Story, but the production process was full of challenges and conflict with Disney. Nearing the launch, Jobs predicted that with Toy Story's success, Disney would see Pixar as a potential rival. To safeguard Pixar's position, he decided to **take Pixar public**. In 1995, Toy Story broke box office records, the IPO raised almost $140m, and Jobs renegotiated a 50-50 split with Disney for future movies.

Forging Pixar's identity. In 1997, Pixar decided to let a new team drive *Toy Story 2*, while the original team worked on A Bug's Life. More than a year later, they realized Toy Story 2 was too far off the mark. Although Disney gave the green light, they decided to redo the film. The gruelling 9 months that followed shaped Pixar's identity in many ways:

- Despite their guiding principles - "Story is King" and "Trust the Process" - Pixar had created the wrong story and missed the gaps. Principles weren't enough; they had to *stay alert to changes*.

- By refusing to accept lower-quality releases, they affirmed their *commitment to quality.*

- To fix the film, people came together to constructively critique the story - this evolved organically into *Braintrust*, a powerful feedback mechanism elaborated in Part 3.

- They learned that great ideas, in the hands of the wrong people, would flop. However, if you give the *right team* (right talents with chemistry) the support and resources they need, they'll fix or recreate any idea to make it great.

- To launch Toy Story 2, everyone worked 7 days a week and barely saw their families. An exhausted artist even left his infant in the car and returned to find him unconscious. By the launch, people were totally burnt out. Pixar learned that, for long-term productivity and happiness, you need a *balanced approach*. For Pixar, this means making it easy for

KEY QUOTES

"You don't have to ask permission to take responsibility."

"Being on the lookout for problems… was not the same as seeing problems."

"Everyone says quality is important, but they must do more than say it. They must live, think and breathe it."

"If you give a good idea to a mediocre team, they will screw it up. If you give a mediocre idea to a brilliant team, they will either fix it or throw it away and come up with something better."

"If you get the team right, chances are that they'll get the ideas right."

staff to enjoy courses and facilities like swimming pools at the office, and not penalizing those with families for putting in less time at work.

A new goal. With Toy Story's success in 1995, Catmull finally fulfilled his goal of making a computer-animated film. However, as new problems emerged at Pixar (including those above), Catmull found his *new calling* – to learn what it takes to build a lasting creative culture, and build Pixar to outlive the forces that've brought down other great companies. We'll cover some of these philosophies and mechanisms in Parts 2 and 3 of this summary.

In 2006, **Pixar was sold to Disney** for $7.4 billion, and Catmull and Lasseter became President and Chief Creative Officer respectively for both Disney Animation and Pixar. They could now test if Pixar's approach could be replicated at Disney Animation, while preserving Disney's unique heritage. After their fair share of victories and mistakes, a *revitalized Disney Animation* launched Tangled in 2010 - their first #1 hit in 16 years.

Part 2: Foundations & Barriers to Creativity

In this segment, we'll highlight the key ingredients for creativity and problem-solving, and the barriers that stand in their way. In Part 3, we'll address how to overcome these barriers.

Discovery & Uncertainty

Many people think that a creative breakthrough starts with a brilliant idea by a visionary, who leads his people to victory. The truth is, most "geniuses" discover their vision through struggles over time, figuring things out along the way.

- In Part 1, we had a glimpse of the long journey from Catmull's initial goal to the completion of Toy Story 20 years later.
- *Monsters, Inc.* started out as a story of a 30 year old man coping with scary characters (that only he could see). The final product 5 years later was a markedly different movie about monsters who scared kids for a living.
- Director Pete Docter knew what he wanted to express in the movie, *Up*, but he took years to conceptualize a story that could

KEY QUOTES

"It was management's job to take the long view, to intervene and protect our people from their willingness to pursue excellence at all costs."

"The act of thinking about the problem and responding to it was invigorating and rewarding."

"At the heart of this merger was an understanding that both companies had to trust each other.

"Creative people discover and realize their visions over time and through dedicated, protracted struggle. In that way, creativity is more like a marathon than a sprint."

"We humans like to know where we are headed, but creativity demands that we travel paths that lead to who-knows-where."

"The best way to predict the future is to invent it."
- Steve Jobs

bring his vision to life. It started out as a floating castle with a king and his 2 sons vying for the throne. Four major iterations later, only the title and a tall bird from the original story remained.

In short, discovery means you must embark on the process without knowing the answer. This is uncomfortable for most people.

Getting Uncomfortable: Candour, Failure, Change

Candour. To create breakthroughs, candid feedback is invaluable. However, there are many reasons for people not to be candid at the workplace, e.g. fear of saying something stupid, offending others, or jeopardizing their career.

Failures and mistakes are also inevitable as part of trying something new. Yet, most of us have been conditioned to see failure as something bad and shameful, and we'd avoid it if possible. Organizations make it even worse by penalizing people for mistakes.

Change. It's natural to want to hang on to what works. Yet, as things change, we can't really know for sure what still works and what should be discarded. Most people also subconsciously resist change as they are worried (a) about the work involved, (b) to be seen as weak-minded or not knowing what they're doing; and/or (c) to preserve self-interest. Change is unavoidable. Denying the need for change won't stop its eventuality.

Blind Spots and Mental Models

The Unknown. Imagine you're standing on 1 side of a door, which represents the world you see and know. The other side is the endless world of the unknown and unseen. Staying on this side of the door *feels* secure, but in reality, the unknown forces on the other side are at work whether you see them or not.

- Most people don't know that Catmull had a close shave with death when he was 12 - had things gone differently, Pixar (including the people it touched and the events it triggered) won't exist. Likewise, our circumstances are shaped by countless *hidden factors and events* that we're oblivious to.

- *Hierarchy* (which is necessary in organizations) can also limit access to crucial information. As you move up the ranks,

KEY QUOTES

"The process of coming to clarity takes patience and candor."

"By definition, 'discovery' means you don't know the answer when you start."

"Without the critical ingredient that is candor, there can be no trust. And without trust, creative collaboration is not possible."

"Failure isn't a necessary evil. In fact, it isn't evil at all. It is a necessary consequence of doing something new."

"Fear makes people reach for certainty and stability, neither of which guarantee the safety they imply."

"People want to hang on to things that work… as we become successful, our approaches are reinforced, and we become even more resistant to change."

"To be truly humble… leaders must first understand how many of the factors that shape their lives and businesses are – and will always be – out of sight."

people tend to "manage upward" to present only what you'd like to see and hear, distorting the true picture of what's happening. People in *technical or front-line roles* also don't generally surface issues - they assume you already know, there's no need to involve upper management, or they try to appear in control.

Randomness. Our brains are designed to look for patterns, even when they don't exist. When a company does well, we tend to explain it using "success factors" or "organizational strengths", which are often over-simplifications of the truth. The media further reinforces these myths.

Mental Models. Besides seeing incomplete pictures and false patterns, we also assume (wrongly) that we see clearly with *hindsight*. The truth is, our brains fill in gaps with assumptions and patterns (without our awareness), and we're biased toward memories that hold meaning for us. That's why different people see and recall an event differently. Yet, we typically assume that our view is the best and correct one. Our mental models can distort our worldview, and make us rigid or blind to alternative solutions. This problem is compounded at an *organizational level*, as people's mental models become intertwined when they work closely together. Organizations develop biased mental models based on their know-how and experiences.

Leaders must remember that there are many hidden and random factors affecting their success, to be humble to alternative views, and constantly seek to uncover their blind spots.

Protect the New

A large organization needs projects and revenues to keep its staff and facilities occupied. More revenues lead to more staff and pressures to grow, creating a self-perpetuating cycle ("**feeding the beast**"). Ultimately, standards drop. On the other hand, new creations are like **ugly babies** – they look awkward, and you don't know if they'll grow up, much less how they'll look.

For creative solutions to blossom, we must protect the Ugly Baby (new ideas) from the Hungry Beast (deadlines and targets). This is not to preserve old practices or interests,but to prevent new concepts from being killed prematurely. For instance, Pixar wanted to introduce internships, but the departments didn't

KEY QUOTES

"We ignore the things we cannot see and make deductions and predictions accordingly."

"Because (leaders) weren't aware of these blind spots, they assumed that the problems didn't exist."

"We must be careful not to believe our own hype."

"We are aware of the results of our brain's processing but not the processing itself."

"Most of us walk around thinking that our view is best – probably because it is the only one we really know."

"If you don't try to uncover what is unseen and understand its nature you will be ill prepared to lead."

"When someone hatches an original idea, it may be ungainly and poorly defined, but it is also the opposite to established and entrenched – and that is precisely what is most exciting about it."

"Our job is to protect our babies from being judged too quickly. Our job is to protect the new."

want to pay for inexperienced interns. Pixar hired the interns using corporate budget, and made them available as a shared resource. The program turned out to be so successful that the departments began to pay for their own interns.

Part 3: Building a Creative Culture

In this segment, we'll highlight some of the mechanisms used at Pixar to overcome the barriers to creativity. Combined, these mechanisms build candour, make it okay to make mistakes, challenge mental models and uncover truths, and tap on the brainpower of every team member.

Broadening our Viewpoints

Rather than pretend or try to know everything, it's better to accept that we *can't*. Instead, focus your attention on how to *combine differing viewpoints*, treating them as additive rather than competing. Here are several mechanisms that Pixar uses to expand perspectives:

"Dailies" are **problem-solving sessions** where team members share their work-in-progress, get constructive feedback, and get applauded for their work. This makes it safe to show incomplete work, give/receive feedback, discuss problems, learn from and inspire others.

Research Trips. Pixar teams immerse themselves in the subjects of the film, e.g. the Ratatouille team spent 2 weeks in France dining in Michelin-starred restaurants, learning how chefs work and even trudging through sewers where rats live. Such trips challenge clichés, bring fresh inspiration, and allow the teams to bring realistic microdetails that make the movies rich and authentic.

Useful limits. Creative work can be like bottomless pits. Setting limits force us to (a) find smarter ways to do things, (b) stop trying to perfect things, and (c) prioritise finite resources. When setting limits, focus on empowering people to solve problems, rather than preventing them from screwing up.

Combine different fields. The integration of art and technology is vital at Pixar. It challenges people to step outside their specialization, review their mental models, and has inspired many innovations, like the "Review Sketch Tool" (which allows you to sketch suggestions onto a digital image), and the "Pitch Doctor" (to do a realistic pitch for feedback).

KEY QUOTES

"The cost of preventing errors is often far greater than the cost of fixing them."

"Inspiration can, and does come from anywhere."

"If there is fear, there is a reason – our job is to find the reason and to remedy it."

"Research trips challenge our preconceived notions and keep clichés at bay. They fuel inspiration."

"Any time we impose limits or procedures, we should ask how they will aid in enabling people to respond creatively."

"Our specialized skills and mental models are challenged when we integrate with people who are different."

Small experiments. In 1996, Pixar's revived its short films (screened for free before movies) as part of its R&D efforts. Although the "shorts" can cost millions to produce, they allow Pixar to test new technologies, approaches, or talents before deploying them for bigger projects (thus reducing failure risks). This also creates opportunities for smaller teams to bond, connect with moviegoers, and sends an internal signal that Pixar values artistry.

Learn to see. Pixars' drawing program teaches more than drawing skills. To draw objects as they are (not what you *think* they are), the staff must become aware of their preconceived notions and learn to put them on hold. Drawing variations (e.g. upside-down objects) also hone observation skills.

Post-mortems help (a) create opportunities for reflection, (b) consolidate what's been learned, (c) teach others who weren't present, (d) address misunderstandings, and (e) equip future project teams with the right questions to ask. However, people generally dread post-mortems. To make them effective:

- *Vary the format*, and use mid-mortems to identify topics to focus on;
- Get people to list the top 5 things they'd want to do again and 5 things that they wouldn't. This *softens the approach.*
- Use *data* as part of your analysis.

Continuous learning. Pixar offers a wide range of classes e.g. painting, acting, belly-dancing. This creates opportunities for employees to meet and bond with new people. It also forces people to try new things, and get comfortable with imperfections.

Braintrust Meetings

In creative work, the creators must immerse themselves in the projects, yet not miss the forest for the trees. Braintrust meetings have been a valuable source of constructive feedback for Pixar directors. The meeting starts with a brief intro by the director, who then shows his work-in-progress and invites feedback. **Braintrust is unique in 2 key ways:**

It's made up of **qualified participants** who're well-versed in the subject matter (which, in Pixar's case, is storytelling). It's like

KEY QUOTES

"The goal is to learn to suspend, if only temporarily, the habits and impulses that obscure your vision."

"A good postmortem arms people with the right questions to ask going forward."

"Think of data as one way of seeing, one of many tools we can use to look for what's hidden."

"The attempt to avoid failure… makes failure more likely".

"Seek out people who are willing to level with you, and when you find them, hold them close."

having a panel of specialists to advise you on a medical case. People may argue passionately, but the focus is *always* on the project. There's no hidden agenda, and nothing is taken personally.

There's **no hierarchy/ authority** - everyone is treated as equals, with the aim of surfacing potential issues to help their colleague succeed. The creator can choose to adopt any or none of the feedback.

Disney Animation successfully adapted its Storytrust using this approach, and Catmull believes any organization can create its own Braintrust.

Creative Experimentation

In science experiments, every outcome is good, as it provides data to support or disprove a hypothesis, and unexpected discoveries may emerge. It's the same with creative experimentation.

Identify your Red Flags. A key challenge is to balance creative and business needs, and to know where to draw the line. For Pixar, the red flag is when a director loses the crew's confidence. As a director-led company, when team members feel lost and confused, it's a sign the leader has lost direction, and the project is in trouble.

When failures occur, it's important to learn from them. At Pixar, if major issues surface, it's common for the key personnel to dedicate 2 days for an offsite meeting, to focus on understanding the problem and its root cause(s). At such meetings, everyone participates, and no one shirks their roles or responsibility.

It's crucial to create an environment where **fear and failure are separated**. When leaders respond constructively to failure, people are not fearful to make mistakes, and can work in unity to solve key problems.

Handing Change and Randomness

When directing "Up", Pete Docter used these tips to keep himself and his team **motivated despite the changes and uncertainty**:

o List the problems and group them into 2-3 broader issues -

KEY QUOTES

"Frank talk, spirited debate, laughter, and love. If I could distill a Braintrust meeting down to its most essential ingredients, those four things would surely be among them."

"The key is to look at the viewpoints being offered... as additive, not competitive."

"To be a truly creative company, you must start with things that might fail."

"If the crew is confused, then their leader is, too."

"Management's job is not to prevent risk but to build the ability to recover."

"It is not the manager's job to prevent risks. It is the manager's job to make it safe to take them."

"Working with change is what creativity is about."

it's easier to tackle a handful of issues than feel everything is wrong.

- Instead of announcing a change, "trick" people to *chat* about it. When they catch the idea or vision, they'll be excited to make the change.

- If you're stuck, take a break to *play* and have *fun*. Return to tackle the issue when your mood has shifted.

When **random mistakes** happen, there's no point in blaming the staff. Focus on the solution and future safeguards.

We tend to draw an artificial line between "small" vs "critical" problems, and treat them differently. It's better to **treat all problems equally**, and empower people to solve problems – this prevents small problems from compounding, and people are less likely to freeze in fear when they face a big issue.

Recognize that **human potential** is random and can't be predicted. We can only find out over time who will step up to the challenge.

Constructive Mental Models

With so many obstacles to overcome, it's normal to feel overwhelmed. At Pixar, people use familiar pictures (or mental models) to handle fear, challenges and tough decisions. Here are some examples:

Directors and creative roles often involve pursuing an unseen destination. *Pete Docter* compares directing to running through a long tunnel – you may not see your way, but you know an opening exists. *Brad Bird* uses skiing to remind himself not to over-analyze; the only way to go fast without crashing is to relax. *George Lucas* sees his company like a train full of team members who're determined to get to their destination. *Bob Peterson* thinks of making a movie like an archaeological dig – you uncover pieces each time, and finally get an idea of what it is.

Producers and logistical roles require a different set of models. *John Walker* imagines balancing an upside-down pyramid perfectly on the palm of his hand. *Lindsey Collins* imagines herself as a chameleon who can take on the personality needed for the task at hand. *Katherine Sarafian* imagines people on a

KEY QUOTES

"While we can agree in principle that an organization needs to be flexible in order to solve problems, living up to that principle can be extraordinarily difficult."

"Big and small problems are, in key ways, the same."

"Everyone says they want to hire excellent people, but in truth we don't really know, at first, who will rise up to make a difference."

"I've known many people I consider to be creative geniuses… yet I can't remember a single one who could articulate exactly what this vision was that they were striving for when they started."

"Our mental models aren't reality. They are tools… The tool is not reality. The key is knowing the difference."

different floors of a condo (each with a different view, and can take the lift to visit others).

Catmull personally finds **mindfulness practice** to be useful in management, as it helps him to focus on the problem calmly without panic nor avoidance.

Notes Day

While Catmull and Lasseter were transforming Disney Animation, Pixar was starting to face its own **crisis**. After years of success, people were starting to *self-censor*. Meanwhile *production costs* were increasing, with growing *external market pressures*. At an offsite retreat, Pixar leaders identified the need to reduce costs by 10%. They decided to close down the office for 1 day, so everyone could jointly solve the problem. Notes Day was born.

Leaders volunteered to run the event, the goals were explained to staff over 3 sessions, and electronic suggestion boxes were set up. Some 4000 emails (with ideas on topics and how to run Notes Day) were screened and distilled to 120 topics (e.g. Tools & Technology, Environment & Culture). Sessions were created based on the topics people wanted to sign up for, and facilitators were trained to run the sessions to extract proposals, ideas, best practices, and next steps.

On that day, Lasseter set the tone by sharing candidly how hard but vital it was for him to receive 2.5 pages worth of personal feedback, and encouraged everyone to embrace the process. By the end of the day, Pixar was abuzz with excitement. People had met new colleagues, understood problems and successes in other departments, and felt deeply invested in Pixar's future.

Notes Day's success was due to at least **3 factors:** There was a clear goal (cut costs by 10%), it was championed by the highest levels of the company, and was led and organized from within. More importantly, it demonstrates that sustaining a creative culture is an ongoing effort that calls for constant adjustments and innovations.

Other Details in the Book to Look out For

Stories are powerful, and this book is packed with stories that help you to experience the challenges, triumphs, and learning experiences

KEY QUOTES

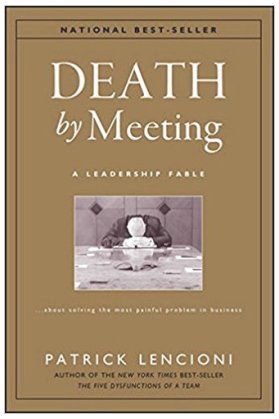
"To keep a creative culture vibrant, we must not be afraid of constant uncertainty."

"The future is not a destination – it is a direction. It is our job, then, to work each day to chart the right course and make corrections when, inevitably, we stray."

through Catmull's eyes. We've captured some of the key highlights and tips in this summary, though there's much more to be gleaned from the details in this inspiring and engaging book, including:

- Behind-the-scenes processes, struggles and fixes for movies like Toy Story, Finding Nemo, Tangled, Ratatuoille, Bolt etc;
- Deliberations and decisions that give us a glimpse of great minds (like Jobs, Lasseter, Lucas, Catmull etc.) at work;
- The challenges and steps taken to manage Pixar and Disney Animation after the 2006 merger; and
- An afterword about Steve Jobs and a list of "starting points" you can use to build a creative culture.

KEY QUOTES



DEATH BY MEETING

A Leadership Fable About Solving the Most Painful Problem in Business

By PATRICK LENCIONI

The Big "So What"

Meetings are an essential part of our work. Great meetings help people to pool resources and knowledge to solve problems and make sound decisions. However, bad meetings are painful, a waste of time and resources, and lead to bad decisions. This book offers a simple, practical solution to making your meetings more effective and enjoyable.

The Fable

Lencioni uses a fable to illustrate the dynamics behind meetings, and how they can affect organizational outcomes.

The story is set in Yip Software, a company that creates and markets creative, realistic sports games. Casey McDaniel is the founder and CEO of Yip. He's a likeable man with a good sense of what the market wants. The company, Yip, is stable with capable employees and cordial staff relations. However, the employees clearly lack passion and drive, and the company is not performing at its full potential.

As the story unfolds, we realize that Casey's executive meetings are terrible. Although the meetings end punctually every week, nothing substantial is achieved in the 2 hours.

- The agenda includes every area of the company (from budgets to strategy, training and marketing), and there's never enough time to cover everything in full;

- Controversial or strategic issues are glossed over or deferred, as the executives try to avoid conflict and there's no time to discuss the problems in detail. Instead, the discussions tend to drift without focus, and time is wasted on small talk and non-essential issues.

KEY QUOTES

"For those organizations that can make the leap from painful meetings to productive ones, the rewards are enormous. Higher morale, faster and better decisions, and inevitably, greater results."

"The hard truth is, bad meetings almost always lead to bad decisions, which is the best recipe for mediocrity."

- All the executives dread the meetings, and find excuses to come late or skip as much of it as possible. Yet, everyone is resigned that that's the way things are.

In fact, the poorly-run executive meetings reflect the underlying culture and state of the company: Yip's staff are comfortable with their niche and that targets will be met, and there's a general lack of urgency to move the business to the next level.

Things take a turn when Yip is acquired by Playsoft, the second-largest video game maker in the country. Suddenly, Casey finds himself at risk of losing his job, and needs to prove that he can get his meetings ontrack. With the help of his temporary assistant, they find a way to transform their meetings to become productive and energizing.

A Model for Effective Meetings

The Paradox of Meetings

Most of us face this dilemma with meetings: they are critical to our work, yet we dread meetings as they're draggy and often useless.

If you're asked to choose between a 2-hour movie and a 2-hour meeting, you'll almost certainly choose a movie. Yet, meetings should be no less interesting than movies because:

- Movies are passive, whereas **meetings are interactive**. You can't interrupt the actors or the plot in a movie, but you can engage in a discussion at a meeting and shape the outcome; and

- Movies don't affect our lives, whereas the decisions from **meetings directly impact what we do** after the meeting, or how we spend our time and effort.

Whether a meeting is productive or energizing doesn't depend on its duration. After all, you can sit through a good movie for hours, and even re-watch it many times. Using the analogy of movies/TV, Lencioni explains the 2 real problems behind meetings: they are boring and ineffective.

KEY QUOTES

"Bad meetings at the executive level usually indicated a huge gap between performance and potential."

"How is it that we can enjoy one activity that is inherently passive and irrelevant, and loathe another that is interactive and relevant?"

Problem #1: Meetings are Boring

Solution: Overcome the lack of Drama and Conflict

Why meetings are boring: Most meetings are monotonous and draggy because they lack drama and conflict.

- *Movies and TV programs* are engaging because they come with drama and conflict. These keep us at the edge of our seats, anxiously awaiting to see how the situation or problem will be resolved.

- *Organizations* come with natural conflict, since people have different views, ideas, roles and priorities. However, meetings become boring because leaders try to avoid conflict and stick to meeting schedules, rather than take time to unearth differences and encourage constructive debate and solutions.

To make meetings interesting/ energizing, create a "hook" and mine for conflict:

Use the Hook: The first 10 minutes of a movie are the most crucial, because it determines if you catch or lose the audience's attention.

- Likewise, use the first 10 minutes of a meeting to *capture the participants' attention.*

- Give people a *reason to care*, e.g. by illustrating how a major competitive threat will affect them/the company, or by highlighting the dangers of a bad decision for everyone in the company.

Mine for Conflict: When smart, capable people come together to discuss an important topic, they will inevitably have different views.

- A leader must *seek out and uncover underlying issues* and disagreements between team members. Although it's uncomfortable to confront a problem, it's worse to pretend it doesn't exist.

- Meetings become *engaging and interesting* when there's constructive conflict and a focused effort to seek solutions.

KEY QUOTES

"Conflict is at the center of every great movie. It is the essence of drama, and it is the reason audiences become and remain engaged in a story."

"The key to injecting drama into a meeting lies in setting up the plot from the outset… so that (participants) understand and appreciate what is at stake."

"The only thing more painful than confronting an uncomfortable topic is pretending it doesn't exist."

On the other hand, indecision and conflict-avoidance make meetings boring and frustrating.

- To overcome discomfort to conflict, a leader can get *real-time permission*. You can *announce upfront* that conflict is expected and essential. When you detect underlying concerns from others' questions or body language, *invite* people to voice their concerns. *Interrupt* someone to emphasize that constructive conflict is welcome, e.g. "Before you continue to explain your concern, I just want to highlight that this is exactly the kind of engagement and conflict that we need, to get a better decision."

- The *goal* is not to reach consensus, but to ensure that all key points of views and contention have been aired and considered. The leader will make the final decision with everyone's commitment to support it.

- This process takes more time, but it delivers a *clear, informed decision*. This is much better than the issue resurfacing many months later, or having people complain that they never agreed to the decision in the first place.

KEY QUOTES

"Everyone, but especially you, as the leader of the group, needs to be looking for places where people have different opinions but aren't necessarily putting them out there. You need to be constantly mining for buried conflict."

"I'd rather spend three hours on something and come to the right decision than spend one hour and get nowhere."

Problem #2: Meetings are Ineffective

Solution: Overcome the lack of Contextual Structure

Why meetings are ineffective. Most companies only have 1 type of regular staff meeting. As a result, people don't know what topics are appropriate, and bring up all sorts of issues at the meeting

- We have *different types of TV programs* for different audiences, e.g. headline news are structured and delivered differently from a sitcom or movie.

- Likewise, we need *different types of meetings*—with different formats, frequencies and duration—for different goals. For instance, you need time to research and debate strategic issues; discussing them at weekly meetings takes time away from urgent, tactical issues that must be addressed for short-term action.

"There is nothing inherently about meetings that makes them bad, so it is entirely possible to transform them into compelling, productive, and fun activities."

Here are 4 key types of meetings, each designed for different purposes:

Daily Check-ins (5-10min). These are like your daily headline news, and should last no more than 5 minutes (or 10 minutes for larger groups).

- The *goal* of a daily huddle is to share daily activities, so you clarify daily expectations and ensure nothing falls through the cracks. Trying to sort out these out individually via emails or phone could take much more time and effort. However, this arrangement may not work for all organizations—for instance, if your team members work remotely or in different locations, it may not make sense to try to coordinate such daily sessions.

- The *format* is simple: each person states his/her key activities for the day, in 1 minute.

- For this meeting to be effective, it must be quick. Here are the common challenges and *key success factors*:

  i. It's common for daily check-ins to start strong, then fizzle out. The key is to make it a natural part of your daily routine. Have *a fixed time and place, and never cancel it*, even if there are only 2 people in the office that day.

  ii. Be disciplined and keep it to 5 minutes. To keep it short, do the discussion standing up (instead of sitting down).

  iii. Try this out for 2 months, then *evaluate* if the arrangement is working.

Weekly Tactical (45-90 mins). These are like your 1-hour sitcoms or TV drama, with a fixed format, timing and duration. The sessions can be held weekly or fortnightly, and should last for 45-90 min (depending on the frequency of the meetings).

- There are *2 goals* for this meeting: (a) *resolve urgent tactical issues* (including removal of obstacles) and (b) *gain clarity* (by putting everyone on the same page). Thus, everyone *must* attend.

KEY QUOTES

"Five minutes every day would save us countless emails and voice mails and office drop-ins."

Use this *format* for maximum effectiveness:

i. *Lightning Round*: Start by having each person state his her 2- 3 top priorities for the week. Limit it to 1 minute per person. This gives everyone a sense of what's going on, and sets the tone for the meeting.

ii. *Progress Review*: The team takes no more than 5 mins to update on 4-6 key metrics, to get a sense of their short term performance. Do *not* cover all the metrics, or discuss any of the issues.

iii. *Real-Time Agenda*: The 2 items above should take no more than 15min. Based on the members' priorities and metrics, the team then decides on the tactical issues they must address to make the week most productive for everyone. For example, "Should we increase advertising this month to support sales?", "Do we need to talk to IT department to get the tech glitch sorted?"

For this meeting to be effective, here are some *key success factors* to take note of:

i. *Do not prepare an agenda in advance*. Having a real-time agenda means the loss of some control, but it keeps the meeting relevant, focused and effective.

ii. *Avoid going into details* during lightning round. Stick closely to 60s per person, and limit the discussion to short-term, tactical issues. If any long-term or strategic issues arise, "park" them aside into a list of possible topics for the strategic meetings.

Monthly/Ad-hoc Strategic (2-4hrs). These are like a full 2-hour feature-length movie.

The *goal* of the monthly strategic meeting is to deep-dive into critical issues that have a major impact on the organization's long-term success. The duration of the meeting will depend on the number of topics on the agenda.

Choose *1-3 topics* in advance, and ideally set aside at *least 2 hours* for each topic, so you have enough time to analyze,

KEY QUOTES

"There is simply no substitute for a good meeting—a dynamic, passionate, and focused engagement—when it comes to extracting the collective wisdom of a team."

debate, and make decisions for each one. Whenever something big comes up at a Weekly Tactical, park it in a list of *potential strategic issues*. You can also get everyone to write down 1 topic, do a 60-second pitch on why it must be discussed, then vote for the item(s) to be included at the next Strategic Meeting.

Schedule these meetings regularly (ideally monthly). If there are urgent issues to be addressed, call for an extra *Ad-hoc Strategic Meeting*.

The *format* for discussion should be similar to a feature length movie: Start with a 10-minute hook, then mine for conflict and unearth different perspectives, before heading for resolution.

Here are some *key success factors* for effective strategy meetings:

i. Make sure you *schedule adequate time* for each topic, and avoid packing too many items on the agenda. It's better to zoom in on 1 important issue, tap on everyone's inputs to resolve it as best as possible, than to have a "complete" agenda and no time to discuss the items.

ii. *Prepare and research* the topics in advance, so you can have a meaningful and thorough discussion. You can assign a lead person for each topic—he/she will be accountable for ensuring that members come to the meeting prepared for the discussion.

iii. The leader must actively mine for conflict; don't be afraid to *thrash out the issues* and debate the issues openly. Despite the preparation, you're unlikely to reach a clear conclusion based on numbers and facts alone. The leader must be prepared to make a judgment call based on the inputs gathered.

Quarterly Off-site Review (1-2 days). This is the equivalent of your mini-series, and would usually take 1-2 days. While 2 days a quarter may seem like a huge commitment, it only adds up to 8 days or 3% of the work-days in a year. When done properly, the payoffs will significantly outweigh the time and resource commitment.

KEY QUOTES

"The leaders of these meetings have to think of themselves as directors. Get people hooked in those first ten minutes, then mine for ideological conflict, and drive it to conclusion."

"You have a passionate, unfiltered, messy, provocative discussion that ends when the leader of the team decides all the information has been aired."

The *goal* here is step away from daily/tactical issues, and do a comprehensive, holistic review of the company's strategic direction. The topics could include:

i. *Comprehensive Strategy Review*: Market conditions change rapidly, and you should re-assess your strategic direction not just once a year, but 3-4 times a year.

ii. *Team Review*: As leaders of the organization, you must constantly evaluate yourselves individually and as an executive team, to ensure you're acting in the best interests of the organization.

iii. *Personnel Review*: Get feedback on your key employees, from your peers across other departments. This gives you a more holistic view of your team's strengths and weaknesses, and allows the executive team to jointly nurture and retain top performers while supporting poor performers.

iv. *Environmental Review*: Step back to look at wider trends, opportunities and threats involving your competitors or industry.

KEY QUOTES

"Effective off-sites provide executives an opportunity to regularly step away from the daily, weekly, even monthly issues that occupy their attention, so they can review the business in a more holistic, long-term manner."

"Even the best executives can lose sight of the forest for the trees when inundated with daily responsibilities."

Here are some *key success factors* for effective off-site meetings:

i. Don't overwhelm yourself with tons of *lengthy slide presentations and speeches*. Focus on what's needed to reflect on and discuss your strategic direction.

ii. The reason for holding the meeting off-site is to get away from your daily work, and devote your attention to the review. There's no need to waste time and resources on *exotic travel destinations, social activities and silly games* No amount of team-bonding or social activities will work if the team isn't united by clarity and common goals.

iii. Don't invite outsiders to attend the off-site meeting as it will disrupt your team dynamics. The only exception is if the invitee is a trusted facilitator who understands your business, and has a vested interest in your team's success.

Here's a quick recap of the 4 types of meetings:

MEETINGS	DURATION	PURPOSE/FORMAT	KEYS TO SUCCESS
Daily Check-in	5-10 minutes	Share daily activities: get clarity & alignment 1min per person to share daily activities	• Keep it short. Don't sit down. • Keep it administrative. • Set a fixed time & place; Never cancel it.
Weekly Tactical	45-90 minutes	Resolve tactical issues + align team priorities. Lightning round → Progress review → Real-time agenda	• Don't set agenda in advance. • Stick to tactical issues.
Monthly (Or Ad-hoc) Strategic	2-4 hours	Deep-dive into critical issues for long-term success. 10-min hook → Mine for conflict → Resolve issue	• Ideally 1-2 topics; give enough time • Prepare & research in advance. • Embrace constructive conflict.
Quarterly Off-site Review	1-2 days	Step back to holistically review strategic direction. Can review your strategy, executive team, key personnel & trends/ environment.	• Go away from office (but not necessarily out of town). • Limit social activities; focus on work. • Don't overload on lengthy presentations/structure.

Getting It Right

Most employees (including leaders) have the misconception that meetings are a waste of time, and a necessary evil at work. They reluctantly attend the meetings, and try to finish the discussions quickly so they can get back to their "real work".

Lencioni emphasizes that meetings are vital management and communications platforms that all leaders should master. When run well, meetings can provide clarity, alignment and solutions to save time/resources and improve results. When run poorly (which happens in most organizations), the lack of clarity and direction ripple throughout the organization to result in confusion, poor morale and the loss of even more time and resources.

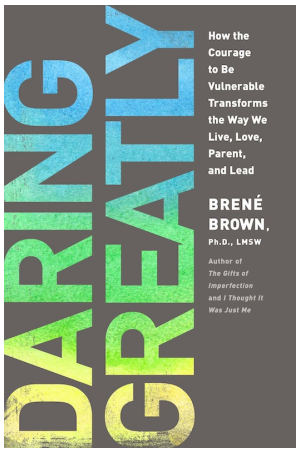
To improve communication, productivity and passion in your organization, get your meetings right.

KEY QUOTES

"When we fail to get clarity and alignment during meetings, we set in motion a colossal wave of human activity as executives and their direct reports scramble to figure out what everyone else is doing and why."

"Who cares how long it takes if you're making a decision that you're going to have to live with for years?"

"Improving meetings is not just an opportunity to enhance the performance o our companies. It is also a way to positively impact the lives of our people. And that includes us."



DARING GREATLY

How the Courage to be Vulnerable Transforms the Way We Live, Love, Parent and Lead

By Brené Brown, Ph.D., LMSW

The Big "So What"

As human beings, we have a fundamental need for connection, love, and belonging. Yet, we fear rejection and are afraid we're not good enough. We try to hide our vulnerabilities, only to create a greater disconnect with our families, communities, and work. Based on 12 years of research, this book explains the concept of vulnerability, and how to embrace it for wholehearted living and fulfilling connections.

Introduction

Having worked and researched widely on the constructs of human connection, Brown discovered that vulnerability is one of the most powerful explanations for human behaviour. In the book, Brown explains vulnerability and shame, and why embracing (rather than avoiding) them is the key to more fulfilling connections. Daring greatly is about embracing vulnerability and imperfection, to live wholeheartedly and engage courageously.

In this summary, we've consolidated the ideas into 4 parts: understanding vulnerability, managing shame, removing the armour, and closing the gap.

Part 1: Understanding Vulnerability

A Culture of Scarcity

Most of us live in cultures of scarcity or "never enough". We're constantly measuring and comparing what we have, against what we want, what we don't have, what others have, or even how things used to be. We long for connection and belonging, yet we're afraid of being unworthy if we don't live up to a standard or ideal.

KEY QUOTES

"Vulnerability is the core, the heart, the center, of meaningful experiences."

"Social work (is not) about fixing… (it) is all about leaning into the discomfort of ambiguity and uncertainty, and holding an emphatic space so people can find their own way."

"If we're willing to dare greatly and risk vulnerability with each other, worthiness has the power to set us free."

"The bottom line is that daring greatly requires worthiness."

Many of our deepest insecurities involve being not smart enough, not loveable enough, not successful enough, not slim enough, etc.

There are **3 key components of scarcity:**

Shame: When we measure our self-worth by how much we achieve, earn, produce, conform, etc., or when we use fear (of rejection, humiliation etc.) to control or manipulate others.

Comparison: When we compare and evaluate people based on a fixed yardstick, rather than appreciate them for their uniqueness.

Disengagement: When people avoid taking risks and speaking up, or when they compete for attention (to be seen or heard).

When you examine these components, you'd realize the opposite of scarcity is not abundance, but "enough". When you feel you're good enough regardless of what you do (or don't do), you'll dare to engage despite uncertainty and emotional risks. Brown calls this "wholeheartedness".

When we remove labels and stereotypes, to see people through the lenses of vulnerability, we start to understand the real struggles beneath their actions. For example, people complain that the younger generation is becoming increasingly self-centred and obsessed with social media. From the perspective of vulnerability, many of these kids have been influenced by reality TV and celebrity culture to believe that they're only as good as the number of followers or "likes" they have; they're simply trying to feel special in a world of "never enough".

Debunking the Vulnerability Myths

To understand vulnerability, it helps to understand what it is not.

Vulnerability is not Weakness.

- Vulnerability is merely a *feeling* of being "naked", a sense of uncertainty and emotional exposure. This is an inevitable part of life, and there's nothing good or bad about it. When we associate vulnerability with weakness, we try to avoid it and hide our feelings as a mistaken sign of strength. For example, love is uncertain; yet, avoiding love to escape vulnerability makes life meaningless.

KEY QUOTES

"The greatest casualties of a scarcity culture are our willingness to own our vulnerabilities and our ability to engage with the world from a place of worthiness."

"The one thing we have in common is that we're sick of being afraid. We all want to be brave. We want to dare greatly."

"Sometimes the simple act of humanizing problems sheds an important light on them, a light that often goes out the minute a stigmatizing label is applied.

"We've confused feeling with failing and emotions with liabilities."

"Truth and courage aren't always comfortable, but they're never weakness."

- In fact, things that make you feel vulnerable - e.g. doing something controversial, or saying "sorry" - are typically associated with *courage and truth* (not weakness). We see others' vulnerability as courage, but condemn our own as weakness. We want others to be open and accessible to us, yet we're afraid to be open and accessible.

- Instead of asking yourself, "What would I attempt to do if I knew I could not fail?", Brown challenges you to ask, "What's *worth doing* even if I fail?"

Vulnerability is not an Option. People may claim they don't "do vulnerability" because they are strong, logical, professional etc. However, vulnerability is not a choice – life itself is unpredictable, and we all feel unsure and exposed at times. The key is how we respond to vulnerability.

Vulnerability is not Letting It All Out. Embracing vulnerability is not about baring your soul to everyone. It's about opening up to people with whom you've cultivated a strong, trusting relationship, to share with reciprocity, trust and boundaries. Building such relationships takes time, and Brown likens it to a filling a jar with marbles:

- We *add marbles* when people demonstrate that they care. They share their secrets and keep ours; they remember what matters to us, involve us when things go well, and show concern when we face challenges.

- We *remove marbles* when the opposite happens. In fact, when those closest to us start to become disengaged, we feel hurt because it triggers our feelings of shame, unworthiness and fear of abandonment. The entire jar can be shattered in the event of a major betrayal, e.g. when someone uses your secret against you.

- Building trust is a *chicken-and-egg situation:* you'd want to feel trust before showing vulnerability, but you must be willing to be vulnerable to gain trust.

Vulnerability isn't best tackled alone. Most cultures value the ability to solve problems independently. However, the best way to handle vulnerability is with support from others. Research shows that, when someone is willing to be vulnerable, others

KEY QUOTES

"We love seeing raw truth and openness in other people, but we're afraid to let them see it in us."

"Often the result of daring greatly isn't a victory march as much as it is a quiet sense of freedom mixed with a little battle fatigue."

"When the people we love or with whom we have a deep connection stop caring, stop paying attention, stop investing, and stop fighting for the relationship, trust begins to slip away and hurt starts seeping in."

"Sometimes our first and greatest dare is asking for support."

perceive it to be courageous, and gradually open up too. Courage is contagious.

Part 2: Understanding and Managing Shame

What is Shame?

Shame is the agonizing feeling that we're flawed and hence unworthy of love and belonging. All of us experience shame, everyone is afraid to talk about it, and our silence only gives it even more power. Shame is different from guilt, humiliation and embarrassment, because we see the flaw as a part of who we are.

- You feel **guilt** when you think you've *done* something wrong ("how could I do that?"). Your actions seem incongruent with who you are, and you're likely to apologize or make amends.

- You feel **humiliated** when you feel you don't *deserve* a negative outcome ("they have no right to do this").

- **Embarrassment** is the least severe and will usually pass quickly.

Shame is different, because you feel you're bad as a person ("I'm such a loser"), and you deserve the bad outcomes. Research shows that shame is correlated only with negative outcomes, like violence, aggression, or depression.

Building Shame Resilience

We can't avoid or remove shame from our lives, but we can become more resilient to it. There are **4 key elements** of shame resilience:

Recognize shame. Let's imagine you're writing a book and feel unsure about finishing it. As you look deeper, you notice a voice telling you that you're a lousy writer, and another one saying you'll be a laughing stock. Brown calls them your "gremlins". Learn to identify shame and its triggers - know and acknowledge when you're feeling shame, and start to understand your own self-doubts and self-criticisms.

Evaluate expectations. Identify the judgments behind the shame, which are often linked to *social and cultural expectations.*

KEY QUOTES

"Shame derives its power from being unspeakable."

"Shame is the fear of disconnection – the fear that we're unlovable and don't belong."

"When our self-worth isn't on the line, we are far more willing to be courageous and risk sharing our raw talents and gifts."

- Brown's research revealed *12 key categories* of shame: appearance & body image, money & work, family, parenting, fatherhood/motherhood, mental & physical health, addiction, sex, aging, religion, past trauma, and being stereotyped/ labelled.

- *Assess* if the expectations are realistic and aligned with your values. For example, is it realistic to have a best-selling book on your first attempt? Are you really a failure if your book isn't popular? Taking a step back to think about your shame helps you to break the fight-or-flight response.

Get connected. Reach out to someone you trust. Once you feel their empathy and connection, your shame (which is the fear of disconnection) will dissolve.

Share it. Shame cannot survive once it's exposed. Don't be afraid to speak about your fears and ask for support. Research shows that people who suffer past trauma recover much better when they use expressive writing or share their stories with others.

Once, Brown received an angry email from someone whom she'd refused a speaking engagement. Feeling upset, she wrote an email to her husband to vent, but accidentally clicked "send" instead of "forward". She was drowning in shame when the other party replied to point out her lack of wholeheartedness.

- Using the elements above, she said "pain, pain, pain, pain" aloud to acknowledge her feelings, until she felt better.

- Then, she called her husband and best friend, and instantly felt reassured by their empathy and love. She also spoke kindly to herself, the same way she would've comforted someone else.

- When she was feeling calmer, she wrote a reply to apologize to the other party and set boundaries for future communications.

Understanding Gender Differences

While shame affects both genders equally, social-cultural expectations create different shame triggers and responses for men vs women:

KEY QUOTES

"A sense of worthiness inspires us to be vulnerable, share openly, and persevere. Shame keeps us small, resentful, and afraid."

"Empathy is connection; it's a ladder out of the shame hole".

"Shame is universal, but the messages and expectations that drive shame are organized by gender."

Women expect themselves to look naturally beautiful, slim, be good at everything (especially motherhood), and to seem to do it all effortlessly. They feel shame when they're not beautiful enough, can't multi-task well enough, etc. When shamed, women intuitively respond by *criticizing or putting others down*, in an unconscious attempt to draw attention away from their inadequacies.

Men on the other hand, must never be weak – they must control their feelings, earn more, take charge, and succeed in their careers. When they feel shame, men naturally *get angry or shut down.*

Men and women also attach shame differently to **sex and body image.** Women are conscious of their bodies, and interpret men's lack of interest to mean they're not slim, attractive or experienced enough. Men, on the other hand, are more concerned if their partners care about them, and see rejection as a form of masculine shame that they're not wanted, or not good enough.

Shame can tear a relationship apart, and gender differences amplify the strain:

- *Downward spirals*. When women feel invalidated, they start criticizing, which triggers men's feeling of inadequacy. The men get angry or shut down, causing women to provoke them even more ("why won't you talk to me!").

- *Entrenched gender expectations*. Women want their men to open up and let them in. Yet, most women can't really accept vulnerability in their men (who're supposed to be strong). When women react with disappointment or even disgust, it reinforces the men's shame and resolve not to show weakness again.

- *Security breach*. Shame is most painful when it comes from those closest to us. Using a loved one's vulnerability to shame him/her is the most severe breach of trust and can cause permanent scars in the relationship.

Cultivating Whole heartedness

Using the 4 elements of shame resilience, we can build our self-worth and wholeheartedness:

KEY QUOTES

"It's not the lack of professing that gets us in trouble in our relationships; it's failing to practice love that leads to hurt."

Practicing **self-love** is one of the best ways to nurture courage, self-worth, and our ability to love others. When we feel worthy, we're less likely to judge or criticize others.

As you build awareness of societal/ cultural expectations, you can identify shame when it surfaces, evaluate it and make a **conscious decision** not to play the game. For example, you may realize that missing your child's concert for a work trip does not mean you're a bad mother, and you can learn to love yourself and others for who you really are, rather than what society expects of you.

Practice love by trusting and being vulnerable with your loved ones, and supporting them in their vulnerabilities. The next time you see someone struggling with a shameful situation, instead of passing judgement, take the initiative to *extend your empathy* with a smile or understanding look. This small gesture may help them to feel instantly better.

Part 3: Removing the Armour

Everyone struggles with vulnerability (including Brown), and we put on different persona or masks to protect ourselves. Even children put on masks, though these are more fleeting and easier to detect. The school bully could simply be masking his need to belong, while the mean girl could be hiding the pain from her parents' divorce.

Since shame is the feeling of not being enough, simply believing that we're "enough" helps us to remove our masks. In this segment, we'll explain the key types of armour and how to remove them.

3 Common Vulnerability Shields

Foreboding joy is the feeling that your joyful experiences (e.g. getting a promotion, falling in love) are too good to be true. You keep expecting the next disaster to strike and constantly plan for the worst. The solution is to *practice gratitude:* focus on what you're grateful for, including the small, ordinary moments like being healthy, or having your loved ones by your side.

Perfectionism is about trying to be perfect to avoid failure or shame. It's different from a healthy pursuit of excellence, and only brings more shame, as you're never perfect enough. The cure is to *learn to see the beauty of imperfection:* Be kind to

KEY QUOTES

"If we want to fully experience love and belonging, we must believe that we are worthy of love and belonging."

"To love ourselves and support each other in the process of becoming real is perhaps the greatest single act of daring greatly."

"Connection is the energy that is created between people when they feel seen, heard, and valued; when they can give and receive without judgement."

"Masks make us feel safer even when they become suffocating."

"Believing that we're 'enough' is the way out of the armor – it gives us permission to take off the mask."

"When we lose the ability or willingness to be vulnerable, joy becomes something we approach with deep foreboding."

"There's a crack in everything. That's how the light gets in."
- Leonard Cohen

yourself when you fail or suffer (rather than avoid/ condemn it), realize that everyone feels pain and inadequacy, and practice mindfulness to separate your fleeting thoughts and feelings from who you really are.

People also use busy-ness to **numb** themselves. Outwardly, they take pride in being available 24x7 to their clients, never dropping the ball, etc. But, under the busy-ness is a sense of insecurity: women are afraid to say no and not please everyone, while men are afraid they're not "man enough" to handle everything.

- The antidote is to *set boundaries*, e.g. no work calls after 10pm. Cultivate self-worth based on who you are, not what you do. When you stop trying to satisfy everyone, you can focus on the people and things that truly matter.

- Brown's research reveals that a deep sense of connectedness (*or spirituality*) is a core aspect of wholehearted living. This is about the manner and intent in which you go about your daily life, e.g. if you're enjoying your meal or just gulping it down, if you're seeing and connecting with the people you meet (e.g. the cashier, the waiter) or just treating them as objects in the background.

Other Masks and Armours

Other less commonly-used shields include:

Classifying people/things into **win-lose extremes**, e.g. success vs failures, kill or be killed. People with such shields avoid vulnerability, leading to more disconnection. It's especially common in the military, or in people who've suffered trauma (e.g. physical abuse, oppression). The solution is to *redefine success*, and use the 4 shame resilience components to restore one's ability to face vulnerability.

Letting loose, either using vulnerability to *manipulate*/ seek attention, or *releasing* all your vulnerability on someone without deep trust/ connectivity. In such cases, people may withdraw from you to cause even more shame. *Get clear on your intentions*, consider your feelings and desired outcomes, and manage your boundaries and connections accordingly.

"Serpenting", or spending undue amounts of energy to zig-zag around vulnerability, when it's less effortful to face

KEY QUOTES

"We can't selectively numb emotion. Numb the dark and you numb the light."

"Living a connected life ultimately is about… spending less time and energy hustling and winning over people who don't matter, and… cultivating connection with family and close friends."

"It's not what you do; it's why you do it that makes the difference."
-Louden

"When we feel good about the choices we're making and when we're engaging with the world from a place of worthiness rather than scarcity, we feel no need to judge and attack."

it directly. Cultivate awareness, so you can catch and stop yourself from serpenting.

We **judge** others whenever we label them as inferior or dismiss them. Brown made a personal choice to stop worrying about bystanders who judge and complain from the sidelines. Instead, she only pays attention only to people who are *"in the arena"*, i.e. those who're actively working on similar challenges, and people whom she loves and trusts most (and are always fighting by her side in the arena).

Part 4: Closing the Gap

The Disengagement Divide

People desire connection, yet they become disengaged when (a) they feel vulnerable, and/or (b) they feel that the other party isn't fulfilling his/ her role in the social contract. In short, this disengagement divide occurs because of the gap between our *aspired values* (what we *want* to do, think and feel) and our *practiced values* (what we *actually* do, think and feel). For instance, children perceive a gap when their parents preach about honesty and respect, but lie or put each other down.

As humans, we can't avoid such gaps; the key is to become aware of them, and seek to close the gaps. Brown believes that we must concurrently address our *strategy* (our game plan to get from where we are to where we want to be) and *culture* (the norms or ways things are typically done).

Rehumanizing Education and Work

Shame is a major barrier to creativity, innovation and learning in our education institutions and workplace. When shame is prevalent, people dare not speak up, try new things or persevere in face of failure.

Recognizing shame. Finger-pointing, gossiping, harassment and name-calling are all signs of shame in a culture.

- Shame can cause "*creativity scars*"- someone who's told he/ she is a lousy writer or hopeless leader can carry the self-doubts for life.

KEY QUOTES

"I… learned that the people who love me, the people I really depend on, were never the critics who were pointing at me while I stumbled… They were with me in the arena. Fighting for me and with me."

"We need daring strategies to develop daring cultures."

"To reignite creativity, innovation, and learning, leaders must rehumanize education and work."

- *Such practices spread*, e.g. if employees constantly deal with shame at the workplace, they're likely to use similar behaviours with clients, suppliers and family members. It's worse when shame is used as a formal *management or influencing tool*, e.g. public ranking of top vs bottom performers, open criticisms.

Dealing with shame brings uncomfortable, dark issues to the light, and the process is both disruptive and irreversible. That's why Brown calls it "*disruptive engagement*". To build **shame-resilient organizations:**

Support leaders who're willing to dare greatly to facilitate honest conversations about shame. Since shame cannot survive in the open, and courage is contagious, people who're willing step forward to address shame are natural change catalysts. Such leaders can emerge at all levels in an organization.

Cultivate *awareness of shame*, so it can be identified and stopped immediately before it spreads.

"Normalize" shame and discomfort, so people realize such feelings are normal, and are less afraid to discuss their common struggles, coping strategies etc.

Train employees on the differences between shame and guilt, and how to give and receive *constructive feedback*.

- Use *strengths perspective* to facilitate feedback: for every area for improvement, identify 3 strengths that the other person has, to help him/ her make the change.
- Literally and figuratively sit on the *same side of the table* as someone, to focus your feedback on supporting him/her.
- Start by *inviting feedback*, so you learn what it's like to be on the receiving end, and role-play difficult situations.

Wholehearted Parenting

The best foundation we can give our children is a sense of love, belonging and self-worth.

Great parenting isn't about having the best strategies and techniques; it's about being the best-possible **role models**,

KEY QUOTES

"Shame breeds fear. It crushes our tolerance for vulnerability, thereby killing engagement, innovation, creativity, productivity, and trust."

"We all want to dare greatly. If you give us a glimpse into that possibility, we'll hold on to it as our vision. It can't be taken away."

"We can't give people what we don't have. Who we are matters immeasurably more than what we know or who we want to be."

"The simple and honest process of letting people know that discomfort is normal, it's going to happen, why it happens, and why it's important, reduces anxiety, fear, and shame."

"A daring greatly culture is a culture of honest, constructive and engaged feedback."

"If we're not willing to ask for feedback and receive it, we'll never be good at giving it."

given our own imperfections, i.e. being the adults we want our children to be.

Kids often don't feel they **belong** in their own families, as they feel they don't match up to their parents' expectations.

- Be conscious of the *if-when rules* that you're planting, e.g. do your kids feel loved only if they achieve certain grades, financial status, or behaviours? Do you unintentionally demonstrate that others' opinions are more important than what your kids feel?

- For children to feel worthy, they must feel loved just as they are. Let them know that you love them, even if you don't love their choices. *Separate the child from his/ her behaviours*, e.g. telling a lie doesn't make your child a liar, and tripping over something doesn't make him/her a klutz.

Rather than try to protect your children from shame, use such experiences to talk about shame and role-model *shame resilience*. Normalize shame by showing your children that everyone faces similar struggles. Teach your kids the difference between *guilt vs shame* when they're young (4-5 years old), and are still open and receptive.

Other Details in the Book to Look out For

Besides sharing the findings from her research and interviews, Brown re-enacts many of her exchanges with her audiences and interviewees, as well as her personal experiences and vulnerable moments. These help us to understand the often-unspoken vulnerabilities, insecurities and feelings that everyone has in one form or another.

In the book, Brown also includes her complete definitions of many concepts like love, connection, shame, as well as resources, checklists and manifestoes. Some of these resources are also available on her website www.brenebrown.com.

KEY QUOTES

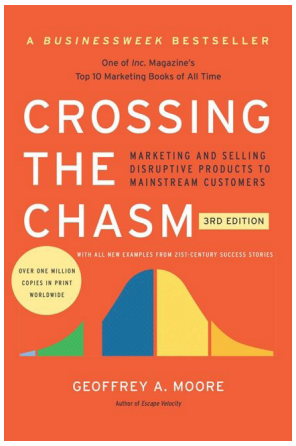
"Who we are and how we engage with the world are much stronger predictors of how our children will do than what we know about parenting."

"If we want our children to love and accept who they are, our job is to love and accept who we are."

"Most of us struggle to feel a sense of belonging – to know that we're a part of something, not despite our vulnerabilities, but because of them."

"Wholehearted parenting is not having it all figured out and passing it down – it's learning and exploring together."

"What we know matters, but who we are matters more.



CROSSING THE CHASM

Marketing and Selling Disruptive Products to Mainstream Customers

GEOFFREY MOORE

The Big "So What"

Launching a high-tech product can be extremely challenging, and failure comes with the loss of significant time and resources. This book provides proven frameworks and strategies to successfully bring new, cutting-edge products to market, with decision-making guidelines for investors, engineers, marketers and managers in the high-tech community.

Introduction

A disruptive or discontinuous innovation is one that requires people to change their existing behaviors, whereas a sustaining or continuous innovation involves a upgrade of existing products. A bigger or higher-resolution TV screen is a continuous innovation while a 3D-TV (which requires special viewing glasses) is a discontinuous innovation.

Every industry will face disruptive changes at some point, though high-tech industries experience them on a regular basis. Hence, it's crucial to have a systematic approach to market new high-tech products.

Companies are especially vulnerable when they're trying to cross the chasm between the small minority of early customers and the large majority of mainstream customers. In this summary, we'll introduce the chasm and the challenges it presents, before explaining how you can successfully cross it to achieve growth and profits.

KEY QUOTES

"The point of greatest peril in the development of a hightech market lies in making the transition from an early market dominated... to a mainstream market."

Understanding the Chasm

High-Tech Adoption and Marketing

The Technology Adoption Life Cycle explains how new products are accepted. Generally, technology adoption follows a bell curve, with 5 distinct consumer groups differentiated by their psychographic profiles and attitudes to new technology:

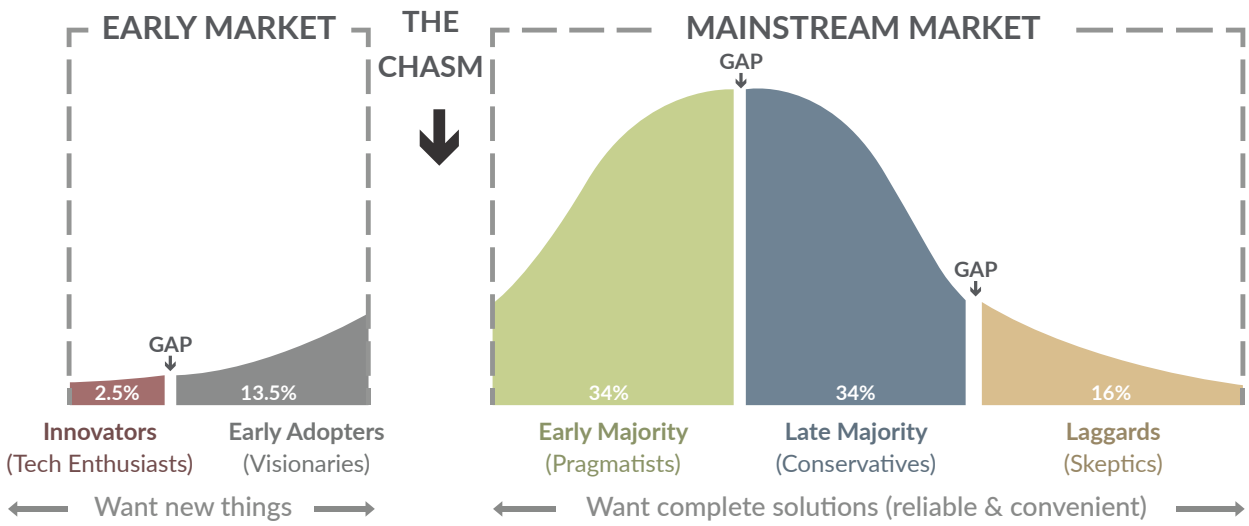
- *Innovators (tech enthusiasts)* are passionate about new technology. They actively pursue and explore the latest technology to learn about them.

- *Early adopters (visionaries)* embrace new technologies as a means to achieve a broader vision. They're good at explaining the potential benefits to others. John F. Kennedy championed the launch of the U.S. space program, while Henry Ford championed the mass-production of automobiles.

- *The early majority (pragmatists)* are more cautious and realistic. They're only willing to adopt technology that's proven and convenient.

- *The late majority (conservatives)* are uncomfortable with new technology. They'll adopt it only when most people are already using it, just so they won't get left behind.

- *Laggards (skeptics)* don't want to be associated with new technology *at all* and may only use it only unknowingly.



KEY QUOTES

"Crossing this chasm…is how high-tech fortunes are made; failure in the attempt is how they are lost."

The High-Tech Marketing Model is about developing the market by sequentially addressing the 5 groups above from left to right. It has been widely applied by many companies from Microsoft to Cisco, Dell, Google, HP and Oracle.

- This model works because *each group paves the way for the next group*, e.g. innovators' endorsement helps to win over the early adopters, who then pave the way for the early majority and late majority. The Apple iPad was demo-ed to techies at MacWorld before its launch in 2009. Visionary executives started to use them, gradually influencing other members of their organizations. As the number of apps and users increased, even kids and grandparents started to use the iPad. Within 5 years, iPads had become a part of people's everyday lives.

- However, each of the 5 groups have different buying objective and expectations, so what appeals to 1 group can alienate another. Such *gaps between the groups* can break your marketing momentum. Specifically:

  (i) There are cracks (a) between the enthusiasts and visionaries, and (b) between the pragmatists and conservatives; and

  (ii) There's a chasm between visionaries and pragmatists due to their conflicting goals. Visionaries want major changes to leapfrog their competitors, whereas pragmatists want to improve existing operations with minimal disruption.

Marketing to Early vs Mainstream Markets

Marketing is not about creating an illusion or hype. It's about taking **concrete actions** to define, grow, maintain and defend your target markets. You must define the target segment for each set of products/services. Within each segment, customers must (i) share the same needs/wants and (ii) act as references for each other in their purchasing decisions. If 2 customers can't be cross-referenced, then they are *not* in the same market, e.g. a doctor won't buy an oscilloscope after hearing how an engineer uses it for his tech research.

KEY QUOTES

"Marketing's purpose…is to develop and shape something that is real, and not…to create illusions."

"No meaningful marketing program can be implemented across a set of customers who do not reference each other."

To succeed in early markets, you need a breakthrough technology product that (i) can appeal to the technology enthusiast *and* (ii) can offer a new/compelling application for the visionary.

- *Tech enthusiasts* are easy to serve if you have a truly new/great technology and don't need to make much money from them.

	Innovators / Tech Enthusiasts
Profile	• Have the passion and mandate to explore new tech • Willing to invest time/energy to get new tech to work. • Willing to tolerate bugs, slow speed & missing functions
Meet their needs	• Let them be the first to try new stuff with no/low costs • Give honest answers to their technical questions • Invite and adopt their inputs
To reach them	• Direct email or advertisements via targeted channels • Offer free info/demos; provide novel & factual info (not marketing hype)
Vital because	• A valuable sounding board to help you refine your product • Gatekeepers/access to key decision-makers

- *Visionaries* are hard to please, but can give you the big break you need in terms of revenues and visibility.

	Early Adopters / Visionaries
Profile	• Willing to take risks and make huge investments in new technology to realize an ambitious dream/vision • Seek major breakthroughs (not minor improvements)
Meet their needs	• Focus on the strategic leap made possible by your tech • Break down ambitious goals into smaller projects • Use concrete milestones to show progress/results
To reach them	• Nurture the right relationships and they will find you (not vice versa)
Vital because	• Opportunity for publicity and high-profile references • Each feature developed can be used as a product extension for another company

- *Tips and pitfalls to avoid* in early markets:

  (i) Bridge the crack between the tech enthusiast and visionary: articulate how the Returns on Investment (ROI) on your technology can justify the risks.

KEY QUOTES

"Enthusiasts are like kindling: They help start the fire."

"In business, technology enthusiasts are the gatekeepers for any new technology."

"Visionaries are the ones who give high-tech companies their first big break. It is hard to plan for them in marketing programs, but it is even harder to plan without them."

"Understand their dream, and you will understand how to market to them."

"If it is not, in fact, a breakthrough product, then it is never going to create an early market."

(ii) Don't sell to the visionary before your product is ready, since they're impatient for results.

(iii) Don't be overly-ambitious: select a market that matches your size/resources. It's better to focus on a simpler problem you can solve than to have an unhappy customer.

Real growth and profits come from the **mainstream markets** since the early and late majority jointly make up 2/3^{rds} of the entire market. Enter the market with the pragmatists, sustain your leadership position, then move on to the conservatives.

- *Pragmatists* prefer established/proven solutions, so it's hard for new players to win their business. But once you get in, it's much easier to grow your volume and improve your price/support to get even more sales.

	Early Majority / Pragmatists
Profile	• Seek predictable, incremental progress • Prefer proven approaches and standards
Meet their needs	• Prefer market leaders with a proven track record + can offer reliability, quality and strong support. • Want at least some competition to get the best price & options. Willing to pay a small premium for quality.
To reach them	• Make sure they hear about you from various industry & media sources, get good testimonials from relevant companies and partner with their trusted vendors.
Vital because	• A source of valuable references • Loyal support & repeat business once you win their trust

- *Conservatives* are highly risk-averse and are afraid of high-tech stuff. They prefer status quo and will invest only in mature, commoditized products with low prices.

	Late Majority / Conservatives
Profile	• Risk-averse and price-sensitive • Prefer mature products that're convenient and risk-free
Meet their needs	• Offer standard, heavily-discount bundles for 1 specific need • Include only features that're familiar to them and convenient to use. Remove extra or fancy features.

KEY QUOTES

"If the goal of visionaries is to take a quantum leap forward, the goal of pragmatists is to make a percentage improvement—incremental, measurable, predictable progress."

"The key is to focus on convenience rather than performance, user experience rather than feature sets."

To reach them	• Use low-cost distribution channels e.g. "as-a-service" product via the internet
Vital because	• Provide low margins but high volumes • Ideal for older tech elements that can be sold at low cost

- *Tip*: Once you've penetrated the mainstream market, stay ahead of your competitors via incremental product innovations or upgrades. Focus on building predictability, service and stability.

- *Laggards* make up about 1/6th of the curve: they won't buy high-tech products and may even block them. Instead of ignoring them, address their concerns—that new technologies are risky and unproven—so they can't block the sales.

Crossing the Chasm

Companies are especially vulnerable during the chasm period:

- At this point, the early market is still digesting the new technology and the mainstream market is still not yet ready for it. Many companies make the fatal mistake of *trying to expand rapidly* during the chasm instead of conserving their resources. They try to push pricey and buggy products to mainstream customers (who want cheap and bug-free products), and they continue to invest in high-tech R&D (when mainstream customers want proven, stable solutions).

- It's also hard to enter a mainstream market since the established incumbents will try to block you. Don't make the mistake of getting *distracted by the diverse opportunities* and spreading your resources too thinly.

- The key to successfully crossing the chasm is to start by *focusing singularly on 1 strategic market niche*. Quickly establish a solid base (with references, procedures, marketing materials) and use it to spread to adjacent markets. We'll now zoom in on the 4 steps to enter and conquer a mainstream market.

KEY QUOTES

"We need to pick our spots carefully, attack fiercely, and then dig in and hold."

1. Define your Focused Point of Attack

This step is about identifying a "beachhead segment" that you'd use to cross the chasm into the mainstream market. Your goal is to hit the strategic bowling pin that'll knock down the remaining pins.

In theory, target marketing is simple: you break down the market into possible sub-segments and select the most attractive segment. In reality, people get stuck in **decision-paralysis** in face of high-stakes decisions with limited information.

Do enough analysis to identify key customer archetypes, e.g. "Gen Y" or "Dinks" (double income, no kids). Then, use scenarios to flesh out your **target customer characterization**:

- Craft *1-page scenarios* to summarize each customer type, including his personal profile and how exactly he'd use your product. Invite people from different departments to contribute. Include the following in each scenario:

  (i) *Header information* with a description of the (a) end user, (b) technical buyer (who gives advice or installs the product) and (c) economic buyer (who pays for the product). For business clients, include the industry, geography, department and job title. For consumer clients, include the age, gender, economic status and social group.

  (ii) *Before your solution*: Describe the scene where the user is stuck, including (a) the moment of frustration, (b) the desired outcome, (c) the attempted approach, (d) the obstacles, and (e) the economic consequences.

  (iii) *After your solution*: Replay the scene with your product, including (a) the new approach, (b) how it helps them to get unstuck and (c) the economic rewards.

- Once you have a library of 1-page profiles, get a small committee to evaluate each option using the *Market Development Strategy Checklist*. Rate these factors (on a scale of 1-5) in 2 stages:

KEY QUOTES

"Trying to cross the chasm without taking a niche market approach is like trying to light a fire without kindling."

(i) *Show-stoppers*. Only consider profiles that score high on all 4 factors.

Target customer	Is there a single, identifiable economic buyer for this offer, whom we can readily access and can afford the price for the whole product?
Compelling reason to buy	Are the economic reasons strong enough for the buyer to want to fix the problem urgently?
Whole products	Can our company (with the help of partners/allies) provide a complete solution in the next 3 mths to satisfy the compelling reason to buy, and dominate the market (>50%) in another 12 mths?
Competition	Has another company already crossed the chasm, addressed this problem and occupies the space?

(ii) *Nice-to-haves*. Add the scores for 5 more items:

Partners and allies	Do we have existing relationships with other companies needed to fulfill the whole product?
Distribution	Do we have an existing sales channel to reach the target customer and fulfill the whole product requirements?
Pricing	Is the whole product pricing within the target customer's budget and does it justify the value from solving the problem? Can all partners get adequately compensated?
Positioning	Is our company credible for this product and segment?
Next target customer	If we dominate this niche, can it create a "bowling pin effect" to help us enter adjacent niches?

- Shortlist the top options. As a team, select just *1 segment that you'll commit to*. This must be (a) large enough to matter, (b) small enough for you to win, and (c) can fit your strengths.

  (i) Speed matters. You can commission market research to validate your biggest assumptions, but there's no need for perfect information. You can still succeed even if you didn't pick the optimal choice.

  (ii) To become a leader, you must win >50% of the chosen niche within the 1st year, while you concurrently build new segments. Find a segment that matches your size/goal.

  (iii) If none of your scenarios survive the evaluation, then you're *not* ready to cross the chasm. Stick to early-market projects and keep costs low while you search for a viable beachhead.

KEY QUOTES

"The good news in this is that you do not have to pick the optimal beachhead to be successful. What you must do is win the beachhead you have picked."

"The rules of thumb in crossing the chasm are simple: Big enough to matter, small enough to lead, good fit with your crown jewels."

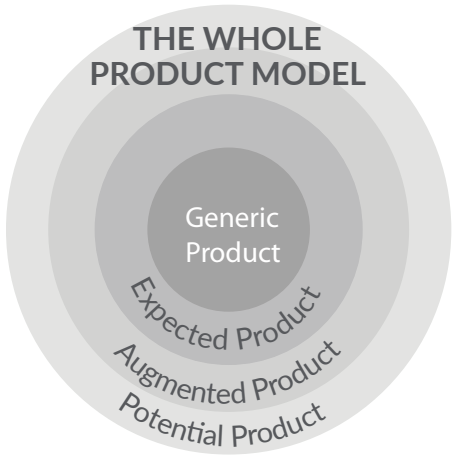
- In the 1980s, *Macintosh* successfully crossed the chasm by targeting graphic art departments of Fortune 500 companies. By dominating that segment, they could use it as a beachhead to win over other executives in those companies (for whom the graphic artists provided presentations for), as well as the creative agencies and professionals who worked with the graphic artists.

2. Set Up your Strike Force

Define the specific product/offer you'll need to secure your initial target market, and how you'll deliver it with available resources.

Now that you've identified a target market with a compelling reason to buy your product, you must position yourself as the irrefutable choice. To do that, you must deliver a **Whole Product** (a concept by Theodore Levitt) which comprises 4 parts:

- *Generic product* = what's in the purchasing contract (e.g. a tablet with cables).



- *Expected product* = what the consumer thinks he's buying, including the configuration needed to achieve the buying goal (e.g. internet connection needed to use the tablet).

- *Augmented product* = product extensions that'll maximum the chance of fulfilling the buying goal (e.g. basic software like email, browser, calendar, app store etc.).

- *Potential product* = future product improvements (e.g. ancillary products or system enhancements).

Customers in the early market focus mainly on the generic product, but the focus shifts outward (toward support and ancillary services) in the mainstream market. To achieve market leadership, you must deliver the whole product. Start

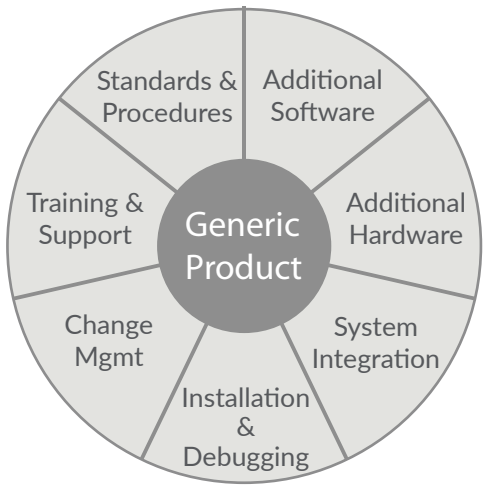
KEY QUOTES

with the **minimum level** of the whole product you'll need to cross the chasm, i.e. what the target customers need to satisfy their compelling reason to buy.

- Use the model on the right to identify *generic product vs other components* needed to satisfy the buying objective.

- Define which ones will be provided by your company (vs the customers, partners or allies), and ensure all vendors have a *fair share of the pie*. Invest time/resources to build those relationships.

SIMPLIFIED WHOLE PRODUCT MODEL



- *Example*: Imagine you're replacing an incumbent in providing enterprise wifi for a university. To overcome the inertia to change, your solution must be at least 10x better than the incumbents'. Besides offering the core/ generic product (wifi access points throughout the campus and systems for central/network management), you may also provide additional elements such as: (i) building interfaces with old equipment so they can still be used, (ii) partnering with existing campus vendors for a seamless transition, and (iii) customization for other campus initiatives. The additional elements are not strictly required under the contract and will require a lot of extra effort/resources. Yet, they'll help to satisfy the client to win their loyalty and build positive referrals.

3. Define the Battle

To dominate the mainstream market, you must know the landscape, who your competitors are, their relationships with your target customers and how to position yourself to win the battle.

Know your target customers' top values and concerns. There're 4 domains involved in marketing any high-tech product: **technology product, market and company**.

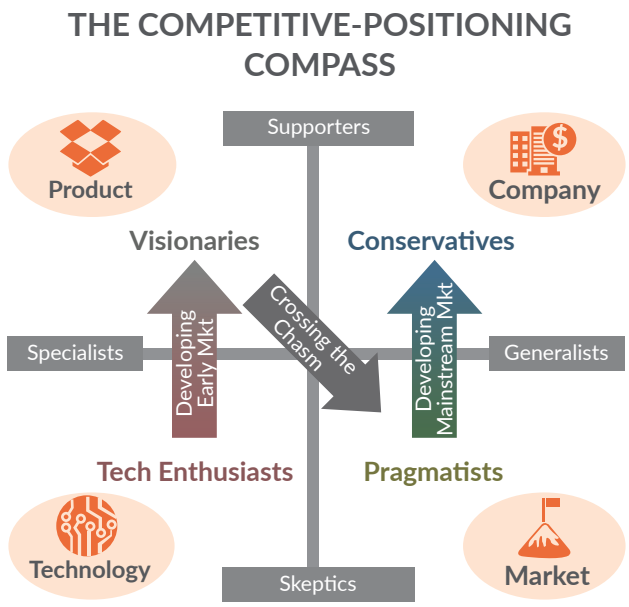
KEY QUOTES

"Winning the whole product battle means winning the war."

"The fundamental rule of engagement is that any force can defeat any other force— if it can define the battle."

The Competitive Positioning Compass maps out how the 4 factors shift in relative importance as you move down the tech adoption curve:

- *Interest & technical know-how*. Early markets are driven by specialists who care more about technology and product issues. Mainstream markets are driven by generalists who care more about market leadership and company stability. To cross the chasm, you must shift your focus accordingly.



- *Attitude*. When people are skeptical, they won't be interested in your product/company. Even if you've already won the support of the visionaries, you must still win over the skeptical pragmatists from scratch.

To win the pragmatists' support, you must effectively position your company/product in their minds. **Positioning** is about firmly associating certain attributes with your product/company, so people will think of you as the incontestable choice in a specific situation. Your unique value proposition must match your target customers, their compelling reason to buy and your product offering.

- It's much easier to *fit into people's existing way of thinking* than to change them. Pragmatists evaluate options by comparing similar vendors/products in a category. So, you must position your product in a category that the pragmatists are familiar with and have other reasonable choices to choose from. Then, position yourself such that you're the obvious, inevitable choice.

- If there's no direct competition, you must *create competition*. Help the customers to understand your value proposition with 2 sets of competitive comparisons:

KEY QUOTES

"Crossing the chasm requires moving from an environment of support among the visionaries back into one of skepticism among the pragmatists."

"The goal of positioning is to create and occupy a space inside the target customers' head."

"In general, the most effective positioning strategies are the ones that demand the least amount of change."

"The pragmatists are loath to buy until they can compare. Competition, therefore, becomes a fundamental condition for purchase."

(i) *Market alternatives* or existing vendors that the target customer has been buying from. Show that you can solve a major limitation in their offer.

(ii) *Product alternatives* or other tech leaders using a similar disruptive innovation as yours. Refer to their technology to gain credibility but differentiate yourself with a segment-specific focus.

For example, Box explains their value proposition as: "Dropbox's ease of use meets SharePoint's enterprise standards."

- *Build credibility* in pragmatists' eyes by presenting evidence of strong partners/allies (e.g. joint-marketing or cross-referencing), market share, certifications, press coverage etc.

- You can only own a tiny space in people's minds, so it's crucial to keep your message focused and memorable, to achieve effective word of mouth. *Communicate your position in 4 steps*:

(i) State your *claim* as the indisputable market leader for a specific segment. Condense it into 2 sentences: "For [beachhead target customers] who are [dissatisfied with market alternative], our product is a [product category] that provides [compelling reason to buy]. Unlike [product alternative], we have assembled [whole product features]."

(ii) Present the *evidence* to support your claim;

(iii) *Communicate* the right message to the right audience; and

(iv) Dynamically *refine* your message based on how competitors respond.

4. Launch your Invasion

Your #1 priority when crossing the chasm is to secure a distribution channel to your target market. To achieve that, you need the right pricing and distribution strategies.

KEY QUOTES

"Evaluations are often simply rationalizations of preestablished positioning."

"As we launch our invasion across the chasm, distribution is the vehicle that will carry us on our mission, and pricing is its fuel."

Customer-Oriented Distribution. There're 5 main customers types, each with their own priorities and preferred channels. Choose 1 main channel that matches your target segment:

CUSTOMER TYPE	PREFERRED CHANNEL
Enterprise executives (huge purchases for organization-wide systems)	**Direct sales**: use a consultative approach and tailor the solution to the client's needs. Use relationship marketing to build personal connections with key leaders, before shifting to solution-selling once instructions are given to explore your product.
End users (relatively low-cost purchases for personal or local workgroups)	**Web-based self-service**: let users find information on the internet and sign up for a free trial before making a purchase. You can also offer a freemium model (where the core technology is provided for free with value-added upsells), or use e-commerce transactions.
Department heads (medium purchases for organizations that need IT systems but lack the budget/ inhouse support)	**Sales 2.0**: Provide direct sales and support over digital media. Provide info on the internet, but have a human salesperson get in touch (via voice call, chat or email) when the client clicks on a link for support. Depending on the interest level, the client may then get directed to website info, a webinar or live demo.
Engineers (decide on technical options on behalf of internal clients)	**Two-Tier Distribution**: Use the internet to provide data, then have a human contact take them through the options until they're ready to connect you with the purchasing departments.
Small business owners/operators (small purchases that deliver high-value)	**Value-added resellers**: Use agents (usually sole proprietors) who'll act as low-cost advisers to help the SME owners navigate complex tech requirements and find cheap solutions.

Distribution-Oriented Pricing. Your prices must be low enough to sell yet high enough to be worth selling. Initially, set your pricing at the level of the market leader, so you can (i) reinforce your positioning and (ii) have a large-enough margin to reward your channel partners. Prices will gradually decrease as your product becomes established in the mainstream market and new competition emerges.

Crossing the Chasm Permanently

In the rush to cross the chasm, companies often make unsustainable commitments. Make the right decisions from the onset so you won't fall back into the chasm.

Financial decisions. It is a misconception that high-tech revenues start out flat then curve up sharply like a hockey

KEY QUOTES

stick. In reality, revenues grow like a staircase, with spurts of growth that flatten out each time you enter a new segment.

- *Investors* should be prepared to sustain the investments for as long as needed to cross the chasm and create a sustainable whole product. Don't just ask for broad business plans—ask to see the detailed battle plans for crossing the chasm.

- So long as the *entrepreneurial team* depends on investors for cash, they can't control their destiny. The faster you gain financial discipline, achieve profitability and break-even cash flow, the better. When people's salaries come from the market (not investors), they'll also focus more on market needs.

Organizational decisions. To win in early markets, you need pioneers to drive innovations and push new boundaries. However, once you've crossed the chasm, you must reassign the pioneers to new projects and bring in settlers to stabilize and institutionalize your processes/standards for mainstream markets.

- Introduce *2 temporary roles* to help with the transition.

  (i) Once you've secured a visionary account, assign a *target market segment manager* as the account manager. His role is to (a) learn how the business works, (b) manage the project and (c) work with whole product manager to identify essential whole-product components. Once he has completed the 1st phase of the visionary's project, hand the account over to a settler so he can focus on transforming the insights from the visionary client into a potential beachhead segment.

  (ii) During the chasm period, you must prepare for marketing (even if you don't start marketing yet). Hire a *whole product manager* to take stock of the growing list of bugs and unresolved issues. Once you cross the chasm, make sure R&D focuses on addressing these issues, to deliver a whole product aligned with your mainstream customers, pricing, and distribution channels.

KEY QUOTES

"Until break-even cash flow is achieved, nothing is secure, and your destiny is not under your own control."

"To leave the chasm behind, to cross it and not fall back into it, involves…the move from being pioneers to becoming settlers."

"Whole product R&D is driven not by the laboratory but by the marketplace."

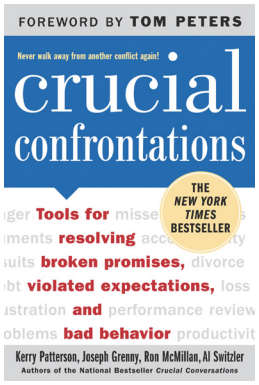
- *Compensation*. To succeed in mainstream markets, you need much more than an initial product or a few visionary accounts. Don't overcompensate pioneers for early market successes; retain resources so you can reward people who help you to cross the chasm (and stay with you).

Other Details in the Book to Look out For

This is a guide-book for marketing high-tech products, packed with detailed concepts, frameworks and case-studies. Besides the insights and examples in this summary, the book also includes:

- Examples of high-tech products in various industries, e.g. Documentum, Salesforce.com, Vmware, Aruba and Lithium;
- Additional principles/insights on positioning, publicity and partnerships; and
- Two appendices that outline (i) the High-Tech Market Development model from the book "Inside the Tonado" and (ii) the Four Gears Model for Digital Consumer Adoption to scale up online adoption.

KEY QUOTES



CRUCIAL CONFRONTATIONS

Tools for Resolving Broken Promises, Violated Expectations, and Bad Behavior

KERRY PATTERSON, JOSEPH GRENNY, RON MCMILLAN, AL SWITZLER

The Big "So What"

How should you confront an employee who's chronically late, a CFO who's suspected of embezzling company funds, or a daughter who lies about her late nights with her "gangster boyfriend"? Failed promises, missed expectations and poor behaviors can create feelings of disappointment that compound into chronic problems for families, teams and organizations. This book equips you with the skills to confront disappointing performance and behaviors, so you can solve problems, improve accountability, and strengthen relationships.

Introduction

Crucial confrontations are face-to-face interactions that hold someone accountable, in a way that solve problems and strengthen relationships. Similar to crucial conversations—which the authors address in a previous book—crucial confrontations involve high stakes and strong emotions. However, crucial conversations are about disagreements, while crucial confrontations are about disappointments, which arise when people don't do what you believe they should be doing; these involve broken promises/rules, missed expectations or bad behaviors.

Most people fear and avoid confrontation. They can't find the words, try to change the subject, drop hints, or get harsh. Crucial confrontations cannot be handled through systems or policies; they can only be addressed by people, face-to-face. Fortunately, such skills can be learned.

KEY QUOTES

"Confrontations are the prickly, complicated, and often frightening performance discussions that keep you up nights."

"To confront means to hold someone accountable, face to face."

"Learn how to have crucial confrontations and you'll never have to walk away from another conflict again."

The authors studied more than 25,000 people across many institutions for 2 decades, shadowing opinion leaders and influencers for over 10,000 hours, to identify what made them effective. The authors found that most organizations are losing 20-80% of their potential results due to their inadequacies in handling crucial confrontations. By improving relevant skills, companies have seen improved accountability and morale, to improve productivity by as much as 40%, reduce costs by 50% and improve employee satisfaction by 20%.

In this summary, we'll outline the key principles and skills for handling crucial confrontations, in 3 parts: before, during and after a confrontation.

Before the Confrontation: Work on Me First

The success (or failure) of crucial confrontations depend on how and what we communicate. Before entering a confrontation, we need to establish *what* we are confronting, *if* we wish to confront it, and to ensure we approach it with the right *frame of mind*.

Identify "What" to Confront

Most crucial topics are actually a complex bundle of sub-issues. A key challenge is to dissect the problem you're trying to address. You know you're tackling the wrong issue if (a) you find yourself revisiting the same issue constantly, and (b) getting increasingly upset by it.

- Let's imagine you have a family friend, Mary, who has been working for you for 10 years, and regularly comes in late for work. Each time you discuss the issue, she'd improve for a day or two, then slip back to being late again. What's the *real* issue that you wish to confront? Is it about the principle of punctuality, the impact on her work, the example it's setting for other staff, her failure to keep her promises, or the feeling that she's exploiting your goodwill and friendship?

- If you confront someone without unbundling the problem, you'll probably end being rash and emotional, tackle the wrong issue (or try to tackle too many issues), and sound incoherent.

KEY QUOTES

"Policies, systems programs—any method for encouraging change—will never function fully until people know how to talk to one another about deviations and disappointments."

"Crucial confrontations live and die on the words people choose and the way people deliver them."

"If you can't reduce a violation to a clear sentence before you talk, the issue almost never becomes more understandable and focused as a conversation unfolds."

To decide what you want to confront, break it down in 3 parts:

Use the **"CPR approach"** to consider which problem level to address:

- *Content*: Talk about something that just happened.
- *Pattern*: Talk about what has been happening over time.
- *Relationship*: Talk about what's happening to your relationship, such as a loss of trust or respect.

Unbundle and expand the list of issues, by analyzing:

- The *consequences* of the problem to you, to the relationship, to the task(s), and other stakeholders.
- Your *intentions* and assumptions of the other person's intentions. Remember that your suspicions have not been verified.

Prioritize what's the most important, by asking *what you want and don't want* for (a) yourself, (b) the other person and (c) the relationship.

Decide "If" you should Confront it

Once you've identified the core issue, you need to decide whether to confront it, or just let it go. Sometimes, there's a clearly broken promise, e.g. a work deadline is missed, or your spouse promised but forgot an anniversary gift. At other times, the breach of expectations may be more ambiguous.

Generally, there are **4 signs that you should be speaking up**:

When *your negative feelings are showing* despite your silence, e.g. you find yourself making snide remarks, feeling tensed and angry, dropping hints about the issue, etc.

When *your conscience is nagging at you*, despite your best efforts to fit in or accept the situation.

KEY QUOTES

"Take the internal prodding as a sign that your silence isn't warranted."

When you're *trying very hard to justify your inaction*, by playing down the consequences of staying silent, and exaggerating the dangers of speaking up.

When you're thinking that you're *helpless and can't make a difference*. Even if you currently lack the skills to effectively confront the problem, you can take action to improve your skills.

However, there are times when you may wish to **hold back from speaking up**, e.g. if your stand is clearly not supported by society, and/or you're unprepared. However, if you're committed to confront the issue—e.g. you decide to uphold or introduce a standard that no one else cares about—then:

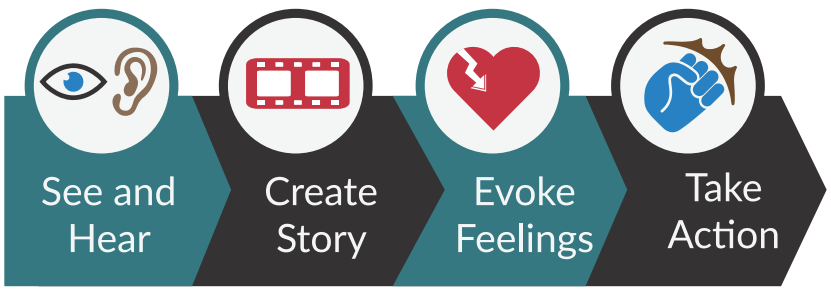
Differentiate yourself and give advanced warning of your expectations, so people have the chance to adjust; and

Establish your standards *without being self-righteous*.

Master Your Stories (Sort out your Headspace)

The first few seconds of a crucial confrontation can shape the tone of the conversation and outcome. We tend to assume the worst, then act in ways that confirm our assumptions. When someone breaks a promise, we often jump to conclusions and assume he/she is guilty. This sets the climate for the conversation before it even begins.

The **Path to Action** explains how our minds move rapidly from observation to action: We see/hear what others do, tell ourselves a story about *why* they do it, which triggers certain feelings and actions.



Studies have shown that humans are prone to the **Fundamental Attribution Error**: we tend to attribute others' behaviors to internal factors like their personality/disposition

KEY QUOTES

"Don't confuse the question of whether the confrontation will be difficult with the question of whether you should deal with it."

"There are times when it's better not to bring up a problem or at least not to do so until you've done some preparatory work."

(e.g. “he’s lazy”, “she’s creative”), and neglect the influence of external situational factors.

Silence and violence. Most people react to disappointments by clamming up initially. Over time, the problem builds up, and the person eventually snaps and resorts to “violence”, in the form of threats, stares, insults, ultimatums etc. Once you switch from silence to violence, you compromise your professionalism and effectiveness, lose goodwill and credibility.

To stop the anger and hostility, you must view others as humans and not villains. Learn to **tell the rest of the story.**

- Ask a *humanizing question* like: “Why would a good, reasonable person do something like this?”

- Expand your view of the situation by using the *six-cell model*, to consider 6 sources of influence behind someone’s behavior:

LEVEL OF INFLUENCE	MOTIVATION	ABILITY
SELF (the person involved)	**1) Pain & Pleasure** What are the person’s possible motives?	**2) Strenghts & Weaknesses** Does the person have the skills to do what’s required?
OTHERS (including you)	**3) Praise & Pressure** What are the influences by peers, family, etc.?	**4) Help & Hindrance** How do others enabled or disabled this person?
THINGS (reward,data tools etc.)	**5) Carrots & Sticks** What are the rewards or deterrents at play?	**6) Bridges & Barriers** What things can enable or disable this person?

Consider *3 levels of influence (self, others, things)* and how they affect whether the person is *motivated* and *able* to take a certain action. This helps us to expand our range of possible stories, and replace our anger with curiosity.

1. *Pain & Pleasure*. What are the person’s possible motives? Is he/she gaining certain pleasure or avoiding certain pain?

2. *Strengths & Weaknesses*. Does the person have the skills to do what’s required? Is this playing to his/her strength or weakness?

3. *Praise & Pressure*. What are the influences and pressures exerted by other people, e.g. colleagues, friends etc.?

KEY QUOTES

4. *Help & Hindrance*. How is this person enabled or disabled by others around him/her?

5. *Carrots & Sticks*. What are the financial rewards or risks, potential promotions or punishments at work?

6. *Bridges & Barriers*. How is this person's ability to deliver affected by technology, gadgets, data etc.?

During the Confrontation: Confront with Safety

Once you're clear on the issue that you wish to confront, and are looking at the other person objectively, you're ready to begin. Start by *describing the gap*, focus on keeping it *safe*, and making it *motivating and easy* for the person to commit to being accountable.

Describe the Gap

A gap, in the context of this book, refers to a major infraction, or the difference between what's expected and what actually happened It's important to create a safe space for the conversation, before addressing the gap and trying to secure an agreement.

Start with Safety. When someone feels threatened, they move into silence or violence, and the conversation breaks down. Maintain a safe space, and watch for signs that the person is feeling worried or fearful. There are 2 core ingredients:

- *Mutual Purpose*: Your goal is to set a constructive mood and prevent misunderstandings. Start by stating your *intention*, focusing on what's important to both of you (not just you). To avoid misunderstanding, use "*contrasting*"—think of the worst assumption the other person may have, pre-empt it by stating that's not your intent, then explain what your true intent is.

- *Mutual Respect*: You need to sincerely respect the other party, and convey it through your tone of voice, facial expressions etc. Ask for *permission* before you address the sensitive issue, and always speak in *private* (rather than make it a public attack).

KEY QUOTES

"When we say gap, we mean… something that might be hard or even risky to discuss."

"If you can create safety, you can talk with almost anyone about almost anything— even about failed promises."

- Here's an *example* of a safe opening: [State mutual purpose & seek permission] "I'm concerned about the amount of time that all of us are spending in meetings. If you're ok, I'd like to share some ideas that could make our meetings more productive. [Add contrasting] I'm not unhappy with our team or with you. I enjoy working with you. I just want to explore ways for to make our meetings more productive. Can we talk about this?"

Address the Gap/Share your Path. Once the other party feels safe, we can move on to the gap.

- *Start with facts* to describe the *gap* as clearly and concisely as possible—what happened vs what was expected, e.g. "You promised to be home by 9pm, but you came back at 11pm". Focus on *what* was seen/heard rather than inferences on *why* it happened, e.g. "You shouted at Jay and called him a moron" is more factual than "You were trying to embarrass Jay."

- After establishing the facts, *tentatively share your story*, using tentative words like "I was wondering if…", rather than absolute words like "it was clear that…".

- *End with a question* like "Can we talk about this?" or "What happened?". Invite the other person to share, and be ready to listen sincerely with an open mind.

As the person explains, listen carefully for the 6 sources of influence, so you can identify the best course of action.

Motivate Others to Want to Take Action

You don't need charisma, power and perks to motivate someone; in fact, these are ineffective in the long-run. Instead, motivation is all about consequences—human beings make decisions by anticipating the possible outcomes from our behaviors, then choosing the behavior that will deliver the best possible bundle of results.

Make consequences visible. All behaviors come with natural consequences, e.g. if you don't manage your diabetes, you risk amputation. Make the invisible visible, using 6 key methods:

KEY QUOTES

"As a general rule, when you are sharing your path, it's best to start with the facts: what you saw and heard."

"Contrary to popular myth, you don't have to wield power or provoke fear to be an effective motivator."

"Motivation is about expectations, information, and communication."

	Motivation	6 Ways to Motivate Action
Self	Pain & Pleasure	• Link to existing values • Connect short-term benefits to long-term pain
Others	Praise & Pressure	• Hold up a mirror • Introduce the hidden victims
Things	Carrots & Sticks	• Focus on long-term benefits • Connect to existing carrots & sticks

- *Link to existing values*. Link the consequences to the person's core values, e.g. "If you don't take care of your diabetes, our children won't get to enjoy the time with their mum."

- *Connect short-term benefits to long-term pain*, e.g. "If you continue to smoke, it will affect your health and stamina, and you won't have a chance to be on the national team."

- *Focus on long-term benefits*, to shift the focus away from short-term challenges.

- *Introduce the hidden victims*, to show the unintended/unseen impact on others.

- *Hold up a mirror*, to show how the actions are seen by others.

- *Connect to existing carrots & sticks*. Link the results of fulfilling expectations with desired rewards.

Tailor your approach to the situation, e.g. is the person simply unaware of the consequences, unmotivated by them, or resistant to what must be done?

- It's not always easy to diagnose the underlying reasons for the gaps. The situation may be ambiguous, complicated, or people may hide their true reasons (e.g. refuse to admit that they don't know something). You may also have differing priorities, or the person genuinely may not want to do what you're asking. *Joint exploration* improves the chances of identifying the cause(s), and it takes patience and skill to identify what would motivate others.

KEY QUOTES

"Change others' view of the consequence bundle and their behavior will follow."

"Change people's hearts by changing their minds."

"Desiring to get out of hard and noxious work doesn't reflect a character flaw; it's what smart people do."

"The goal of exploring consequences is to bring to the surface the issues that make the task undesirable."

- If you've tried all the options above, and the other party still continues to violate the agreement, *discipline* may be required. In such cases, you need to know the mechanics and processes in your organization, partner with others in authority (e.g. partner your boss to discipline a staff, or partner your spouse to discipline your child), explain what would happen if the infraction continues, be consistent and follow through.

- Sometimes, full resolution is impossible, e.g. your boss may apologize for using abusive language but cannot promise that he will be able to rein in his temper in future. In such cases, you can't impose your will on others. However, you can share your *coping strategy* to distance yourself from the problem, e.g. let your boss know that if he loses his temper again, you may politely excuse yourself until he cools down.

To **stay in dialogue**, here are some points to watch for:

- Don't let sharing sound like threatening;

- Be open to others' perspectives of natural consequences;

- Don't oversell: stop once the person understands the overall impact and agrees on what needs to be done.

Finish well. After completing the steps above—discussing consequences, making it motivating, and getting consent to honour your agreement—you must wrap up the confrontation with a follow-up plan (which we'll elaborate on later).

Make it Easy to Keep Commitments

After you've identified the barriers, you need to remove them. People naturally avoid hard or unpleasant work—it's your job as a leader to make things easier and more desirable. In the short run, you can apply pressure to get someone to do something they don't wish to do. However, in the long run, you need to remove the real or perceived barriers that make the job undesirable.

Avoid jumping in quickly with suggestions and advice. Instead, **involve others in the problem-solution**, so you motivate and enable them.

KEY QUOTES

"There's a fine line between sharing natural consequences and threatening others… If your motives are wrong, sharing becomes threatening."

"It's your job to help remove the barrier. It's your job to help make it easy."

- Start by *asking people for their ideas*—they may already know the answers, or simply need some advice on where to start. By jointly working on the barriers with them, you empower them and give them greater ownership of the solutions.

- Return to the Six-Cell Model to *brainstorm existing and potential ability barriers* for the self, others and things. Ask these 3 questions: Will this person keep facing the problem? Will others have similar problems? Have we identified all of the root causes? Pretend to be an ignorant outsider and ask questions like, "Why can't we do this?", "If you ran this place, how would you solve the problem?". Give people access to the information they need to make the right decisions.

	Ability	"Brainstorm Ability Barriers"
Self	Strengths & Weaknesses	• Will this person keep facing the problem? • Will others have similar problems? • Have we identified all of the root causes?
Others	Helps & Hindrances	
Things	Bridges & Barriers	

End off by confirming if the person is willing and able to do what's required. *Pop a verifying question* to check that all key motivation and ability issues have been addressed. If you've tackled ability issues, check for motivation issues, e.g. "If I can get this sorted by 1pm, are you willing to do what's required to finish it by 5pm?" Or, if you've tackled motivation issues, check for ability issues, e.g., "It sounds like you're willing to do this. Is there anything else that could stand in your way?"

Stay Focused and Flexible

Even if you've considered your "what" and "if" carefully, you may find new issues and problems emerging as the conversation unfolds.

Be flexible: Acknowledge the new issue and consider what's the right problem to address—the original problem, the new one, or both.

KEY QUOTES

"Jumping in with your answers isn't always the smart move."

"When facing ability barriers, make impossible tasks possible and nasty tasks less nasty."

"Think hidden forces, think lots of forces, and keep at it until you're satisfied that you've wrestled every single barrier to the ground."

Be focused: Deal with one problem at a time. If you decide to tackle both issues, pause to resolve the new problem before returning to the original one. We'll explain how below.

Here are **4 emergent problems** that you're likely to face, and how you can handle them:

Loss of safety. When people feel unsafe, they move into silence or violence. In such cases, you must step out, create safety (by pointing to shared purpose, reinforcing your intent, using contrasting to clarify misunderstanding, and apologizing if needed), then step back into the conversation.

Out-of-control emotions. If the other person becomes extremely emotional (e.g. starts throwing things or becomes abusive), stepping out of the conversation may be insufficient. First, *ensure your safety*—leave the situation if you may be unsafe. If you're not in danger, move on to *dissipate the emotion*, by exploring the person's path to action, then addressing what emerges. Use the *AMPP approach* to enhance your listening skills: Ask what's going on, Mirror the person to encourage dialogue, Paraphrase for understanding, and Prime by adding words to the conversation (e.g. '"are you upset because…").

A new/different issue becomes a problem. Sometimes, a new and more serious infraction may occur during your conversation, e.g. you're discussing how your daughter has broken her curfew, when you realize she is lying to you. If you choose to switch topics, place a *bookmark* on the current topic and clarify the switch by saying, "I'd like to talk about what just happened". Move on to address the new topic, before returning to the original bookmarked topic. After resolving the new issue, assess if it's still safe to return to the previous topic, or take a break and continue another time.

Loss of trust. It's common for people to justify a broken promise by saying "something came up", and shift the conversation to discuss that distraction, instead of the failed promise and loss of trust. To maintain accountability while giving flexibility, use this simple statement, "If something comes up, let me know as soon as you can."

KEY QUOTES

"On-the-spot creativity calls for an enormous amount of flexibility."

"We become righteously indignant only when others have tread on sacred ground."

"It's okay to change topics, but always clarify what you're doing. Place a bookmark where you just were so that it will be easy to return to it later."

After the Confrontation: Move to Action

By now, we have an agreement, and can follow up with a specific plan, using **WWWF**—Who does What, by When, and Follow up:

Who: Ensure there's someone accountable for the whole task, as well as each sub-task.

What: Define the specific behaviors expected and ask if anything is unclear. Contrast the dos and don'ts to be specific, e.g. "Write down your proposed solutions on 1 page and present them. Don't come empty-handed."

By **When**: include quantifiable numbers and times e.g. Wednesday 6pm.

Follow up: Clarify when and how you'll follow up. Avoid micro-management (i.e. following up too closely) and abandonment (i.e. being too hands-off). To determine the ideal level of follow up, consider the level of *risk* (or criticality of the task), *trust* and *competence* of the party involved.

- *Check-up vs check-back*. Use check-ups if you feel uneasy about the task, e.g. set a date and time to jointly review the progress. Use check-backs for more routine tasks where the person is competent and trusted, e.g. set a date and time for the person to check back with updates.

- *Summarize the key outcomes*. State the specific agreement, and end with a question so the other party can confirm the agreement, e.g. "Is that right?", "Can you see anything else that we haven't discussed which may cause a problem?"

- *Follow up*. You should take the lead in ensuring there's proper follow-up, so you can identify what worked or didn't, and provide support to narrow or remove future gaps.

KEY QUOTES

"If you care about gaining genuine commitment, give the other person the opportunity to say yes to a very specific agreement."

"Allowing failure eventually destroys results and relationships."

Conclusion & Other Details to Look Out For

Here's a recap of the Crucial Confrontations framework.

The book ends with an extended example to show how a husband applies these principles to address his concerns of his wife's possible infidelity. The book also includes other resources including:

- 12 complex situations (e.g. confronting an authoritarian boss or someone "fragile") and how you should deal with them;
- A self-assessment survey to understand how you typically handle crucial confrontations;
- Additional diagnostic questions for the 6 sources of influence;
- Tips for motivating with praise; and
- Questions for group discussions.

You can download some of these resources at the official website.

Crucial Conversations®

Tools for Talking when Stakes are High

KERRY PATTERSON, JOSEPH GRENNY,
RON MCMILLAN, AL SWITZLER

The Big "So What"

Our daily interactions can hold pivotal moments, with outcomes that affect the quality of our relationships, careers and life. This book helps us to identify and effectively conduct "crucial conversations", so we can overcome difficult or sensitive issues, to improve results and achieve our desired outcomes.

Introduction

The authors started with the goal to find out what made some people more effective than others. They discovered that the most outstanding leaders are able to influence the outcomes of difficult but vital conversations, without offending others. By following these leaders, observing how they handled such conversations, developing and testing theories and tools, the authors developed the tips in this book.

In this summary, we will provide an overview of the 7 key principles and associated skills of crucial conversations. For more detailed tips, powerful examples and exercises, do refer to the book.

Crucial conversations – what they are, and why they're crucial

Crucial conversations have 3 key components: high stakes, differing views, and strong emotions. They may not involve big issues, but their outcomes can affect the quality of our lives. For example, an innocent remark to your neighbour about their late night (noisy) parties can unexpectedly degenerate into a shouting match; overnight, your two families end up in a "cold war", and both sides are unhappy.

KEY QUOTES

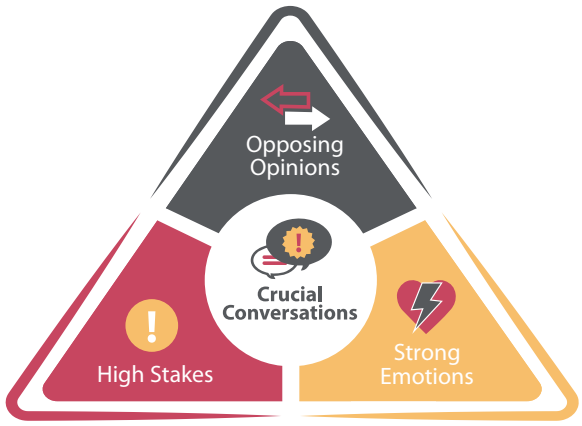
"The root cause of many – if not most – human problems lies in how people behave when others disagree with them about high-stakes, emotional issues."

"The single biggest problem in communication is the illusion that it has taken place."
- George Bernard Shaw

"The crucial conversations we're referring to are interactions that happen to everyone. They're the day-to-day conversations that affect your life."

"What makes each of these conversations crucial…is that the results could have a huge impact on the quality of your life."

"If you know how to handle crucial conversations, you can effectively hold tough conversations about virtually any topic."



Unfortunately, we are usually at our worst performance when faced with crucial conversations – because the issues are important (and often personal) to us, our emotions take over (pushing logic aside), and things start to spiral downwards.

The 7 Principles to Mastering Crucial Conversation

The Importance of Dialogues

When we enter a conversation, we bring along our beliefs, experiences, emotions, and perspectives – these jointly form our "pool of meaning". An effective dialogue involves 2 or more people exchanging meaning freely between them. For this to happen, we must make it safe for people to contribute their meaning to a common pool – that way, everyone can get a more complete picture of varying perspectives and ideas, build on them and arrive at a more informed decision, with greater understanding and ownership.

On the other hand, conflict arises when people hold different opinions and pools of meaning. Instead of a free and constructive exchange, people may become:

- **Silent and withdrawn**. They withhold their opinions for fear of confrontation, offending others or sounding stupid; or

- **Violent and aggressive**. They force their opinion on others, directly or indirectly (e.g. using sarcastic remarks, putting down others, or using authority to impose their views).

We'll now zoom in on how to identify crucial conversations, and how to master the skills to handle them.

KEY QUOTES

"People who routinely hold crucial conversations and hold them well are able to express controversial and even risky opinions in a way that gets heard."

"The more important the discussion, the less likely we are to be on our best behaviour."

"When it comes to risky, controversial, and emotional conversations, skilled people find a way to get all relevant information (from themselves and others) out into the open."

"Since the meaning is shared, people willingly act on whatever decisions they make – with both unity and conviction."

"When people purposefully withhold meaning from one another, individually smart people can do collectively stupid things."

"It's the most important set of skills you'll ever master… create conditions in yourself and others that will make dialogue the path of least resistance."

1. Start with Heart (Get the Right Focus)

It's easy to give in to our emotional impulses, or to choose between 2 poor choices. The first step is to hence get your heart right.

Know and Focus on What you Truly Want

Imagine this: You've just explained to your team how critical it is to complete the current project on schedule, and urged everyone to complete their assigned tasks by the week. One of your staff points out that 2 days ago, you agreed defer a vital input by another department, which caused a delay to your team's output. You feel offended by this open challenge, and are tempted to dismiss the comment or to retort with a sarcastic remark.

This is common problem in crucial conversations - When emotions take over, we lose sight of our original goals, and become distracted by one of these less noble goals:

- **Winning** the argument or proving ourselves rights;
- **Punishing** the other person for making us feel embarrassed, disrespected, hurt; and/or
- **Avoiding** conflict.

First, get clear on your objectives. Break down your goals into 3 parts – what you *really* want for (a) yourself, (b) others and (c) the relationship.

Then, when faced with situations like the one above, take a step back:

- **Examine if your motives have shifted** (e.g. if you're now focused on defending your ego rather than completing the project on schedule). Consider what your actions would say about your true motives, if you were looking at them as a third party.
- Then, **re-focus** and consider what you should do to achieve your real goals.

KEY QUOTES

"If you can't get yourself right, you'll have a hard time getting your dialogue right."

"When you name the game, you can stop playing it."

Refuse the Fool's Choice

Often, we mistakenly think there are only two options (e.g. talk to your spouse about her bad habit and make her unhappy, or avoid the topic altogether). During crucial conversations, we feel threatened, our brain shuts down, and we're even more likely to settle for the Fool's Choice.

The better approach is to realize that the options are not mutually-exclusive. It is possible to voice your concerns, while maintaining respect or a positive relationship. Get clear on what you truly *want*, what you truly *don't want*, and figure out how to achieve *both* objectives. Use the word "and" to frame your question, e.g. "How can I talk to my spouse about her bad habit *and* not make her unhappy?", or "How can I request for flexible work arrangements *and* keep my promotion?"

2. Learn to Look (Know when it's unsafe)

Most people focus only on the content (e.g. words) of a discussion, but neglect the more subtle conditions (e.g. feelings, tones). Become aware when a dialogue is breaking down, so you can bring it back on track. Here are some conditions to look out for:

Conversation Cues: Look for signs that a conversation has shifted from a normal one to a crucial one. The cues can be *physical* (e.g. tightening of chest, clenching of fists), *emotional* (e.g. feelings of fear, hurt, anger) or *behavioural* (e.g. finger pointing, raised voices).

Loss of safety: When people feel safe, they tend to share more freely. When they feel insecure, they retreat, become more defensive, and can be blind to logic. Usually, they'll either resort to silence or violence:

- *Silence* could manifest as *avoidance* (e.g. changing the subject, evading an answer), *masking* (e.g. using indirect references or sarcasm), or *withdrawal* (e.g. leaving the dialogue);

KEY QUOTES

"The mistake most of us make in our crucial conversations is we believe we have to choose between telling the truth and keeping a friend."

"When our brain isn't functioning well, we resist complexity. We adore the ease of simply choosing between attacking or hiding."

"The sooner you notice you're not in dialogue, the easier it is to get back and the lower the costs."

- *Violence* could show up as *controlling* (e.g. exaggerating facts), using *labels* (like stupid or evil) to discredit ideas or people, or *attacking* (threatening or belittling others).

Know your personal cues: It's harder to observe yourself than others. Use the survey in the book to learn what reactions you're most prone to under stress, so you can look out for them.

3. Make it Safe (Facilitate an Open Dialogue)

Once you see signs that you or others feel unsafe, the best approach is to step out of the current conversation, restore safety, *then* resume the dialogue. With a safe environment, you can once again talk things through openly.

Identify What's at Risk

There are 2 key conditions required for a safe dialogue:

Mutual Purpose. To *start* a dialogue, people must believe that you care about them and their goals (rather than hold malicious intent). Have everyone clarify their goals using the "Start with Heart" questions, then identify a common goal – this sets a positive context for the dialogue.

Mutual Respect. Respect is essential to sustain or *continue* the dialogue. Once people feel that they're being disrespected, they shift their focus away from the discussion to protecting their pride. To restore safety, you need to stay connected, by empathizing with others or by focusing on areas of similarities (rather than differences).

3 Approaches for Restoring Safety

Once you have stepped out of the conversation, choose the right approach for your situation:

Apologize. If you've caused someone pain due to your mistake, apologize first. If this brings back a safe space, you can proceed to explain what happened; if it doesn't, move on to the other methods below.

KEY QUOTES

"Mutual Purpose means that others perceive that you're working toward a common outcome in the conversation, that you care about their goals, interests and values. And vice versa."

"Respect is like air. As long as it's present, nobody thinks about it. But if you take it away, it's all that people can think about."

"To offer a sincere apology, your motives have to change. You have to give up saving face, being right, or winning in order to focus on what you really want."

Use contrasting. If there has been a misunderstanding (not due to your fault), use this method to address it. Start by addressing the others' *concerns* (e.g. "I didn't mean to give you the impression that I don't value your suggestions."), then *affirm* your respect or clarify your true objectives (e.g. "I do appreciate the innovative and constructive ideas that you've been offering."). Unlike an apology, contrasting is about putting things in perspective, so you can prevent further breakdown in the dialogue, or reduce the pain from a misunderstanding.

Develop Mutual Purpose. If you and your partner(s) have different or even opposing goals, you'll need to first develop a common objective, before you can resume an effective dialogue. Use the "CRIB" approach to achieve this:

- *Commit to find a Mutual Purpose*: Make a sincere, unilateral commitment to stick to the conversation until you can find a solution to your mutual goals, e.g. "It appears we have different views on this issue, but I'm committed to stick to our discussion until we find an outcome that meets both our goals."

- *Recognize our Purpose is different from our Approach*: What we want is often not the same as what we say to get it. Ask people *why* they are making their request, to understand the underlying goal. By clearly identifying the end goal that both parties want, you can step away from your original approach to find new alternatives.

- *Invent a Mutual Purpose*. If your goal can't be achieved except at the other person's expense (or vice versa), one option is to rise above the short-term goals and identify a broader, more inspiring common goal.

- *Brainstorm new approaches*, focusing on solutions that can achieve both parties' goals.

It's hard to apply these skills in the midst of an emotionally-charged conversation. The key is to learn the skills before crucial conversations take place. The improvements may be incremental, but any progress can bring positive results, and they add up over time.

KEY QUOTES

"When it comes to these high-stakes conversations, a little progress can produce a lot of benefit."

4. Master your Stories (Stay in Constructive Dialogue)

Managing your emotions will help you to master crucial conversations, and stay in dialogue despite negative feelings.

Understand the "Path to Action"

First, let's look at why people react emotionally, and why the same circumstances may trigger different responses in different people.

When we see or hear something, we create a story about why it happens, and decide if it's good or bad – these affect how we feel, which affects how we act. The authors call this the "Path to Action":

Imagine you're in the middle of a meeting. You see a colleague lean over and whisper something to another colleague; both of them snigger and one of them glances at you. You tell yourself angrily that they must be gossiping about you, and make a mental note to confront them later. Such stories may be conjured so quickly that you feel upset without realizing the underlying story you've created.

There are typically 3 types of stories that we tell ourselves:

- **Victim plot**: We present ourselves as the victims and ignore how we may have contributed to the problem or situation.
- **Villain plot**: We present the other party as a total villain (e.g. idiot, maniac, slave-driver) and ignore their positive or humane side.
- **Helpless plot**: We present ourselves as having no choice but to do what we did.

We tell such stories because they allow us to shirk responsibility and justify our actions (which we may silently acknowledge is undesirable). However, we do have a part to play in most unhappy situations:

- No one can make us upset. Our feelings are a result of how we react to others, *so we make ourselves upset*.

KEY QUOTES

"If we take control of our stories, they won't control us."

"'Clever stories'…allow us to feel good about behaving badly even while achieving abysmal results."

- Once we're upset, our emotions prompt our actions (e.g. confronting our colleagues), and also prompt others' response.

Know and Master your Stories

To break the cycle, the best way is to:

Retrace your steps. Pause what you're doing and retrace your "Path to Action" in reverse order:

- o Take note of how you are *acting* (e.g. if you're being withdrawn or aggressive);
- o Identify the *feelings* behind those actions;
- o Examine the *story* that's creating those feelings; and
- o Check if the story is based on real *facts* (which can be measured and verified), or if there could be alternative explanations.

The book also includes several examples and additional tips, such as "hot words" to listen for, and how to test your assumptions.

Tell the remaining story. Fill in the missing details/ perspectives of your stories to make them constructive. Specifically:

- o Convert *victims to actors*: Be aware of your role in the situation and take responsibility for the mistakes you may have made.
- o Convert *villains to humans*: View others through the lens of empathy, to see their positive side and the reasons for their behaviours (which are often not malicious).
- o Convert *the helpless to the able*: Revisit the "Start with Heart questions", and use the "and technique" in Step 1, to identify what you could do to achieve your desired results.

5. State your Path (Share your views persuasively)

How do you convey something bad or controversial, yet maintain a positive, respectful tone? Here are 5 STATE skills to share your views without offending others:

KEY QUOTES

"Separate fact from story by focusing on behaviour."

"If the '60 Minutes' camera crew replayed this scene on national television, how would you look? What would they tell about your behaviour?"

"By asking what role you've played…you become aware of how you've minimized your own mistakes while you've exaggerated the role of others."

"The best at dialogue…are both completely frank and completely respectful."

Share the Facts. Start by sharing what you saw or heard, rather than your story. For example, rather than saying "you've been lying to me", it's safer to start with "you said you didn't know Esther, but I just saw a photo of you two together."

Tell your Story. Share your story and feelings, using contrasting to minimize misunderstanding, and watching for signs that people feel unsafe.

Ask for Others' Paths. Encourage others to share their own facts, stories and feelings, and be open-minded to alternative views.

Talk Tentatively. Present your stories as hypotheses rather than facts. Use phrases like "I wasn't sure if….", or "I was wondering if…", rather than "The point is….", "My view is….".

Encourage Testing. When others feel unsafe, they will be reluctant to share their honest views, stories or feelings. Encourage testing by asking others (respectfully) to disprove your story.

As you apply these skills, keep looking for signs of silence or violence. Once you spot such signs that the other person feels unsafe, examine if you're also behaving that way. Step back, tone down, and restore safety. Remember that your views are not the only valid ones, and forcing your way through will only cause a downward spiral.

6. Explore Others' Path (Be a Good Listener)

When you notice signs (silence or aggression) that safety has been breached, how do you proceed? Besides apologizing, using contrasting and finding mutual purpose, we must be **ready to listen**. To do this, we must be:

- **Sincere**. Be genuinely interested in others' views;

KEY QUOTES

"When we feel the need to push our ideas on others, it's generally because we believe we're right and everyone else is wrong."

"The reason we should speak tentatively is because we, indeed, are not certain that our opinions represent absolute truth or our understanding of the facts is complete and perfect."

"The harder we try and the more forceful and nasty our tactics, the greater resistance we create, the worse the results and the more battered our relationships."

- **Curious**. When others become silent or violent, or share their stories and feelings, it's easy to mirror them and get dragged into our own stories. Instead, be curious about why they would react that way; and

- **Patient**. Emotions tend to linger on even after thoughts have shifted. Hence, someone may still feel emotionally unsafe even if they've logically accept they're safe.

Encourage Others to Share their Views

By the time conversations turn crucial, they are already moving through the Path to Action. It's vital to manage our own emotions, and focus on helping others to retrace their path – our goal is to find the source and facts behind the stories and feelings.

To do so, use these **4 listening tools (AMPP)**:

Ask. Take the initiative by sincerely inviting them to share, e.g. "Please help me to understand what's going on", "I'd really like to know what you think about this."

Mirror. Confirm feelings by mirroring what you see, e.g. "You say you're fine, but you seem really tense."

Paraphrase. Summarize or rephrase the message in your own words, to make sure you've understood it correctly

Prime. As a last resort, if you sense that the other party is still withholding, try making a best-guess of what their story may be, then prime it e.g. "Are you thinking that this innovation is too risky?"

Even if you feel that the other person's view may not be right, remember to keep an open mind – the goal is to keep the dialogue going to reach a mutually-satisfactory resolution.

Minimize unnecessary disagreements

Remember the **ABC** of effective dialogues:

KEY QUOTES

"At the very moment when most people become furious, we need to become curious. Rather than respond in kind, we need to wonder what's behind the ruckus."

"If we don't get at the source of their feelings, we'll end up suffering the effects of the feelings."

"Priming is an act of good faith, taking risks, becoming vulnerable, and building safety in hopes that others will share their meaning."

"Understanding doesn't equate with agreement. Sensitivity does equate to acquiescence."

- **Agree**. When you've secured a broad agreement, don't allow the small details to turn an agreement into an argument (e.g. you've decided to proceed on a project, but can't agree on the start date).

- **Build**. If you're in broad agreement but lack specific information, reinforce the agreement, then focus on filling the missing gaps.

- **Compare**. When you have differing views, compare the stories to identify and understand the differences, rather than dismiss either story as "wrong".

7. Move to Action (Convert dialogue to results)

An effective dialogue allows us to develop shared meaning and shared purpose. However, reaching an agreement does not guarantee action and results, e.g. you may have agreed to set up an inter-departmental taskforce, but the execution details may not have been decided.

Make Specific Decisions

The authors share 4 decision-making methods you can choose from:

- **Command**: This works well when decisions are necessitated by external factors like customer or industry demands, or when the stakes are too low for detailed discussions.

- **Consult**: This involves soliciting inputs, views or options from others before making a decision.

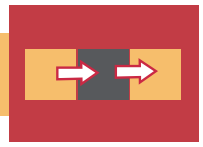
- **Vote**: This is great for choosing between several good options.

- **Consensus**: This can be tedious and frustrating, and should only be used for complex issues, and/or when it's vital to secure all stakeholders' support.

In choosing between these 4 methods, consider who really *cares* to be involved, who has the *know-how* for sound decisions, who must *support or cooperate* for the decision to work, and *how many* people must be involved (proportionate to the importance of the issue).

KEY QUOTES

Ensure Follow-up



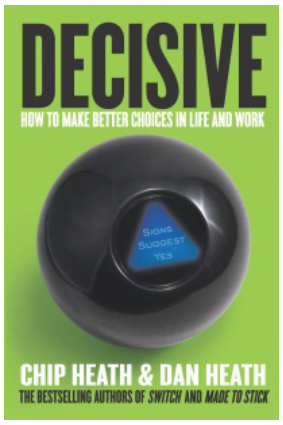
Once a decision has been made, ensure closure by (a) clearly specifying who to do what by when, and (b) establishing clear follow-up and accountability.

Other Details in the Book to Look Out For

The book includes many useful case studies to illustrate crucial conversations at work at home and in the workplace, and how to apply the skills and tips to achieve your desired outcomes. There are also several useful exercises for you to practice handling difficult situations, a "Style Under Stress" survey and an entire chapter dedicated to examples of difficult or sensitive conversations. Some examples include: dealing with an overly-sensitive spouse, blatant disrespect, or under-performing teammates. For additional resources, videos and other useful materials, do get a copy of the book or go to www.CrucialConversations.com/.

KEY QUOTES

"If you want people to feel accountable, you must give them an opportunity to account."



DECISIVE

How To Make Better Choices in Life and Work

CHIP HEATH AND DAN HEATH

The Big "So What"

We make decisions every day. Yet, we often find ourselves regretting or abandoning these decisions—be it choosing the wrong career, making a poor business decision, or buying something we don't need. This book explains why we make poor decisions, and how we can counter our own mental/emotional biases to make better choices.

Introduction

There are many books and studies that explain why we make **poor decisions.**

- For example, in "Thinking, Fast and Slow", Daniel Kahneman explains many of our mental biases, including "what you see is all there is". The Heath brothers call this the "*spotlight effect*", i.e. we make decisions based on the information being spotlighted and our subjective interpretation of that information. In so doing, we miss out on information and options outside of the spotlight.

- In fact, we can't trust our *intuition or detailed analysis*, as both are susceptible to biases.

The question that remains is: **How can we make better decisions**? The Heath brothers explain 4 key steps in a typical decision-making process, the villains that causes bad decisions at each step, and how we can counter them using the WRAP process to adjust our spotlight and make better choices.

KEY QUOTES

"Our decisions will never be perfect, but they can be better. Bolder. Wiser. The right process can steer us toward the right choice."

"What's in the spotlight will rarely be everything we need to make a good decision, but we won't always remember to shift the light."

"Sometimes we are given the advice to trust our guts when we make important decisions. Unfortunately, our guts are full of questionable advice."

Decision-making Process	Key Villains	WRAP Solution
Facing a choice	Narrow Framing	Widen your Options
Analyzing options	Confirmation bias	Reality-Test your Assumptions
Making a choice	Short-term emotions	Attain Distance before Deciding
Post-decision	Overconfidence	Prepare to be Wrong

The 4 Villains of Decision Making

Here are the 4 key factors behind our bad decisions.

Villain #1: Narrow framing.

- When we *face a choice*, we tend to look at our options narrowly, and often in binary terms, e.g. "Should I buy a new house or not?" or "Should I quit or stay in my job?". This limits the options that we consider.

- In reality, there are always more and better options if you use a *broader frame*, e.g. "What's the best way to improve our living conditions?" or "How can I improve both my income and job satisfaction?".

Villain #2: Confirmation bias.

- As we *analyze our options*, we tend to only look for data that confirms our beliefs, assumptions and predispositions, instead of truly seeking the best information.

- Researchers found that we're 2x more likely to favor information that *confirms our view* than information that disconfirms it. In fact, the more time and effort we invest in analyzing an issue, the more our confirmation bias kicks in. A KPMG study found of 83% of 700 mergers and acquisitions (M&As) did not boost shareholder value. This is partially

KEY QUOTES

"A better decision process substantially improves the results of the decision, as well as the financial returns associated with them."

"The confirmation bias leads us to hunt for information that flatters our existing beliefs."

"When we want something to be true, we will spotlight the things that support it, and then, when we draw conclusions from those spotlighted scenes, we'll congratulate ourselves on a reasoned decision."

because, after months of analyzing and negotiating a potential M&A, executives tend to focus only on the company at hand, rather than reconsider other companies or new ways to achieve their goals.

Villain #3: Short-term emotions.

- Despite our detailed data and analysis, when we actually *make our choice*, we tend to be influenced more by our short-term feelings.

- In such cases, it helps to *step away* until the emotions fade, so we can see things from a fresh perspective and consider the bigger picture.

Villain #4: Overconfidence.

- *After making the decision*, we tend to feel certain about how the future will turn out, when in reality we are merely guessing and have no way of accurately predicting the future.

- For example, doctors who were "certain" about their diagnosis turned out to be *wrong* 40% of the time. Students who estimated they had a 1% chance of being wrong were in fact wrong 27% of the time.

Solution: W.R.A.P

To protect yourself from these 4 biases, wrap the 4-step W.R.A.P. process around your usual decision-making process.

The 4 steps generally flow in **sequence**, but you need not follow them strictly, and you may not always need all the steps.

This process works only for **considered decisions** that take at least 5 minutes, i.e. it does not work for intuitive, split-second decisions, which can only be trained in a predictable environment with lots of repetition and instant feedback.

KEY QUOTES

"We have kicked up so much dust that we can't see the way forward. In those moments, what we need most is perspective."

"When we make guesses about the future, we shine our spotlights on information that's close at hand, and then we draw conclusions from that information."

"Our hope is that you'll embrace the process we outline…and practice it until it becomes second nature."

Widen your Options

To overcome your tendency to adopt a narrow frame, use these 3 strategies to (a) expand your options, (b) effectively consider multiple options, and (c) find alternatives even if you're stuck.

Avoid a Narrow Frame

Learn to **become aware** when you're stuck in a narrow frame.

- Watch or listen out for *whether-or-not questions*. Then, consciously widen your options with questions like "Is there a better way?" or "What else can I do?".

- *Replace "OR" with "AND"* in your questions to ask "How can I get this AND that?" rather than "Should I go for this OR that?"

Consider your opportunity costs, i.e. what you give up when you make a choice. For example, if you're deciding whether to buy a car (a binary decision), you can remind yourself of other options simply by *adding the words in bold below.*

a. Buy a car.

b. Not buy a car. **Keep the $5,000 for something else.**

Use the "Vanishing Options Test": Ask yourself what you'd do if you can't choose either of the options you are considering. This forces you to go beyond your narrow frame to explore new alternatives.

Multitrack—Explore Multiple Options

Consider more than 1 option simultaneously. This is more effective than considering your options sequentially.

- For example, graphic designers who concurrently designed (and received feedback on) 3 design options delivered much *better results* than those who designed 3 ads sequentially.

KEY QUOTES

"Learn to distrust 'whether or not' decisions…when you see or hear that phrase, a little alarm bell (should) go off in your head, reminding you to consider whether you're stuck in a narrow frame."

"If you're willing to invest some effort in a broader search, you'll usually find that your options are more plentiful than you initially think."

"Until we are forced to dig up a new option, we're likely to stay fixated on the ones we already have."

- This is because people can *compare and learn simultaneously* from various sets of feedback, to develop better mental models and solutions for subsequent revisions. With multiple alternatives, people also tend to feel less invested in any one solution, thus *minimizing ego and politics*.

- However, this will not work if *bogus options* are presented just to make a preferred option look good. Do a quick poll amongst your team-mates—if there's disagreement on the best option, it means you have genuine options to choose from.

You simply need to add **1-2 additional options** to drastically improve your decision and outcomes.

- There's no need for a full range of options; in fact, too many choices can lead to *decision paralysis.*

- A study found that whether-or-not decisions (with only 1 option) failed 52% of the time in the long term, while decisions with *2 or more alternatives* failed only 32% of the time.

Our **frame of mind** affects how we respond to the options we see.

- When we're in a "*preventive mindset*", we are cautious and focused on minimizing losses or damage. When we're in a "*promotion mindset*", we focus on opportunities.

- You need both perspectives, and the key is to *combine caution with optimism*—focus on AND, not OR, e.g. how can you reduce the budget while using the freed-up resources to invest in your most exciting opportunities?

Find Others Who Have Solved Your Problem

If you feel stuck, one of the best ways to find new ideas is to look for people who have already solved your problem.

You can find "**bright spots**" within your organization, your industry or others in similar circumstances. For example, if you're trying to build a new exercise habit, look at what you did on those days when you successfully went to the gym. If you're

KEY QUOTES

"You don't need a plethora of choices to improve your decisions. You just need one extra choice, or two."

"How you react to (an option)…depends a great deal on your mindset at the time it's offered."

"When life offers us a 'this or that' choice, we should have the gall to ask whether the right answer might be 'both'."

"To break out of a narrow frame, we need options, and one of the most basic ways to generate new options is to find someone else who's solved your problem."

trying to implement a new loyalty program, look at how others have successfully rolled out theirs.

You can even proactively capture your discoveries in a "**playlist**", e.g. people to consult, ideas to consider, or questions to ask.

- *Checklist vs playlist*. A checklist is prescriptive—it tells you exactly what you need to do and works for repetitive tasks. However, a playlist is generative—it acts as a stimulus to help people consider more options and discover new ideas.

- For example, a playlist for *budget cuts* could include: exploring new sources of income to alleviate the need for cost-cutting, delaying planned expenditures (not just cutting existing ones), and identifying new opportunities that are now possible to pursue with the freed-up resources. Such a playlist helps your team to approach budget cuts more creatively and constructively.

Use **analogies** to get new ideas, starting from analogies that are most identical to your situation, then expanding it progressively to get more creative. For example, if you want to reduce the queuing time in your office canteen, you can start with bright spots within your organization (e.g. how queue lines were shortened at the checkout counters). Then, gradually broaden your reference points to look at other industries, e.g. queue-management at F&B outlets or retail stores, or even crowd management practices at stadiums or theme parks.

Reality-Test your Assumptions

To overcome confirmation bias and our overconfidence in our predictions, we must reality-test our assumptions. The authors recommend 3 strategies to (a) improve the way we collect information, (b) improve the types of information we collect, and (c) test our options before we commit to them.

Consider the Opposite

Look for disconfirming data that challenge your beliefs or assumptions. Deliberately seek disagreements or find people who can play devil's advocate, to get a more balanced perspective.

KEY QUOTES

"Granular problems benefit from local analogies, and conceptual problems lend themselves to regional analogies."

"If you haven't encountered any opposition to a decision you're considering, chances are you haven't looked hard enough."

Probe further to draw out disconfirming information.

- Use *probing questions* like: "*What would have to be true* for this option to be the right answer?", or "Could this solution bring any problems?". Where probing questions are inappropriate, you can use open-ended questions to gather data.

- *Probe for specifics*, which may uncover conflicting data. For example, instead of asking, "are your employees happy with your company?", try asking "how many employees were hired 5 years ago?" and "how many of these employees are still with the company?".

Force yourself to **consider what's opposite to your instincts**.

- If you are feeling upset with someone, force yourself to "*assume positive intent*", e.g. assume that the other person is trying to be helpful, rather than being a busy-body.

- At the extreme, you can test your assumption by *making a deliberate mistake*, i.e. do what you believe won't work. If you fail, it proves your assumptions are correct; if you succeed, you'd have just disproved a wrong assumption.

KEY QUOTES

"Reality-Testing Our Assumptions is difficult… That's the whole point of the confirmation bias—deep down, we never really want to hear the negative information."

Zoom Out and Zoom In

An "outside view" is the summary of real-world experiences, while an "inside view" is your own impression or opinion. Zoom out and zoom in to get a more complete and realistic assessment of your choices.

Zoom out to get a more global view of what to expect.

- Test your assumptions by *consulting an expert*—someone who has more experience than you in an area—such as a lawyer for legal matters. Generally, experts are great at offering advice on variables and base-rates, but not for predicting outcomes for specific situations.

- Seek to answer this question: *What can I reasonably expect* to happen if I make this choice?

Then, **zoom in** on the details to assess the likely outcomes for your unique situation, and focus on specific ways to improve your chances of success.

- For example, you may shortlist *potential holiday resorts*

"Take the outside view. You should distrust the inside view…and instead get out of your head and consult the base rates."

based on research of other travellers' reviews and ratings. However, you'd only know if a resort is ideal for you after you zoom in on the specific comments (e.g. does the resort offer your favourite seasport and does it have the types of food you like?).

- Likewise, if you're planning to *start a business*, you can do a reality-check by looking at success rates and profit margins of various types of businesses, key factors behind business failures etc. However, to maximize the success for your business, you'd need to examine details like product specifications, types of product testing and quality control measures adopted by your top competitors, specific strategies to manage shipping and inventory control etc.

Test Assumptions with Small Experiments

Instead of spending all your time doing research and analysis, or plunging into a major decision based on gut-feel, use "ooching" to dip your toe in the water first.

Test your hypotheses using small experiments in real-life. For example, you can test if a profession is suitable for you by taking up internships and part-time jobs. To launch a new product, test it in the market with a prototype before you invest the resources to perfect it.

It's also more effective to use work samples, job knowledge tests and peer ratings to **predict job performance** (compared to interviews).

Ooching works best in cases where you honestly need more information. It **should not be an excuse** to avoid making commitments or put off difficult decisions.

Attain Distance before Deciding

To make sure your choices are aligned with what you truly want, you need to (a) manage the short-term feelings that cloud your judgment and (b) know and follow your priorities.

KEY QUOTES

"When we ooch, we bring real-world experience into our decision."

"To ooch is to ask, Why predict something we can test? Why guess when we can know?"

"Ooching…should be used as a way to speed up the collection of trustworthy information, not as a way to slow down a decision that deserves our full commitment."

Conquer Short-Term Emotions

We often make decisions based on emotional impulses, then regret them when the feelings fade.

By default, we tend to be **emotionally attached** to status quo and what's familiar:

- *Loss-aversion*. We find the pain from potential losses to be greater than the rewards from potential gains, thus prefer to keep things the way they are.
- *Familiarity*. We are naturally predisposed toward what we're familiar with, and tend to feel more positive about something just because we're exposed to it more frequently.
- Use the techniques below to *distance yourself* from these short-term impulses so you can make better decisions.

The "10/10/10 principle". To decide whether to proceed with an option, consider how you'll feel about it (a) 10 minutes from now, (b) 10 months from now, and (c) 10 years from now.

- Our feelings seem very real and intense in the present, but fade with time. By forcing yourself to *look into the future*, you'll dull the impact of your emotional impulses.
- Our short-term feelings are still useful in decision-making. The key is *put them in perspective* so they are not the main or sole influencer of our decisions.

Adopt a third-party perspective to distance yourself from your emotions and gain greater clarity. Ask yourself, "What advice would I give my best friend in such a situation?" or "What would my successor do in my shoes?".

Honor your Core Priorities

Although it helps to minimize the impact of short-term impulses, all major decisions are fundamentally about emotions—what you believe in, what you want and who you are. The key is to make decisions that are right for you.

If you find yourself agonizing over 2 options that are both attractive in the long-term, it's likely that you're dealing with a **conflict of core priorities.**

KEY QUOTES

"Conducting a 10/10/10 analysis doesn't presuppose that the long-term perspective is the right one. It simply ensures that shortterm emotion isn't the only voice at the table."

"There's no 'rational machine' underneath that is generating your perspective. It's who you are and what you want. The buck stops with emotion."

- Imagine you're trying to decide whether to stay in your current job (which pays well, provides work-life balance and allows you to play to your strengths) or take on a high-profile job (which comes with a huge pay rise, new challenges but requires you to move overseas and work long hours). The right decision in this case depends on *your values and what matters most to you.*

- Tough organizational decisions like, "Do we go with Option A to maximize shareholder value, or go with Option B to maximize benefits to our customers?" are also about *mission and core values.*

In order to make sound decisions, you must **define and follow your core priorities**. However, most people don't define their priorities simply because they don't have to. Attain distance so you can step back and review where your priorities truly lie.

Even if you know your priorities, it's hard to stick to them, e.g. you may value quality time with your kids but constantly give priority to urgent work projects. To make time for your key priorities, you must **remove your lesser priorities**.

- Create a "*stop-doing list*" each year, to free up time/resources for your main priorities.

- Fix a slot in your weekly schedule to *review how you spend your time*, and to identify what you can give up to make time for your priorities.

- *Set a regular alarm*—each time it goes off, pause and ask, "Am I doing what I most need to be doing right now?"

Prepare to be Wrong

We cannot accurately predict the future, but we can plan for surprises using 2 strategies: (a) bookend the future so you explore a wider range of possibilities and (b) set a tripwire to review your decisions.

Bookend the Future

Estimate 2 extreme scenarios—a desperate outcome (the lower bookend) and a dream outcome (the upper bookend). This forces you to consider a broader range of possibilities.

KEY QUOTES

"When we identify and enshrine our priorities, our decisions are more consistent and less agonizing."

"People rarely establish their priorities until they're forced to."

"With some distance, we can surface the priorities conflicts that underlie tough choices. With some distance, we can spot and stamp out lesser priorities that interfere with greater ones."

"We can't control the future, but with some forethought, we can shape it."

"To bookend the future means that we must sweep our spotlights from side to side, charting out the full territory of possibilities."

Build safeguards against the **lower bookend**, much like how you'd buy insurance.

- Use "*premortems*" (a concept by Gary Klein) to identify your biggest threats: Imagine your project turns out to be a total flop—what could have caused that failure? Build contingencies for these threats.

- Use "*failure-mode and effect analysis*" or FMEA (by Gunther Murphy) to identify potential failures at each step of your plans. Ask "how likely is it?" and "how severe would the consequences be?", then multiply the scores for the 2 questions to identify the biggest threats to be addressed.

Be prepared for the **upper bookend** or the unexpectedly good outcomes. Use a "*preparade*": Imagine your project is such a success that you're holding a parade to celebrate it. What will you need to handle this success?

Assume you're still overconfident, and build in a **margin of error** that's appropriate for your type of project.

You can also apply this concept to make better hiring decisions. During interviews or new-hire orientations, give a "**realistic job preview**", i.e. give a glimpse of what to expect, including unpleasant realities like long hours or difficult customers. By preparing people for what's to come, you can actually reduce turnover and improve job satisfaction.

Set a Trip-Wire

It's easy to get comfortable with status quo or lapse into auto-pilot mode (like how we brush our teeth or drive without conscious thought). We may also miss small daily changes or adopt a wait-and-see approach until it's too late. Tripwires are signals that will force us to reconsider a decision or to make a new one, at the right time, like your car's low-fuel warning indicator.

Your tripwire can be in the form of a **date or measurement**, e.g. "We will take action when 20% of the market has adopted this technology" or "We will take action if the market has not recovered in the next 3 months."

You can also create a **partition** that necessitates a conscious choice.

- In a study, participants who were given 24 unwrapped cookies finished them in 6 days, while those given

KEY QUOTES

"By bookending—anticipating and preparing for both adversity and success—we stack the deck in favor of our decisions."

"The FMEA and its sister technique, the premortem, stop people from focusing on a single, usually optimistic guess about how the world will unfold and instead compel them to pay attention to the uncertainty surrounding the guess."

"Tripwires at least ensure that we are aware it's time to make a decision, that we don't miss our chance to choose because we've been lulled into autopilot."

individually-wrapped cookies finished them in 24 days. The physical act of removing the wrappers forced people to consider if they wanted to continue eating.

- Likewise, you can create tripwires by separating your salary (or even gambling funds) into separate envelopes to remind yourself to control your expenditure.

Label your tripwires to make them easier to recognize—the recognition alone acts as a reminder that you can make a deliberate choice.

Conclusion + Other Details in the Book to Look Out For

The WRAP process provides a clear and consistent way to make better decisions; it can also improve the perception of fairness to improve buy-in for group decisions. Apply the tips to your decisions, and trust that you have the safeguards in place to make bolder decisions and take risks more confidently.

The Heath brothers bring these ideas to life using a range of real-life stories, vivid examples and case-studies. The book also includes:

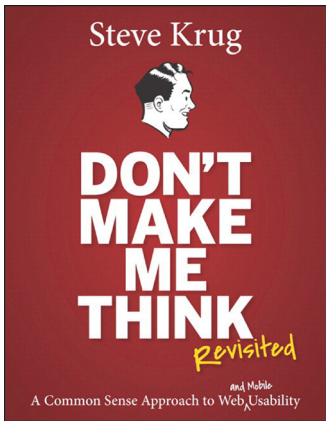
- "Clinics" to help you apply the tips using various real-world challenges; and

- Advice on overcoming 11 common roadblocks to use the WRAP process effectively.

Visit heathbrothers.com for additional resources such as a free workbook, various decision scenarios, podcasts and a book club guide.

KEY QUOTES

"With the right tripwire, we can ensure that we don't throw good money (or time) after bad."



DON'T MAKE ME THINK, REVISITED

A Common Sense Approach to Web Usability

STEVE KRUG

The Big "So What"

Today, it's hard to imagine any business without a website or internet presence. This book offers valuable principles and guidelines on how to design great, usable websites. Such insights are relevant for web designers, developers, and anyone who wants to think like a usability expert—to understand how people behave and how you can make things more usable.

Introduction

This book was first written in 2000. Since then, technology has changed rapidly, yet the principles in the book remain unchanged because **usability is fundamentally about human psychology**. Once you understand how the human brain works, you can continue to apply the insights even as technology and landscapes evolve.

This 2013 edition was updated with newer examples and to address **3 additional landscape changes since 2000**:

- Internet-usage has gone *mobile*. We no longer surf the web only in front of the computer. We're now constantly connected to the internet via different devices (especially our phones), to make dinner reservations, adjust our home lighting or temperature, do our banking etc.

- Websites are becoming *smarter and more powerful* and can learn/anticipate what users need. In fact, users often get irritated when sites don't do *exactly* what they expect them to do.

KEY QUOTES

"Usability is about people and how they understand and use things, not about technology ...while technology often changes quickly, people change very slowly."

"The human brain's capacity doesn't change from one year to the next, so the insights from studying human behavior have a very long shelf life. What was difficult for users twenty years ago continues to be difficult today."
—Jakob Nielsen

- The concepts of *usability and user experience design (UX)* are now widely known, not just to the techies. However, most people still don't know exactly what to do about it.

As a usability consultant, the author helps to test websites to identify key areas for improvement. However, not every company can afford to hire consultants. This book equips you and your team with useful principles and tips to **prevent and address usability issues** on your own. In this summary, we'll use the term "website" to refer generically to both websites and web/mobile apps.

Key Principles and Guidelines

The 3 Laws of Usability

Basically, something is usable if an average person can figure out how to use it to achieve an outcome without it being more trouble than it's worth. Krug breaks this down into 3 laws:

Law #1: Don't make the user think. This is the overarching rule. Each time a user has to pause (even for a split-second) to think about something, it distracts him from the action you want him to take. The goal is to make your website *effortless* to use, i.e. make it self-explanatory, if not self-evident.

- A website is *self-evident* when users "get" what it's about and how to use it without having to think. As a rule of thumb:

  (i) Make clickable links/buttons obvious.

  (ii) Use words that are obvious to *everyone*. Avoid technical jargon, clever-but-confusing marketing phrases, or terms that're specific to your industry/company.

Here are 2 examples:

	Obvious	Requires some thought	Unclear
#1	Jobs	Employment Opportunities	Job-a-holics!
#2	Download	Download	Download

KEY QUOTES

"Usability is, at its heart, a user advocate job…Usability is about serving people better by building better products."

"Your job is to get rid of the question marks…every question mark adds to our cognitive workload, distracting our attention from the task at hand."

"Making every page or screen self-evident is like having good lighting in a store: it just makes everything seem better."

- Even if you're doing something new that's unfamiliar to most people, you can still make the UX *self-explanatory*. Help users to understand and navigate the website with just a small amount of carefully-worded texts.

Law #2: Make every click an obvious choice with no need to think. Krug believes that the number of clicks doesn't matter, so long as each click is (i) mindless (i.e. no thinking required) and (ii) obvious (i.e. the user is sure it's the right choice). The only exception is during slow internet speed, in which case the # clicks will make a difference.

Law #3: Half the words on each page, then half them again. Remove all unnecessary words to reduce distractions, allow the key content to stand out, and shorten the page to minimize scrolling. The only exception is for news or content-driven articles.

How People Use the Web

We do *not* read websites in a sequential, detailed or orderly fashion. Instead, we scan webpages and navigate sites using trial-and-error.

We scan (not read) webpages. We almost never read a webpage from top to bottom.

- We tend to skim through a page quickly and zoom in on words that (i) are clickable and (ii) seem relevant, i.e. they match our immediate task/goal, personal interests or fit certain pre-programmed triggers (e.g. words like "Free", "Sex" or "Sale").

- When something looks roughly like what we're seeking, we'll click it, scan the new page, then go "Back" if it's the wrong choice. When we find a relevant page, we also scan it quickly to pick up the specific bits of info we need.

We make reasonable (not optimal) choices. We don't take the time to compare options and select the best one. We "satisfice" or click on the first reasonable option we see. After all, we can always go "Back" if it's not what we're looking for.

KEY QUOTES

"If you can't make something self-evident, you at least need to make it self-explanatory."

"It doesn't matter how many times I have to click, as long as each click is a mindless, unambiguous choice."

"We don't read pages. We scan them."

"We don't make optimal choices. We satisfice."

We go for guesswork (not the "right" approach). Instead of reading instructions or figuring out the details, we make assumptions and fumble our way through using trial-and-error. So long as we eventually find what we want, we don't care if the process is inefficient. And, if something works, we stick to it until we stumble upon a better alternative, i.e. we won't deliberately search for better options. If you can help users to "get" your site and achieve their goals faster, they're more likely to return. You'll also have a higher chance of (i) directing them where you want them to go, and (ii) showing them more benefits and features that you offer (not just what they stumble upon).

Design your Website for Easy Scanning

Help users to quickly understand your site and find what they need.

Make use of existing conventions i.e. common standards, designs or layouts. For example, a car's acceleration pedal is *always* to the right of the brake pedal. The STOP sign—with its distinctive octagon shape and red color—is also universally understood.

- Similarly, *there're conventions for webpages*, such as (i) where things are located (e.g. logos on the top-left corner, key navigation menu on the top or left), and (ii) familiar icons (e.g. shopping carts for ecommerce, magnifying glass for search bars).

- Conventions are widely-adopted because they work. *Don't break from convention just to be creative*. Follow conventions unless your alternative is (i) just as clear/intuitive to the users or (ii) adds so much value that it's worth the extra thinking/learning you're putting them through.

Use effective visual hierarchies. Clearly show the relationship between various elements on the page, i.e. which things are important, similar to, or are part of other things. We encounter such visual hierarchies every day, e.g. in magazine or newspapers headlines and columns.

KEY QUOTES

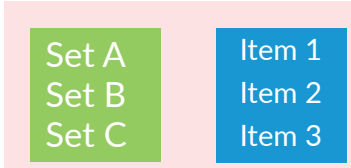
"We don't figure out how things work. We muddle through."

"For most of us, it doesn't matter to us whether we understand how things work, as long as we can use them. It's not for lack of intelligence, but for lack of caring."

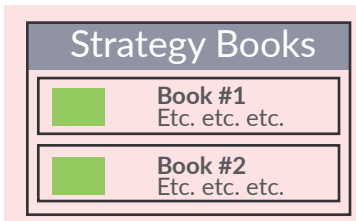
"Innovate when you know you have a better idea, but take advantage of conventions when you don't."

- Make *important items* more prominent, e.g. bigger, more colorful, higher on the page and/or with stronger contrast.

- Connect *similar/related* things visually, e.g. group similar content under a common heading, place them in a clearly-defined section or use the same design style/color.



- Show that something is a *sub-set* of another by inserting it directly within the parent section, e.g. place all strategy-related books under a "Strategy" section.



Format your content for easy scanning.

- Divide each page into *clearly-defined sub-sections* so users can quickly zoom in on the most relevant areas.
- Use *formatting*, such as different header levels (with corresponding font sizes), short paragraphs, bulleted lists and highlight the key words/phrases.

Make every click mindless and obvious (Law #2):

- *Make clickable elements evident*. Users will scan the page for what's clickable, e.g. buttons, menu bars, words with specific colors and underlining. Don't confuse them by using the same colored font for clickable and non-clickable headings.
- *Use unambiguous choices*. "Single-user or Multiple-users" is unambiguous but "Home or Office" isn't. If an unambiguous choice isn't possible, then guide users with form/tool tips that are (i) concise (with minimal info), (ii) timely (offered just when they need it), and (iii) unavoidable (i.e. they have to notice it).

Remove distractions or "noise" on your website. These include:

- *"Loud" pages* where everything shouts for the users' attention. If a page is full of exclamation marks, bright colors, fancy fonts types, animations and popups, the user won't know what to focus on.

KEY QUOTES

"The more important something is, the more prominent it is."

"Almost anything that can be a bulleted list probably should be."

"Shouting is usually the result of a failure to make tough decisions about which elements are really the most important and then create a visual hierarchy that guides users to them first."

- *Messy pages* that're so untidy and disorganized that it's hard to read or navigate.

- *Clutter* from unnecessary content which make it hard to find the useful stuff. Remove everything that doesn't really contribute to your page, including unnecessary words from:

  (i) Social talk or welcome/intro messages that don't convey anything useful.

  (ii) Lengthy instructions. If absolutely necessary, insert concise instructions only at the point where users will need them.

Navigation, Home Page and Testing

Navigation

Navigating a website is like looking for something in a huge departmental store.

- There're a few *similarities*:

  (i) People are usually looking for something specific;

  (ii) Some prefer to browse on their own first while others prefer to ask for help; and

  (iii) They'll leave if they can't find what they're looking for.

- However, there're also *differences*. Unlike in a physical store:

  (i) You can't tell how much of the website is unexplored;

  (ii) You don't have a physical sense of where you are on the site; and

  (iii) It's harder to return to a specific place in a website. Most people use the "Back" button, bookmarks (or stored personal shortcuts) and the Home Page (as a "base" to start afresh).

KEY QUOTES

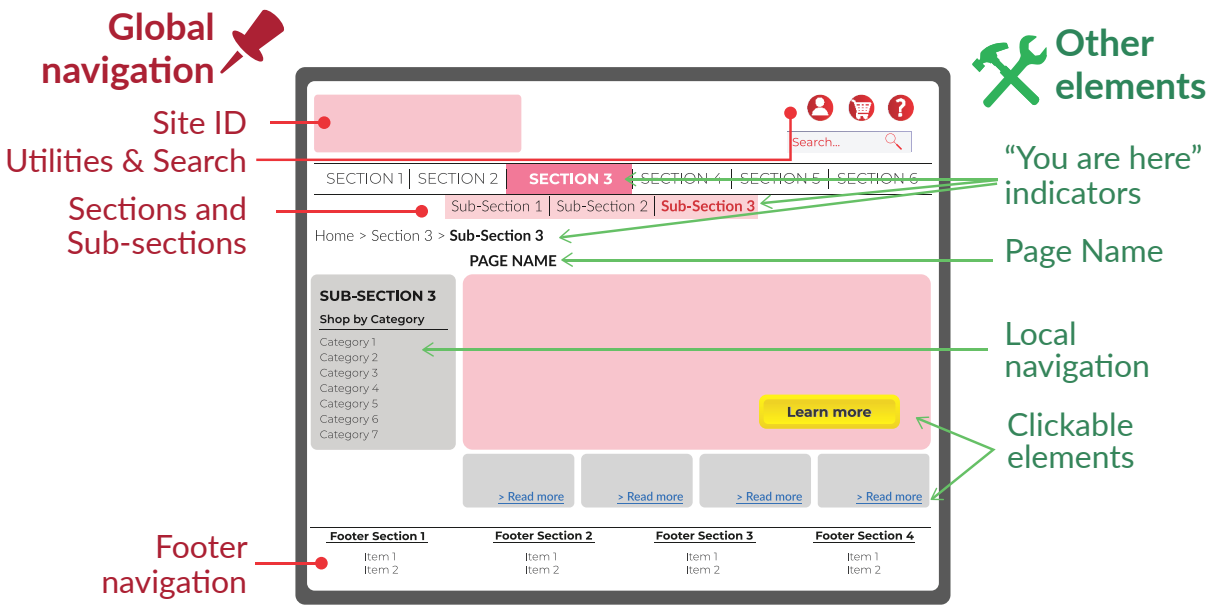
"In the face of limited time and attention, everything that's not part of the solution must go."

"Happy talk is like small talk… But most Web users don't have time for small talk; they want to get right to the point."

"It's a fact: People won't use your Web site if they can't find their way around it."

Web navigation serves 2 key goals: help users (i) find what they're looking for and (ii) know where they are on the site. Great navigation makes the site hierarchy clear, helps people to see what the site contains, how to use it (e.g. where to start and what options are available), and builds confidence in your brand.

We expect to find street signs at street junctions and corners, index pages in books, signs along supermarket aisles, etc. We feel frustrated when these expectations aren't met. Likewise, there are certain conventions for web navigation that users expect:



Global navigation (or persistent navigation) means having core navigation elements on *every* page of a site to provide a consistent experience. The only exception is when the user is filling up a form (e.g. to register or make a purchase).

- The *Site ID or logo* must appear consistently on every page so users know they're on your site. The Site ID usually doubles up as a Home page link, but you can still add an explicit link to "Home".

- *Sections* (or primary navigation) provide links to the key parts of your site. You can also include sub-sections (or secondary navigation) under each section.

- *Utilities* are links to other important webpages that aren't part of the main content hierarchy, e.g. login, shopping cart, search bar, about us, FAQs. Make them less prominent than the sections, include no more than 5 most-used utilities in the global navigation and put the rest in the footer.

KEY QUOTES

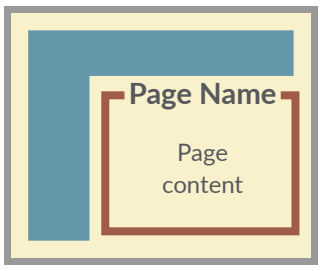
"Clear, well-thought-out navigation is one of the best opportunities a site has to create a good impression."

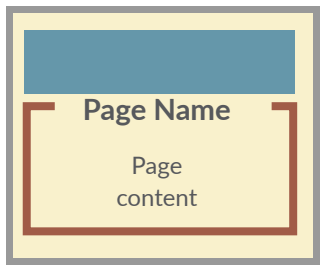
"It's vital to have sample pages that show the navigation for all the potential levels of the site before you start arguing about the color scheme."

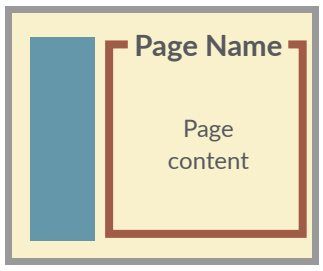
- Include a *search bar* or minimally provide a link to a search page. Keep it straightforward, e.g. label it "Search" (not "Find" or "Quick Search"). Only split the search further (e.g. "Search by authors" or "Search by title") if absolutely necessary.

- Most sites only display up to 2 levels of their content hierarchy. It's much better to work out and *show all levels* of the hierarchy.

Always have a **page name** for every page. This should (i) be prominent, (ii) match the link that was clicked (to minimize confusion), and (iii) be located such that it frames the page content.







Let users know "**you are here**" on the site by:

- Prominently *highlighting the sections/sub-sections* that they're at (e.g. using a pointer, bolding the text, using a different color for the text or button)

- *Using breadcrumbs* at the top of the page to tell users where they are relative to the Home page (e.g. Home > Store > Men's Clothes > **Pants**).

Tabs are easy to understand and can be designed to be prominent yet elegant. Make sure you use a strong color contrast and create a clear visual link between the tab and main content.

Since people can enter your website from any page (not just the Home page), you should **test the navigation** for your entire site:

- Imagine you've been blindfolded and suddenly open your eyes to face a random page on your website. You must be

KEY QUOTES

"Just as every corner should have a street sign, every page should have a name."

"Designers love subtle cues, because subtlety is one of the traits of sophisticated design. But Web users are generally in such a hurry that they routinely miss subtle cues."

able to instantly identify (i) what website this is (site ID), (ii) what page you're on (page name), (iii) what the key sections are (sections), (iv) what you can do at this level (local navigation), (v) where you are in the site, and (vi) how to search for what you need.

- Print out one of your pages and see if others can identify these elements at a glance: (i) site ID, (ii) page name, (iii) sections, (iv) local navigation, (v) "you are here", and (vi) search options.

Home Page

The Home page is one of the **most challenging** pages to design because you must fit in many things:

- It typically includes *elements* like your site ID and mission, site hierarchy, search functions, teasers/highlights (of key content, features and deals), shortcuts to commonly-used content/features, and registration or login forms.

- They must also meet different *users' objectives* by helping them to find what they're looking for, interest them with your offers, build trust/credibility, and show them where to start.

Many stakeholders will want to be featured on the Home page, but you mustn't clutter the page. Instead, the Home page must **give a clear, big-picture overview** of your site.

- Specifically, it must quickly answering these *4 questions*:

  (i) What is this site? [Site ID and mission]

  (ii) What can I find here? [Content]

  (iii) What can I do here? [Features]

  (iv) Why should I be here? [Value proposition]

- The *initial impression* formed within the few seconds will affect how the user interprets (or misinterprets) everything else on that page.

KEY QUOTES

"Preserving the Home page from promotional overload requires constant vigilance."

"We make snap judgments, but they tend to be a pretty reliable predictor of our more reasoned assessments."

- Most people will also return to the Home page to *orientate themselves*—what they see will affect if/how they use your site.

These 3 elements can be used to highlight the **key message** upfront:

- A *tagline* is normally found with your logo and sums up your value proposition. Great taglines are short (<6-8 words), clear and explain specifically what you do, e.g. "wheels when you want them" (Zipcar). An ideal tagline captures your differentiating factor and core benefit.

- A *welcome blurb* is a succinct description usually located on the top left of the content space e.g. "Founded in 1996, Idealab is the longest running technology incubator. We have created over 150 companies with more than 45 IPOs and acquisitions." Never use your corporate mission as the welcome blurb.

- A "*learn more*" button or link.

  It's ok to use more space to convey your key proposition, so long as the content is clear and succinct. Use pictures/videos and highlight only the most compelling content/features as teasers.

Once you've addressed the 4 questions, you must show the user **where to start**, e.g. to search, browse, get free samples, enjoy your promotions, or begin with Step 1 of a specific process. Ensure your entry points are distinct, e.g. your sections must look like sections, and your search bars must look like search bars. Label them clearly, e.g. "Browse by Category", "Search", "Sign in" or "Start free trial".

Test every element on your Home page. Do not rely on intuition or assumptions.

- Web teams often waste time/energy debating over design elements, e.g. whether to use pull-down bars or a certain layout. Every stakeholder (from the designer to the CEO) has personal preferences about web usage. We tend to assume that others share our preferences, and we argue over what the "average user" wants. In reality, web usage

KEY QUOTES

"If people are lost when they start out, they usually just keep getting...loster."

"Testing reminds you that not everyone thinks the way you do, knows what you know, and uses the Web the way you do."

"What works is good, integrated design that fills a need—carefully thought out, well executed, and tested."

is *quirky and unpredictable*. The best approach is to plan carefully then test if/how people actually use the elements.

- People also tend to *test the wrong things*, e.g. they test the design of a promo banner, only to realize that users aren't interested in the promotion at all.

How to do Usability Testing

What is usability testing?

- *Usability tests ≠ focus groups*. Focus groups are small groups of people who share their views/opinions about something. They may be useful in the *early* stages of planning to get ideas and feedback on your value proposition. On the other hand, usability tests are about watching how people use something (e.g. your website); they should be used at *all* stages of development, from prototype-testing to identifying/fixing specific problems.

- *Any testing is better than none*. A test earlier in a project is also many times more valuable than a test at the end of the project, since you'd have more time to use and apply the insights.

Professional testing can cost anything between $5-10k. However, you can do **DIY testing** for a fraction of the cost.

- Get your Web development team to spend just *1 morning a month* to do usability testing: do a test with 3 users, debrief over lunch, and decide what to fix before the next monthly test. The idea is to keep it simple so you have a fixed testing schedule that you're committed to. Agile development teams should do more frequent testing, e.g. 2x a month.

- Krug recommends a small sample size of just *3 users* for each testing. After all, you don't need to uncover all the problems or to prove something statistically. Your goal is simply to get actionable insights to improve your site every month.

- You can *use anyone for the tests*. In most cases, the problems faced by 1 user will apply to other users, so there's no need for participants to match your user profile exactly Usually,

KEY QUOTES

"People often test to decide which color drapes are best, only to learn that they forgot to put windows in the room."

"Testing always works, and even the worst test with the wrong user will show you important things you can do to improve your site."

"You can find more problems in half a day than you can fix in a month."

you can recruit participants (from Craigslist, social media, website popups etc.) for an incentive of about $50-100 for 1 hour.

- Involve as many *observers* as possible. Put them in a separate observation room where they can see the participant's screen and hear what's happening in the testing room. After each session, take a short break and get each observer to write down the top 3 usability problems they observed.

- If you're redesigning your website, start by testing *what currently works* or doesn't work before you make the changes. You can also get participants to test a competitor site for additional insights.

- Each month, select the specific *tasks and sub-tasks* you want the participants to do. For example, to test account-logins, they may need to create an account, change their password, retrieve a lost password etc. You can also instruct them with specific tasks like "Find a summary for a book you read recently" or "Find a strategy book for less than $15".

- Here's a sample *test session structure*. You can also consider alternatives such as (i) remote-testing (via screen-sharing) or (ii) unmoderated remote-testing (i.e. send people the task/links, then get them to record what they do).

Item	Description
Welcome (4 min)	Explain what to expect.
Questions (2 min)	Find out more about the participant
Home page (3 min)	Open your Home page and ask the participant for inputs. Assess if your page is easy to understand.
Tasks (35 min)	Observe the participants as they perform the assigned task(s). The facilitator can ask questions like "What are you thinking?" or "What are you doing now?". Don't say/do anything to influence guide them. If they ask for help, ask "What would you do if I wasn't here?"
Probe (5 min)	Ask questions to clarify what happened, and/or present questions from the observers.
Wrap up (5 min)	Thank the participant and pay them.

KEY QUOTES

- Do the *debrief* over lunch.

  (i) List the issues on a whiteboard: Get everyone to share the top 3 problems they observed over the 3 sessions. Agree on the 10 most serious problems and rate each one on a scale of 1-10.

  (ii) List the top 10 issues in order of seriousness. Discuss how you can address each one, including who to fix it and how. Start from the most serious item and keep going until you've enough items for the available time/ resources that month. Focus on the most serious items, but also include low-lying fruits can be easily fixed within 1 hour.

- *Useful tips*: Often, the solution is to remove/simplify an existing item, *not* add more stuff. If a user goes off-track but corrects himself without help or obvious frustration, the issue can be left alone. There's no need to fix a problem 100%; *any* improvement helps.

KEY QUOTES

"Focus ruthlessly on fixing the most serious problems first."

Other Considerations

Mobile Usability

Mobile growth exploded after Apple made it possible to scroll by swiping and to zoom in/out by "pinching" the screen. The **principles for usability** are generally similar for mobile and web. However, (i) you need to cater for a much smaller screen and (ii) there're fewer conventions since mobile technology is still evolving rapidly.

"Mobile devices meant cramped devices, squeezing Web pages the size of a sheet of paper into a screen the size of a postage stamp."

Fundamentally, mobile space constraints mean that you must make **tradeoffs**, i.e. decide what to leave out.

- One way is to *design for mobile users first* so you're forced to choose only the most vital content/features, before adding more content/features for the desktop version.

- You must still include all critical elements for the mobile version, but break up content into *sub-parts or levels* and

"Most of the challenges in creating good mobile usability boil down to making good tradeoffs."

prioritize them. People will have to tap/scroll more, but they're ok so long as each step is obvious and mindless.

Here are some **tips** you can apply immediately:

- Start with these *3 low-lying fruits*: (i) allow zooming on your website (so users can still view elements that are too small), (ii) ensure external links (emails, social media etc.) bring people directly to relevant parts of the site (not the Home page) and (iii) give the option to view the full website instead of the mobile version.

- *Make each element extremely clear*, e.g. use 3D buttons that're obviously clickable, outline boxes where people should type in. If you're using Flat design, you must deliberately create other forms of differentiation. If you use "hovering" in your Web design (e.g. drop-down menus that appear when the cursor is above a section), remember to find alternatives for mobile users since hovering doesn't work on touchscreens.

- *Speed*: make sure your pages load quickly.

Basically, users must easily figure out how to use your app without complex tutorials. Once they "get" it, they should easily remember or relearn it when they return. You can delight your customers with surprising features, but never do it at the expense of usability.

Usability-testing on mobile is similar to that on the web except for several logistical challenges, since the tools for web-testing are still not widely available on mobile. For example, it's harder for the facilitator/observers to see the user screen, and mobile screen-sharing is not widely available yet. Krug recommends:

- Pointing a camera at the mobile screen so you can capture both the screen and the users' fingers; and

- Attach the camera to the device so the user can hold it freely.

Other Factors and Influences

Every user has a **finite pool of goodwill** toward your brand. Each time you anticipate the user's needs and make him feel

KEY QUOTES

"Almost everything that's different when you're doing mobile testing isn't about the process; it's about logistics."

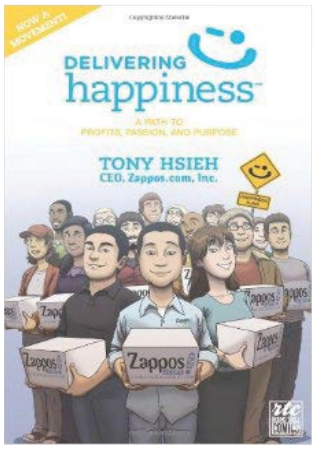
"There's another important component to usability: doing the right thing—being considerate of the user."

at ease, understood and competent, you increase the goodwill. Each time the user feels confused, unsure or faces an obstacle, the goodwill depletes.

Ideally, your website/app should be accessible for everyone, including those with disabilities. Even if you can't afford to develop customized solutions, you can start with 4 areas: (i) fix usability issues that affect everyone, (ii) include a few blind users in your usability-tests, (iii) read up on Web accessibility, and (iv) go for low-lying fruits, e.g. add alternate attributes for every image, use appropriate headings, use forms that work with screen readers, choose a web template that's designed to be accessible.

To convince your management to support usability improvements, you'd need to (i) show the returns on investment and (ii) present the benefits in their language (e.g. using their buzzwords or KPIs). A simpler way to start is to do a test on competitors (which is typically of interest to management), get the bosses to observe a usability test, or do your own test then share the results.

KEY QUOTES



DELIVERING HAPPINESS

A PATH TO PROFITS, PASSION AND PURPOSE

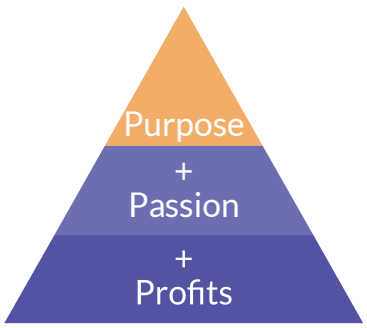
by Tony Hsieh

The Big "So What"

Tony Hsieh shares how he built Zappos from nothing to its eventual sale (or marriage) to Amazon for $1.2 billion. It's a valuable case study on:

- How to develop a successful start-up;
- How to create a happy workplace that generates sustainable returns for employees and the company; and
- How to follow your passions to create your own path to success

Introduction



Hsieh organized his book into 3 parts. In "Profits", he shared his entrepreneurship journey from childhood till he was in college. In "Profits and Passion", he details the business journey and insights as he brought Zappos from a struggling start-up to its acquisition by Amazon. In "Profits, Passion and Purpose", he shares how Zappos broadened its vision to Delivering Happiness to the world, before closing with how each of us can chart our personal path to happiness.

This summary is organized in 3 parts to present useful ideas from the book that can be applied:

- Personal insights from Hsieh's personal journey and philosophy
- Business insights from Zappos' success story
- Finding your Path: 4 Frameworks for Happiness

KEY QUOTES

"I decided to write this book to help people avoid making many of the same mistakes that I've made. I also hope that this book will serve as encouragement to established businesses as well as entrepreneurs who want to defy conventional wisdom and create their own paths to success."

"I thought about how easily we are all brainwashed by our society and culture to stop thinking and just assume by default that more money equals more success and more happiness, when ultimately happiness is really just about enjoying life."

1. Insights from Hsieh's personal journey

Hsieh is a masterful story-teller, and it is impossible to replicate his vivid stories through a summary. In this segment we provide a few highlights of his journey and his aha moments.

From young, Hsieh has had an entrepreneurial streak in him. From attempting an earthworm breeding business at the age of 9, to running garage sales, to trying his own newspaper to sell ads, to running a mail-order button business in middle school, to crowdsourcing for a study guide and selling pizzas in college, he has developed a real understanding of money, profits and what matters to him. He shares about each of these ventures in great detail and with a lot of humour. Through these stories, we get a glimpse into his learning experiences and insights, many of which also shape his philosophy and approach to business.

There were a few significant "aha" moments on Hsieh's journey:

The importance of company culture

In 1996, Hsieh co-founded LinkExchange, an internet advertising cooperative. During the first year, they hired friends and people who were attracted by the fun and excitement of what they were creating. The team was dynamic, close-knit and the company grew rapidly. As they grew beyond 25 employees, they started to hire people who were smart but more motivated by money and career growth, and the culture started to shift. By 1998, when the company was sold to Microsoft for US$265 million with about 100 staff, Hsieh realized that he was no longer enjoying his business. This was his first major lesson on the importance of company culture.

KEY QUOTES

"Envision, create and believe in your own universe, and the universe will form around you" – a stranger that Hsieh met at a party."

"I'd realized that whether in poker, in business, or in life, it was easy to get caught up and engrossed in what I was currently doing, and that made it easy to forget that I always had the option to change tables…Without conscious and deliberate effort, inertia always wins."

"I didn't know it at the time, but ten years later I would learn that… the combination of physical synchrony with other humans and being part of something bigger than oneself (and thus losing momentarily a sense of self) leads to a greater sense of happiness." – Hsieh on his experience with rave culture

Discovering his passions and path

Like most people, Hsieh discovered his true passions through real-life experience. Hsieh left his job at Oracle after 5 months (because he was bored) to focus on a web-design business. He learned quickly that he didn't enjoy web design either, and moved on to start Link Exchange, which was sold to Microsoft in 1998.

By early 1999, Hsieh decided to forgo a large sum of money to leave Microsoft and pursue his passions. "I didn't realize it at the time, but it was a turning point for me in my life. I had decided to stop chasing the money, and start chasing the passion."

He moved on to start Venture Frogs, a $27 million investment fund (of which Zappos was one of the investments). Hsieh lost a lot of money in investments, the stock market, movies, etc., but learned more about himself, his passions and business along the way. He drew many parallels between business and poker (something he got interested in for a while), and shared one of his key insights about business and life: "I learned that the most important decision I could make was which table to sit at. This included knowing when to change tables...In business, one of the most important decisions for an entrepreneur or a CEO to make is what business to be in."

The power of Connectedness

When planning for his 26th birthday party, Hsieh had a transformational experience at a party, when he experienced a profound sense of connection with the other people and the rest of the universe.

He was exposed to "rave culture", a youth-oriented subculture that blends music, art and social ideals. In the process, he learned how to be genuinely interested in other people, with no hidden motives. "The rave culture was a reminder that it was possible for the world to be a better place, for people to simply be appreciative of the humanity in one another".

KEY QUOTES

2. The Zappos Story: Lessons for Business

In many ways, Zappos is an embodiment of Hsieh's values and passions. Hsieh details how he and his partners successfully grew Zappos from scratch to achieving annual gross merchandise sales of over $1 billion. The company also has a set of distinctive and integrated core values that permeates all levels of the organization, and extends its open, honest and collaborative approach to all of its stakeholders.

Zappos went through its share of challenges, especially in the first 2 years of business. Hsieh and his partners struggled to find the right business model, and grappled with problems of cash-flow, inventory, logistics etc. Hsieh attributes Zappos' success to their initial investment and focus in 3 areas: customer service, culture and training.

Customer Service

Repeat customers and word-of-mouth are the key drivers for Zappos' growth today, and this foundation is built through its commitment to customer service.

Top 10 Ways to Instill Customer Service Into Your Company

A commitment to customer-service comes from the top, and must be a priority for the whole company, not just one department.

Build WOW into your company's daily vocabulary.

Trust that your customer service reps want to provide great service, and empower them to do so.

Make it ok to fire customers who are insatiable or abuse your employees.

KEY QUOTES

"Looking back, a big reason we hit our goal early was that we decided to invest our time, money ad resources into three key areas: customer service (which would build our brand and drive word of mouth), culture (which would lead to the formation of our core values), and employee training and development (which would eventually lead to the creation of our Pipeline Team)."

Customer experience

"As unsexy and low-tech as it may sound, our belief is that the telephone is one of the best branding devices out there. You have the customer's undivided attention for five to ten minutes, and if you get the interaction right, what we've found is that the customer remembers the experience for a very long time and tells his or her friends about it."

Display your 1-800 number prominently – send the right message to your customers and employees.

View each client's call as an investment in your brand, not as an expense to minimize.

Don't focus on call times and upselling, and don't use scripts.

Celebrate great service and tell WOW stories in the whole company.

Find and hire people who are passionate about great service.

Extend great service to everyone, including customers, employees and vendors.

Zappos views customer service as an integral part of their brand, and believes that marketing should be about building engagement and trust (especially post-sale) rather than just generating buzz. Some examples of its exceptional service include: free shipping both ways (to deliver the shoes to customers and for customers to return shoes they have tried but don't like) and their 365-day return policy.

While many of its measures are costly, Zappos views them as a marketing investment that creates an emotional connection with customers, generates word-of-mouth marketing and increases the lifetime value of customers.

Culture

With internet, everything has become transparent. The best way to develop an authentic brand is to ensure that your company's brand and culture are one and the same, i.e. everyone in the company genuinely embraces the core values as an integral part of their lives.

KEY QUOTES

Culture

"We believe that your company's culture and your company's brand are really just two sides of the same coin. The brand may lag the culture at first, but eventually it will catch up. Your culture is your brand."

Zappos' 10 core values were not defined by the founders, but derived from a feedback process to identify what Zappos really meant to each employee. Hsieh spends over 30 pages sharing about each of these 10 core values and how they are brought to life at Zappos.

Zappos' Ten Core Values

1. Deliver WOW Through Service.
2. Embrace And Drive Change.
3. Create Fun And A Little Weirdness.
4. Be Adventurous, Creative And Open-Minded.
5. Pursue Growth And Learning.
6. Build Open And Honest Relationships With Communication.
7. Build A Positive Team And Family Spirit.
8. Do More With Less.
9. Be Passionate And Determined.
10. Be Humble.

Hsieh shares many examples of how Zappos' culture is reinforced and communicated, from designing a central reception area that all employees will pass through (hence increasing interaction), to offering tours of their HQ, to "the face game" to help employees know one another, to regular surveys, to creating a library for employees to read and learn etc. It doesn't matter if these values are directly relevant to your company; his message is this: Commit fully to your core values, until they are the default way that your organization thinks and acts.

Hsieh also shares several unique ways in which Zappos' culture is shaped and strengthened:

The Zappos Culture Book

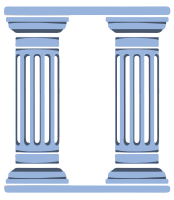
This book captures Zappos' culture and values, based on contributions by Zappos' employees, vendors, customers and partners. True to Zappos' belief in transparency, none of the entries are censored or edited (save for typos), and the book is made available to not just employees, but also

KEY QUOTES

"As it turns out, it doesn't actually matter what your company's core values are. What matters is that you have them and that you commit to them. What's important is the alignment that you get from them when they become the default way of thinking for the entire organization."

"Your personal core values define who you are, and a company's core values ultimately define the company's character and brand."

members of the public. Over time, this has become a way for employees to freely express themselves, and is a good documentation of how the culture evolves over time. Hsieh includes a segment on how to develop your own culture book (if this is something you resonate with).



Hiring right and training

are both key elements to building and maintaining the culture at Zappos.

- Candidates are only accepted into Zappos if they pass 2 tests: having the right experience, technical ability, team fit etc. (assessed by the hiring manager) and having the right culture fit (assessed by the HR department).
- Every employee, regardless of their department, goes through same 4-week training program. To weed out those who are there for the wrong reasons, all candidates are offered $2,000 to quit after the 1st week of training till the end of the 4th week.

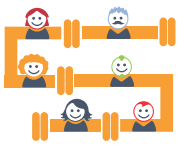
Hsieh highlights the importance of committing to your core values, such that "you're willing to hire and fire based on them."

Alignment across all stakeholders

Hsieh shares various stories and examples to show the importance of aligning all stakeholders – from employees to customers, vendors and even the Board of Directors. Hsieh shared in detail (including internal emails) to show how they held true to their values of openness and honesty when handling a round of layoffs in 2008 and announcing their acquisition by Amazon in 2009.

KEY QUOTES

Employee Training and Development



Zappos' commitment to its core value of Growth and Learning has led to the creation of their pipeline concept. Rather than focus on individual talents, they develop pipelines of people in every department, with various skills and experience. They aim to hire passionate people at an entry level, and grow them internally, with the opportunity to be a senior leader in 5-7 years. Books and courses are offered by their Pipeline Team to develop their staff.

Purpose: Going Beyond Profits and Passion

- As Zappos grew, there were more and more public speaking opportunities for Hsieh to share about his and Zappos' success.

  Over time, Hsieh has adopted 3 basic rules for his talks which helped him to stay in flow and deliver the most impactful speeches:
  - Be passionate (he'll decline topics that he's not passionate about)
  - Tell personal stories
  - Be real

- Staying true to Zappos' core value of Pursuing Growth and Learning, he focuses on using the speaking engagements to help the audience to grow and learn, rather than to promote Zappos. Hsieh and his team soon realized that they were helping to change other companies and people's lives, and expanded their materials into Zappos Insights and Zappos Insights Live. In 2009, they expanded their vision to a simple but powerful statement: "Zappos is about delivering happiness to the world".

KEY QUOTES

Pipeline Team

"Rather than focusing on individuals as assets, we instead focus on building as our asset a pipeline of people in every single department with varying levels of skills and experience."

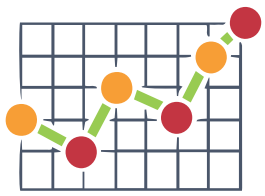
3. Finding Your Path to Happiness

Hsieh ends his book by shifting the attention to the reader and the psychology behind happiness. He summarises his research and the ideas that have helped him to find his own path.

Framework 1: Happiness Ingredients

There are essentially 4 key ingredients to happiness, and Hsieh shares how Zappos builds each of these ingredients into its organization:

Perceived control



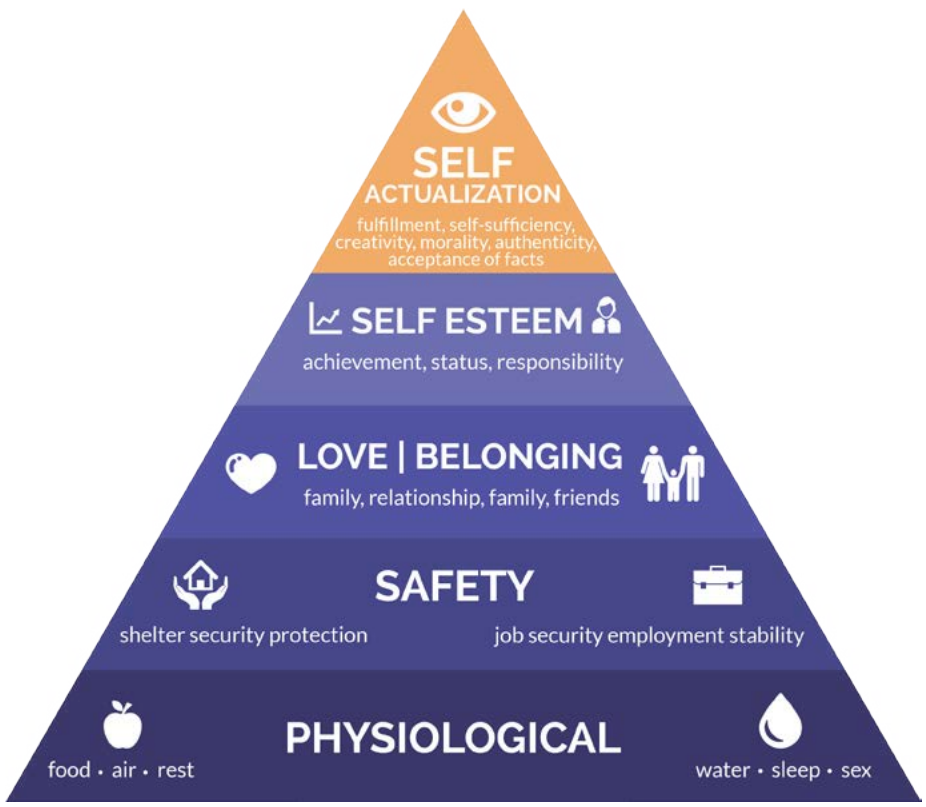
Perceived progress

Connectedness
(Number & depth of relationships)

Vision/ meaning
(being part of something bigger than yourself)

Framework 2: Serving Business Stakeholders' Needs

We can apply Maslow's Hierarchy to better serve the needs of our stakeholders in business.



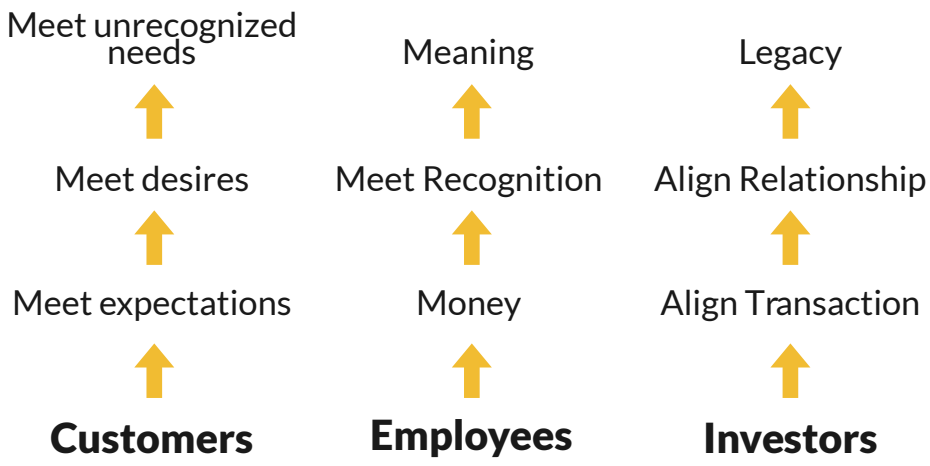
KEY QUOTES

"If you just focus on making sure that your product or service continually WOWs people, eventually the press will find out about it."

"As we rolled out these additional services, we slowly realized that we were becoming part of a bigger movement. It was no longer just about Zappos. We were helping to change the world."

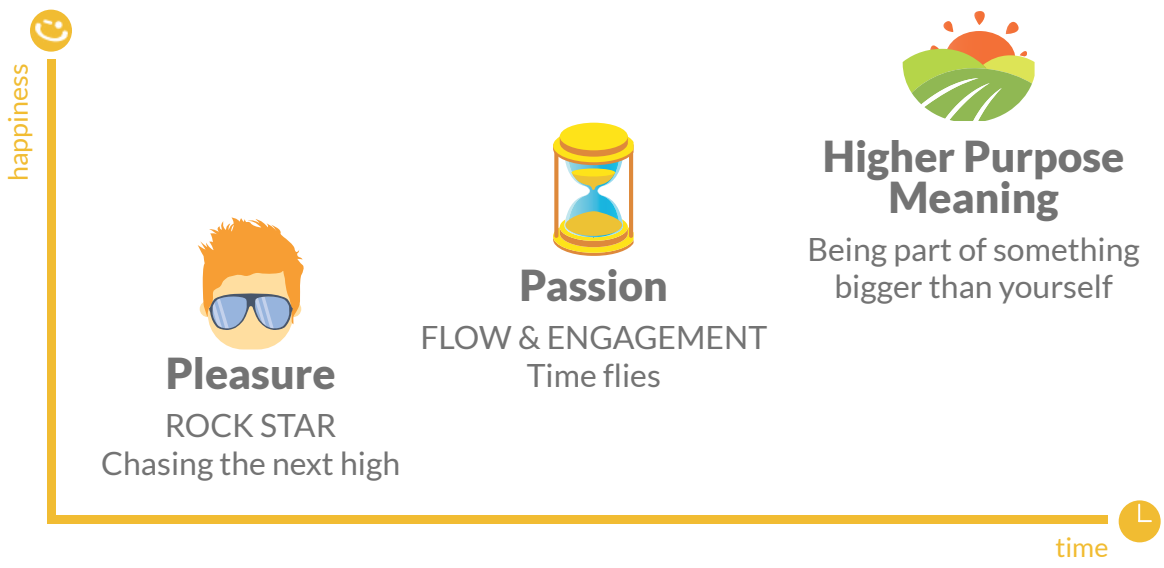
Happiness

"In the end, it turns out that we're all taking different paths in pursuit off the same goal: happiness."

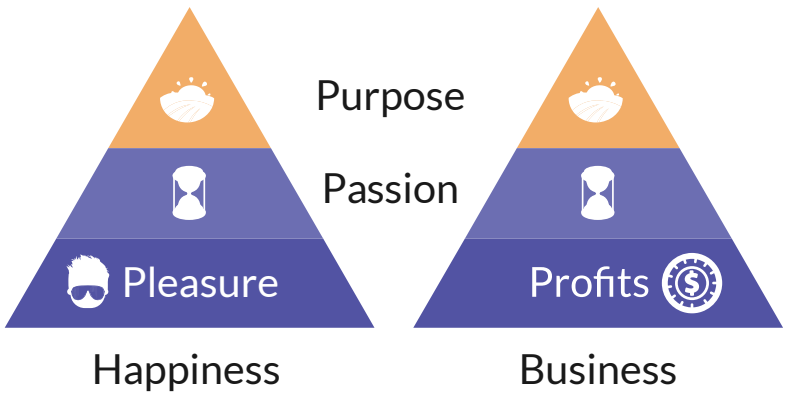


Framework 3: Types of Happiness

There are 3 types of happiness. Since achievement of higher purpose brings the most lasting form of happiness, we should start focusing there, and layer it on top of passion and pleasure.



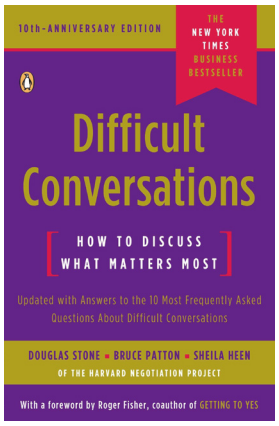
Framework 4: Parallels of Happiness and a Great Business



Hsieh shares the parallel between what makes people happy and what builds sustainable companies. He recommends using happiness as a guiding principle to build great, long-term organizations.

KEY QUOTES

"I wanted to write this book… to contribute to a happiness movement to help make the world a better place."



DIFFICULT CONVERSATIONS

How to Discuss What Matters Most

Douglas Stone, Bruce Patton and Sheila Heen

The Big "So What"

Difficult conversations are a normal, unavoidable part of our personal and professional lives. Yet, most people dread having them since such conversations—if not properly handled—can make things worse. This book equips us with the skills and steps to handle difficult conversations in a way that fosters understanding and effective problem-solving.

Introduction

A **difficult conversation** is anything you have difficulty talking about, e.g. ending a relationship, asking for a pay-raise, or addressing a hurtful behavior.

Every difficult conversation follows a certain structure. Specifically, there are **3 types of difficult conversations** that present different issues and complications:

- The "What happened?" conversation;
- The Feelings conversation; and
- The Identity conversation.

Often, we enter a conversation to deliver a message, e.g. to prove a point or get others to do what we want. Issues arise because each party focuses on his/her own agenda and viewpoint. To **handle difficult conversations effectively**, you must:

- Shift your goal from persuasion to learning; and
- Learn how to manage the 3 types of conversations.

KEY QUOTES

"Delivering a difficult message is like throwing a hand grenade…there's no way to throw a hand grenade with tact or to outrun the consequences…Choosing not to deliver a difficult message is like hanging on to a hand grenade once you've pulled the pin."

"At heart, the problem isn't in your actions, it's in your thinking."

"To make the structure of a difficult conversation visible, we need to understand not only what is said, but also what is not said."

In this summary, we'll start by zooming in on the 3 types of difficult conversations, before explaining how to create a learning conversation.

The "What Happened?" Conversation

This conversation centers around different views about what happened (or should happen), who's right, who's to blame etc. We each feel that our viewpoint is correct, when in reality we make wrong assumptions on 3 fronts:

Truth: We assume that "I'm right and you're wrong" when most difficult conversations are really about conflicts in subjective values or perceptions. For example, "you're too inexperienced" or "you're driving too fast" are not facts; they're merely opinions.

Intention: We assume we know the intention behind the other party's action or non-action, when we may be totally wrong, e.g. you think your colleague is shouting to humiliate you, when he's just trying to make himself heard above the noise.

Blame: We're quick to blame others, which blocks us from examining other factors (including ourselves) that may have contributed to the situation.

Let's break down these 3 issues in detail and how to address them.

Uncovering the Truth

Don't argue about who's right. *Do* explore each other's stories.

Why we argue and why it's counter-productive.

- Logically, we may agree that there're 2 sides to a story. But deep inside, *we each believe our story is the "right" one* and the problem lies with the other person. When you assume someone is naive, you may try to "teach" him the truth. He in turn assumes that you're an arrogant know-it-all. The argument leads nowhere and the relationship is damaged.

KEY QUOTES

"Difficult conversations are almost never about getting the facts right. They are about conflicting perceptions, interpretations, and values...They are not about what is true, they are about what is important."

"We all have different stories about the world because we each take in different information and then interpret this information in our own unique ways."

- In reality, we all have *different stories and perceptions* about the world because:

  (i) We have *different information*: First, we filter information differently, e.g. an artist may look for different things from an analyst, an observer sees a situation differently from the person-in-charge. Second, no one can know your complex inner state (e.g. your hopes, dreams, fears, constraints) better than you do.

  (ii) We *interpret the same info differently* due to our past experiences (e.g. upbringing, traumas) and different implicit rules about how the world works (e.g. "boys mustn't cry" and "you should squeeze the toothpaste from the bottom of the tube").

  (iii) We're *biased toward our self-interests*, paying more attention to data and conclusions that fit our interests and beliefs.

Shift from certainty to curiosity. Start by acknowledging that you don't have all the facts/info. Be curious about the other person's story as well as your own (including the assumptions underlying your story and responses). Your goal is not to decide who's right or wrong; it's to understand where you're each coming from so you can jointly move forward.

- *Use the "And Stance"*. It doesn't have to be either your story *or* theirs. Learn to embrace your story *and* theirs. For example, Jane made a mistake *and* you made things worse; you hurt Tim *and* he embarrassed you publicly. Seek to understand their story instead of simply accepting or rejecting it.

- *You can be curious in any situation*, even if:

  (i) You're factually right. For example, you may be right that smoking is bad for your son. But in an argument about why he should quit, the crux isn't about whether smoking is good or bad. It's about understanding each other's stories: why he feels the need to smoke, why you're so upset about him smoking, etc.

  (ii) You're sharing bad news (e.g. firing someone or ending a contract). Being curious about the other

KEY QUOTES

"Things don't change, because each is waiting for the other to change."

"Certainty locks us out of their story; curiosity lets us in."

"Because you may have different information or different interpretations, both stories can make sense at the same time."

"Remember, understanding the other person's story doesn't mean you have to agree with it, nor does it require you to give up your own."

person's story doesn't mean you have to agree with it. You can be both curious *and* firm about your decision.

Clarifying Intentions

Don't assume they intended the bad outcomes. *Do* separate the intent of their actions from the impact.

✕ We make **2 common mistakes**:

- *We make wrong assumptions about others' intentions*. First, we tend to attribute intentions based on their impact, e.g. if we feel hurt, we'll assume the other person *meant* to hurt us. Second, we assume the worst of others but the best of ourselves, e.g. if your staff forgot to submit a report, she's careless; but if you forgot the report, you're just overworked. Such assumptions hurt our relationships because:

  (i) We assume bad outcomes are due to bad intentions, and assume bad intentions are due to bad character. For example, if assume your husband meant to hurt you because he's selfish, then you'll go on to judge *everything* he says/does based on that assumption.

  (ii) When we accuse others, they get *defensive*.

  (iii) In fact, our assumptions can become *self-fulfilling*, e.g. if you assume your boss doesn't trust you with responsibilities, you may get demotivated and your lackluster performance eventually leads to your boss giving you less responsibility.

- *Good intentions don't negate the bad impact*. When someone accuses us of bad intentions, we intuitively try to clarify (e.g. "I was only trying to help"). This backfires because:

  (i) We miss what they're really saying. When someone says, "Why did you do this to hurt me?", he's actually saying that (a) you intended to hurt him and (b) he's hurt. When you clarify your intentions, you only address the 1st message and neglect the 2nd one.

KEY QUOTES

"Once we think we have someone figured out, we see all of their actions through that lens, and the stakes rise."

"Often we say 'You intended to hurt me' when what we really mean is 'You don't care enough about me.' This is an important distinction."

(ii) We over-simplify our motivations. In reality, our intentions are never purely "good" or "bad" and we may not even be aware of our own complex motivations.

In short, what you intended doesn't matter as much as how the other person ended up feeling.

☑ To avoid the 2 mistakes:

- *Separate impact from intent*. Recognize that your view is just a hypothesis that should be validated.

  (i) Ask yourself 3 questions to gain clarity: (a) What did he/she actually say/do? (b) How did that impact you? and (c) What assumption did you make about his/her intentions?

  (ii) Check your hypothesis: state specifically what the person did, how it impacted you, and explain your assumption about their intentions, making it clear you're only seeking clarity or confirmation (not stating it as a truth). It's perfectly normal for the other person to be somewhat defensive, so prepared to clarify you're only trying to uncover what happened.

- *Acknowledge the other person's feelings* before you address your intentions. *Review your own intentions* and be open to the idea that they were complex instead of 100% good.

Shifting away from the blame-game

When something bad happens, we often start blaming one another. This stops us from learning what's truly behind the problem and how to correct it. *Don't* focus on blame. *Do* map out the contribution system.

Focus on contribution, not blame.

- *Blame* is about judging if someone caused a problem in the past and if/how they should be punished. Pinning the blame on 1 person rarely solves the problem since there're always multiple contributors. For instance, an employee who takes bribes from a supplier is clearly at fault. But firing the person won't address other contributing factors

KEY QUOTES

"The more you can relieve the other person of the need to defend themselves, the easier it becomes for them to take in what you are saying."

"Once we think we have someone figured out, we see all of their actions through that lens, and the stakes rise."

"Talking about blame distracts us from exploring why things went wrong and how we might correct them going forward."

like the hiring process, lack of internal checks and balances, cultural norms etc.

- *Contribution* is about diagnosing how various parties and factors contributed to an outcome. It helps us to uncover what really happened and how to improve the situation. For example, there're always many contributing factors when a spouse cheats. Without understanding those factors, you can't improve the relationship. Remember:

  (i) The goal is to seek understanding, not assign blame.

  (ii) We're often more interested to have our feelings acknowledged, i.e. to hear the other person say "I'm sorry I hurt you" rather than "It was my fault".

  (iii) Don't blame the victim. Just because someone contributed to their own problem doesn't mean they're to blame. If you were mugged in a dark alley late at night, you'd have contributed to the situation but you aren't to blame for it.

KEY QUOTES

"Blame is about judging and contribution is about understanding."

"Understanding is the goal, not assigning percentages."

Map out the contribution system:

- *Consider 4 ways you may have contributed to a problem*:

  (i) Avoiding the problem till now

  (ii) Being unapproachable

  (iii) Shutting down a discussion when things get heated up

  (iv) Imposing your implicit role assumptions on others

- *Use 2 approaches to identify your own contribution*:

  (i) Role reversal: put yourself in the other person's shoes

  (ii) Look at the situation as a neutral third party

The Feelings Conversation

Feelings are often at the heart of difficult conversations. They influence our thoughts and actions. Avoiding them will only lead to more hurt and misunderstanding.

"Difficult conversations do not just involve feelings, they are at their very core about feelings."

In difficult conversations, we often try to hide our feelings and stay rational, e.g. you may pretend to have a professional discussion with your boss about the new team structure when you're silently upset that he promoted your colleague over you. **Bottling up your feelings will only backfire**.

- Your feelings will *leak out* in your tone of voice or body language. Or, they may explode in destructive or embarrassing ways.

- Unexpressed feelings *distract us* from fully listening or expressing ourselves. They can lead to a loss of confidence in the long run.

Handling feelings in difficult conversations

Use these 3 guidelines to constructively express your feelings.

Sort out what you really feel. Our feelings come in complex bundles and we may not be aware of (or willing to face) some of them.

- *Examine your emotional footprint*. All of us are more comfortable with some feelings than others. The pattern may differ for different relationships. Reflect on the feelings you find hard to express, and why. Remember: it's normal to have feelings. Your feelings don't define who you are, e.g. "bad" feelings like anger or jealousy don't make you a bad person. Don't hide your feelings—they're just as important as others' and hiding them will only weaken (not protect) your relationships.

- *Dissect singular feelings* to uncover your full bundle of feelings. You may think you're angry at your child for lying, when you're actually also feeling disappointed, guilty, unsure and sad. By recognizing the full spectrum of feelings, you can gain insights about the situation or relationship, and express yourself fully.

Negotiate with your emotions. Your thoughts affect your feelings. When you change your perceptions, your feelings will change too.

KEY QUOTES

"Feelings are too powerful to remain peacefully bottled. They will be heard one way or another."

"It's hard to hear someone else when we are feeling unheard, even if the reason we feel unheard is that we have chosen not to share."

"By keeping your feelings out of the relationship you are keeping an important part of yourself out of the relationship."

- *Re-examine* your story and theirs, question your assumptions and consider the wider contribution system. This should lessen your antagonistic feelings toward the other person.

- Make it a point to *acknowledge the other person's feelings*, e.g. "I didn't realize you felt that way". Don't gloss over it to focus on the problem, or try to "fix" the feelings.

Share your feelings, not your assumptions about the other person.

- We often *confuse our feelings* (e.g. insecurity) with judgments ("you should've been there for me"), attributions ("you betrayed me"), problem-solving ("it'd have worked if you did this") and characterizations ("you're so selfish"). When you feel the urge to blame someone, it signals that there are important emotions driving you.

- *Describe your emotions without being emotional*. Link the feelings back to the problem. Express your full range of feelings, e.g. you're angry but also appreciative and worried. Begin with the words "I feel..." to focus on expressing your feelings without judgment, blame or attribution.

The Identity Conversation

During difficult conversations, we're constantly asking ourselves, "what does this say about me?" We seek to protect our sense of self. For example, a pay-raise discussion isn't just about the money; it's really about your self-worth and self-image.

When someone says something that raises questions about our identity, we get **thrown off-balance**, making it hard to think clearly or communicate effectively.

- Difficult conversations bring up *3 key identity issues*: (i) Am I competent? (ii) Am I a good person? (iii) Am I worthy of love?

- We tend to adopt an *"all-or-nothing" approach*, e.g. you're good *or* bad, generous *or* greedy, competent *or* useless. This leads us to respond in 2 extreme ways:

KEY QUOTES

"The route to changing your feelings is through altering your thinking."

"Understanding feelings, talking about feelings, managing feelings—these are among the greatest challenges of being human."

"You'll be astounded how often difficult conversations are wrapped up in both people reacting to what the conversation seems to be saying about them."

(i) We *deny* the feedback to protect our sense of self (e.g. "he's criticizing my work because he doesn't understand it"); or

(ii) We *exaggerate* the feedback and change our self-image (e.g. "he's right...I'm totally useless").

In a difficult conversation, you'll inevitably hear unpleasant things about yourself. It helps to anchor your identity in advance:

- *Know the identity issues* that matter most to you. Look for recurring patterns when you feel off-balance in difficult conversations. Do you respond most strongly when certain aspects of your identity are threatened?

- Use the "And Stance" to *acknowledge your complex identity*. For example, you can be loyal *and* leave your job for a better career opportunity. Accept that you *will* inevitably (i) make mistakes, (ii) have a mix of good and not-so-good intentions, and (iii) have contributed to the problem in some way.

Remember these 4 tips:

- *Don't try to control others' responses*. Even if you want to avoid upsetting the other party, you really can't control their feelings. Trying to do so will only backfire. Use the "And stance": enter the conversation with the goal of addressing an issue *and* expressing your feelings *and* giving them the space to feel what they feel.

- *Prepare for possible responses*. Imagine how the conversation may play out, what you may learn, how the other person may respond, and the possible identity issues it may trigger.

- *Project into the future* (say, 30 years from now). What advice would your future self give about your current situation?

- If you're feeling overwhelmed, *take a break* to regain your balance. It's ok to say "I'm really surprised by what you've just shared. I'd like some time to think about it." If the issue is relevant to both sides, lay out explicitly, e.g. "I get the sense that this all boils down to whether I'm being a good boss. Is this how you feel as well?"

KEY QUOTES

"No one is always anything. We each exhibit a constellation of qualities, positive and negative."

"Don't measure the success of the conversation by whether or not they get upset."

Create a Learning Conversation

Now that you understand the challenges associated with the 3 conversations, here are the steps for preparing for and navigating a difficult conversation.

1. Prepare by considering the 3 conversations

Take time out to walk through the 3 conversations.

What Happened?			Feelings	Identity Issues
Stories	Impact/Intent	Contribution		
My story?	*My intentions?*	*How did I contribute?*		
	Impact on me?			
His story?	*His intentions?*	*How did he contribute?*		
	Impact on him?			

Unravel what happened by considering: (i) your respective stories and where they came from, (ii) the impact and possible intentions on both sides, (iii) how each of you (and other third parties) contributed to the problem.

Understand your feelings: explore your emotional footprint and examine your complex spectrum/bundle of emotions.

Anchor your identity: clarify what aspects of your identity are threatened and how you can be more grounded.

2. Know your Purpose → Decide if you should raise the issue

Get clear on your purpose for initiating a conversation, and what you hope to achieve from it.

- You should *start a conversation to gain mutual understanding*. Adopt a learning stance with 3 purposes in mind:

  (i) Understand their story (perceptions, feelings, constraints)

KEY QUOTES

"The paradox is that trying to change someone rarely results in change. On the other hand, engaging someone in a conversation where mutual learning is the goal often results in change."

(ii) Express your emotions and viewpoints

(iii) Find ways to jointly solve the problem or move forward.

- *Do not start a conversation if*:

  (i) The real conflict is within you rather than between you and the other person.

  (ii) There are better ways to resolve the issue, e.g. by changing your own contribution.

  (iii) Your purpose isn't a good one. This includes (a) trying to change the other person, (b) using the conversation to vent or get emotional release, or (c) doing a hit-and-run. If you're going to talk, then plan in advance and do it properly; otherwise, don't do it at all.

Sometimes despite your best efforts, the best approach is to simply **let go**. Help yourself to get over it with 4 liberating assumptions:

- You're responsible for doing your best, not to make things better.
- The other person has limitations and imperfections too.
- The conflict doesn't define who you are.
- You can let go and still care for the other person.

3. Start from the Third Story

Begin with the Third Story, i.e. what a **neutral third-party** (e.g. a mutual friend or a marriage counselor) may observe.

- *Do not* start from your own story (i.e. describe the problem from your perspective) or trigger identity issues by implying things about them or their character.

- *Do think like a mediator*: see/describe the problem in a way that's simultaneously true for both sides.

  (i) Your views are simply different (not better or worse). Both sides can hear each other out without giving up your own views. Even if you still disagree, you'll have

KEY QUOTES

"If you're going to talk, talk. Really talk...you can't do it on the fly."

a better mutual understanding and a higher chance of finding a viable way forward.

(ii) Describe the gap in your stories objectively without judgment, e.g. "We seem to have different views about project management. You prefer to manage the details personally while I prefer to delegate the details to other team members."

- Even *if the other party initiates* the conversation, you can still steer it toward the Third Story.

Share your purpose and extend an invitation. Explain your aim of mutual understanding and problem solving, then invite them to partner with you to figure things out.

- You can say something like: "I sense that we each see the situation differently. I'd like to share my perspective and to learn more about yours." Use phrases like "Can you help me to understand...." or "Let's work out how we can..."

- Be persistent to show you have both parties' interests at heart, but don't force them to engage. You can even share your internal conflict, e.g. "In my own story, I assume that you're being selfish, but that seems unfair and I'm hoping you can help me get a better perspective."

4. Explore Their Story and Yours

Take turns to explore the 3 conversations from your respective viewpoints. Specifically:

- Explore the *source of your story* (e.g. "My reactions probably stemmed from a similar incident with my previous boss....").

- Share the *impact* on you (e.g. "I felt really uneasy when....").

- Take responsibility for your *contribution* (e.g. "I suspect I made things worse when I...").

- Describe your *feelings* (e.g. "It was really hard for me to bring this up, but I felt that we should talk about it....")

KEY QUOTES

"Changing our stance means inviting the other person into the conversation with us, to help us figure things out."

- Examine *identity* issues (e.g. "I probably feel so strongly about this because I've always considered myself to be...")

Listen from the inside out. When you truly listen to the other person, (i) it helps you to understand them, and (ii) once they feel heard/understood, it helps them to listen to you.

- *Manage your inner voice*. Be aware of the things you're thinking but not saying (e.g. "That's unfair", "How dare you say this"). Acknowledge that voice, then remind yourself to stay curious since you don't know as much as you think you do. If you can't quieten the inner voice, then talk about it, e.g. "I really want to hear what you have to say, but I'm feeling a bit defensive at the moment and it's affecting my ability to listen fully."

- *Use inquiry for learning*. Don't use questions (a) to make a statement (e.g. "Must you drive so fast?") or (b) poke holes at their argument (e.g. "If you did your best, then why did Tom resolve the issue so quickly once he took over?"). Do (a) ask open-ended questions (e.g. "What did you have in mind?"), (b) ask for concrete info (e.g. "Can you share an example?"), and (c) ask questions about the 3 conversations (e.g. their assumptions, feelings, and how your actions impacted them).

- *Use paraphrasing for clarity*. Paraphrase what they said to ensure you've understood them, and to show you've heard them.

- *Listen out for their feelings and acknowledge them*. When people express their feelings, they're really asking: "Do you understand how I feel? Do you care?" Always acknowledge feelings before you move into problem-solving.

Express yourself, clearly and powerfully. This requires that you have a clear purpose and know you're sharing something worthwhile.

- Know that you're *entitled* to express yourself but your entitlement is no more or less than the other person.

- Don't beat around the bush or make them guess what you mean. Use the "Me-Me And" approach to *get to the heart of the matter*, e.g. "I think you're really capable, and I think you're not putting enough effort into this project."

KEY QUOTES

"We have a deep desire to feel heard, and to know that others care enough to listen."

"Feelings crave acknowledgment...They won't be happy until they get it, and nothing else will do."

"Expressing yourself well in a difficult conversation has nothing to do with how big your vocabulary is or how eloquent or quick-witted you are. "

- *Separate fact from opinion*. Preface your opinions with phrases like "it's my belief that…" or "my opinion is…" Share where your views or opinions came from.

- *Don't exaggerate* with words like "always" and "never".

- Express yourself in *terms that they can relate* to e.g. "I have this compelling need for the house to be clean and tidy, just like how you must keep your car spotlessly clean". Cater to their mode of absorbing info, e.g. do they relate better to visuals or numbers?

- Ask them to *paraphrase back*.

- Explicitly ask them *if/how they see things differently*.

If the other person keeps focusing on blame and who's right, try these approaches to **bring things back on-track**:

- Use *reframing* to translate destructive statements to constructive ones. For instance, if they insist "It's all your fault!", you can reframe it as "I'm sure I've contributed to the problem. Perhaps we both have. Instead of focusing on whose fault it is, can we try to figure out how we got here, so we can work out a way forward?"

- Even if the person is being difficult, it always helps to *listen first*. Listen intently and ask questions to understand how he/she sees the issue. Once people feel heard, they no longer feel the need to repeat themselves and can start listening to what you have to say. It also helps you to share your views in ways they can relate to.

- If, after reframing and listening, the other party still monopolizes the conversation, attacks and interrupts you, you can *name the dynamic* explicitly to clear the air. You may say something like: "I've tried to share my views 4x times now. Each time you cut me off in mid-sentence. I'm not sure if it was intentional, but it's really frustrating for me. I'd like to hear your perspective and I'd also like to finish what I'm saying."

KEY QUOTES

"Communicate your feelings in a way that invites and encourages the recipient to consider new ways of behaving, rather than suggesting they're a schmuck and…there's nothing they can do about it."

"You can't move the conversation in a more positive direction until the other person feels heard and understood."

5. Take the Lead in Problem-Solving

Now that you have a mutual understanding, you're ready to move into problem solving. You can find a **mutually-acceptable solution** even if you don't fully agree with each other.

Opposing views often come from a clash of assumptions. If you can identify those assumptions (e.g. "The kids won't be safe alone at home"), you can propose to **test your hypotheses**.

- Explain the *parts of their story* that don't make sense to you (instead of presenting the gap using your own story).
- Share *how you can be persuaded*, and ask if there's anything that can persuade them.
- *Ask for their advice*.

Be prepared to brainstorm creative solutions and **invent options**. Rather than squabble over whose approach to take, consider if there're certain *standards/principles* you can apply.

If you still **can't reach agreement**, decide if it's better to accept less than what you want, or accept the consequences of a disagreement.

KEY QUOTES

"For many people, realizing that they don't have to agree brings a sense of great liberation, relief, and empowerment."

TED TALKS

The Official TED Guide to Public Speaking

CHRIS ANDERSON

The Big "So What"

Great talks can inspire, educate and transform people. In this book, the head of TED, a world-renowned media organization, presents various insights and tips that anyone can use to improve your public speaking skills.

Introduction

Great talks can spread powerful ideas, allowing you to inspire people, share knowledge/insights and spread your vision. When you combine public speaking skills with the power of the internet, you can multiply your reach and impact large numbers of people.

Public speaking makes everyone nervous to some extent. The good news is, presentation *literacy can* be learned. There are many skills and tools you can master to make your talks great. Many famous personalities like Eleanor Roosevelt, Warren Buffett and Princess Diana all started out being terrified of public speaking, but managed to overcome their fears or even harness it to improve themselves.

Anderson recommends that you treat the tips in this book as tools (not rules) to develop your own unique style of public speaking. In this summary, we'll cover the key ideas in 4 parts:

- Start with the right foundations
- Develop your ideas
- Preparation
- Delivery time!

KEY QUOTES

"Public speaking is the key to unlocking empathy, stirring excitement, sharing knowledge and insights, and promoting a shared dream."

"Presentation literacy isn't an optional extra for the few. It's a core skill for the twenty-first century."

"There are hundreds of ways to give a talk, and everyone can find an approach that's right for them and learn the skills necessary to do it well."

Part 1: Start with the Right Foundations

Your Idea: the crux of your talk

The most crucial thing in a great talk is to have an idea you care about that's worth sharing.

- An idea doesn't have to be an invention or something ground-breaking. It can be *anything that changes how someone sees the world*, be it a how-to tip or a reminder of what truly matters.

- Don't underestimate the value of your work, learning or insights. The truth is, every one of us has worthy insights based on our unique experiences. Take the time to reflect on your personal journey, *your unique insights* and what you truly care about.

- When you share an idea that changes others' mental models, you're giving them a *lasting gift*. That should be the essence of a great talk.

Whether you already have an idea you wish to share or just a hazy concept that needs to be developed, you must commit yourself to researching and building the idea before you're ready to share it. Anderson urges you to **start taking action** now to define your idea.

Build your Throughline

A throughline provides a **core theme** that connects all the components of your talk into a coherent overall picture.

- All great movies, plays or novels have a *throughline*. It's like having a rope where you can hang each new element that you present, or having a path upon which the audience can follow you to a specific destination.

KEY QUOTES

"The only thing that truly matters in public speaking is... having something worth saying."

"Your number one mission as a speaker is to take something that matters deeply to you and to rebuild it inside of the minds of your listeners. We'll call that something an idea. A mental construct that they can hold on to, walk away with, value, and in some sense be changed by."

- A throughline is *more than a topic*: it gives people something to think about and should be captured in no more than 15 words, e.g. “More choice actually makes us less happy”. Find your throughline, then build your talk around it. Your goal is to help the audience to understand that line thoroughly without any big leaps or mental gaps.

Developing your throughline. Most speakers complain that they have too little time for what they want to say. The *wrong approach* is to put down everything you want to cover then try to compress it. The *right way* is to:

- Define *1 core idea*, then take the time to show why it matters to your audience and flesh out each point with facts, stories and examples.

- *Structure your talk* such that every element is linked to and builds up your core idea. Commonly used structures include:

(i) What ➔ So what➔ Now what
(ii) Intro ➔Context ➔Key concepts ➔ Implications ➔ Conclusion

KEY QUOTES

“The secret of successful talks often lies in what is left out. Less can be more.”

Approach it Right

Great public speaking doesn’t come from following a fixed formula or trying to be someone else. It’s about **being authentic**; be who you are and go for a topic you truly care about.

The best way to communicate an idea is to **recreate the idea in your audience’s minds**. This requires that you begin where the audience are and bring them on a journey with you.

- *Use your audience’s language*, down to the examples and terms that they can relate to. For example, most people can imagine an elephant but not a *Loxodonta* (an elephant’s scientific name).

- Pay attention to your *choice of words, body language and tone of voice*. They are all vital to your talk.

“Your goal is not to be Winston Churchill or Nelson Mandela. It’s to be you.”

Avoid these 4 common mistakes. Do *not*:

- *Make a sales pitch*. Your role as a speaker is to give to the audience, not take from them. Even if you can get away with subtly promoting your products/services, try to avoid that. Focus fully on helping the audience to learn something meaningful.

- *Ramble pointlessly*. When you ramble on and on without a clear message or takeaway—or worse, tell the audience that you didn't prepare—you are being disrespectful of their time.

- *Bore them with company talk*. People who don't work in your organization aren't interested in your mission, products or milestones. However, they'd probably want to hear about the ideas behind your work, the surprising lessons you learned from overcoming certain challenges and how they can apply such insights to their own work.

- *Put on an inspiring act*. Many speakers try too hard to be adored by the audience; they focus more on putting on a show rather than delivering a great idea. Real inspiration doesn't come from a great performance; it comes from acts of courage, authenticity, selflessness or wisdom.

Part 2: Build your Idea

Once you have a throughline, you can start to build the elements to hang on it. In this section, we'll present 5 core tools you can use.

Connection

Before you can build an idea in someone's mind, you need their trust and permission. Talks are powerful because of the potential for human connection. When you build a bond with the audience, they'll be more open to what you have to say.

Make eye contact from the start. As you walk onto the stage, focus on your passion and excitement for what you're about to share. Then, take a few moments to look at members of the

KEY QUOTES

"You want to build your reputation as a generous person, bringing something wonderful to your audience, not as a tedious self-promoter."

"An organization is fascinating to those who work for it—and deeply boring to almost everyone else."

"Inspiration is like love. You don't get it by pursuing it directly."

"To make an impact, there has to be a human connection."

"Eye contact, backed by an occasional warm smile, is an amazing technology that can transform how a talk is received."

audience in the eye before starting your talk. This creates a real connection and syncs your mind with the audience's.

Don't be afraid to **show your vulnerability**; it makes you real to the audience and they're even more likely to root for you. However, don't fake vulnerability just to manipulate others, nor share things that you yourself haven't yet worked through yet.

Use laughter—it reliefs tension, warms the audience up to you and makes them more willing to listen to you. However, if you're not naturally funny, don't pretend to be funny or use tacky jokes from the internet. Try these tips instead:

- Use *real anecdotes* that're relevant to your subject but exaggerate or remix them in a fun way.
- Prepare a *funny remark* in case you make a blunder or face a technical glitch.
- *Build humor into your visuals* or create a contrast between what you're saying and what you're showing.
- *Use satire*, i.e. say the opposite of what you mean then reveal your true intent.
- When there's a *laughing moment*, pause to give people a chance to laugh (but don't try to fish for an applause).

Shelf your ego. Unfortunately, it's hard to realize when we're being egoistic. Check that you're not name-dropping or boasting about your achievements, and test out your talk on someone you trust.

Tell stories about your authentic personal experiences or people close to you. These can be used in any part of your talk—be it in the opening, middle or end.

Narration

Since the days of our cavemen ancestors, stories have been used to bring people together, help people to dream, imagine, connect and understand one another.

KEY QUOTES

"Humor is a skilled art, and not everyone can do it. Ineffective humor is worse than no humor at all."

"Self-deprecation, in the right hands, is a beautiful thing."

Wrap your story around a **core idea** and make it compelling with **4 components**:

- Build it on a *character* your audience can relate to or care about;
- Build up *tension* using mystery, drama or danger;
- Use the *right amount of detail*—give just enough to let people imagine the scene vividly and remove the rest.
- End with a *proper resolution* that's surprising, insightful, funny or moving, and ties in with your core message.

You can also create your own **parable** (i.e. a short story that conveys a moral or spiritual lesson) but make sure you use analogies that your audience will understand.

Explanation

Understanding must be built like a hierarchy, with each layer constructed on a previous one. If you need to **explain something complex or technical**, always start with what people already know and build from there.

- *Start where the audience is*. Don't assume they're familiar with your topic and technical jargons.
- *Spark their curiosity*. Share something that makes them wonder "why" or "how".
- Then, introduce the related concepts *one by one* like building blocks and show how they're linked together.
- Use *metaphors* to draw a parallel between what you're explaining with something that the audience already understands (e.g. "the pre-frontal cortex of your brain works like a flight simulator to let you imagine things").
- Use short *examples* to help the brain apply the idea to a scenario to lock in the understanding.

KEY QUOTES

"If you're going to tell a story, make sure you know why you're telling it."

"In the right hands, a parable can entertain, inform, and inspire all in one."

"You can't give a powerful new idea to an audience unless you can learn how to explain."

"Knowledge can't be pushed into a brain. It has to be pulled in."

"Explanation is the act that consciously adds a new element to someone's mental model or reorders existing elements in a more satisfying way."

When you help someone to understand a concept, you fundamentally change their **mental model** and create a lasting impact.

Persuasion

Sometimes, before you can explain a new idea, you need to first demolish existing concepts that are wrong. Persuasion is about getting the audience to realize that their current view of the world isn't quite right, so they're open to an alternative viewpoint.

You can **prime** or nudge someone in a certain direction by using metaphors to make an idea more plausible.

Once someone is primed, it's easier to present your argument using **reasoning**.

- Break down your argument into a series of *if-then statements*. Start with something the audience accepts as true (or was proven to be true earlier in the talk), then build an argument like this: If X is true, then Y must happen, since every X implies a Y.

- You can also use *reductio ad absurdum*, i.e. give credibility to your position by presenting the opposite to your argument which is obviously false.

Use a **detective story**: present a mystery, the possible solutions, then eliminate the options one by one with the audience until there's only 1 logical conclusion. Bring the audience on a learning and discovery journey so they can persuade themselves.

Go beyond logic. Use humour, anecdotes, vivid examples, third-party validation and impactful visuals so your conclusion isn't just logical but also meaningful and energizing.

Revelation

The most direct way to convey an idea is to simply show it. You can mix and match 3 approaches below to lead up to a sensational revelation.

KEY QUOTES

"Our minds need to be primed before they can be persuaded."

"If you can walk someone through a reasoned argument convincingly, the idea you have planted in her mind will lodge there and never let go."

- If your work involves strong visual components, it can be very effective to take the audience on a "**wonder walk**" by taking them through a series of impactful images or videos. Don't try to describe the visuals. Instead, focus on linking them to your throughline, e.g. explain the creative process or insights behind the work.

- If you're sharing a new technology, process or invention, a **demo** is one of the most effective ways to show how it works. Don't be afraid to add some showmanship like how the iPhone was launched.

- Humans have a unique ability to imagine what doesn't yet exist. Using sketches, images, demos, or even a vivid description, you can build such a compelling **dreamscape** of the future that people will desire it. It helps to link such visions back to hope, humanity and/or actionable steps.

Part 3: Prepare, Prepare, Prepare

Use Visuals Effectively

Visuals (photos, illustrations, graphs etc.) are **not always essential** and bad slides can actually hurt your talk. Use visuals only if they're truly necessary and will make your talk more effective.

Generally, there are 3 ways to **add value with visuals**:

- *Reveal* something that's hard to describe in words. Let the visuals do the work so you can focus on setting the context and priming the audience.

- *Explain* or enhance your show-and-tell. Make sure what you say and show are in sync. Limit each slide to 1 core idea with only a short phrase, question or an image. Your slides should build curiosity, not steal the thunder by showing the words you're going to say. When you're not referring to a slide, switch to a blank screen so the audience can focus back on you.

KEY QUOTES

"(Dreams) can spread to others, build excitement and belief, and thereby make themselves come true."

"Having no slides at all is better than bad slides."

"The main purpose of visuals can't be to communicate words… It's to share things your mouth can't do so well."

- *Delight* your audience by adding aesthetic appeal. You do not have to explain every image you show.

The book includes many **presentation tips** on software, fonts, legibility, to-dos and not-to-dos. Here are some examples:

- Be original. Avoid standard presentation *templates*.
- Use *high-res images* on black background for the best effect.
- Use 1 simple, easy-to-read *typeface* per presentation, with ≤3 font sizes and at least 24pt-size for all fonts. Avoid using italics or underline as they're hard to read (bold fonts are ok).
- *Build up the content* on each slide by adding words and images progressively.
- Use *videos* only if essential and keep them to <30s each.
- Don't use flashy *transitions or animations* that distract the audience from your content.
- Send your presentation in advance and save a *backup copy* of the presentation, fonts, videos etc. in a zipped folder in a USB drive.

Scripting

In the past, TED tried to set rules, such as no lecterns or reading from a script. They've since realized that it's best to let speakers do whatever they feel most natural and confident with. One of the key decisions you must make is whether to use a script.

Scripted talks can help you to make the most of your time on stage. However, you must deliver it the right way to avoid losing passion and connection. There are 3 key strategies you can use:

- *Know the talk so well* that it doesn't seem scripted. This means you must practice *a lot*, until you know the material inside-out and are unlikely to freeze on stage. At the same

KEY QUOTES

"The key is to find the mode you can feel confident about, and commit to it."

"It's all about giving meaning to the words as you speak as naturally and passionately as you can."

time, the talk must come across as if you're sharing the ideas for the first time rather than reciting them from memory.

- *Refer to the script* from a lectern, screen or confidence monitor, but look up during every sentence to make eye contact with the audience so you're still speaking to them (not just reading).

- Reduce the script to *bullet points* and express each point in your own words.

Unscripted talks tend to sound fresh and real because you're thinking aloud and searching for the words in the moment. However, you still need to prepare for them.

- Prepare a *clear talk structure* and mentally label each set of points or notes you intend to cover.

- Prepare for *potential problems* so you know what to do if you can't find the words in the moment, if you leave out something critical or over-run your time slot.

Rehearse

Regardless of whether you choose a scripted or unscripted approach, you must rehearse repeatedly. Your goal is to know your talk so well that you can focus fully on the meaning you wish to convey. Rehearse in front of the mirror, to friends and family, to a group or just before you sleep. Insist on honest feedback on all aspects of your talk, e.g. whether you made eye contact, captured their attention, or helped them understand a new idea.

Open and Close

Even if you're not using a script, it's a good practice to memorize the opening and closing lines for your talk to create the most impact.

Here are 4 ways to **start strong** and capture people's attention from the onset.

- *Use a little drama*, like the opening of a great movie or novel, to make people curious about your talk. It could be a

KEY QUOTES

"When people think a talk sounds rehearsed, the problem is not too much rehearsal, it's too little rehearsal."

"In the opening sentences your sole goal is to give your audience a reason to step away from their comfort zone and accompany you on an amazing journey of discovery."

shocking fact (e.g. “In the next 18 mins as I give this talk, 4 Americans will die from the food they eat.”), a vivid story or a humorous line.

- *Spark curiosity* by asking a surprising question (e.g. “How did a 10-year old with only $300 get an entire town to change their future?”). Or, frame your topic in an unexpected way.

- *Use an impactful visual or object*. A stunning image will capture attention, but when you can reveal something surprising about it, it creates an even bigger impact. You can also use openings like: “this video I’m about to show changed my life” or “I’m going to show you something that may seem impossible at first glance”.

- *Use a teaser* that gives a sense of where you’re at and where you’re going. But, never give away the punchline or the big reveal right at the start.

How you end your talk can shape how people remember the entire experience. Here are 7 ways to **end powerfully**.

- Pull back to show the *big picture* and the range of implications and possibilities of what you’ve just shared.

- Give a specific *call to action* and nudge your audience to act on the powerful idea you’ve just shared.

- Make a *personal commitment* on what you are doing to do.

- Create a *vision* of what the future might be.

- Ask a *surprising question* that makes people think about what you’ve said.

- Use *narrative symmetry* by linking back to something you’ve said in the beginning.

- If you’ve built up your talk properly, you can end with *poetic language* that evokes feelings about humanity, hope etc.

KEY QUOTES

“Curiosity is the magnet that pulls your audience along with you.”

Part 4: Delivery Time!

What to wear

The **right clothing** can help you feel good and connect with the audience. Wear something you feel confident in and expresses your personal style. Pick out your attire in advance to avoid added stress on the day of the talk.

When **selecting your attire**, consider these tips:

- Dress a notch above what the audience will be wearing.
- If you'll be filmed, avoid full white/black or small/tight patterns.
- Wear something that stands out on the stage and gives you a nice silhouette (fitted but not too tight). You can add a splash of color (e.g. a bright scarf) to go with neutral colors.
- Avoid dangling earrings and flashy/noisy accessories.
- If you'll be wearing a mike, wear a belt or a defined waistline to attach the battery pack.
- Rehearse your talk in the planned outfit.

Mental preparation

- **Manage your anxiety** and redirect the adrenaline to energy:
  - *Use your fear as a motivator* to practice as much as you can.
  - Before going on stage, *breathe in deeply* and release your breath slowly. Remember, it's *ok to be vulnerable* and show that you're nervous.
  - Eat a small portion of healthy food an hour before going onstage; *avoid an empty stomach* or eating too much.

KEY QUOTES

"Your clothing can earn you an audience connection before you've even spoken a word."

- *Drink water* (about 1/3 of a bottle) *just* before you go on stage so your mouth won't get dry.

- Identify a few *friendly faces* in the audience and focus your talk on them.

- *Have a backup plan* for common problems like forgetting your script, technology glitch etc.

- Remind yourself that *what you're sharing matters* and focus on sharing it.

Setup

Ideally, you should give your talk without a lectern and with at most notecards that you can hold in 1 hand. However, go with the mix of **props and tools** that works best for you and practice with them.

- If need be, have a *comfort backup* by putting your full script on a table or lectern at the side/back of the stage. That way, you can take a sip of water and review your script if you really blank out.

- Plant certain images or words in your slides as *memory cues*.

- Prepare 5x8 inch *hand-held note cards*; hold them together with a ring clip in case you drop them. Ideally, you should use them only occasionally and focus on the audience.

- *Confidence monitors* are available in certain venues, though you shouldn't over-rely on them. Never read off the monitors.

- If you must have your full script or laptop in front of you, ask for a sleek, *unobstructive lectern* that doesn't block your body.

KEY QUOTES

Voice and Presence

Talks are more powerful than written words alone because of your presence and connection with the audience. Keep practicing, and you'll eventually find your unique, authentic way of delivering the talk.

Vary your **voice** to match the meaning you wish to convey. Go through your script and highlight the key words, questions and moments. Try reading it with different nuances; experiment with pauses and changes in tone, pace, volume, rhythm and timbre. Use your natural, conversational pace as the default.

Body language. If you're not using a lectern, the simplest posture is to stand tall, place equal weight on both feet and use your hands and arms to amplify what you are saying. You can stand in 1 place or walk the stage so long as you're relaxed and deliberate with your movements.

Using Creative Formats

There are many other innovative ways to engage the audience's 5 senses and make your talk **stand out**. Just remember not to appear gimmicky or to lose sight of your real message.

Anderson shares many of such **format innovations**, including using dramatic props (like a real human brain or releasing a jar of mosquitoes), panoramic screens, multisensorial stimulation (like smells or tastes), live podcasting, dual presenters or debate formats, guest appearances etc.

Conclusion

- Anderson believes that public-speaking skills will become even more important in the future. He shares how TED is nurturing the talk renaissance, and urges every one of us to **find and share our unique ideas** to positively shape our world.
    - o With the internet, it's now possible to learn from, understand and be inspired by *people* around the globe with totally

KEY QUOTES

"Talks can offer something more than the printed word… It's the human overlay that turns information into inspiration."

"Let's embrace the spirit of innovation…But let's also never forget that substance matters more than style."

"For the first time in history, it's possible for anyone on the planet who has access to the Internet to summon to their home the greatest teachers and inspirers."

different background, skills and experiences. This creates endless possibilities in terms of learning and innovation.

  - As the amount of information keeps growing and machines keep getting smarter, specialist *knowledge* is likely to become less valuable than *contextual knowledge* (the ability to see the big picture and how things fit together), *creative knowledge* and a deeper understanding of our *humanity*. Talks are a powerful means of expanding such knowledge and perspectives.

- As you pursue greater purpose and meaning in your life, you'll inevitably discover something worth saying. And, when you share such ideas with passion, conviction and authenticity in a connected world, there's no limit to the **amount of impact** you can make.

- In this summary, we've outlined the key ideas and tips in the book. The book also includes **other tips and details**, such as:

  - Quotes, examples and snippets from various talks/ speakers; and

  - Anderson's personal observations, beliefs and hopes for the future.

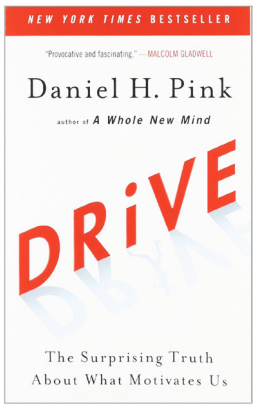
For more details, please refer to www.ted.com.

KEY QUOTES

"If we can find a way to truly listen to each other, and learn from each other, the future glitters with promise."

"Seeding a valuable idea... is the most impact that's possible for an individual to have. Because, in a connected world, that idea, once properly seeded, is capable of spreading itself."

"The future is not yet written. We are all, collectively, in the process of writing it."



DRIVE

The Surprising Truth about What Motivates Us

By Daniel H. Pink

The Big "So What"

By truly understanding human motivation and creating the right environment, organizations can help people to discover their innate drive, to become naturally more productive, fulfilled and happy.

Introduction

There's a gap between what we know about motivation and how businesses and society currently operate. Most of our systems are built around carrot-and-stick and external motivation, which are not always effective and may sometimes backfire. To maximize productivity and motivation in the 21st century work, we need to upgrade our approach to tap on and increase intrinsic motivation, with 3 elements: autonomy, mastery and purpose.

Developing a new Operating System

Like computers, societies have operating systems – our laws and socialeconomic frameworks are built on assumptions of how things work and how humans behave. Pink traces how these underlying assumptions (and consequently society's operating systems) have evolved over time:

Motivation 1.0 – Biological needs

This system assumes that humans are driven by our biological and survival needs, i.e. food, security and sex.

KEY QUOTES

"Societies also have operating systems... And much of our societal operating system consists of a set of assumptions about human behaviour."

Carrot-and-stick approach

"For as long as any of us can remember, we've configured our organizations and constructed our lives around its bedrock assumption: The way to improve performance, increase productivity , and encourage excellence is to reward the good and punish the bad".

Motivation 2.0 – Extrinsic Rewards & Punishments

This system assumes that humans seek rewards and avoid punishments, in addition to satisfying our biological needs. It is still deeply embedded in most aspects of our lives today. Pink points out that Motivation 2.0 works, but not all the time, because of 3 areas of incompatibility:

- How we organize what we do: Pink uses the growing trend of opensourcing to illustrate how people are changing the way we organize our efforts, driven by the intrinsic satisfaction of mastering a challenge, and the desire to contribute to the community. In short, traditional businesses are "profit maximizers", but there is a growing number of businesses that are "purpose maximizers".

- How we think about what we do: The assumption that we are wealth-maximizers is flawed, because we do not consistently seek to maximize wealth, nor do we always respond rationally to extrinsic incentives.

- How we do what we do: Motivation 2.0 is based on the belief that people need extrinsic rewards and close supervision because they do not enjoy their work. However, many jobs have become more interesting and self-directed. Moreover, external motivation may work for algorithmic tasks that follow fixed rules and instructions, but are counter-productive for heuristic tasks that require creativity to solve novel problems.

Motivation 3.0 - Intrinsic Motivation

Pink recommends a full upgrade to this operating system for the 21st century. This system is built on the assumption that, besides biological urges and extrinsic motivation, humans also have a desire to learn, to create, and to make the world a better place. In short, it recognizes the "third drive" or intrinsic motivation, which includes 3 elements:

KEY QUOTES

"Motivation 2.0...doesn't mesh with the way many new business models are organizing what we do – because we're intrinsically motivated purpose maximizers, not only extrinsically motivated profit maximizers."

"Economists are finally realizing that we're fullfledged human beings, not single-minded economic robots."

"For growing numbers of people, work is often creative, interesting, and self-directed rather than unrelentingly routine, boring, and other-directed."

Motivation 3.0

"The science shows that the secret to high performance...(is) our deep-seated desire to direct our own lives, to extend and expand our abilities, and to make a contribution."

- Autonomy: The desire to direct our own lives
- Mastery: The desire to get better and better at something that matters
- Purpose: The desire to serve something larger than ourselves

From Motivation 2.0 to Motivation 3.0

The Starting Point: Baseline rewards

"Baseline rewards" (like salary, some perks and benefits) are prerequisites to motivation, i.e. people must minimally be paid a fair and equitable amount. Without a healthy baseline, there is no motivation to speak of. However, beyond that baseline, money or carrots and sticks can actually dampen rather than increase motivation.

Why Carrots & Sticks Can Backfire

- Extrinsic rewards, especially contingent rewards or "if-then" rewards, may unintentionally extinguish intrinsic motivation and hence decrease performance and creativity. Extrinsic rewards may still work in the short run, but they tend to cause "considerable long-term damage"
- Empirically, it is proven that introducing or increasing incentives does not always improve performance, and may in fact reduce performance(especially if they are contingent incentives).
- Rewards tend to narrow our focus, which is helpful to get us to focus and run faster on a fixed path, or to handle algorithmic tasks. They however tend to hinder right-brain thinking or creative solutions.
- People sometimes do things for intrinsic satisfaction or "feelings that money can't buy" – introducing rewards may extinguish the nobility and interesting aspects and reduce the desired behaviours.

KEY QUOTES

"Baseline rewards"

The best use of money as a motivator is to pay people enough to take the issue of money off the table."

Extrinsic Motivation

"Sometimes these motivators work. Often they don't. And many times, they inflict collateral damage".

"Over and over again, (researchers) discovered that extrinsic rewards – in particular, contingent, expected, "if-then" rewards – snuffed out the third drive."

- Rewards may end up encouraging undesired behaviours and attitudes including unethical behaviour, addition, short-term thinking, cheating and short-cuts.

When and How to Use Carrots & Sticks

Extrinsic rewards do have their uses. Specifically:

Routine tasks: People performing routine, dull tasks that involve only mechanical skills have little or no intrinsic motivation to be lost. In such cases, you can use rewards to boost performance, with the following approach:

- Explain why the task is necessary, so you provide meaning for an otherwise-boring task.
- Acknowledge that the task is boring, as an act of empathy
- Provide autonomy, and give people some freedom over how they complete the task

Now-then rewards: For non-routine conceptual tasks, offer "now then" rewards instead of "if-then" rewards, i.e. offer rewards as a surprise or bonus after the task is completed.

This is assuming the basic compensation and the 3 elements of autonomy, mastery and larger purpose are already in place. Ideally, these rewards should follow 2 additional guidelines:

- Use non-tangible rewards like praise and positive feedback rather than just cash and physical trophies.
- Provide specific feedback, focusing on their effort and strategy (rather than must the results)

Self-Determination Theory (SDT)

To stay relevant, businesses can update their approach to motivation, using the self-determination theory (SDT). According to SDT, human beings have an innate drive to be autonomous, self-determined and connected; if we focus on creating environments where this drive can be expressed,

KEY QUOTES

"Mixing rewards with inherently interesting, creative or noble tasks deploying them without understanding the peculiar science of motivation, is a very dangerous game."

"Greatness and nearsightedness are incompatible. Meaningful achievement depends on lifting one's sights and pushing toward the horizon."

people are more productive, fulfilled and happy.

Organisations should focus on these drives when managing their human capital, by creating settings which focus on our innate need to direct our own lives (autonomy), to learn and create new things (mastery), and to do better by ourselves and our world (purpose).

Moving from Type X to Type I Behaviours

Pink classifies human behaviour into 2 main types - Type X (primarily motivated by extrinsic factors) and Type I (fuelled more by the inherent satisfaction of an activity). Generally, Type I behaviour generates better results, health, and overall well-being. Hence, Pink advocates that we move ourselves (and our colleagues) gradually from Type X to Type I. In particular:

- In the long run, Type Is Type I's almost always outperform Type X's, and they enjoy greater physical and mental well-being.
- For Type X's the main motivator is external rewards (e.g. money and recognition); any deeper satisfaction is welcome but secondary. For Type Is, the main motivator is the freedom, challenge, and purpose of the task; any external reward are welcome but only as a bonus.
- Type I behaviour traits are not fixed, so any Type X can become a Type I.

The Three Elements of Motivation 3.0

1. Autonomy

Autonomy essentially means acting with choice. It is different from independence, as you can choose to work interdependently with others. Having a sense of autonomy can produce significant improvements in performance and attitude. A Cornell University study found that autonomy-oriented businesses grew 4 times faster and had 3 times lower turnover than control-oriented firms.

KEY QUOTES

"We're designed to be Type I… If we update the environments we're in… we can return ourselves and our colleagues to our natural state."

"This era doesn't call for better management. It calls for a renaissance of selfdirection."

"Autonomy… is different from independence. It means acting with choice – which means we can be both autonomous and happily interdependent with others."

Based on the SDT, we are naturally Type Is (self-directed and autonomous). However, most of us have been conditioned to adhere to outdated concepts of management, which assumes that those being managed need prodding to move forward, and need to be given direction to stay on-track. Even the concept of empowerment is built on the pretext that the organization holds the power and is "generously" sharing it with employees. Given the right environment, we will return to our natural Type I state.

One such environment is the Results-Only Work Environment (ROWE) conceptualized by Cali Ressler and Jody Thompson. Here, people don't have fixed work schedules; they are free to do their work where, when and however they wish, so long as they get their work done. People are treated as partners, not resources, and hence need to direct their own lives.

Encouraging autonomy doesn't mean people need not be accountable for their work. On the contrary, Motivation 3.0 assumes people want to be accountable, and the way to encourage Type I behaviour and enable superior performance is to give autonomy over 4 essential areas:

- Task (What they do)
- Time (When they do it)
- Team (Who they do it with)
- Technique (How they do it)

2. Mastery

Mastery means becoming better at something that matters, and this can only be achieved through deep engagement or flow. When "in flow", we are typically performing at a notch or two beyond our current abilities, which stretches our body and mind to produces a level of focus and satisfaction that extremely rewarding. We lose ourselves (positively) in what we are doing.

While flow is essential to mastery, it happens in a moment, and hence doesn't guarantee mastery, which happens over time and with repeated practice. There are 3 laws that govern mastery:

KEY QUOTES

"Control leads to compliance; autonomy leads to engagement."

"In flow, people lived so deeply in the moment, and felt so utterly in control, that their sense of time and even self melted away."

"Flow is essential to mastery. But flow doesn't guarantee mastery – because the two concepts operate on different horizons of time. One happens in a moment; the other unfolds over months, years and sometimes decades."

- Mastery is a mindset: Our beliefs shape what we achieve. Type X behaviour holds an "entity theory of intelligence", i.e. the belief that our abilities are finite, and they value performance over learning goals. Type I behaviour holds the "incremental theory of intelligence", i.e. the belief that our intelligence and capabilities can improve infinitely, and learning goals are prized over performance goals. "Begin with one mindset, and mastery is impossible. Begin with the other, and it can be inevitable."
- Mastery is pain: Mastery requires grit, all-out effort, and deliberate practice over a long period of time. It often involves periods of hard work and effort with little improvement, and doing what you love to do even when you don't feel like doing them.
- Mastery is an asymptote: An asymptote is a straight line that a curve approaches but never reaches. You can approach and get extremely close to mastery, but it is impossible to fully realize it. This can be frustrating, but also alluring at the same time.

To enrich and motivate people, organizations can create conditions for people to make progress, then highlight, recognize and celebrate that progress.

3. Purpose

Purpose is about linking your desires to a cause that's bigger than yourself. It provides a context for autonomy and mastery. Motivated, productive and fulfilled people typically work towards a higher purpose beyond their self-interest. The main difference between Motivation 2.0 and 3.0 is that the latter places equal emphasis on profit-maximization and purpose-maximization, not just focus on profit-maximization alone.

There are 3 ways to express "purpose motives" in the organization:

- Goals: Place purpose as the priority, and use profits as a catalyst rather than the key objective.

KEY QUOTES

"What people believe shapes what people achieve."

"Mastery hurts. Sometimes – many times – it's not much fun… It's grueling, to be sure. But that's not the problem; that's the solution."

"The joy is in the pursuit more than the realization. In the end, mastery attracts precisely because mastery eludes."

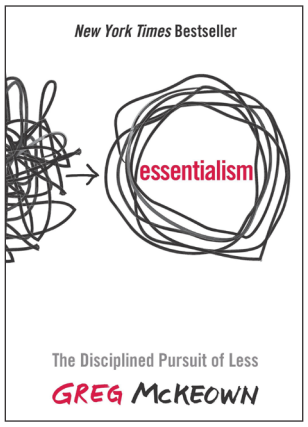
"Autonomous people working toward mastery perform at very high levels. But those who do so in the service of some greater objective can achieve even more."

"Humanize what people say and you may well humanize what they do."

- Words: Choose words that are humanized and lean towards a purpose beyond self-interest. Focus on “why” rather than “how”.
- Policies: Allow people to pursue purpose on their own terms.

KEY QUOTES

“People at work are thirsting for context… a powerful way to provide that context is to spend a little less time telling how and a little more time showing why.”



ESSENTIALISM

The Disciplined Pursuit of Less

GREG MCKEOWN

The Big "So What"

Often, we find ourselves feeling overworked, exhausted, perpetually busy yet unproductive. Essentialism is about focusing your energy only on what's essential, so you can do the right things that truly matter.

What is Essentialism?

Essentialism is the discipline of continuously defining where we can create the most value, then finding ways to execute most effortlessly.

Today, we have more choices than ever before. This, combined with increased connectivity, social pressure, and the myth that we can have it all, has led to the **proliferation of nonessentialism**. People find it hard to say "no" and are constantly stretched too thinly across too many areas.

Both individuals and organizations also get caught in the **Paradox of Success**. They start out with a clarity of purpose which leads to success. As their success brings more options and opportunities, they start to get distracted, losing sight of their core priorities and key success factors. Their success thus ends up catalysing their failure.

Essentialism is about **designing and taking control of your life**.

- The same amount of energy, when directed purposefully, can bring you much closer to your goal. This requires that you constantly step back to ask: "Am I investing in the right activities?" and "Is this the most important thing I should be doing now?"

KEY QUOTES

"The way of the Essentialist is the relentless pursuit of less but better...It means pursuing it in a disciplined way."

"The preponderance of choice has overwhelmed our ability to manage it."

"Success can distract us from focusing on the essential things that produce success in the first place."

"Only once you give yourself permission to stop trying to do it all, to stop saying yes to everyone, can you make your highest contribution towards the things that really matter."

"If you don't prioritize your life, someone else will."

- Know the right things you must do, reject everything else and direct your time and energy to create the biggest impact where it matters. In so doing, you drastically improve both your levels of performance and results.

The Essentialist Mindset

Essentialism involves 3 mindset shifts:

Choose. We can't always control the options presented to us, but we can *always* control the choices we make and how we spend our time and energy. Remove the words "I have to" which puts you in a reactive, helpless position. Use the words "I choose to"—remember that you can *always* choose how to respond to your circumstances.

Discern. We're surrounded by noise that confuses and distracts us. Stop thinking that everything is important. Learn to filter out the few vital things that are truly valuable from the mass of trivialities.

Trade-offs. Trade-offs are a fact of life. You can do *anything* but not *everything*.

- Southwest Airlines managed to achieve amazing growth in a notoriously unprofitable industry because it was deliberate about its trade-offs—it chose to keep costs down even if that meant alienating certain groups of people. On the other hand, Continental Airlines made the costly mistake of trying to straddle 2 vastly different strategies.

- Stop thinking "How can I do it all?" Instead, choose the problem you'd focus on, and ask "What trade-offs will I make?" and "How can I go really big on this?" See trade-offs not as losses but as opportunities to find the highest-impact options.

Becoming an Essentialist: the 3-Part Model

There are 3 key parts to Essentialism: explore, eliminate and execute. These elements work together in a self-reinforcing cycle.

KEY QUOTES

"We often think of choice as a thing…a choice is an action. It is not just something we have but something we do."

"Distinguish the vital few from the trivial many."

"We live in a world where almost everything is worthless and a very few things are exceptionally valuable."

"We can try to avoid the reality of trade-offs, but we can't escape them."

Explore: Identify the Vital Few

Essentialists explore more options than non-Essentialists but don't react to most of them. Create the space to think, listen, observe, play, rest and explore with the goal of identifying the activities/efforts that'll create the biggest contribution toward your goal.

Escape. Today, people are typically too busy to think. It takes *deliberate effort* to create the time and space to escape, explore life, reflect on what's truly vital, and evaluate your options. Find the ideal spaces where you can concentrate and/or ideate. Set aside time regularly to read, expand your perspectives, explore new ideas and challenge your assumptions.

Look deeply. Great journalists go beyond factual reports; they dig deep to discover what's meaningful to people. Likewise, in all aspects of life, you gain true insights when you look below the surface to find the hidden truths and connect the parts to see the broader patterns.

- Train yourself to connect the dots and *see the bigger picture* or wider trend rather than react to every small event or trigger.

- To filter out the vital from the noise, learn to be a *great observer and listener*. Listen carefully to what's *not* being said. Pay attention to the essence that's being communicated; don't try to formulate your own response as you listen.

- *Keep a journal* where you note down daily thoughts and observations that you'd otherwise forget. Take an hour every 3 months to go through your journal entries and look for patterns that may surface.

- Always *clarify the question or problem*, i.e. "What question am I trying to answer?" or "What problem am I trying to solve?" Get out in the field to gather first-hand data or experience, and look for unusual or abnormal details.

Play (i.e. anything that you do for the joy of doing) is a vital source of brain stimulation and imagination.

- We're often most, creative, expressive and alive during play. Play opens up our minds to new options and possibilities, relieves stress (a barrier to creativity and productivity), and stimulates

KEY QUOTES

"To discern what is truly essential we need space to think, time to look and listen, permission to play, wisdom to sleep, and the discipline to apply highly selective criteria to the choices we make."

"In order to have focus, we need to escape to focus."

"The best journalists do not simply relay information. Their value is in discovering what really matters to people."

"In every set of facts, something essential is hidden."

"Listen for what others do not hear."

"Small, incremental changes are hard to see in the moment but over time can have a huge cumulative effect."

"Play doesn't just help us to explore what is essential. It is essential in and of itself."

both the logical and creative parts of the brain. That's why many breakthroughs—from Colombus' realization that the world was round to Newton's conceptualization of gravity—occurred during play.

- Indeed, many companies like Twitter, IDEO, Pixar and Google are already promoting fun and play at work. Consider what used to excite you as a child and find ways to recreate that today.

Sleep. You are your greatest asset—to create a massive contribution, you must first nurture a healthy mind, body and spirit. Sleep is a crucial investment to keep you operating at optimal levels. Pace yourself and recharge to ensure you don't burn out.

- Sleep has been found to *improve creativity and problem-solving abilities*. In deep sleep (even briefly), our brains make new connections that allow new ideas and solutions to emerge.

- Get *8-hours of sleep daily* for peak performance. Anders Ericsson found that top violinists spent more time practicing than average violinists and slept more than the average American (for an average of 8.6 hours in every 24 hours). By regenerating themselves, they concentrated better and got more out of their practice.

Select. When an opportunity comes knocking, we tend to fear missing out if we say "no". Yet, if you accept every opportunity, you'll be overwhelmed. Force yourself to be explicit about your decision-making criteria, then systematically select *only* what's the most ideal.

- Apply the *90 Percent Rule* and say "yes" only to the top 10%. When you evaluate an option, focus on the 1 most important criterion to rate the option between 0-100. Reject all options that score <90%. You can also (i) list down 3 minimum criteria for an option to be considered and (ii) 3 extreme criteria for an option to be approved. Reject any option that doesn't fulfill both sets of criteria.

- Remember: you're looking for only the *best options*. Apply this to every aspect of your life, e.g. hiring *only* the ideal employees, attending *only* the most useful events and buying/keeping *only* what you absolutely love.

KEY QUOTES

"Play expands our minds in ways that allow us to explore: to germinate new ideas or see old ideas in a new light."

"The best asset we have for making a contribution to the world is ourselves."

"Sleep will enhance your ability to explore, make connections, and do less but better throughout your waking hours."

"Sometimes you will have to turn down a seemingly very good option and have faith that the perfect option will soon come along."

"If it isn't a clear yes, then it's a clear no."

"We aren't looking for a plethora of good things to do. We are looking for the one where we can make our absolutely highest point of contribution."

Eliminate: Cut Out the Trivialities

After you've distinguished the vital few from the trivial majority, you must cut off the latter from your life.

Clarify. To eliminate activities that aren't aligned with your goal/purpose, you must first know what your goal/purpose is.

- In organizations, teams that *lack clarity* tend to be rife with politics; people create their own games/rules and pursue conflicting interests. In our personal lives, people that lack clarity get distracted by diverse priorities and get lost in trivialities like how many "likes" they have on social media.

- Define your "*essential intent*" to stay clear and focused on what matters. This is a strategic decision that'll eliminate thousands of other decisions in the years to come, and must be both concrete and inspirational, e.g. "to get everyone in South Africa online by end of 2020". To gain clarity, ask good questions like "What's the 1 thing we must be truly outstanding in?" or "How will we know that we've succeeded?"

Dare. It takes courage to say "no"—to act against social pressures and overcome our fears of missing out or disappointing others.

- Each time you say "yes" to something nonessential, you're saying "no" to something essential. *Focus on the trade-offs* so it's easier to reject the nonessentials.

- Humans are social creatures and we intuitively want to be accepted by others. We feel bad about rejecting or disappointing others. Saying "no" could reduce your popularity in the short term, but it *earns you respect* in the long term. In fact, a clear and polite "no" is much better than a non-committal "yes" that you fail to deliver on.

- Learn to say "no" *firmly but skillfully*:

  (i) Separate the decision from the relationship—remember that you're rejecting the request, not the person.

  (ii) Reject a request gracefully. Pause for 3 seconds, then respond with something like, "I'd love to help you on the project but I

KEY QUOTES

"When there is a serious lack of clarity about what the team stands for and what their goals and roles are, people experience confusion, stress, and frustration."

"Once the big decision is made, all subsequent decisions come into better focus."

"Clarity about what is essential fuels us with the strength to say no to the nonessentials."

"Part of living the way of the Essentialist is realizing respect is far more valuable than popularity in the long run."

"As hard as it can be to say no to someone, failing to do so can cause us to miss out on something far more important."

don't have the bandwidth at the moment." If you need time to consider, simply say, "Let me check my availability and get back to you." You can also use email auto-responders to explain why you're currently unavailable. If your boss asks you to do something on top of existing priorities, seek clarification e.g. "I'd be happy to prioritize this. Which of these other projects should I set aside to focus on this project?" You can also offer other viable alternatives to the requester.

Uncommit. We tend to continue something just because we've always done it or because of what we'd already invested/sunk in it.

- When you pour more time, energy or money into a bad choice or unessential activity, you're wasting even more resources. *Cut your losses* and refocus your current/future resources on what's useful and essential.

- To *overcome the sunk cost bias*, ask yourself questions like: "If I don't already own this, how much would I pay for it?", "If I don't already do this, will I start doing it?" or "If I didn't have this opportunity, what would I be willing to do to acquire it?" You can also get an objective opinion from a neutral third party who's not emotionally invested in the situation.

- *Don't stick blindly to status quo*; start your plans from scratch each time to evaluate every item against your criteria.

- When you're presented with an opportunity or request, *pause for 5 seconds* to ask yourself if it's essential before you respond. If you're unsure whether something is essential, simply remove it to test if there's any real impact.

Edit. Be like an editor—relentlessly remove what's irrelevant, unimportant or doesn't add to the masterpiece.

- By removing the nonessential, a great editor *adds value* to a movie's plot and characters, making them more coherent and impactful. Likewise, disciplined editing helps to cut away things in your life that are confusing, distracting, disruptive or simply aren't aligned with your goals.

KEY QUOTES

"It's natural not to want to let go of what we wasted on a bad choice, but when we don't, we doom ourselves to keep wasting even more."

"Every use of time, energy, or resources has to justify itself anew. If it no longer fits, eliminate it altogether."

"A good film editor… eliminates everything but the elements that absolutely need to be there."

- *Condense* your existing activities and communications to make them as clear and concise as possible, e.g. communicate in fewer words or run a meeting in less time.

- Editing also helps to improve the *accuracy* or effectiveness of your efforts, so they contribute most directly to your goals.

Limit. Technology has significantly blurred the lines between work and family, with employees often being expected to respond to emails and messages after work-hours or on weekends. We may also encounter people who encroach into our personal space, offload their problems on us, or try to exploit us for their own gains. To protect what's essential, you must set boundaries. It's vital to know your boundaries and stand firm on them—once you start to make exceptions, you're likely to keep making more and more exceptions until you're living on others' terms. When you take on others' problems, you dilute your focus while disempowering others from taking control of their lives.

- It's vital to know your boundaries and *stand firm* on them—once you start to make exceptions, you're likely to keep making more and more exceptions until you're living on others' terms. When you take on others' problems, you dilute your focus while disempowering others from taking control of their lives.

- Such boundaries do not constrain you; they *free you* to select your playing field and focus on winning the game that matters.

- In some cases, setting your boundaries will involve *trade-offs*, e.g. it may limit your career progress in certain companies. However, the cost of not setting your boundaries is even higher as you may end up hurting what's most essential to you.

- *Define your deal-breakers*. Think of someone who frequently distracts you from your priorities and list down the types of requests you should reject in future. Each time you feel obliged to do something you'd rather not, make a note of why you feel violated. Review your notes to find your hidden boundaries.

- When you're working with people with different priorities or approaches, it helps to craft a *social contract* to establish mutual boundaries to reduce friction.

KEY QUOTES

"A good editor is someone who uses deliberate subtraction to actually add life to the ideas, setting, plot, and characters."

"When we don't set clear boundaries in our lives we can end up imprisoned by the limits others have set for us."

"Boundaries are a little like the walls of a sandcastle. The second we let one fall over, the rest of them come crashing down."

"Not pushing back costs more: our ability to choose what is most essential in life."

Execute: Remove Constraints & Make Execution Effortless

Non-Essentialists spend their time/effort trying to force their way through execution, while Essentialists invest time/effort to figure out how to do things in the least effortful way.

Buffer. We can't predict what will happen in the future. We can only expect the unexpected and build in a buffer, i.e. something that prevents 2 things from clashing and causing damage.

- Don't assume the best then find yourself stuck with inadequate time/resources. Plan ahead and create buffers for *contingencies*, e.g. add 50% buffer for travelling time.

- When planning for an important project, ask several key questions: (i) What risks do I face? (ii) What's the worst-case scenario and the social/financial impact? and (iii) What can I do to *reduce these risks or improve my resilience* to them?

Subtract. Adding resources won't necessarily increase your output. You must address the constraints that are slowing you down.

- Don't randomly act on the most visible or immediate obstacles. Step back, *examine the whole system* to identify the biggest bottlenecks and tackle those instead.

- Return to the earlier question: "How will we know that we've succeeded?" Ensure you have a clear, concrete essential intent, then (i) identify the constraints that are slowing you down and (ii) start by removing the *biggest obstacles* that, once removed, would eliminate most of the other obstacles.

Progress. To get massive results, you don't need flashy ideas. Neither must you achieve everything at once. Identify the priorities with the biggest contributions, take baby steps and celebrate each small win until you get to your big goal.

- Invest some time to *set up a system* that allows you to execute as smoothly and effortlessly as possible. The Richmond Police Department decided to take an unusual approach to recidivism. Rather than target people who'd already committed crimes,

KEY QUOTES

"Instead of focusing on the efforts and resources we need to add, the Essentialist focuses on the constraints or obstacles we need to remove."

"Removing obstacles... (is) kind of like dislodging a boulder at the top of a hill. All it takes is a small shove, then momentum will naturally build."

"Once a small amount of initial effort was invested to set up the system, it worked without friction."

they started to focus on the cause of the crimes and issue tickets for people who demonstrated desired behaviors. This shift in approach reduced recidivism from 60% to 8% over a decade.

- Businesses often create a minimal viable product—the simplest form of a product to deliver the intended value to target customers. Likewise, you can consider the "*minimum viable progress*" that'll be valuable to your essential task at hand.

- Don't wait till the last minute to tackle your projects. You can achieve superior results by starting early with the *minimum viable preparation*. Ask yourself: "What's the minimum I could do now to prepare?". For example, if you're delivering a speech in 6 months, you can start researching your topic now.

- Make your progress visible and *celebrate small wins* to keep yourself motivated.

Flow. There's extensive research to show that routine can make something difficult seem relatively easy.

- When you learn or do something new, it's always more effortful initially. As you do the same thing repeatedly over a period of time, it becomes a *habit* that you perform without conscious thought, e.g. driving or brushing your teeth.

- Mihaly Csikszentmihalyi found that the most creative people have *routines* that help them to perform at their best. The routines create a natural rhythm and free their minds to concentrate fully on their tasks. By investing some effort initially to establish a helpful routine, you can reduce the struggle of taking consistent action. For years, serial Olympic gold medallist Michael Phelps followed the same routine—from his preparation and training in the mornings to his visualization just before he went to bed. His achievements may have seemed effortless, but in reality they came from years of routine practice and conditioning.

- On the other hand, once bad habits/routines are formed, it can be extremely hard to change them. To *change an existing habit*, you need to first identify the cue that triggers the behavior (e.g. what triggers you to reach for some chocolates?). Then,

KEY QUOTES

"The Essentialist designs a routine that makes achieving what you have identified as essential to the default position."

each time the cue surfaces, make a deliberate effort to change your behavior (e.g. grab a salad instead). Over time, you'll create new neural connections in your brain to forge new habits. You can also create new triggers, such as doing something at the same time and place daily until it becomes second nature to you.

- Develop a routine to *tackle the hardest tasks first*. To keep things fresh, you can also consider having different routines for different days of the week.

Focus. To operate at your peak, you must deliberately focus on what's the most crucial, right now.

- Don't waste energy fretting about past mistakes or future problems. Shift your attention to how you can *make the most of the present moment*. Constantly ask yourself this question throughout the day, week, month and year: "What's the most important *now*?" This keeps you focused on (i) the present moment, (ii) your own game and (iii) what's most vital.

- We can multi-task (i.e. do more than 1 thing at a time such as washing the dishes while watching TV) but we can't multi-focus (i.e. focus on more than 1 thing at a time). *Focus singularly* on your most important tasks. When you're calm and present, you'll also concentrate better, think more clearly and enjoy your task more.

- Whenever you feel overwhelmed, pause and take a deep breath. *Recenter yourself* and ask what's the most important right *now* (not what's important 1 hour or 1 day later). Drop all other items temporarily and focus only on that 1 priority.

Be. Don't add Essentialism on top of everything else in your life. Make it a fundamental part of who you are and how you live.

- Essentialism isn't something that you do, but something that you *become*. It's about thinking, acting and living in a way that allows you to have the greatest possible contribution and fulfillment, so you live a meaningful life without regret. Gautama Buddha left his life as prince to embrace asceticism, eventually attaining enlightenment and founding Buddhism. Mohandas Gandhi gave up his wealth to pursue a simple life dedicated to liberating the oppressed. What will *your* biggest contribution be?

KEY QUOTES

"Every second spent worrying about a past or future moment distracts us from what is important in the here and now."

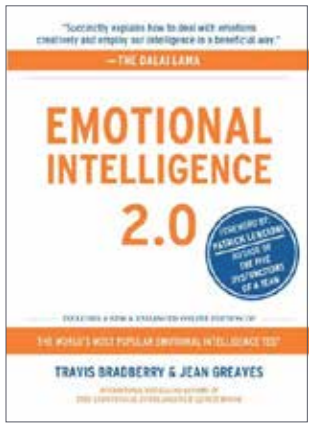
"Multi-tasking itself is not the enemy of Essentialism; pretending we can 'multifocus' is."

"We can all live a life not just of simplicity but of high contribution and meaning."

- As Essentialism becomes an *integral part of who you are*, you'll become more astute about what you put on your to-do list (rather than trying to finish more and more tasks). You'll find it more effortless to achieve results as you remove constraints and install systems to reduce friction. And, with greater clarity, purpose and presence, you'll find much more joy in life and living.

KEY QUOTES

"If you allow yourself to fully embrace Essentialism—to really live it, in everything you do, whether at home or at work—it can become a part of the way you see and understand the world."



EMOTIONAL INTELLIGENCE 2.0

TRAVIS BRADBERRY & JEAN GREAVES

The Big "So What"

Emotional intelligence (EQ) has been widely proven to be an important factor of success. This book explains what is EQ, how you can determine your EQ levels and use a step-by-step program (with 66 proven strategies) to improve 4 key EQ skills.

Introduction

Most of us accept the importance or EQ, yet we don't give it much attention. Studies have found that EQ accounts for about 58% of performance in most jobs, and people with high EQ earn more than people with low EQ. Yet, based on the authors' tests, only 36% of people can identify their own emotions.

What is Emotional Intelligence (EQ)?

Our intelligence (IQ), EQ and personality jointly define how we think and act.

- Your *EQ* is your ability to identify and understand emotions in yourself and others, and to use this awareness to manage your responses and relationships.
- Your *IQ* affects your ability to learn, while your *personality* reflects your preferences and inclinations.
- All 3 qualities are relatively independent. Of the 3, *EQ is the most flexible* and it's easier to improve EQ than IQ or personality.
